In this Vaisnavadeva ceremony, Vedic gods are worshipped, chief among them being Agni, the fire-god. The cooked food, *siddhanna*, is cast into the fire, as the worshipper prays, 'for the purification of that food and for my own purification, and to make expiation for the five destructive domestic implements (*pañcagāṇā*), and to obtain the reward prescribed by the Śruti, Smṛti, and Purāṇas.' The movable fire-pan, *ukhā*, is employed, and a particular form of sacred fire, viz. *rukṃaka* (bright as gold), is placed in it. Consecrated fuel is put on, and the fire is fanned. Then the fragrant sandal, *vilepana*, is flung into the fire, also flowers, as offerings to Agni. A portion of cooked rice, about a mouthful, is next offered to all the gods in turn. Lastly, ashes from the fire, *vibhūti-grahana*, are taken in a deep-bowled spoon, *darvi*, and are applied with the finger to various parts of the body, with a prayer to Siva; and, with the prayer, 'May I enjoy the triple life, *tryāyusam*, of Jama-dagni, of Kāśyapa, of Agastya, of the gods; may I altogether live for a hundred years,' the ashes are applied to the neck, navel, shoulders, and head.² The Hindu cult has followed a special line of development: ancestor-worship is merged in polytheism; hearth-worship is differentiated into polytheistic burnt-offering and fire-worship. But the idea of a central family-rite remains.

In the theory of sacrifice, enough has not been made of the fact that the altar is technically and in principle a hearth. This was recognized clearly by the Greeks (*εὐχάριος* = *βωμός*) and the Hebrews. The top of the Hebrew altar of burnt-offering was its 'hearth.'³ The altar, in short, is the combined fire and cooking-place of the people's representatives. There was thus brought into the great sacrificial religions the idea that the people, and later the human race, are one great family. The Greek notion of a hearth centrally placed in the universe has been referred to. The Hebrews applied to Jerusalem the mystical title of *Ariel*, 'the hearth of God.'⁴ The Hindus represented the fire-altar as symbolical of the Universe.⁵

LITERATURE.—This is fully given in the footnotes.

A. E. CRAWLEY.

HEARTH, HEARTH-GODS (Greek).—The reverence paid by the Greeks to the hearth (*ἑστία*) appears from its personification in the goddess Hestia, who is first mentioned in Hesiod (*Theog.* 454) and the Homeric hymns (*Aphr.* 21 f., and *Hymns* xxiv. and xxix.). In each Greek city the town-hall, or *prytaneum* (originally the king's house), was sacred to Hestia, and a perpetual fire was maintained on the 'common hearth.' The custom of preserving a sacred fire in a chief's house is wide-spread (see Frazer, in *JPh* xiv. 145 f., and *GB*³, 'Magic Art,' vol. ii. ch. 17); and in Greece, and

as at Rome and elsewhere, it probably originated from the practical difficulty of re-kindling fire by the primitive method of rubbing two sticks together (see FIRE). It has also been suggested that the maintenance of the sun's heat was associated with the upkeep of a perpetual fire on earth; if the flame was extinguished, the sun might fail (A. B. Cook, in *FL* xv. [1904] 308 f.). In any case the custom must have become a religious duty at an early period. At Athens and Delphi, if the sacred fire was extinguished, it was re-kindled from the sun's rays (Plut. *Numa*, 9). The fires on the common hearths of these two cities were tended by widows, who corresponded to the Vestals at Rome; but there was never a religious order of Vestals in Greece, and the great importance of these virgins has no analogy in Greek religion. The virginity of Hestia herself is, however, a noticeable feature in ritual and myth. The goddess took a vow of perpetual chastity (Homer, *Hymn to Aphr.* 21 f.), and sexual intercourse was forbidden in front of the hearth in private houses (Hes. *Op.* 733). At Sparta there was a priestess called 'Εστία πόλεως after the goddess (*CIG* i. 1253, etc.); but generally the public worship of Hestia was in the hands of men (cf. Aristotle, *Pol.* 1322b). In some cities the hearth-fire in the *prytaneum* seems to have given place to a lamp (Theocr. xxi. 36; Athenaeus 700 D); otherwise (as at Elis [Paus. v. 15. 9]) the ancient form of the hearth was retained. Certain hearths were of importance beyond the limits of the particular State, e.g. at Delphi and Delos. After the battle of Plataea the Delphic oracle commanded that all fires, as being polluted by barbarians, should be extinguished in the country, and new fire brought from the common hearth at Delphi (Plut. *Arist.* 20). From Delos sacred fire was brought every year to Lemnos, all fires in that island being extinguished for nine days during the voyage of the vessel (Preller-Robert, i. 179, 426). When a colony was founded, it was supplied with fire from the common hearth of its mother-city (Herod. i. 146; schol. on Aristides, iii. 48. 8 [Dindorf]; *Et. Magn.* p. 694. 28 [Gaisford]; Aristoph. *Av.* 43, where fire for a new city is carried in earthen vessels). The custom has savage parallels (see Frazer, *op. cit.* 215 f.). It is probable that, in imitation of this practice, the fire of a new house was lighted by the mother of a bride from the parental hearth; but this is only a conjecture (see Comperz, *Greek Thinkers*, Eng. tr., London, 1901, i. 117).

While the maintenance of perpetual fire on the public hearth is proved, it is doubtful whether the same custom prevailed in private Greek houses. Frazer admits that direct proofs are wanting for ancient Greece, but quotes many instances, both in Europe and in other parts of the world, in which private householders keep a fire always burning on their hearths. In modern Greek houses the lamps before the sacred icons are never allowed to be extinguished; and this may well be a survival from pre-Christian times. Artemidorus (*Oneirocr.* ii. 10) considers it a bad omen to dream of putting out the hearth-fires; but this need not imply that the fire was never suffered to die of its own accord. A Homeric hymn to Hestia (xxix.) addresses the goddess as one who has an eternal seat in the houses of god and men; but this passage must not be pressed too far. Preuner (in Roscher, i. 2609) thinks the custom improbable, owing to the lack of evidence which would probably have been forthcoming, as for the public hearth. In any case, great sanctity was attached to the private hearth from the earliest times. Even in Homer (although the personification of the Hearth-goddess is later) an oath taken in the name of the hearth was of peculiar force (cf. *Od.* xiv. 159, etc.). In

later times such an oath was common, especially when the interests of the family were concerned (see Jebb on Soph. *El.* 881; Roscher, i. 2623). Prayer was also offered to the hearth (or to Hestia) on solemn occasions, as on returning home after long absence (cf. Eur. *Herc. Fur.* 599), or when death was imminent (Eur. *Alc.* 162 f.). The Orphics prayed to Hestia for health and wealth, and for all moral or material well-being (*Orph. Hymn* lxxxiv.). The first libation of wine was regularly offered to Hestia in public and private feasts; hence the proverb ἀφ' Ἑστίας ἀρχεσθαι. So, at Olympia, the first sacrifice was in honour of Hestia, who took precedence even of Olympian Zeus (Paus. v. 14. 5). In public sacrificial feasts the last as well as the first libation seems to have been poured to the goddess (Homer, *Hymn* xxix. 4; Cornutus, *de Nat. Deor.* 28). For other details of sacrifice, see Preuner, in Roscher, i. 2617.

In private life the hearth was the centre of the family. In Attica, a child when five days old was carried by persons who ran round the hearth. At this festival, which was called Amphiromia, the child received its name (see Aristotle, *Lys.* 757; schol. on Plato, *Theat.* 160 E; S. Reinach, *Cultes, mythes, et religions*, i. [Paris, 1905] 137; *ERE* ii. 648^b). On the meaning of *παῖς ἀφ' Ἑστίας* in the Eleusinian Mysteries, see Farnell, *CGS* iii. [1907] 164.

Perhaps the chief importance of the hearth, both public and private, lay in the fact that it was an asylum of refuge. A suppliant who entered the house of another and sat at his hearth could claim protection (cf. Herod. i. 35; Aesch. *Ag.* 1587; Pind. fr. 49; Soph. *Oed. Col.* 633; Eur. *Herc. Fur.* 715; and Thuc. i. 136, where Themistocles obtained protection, even from an enemy, by sitting at the hearth of Admetus, king of the Molossians, and taking the child of Admetus in his arms). Some times, however, the rights of asylum were violated; Theramenes was dragged from the hearth in the Athenian senate-house, at which he had taken refuge (Xen. *Hellen.* ii. 3. 52).

As the earth was commonly held to be the centre of the universe, we find that poets and philosophers identified the Earth-goddess with Hestia, the centre of the home (Preller-Robert, i. 427; J. E. Harrison, in *JHS* xix. [1899] 243). Just as there was no statue of Vesta in the temple at Rome, even in the time of Augustus, so in early times the Greeks had no image of Hestia; the hearth, with its fire, was itself worshipped. Later, at Athens, there was an image of Hestia in the *prytaneum* (Paus. i. 18. 3), but evidence for other cities is lacking. Pausanias notes (ii. 35. 1) that there was no image of Hestia in her temple at Hermione; sacrifice was made on an altar. Temples of the goddess were rare, as her chief sanctuary was the *prytaneum* of a Greek city.

In general art the Hearth-goddess was represented under the form of a woman either seated or standing in a restful position, appropriate to a deity who, in Plato's myth, alone never leaves the house of the gods (*Phaedr.* 246). The Greeks themselves derived her name from ἔσθαι ('sit'), though it is certainly cognate with *Vesta*, and may mean the 'bright' or 'shining' fire (Skr. *vas-*).

E. E. SIKES.

HEARTH, HEARTH-GODS (Roman).—The fire-place, hearth, or *focus* was originally the centre of the Roman dwelling-house, both in a literal and in a figurative sense, and was situated in the pos-

terior portion of the *atrium*,¹ which served generally as a parlour and a public room,² and was so named because its roof was blackened by the smoke rising from the hearth-fire.³ In this chamber the inmates of the house took their meals, sitting at long tables,⁴ as was the practice also in rural districts at a later period,⁵ and portions of the food were cast upon the fire as oblations.⁶ In later times the scraps that fell to the floor were similarly disposed of,⁷ or were set in little pans (*patellae*) upon the hearth.⁸ In the house, accordingly, the hearth supplied in every respect the place of the altar, and the frequently recurring phrase *ara focique*⁹ embraces the whole sphere of *sacra publica privataque*. The importance of the hearth as the religious centre of the house appears very prominently in the ceremonial of marriage. Thus the bridal torch was kindled at the hearth-fire of the bride's home,¹⁰ and the bride herself was received by the bridegroom with a torch lit at his own hearth,¹¹ while, again, the young wife had to lay an *as* upon her husband's hearth as a sacrificial gift,¹² thereby, so to speak, purchasing a share in the religious fellowship of her new home.¹³ As mistress of the house it was her special task to keep the hearth clean, and to deck it with garlands at the Kalends, Nones, and Ides—duties which in her absence devolved upon the stewardess (*vilica*) as her representative.¹⁴

The fact that the hearth was the shrine of the household gods, ancient and modern writers, proceeding upon the assumed identity of these with the ancestral spirits, have sought to explain by the hypothesis that in primitive times the dead were interred within the house, just beside the hearth.¹⁵ We have, however, no evidence that this was ever the practice in Rome; the reference of Serv. *En.* v. 64, vi. 152, 'apud maiores . . . omnes in suis domibus sepeliebantur,' is intended simply to justify the worship of the household Lares and Penates, and is thus obviously a mere theory, which the laying open of the ancient cemeteries in the Forum and on the Esquiline has in no way confirmed.

The household deities worshipped at the hearth all bear in common the name *di penates*.¹⁶ The term *penates* is derived from *penus*, the store-room off the *atrium* and close to the hearth;¹⁷ the contents of this chamber were guarded by the Penates, who in this way guaranteed the continued existence of the house. Among the Penates the chief place is held by Vesta, who is simply a divine personification of the hearth-fire,¹⁸ and, in fact, her

name is actually used metonymically as equivalent to *focus* or *ignis*.¹ But, in addition to Vesta, all the deities regarded by a particular household as the special guardians of its fortunes were worshipped as Penates; and the wall-paintings and bronze figurines of Pompeian domestic chapels show that in later times such homage was very frequently accorded to Juppiter, Fortuna, Hercules, Mercury, etc. Originally, however, the term *Penates* was not used with reference to particular divine personages at all, but was applied quite generally to all the tutelary *numina* of the household. This more primitive conception still survived in the State worship of the gods at a later day; thus the circular temple of 'Vesta publica populi Romani Quiritium' in the Forum did not contain images of the gods, but enclosed only the sacred fire of the national *focus*, and the *penus* attached to it; here, in fact, the national worship of Vesta and the Penates always remained an imageless cult.

Like the national worship in the temple of Vesta, the cult associated with the domestic hearth was at the outset also confined to Vesta and the Penates. It was only at a later period that the worship of the Lares became incorporated with the domestic hearth-cult. The worship of the *Lar familiaris*, originally localized at the *compita* (cf. art. CROSS-ROADS [Rom.], vol. iv. p. 335 f.), was gradually—and in reality for the sake of the household slaves, who had a strong interest in the cult of the Lares²—allowed a place beside that of Vesta and the Penates at the domestic hearth. Hence in Plautus³ the treasure entrusted to the keeping of the *Lar familiaris* is buried 'in medio foco'; and, later, people even spoke of the 'focus Larum,'⁴ while the food that was formerly presented to the Penates came at length to be offered to the Lares.⁵ In the re-organization of the Lar-cult by Augustus⁶ the tutelary spirit (*Genius*) of the master of the house was also added to this group, and in the wall-paintings of Pompeii we see the figure of the *Genius* standing between the two Lares and conjoined with Vesta and the Penates.⁷ By this time, however, the hearth had long been removed from the *atrium* and placed in a separate room for cooking in the rear portion of the house;⁸ the shrine of the household deities (often called *lararium*)⁹ was in some cases transferred with it to the kitchen,¹⁰ while sometimes it was still retained in the *atrium*,¹¹ or else placed in other rooms of the house,¹² so that its connexion with the hearth was now for the most part a thing of the past.¹³

Just as in the private house the hearth supplied the place of the altar, so we occasionally find *foci* or *foculi*, either in addition to, or as substitutes for, the altar, in the sacrificial ritual of the State religion.¹⁴ These were sometimes used as *arae temporales*, i.e. altars for temporary occasions¹⁵, some-

times in circumstances where a portable apparatus was employed for the introductory libations of wine and incense,¹ or for the burning of the entrails.² Hence the occasional use of the phrase 'foculo posito' as designating an accompanying sacrificial act.³ The assertion that the use of *foci* was confined to the worship of particular classes of deities⁴ rests upon an arbitrary hypothesis of Roman writers. On monuments showing representations of sacrificial ceremonies we find the *foculus* in the form of a collapsible metal tripod supporting a vessel for holding the fire.⁵

HEBREWS.—See ISRAEL.

HECATE'S SUPPERS.⁶—'Hecate's suppers' (*δεῖπνα* 'Εκάτης, or, as they were sometimes called, 'Εκαταῖα,⁷ or 'Εκατῆα⁸) were the offerings laid at the cross-roads every month for Hecate. Their purpose was to placate not only this dread goddess of the under world, but also, as we learn from Plutarch (*Moralia*, 709 A), the *ἀπορροαῖοι*, i.e. the ghosts of those who for some reason cannot rest easy in their graves, and come back to earth in search of vengeance.⁹ An army of these invisible and maleficent beings follows in the wake of its leader and queen as she roams at large through the midnight world.¹⁰

In reality, then, these offerings are a specific variation of the primitive cult of the dead. And to a certain extent this specific variation is due to the well-known fact that the Hecate with whom we have to deal is a composite deity. She was a moon-goddess, and possibly even a goddess of the roadways,¹¹ as well as a goddess of the under world; and which of the three was her original function is a matter of dispute. This, however, need not concern us here, inasmuch as the amalgamation had evidently taken place long before the *Plutus* (594 ff.) of Aristophanes, in which occurs the first surviving reference to our subject.

Hecate's suppers were naturally deposited at the cross-roads. The triple goddess is so clearly identified with the place where three roads meet that

she is often known as *Τριόδῖτις*, Trivia. The cross-roads, too, have always been haunted by ghosts of the unquiet dead (see CROSS-ROADS).

As regards the day of the month upon which these offerings were made, the testimony appears at first sight to disagree, and the result has been a certain amount of confusion in the statements of modern investigators. We are told, on the one hand, that the date was 'at the new moon,'¹ or, as stated more exactly by the scholiast on Aristophanes (*Plutus*, 594), *κατὰ τὴν νοῦνην* . . . *ἐσπέρας*, which, in this connexion, ought to mean 'on the eve of the new moon.' The statement is entirely in accordance with the character and functions of the goddess. Beyond a doubt, the date of this sacrifice was determined, at least originally, by the first appearance of the new moon: that is, by the first appearance of Hecate herself as she comes up again from Hades. Offerings to the dead were also made on this day.² On the other hand, we are told that the sacrifices to Hecate and the *ἀπορροαῖοι* fall on 'the thirtieth,'³ i.e. on the last day of the month according to Greek reckoning. This day was also given up to the service of the dead.⁴ Indeed, at Athens the last three days of the month were sacred to the powers of the under world, and hence were counted *ἀπορροαῖες*, *nefasti*. *Δεῖπνα* were given to Hecate and the *ἀπορροαῖοι*; libations were offered to the dead, etc.

The discrepancy of dates, however, is only apparent. So long as the Greeks reckoned time by lunar years, which was the case during the earlier history of these sacrifices, the eve of the new moon always fell on the thirtieth of the month as a matter of course. The reformed calendar took no account of the phases of the moon. Nevertheless, the old habit of calling the first of the month *νοῦνη*, 'new moon day,' still persisted for an indefinite time, and to an indefinite extent. Hence, when the scholiast quoted above said 'on the eve of the *νοῦνη*,' he doubtless had in mind the thirtieth of the month according to the new calendar. It seems certain then, partly no doubt because 'three' and all its multiples are peculiarly sacred to Hecate, that the sacrifice still clung to the thirtieth, despite the fact that, when the calendar was reformed, the original reason for selecting that date ceased to exist. It is possible, of course, that the rite was also performed at the actual appearance of the new moon as well as on the traditional thirtieth, but this cannot be proved on the basis of evidence now available.

A reference in the *Hecate* of Diphilus and a passage from Philochorus—both quoted by Athenaeus, 645—show that on the eve also of the full moon (the 13th of the month Munychion [cf. C. A. Lobeck, *Aglaophamus*, Königsberg, 1829, p. 1062]) Hecate was remembered at the cross-roads⁵ with a cake surrounded by lighted torches, and known as an *ἀμφιφῶν*. This striking prototype of our birthday cake was also a regular article of diet.⁶ It seems likely, however, that this observance at the full moon came over to Hecate from Artemis at a later date.

As is usually the case with offerings to the dead, the regular 'Εκάτης δεῖπνον on the thirtieth of the month consisted of food. The specific articles, so far as they are mentioned, were: (1) *μαγίδες*,⁷ a kind

¹ Ovid, *Fasti*, iv. 935: 'tura focis vinumque dedit'; Henzen, *Acta Fratr. Arval.*, Berlin, 1874, p. 93.

² Macr. *Sat.* iii. 2, 3: 'exta porriciunt, dis danto in altaria aramine focuove, eove quo exta dari debebunt.'

of loaf or cake, the shape and ingredients of which are not clear; (2) the *μαῖνις*,¹ or sprat; (3) *σκόροδα*,² or garlic; (4) the *τρίγλη*,³ or mullet; (5) *ψάμμητα*,⁴ a sacrificial cake described by Harpocration as 'something like the *ψαῖσά*'; (6) eggs;⁵ (7) cheese;⁶ (8) possibly the *βασυρίας*, a kind of cake, for which Semus, in Athenaeus, xiv. 545 B, gives the recipe.

Certainly some, perhaps all, of the articles in this ceremonial bill of fare were thought to possess some peculiar virtue or association commending them to Hecate and her crew. Ancient and widespread, for example, is the belief that the cock is the herald of the sun, and that all vagrant ghosts must obey his summons and return to their place.⁷ Possibly this is one of the reasons why eggs are so regularly associated with the cult of the dead.⁸ In most cases, however, it is likely that the choice of a given article for a given sacrifice is the cause, not the result, of the properties and associations ascribed to it. The belief, for instance, that garlic was sovereign against vampires⁹ was probably the result of, instead of the original reason for, its use in this service. So, too, the evident fact that the *τρίγλη*, or mullet, was sacred to Hecate is sufficiently explained by religious conservatism. Various authorities quoted by Athenaeus give reasons for it, but these were evidently second thoughts, and due to later theorizing.

However that may be, the food thus offered was meant to be prophylactic—to avert the *ἐνθύμιον*, the easily roused wrath of Hecate and the ghosts. Hence, if Roscher is correct, the title of Euclidean given her by Callimachus¹⁰ really embodies the worshipper's fervent prayer on these occasions that 'good digestion wait on appetite.'

With the regular *Ἑκάτης δειπνον* just described should be included the so-called *καθάρματα*, *καθάρσια*, and *δευθύμια*. All three were connected with the purificatory and expiatory sacrifices to Hecate that were performed at regular intervals for the house and household. They were, therefore, left at the cross-roads for Hecate, and, as was usually the case with offerings made to spirits present and easily angered but not invisible, the worshipper retired *ἀμετασπέρρι*, 'without looking back.'¹¹ Finally, all three, as Rohde suggests (*Psyche*, ii. 79, n. 1), were doubtless more or less confused with each other and with the *Ἑκάτης δειπνον* at an early date.

In its general sense *καθάρματα* means garbage, trash, offscourings of any kind. In this connection, to judge from a passage in Ammonius (p. 79, Valckenaer), *καθάρματα* (*καθάρματα καὶ ἀπολύματα*, as Didymus says in Harpocration, s.v. *δευθύμια*) means all those portions of the sacrifices for the house which were not actually used in the ceremonial. Such, for instance, would be the *ἀπὸνιμια* (Athenaeus, ix. 49 E), the waste blood and water. Though merely *καθάρματα*, they were sacred to Hecate, and were deposited at the cross-roads.

The *καθάρσια*, on the other hand, appear to have been whatever was left of the sacrifices themselves after the ceremonial in and about the house had been completed. Among the articles probably belonging to this class are eggs, and especially the body of the dog used in the sacrifice.¹ Dogs, as is well known, were peculiarly sacred to Hecate, and played a very important part in these ceremonial house-cleanings among both the Greeks and the Romans. Before they were sacrificed, for example, they appear to have been touched by every member of the family. This process, the *περισκυλακισμός*, seems to indicate that on such occasions this oldest of the domestic animals acted as the *φάρμακός*, the scapegoat of the entire household.

Another important detail in this ritual, as in all similar rituals the world over, is evidently alluded to by Plutarch (*Moralia*, 709 A), but it is described only by the scholiast on Aeschylus, *Choeph.* 98 (Kirochhoff). This was the fumigation of the house. After this was done, the censer, which was always of baked clay, was deposited at the cross-roads. In other words, in this particular ceremony the *καθάρσιον*, the only thing surviving, was the censer itself, and it was therefore treated accordingly.

We have called this ceremony 'fumigation,' because of the scholiast's own words: *καθαίροντες την οικίαν δόττακλινθ θυμιαττήριω*, 'purifying the house with a censer of baked clay.' No mention is made of what was actually burned in the censer—the operation was too familiar to require it. A somewhat different interpretation of these words, however, has had a considerable influence upon the modern discussion of the *δευθύμια*. It has been assumed that what was burned in the censer was not the ordinary fumigating materials, but the actual *καθάρματα* or *καθάρσια* themselves, as the case may be; that this process was itself the *δευθύμια*; and that, in fact, it was reflected in the derivation of the word (i.e. *θύμιον*, 'thyme'). If this is true, the best ancient authorities were at fault. The majority of them identify the *δευθύμια* with the *καθάρματα*, or, less often, with the *καθάρσια*.² So far as we know, none of these were burned. Irrespective of the *ἀπὸνιμια*, which could not be burned, we know that after the dog was sacrificed his body was taken to the cross-roads. We are also told not only that the eggs used were raw (schol. on Lucian, *Dial. Mort.* i. 1, p. 251, Rabe), but also, if we may believe that Clemens Alexandrinus (*Strom.* vii. 844) is referring to this sacrifice, that they sometimes proved to be *ζωογονούμενα*, able to fulfil the function for which nature had originally designed them. Certainly, too, the theory that *δευθύμια* is connected with *θύμιον* serves to confuse rather than to explain. The idea usually connoted by *δευθύμιος* is a high temper, a disposition easily roused to wrath. The present writer prefers, therefore, to adopt the suggestion of Rohde (i. 276 n.) that *δευθύμιον* would really be a more emphatic statement of the idea contained in *ἐνθύμιον*—a word which, as we saw above, is quasi-technical in this particular sphere; *δευθύμια*, then, would be 'ceremonies to avert the wrath' of Hecate and the ghosts. As such, it would naturally be a generic term for either *καθάρματα* or *καθάρσια*, and we see why the old lexicographers identified it now with the one, now with the other.³

Any interference with offerings to gods is naturally counted as sacrilegious, and renders the culprit liable to the punishment for sacrilege. This

¹ Roscher, 1889; Heckenbach, 2781; Rohde, II. 79, n. 1.

² Harpocration, Photius, *Lex.*, and Suidas, s.v.; Bekker, *Anecdota Graeca*, 288, 7, and 287, 24; Pollux, II. 231; *Stymol. Magnum*, 626, 44.

³ The *ὄψις* *αὐτῶν* *χόλως* used in the expiatory sacrifice prior to a public assembly (Demosthenes, liv. 19) are generally included among the *καθάρσια* regularly deposited at the cross-roads (cf. Sandys' note on Demosth. ad loc.).

was especially dreaded in the case of all offerings to the dead.¹ For example, as we saw above, the worshipper retired *ἀναστροφήν*. This was because he was afraid that the spirits would be angry if he appeared to be looking at them. Hecate was supposed to 'fasten at the cross-roads upon the guilty wretch who had gone after her foul supper,'² and to punish him with madness,³ or with some similar affliction, of all which she was popularly supposed to be the primary cause. Indeed, a curious passage in Petronius, 134, shows that merely stepping accidentally upon the *καθάρματα* (*purgamentum*) at the cross-roads was considered dangerous. The superstitious man, says Theophrastus (*Char.* xvi.), 'if he ever observes any one feasting on the garlic at the cross-roads, will go away, pour water over his head, and, summoning the priestesses, bid them carry a squill or a puppy round him for purification.'

In spite, however, of the supposed peril involved, as well as of the fact that they were proverbially foul and unpalatable,⁴ Hecate's suppers were frequently eaten by some one else. The most common motive, of course, was poverty. Our first reference to it is found in Aristophanes, *Plutus*, 594, where Penia claims that wealth always has the best of it. Chremylus counters with the statement that 'Hecate can tell us whether it isn't better to be poor or hungry. She says that well-to-do or rich people send her a supper every month; whereas poor people snatch it away when it has hardly been put down.' A truly Aristophanic argument! But it was taken literally by the scholiast, and hence apparently the quite impossible statement, still to be found occasionally in modern commentaries and handbooks, that Hecate's suppers were 'meals set out at the cross-roads every month by the rich for the benefit of the poor.' The Cynic philosophers frequently replenished their wallets from Hecate's suppers, or pretended to have done so, and reference to the practice was evidently a literary commonplace especially characteristic of their writings.⁵ We should expect it of a school whose doctrine of a return to nature led them to scoff at all conventionalities—religious or otherwise—and to ape the life and manners of the lowest stratum of society. Sometimes Hecate's suppers were taken merely in a spirit of bravado. Such was the case with the gang of Athenian 'Apaches' whom Demosthenes attacks in his speech against Conon (liv. 19).

Nevertheless, Hecate was deeply rooted in the hearts of the people. Of all the ancient cults, none has exhibited a greater vitality. As late as the 11th cent. the Church was still trying to break up the practice of leaving offerings at the cross-roads.⁶ Even now, not all have forgotten that the cross-roads are uncanny, and that dogs can see things invisible to human eyes. Hecate herself led the famous witch ride of the Middle Ages, while in Germany the Wild Huntsman, and in Touraine the heroic figure of Foulques Nerra, that great ancestor of the Plantagenets who still roams through the darkness with his immaterial host, are a clear indication that Hecate and her goblin crew are only disguised, not outworn.

LITERATURE.—This is fully given in the article, esp. in the footnotes.
KIRBY FLOWER SMITH.

HEDONISM.—Hedonism (from Gr. *ἡδονή*, 'pleasure') properly denotes the creed or theory that pleasure is or should be the sole end and aim of human action or conduct, and that to

it all good or well-being is ultimately reducible. The theory may be, and historically has been, held in a variety of forms. In the first place, we must distinguish what is known as *Psychological Hedonism* (the theory that every man either always or normally and regularly acts with a view to attainment of pleasure) from *Ethical Hedonism* (the doctrine that it is right and reasonable for men so to act, and that every man 'ought' to aim at securing for himself or for mankind the greatest possible sum of pleasure or balance of pleasures over pains). It is possible to be a psychological hedonist without adopting hedonism as an ethical maxim; indeed, as has frequently been urged, unqualified psychological hedonism leaves no room for ethical injunctions; for, if everybody always in fact aims at his own greatest pleasure, it is superfluous and meaningless to tell him that he ought to do so. On the other hand, ethical hedonism may be held by persons who do not accept psychological hedonism; which, in truth, is now either abandoned by hedonistic moralists or maintained with drastic reservations.

1. Historically, ethical is older than psychological hedonism, and was first explicitly propounded by Aristippus of Cyrene, a disciple of Socrates and founder of the Cyrenaic School (see CYRENAICS), who held that pleasure is the highest good, and that it should be one's aim to secure at every moment as much of it as possible. It is this simple and unaffected form of hedonism which is combated by the Platonic Socrates in Plato's *Philebus*. A more discriminating theory, formulated by Eudoxus (who introduced the observation that all creatures, rational and irrational, aim at pleasure), is criticized and rejected by Aristotle (*Eth. Nic.* x. ii.). A generation later, the doctrine that pleasure is not only the highest, but the only, good 'for gods and men' was preached by Epicurus who, however, unlike the Cyrenaics, insisted (a) that pleasures of the mind and of friendship and intercourse are greater and of more value than bodily pleasures; and (b) that the perfection of pleasure and the most desirable state is 'freedom from pain and care' (*ἀραπαγία*). This negative type or conception of pleasure, though never formally repudiated by the disciples of Epicurus, was, as their critics were not slow to remark, very far from being retained in practice as a standard of conduct by adherents of the School; nor was it easily reconciled with other sayings of the founder. The Roman poet Lucretius expounded the Epicurean philosophy with extraordinary earnestness and literary power; and it became very popular in the Græco-Roman world. But it naturally found no favour with the Christian Fathers or the Schoolmen. It was alien to the spirit of the New Testament (cf. ETHICS [Christian]).

2. In the 17th cent., hedonism was revived by Hobbes (*q.v.*), who, identifying pleasure with desire, was apparently the first to combine the view that there is no good other than pleasure with the psychological position that men in fact always seek it. Locke (*q.v.*), while adopting and defending the latter, i.e. the psychological tenet, rejected hedonism as an ethical method, and founded his standard of conduct in obedience to the commandments of God—an obedience motivated by prospect of 'the different state of perfect happiness or misery that attends all men after this life, depending on their behaviour here' (*Essay*, ii. 21, § 60). A hundred years later, Paley expresses the same view in even more uncompromising terms: 'Private happiness is our motive, the Will of God our rule' (*Mor. Phil.* ii. ch. 3). In the 18th cent. the main opposition to the 'selfish' philosophy came from the school of Shaftesbury, Hutcheson, and Hume,

⁶ Bohde, li. 84, n. 2, and references.

who asserted the naturalness and pleasure-bringing power of 'sympathy.' Here it may be well also to note that from the days of Plato and Aristotle onwards, side by side with 'pleasure' as an object of pursuit, the somewhat vaguely related concept of 'the profitable' or 'advantageous' (*τὸ συμφέρον, utile*) had been recognized—often by English moralists under the name of 'interest.' That in a general way it signified deferred, or diffused, pleasure had been taken for granted by many writers; otherwise it stood apart.

3. A new chapter in the history of hedonism opens with Jeremy Bentham (1748–1832), the apostle of purely mundane hedonistic utilitarianism. Discarding the support of theological sanctions and denying all qualitative differences in pleasure, he furthermore blended in one panegyric the praises of 'pleasure' and 'utility,' and made it clear that the latter consists wholly in balances of the former after deduction of necessary 'pains.' But he at the same time universalized his hedonism by importing into it the non-hedonistic axiom, 'everybody to count for one and nobody for more than one' (see UTILITARIANISM). Since the days of Bentham, the doctrine and the axiom have frequently parted company. It could hardly be otherwise. Pleasure-seeking and equitable distribution are apt to pull contrary ways. If one tries to spread pleasure everywhere, the layer of delight becomes so thin that nobody is delighted. Practically, under hedonism, not everybody, but a certain fraction of the community, gets the pleasure. It may be one class, or 'the classes,' to the exclusion of the masses; or, in a democratic age, it may be numerous masterful individuals, or groups of individuals, who 'like' one another, to the exclusion of those who fail, or do not try, to ingratiate themselves with the dominant type. Hedonism, it is true, would seek to remedy or obviate this unsatisfactory result by promoting a perpetual multiplication of means and opportunities of pleasure. And in this undertaking the philosophers have the enthusiastic support of the unphilosophic populace, no enterprise being more popular than discovery or invention of a new or improved source of pleasure. But, although pleasure is doubtless more widely distributed as a result of increased production, there is little or no evidence of its being more evenly distributed. As a matter of fact, Bentham's successors have not concerned themselves greatly about the axiom of equality. Rather they have endeavoured, by accepting and developing the doctrine of 'sympathy,' to magnify the value of social and altruistic pleasure. Moreover, J. S. Mill (*q.v.*) (1806–73), by recognizing qualitative differences in pleasure, further ennobled the ethics of hedonism, but at the cost of its fundamental hypothesis; for, if some pleasures are higher, and therefore better, than others, there must be something good besides pleasure to constitute the difference. Mill was no psychologist; and, while his eloquent advocacy of 'utilitarianism' did much to propagate a hedonistic view of ethics, his attempted inference of ethical from psychological hedonism has been often and effectually refuted. The psychology of hedonism found an abler and a thoroughgoing exponent in A. Bain (*q.v.*) (1818–1903), who held that pleasure or avoidance of pain is always the object of desire and the aim of action, excepting in so far as men are abnormally under the influence of a 'fixed idea.' This important exception virtually concedes all that is commonly urged by opponents of psychological hedonism.

Refutation of ethical hedonism is a larger matter. Nor is it practicable to summarize the arguments that have been advanced against it. They all rest ultimately on a conviction, of which (it would

appear) some men are, and others are not, conscious—that good, or 'what ought to be,' is something *sui generis*, and not the same as what is pleasurable to me or to anybody; in other words, that the ethical value of what I like, or of what anybody or everybody likes, is to be determined by, and does not determine, what is good or right. The hedonist accounts this belief, or utterance of consciousness, an illusion. To the intuitionist it is a fact, real and ultimate, and a disproof of hedonism.

Within the camp of the hedonists, egoism may be said to be now discredited—on paper, at all events. This already appears in H. Sidgwick's *Methods of Ethics* (6th ed., London, 1901), where Egoism, Utilitarianism (Universalistic Hedonism), and Intuitionism are severally examined and compared, an endeavour being made, in conclusion, to transcend the antithesis between the two last.

It would be out of place here to discuss the effects of the wide and increasing acceptance of hedonism as a philosophy of life. But it is permissible to remark that observation of those effects tends entirely to controvert the view, once prevalent, that the conflict of theories is mainly academic, and that there is practical agreement among intelligent persons as to what conduct is good and admirable. There is not and cannot be any such agreement. The victory of hedonism means a transmutation of all ethical judgments.

The incompatibility of hedonism with the biological principle of evolution is convincingly shown in W. Sorley, *Ethics of Naturalism*, London, 1904.

LITERATURE.—See ETHICS and the literature there cited.

J. M. SCHULHOF.

HEGEL. — 1. Life. — Within Hegel's dates (1770–1831) fell the most eventful epoch in modern history since the Reformation. In literature, philosophy, and politics, humanity was enriched and adorned with a galaxy of men of brilliant and daring genius. While Hegel occupies a foremost place amongst the men of this period, his own personal life was quite uneventful. He gave himself exclusively to the task of the philosopher—that of severe concentrated reflexion on ideas and historical movements. The mental aloofness which this required left neither time nor place for practical participation in the changes that were occurring around him; and he never sought directly to influence the current of events. The rapid succession of political and social crises only interrupted the even tenor of his way by slight personal inconvenience. The quiet waters of academic life were perhaps less affected by the revolutionary storms than any other region; and Hegel was from first to last an academic man.

Georg Wilhelm Friedrich Hegel was born in Stuttgart on 27th Aug. 1770. His ancestors had long been connected with Swabia, and Swabian in mind and character Hegel always remained—naïve and simple in nature, genial in temperament, with a strong vein of good sense embedded in sardonic caustic humour. Various members of the family had been craftsmen, officials, scholars, and pastors; one of the latter is said to have baptized Schiller the poet. Hegel's father, Georg Ludwig Hegel, was an under-official in the service of the Duke of Württemberg; of him or of his wife, Maria Magdalena Fromme, nothing seems to be known. Hegel was the oldest son; a brother, Ludwig, entered the army, took part in an expedition to Russia, and died unmarried; a sister, Christiane, to whom, as to his mother, Hegel was greatly attached, also died unmarried. Hegel, after attendance at a 'Latin School,' entered the usual Gymnasium at seven years of age, was the model industrious pupil who took prizes in every class, read methodically and intelligently in many direc-

tions, and left school with a sound classical training and considerable miscellaneous knowledge. His mind developed very slowly, and his achievements were always the result of hard work and inexhaustible patience. To the end of his life the path from thought to expression, whether in speech or writing, was more or less blocked; his utterance was always awkward, and even his gestures were clumsy and angular. These peculiarities were not overcome with advance of years; on the contrary, the advance in his mental development seemed to increase the difficulty in finding the appropriate expression for his ideas.

At eighteen (1788), he entered the theological seminary at Tübingen as a ducal bursar, and here he remained till 1793. He graduated master of philosophy in 1790 with a scholastic dissertation 'On the limits of human duties, assuming that the soul is immortal'; and passed the examination for clerical orders in 1793 by an academic thesis on what seems an insignificant topic in Church history—the calamities affecting the Church of Württemberg. At Tübingen his abilities seem to have made no great impression on his teachers or on his fellow-students. He spent the next seven years as a private tutor, partly in Switzerland (1793–96), and partly at Frankfurt (1797–1800). From the fragments of his early writings collected by his biographer Rosenkranz, and from his early letters, there can be little doubt that this was the formative period in his intellectual life. His tutorships left him apparently plenty of time for his own work; he read widely, made himself master of the new philosophy, and through his friend Schelling came directly into touch with the leaders of the new movement. By the time his apprenticeship ended, he emerged from obscurity with an unusually well equipped intellect, re-entered academic life at Jena in October 1801 as lecturer, and at once took his place as a leader in philosophy. After a brief adherence to the views of Fichte, he came into line with the early philosophy of Schelling, with whom he edited the *Journal für Philosophie* (1802–03). He definitely broke away from Schelling about 1803 and took up his own independent position in his first work, the *Phänomenologie des Geistes*, which was given as a course of lectures to his students in 1806 and appeared in published form in 1807. He was appointed 'extraordinary' professor in February 1805, and received his first and last salary of 100 thalers in July 1806. Hegel began to feel life at Jena University too narrow, and his eyes turned to Heidelberg. For a few years after 1806 he drifted from university circles. He took up the editorship of the *Bamberger Zeitung* in 1807 and remained there till 1808. In the autumn of 1808 he was appointed Rector of Nürnberg Gymnasium, where he remained till 1816. In the autumn of 1811 he married Marie von Tucher. While in Nürnberg he drew up for his pupils his first draft of his philosophical system, afterwards published as the *Propädeutik*; here, too, he composed and published his *Logik*, which occupied him from 1812 until 1816, when he moved to Heidelberg as Professor of Philosophy. In 1817 appeared the first edition of his *Encyclopädie* which was published for the students attending his lectures. In December 1817, at the instigation of Solger, overtures were made to him by the Prussian minister of Education, Altenstein, which led to his migration to Berlin in Jan. 1818 to occupy the chair of Philosophy. Hegel was liberally treated by the Prussian minister, was given a salary of 2000 thalers and 1000 thalers for removal expenses, and anything further he might require to make him comfortable in his new post. Here Hegel remained till his death in 1831. The chair in Berlin was the summit of his academic career, and constituted

him the acknowledged leader of philosophical thought in Germany. His work prospered, his influence with his students steadily grew, as a spiritual force he became predominant, and his circle of friends made life happy and complete. He was appointed Rector of the University in 1830; otherwise the record of his life in Berlin is the record of the successive courses of lectures on the different parts of his system, as this gradually grew and took shape under his unremitting reflection. He published *Naturrecht und Staatswissenschaft im Grundriss*, otherwise called *Philosophie des Rechts*, in 1820, the 2nd edition of the *Encyclopädie* in 1827, and the third edition in 1830. None of his other lectures in Berlin were published till after his death, when the courses on History, Religion, and Art were edited and produced by his pupils. His death took place on 14th Nov. 1831. He was seized with cholera in one of its subtlest and most dangerous forms, and died very suddenly after a day's illness. He was buried, at his own request, beside Fichte and close to the grave of Solger, his friend.

Throughout his life Hegel showed no outstanding distinction of personality of any kind. He never seems to have gone through any intense spiritual conflict, he had no period of storm and stress, and had no quarrel with persons, passions, or principles. His was a life without misfortune, without adventure, without a great friendship, without the elevation of a great love or the tyranny of a great ambition. Science was the consuming occupation of the whole energy of his mind. He had in an unusual degree that supreme intellectual detachment, combined with complete and intense concentration, which marks the philosopher *pur sang*. In private life he was sociable, and on terms of friendship with a few simple and genial people—a natural being without personal affectations, despising all pose, and with none of the self-consciousness which makes a man a prey to the flattery of success or to the morbidity of failure. He was always reconciled to life as he found it, accepting without demur the institutions and even the fashions of his social environment, meeting the serious demands of the day with sober good sense, and the trivialities with good-humoured irony; a good citizen, a good patriot, a good churchman, a man of unbending rectitude and unswerving consistency of purpose.

2. The historical sources of Hegel's philosophy. —It is characteristic of most philosophers to support their own theory by assuming a hostile attitude towards their predecessors, more especially their immediate precursors in the common task. Sometimes the hostility is open, sometimes veiled in indifference; at times the attitude is critical, at other times neglectful or even grudging; but the more comprehensive the new system, the more does it usually claim acceptance at the expense of those who have gone before. This reluctance to acknowledge intellectual ancestors creates a self-conscious independence, which may be necessary to maintain complete freedom of thought, and devotion to objective truth, but contrasts curiously with the trust in tradition and respect for the past so characteristic of religion and social life. It makes every philosopher an intellectual Melchizedek, and the company of philosophers a pure democracy contemptuous of forefathers and genealogies.

Hegel was one of the few who recognized that such a negative attitude towards the past was not necessary in the interests of either speculative freedom or philosophical truth. He was the first philosopher in modern times to treat the history of philosophy as a specific philosophical problem, and to offer a clue to interpret and connect the different philosophical systems which the history of human culture had brought to light. He sought to show

that all philosophers had a single purpose in view and were dealing with a single principle, and again that each expression of that principle, being incomplete or one-sided, demanded and gave rise to a further interpretation of its meaning. The different systems were thus essentially connected in two ways: on the one hand, all were endeavouring to unfold the meaning of a single object or 'idea,' as Hegel called it; on the other hand, each successive system was a progressive advance on its predecessor. Each fresh attempt to grasp the fundamental 'idea,' required and made possible the speculative freedom of each thinker, his detachment from his predecessors, immediate and remote; the progressive evolution of philosophical truth involved and ensured the intimate unity between past and present systems.

This conception of the history of philosophy throws direct light on the sources of Hegel's own philosophy. It is, indeed, the only assistance he gives to those who wish to know what those sources are. Hegel's development was almost entirely internal; he apparently made no attempt to work out tentatively philosophical ideas which must have occurred to him at the various stages of initiation. If he did make any bridges over the various currents of thought which he encountered on the way to his system, he must have burnt them; but the chances are that he waded across in silence and did not pause for intellectual experiments. In his earliest philosophical essays published in *Das kritische Journal der Philosophie*, edited by himself and Schelling, his mind is already made up on the main points at issue; and, when his first philosophical treatise (the *Phänomenologie des Geistes*) appeared in 1807, his system was already formed and henceforth remained unchanged in principle and method. The only indications we have of the course of his ideas in the preparatory years are a few isolated fragments and remarks on different topics, political, religious, and philosophical, which in part were first published in Rosenkranz's 'Life of Hegel,' and which have recently been published in complete form. From these scattered sources, taken along with the conception of the history of philosophy above described, we are able, however, to specify some of the more important influences which helped to determine the form of Hegel's philosophy.

(a) Hegel was a student of theology, and for some time seriously contemplated a clerical career. This of itself would have turned his mind to the study of religion, but in any case the subject of religion was one of absorbing interest throughout his whole life. His mind was, so to say, constitutionally of a deeply religious cast. This affected his attitude towards philosophy from the first, and helped very largely to shape the philosophical problem as he understood it. There is no topic to which he so constantly recurs as that of the intimate relation of religion, especially the higher types of religion, to philosophy; and in no part of his analysis of ideas is he more happy than when he illustrates the community of thought between the two. The religious aspect of experience was, then, one of the most important factors determining the form and principle of his philosophy.

(b) A second and hardly less important influence was derived from his study of history, the history of ideas, and the history of social and political institutions. There seems little doubt that he early realized the importance of a study of the history of philosophy, both for the due appreciation of the form and content of speculative thought and for the comprehension of its purpose and place in the history of mankind. This furnished him with a knowledge of philosophical problems and conceptions unrivalled and indeed unap-

proached by any of his contemporaries or predecessors in modern philosophy. It gave him perspective and breadth of view in the construction of his own system, and thus at least tended to counteract the one-sidedness which is the danger of all abstract thinking, and which so often arises from too exclusive concentration on the pressing problems of the moment. It enabled him to see whether a new form of philosophy was justifiably required in his own time, having in view all that had already been done, and, if so, what form that philosophy should assume. It showed him the vital relation between philosophy and general history, and so revealed the inner connexion of philosophy and human life, in a way hardly realized before and only imperfectly conveyed by historians, and philosophies of history such as that of his contemporary Herder in the *Ideen zur Geschichte der Menschheit* (1784). Above all, it led him 'back to Greece' with its wells of undefiled philosophy; and there he found an abiding fount of inspiration, to which he constantly returned and from which he drew a great part of what was best and most valuable in his own philosophy. If there is one element more than another in Hegel's study of history which gave him a unique place amongst his contemporaries and led him to take a distinctive line and make an independent contribution to philosophy, it is his intimate knowledge at first hand of the mind and thought of the Greeks. Just as from one point of view his philosophical aim may be said to be to harmonize the apparently conflicting attitudes of religion and philosophy, so from another point of view it may also be described as an attempt to recast Greek ideas in the mould of modern thought, and reconcile the contrasted human ideals of Greek civilization and of Western Europe in modern times.

(c) Another very important influence which guided the direction of Hegel's philosophical development was derived from the peculiar forces which were at work in all departments of human life at the time when he lived. Not only in the domain of literature, but in social and political life, traditions, conventions, the accepted principles of order, were set aside in favour of the spontaneous tendencies of the individual as a 'naturally' distinct and separate unit of humanity. The supreme outcome of this movement in the sphere of politics was the French Revolution, and in the sphere of letters Romanticism. On its negative side we have civilized society dissolved into its ultimate constituents and rejecting its ancestral ideas and organized institutions; on its positive side we have the attempt made to carry out the purpose of human life under the guidance of individual freedom. It was impossible for any man of insight, endowed with a sympathetic appreciation of the higher ideals of humanity, to remain unaffected by such a highly electrified spiritual atmosphere. Hegel as a son of his time was closely in touch with and profoundly influenced by the forces which were changing the features of modern civilization and creating new worlds for old. His unique contribution to the movement was derived from a reflective understanding of its governing ideas, as the result of which he sought to place it in its proper setting within the drama of human history, to correct its one-sided intensity, and to reveal it as a phase of the general life of the human spirit. Here once again his study of history came to his assistance, and his knowledge of the philosophical ideas of the past enabled him to grasp the inwardness of the thought of his own time in a way impossible to those who were completely under the control of its immediate influences.

(d) Finally, there can be no doubt that the Kantian

philosophy, with its succeeding development under the hands of Fichte and Schelling, was the immediate philosophical source of Hegel's own system. This was due partly perhaps to Hegel's conception of what development of philosophy involved, but much more to the fact that there was no escape from the influence of a scheme of thought which had taken complete possession of the philosophical minds of his time, which in its principle was profoundly important and in its full significance was not understood, much less exhausted, by those who had as yet undertaken to expound it. It was thus natural and inevitable, if Hegel was to take his place amongst the philosophers of his time, that he should fall into line with the Kantian movement, and in the first instance make himself thoroughly acquainted with its principle, with the development of that principle at the hands of his immediate predecessors and contemporaries, and with the latent philosophical possibilities of the principle unrealized by its originator or by any of the exponents who had as yet adopted or adapted it.

Other influences there may have been in the final shaping of Hegel's system, but those enumerated seem the most prominent and the most effective. All of them have to be borne in mind if we are to give an approximate explanation of the sources of his philosophy; for it seems superficial and inaccurate to describe his system as 'Spinozism recast in the mould of the principle of Kant,' or 'systematized Romanticism,' or again as a revised form of the philosophy of Schelling.

3. Hegel's view of philosophy.—Hegel differs from other philosophers in nothing more than the care which he bestowed on the consideration of the place of philosophy in the plan of human experience. In this he reminds us of Plato and Aristotle rather than of any modern thinker. Hence no statement of Hegel's system is satisfactory which does not at the outset explain his view of the object and method of philosophy. In a sense one might say that his conception of philosophy contains a kind of epitome of his whole system. He constantly recurs to the topic whenever a relevant opportunity arises, and had no doubt as to what precisely he meant by philosophy.

The distinctive character of his conception of philosophy may conveniently be brought out, to begin with, in relation to Kant's theory of knowledge. On Kant's view, metaphysics was a failure and a futility. It failed in the sense that the knowledge it pretended to give was not, and apparently could not be, verified by experience, did not secure common assent even from those who cultivated it, and showed no signs of any progressive advance in the comprehension of the object or objects with which it professed to deal. It was futile in the sense that it was a mere formal manipulation of the most general concepts in *abstracto*, the connexion of which was merely analytical and was secured by the purely logical principle of consistency or non-contradiction, the origin and validity of which were accepted without criticism or challenge, with the result that such a system of concepts, being in no way subjected to the only criterion of truth—agreement with experience—could not be regarded as either true or false, as anything more than an intellectual castle in the air without any serious claim to be called knowledge. The pretence of metaphysical knowledge stood in glaring contrast to ordinary scientific knowledge; and this would be admitted were it not for the apparently ineradicable instinct which induces reason ceaselessly to undertake the task of supplying such knowledge. Kant therefore sets himself to examine the nature and conditions of true knowledge in order (1) to show the limits within which knowledge is valid and successful; (2) to account for both the failure

and the apparent inevitableness of the task of metaphysics. Kant's theory of knowledge in its scope and its outcome was controlled by the purpose which determined it: true knowledge, he maintained, was concerned solely with experience which always involved the content of sensibility; metaphysics was the result of the operation of reason untrammelled by experience.

Hegel regarded Kant's whole undertaking as logically impossible from the start, for Kant's own theory is meaningless if his view of knowledge is correct. Kant's theory is itself a kind of knowledge; it is the knowledge which philosophy supplies; but it finds no place or explanation in his theory. It does not start from nor deal with experience in Kant's sense. But it is not permissible to have a standard of knowledge by which to judge metaphysics, without equally demanding a standard by reference to which the criticism of the validity of knowledge is itself made possible. The criticism of *all* knowledge implies a criterion, just as much as the criticism of a part of it. The philosophy of the limits of knowledge must in some way be unconditioned by those limits; and hence either such a philosophy is not knowledge, or else knowledge must have a meaning beyond that implied by such a philosophy. Kant as the guardian of the limits of knowledge overlooked the inevitable question, 'Quis custodiet ipsos custodes?' Logically, then, Hegel's criticism of Kant is unanswerable from Kant's point of view. There is only one way of determining what knowledge can or cannot do, and that is by following knowledge wherever it leads: as Hegel frequently remarked apropos of Kant's theory, we can learn to swim only by entering the water.

But it is clear that we cannot swim in any kind of water, and we must have some preliminary general idea of our own strength. Hegel rejects Kant's conception of knowledge, virtually because it is too restricted in scope, and because it does not give any explanation of that kind of knowledge involved in constructing his own theory, viz. philosophical knowledge. But Hegel, too, starts from a conception of knowledge, and also takes a certain type of knowledge as a standard by which to determine the value of other kinds of knowledge. His general conception of knowledge is wide enough to embrace all forms of knowledge: his standard type of knowledge is that by which all forms of knowledge must be interpreted, the ideal of all knowledge; and this is the idea of knowledge as realized and developed in philosophy. Thus he dismisses Kant's arbitrary limitation of knowledge to 'scientific' knowledge; he regards philosophical knowledge as a necessary and definite type of knowledge with a distinctive character of its own, but at the same time intimately related to all other forms of knowledge. Being that type by which all kinds of knowledge are interpreted, it must in some sense be a higher embodiment of the nature of knowledge than any other. But it cannot be obtained from an empirical examination of other types given in experience: it is not a mere aggregate of the other types, nor a generalization from them. It has a unique function to perform, which must be capable of precise definition as a preliminary to carrying out the task of philosophy: without this we shall not know how to proceed. And in so far as it requires justification, this must somehow be supplied by philosophy itself.

The essential elements in Hegel's conception of philosophy are determined by reference to (1) the object with which philosophy deals, (2) the medium in which it works, (3) the method by which it carries on its process to a final result. These factors are closely connected, but each is distinct from the other.

On Hegel's view the object of philosophy is described in general terms as the Whole, the Absolute, or God. This is reality without qualification, and hence, abstractly considered, can only be described as what is simply, or what is not finite, not a part. The specific meaning assigned to this object varies with each philosophy, but it is one and the same object with which all philosophies deal. Even when a philosophy denies that any definite meaning can be attached to such an object, it is just the reference to this object which makes such a denial a contribution to philosophy. Whatever philosophy may or may not achieve, it has always been concerned with what is ultimate. This does not require demonstration; it is so much historical fact.

Again, the medium in which philosophy moves is that of the supreme achievement of thought—a notion. This has certain characteristics, negative and positive. Negatively, it is not derived from nor dependent on sensation or perception, and hence is not a mere general concept: it is not a purely formal abstract universal, and hence a notion has no rigid fixity of outline, empty of all specific content and applicable to any, and does not exclude all relationship with other notions. Positively characterized, a notion operates freely and independently within itself and under its own conditions. It is the ultimate principle controlling and penetrating all thought wherever it appears, whether in sensation, perception, or abstract reflection; it is universal, but is a concrete universal, that is, holds within itself the particular and is the organic unity of universality and particularity; it is a single identity in and through difference, is, in fact, thought as an operative individual unity; and each notion directly refers to and connects itself intimately with other notions, so as to form an organically articulated system, a self-contained structure of notions.

The method by which philosophy proceeds is that of development of the notion. Development here does not mean development in time, but development in expression and coherence of the elements involved in the notion; it is a development in terms of and for the purposes of complete thought. The notion is an operative individual unity, and thus is a process which can be realized with more or less completeness. The unity of the elements in the notion may be implicitly asserted or explicitly affirmed; it may be immanent or fully unfolded. The elements in the notion may be taken by themselves, and each may in turn be said to be the whole notion; but each inevitably calls for the other as soon as the one-sided affirmation is clearly made and seen, because nothing short of the whole notion can express its meaning, and its unity is indissoluble. One partial affirmation, therefore, gives rise to another, till the notion is fully unfolded and installed as an explicit unity of all its elements. The partial affirmation of the notion is, relatively to the whole, an abstract affirmation; the complete explicit co-ordination of all the elements within the unity of the whole notion makes impossible any abstract isolation of elements, and so cancels all one-sided affirmations; relatively to these abstract affirmations, the whole notion, as explicitly containing and co-ordinating all its elements, is concrete. From this point of view the development of the notion is described by Hegel as a process of the notion from abstract to concrete.¹ The notion itself determines these stages; it is these stages, and it is the process of removing the one-sidedness of each till the unity of the whole is completely realized. Looking at the process as a growth from a lower to a higher degree of articulation of the nature of the whole,

it is spoken of as a process from 'potentiality' to 'actuality.' Looking at the notion as an individual concentration of the highest activity of mind, which is essentially self-consciousness, the process is described as the notion gradually 'coming to consciousness of itself.' Taking the stages of the notion as stages in a self-distinguishing and self-relating principle, the identity as such of the notion is spoken of as the notion 'in itself,' the notion 'implicit'; the diversity as such, which the notion contains, is described as the notion 'for itself,' the notion 'explicit'; while the union of these two aspects in a single articulate totality is the notion 'in and for itself,' the notion completely 'realized.' These different ways of regarding the process in the life of the notion are closely connected, and are, in fact, alternative expressions for the process which are employed according to the context and to suit the convenience of the exposition.

The conception of philosophy above delineated marks off philosophy as a form of knowledge from all other forms in which knowledge exists, and is from first to last the region within which philosophy in Hegel's sense lives and moves and has its being. It no doubt requires justification, and Hegel gives a justification of this conception; but it is a justification in terms of and satisfactory to philosophy itself, not one that any other form of knowledge would accept or give. And indeed no other form of knowledge except philosophy requires or is able to guarantee the point of view of philosophy. Each form of knowledge takes its own way and keeps within its own conditions and limits, without giving any other justification of itself except the success with which it accomplishes its aim. Philosophy alone must try to justify its own conception, because it is and claims to be the most comprehensive type of knowledge; and without such a justification from itself it would require a still higher form of knowledge to justify it, and so on *ad infinitum*. The only way it can prove that it is the final or 'absolute' form of knowledge is by showing that it can account for its own conception; and if it can do so there is no further form of knowledge possible or required. In that sense philosophy is without presuppositions (*ἀνεμπόδῆς*), because it leaves nothing, not even itself, unexplained and external to the control of its own principle. What this justification is, we shall presently see.

The conception of philosophy is of importance not merely to make clear from the outset what Hegel means by philosophy, but also to understand his manner of treating the different parts that fall within his scheme of philosophy. The treatment is throughout uniform in character. The Absolute is the fundamental object from first to last. The Absolute is one and is apprehended in the form of the notion: it is the notion *par excellence*. But the Absolute expresses itself in different ways, each of which is an embodiment of the notion. And conversely, wherever we have a notion, there in some way we have an expression of the Absolute, the ultimately real. The process of revealing what the notion contains is, as just indicated, that of development. Hence in every part of philosophy the same mode of exposition is adopted. This principle of development has to deal sometimes with material which has no temporal nature at all, sometimes with material which has a temporal character, or only exists in a temporal sequence. In all cases the development is a logical sequence, for only so is the content of the notion coherently and systematically connected in the way demanded by philosophy. In the case where the content is bound up with temporal conditions, the development of that content in logical form consists either

¹ See *Gesch. der Philos.* xiii. 54.

in adopting the content which time offers and arranging it to meet the requirements of the logical development of the notion considered, or in regarding the temporal sequence of the content as in essence following the same course as the logical sequence of the notion. An illustration of the former appears in the treatment of the various historical forms assumed by the idea of freedom in human history; the course of the history of philosophy in Europe is an illustration of the latter.

Following this clue of the inseparable connexion of the notion with the principle of logical development, we can see how it comes about that in every part of Hegel's scheme of philosophy there are only two questions to be considered: What is the notion dealt with in the part in question, and how is the development of the content of that notion to be expressed in terms of the peculiar character of the notion in question?

Thus we have (1) the notion of philosophy itself as a factor in the life-history of the human experience of the individual mind. The development of this notion in and through the various forms of concrete human experience gives us the philosophical interpretation and vindication of the place of philosophy in experience. This part of the system of philosophy is worked out in the 'Phenomenology of Mind.'

(2) Philosophy, as a human effort to express the ultimate notion of the Absolute, is subject to the conditions of race, culture, and civilization in the midst of which it appears. The one notion is, as already said, dealt with all along, but it expresses itself differently owing to the variety of conditions just mentioned. It is thus one philosophy which works itself out under these conditions; the different expressions of this one philosophy constitute a variety of philosophical systems. These systems appear at different times, and necessarily make philosophy take on a historical character. Taken together, they constitute the history of philosophy; and these systems are but forms of one philosophy, being the work of the one notion which animates them all. The logical development of the expressions of this one system through all its historical conditions constitutes what Hegel understands by the 'History of Philosophy.' The logical development here is inseparable from the direct historical sequence in which the different systems have appeared. The historical direction is the logical direction, because there is one notion or one absolute system working through all and animating the various minds concerned; and the way in which its content actually appears is a historical sequence. Thus Hegel's 'History of Philosophy' is not a mere narrative of theories succeeding each other in time, but an integral part of his own philosophy; it is a philosophical interpretation of the history of philosophical theories.

(3) The notion of the Absolute, which is the ultimate object of philosophy, has, like every other notion, its own moments or aspects, each of which is the Absolute, but is capable of distinction from the others, and capable of separate logical development. Its very concreteness makes it necessary for philosophy to take it in detachments, so to say, in order exhaustively to express its content. But its single concrete reality cannot be broken up into separate components. It remains in its concreteness as the all-comprehensive and supreme principle operating in each of its aspects, and containing all the results of the development of each in turn. It is the presupposition and final result of that development. The aspects are themselves, therefore, but stages in the evolution of its concrete single reality, and must be so treated; and the development of the different stages forms a

continuous development of the entire content of the notion of the Absolute. This comprehensive development of the notion of the Absolute is the entire system of the philosophy of the Absolute. It forms a single body of philosophical science, with distinct members. This constitutes what Hegel calls the 'Encyclopædia of the Philosophical Sciences.' It is thus not a mere collection of sciences, or a dictionary of philosophical knowledge; it is a philosophically connected whole of Science.

(4) It has just been said that each of the aspects of the notion of the Absolute can be treated by itself, but that each must be looked on as a specific embodiment of that notion. The first aspect logically is that of the notion in its bare concentrated universality, the notion 'in itself,' the notion as self-identical. This aspect must cover the whole domain of the Absolute, but must do so always with this character of universality, and formal self-identity. Whatever the Absolute contains must be expressible from this point of view; and, since the Absolute is the totality of all reality, there will be a multiplicity of universals within it. The notion as self-identical, in short, is capable of logical development in terms of its universality alone; such development will unite all its universals into an organized whole or Science of all the ultimate universal elements of the Absolute as it is or was 'in itself before the creation (i.e. differentiation) of nature and finite spirit.' This is carried out in the science of 'Logic'—the science of the merely universal principles by which the Absolute lives and moves in a uniformly coherent intelligible system. Such a system is the ground-plan of the whole of reality, the network of notions which holds together and constitutes the essence of all that is.

(5) The second aspect of the notion of the Absolute is the sheer opposite of the first, is the aspect of pure dispersion, the notion 'for itself' (i.e. out of itself), the notion as self-differentiated. This again covers the whole domain of the Absolute, is the Absolute in this peculiar form. The fundamental oneness of the Absolute must not therefore be lost sight of when viewing this phase of its differentiation; it is a differentiation *within* the one, or the one resolved into pure self-externality. Without this implication of the oneness of the Absolute, it would be impossible to have a science or intelligible system of the Absolute in this form of pure difference. The Absolute in its aspect of self-dispersion is the world of Nature, inorganic and organic, as realized in space and time, the universal media of thoroughgoing externalization, whose very essence consists in keeping its contents apart from one another down to the minutest particular detail. Nature, however, makes a whole by itself, and that wholeness of Nature is once more the unity of the Absolute as such expressed in and through the form of Nature. This makes possible an intelligible system of Nature, and such a system is the 'Philosophy of Nature'—the philosophical development of the notion in the form of self-externalization.

(6) The third aspect of the notion of the Absolute is the explicit union of the first (pure universality) and the second (pure difference) in a synthesis which avoids these abstract extremes and expresses the concreteness of the Absolute in its highest possible form. It contains the principle that gives rise to each of the preceding extremes. It is, therefore, a principle of universality, and also a principle of self-differentiation. The term combining these two functions in one reality is that of mind or spirit, which, being essentially self-conscious, is at once a conscious unity in all its processes and the conscious source of endless

differences and distinctions within itself. It is supremely an identity which maintains itself through its differences and refers them to itself. It is thus the realized embodiment of the concrete form of the notion, and the type of all such concreteness. The notion of the Absolute fully realized, 'in and for itself' is thus 'Mind,' and the logical evolution of the notion as mind is the 'Philosophy of mind.' This completes and exhausts the notion of the Absolute; it contains all that fell within the content of the other stages of that notion, for mind is the source of universals, and mind as the soul of an organized body sums up in its organic embodiment the processes of nature. In the logical evolution of mind, therefore, the philosophy of the Absolute comes full circle; and the crowning stage in the development of mind is the philosophy of the Absolute itself; the final outcome and expression of Absolute Mind is the truth of the Absolute revealed in and through philosophy.

(7) Since the notion of the Absolute is embodied with varying degrees of completeness throughout all the system, any part may be taken by itself and worked out into systematic form in exactly the same way that reality as a whole is developed. Each part forms a realm by itself, and its detailed contents can be logically evolved from it. Hegel dealt with four parts or stages in the philosophy of mind in this way. One of these has already been mentioned—the 'Phenomenology of Mind,' mind as creating 'experience.' The other three are (a) mind as 'objective,' as the source of social and moral activity, (b) mind as expressing itself in the realm of art, (c) mind as realized in the life of religion. These are respectively worked out as subforms of his comprehensive system, under the titles 'Philosophy of Law,' 'Æsthetic,' and 'Philosophy of Religion.' In each case exactly the same plan is pursued: we have the notion of 'social mind' delineated and then logically developed through all its forms and stages; and similarly of art and religion.

Whether these minor systems are capable of giving rise to still further systems, Hegel gives no indication. He seems to make an independent treatise of human history, though this is undoubtedly a subject which falls within the scope of the logical development of objective mind, for objective mind, society, is essentially a historical reality. But the separate treatment of history, apart from the treatise on the logical development of social life, is of no real significance, and was probably due to the exigencies of academic work. Strictly speaking, the 'Philosophy of History' occupies the same relation and position in the philosophy of objective mind as the philosophical treatment of the various historical aspects of art and religion occupies in the 'Æsthetic' and 'Philosophy of Religion.' The 'Philosophy of History' must be regarded as a continuation of the 'Philosophy of Law,' as the logical evolution of the notion of freedom (which is the principle of objective mind) in the various historical forms assumed by objective mind in the life of mankind.

4. The nature and meaning of Hegel's 'notion.'

—It is evident that for the proper understanding of Hegel's system it is essential to make clear what the notion means, for the notion is the root-principle from which the whole system springs. Hegel no doubt expounds the principle repeatedly, but always in terms of his own theory, and thus takes for granted precisely what the interpreter of the system wishes to have explained. Nowhere does he trace how he personally arrived at this principle, and nowhere does he show how it is derivable from thought as commonly accepted. On the contrary, he proceeds in the opposite way; he recasts the meaning of

ordinary thought by reference to the notion previously accepted as true and as having a specific significance from the outset. Yet there can be no question that this principle was not arrived at without a struggle, and did not arise out of his head, like Minerva from the head of Jupiter. The principle is not self-evident, and needs both explanation and justification.

In default of any historical evidence of how Hegel reached this principle, we must fall back on the epistemological grounds for adopting it. These are mainly two, and are not strictly separable. In the first place, Hegel regarded the world as a single unified whole, which maintained its unity through endless multiplicity of real individuals, and in a certain sense could itself be looked upon as the supreme form of individuality. The world was not a mere process, nor a static reality; for the former makes unity or singleness impossible, and the latter is in contradiction with the plain facts of life in Nature and man. The world is a process that is self-contained, and so as a whole is at rest with itself: it is a process *sub specie temporis*, but a unified whole *sub specie æternitatis*. Its unity is all-pervading, and is maintained in and through the process of its finite parts. The question for philosophy is how best to conceive the principle which thus constitutes the nature of the Absolute a self-complete and self-contained single whole. This resolves itself into the further question what form of finite reality furnishes the most adequate homologue, is nearest in structure, composition, and process to this supreme individual. For man the solution must be found in the highest individuality known to him. But for man the central individuality in all finitude, that which supplies him with the very standard for determining the nature and degree of individuality among finite beings, is the human individual as a realized self-conscious mind. This must be the clue and the basis for the comprehension of the Absolute, as it is the final source of the interpretation of all that is finite.

But self-conscious mind (or spirit) reveals its activity in many ways, through sensation and perception as well as through ideas. To make use of mind as a working principle of explanation we must therefore find the highest and at the same time the most universal function of its activity, that which is the controlling essence of its individuality, dominating all its modes of expression, making them what they are, and holding them together as phases of its own individuality. This is nothing other than its supreme function of consciously uniting its own differences in a single focus of self-hood: not 'referring its content to the unity of the self,' but realizing singleness of being or self-hood through the function of combining differences in a unity. The conscious operation of that function is the reality of the self; the self of the individual mind is at once the unity and the differences, is a concrete function, and is single from first to last. As Hegel puts it (*Gesch. der Philos.* xiii. 45), 'the being of mind is its act, and its act is to be aware of itself.' This supreme function is not an abstract operation; it is the essential principle operating throughout all the processes and expressions of the life of mind, and such an essence is in no way and in no sense separate from its expressions. The statement of this essence is no doubt formal; but the essence itself is only a form in the sense that form is inseparable from content. We never have the form 'by itself' in experience, and hence can never treat it as abstract when making use of it for purposes of explanation. It is not admissible, therefore, to start from it as an abstract form and try to deduce out of it analytically further principles or forms of unity. For, if we take it as abstract

at all, we can extract nothing out of it; at best we can only repeat it; and, if we seem to derive further principles from it, we have not, to begin with, taken it as abstract.

It is by the use of this supreme function of mind, then, that we have to proceed when we employ self-conscious mind as the clue to interpret reality, finite and absolute. This highest function Hegel, following the traditional usage of philosophers, calls 'reason.' Since in it the self always operates in a conscious way (it is the conscious unifying of differences), Reason is essentially cognitive in character, but 'cognitive' only in the general sense of full awareness. Reason does not here mean simply reflective activity, nor merely intuitive activity; it is both at once in an indivisible act. It can be called reflective when we consider the aspect of distinguishing and relating the elements involved; and intuitive when we consider the aspect of uniting these differences into a single whole. But these are, after all, aspects; the function is one and individual. Reason is therefore 'mediate' and 'immediate' in its operation, and wherever it operates this holds true. This means, however, that as a function it is self-complete, directing itself and determining itself according to its own law or method of procedure: it is its own world and the law of its world. It is the realized limit of knowing. In other forms of knowledge, something is 'given' as an 'immediate,' and 'received' by reflexion as material to be worked upon or 'thought about'; and these factors in the process are assigned to distinct sources. Both factors must exist if knowledge in any sense is to take place; and the aim of knowledge is to transform and permeate the 'given' by the process of reflexion. The limiting case of such a process is when the immediate and the mediating activity are merely aspects of a single operation. Such a limit is reason. But it is an actual limit, not an imaginary or 'ideal' limit; for reason is but the highest function of mind, and mind is through and through actual. Reason is thus not a point of view, but an active function, not external to its contents, but holding its contents (its immediate) within itself. It is in this sense that reason is described as 'concrete' and not abstract. It is concrete, as the essential function of mind must be; and mind is, as already indicated, the very type and standard of what is concrete and individual.

But a further stage is required before we can make effective use of this principle. So far we have treated reason as a function. Now that function operates within a certain range and for an end. It is a function which operates in an individual way, grasps a whole in its singleness, as a unity in and through differences. The end is its product, the outcome and summary of its operation. In a sense this product may be described as the function itself, the function in its single completeness. The distinction between them, such as it is, consists in the product being regarded as the function brought to rest, while the function is the product in course of being brought about. This product Hegel calls a 'notion' (*Begriff*). A notion may be called the object of reason, but only if the connexion between reason and its object be considered as close as that between function and product just mentioned. A specific notion is reason in one of the manifestations of its function; and, if we look at reason simply as the most general function of self-conscious mind, we can speak of reason itself as 'the notion' (*der Begriff*) *par excellence*. Hence we often find Hegel using precisely the same expressions in describing the operation of 'the notion' as when describing the function of reason. The notion is spoken of as 'conscious of itself,' and 'determining itself,' and as 'uniting its differences,' etc.—expressions which

seem to create difficulty until we see that for Hegel 'the notion' is reason, in the sense just described. He does not mean that the notion, like an abstract shade of substantial self-conscious mind, works independently of the vital energy of mind; for the notion in his sense is not a shadowy ghost of mind at all. The notion is reason in the full plenitude of its power, and is indistinguishable from it except as function and end are distinguishable in the operation of reason. The notion is thus not 'endowed' with energy by reason, nor again is the notion the 'expression' of reason, if this implies that the expression is separable from the source or force from which it proceeds. And what is true of 'the notion' *par excellence* holds good of any notion in which reason is embodied.

This step is highly important for Hegel's view. For now it becomes possible to link his theory with the language in which philosophy from its inception has clothed its thoughts in detail. For philosophy has itself created and creates that language, because it is the function of grasping a unity with its differences. That language is animated throughout by the activity of reason; and the results of its activity appear in the manifold 'categories' with which philosophy deals. Wherever we have a function of thought-unity in and through differences, there we have a category, and there we have the operation of reason. Hence we can treat a category as a specific realization of the operation of reason, and can trace its source to the one supreme function of self-conscious mind. Hegel does not require to create the world of reason out of his own mind, nor to dictate to experience the kind or number of categories which constitute reality. The work has been already done in the course of the history of philosophy, and he has but to put the results together; while experience alone can let us see what the categories are which constitute reality. The complicated culture of European life is, so to say, strewn with categories, some having names derived from one language, some with names derived from another. Again, he does not require to be constantly appealing to the nature of reason to verify or justify his categories; he is sure that reason is present wherever this function of unity in and through difference is exercised and concentrated into the summary form of a category. And, finally, reason, while the supreme essential function of mind, must articulate itself into a plurality of categories, because mind is the absolutely concrete with an endless variety of content due to the fact that it gathers up into itself the entire realm of finitude. It is, as already said, the standard of all individuality, and is the standard because it contains all that the other types of individuality contain, and more than is contained by any other single type.

The plurality of categories referred to, being all in the long run expressions of the one supreme activity of reason, are necessarily connected with one another through their common derivation from a single source. Together they form a system so organically connected that any one category involves all the others, and can be clearly interpreted only in the light of the entire system. Each mirrors the whole system in itself; and the whole system can be said to be the unfolding of 'the notion' *par excellence*. This supreme notion gathers up into itself all the plurality of the various categories, and in this respect assumes a distinct name—the Idea. Such a system is, again, self-complete and self-contained, because, as we saw, reason is a self-complete and self-determined function carrying its own 'immediate' within itself. Such a system can thus constitute an organic whole of 'knowledge,' the knowledge which reason has of itself in its character of the essence of mind. This

does not mean that the system defies or is independent of experience and reality; for the notions are the controlling principles of experience and reality. It means simply that, since the notions are concrete in the sense explained, they can and do form a distinctive subject-matter for systematic treatment.

Recurring to our starting-point, we can now see how Hegel proceeds to work in interpreting the Absolute. Self-conscious mind is the clue, and the activity of reason is its essence and supreme function. The Absolute is interpretable only in terms of mind, for mind is the highest type of individuality with which we have any acquaintance. It is useless to ask what the Absolute may be over and above mind; for over and above mind there is nothing higher to which to appeal in an intelligible way. To be intelligible is to be mentally constituted, and intelligibility is the presupposition and result of philosophy in the sense of complete knowledge. Moreover, mind *qua* mind is homogeneous with itself, whether mind be finite or absolute. This is especially so if we take the essence of mind, for that essence is identical in all the shapes and forms of mind. The essence of mind is, as said, reason. The operation of reason is thus the same in finite and absolute mind; it is the function that grasps individuality in its concrete singleness. If the Absolute is the supreme individual, reason *qua* reason is adequate to its comprehension. But not only is reason adequate to the comprehension of the Absolute, in the sense of being able to undertake this task. It might make this claim and still be a mere unrealized point of view, or at best enunciate merely abstract propositions identical in significance. But we are not left in darkness regarding the detailed content of the Absolute. For we are able to evolve coherently and in terms of reason the varied content of finite mind. And, if we accomplish this, we *ipso facto* have expressed the content of the Absolute, for the result so realized is the articulation of the one supreme function of reason, which constitutes finite and absolute mind alike. The evolution of such a result is made possible because mind, and therefore reason, is the spokesman and interpreter of the totality of finite individual things, the whole realm of *natura naturata*. Mind supplies the standard of their individuality in each case, and brings to the consciousness of its own individuality the constitutive principle of each. All individuals, so to say, come to light in finite self-conscious mind. But *natura naturata* is the Absolute itself expressed in terms of the whole of finitude; and, when the Absolute is viewed as mind, its expression is not merely inseparable from but is identical with itself, for mind is conscious self-expression. Hence, if reason is adequate to the comprehension of the totality of finitude, and accomplishes this result in coherent systematic form, the result so achieved can be taken as the evolved and connected content of absolute reality. And this is just what Hegel means by comprehending the Absolute. Thus it is through the notion and in terms of the notion—which is the form with which reason works, the language of its activity—that the Absolute is expressed. The notion, as above explained, is the beginning and end of Hegel's system. Wherever reason grasps individuality in its singleness, there we have a notion; and, since its function is to grasp in this and in no other way, the totality of finitude is for it a realm or system of notions; while again the system of notions is the comprehension and indeed the self-comprehension of the Absolute.

The second line of thought by which Hegel reaches his notion, and secures its validity as a

principle of interpretation, is equally important. The distinction of subject and object, within which human conscious experience exists, is held to be a distinction within a single unity, and the form in which this unity in difference reaches its highest expression is self-consciousness. In this form the distinction in question becomes a self-distinction, and the unity is the single self functioning in and through both factors alike and at once; while, as already indicated, the essential nature of self-consciousness is the activity of reason. By this line of thought Hegel seeks, on the one hand, to avoid the dangers of subjective idealism to which his principle is liable, and into which certain of his immediate predecessors, notably Fichte, fell when developing the implications of Kant's theory; and, on the other, to steer clear of the abstractness of the bare unity of subject and object propounded by Schelling, which possessed objectivity at the price of being inarticulate.

The argument by which he establishes this position is contained in the first half of the *Phänomenologie des Geistes*. Briefly stated, it consists in showing that, wherever subject and object stand in the relation which constitutes experience, the unifying principle is that of thought. This is at once a function of the subject and the controlling centre of the reality of the object; and these are inseparable in the life of experience. This unity is not apparent, but is only implicit at the lower levels of experience, where subject and object seem more opposed than united, as, for example, in such levels as those of sensation and perception. But analysis of these types of experience brings to light the underlying principle of unity. The very process of experience from the lower to the higher forms is necessitated by the demand for the explicit in place of the implicit unity, and is at once the gradual evolution of the essential unity of subject and object and the growing awareness of the universality of thought which permeates the component factors constituting experience. We cannot say that the subject dominates the object any more than that the object directs the activity of the subject: they are inseparable elements and develop *pari passu*. It follows that the process reaches its goal, and experience its truest type, when subject and object are transparent to each other, when the subject is aware of itself in its object, and the object responds and corresponds to the functions of the subject. The distinction between the two is as real as ever, but the unity now contains them as factors of one conscious process. This stage is that of consciousness of self. From this point of view, so attained in the course of experience, the levels below this stage are now seen to be not merely preparatory steps to the attainment of self-consciousness, but are themselves implicitly constituted by self-consciousness, which was operative in them from the first, and from which, in fact, by abstraction they obtained their place as forms of experience and as stages in the evolution of experience. Experience is thus constituted and permeated by self-consciousness; indeed its significance consists in its being the process of manifesting or evolving consciousness of self, in the subject's becoming gradually aware of or finding itself in its object, and so coming to be 'at home' in its world.

In this way the principle of reason, which, as we saw, was taken to be the essential activity of self-consciousness, is liberated from all one-sidedness, especially the one-sidedness of finite subjectivity, and is adequate to meet the mind's demands for unity with its object, whatever the object may be. There is no need for distrust or hesitation on the part of reason in dealing with the world; it

has but to 'let itself go,' and the whole domain of concrete individuality in all its manifold forms will straightway give up its essential meaning without reserve, and without retaining the least part of the only secret worth knowing, the secret of the 'thing itself.' Reason is the open secret of the world, because it opens all secrets. It makes the world after its own image, because it finds its own likeness in the face of the world.

'The fast-bound substance of the universe has no power within it capable of withstanding the courage of man's knowledge: it must give way before him, and lay bare before his eyes, and for his enjoyment, its riches and its depths' (Hegel's Address to his Students in Berlin, 22nd Oct. 1818).

In the light of the foregoing we can see at once the central position which Hegel's logic holds in his theory. For logic, as he understands it, is the science of the notions which constitute the sole and only outcome of the activity of reason. The totality of all the notions is the totality of the constitutive principles of reality in all its forms of individuation; and the science of this totality thus must cover the whole of reality, finite and absolute. And, since these notions so systematized exhaustively reveal all that reason can obtain in the way of complete knowledge, the science of logic is straightway identical with metaphysics.

If such a view is called 'Panlogism,' there can be no objection to the term as long as it is understood to imply no objection to the theory. Those who apply the term, however, often speak as if there were some other way of comprehending the Absolute than that which reason affords. What other way there is of 'comprehending' except by and in terms of reason is not clear from their statements. There seems, on the face of it, no other way of being rational except by exercising reason; and, if reason does work in the form of notions, it seems useless to object that the outcome of its work is only a system of notions. One may object to Hegel's way of rationalizing; but no one can maintain both that the universe must be intelligible in terms of reason, and also that the outcome of rational thinking is an illegitimate interpretation of reality. The only valid objection to 'Panlogism,' properly understood, is to insist that there is some other and better way than reason for approaching the Absolute. But this objection is equivalent to philosophical nescience, which, indeed, is the only alternative to rational interpretation. Some critics of Hegel's system frankly adopt this position. Their position is clearly consistent as against Hegel, but it involves the abandonment of the philosopher's task, as Hegel understands it.

Much more serious and important objections can be urged against Hegel's scheme of notions than the accusation of 'Panlogism.' A few may be mentioned at the present stage. It may be readily granted that the function of reason is the supreme central operation of self-conscious mind, and that reason seeks to grasp the individual in its singleness. It is quite another matter to admit that any finite mind is capable of exercising this function with unflinching accuracy and success throughout the whole domain of reality. Hegel seems to proceed as if, having extracted the essence of mind, the essence could be left to itself and would straightway work with inevitable certainty and necessity wherever and whenever it might be set in operation. But this is to identify the finality of the function with finality in its exercise, the finality of a claim with finality of every assertion of the claim, the finality of a point of view with absolute accuracy of vision. The two are evidently distinct in fact, at least in the case of every mind short of omniscience. The essence of a finite mind is never exercised except under the complex conditions and in the complex setting

of a finite individuality; and these conditions are both obstacles to the perfectly free exercise of reason, and constant sources of failure or error throughout the whole operation of its activity. To maintain anything else is to ignore the plain facts of human frailty which are found in every other phase of man's experience. If illusion and imperfection haunt the efforts of man in the minor matters of everyday concern, it can hardly be expected that they will suddenly disappear when he undertakes the unique and supreme task which strains the consummate powers of his mind to the uttermost. Hegel in describing the working out of the notions of reason frequently uses the expression that in the development of the operation of the notion the individual thinker has merely to 'look on' (*zuschauen*). But the individual cannot be regarded as merely a still mirror reflecting with infallible accuracy a process in which he does not actively participate. Even to 'look on' he must concentrate his vision, and to see correctly his sight must be clear and uninterrupted. The point need not be laboured here. When we examine Hegel's way of carrying out his ideal of rational thought, we find that he constantly starts from the conventional terms embodied in ordinary speech and science, takes their meanings as he finds them, and proceeds to invest them with the dignity of the notion. At times he appeals to etymology to help out the operation of reason, and constantly makes use of the varied applications and *nuances* of a term to give vitality and movement to the notion. His procedure may be described in some cases as an attempt to infuse the spirit of the notion into the terms of ordinary thought, in other cases as the sublimation of ordinary thought into the ethereal realm of the notion, in much the same way as, in the hands of the pure mathematician, the ideas of measurable quantities of physical phenomena are volatilized into elements of a rational ordered manifold held together by their purely logical connexion.

Another criticism of considerable importance is that which challenges Hegel's attempt to identify the rational coherence of the whole realm of finite individuality with the system of absolute truth, the whole truth as it is for the Absolute Mind. The former is the reasoned system of *natura naturata*; the latter is the reasoned system of *natura naturans*. It may be that the former is all we can know of the Absolute; but, so long as the distinction remains between the Absolute and its manifestations in the total realm of finitude, it cannot be all that the Absolute can know of itself. To confound the two is to adopt the attitude of what may be called metaphysical positivism; and, whether positivism be scientific or metaphysical, it is open to the charge of affirming as an absolute truth what can never be more than a system of truth which is relative in every sense of the term. If, on the other hand, the distinction between the Absolute and its appearances is insisted on, the rational system of finitude may indeed bear the image and superscription of the Absolute, but it must always be regarded as at best but an approximation to, never a substitute for, the final truth, as the medium of exchange used by mortals in order to handle conveniently and profitably the wealth of absolute knowledge. Hegel never explicitly draws the distinction just referred to; the tenor of his argument is against admitting that the distinction is vital for philosophical thought; and he constantly claims that the system of truth revealed through the free activity of reason is the same truth and the whole truth for finite mind and Absolute Mind alike.

The third charge against Hegel's view is that, while, as we have seen, he approaches his position

by the avenue of human individuality, he claims to have eliminated all traces of anthropomorphism from his system. The explanation of such a claim is simple, but the justification of the claim is unwarranted. He finds his foothold in the reality of human individuality, and from this he extracts the essential principle of activity and movement—reason. He then takes this essence by itself, regards it as a self-contained agency working itself out by its own laws and conditions, and lets it loose, so to say, to accomplish its end, viz. the grasping of reality, in all forms, in terms of the constitutive nature of reason. The individuality from which it comes to begin with is thenceforward eliminated: the individual only 'looks on' while it works. The function is hypostatized, and operates as if it were itself the concrete individual. Hence all the limitations, which in every other aspect qualify the action of the human individual, are held to apply no longer to the function itself. The very success with which the function is exercised is unaffected by the conditions of human individuality: it always works correctly and without interference. Reason is in this way deanthropomorphized. But it seems plain that such a contention overshoots its mark. The essence of finite self-consciousness does not cease to be finite because it is the essence; an essence must, if it is really the essence, still be characterized by the limitations which encompass and permeate all finitude. Finite limitations are not an accident of finitude; they are of the essence of it. It is paradox to regard the essence of finitude as something other than a finite essence; and mere assumption to treat the essence of finitude as infinite in nature and function. If this assumption is correct, it is impossible to account for error; and the assumption gives place to presumption if it is maintained that the working out of the essence makes the system faultless, final, and unalterable. Moreover, the whole value of the principle, as a way to interpreting reality, is lost, if the essence is thus hypostatized. For reason is the same, whether it be realized in a tree or a tadpole or a philosopher. It is, however, just the peculiar significance of the essence in man's individuality which is the source of its value as a clue to the interpretation of reality: the peculiar nature of human individuality in all its concreteness cannot, therefore, be eliminated without endangering its importance as a clue. This means that the essence cannot be taken in abstraction from its source, if it is to be of value. But, if it is taken *with* all the qualities and qualifications of human individuality, the limitations of an anthropomorphic point of view must necessarily affect its whole operation and characterize the result obtained. In short, its value depends on its being anthropomorphic; the elimination of this point of view, however much we may gain in generality and abstractness, lessens the value of the result.

5. Hegel's method.—Equally important with the fundamental principle of the 'notion' in Hegel's system is his view of the nature of the method by which the system is constructed. The peculiar characteristic of all philosophical thinking lies, no doubt, in the consistent operation of a single method of procedure, and most of the great thinkers have recognized this. To Hegel, method was of the essence of system, not merely in the sense that the two were inseparable, but in the sense that the system was nothing but the successful operation of a method clearly conceived from the outset and consistently applied at every step throughout it. He maintains that the value of his own system stands or falls with its method, and not so much by the perfect accuracy in detail with which the system is wrought out. In the introduction to the 'Logic' (*Werke*, iii. [1841]) he says:

'I cannot presume that the method . . . is incapable of being worked out with still greater completeness and elaboration in detail, but I do know that it is the only true method.'

In his first piece of constructive work (the *Phänomenologie*) he pointed out the fundamental necessity of having a carefully formed idea of the method by which philosophy should proceed; and to the last he looked on the method as the soul of a philosophical system. His method, quite as much as its principle, differentiated his own position from that of his predecessors.

Hegel always insisted that the nature of the method was to be found by an analysis of the nature of the notion. The method was not imposed externally on the notion, but was the vital nature of its process. No doubt the formal character of the method was suggested by certain aspects of the work of Kant and of Fichte; much also was due to Plato. But the historical aspect is altogether subordinate to the specific meaning and procedure assigned by Hegel to his method.

Stated in general terms, the method is the way by which the notion, through its own activity as above described, gradually articulates and coherently connects into a single explicit system the component differences involved in its nature as a concrete function of self-conscious mind. A notion, being the essence of self-conscious mind, is a self-closed whole. This is true, whether we take the supreme notion or any notion of a lower grade of significance. In its procedure, therefore, it is self-directed, and not externally determined. Its procedure is immanent and constitutive of its own activity. It unfolds itself because it is a function of a self.

But, again, a notion so completely permeates its own content that its component elements are its own differentiations, are its own expressions, or, as Hegel calls them, its own 'moments.' In each, therefore, we have in a sense the notion in a specific form; and the notion asserts itself in each in turn, as truly as it is the synthesized whole of all the parts. In some cases, e.g. the higher notions in the 'Logic,' the parts are themselves notions of a subordinate significance which again contain 'moments' within themselves. In the limiting cases, a notion, on the one hand, is a bare self-identity, and the attempt to assert itself in its content merely brings out the fact that it is incapable of differentiation and so has no content specifically to assert, its content is indistinguishable from absence of content—the assertion of pure being is equivalent to the assertion of pure nothingness: on the other hand, at the other extreme, the notion is so concrete, so replete with content, that it is incapable of asserting itself specifically and at the same time truly; every differentiation is a self-limitation and so incomplete and inadequate to itself; its full meaning is realized only as a comprehensive intuition which gathers into itself the totality of its differentiations, or the 'absolute idea' melts into the organizing process, in and through which its varied content rounds itself into a single self-complete system incapable of further development.

Now, the source of the method lies in this self-regulative character of the activity of the notion in its organic relation to its moments. The procedure is positive in its beginning and positive in its outcome, for a notion is a positive principle from first to last: it loses nothing by the process and gives up nothing in the result. The purpose of the process is to make the notion consciously realize the totality of its content as an articulated individual whole; the necessity of the process lies in the nature of reason, which, being self-consciousness, must become explicitly aware of what its unity contains and controls. This necessity is the

same whether the reason be embodied in the finite human mind or in an absolute mind; and the connexion of content established is the same for both alike so far as it is valid at all. Hence the question of time does not enter into the nature of the process and is indifferent to the process, even if time be required to carry it out, as is obviously the case when a finite mind engaged with the process passes from one stage to another. In contradistinction from the process of time, this process of establishing connexion between the moments of the notion may be described as a cognitive or logical process pure and simple. So far as time as such is concerned, it must itself be handled by the same logical process, if it is to have a place in the compass of the absolute notion, the notion of absolute individuality.¹

A notion, then, aims at realizing all its content as controlled by its own unity. It seeks to affirm its differences separately and together as its own. Its differences are for it ultimate, otherwise it would really be a bare self-identity. The differences are thus, *within the compass of a given notion*, extreme opposites to one another: what the one is the other is not. *Per se* the differences are absolutely opposed; but, being differences within the same notion, they are for the notion only relative differences, no matter how strongly they appear opposed. It is only such differences that the notion is concerned with, for it is such differences that above all challenge the unity of reason, the singleness of self-consciousness. And, further, only in the case of such differences do we have the type of that opposition in which self-consciousness itself consists, the opposition of subject to object within the unity of the same self. As reason is the essence of self-consciousness, each notion of reason must carry within it elements as opposite as subject and object. A notion, then, being concerned with differences which are thus ultimate for one another, there can be only two such differences within the same notion: the opposites within a notion are *per se* contrary the one to the other. And indeed it seems a matter of indifference whether we say that contrary opposites constitute a single notion or that a notion is a function of uniting contrary opposites; whether we start from the one or the other is of no importance for purposes of explaining a notion. A notion is called for wherever there is this contrary opposition, and a notion consists in the unity of such opposites; for both unity and such differences constitute the individuality of a notion.

An illustration from the 'Philosophy of Law' will help to make this clear. The notion of property is that of will expressed in a more or less permanent outer form, in an object of nature over which, by some means or another, will has exercised its force and so embodied its act. It means, therefore, identification of will with a natural object. A will is always a personal will, and property is thus essentially personal property. The ultimate factors composing this notion are thus active personal will in relation to an external object, and passive external object in relation to a personal will. The first appears as ownership of a thing, the second as the use of a thing. Those differences *per se* are diametrically opposite to one another: ownership is not use, for the thing in being used up passes from the owner; left to themselves the opposition between them is absolute. Yet they have such an opposition only because and in so far as they fall within the notion of property. But for this they would be merely outside one another, and could not be even intelligibly contrasted and compared with each other. The very fact of their opposition being a real and reciprocal opposition

implies the singleness of the notion containing them; the singleness of the notion creates the contrariety existing between the different elements taken *per se*. But in virtue of the unity of the notion the differences are, from the point of view of the concrete notion, relative: they are both moments of the same notion, and are related on that account. However absolute, therefore, the difference is between the moments taken *per se*, these differences are, in the light of the one notion, merely relative.

The first step in the process of the notion is, then, the recognition that the differences within it are *per se* contrary and ultimate, and that, because of the unity of the containing notion, the differences are related to the same notion and so are relative to one another.

From this follows the important aspect of the process, on which Hegel constantly lays stress—the function of negation. In a sense this is the vitalizing power in the process, its driving force, so to say. Each difference is the contrary of the other, and is 'negative' of it. But this negative relation is not bare or 'infinite' negation, but *specific* negation, negation within a certain field, and negation in a certain definite direction. Thus the 'use' of a thing is not simply 'not-ownership'; if so, it would have no qualities in itself at all, and not to have qualities is equivalent to being in fact nothing. Or again, if it were merely 'not-ownership,' it might well be a fiction, for a fiction is 'not-an-owner.' It is 'use' of a thing within the field of property; and 'use' is not ownership in the sense that whatever within this field is involved in 'ownership' is not found in 'use.' An owner, *e.g.*, has a will, a thing used cannot have a will; hence a slave is not, *qua* slave, a personal will. So a thing as used can be alienated because it is an external object, a personal will as owner is not used and cannot be alienated. In short, the negative relation between the two component differences is a negation with a specific content peculiar to each side of the opposition in question. And it is this definite and positive content which at once makes the negation possible, and constitutes the particular kind of opposition in which they stand to each other. The positive content of each difference enters into and shapes the character of the negative relation of the one to the other. Hence it is that, while in every notion the differences are negative of each other, the precise character of the negation and of its procedure varies with each notion.

Now, this positive content which makes the negative relation definite is derived from the notion itself, which is altogether positive. The notion affirms itself in each moment, and this makes the moment what it is. Moreover, the notion finds itself in each moment, and, so to say, endeavours to concentrate its entire meaning into each moment. For that reason each takes its stand with all the weight of the notion behind it, and in the name of the notion denies the right of the other to be itself, or even to be the notion. The negation is thus not a passive but an active relation, not a condition of quiescence but of conflict between the moments. But this active opposition presupposes and requires a common basis, and that is found in the positive content which each possesses. The positive content which makes the negation definite in character is the source of the union between the opposing moments of the notion. Or, in other words, the conflict is not so much between the moments *per se* as between moments each of which claims to embody the one whole notion. The tension between the moments is a tension within the unity of the notion which is articulate in each. It is this tension which sets up the process of interrelating

¹ It is treated as part of the 'Philosophy of Nature' (*Naturphilosophie*, §§ 257–259).

the moments in such a way as to break down the opposition and connect the one with the other, and establish an explicit union between them—a union which was implicit from the first and becomes articulate in the organic connexion of the moments. This process of interrelation is what Hegel calls thinking, or rationally unifying, 'contradiction.' To think, or rather think out, contradiction, he says, is the very nature of reason: true thinking can do nothing else, and has nothing else to do. By 'thinking contradiction,' he obviously does not mean thinking 'logical contradictories' in the formal sense; but thinking into a harmonious unity the real contrariety of moments in a notion which are negatively opposed to each other. Since this way of thinking is in a sense the core of the whole process, he rightly regards the procedure as the consciousness of contradiction and the removal of contradiction. The term usually employed to designate this process—dialectic—Hegel adopts from his predecessors, more especially Kant and Plato; though Hegel constantly points out that the dialectic method was imperfectly understood and imperfectly applied in every system but his own, and mainly because the nature of negation, on which the process turns, was not properly grasped.

When we ask how the opposite elements are brought into harmony, the answer is—by the ordinary operations of analysis and synthesis characteristic of all thought and indeed of mind itself. These two operations are inseparable, and are inherent in the function of reason. Starting from an implicit synthesis, we find by analysis the moments of the notion; we discover in the same way the positive content of each moment, and by continuing the analysis far enough we come to a point where the very content of each moment suggests its relation to the other, and the further analysis gradually passes over into the explicit synthesis of the separate moments.

So far we have regarded the moments as if they had the same value for the notion. In a certain sense this is true. Each is essential to the notion; and from this point of view the affirmation of one moment, the 'thesis,' cannot be regarded as higher than the affirmation of the other, the 'antithesis.' But the process of interrelating these two brings out a result which contains more truth than either moment separately, and issues in a stage which is higher than both taken together. In the final stage in which the process culminates, the explicit synthesis of the two separate moments, we have a form of the notion which combines the two and at the same time removes the one-sidedness in which each subsists. It is not a mere amalgam of the two preceding moments; it is a transformation of them, and is thus a further stage in the process of the notion, and is in that sense a new 'moment' in that process. Since it unites in itself the positive substance of the two preceding moments, and since these were the ultimate differences contained in the notion, this third moment completes the process of the notion, and brings into prominence the reality of the unity underlying those differences from the start. It reveals this unity in explicit form as the controlling principle of the differences, and reveals the differences explicitly as factors in the same single unity. In this third 'moment,' therefore, the notion has completely expressed itself, it has 'come to itself,' it has 'become conscious of itself.' In that sense the third moment is on a higher level than the preceding moments, and its truth is a higher truth regarding the nature of the notion. But it is not higher at the expense of the preceding stages; it is higher only by containing their truth, and, indeed, because it contains their truth. It cancels their isolation from each other, and also

their consequent opposition to each other. These, the isolation and opposition, are certainly removed; for, in the final stage or moment, the two preceding elements are so completely interwoven that their opposition has no longer any significance for the notion. Each so permeates the other that only a regressive process of analysis can even distinguish them. In so far, then, as their negative relation to each other was the result of their fundamental opposition, this negation, essential as it is to the process of the notion, is the transitional aspect of the process, and disappears in the resulting final moment. Contradiction, then, which is vital to the process, exists only in order to be removed; it is not final but transitional: to think out contradiction is to abolish it. Hence it is that the final or absolute notion is entirely free from and entirely cancels all the contradictions involved in and incident to the lower 'finite' notions. Hence Hegel's view, that contradiction is of the essence of finitude. The complete removal of contradiction is identical with 'true' infinitude, the self-closed and self-contained whole or absolute notion; conversely, wherever there is finitude there is process, and wherever there is process there is contradiction. The contradiction is thus not accidental to the nature of finitude, but inherent in it, and is, in fact, the very reason of its connexion with infinitude, the presence of which, again, in the finite may be said to be the source of the negative movement, the contradiction, in finitude as such. If the process were endless, if infinitude were an infinite progress or regress, there could be no contradiction and so no removal of it: we should have indefinite process in time, and not process in thought. Hence he names such a process the 'false' infinite, 'false' because it makes the attainment of a rounded system of truth, or indeed truth at all, meaningless and impossible.

How the 'higher unity' or 'higher truth' is arrived at, it is not difficult to see. We may best bring this out by recurring to the illustration previously referred to. The notion of property, we saw, is resolvable into the two ultimate factors of 'ownership' of a thing and the 'use' of the thing, these being opposed to each other. They are opposed because the ownership means the detention of the thing as the correlate of exercising a permanent or identical personal will in regard to the natural object, while the use of the thing means the dissipation of the thing, the evanescence of it, and hence the gradual loosening of the hold of the personal will over it. In the former element the notion of property is expressed in terms of the nature of personal will, in the latter it is expressed in terms of the nature of a thing or natural object. Personal will provides the aspect of identity or universality in the situation, the thing provides the aspect of diversity or particularity. Sharply opposed as these are, the analysis of the first, which is logically the prior element—since will must be exerted before a natural object can become a thing and enter into a self-conscious situation as property—brings out the second. For ownership to be effective, will must be repeatedly and continuously exerted over it, and the continuous exertion of will over a thing is precisely what is meant by 'using' it. But the continuous use of a thing means that, since the thing is particular and the will universal, the thing destructible and the will indestructible, ultimately the thing is exhaustible and therefore our hold over it is terminable. The termination of property in a thing is thus involved in the very nature of property. In fact, the complete termination of property in a thing is the very highest expression of what property means for a will. This termination may be brought about in two ways, either by exhausting it so that it is no longer of

'use' and so no longer our property, or by openly giving it up as our property. The capacity to do either is involved in complete ownership, 'complete ownership involves complete use'; the explicit surrender of ownership is the highest proof of complete ownership, the complete exhaustion of our interest in the thing is the complete surrender of its significance as our property and the return of the thing once more to the sphere of nature from which it was taken to begin with. This, the final stage in the process of the notion of property, is, in legal phraseology, the moment of 'relinquishment' of property. This moment therefore contains the positive substance of ownership in its purest and completest form, for we cannot relinquish what we do not own completely; and, on the other hand, it contains the positive substance of what is involved in 'use' in its completest form, for we cannot truly use a thing unless we can make it independent of ourselves at choice, unless we are completely free to 'do as we like with our own'; otherwise the thing determines our will and not our will the thing. Thus in relinquishment of a thing the will most clearly reveals its complete freedom in relation to the thing, and most clearly manifests that the thing has no will of its own but is absolutely subordinate to a personal will. Relinquishment in that way is the 'higher unity' of the separate elements involved in the notion of property. Yet it does not destroy their positive significance, for this is retained in the result; it removes their antagonism in a form in which that antagonism can no longer exist, because both the elements go to constitute what that form itself is, and are inseparably interwoven in this highest moment. This moment is the culmination of the process, or 'dialectic,' of property, for the notion of property is exhaustively expressed in this moment; and the notion of property can have further significance only as a part of a wider notion altogether, i.e. a notion expressing more fully the nature of self-conscious will which is at the basis of property. This further notion, as Hegel interprets the matter, is that of contract.

Such then in outline is the nature of the process, or 'method,' of the notion. Only one further question seems to be worth raising: How does Hegel know where to start the process, what element in the notion to place first? The answer to the question is obtained if we bear in mind that the aim of the process is the complete explicit realization of the whole of what a notion contains. The complete truth is the most concrete and systematic, the most or the highest individual. We cannot learn this all at once, and by mere intuition. It is a result. The result of the process determines the aim of the process, and the aim regulates the procedure. The procedure is thus from the simplest, most abstract, to the most articulated and complex, the most concrete. Hence the first moment is always the logically simpler, more ultimate, and more abstract. It is that without which no other stage in the process would be possible at all, and no advance capable of being made to the concrete result. What this is in the case of a given notion can be revealed only to logical analysis, exercised in the light of the result to be achieved. In general it may be said that the notion in its aspect of identity as such is taken as logically prior to and the condition of all further development of the notion; the aspect of diversity is then directly suggested and gives the second abstract moment. This holds good whether the notion we are seeking to unfold be such a comprehensive notion as that of the State, or a minor subordinate notion, like that of property.

The method of procedure above analyzed is precisely the same in essentials throughout the whole

of Hegel's system. It governs the process of evolving notions wherever they appear and whatever they be. The process of connecting all the content of the notion of the State, for example, is essentially the same as that of connecting the aspects of contract, or conscience, or a free constitution. And the process of connecting the constituents of the whole Absolute notion, the notion of Absolute Individuality, is precisely the same as that required to connect the content of any part of the system—Religion, the State, or Nature. No doubt the method varies with the notions considered, but only in the sense that form varies with content, and yet is inseparable from content. Doubtless, again, Hegel may have been more successful in carrying out his method in the case of certain notions and certain departments of philosophy than in others. Sometimes he may have failed altogether, and often his analysis is obviously strained, artificial, and forced. But these are necessary incidents of the inevitable fallibility of genius, and must be so regarded. It seems a mistake to treat, as McTaggart does, the variations in success of Hegel's use of his method as so-called 'changes of method' in the system. Misapplications are not deliberate changes; and the assumption that alterations were deliberate either convicts Hegel of insincerity in the construction of his system, or regards him as working out his system with mechanical and infallible success.

In the light of the method as above explained there is no difficulty in accounting for the fact that the process of connecting the elements of a given notion is the same in character as that which connects the variety of notions involved in a given sphere of the system and the totality of notions required to unfold the content of the whole system. For, just as from the point of view of a given notion its elements are 'moments' in the realization of that notion, so any given notion, short of the notion of Absolute Individuality, is a 'moment' in a wider notion, and is thus a stage in the realization of a completer truth. Property, for example, is a notion with subordinate 'moments,' but property itself is a moment in the realization of the notion of 'contract,' just as contract again is a moment which helps to unfold the complete content of 'abstract Right' as an expression of free personal will which is the basis of the notion of the State; and so throughout the whole system.

It is impossible to go over the ground covered by the operation of the dialectic throughout all the notions which emanate from reason in its interpretation or reconstruction of individuality in all its forms. To do this would require a re-statement of the whole system, and if given in outline would convey little concrete information. The whole value of the argument lies in its close association with the actual substance of reality; the vitality of the dialectic draws its energy from each concrete form of individuality in turn, and works with its content as the indwelling organizing agency. There is nothing formal in the procedure; the form of the method in fact takes on the colour and quality of the content. The principle that the notion of reason is the core of things being once for all adopted, it is henceforward throughout the system accepted as the truth of things, and reality is simply asked, so to say, to render up its meaning in terms of the notion and its method of procedure. The individual mind of the philosopher merely 'looks on,' as Hegel puts it, and records the result in the various spheres of truth into which reality naturally, or rather according to historically accepted divisions, falls.

6. Hegel's view of ethics.—The ethical life in its most comprehensive sense is a particular aspect

of a more general reality, that of finite mind. It is not the highest expression of finite mind, nor is it the lowest level at which mind exists. It arises at that stage in the process of mind's activity where, having reached consciousness of itself as a concrete reality, finite mind utters its substance in an objective form. It presupposes the conscious continuity of itself with nature, and freely commits the ends of its own being to the objective processes of nature, and finds nature supporting its own purposes. It determines nature by its own ends; it 'acts,' and does not in so doing feel any sense of loss, but, on the contrary, feels enlarged and enriched. Similarly, it presupposes the conscious continuity of finite mind with finite mind, the identity of self with self, the acknowledgment of self by other selves, and the open, concrete recognition of intercommunion of self with other selves, so that one self shares the life of another in definite ways, and is expanded in so doing. It presupposes, in short, the conscious universalization of mind, brought about and sustained through intersubjective intercourse which is carried on by all the means at the disposal of each mind—desire, emotion, end, etc. Of these forms of objectification—that through conscious union with nature, and through conscious communion of finite mind with finite mind—the latter is infinitely the more important, because of the more explicit and complete identity of the component factors in the situation, and because the first form is involved as a necessary means to the complete attainment of the second. Without 'nature' intercommunion of conscious selves would be impossible; without other selves mind would never rise above the limits and limitations of 'animated nature.'

When the resources of finite mind have been evolved to this level where it finds and accepts mind (finite mind) as its own object, an object responding to the call of the subject and evoking its potentialities, then mind is in a condition where the open and free interrelation of self with self is possible; and in this interrelation consist essentially the ethical process and the ethical life of man. It thus forms a level of the life of mind quite by itself. Compared with the previous stages of mind, it may be justly spoken of as 'objective'—explicitly universal and permanently embodied finite mind; the previous stages by contrast being spoken of as 'subjective' mind. And further, because this level of mind is its own creation and product, using nature, but not itself the outcome of nature, it is self-constituted and self-determined, and therefore free.

Thus the region of the life of mind where ethical life exists is that of free objective finite mind. This is the form of reality, the type of 'notion,' which has to be evolved by the science of ethics, and its parts logically connected by its inherent dialectic.

In the order of reality the whole comes before the parts, the complete before the incomplete; and in the whole we see most clearly the nature of that individuality with which we are dealing. The whole where finite mind is expanded and objectified in its completest way is historically the State. This is the most concrete phase of objective mind; this, in fact, is the concrete reality to which the notion of objective mind primarily refers, and which contains all other ways in which that notion is expressed. But in the order of exposition we must begin with the most elementary way in which this notion of objective mind is embodied, the simplest form in which the notion of free objectified mind is expressed. In every form, from the simplest and most abstract to the most complex and concrete, essentially the same principle is realized, but the fullness of its content, or its

'realization,' varies in degree of 'truth' or adequacy to the nature of the notion in question. What this simplest phase of the notion is can again be found only by experience; but this means no more than that the philosopher, observing the nature of the notion considered, is in touch with all the appearances of its reality.

The primary subordinate notions into which the concrete notion of objective mind falls are arrived at by a logical analysis of its content. Objective mind, free will, may sustain itself directly (a) through the external relation of will to will, (b) through the inner life of each self-conscious individual will being aware of itself as a self-contained unit of objective mind, and, (c) finally, through the free and unreserved intercommunion of mind with mind, an intercommunion which avails itself of both external and internal attitudes of will, but is a fuller realization of the objective mind than either. In each case we have the same factors, mind conscious of itself through explicit relation to other finite selves, and realizing itself in this relationship. The first is the sphere of the legal relationships of wills; the second, that of inner moral sentiment, purpose, all that is summed up in the term 'moral conscience'; the third is that of social institutions. These are stages in the fulfilment of the same end, and are only logically separable moments of that one end. Thus legal relations are impossible by themselves; no social order, no objective mind, could subsist by them alone, for the obvious reason that in them the notion of mind is not fully realized. The inner side of mind—what the individual is 'for himself'—is ignored in law, or considered only as relatively subordinate, as having significance only in so far as it throws light on 'acts,' on the external expressions of will which are alone the sphere and interest of law properly understood. Yet the inner side is of supreme importance to the individual, and also of supreme importance to the complete life of society. It is at least of equal importance with law as a realization of mind, and is in any case as necessary for the complete expression of the mind's nature. The fullness of intercommunion of mind with mind demands that the powers of response within the individual shall reflect and correspond to the demands made upon it by others. The third stage is equally necessary, and cannot subsist apart from the two preceding; for the complete intercommunion involved in social institutions is as impossible and incomplete without legal relations as it is without the inner adjustments of the individual mind to the inner life of others.

Taking these primary elements in the constitution of the complete notion of objective mind, Hegel analyzes them as successive stages, and under the general designations of (1) abstract law, (2) morality (*Moralität*), and (3) the social order (*Sittlichkeit*). Each of these is a notion, a subordinate notion in the whole, but a notion none the less, because each has an individuality all its own, is a unity in difference.

(1) The forms assumed by the external relation of mind to mind constituting the sphere of law are easily stated, and are more or less familiar in every historical code of laws. Individual wills may be legally related and combined indirectly or directly, positively and negatively. (i.) They are related externally and in an indirect manner when some external, 'natural' object is the common centre of their interest and of the activity of their separate wills; this is the sphere of property, essentially an objective realization of mind and a relation of one mind to another, *meum* and *tuum* being correlative and inseparable terms; it is primarily positive and only in a secondary sense negative. (ii.) They are directly related when two or more wills have

a mutual hold over each other as regards certain actions of their respective wills, and on certain explicit conditions mutually and freely arranged between the separate wills so related; this is the notion of contract. Only a limited range of the activity of an individual will can be contracted away; hence, no matter how close the contract, the individual wills as such still retain their independence; a will cannot contract itself entirely away without self-contradiction and without contradicting the notion of a contract. It is a fuller realization of objective mind than property, because contract enters more deeply than property into the structure of the individual will; the very powers of a will, as such, are made the basis of the contract. It is both positive and negative in explicit terms, for a contract explicitly limits as well as unites the contracting wills. (iii.) The third form in which wills are related externally is primarily negative, and only in a secondary way positive. One will may, of itself and without the acknowledgment of another will, invade the domain of individuality of another, and to some extent curtail the activity of this will. The invading will may do so to any extent, even to the destruction of the existence of the invaded will, and may do so unconsciously or deliberately. The relation is here primarily negative, because one of the wills thrusts the other aside and does not admit its reality, while the other (invaded) will in its turn reacts on the first and denies the reality of the invading will as regards the specific action of that will. This is the notion of wrong-doing in all its forms, 'civil' and 'criminal.' It is obviously an external relationship; still it is a relation, and a relation of an objective kind, for each acts and expresses his will before the eyes of the other.

The above notions exhaust the possible external relations of wills to one another, and the last stage enters even more deeply into the substance of will than either of the others, more especially when the wrong-doing is deliberate. For in wrong-doing the agent and the sufferer call upon the inmost claims and resources of their personality in order to assert and defend their respective positions; and the process of removing the wrong makes further demands on the concrete nature of their individuality in order to reinstate their true relations to each other. Their value in their own eyes and their significance for the society to which they belong are called in question, and force them to bring out more explicitly their real nature as wills, and establish as the result a concord which has an inner side as well as an outer. This appears very clearly, for example, in the effect of punishment on the wrong-doer.

It is probably because of this effect of the process of wrong-doing and of its removal that Hegel finds the logical connexion between 'law' and 'morality' at the point where wrong is righted. The logical transition seems indeed forced and artificial, as so many of his transitions from one fundamental notion to another can be shown to be; and certainly it is by no means so convincing as that between the successive stages of the analysis of law.

(2) Morality, or the inner side of realized mind, likewise has its various modes of expression. The analysis of morality is one of Hegel's richest and most subtle contributions to the interpretation of the moral life, even if we add that its value lies less in the framework of its logical order than in its insight into concrete moral experience. An individual's morality is the working plan through which the inner processes of his mind are brought into the service of an objective life with other individual minds. It is not therefore a private preserve of individuality, within which he shuts him-

self off from society; it can be so applied, no doubt, but when so applied it becomes the source of evil and not of good for the individual. The true conscious good of the individual lies in the subordination and regulation of the functions of his inner life in the interests of a systematic unity with his fellows. The conception of such a unity, consciously operating upon the inner conditions of his activity, relative to his peculiar place in the objective system, and growing into definiteness and clearness with the success of his efforts to attain it—this is the good of and for the individual as a specific centre of finite mind. This region of morality may therefore be described as the individual's conscious perspective of his objective life with his fellows, and is the process of realizing and reflecting in his inner life the objective system of social well-being with which he, as a special centre, is bound up. It covers such facts as intention, conscious purpose, happiness, duty, emotion, and, highest of all expressions of this attitude, the individual 'conscience' with its possibilities for good and for evil to the individual. The whole inner life of the individual is in this way a moral microcosm of the objective self-contained macrocosm of a historical society, and is realized directly on its own account, indirectly as an embodiment of complete objective mind.

(3) The third stage of objective mind—the social order—covers all that we mean by the institutional aspect of the life of a society. Here we have the free unreserved interaction of individual mind with individual mind, the interweaving of interests and purposes within and without the conditions of universal law, with and without the sanctions and guidance of individual conscience. Institutions are the utmost individuals can achieve in the relations they establish with one another; and they contain all the human interests of which their finite individualities, so far as intercommunicating, are capable. From one point of view they are expressions of finite mind, from another point of view finite minds are the living particular foci of the objective concrete spirit embodied in institutions. More than all else in objective mind, therefore, institutions are 'ends in themselves.' They are in no sense creations of 'nature,' because institutions use nature as instrumental for the continuous intercommunion of finite spirits. They are, however, created by self-conscious mind at its highest level, created as universal embodiments of mind, and created for the maintenance of universal and constant relations between individuals. They are always 'instituted,' set up by deliberate resolve; and, once established, are maintained rather by the universality of the ends they embody than by the clear conscious resolution of their component individuals. They have a kind of life of their own once they are set going; and they continue in being by their own single reality, whose complete significance any given individual may be only partially aware of, and as a rule only partially shares. Much of the life of institutions is for the component individuals unknown, much is carried on by conscious automatism, and in some cases, e.g. the State, the institution is maintained even against the judgment of the individual regarding his conscious interests. Still this unconsciousness in the life of institutions is at most a mere matter of degree, and rather a psychological condition of carrying on the institution than a logical aspect of its structure. Consent and intelligence are always presupposed, and the self-consciousness in which the institution is rooted may break out at any time into criticism and lead to further initiative and progress in the life of the institution.

In a word, then, the institutional stage of ob-

jective mind is the direct and conscious operation of a definitely realized collective unity of individual minds upon the individual components sharing in its life; a unity maintained through each, but more concrete than any; a unity secured on certain expressed formulated conditions and therefore implying 'law'; a unity permeating the inner processes and well-being of its components, and therefore involving what the stage of 'morality' contains. It is logically higher in value than the preceding stage, and ethically higher in authority and significance. It is historically prior in existence to the component individuals, and prior therefore to both 'law' and individual morality. In its earliest forms its mode of regulation is that of 'custom,' and custom is at first the source of law and the ruler of conscience. In its highest forms the social order is a blend of custom and self-conscious regulation, the former acting as the conserving, quasi-unconscious method of procedure, the latter as the principle of criticism, initiative, and progress.

The institutional condition is capable of indefinite development, and there is, strictly speaking, no practical limit to the number of institutions. But historically and in principle some institutions are more rooted in the natural conditions of man, more lasting in character, and more universal in their purpose than others, and so more fundamental in the structure of objective mind. Such are the institutions of the family, the city, and the State, and these again are in the order of their ethical importance. The first is based on the natural organic fact of sex; provides the sphere for intercommunion of particular minds in terms of natural affection, sympathy, and direct personal helpfulness; and has its larger ethical significance in the rearing and moulding of new individuals for the wider life of the whole community. The second rests on the natural need of varied organic sustenance; gives rise to and makes possible the complex interdependence of co-operating individuals each and all engaged in obtaining a livelihood; and finds its larger ethical significance in the organization of economic relations in such a way as to give free opportunity of self-expansion to all and protection to each in the fulfilment of his function. The third rests on the need of forceful security from interference from without the community, of regulated security from interference as between individuals and minor institutions within the society, and of concentrating the whole resources of objective mind in a single all-comprehensive dominating unity, which is capable of acting on every part and giving rounded completeness to the ethical life of finite objective mind.

The State is thus the culmination of the reality of objective mind as an organized ethical whole of human purpose consciously acting on the individuals and fulfilled by them. As an ethical whole each State is or should be a single individuality, self-contained, and therefore sufficient for the ethical life of its component individuals. The finitude of any given State is inseparable from it, and is a limitation as regards its capacity to exhaust the life of humanity as such. Each State is but one State amongst other States, all expressive of humanity. The ethical life is therefore a restricted area of reality, and not an exhaustive expression of the Absolute, or, for that matter, even of humanity. When, however, we pass beyond the State and consider the life of humanity as embodied in all States, we pass from the ethical life proper to the drama of human history. This is inseparable from the course of the world in all its aspects. The treatment of States from this point of view is undertaken by the more comprehensive part of Hegel's system, the 'Philosophy of History,' an interpretation of States as realizing

in various degrees the idea of freedom of will embodied in each State.

7. Hegel's view of religion.—Religion occupies a peculiar position in Hegel's philosophy. Philosophy as a whole and in its parts is determined by its object; it always has a definite form of individuality to deal with. Reality as the absolutely individual whole is the supreme object of philosophy; the evolution of its content is the systematic development of the Absolute Idea, the reason-constituted essence of Absolute Spirit. The various divisions and subdivisions of the philosophical system, nature, finite mind, etc., are dealt with as specific individuations of this ultimate reality; their content is evolved in detail as 'moments' of the supreme truth, and thus gives rise to the various parts of the absolute philosophy, the various 'philosophical sciences.' Beyond the one complete absolute science and the various subordinate 'sciences' in that system, beyond reality as a whole and reality in its parts, there is nothing for philosophy to deal with. A philosophical science is the systematic evolution of the real in terms of its fundamental essence or notion; and the real is a whole of parts, a unity of diverse elements.

Now religion is not an object in the sense of a sphere of reality: it is an attitude towards an object. The only form of object possible is either the Absolute or some specific sphere of the Absolute. As Hegel continually asserts, the object of the religious attitude is the Absolute in its unity, in its completeness, in its 'truth.' But this reality is also the peculiar domain of philosophy, or speculative science; and speculation in Hegel's view is alone necessary and sufficient to give the complete truth about the Absolute. Here then lies an obvious difficulty. It cannot be met by saying that the Absolute in philosophy is not the same as the Absolute in religion. The latter, as well as the spirit, of Hegel's system is against such a view: the Absolute in philosophy is emphatically identified with God in religion, and in the highest religion there is not even the semblance of contrast. Nor are there two truths about the Absolute; the Absolute is the supreme truth and the supreme truth is one. Hegel's solution of the difficulty is found in drawing a distinction between the 'form' in which the Absolute is grasped in the case of religion and of philosophy, and the 'content' which they both deal with. The 'form' is different in the two cases, the 'content' is precisely the same. The same Absolute is present in both and in the same sense, viz. as Spirit, self-conscious and rational; and its mode of realization is the same, viz. it is 'conscious of itself' in the religious mind as well as in speculative philosophy. But the medium through which its realization is effected, the 'form' in which the 'content' is expressed, is in religion that of feeling, of sensuous intuition, and of significant sensuously symbolical general ideas, whereas in philosophy the 'form' is that of the notion *qua* notion (as above explained, p. 572 ff.).

This solution, however, only raises a further difficulty. The notion, as we have seen, is the final form in which truth appears, and the notion alone is entirely adequate to convey absolute truth. Is the 'form' used by religion an approximation to the notion, or is it co-equal in value with it for the Absolute which expresses itself in the religious life? There is no doubt that Hegel's view is that the religious 'form' is not in itself completely adequate to the essential nature of Absolute Spirit, and that the religious 'form' calls for and is compelled by its own 'dialectic' to pass to the supreme form in which truth is embodied—the 'notion.' Hence it is that on his view philosophy, and not religion, is the highest expression

of self-conscious spirit; and that speculation is the final stage and 'crown' of the life of spirit.

It is difficult to resist drawing an obvious inference. If it is possible, as Hegel maintains, to convey the truth about the Absolute in the form which is the essence of the Absolute (self-conscious reason), and thus perfectly adequate to the nature of the Absolute, then religion is simply the way of error; if, on the other hand, religion is not the way of error, the claim of philosophy to express the final truth about the Absolute is untenable, since the Absolute requires to express *itself* in the sphere of feeling, intuition, and representative ideas, *as well as* through the notion. On the former alternative, religion is in strictness unnecessary, and philosophy is all that God requires to convey His truth to finite spirit; on the latter alternative, religion is necessary and philosophy has no claim to priority of value over religion, since the Absolute is its own standard of value and one form of self-expression is as needful as the other. Either philosophy fulfils a purpose altogether different from religion, or else philosophy is not by itself the highest and completely concrete expression of the Absolute.

The ambiguity involved in Hegel's position was not merely a source of great perplexity to his followers, and led to diametrically opposite interpretations of the religious significance of his doctrine, but it was clearly a source of trouble to himself when he came to define the boundaries of religion and philosophy. It is easy to see how the difficulty arose. Hegel claims that it is possible in virtue of the principle of his system to take up a theocentric position, and to express not simply what the finite spirit thinks of the Absolute Spirit, but how the Absolute Spirit must itself think. Thought, in the sense of the 'notion,' is absolute thought, thought as it is *for* the Absolute. In religion and pure speculation we have before us what the Absolute Spirit is in and for itself and how it articulates itself. Religion is the 'self-consciousness of God,' not simply how finite spirit is conscious of God, but how the Absolute Spirit is conscious of itself in finite spirit: the Absolute Spirit 'manifests itself' in man, and the manifestation does not conceal but openly reveals its very nature. The revelation of God to man in religion and God's revelation of Himself to Himself in finite spirit are one and the same revelation, much in the same sense as Spinoza maintained that the 'intellectual love of God' was at once 'God's love of Himself' and 'man's love of God.' Similarly, with the necessary change of 'form,' speculative philosophy is the 'self-consciousness of the Absolute Spirit,' the notion of Absolute Mind articulating itself to itself and to finite mind at the same time, since finite mind adds nothing and detracts nothing in the process, but merely 'looks on' at the process of self-articulation. In the result, therefore, the system of notions constituting the substance of the Absolute Reason is the thought of God, as He was or is in the beginning 'before the creation of nature and finite spirit.' Self-manifestation in religion, self-articulation in speculative science—both proceed from the same Spirit; both are therefore necessary to it, as indeed both are commonly considered inevitable in the life-history of finite experience. How then can the two be distinguished? More especially how can the two be distinguished in terms of and by the necessity of the 'notion,' so as to satisfy the demands of a philosophy which lives and moves within the sphere of the 'notion'? How can the notion dialectically exhibit the necessity of two separate self-revelations of the Absolute Spirit? How can the notion justify by its own procedure an 'inferior' and less adequate expression of the

nature of the Absolute than that supplied by the notion? How, in short, can the notion find a place within its own form for a non-notional representation of the absolute truth?

It is not surprising, when we view the matter in the light of the above, that Hegel's efforts to draw the line between religion and philosophy should show considerable vacillation. Thus we find at one time art treated as a part of religion, at another time religion treated as separate from art; at one time art and religion are distinguished as regards their form of expression, at another the form adopted by art is used as a means to give substantiality to the religious attitude. Again, religion is regarded as independent of philosophy and as a vitally necessary moment of expression; at another time religion is treated as a prelude to philosophical truth, yielding up its claims to be truth when the higher point of view of philosophy is reached; at one time religion is a phase of philosophy, at another philosophy is a phase of religion, since philosophy is 'also the service of God'; at one point 'feeling,' 'intuition,' and 'symbolic representation' of God are cancelled and superseded in the 'notion,' as indeed in a sense they must be since they are lower levels of conscious life; at another time these forms are treated as individual forms embodying in themselves the notion like any other individual mode of reality, and so capable of being interpreted and dialectically developed in terms of the notion.

This uncertainty of treatment seems almost inevitable in a system which claims as philosophy to interpret the Divine mind and also to give a philosophical interpretation of a religious, or non-philosophical, apprehension of the same reality, which seeks to be a religious philosophy and yet to find an independent place in its scheme for a philosophical religion, which asserts that the 'Logic,' or general ground-plan of the system, is 'theology,' and at the same time tries to justify the claims of historical theology. Religion was accepted as a fact of history, and its nature had to be traced to its source in the Absolute. In the religious life, finite spirit claims to be in communion with Absolute Spirit. Hegel's view of philosophy required him to prove that such communion arises from the necessary procedure of Absolute Spirit, and that it was thus a stage in the evolution of the Absolute Idea as expounded by philosophy.

Enough has perhaps been said to indicate that whatever value attaches to Hegel's analysis of religion, his attempt to fit religion into the dialectical construction of his system cannot be regarded as either successful or logically satisfactory. However we interpret his position, it appears unconvincing. On the face of the matter, it seems as unaccountable that the Absolute should adopt the confessedly imperfect media of 'feeling' and 'symbolic ideas,'¹ to convey its truth to *itself* as it is for finite spirit, when, so to say, it always has in its grasp for the same purpose the perfect medium of self-expression, the 'notion.' On the other hand, the elimination of all personal qualities in the logical coherence of the notion is a consummation of the religious life which is attained at the cost of the intimately personal communion of finite spirit with Absolute Spirit, in which, as Hegel asserts, religious experience is rooted; and, if the choice has to be made at all, there is little doubt that the religious mind, even in the highest form of religion, will not regard Logic as an adequate substitute for Love. When, again, we consider the endless varieties in mood and expression assumed by religious life in the course of the

¹ This symbolic character of religious ideas is never transcended; it is found in the highest or 'absolute religion' as well as in the 'religion of nature.'

history of mankind, it seems nothing else than grotesque to treat all the creations of the religious attitude, from the phantoms of primitive fear to the aspirations of the saints, as expressions of the self-consciousness of God in the soul of man. Dialectical necessity of that kind does more than justice to the folly of man at the price of doing less than justice to the wisdom of God. In the history of religion, as in history generally, it may be true to insist that the '*Weltgeschichte ist das Weltgericht*'; but a judgment of the world is not a justification of it.

Setting aside, then, the difficulties presented by Hegel's attempt to build religion into the logical structure of his system, the success of his analysis of religious experience is not seriously affected by its somewhat artificial association with the exigencies of his method. Religion in his view is a conscious relation of finite spirit to the Absolute as spirit, and from this fundamental principle everything else follows. The relation is double-sided, and is maintained through spiritual activity of both the terms involved. God as the supreme spiritual unity of man's world (nature and finite spirit) communes with man as spirit, and this communion takes the form essentially of 'manifestation,' 'revelation.' The activity of spirit is necessarily self-manifestation, manifestation to a self, and manifestation of a self. This manifestation constitutes the truth, the substance, the reality of religion. Being not merely truth about God, but truth of God, God as truth, this manifestation is at once God's consciousness of Himself in man, and man's consciousness of God in himself. The truth is one and the same on both sides, and both are aware of the same truth. The peculiarity of the religious life just consists in this essential unity of man's spirit with God's spirit, a unity that defies separation. The imperturbable 'certainty' in the religious mind of its direct intimacy with Absolute Spirit is the psychological effect of this fundamental unity. This certainty is found in all religious experience, and is so complete that it can and does take the form of mere 'feeling,' as well as the form of thought. Its 'beliefs' are often a blend of feeling and idea, and its beliefs are always immediate to the religious consciousness.

In maintaining this attitude, however, man never confuses the position of God in the relation with that of man. God is the self-revealer, man is the recipient of the manifestation. Man does not create the reality, the truth, revealed to him; he accepts it. His attitude is that of 'submission,' 'worship,' 'acquiescence,' 'expectancy'; God's attitude is that of the 'all-giver,' the 'all-wise,' the 'all-powerful,' the 'deliverer.' The immediacy of the communion never cancels the distinction of the terms related, finite spirit and Absolute Spirit.

The relation, again, is that of the concrete human spirit to the Absolute. The union may be effected through any element of nature or finite spirit; and the manifestation may adopt as its vehicle of communication with man's spirit any level or function of conscious life, whether in the sphere of feeling, ideas or volition, theoretical or practical. These together—the feature of nature or finite spirit by which God is expressed, and the mode of conscious life which constitutes the form of conscious communion with God—determine the different kinds of religious attitude which can be assumed, and the different types of religions which historically appear. Thus God 'appears' in and is identified with the realm of sense, with objects and powers of nature inorganic or organic, with the purposes of man's moral life, with the purposes that keep man and nature together, and with self-consciousness in its purest expression. Similarly God communicates with man's mind through pure feeling,

through 'intuition,' through symbolic general ideas, through the 'notion' of reason. And, just as it is not the part of nature, or of man's life as a part, that is the objective reality for the religious mind, but the one Absolute Spirit as focused in the part, so the mere feeling or idea is not looked upon as conveying an impersonal systematic truth about God, but as a channel of communication with God, and indeed as a *consciously* imperfect medium of conscious communion, a symbolic language of human apprehension, a figurative human suggestion used to make vivid and personal the concrete consciousness of the Divine presence in man's soul. If the idea used is taken as literal systematic truth, it is not merely on critical analysis found to be untrue, but it loses its religious significance: it becomes an attempt at speculative impersonal interpretation, not a channel of spiritual personal communion.¹ This can be illustrated from the ideas found in any religion, viz. the 'wrath' of God, God as 'Creator,' God as 'Father,' and even more abstract ideas, such as God as 'First Cause.'

In the religious life there is a constant process taking place in the soul of man by which the communion is effectively realized and sustained, an activity by which that union is kept up, or restored when interrupted. In contrast to the way in which God is presented to the soul, which Hegel describes in one passage as the 'theoretical' aspect of religion, this process of supporting the union and restoring an interrupted union is called the 'practical' aspect of religion. This practical aspect is the cult; it constitutes an inseparable element in every religion, and varies with each religion as the idea of God varies.

The foregoing is in brief Hegel's general notion of religion with the essential elements found in one form or another in every religion. It will be seen at once that this notion owes quite as much of its contents to psychological analysis of religious experience as to logical analysis of the nature of Absolute Spirit. Still more close is the connexion between the history of religion and his 'notion' of religion, when we consider the further development of the argument in the 'Philosophy of Religion.' While no doubt Hegel intended to portray the logical evolution of the stages required to realize the above notion of religion in its completeness, the evolution owes as much to psychology and history as to logic; and it is not easy to say which is the most important. The notion of religion is realized; i.e., man is conscious of God or God becomes conscious in man, at all the levels at which finite consciousness exists—sense, understanding, reason, spirit. These levels form together a succession of stages in the fulfilment of the life of human consciousness, the connexion and evolution of which constitute in part the 'Phenomenology of Mind.' The evolution of the notion of religion follows the course taken in the development of the stages of consciousness. Again, by what seems to the student of Hegel's system a piece of good fortune, but which is doubtless the background of Hegel's own thought, there is a historical type and form of religion corresponding to each of these stages in the morphological development of consciousness. This historical material is drawn from the history of mankind in general and the history of religions in particular. Each specific religion has its place determined in the evolution of religion in general by the stage in the evolution of consciousness to which it corresponds and at which it is realized. Thus the evolution of consciousness mediates the connexion between the general notion of religion and the general history of religious experience in mankind. By this means Hegel's development of

¹ This confusion is precisely the source of the 'conflict between science and religion,' or between philosophy and theology.

the notion of religion is at once a statement of the way in which the notion of religion is gradually evolved and exhaustively realized in finite spirit, and also a genetically constructed system of the historical forms in which religion has appeared. In a word, his notion of religion is evolved in its concreteness by giving a morphogenetic construction of the forms assumed by religious experience in human history. It is 'logical' in the sense that the forms are arranged so as to show an ever-increasing advance in the notion from abstract to concrete; it is 'historical' in the sense that specific religions are extracted from human history because they typify in actual form and reveal to analysis the stages in this advance.

We have therefore in the working out of Hegel's 'Philosophy of Religion' a plan adopted which is the same in principle as that followed in his 'History of Philosophy,' or again in his 'Philosophy of History.' Just as the 'History of Philosophy' may be described as philosophy itself 'taking its time,' or at least taking time for its unfolding, and history in general as human 'freedom' in the making, so we may describe the history of religion as the notion of religion working itself out under the conditions of time and human limitations. It is altogether in the spirit of Hegel's system to demonstrate the inseparable unity of notion and reality, to establish the notion as the essence of the real. In the case of religion the real is cast in the mould of history, and bound up with the course of time. Hence the evolution of the notion of religion must necessarily be the evolution of an historical reality.

We need not trace here in detail the analysis Hegel gives of the various historical religions. Suffice it to say that he finds the simplest forms of religion to be the religions of Nature, i.e. with natural objects of sense as their media; the middle forms of religion to be those of Greece and Rome; the highest or absolute form of religion to be Christianity. The outcome of his argument would thus seem to be the philosophical defence of the place claimed for Christianity amongst the peoples of Western Europe. The critical student may suspect such a result of savouring of predilection and partisanship rather than of abstract impersonal logic, and may find more than traces, in such an argument, of the spirit of all theodicies. But on the first count Hegel claims that to be a sound Lutheran is to be on the side of reason, and on the second he does not hesitate to maintain that all philosophy is in the long run a theodicy.

LITERATURE.—I. BIOGRAPHY.—K. Rosenkranz, *Hegels Leben*, Berlin, 1844; *Hegel als deutscher Nationalphilosoph*, Leipzig, 1870; K. Hegel, *Briefe von und an Hegel*, do. 1887; R. Haym, *Hegel und seine Zeit*, Berlin, 1857; K. Köstlin, *Hegel in philos., polit., und nation. Beziehung*, Tübingen, 1870; Kuno Fischer, *Hegels Leben, Werke, und Lehre*, Heidelberg, 1901; *Hegel-Archiv*, ed. G. Lasson, vol. I., Leipzig, 1912.

II. WORKS.—*Werke*, 18 vols., Berlin, 1840 ff. (the volumes containing the different parts of the system were edited by different pupils and friends of Hegel); some of the volumes have been translated into English: *The Philosophy of History*, tr. J. Sibree, London, 1857; *The Logic of Hegel*, tr. W. Wallace, Oxford, 1892 (=vol. I. of Hegel's *Encyclopaedia*); *The Philosophy of Mind*, tr. W. Wallace, do. 1894 (=vol. III. of Hegel's *Encyclopaedia*); *The Philosophy of Religion*, tr. E. B. Spiers and J. B. Sanderson, London, 1896; *The History of Philosophy*, tr. E. S. Haldane and F. H. Simson, do. 1892-96; *The Philosophy of Right*, tr. S. W. Dyde, do. 1896; *The Phenomenology of Mind*, tr. J. B. Baillie, do. 1910; *The Introduction to Hegel's 'Philosophy of Fine Art'*, tr. B. Bosanquet, do. 1886; *The Philosophy of Art*, tr. W. Haastie, Edinburgh, 1896.

J. B. BAILLIE.

HEINE.—I. Life and writings.—Heine was born on the eve of the 19th cent.; whether the year was 1797 or 1799 has been a matter of dispute which can never be finally settled, since all the records have been destroyed by fire. He himself insisted that 13th Dec. 1799 was the correct date, and, erroneously regarding 1st Jan. 1800 as commencing the new century, spoke of himself as the first man of the 19th century. He was born at a time when the despotism which had tyrannized Europe was rapidly breaking up and yielding before the approaching forces of democratic freedom. He was a supreme illustration of that close alliance between tragedy and comedy which stamps all periods in which new wine is fermenting in old bottles. Düsseldorf was his native place, and this circumstance perhaps partially accounts for the spell which France cast over him, and for his satiric attitude towards the Teuton peoples; for the French were dominant in the Rhenish provinces during his earliest years. Yet he was in a sense without nationality. His parents were Jewish. The father, Samson Heine, was easy-going and unintellectual, unlike his brother Solomon, who became one of the richest men in Germany, but he was fond of art and music, and gained the deep affection of his son; the mother, who came of a cultured, originally Dutch family, was full of energy, well-educated, an admirer of Goethe and Rousseau, and had the greater influence on the mind of Heine. Harry, as he was christened, was their eldest child; his nature seemed to embrace the most contradictory of traits, for 'in soul he was an early Hebrew; in spirit, an ancient Greek; in mind a republican of the nineteenth century' (*Sharp's Life*, 12). He

was a quick boy, an energetic and appreciative lover of books, and he availed himself of opportunities for study which were given him by an uncle who was a studious physician and minor author.

From his early attempts at verse Heine was sent to the drudgery of a bank at Frankfurt. After a period of business life in Hamburg with his uncle Solomon Heine, an unsuccessful venture on his own account, and the disappointment of a rejected proposal to his cousin Amalie, he left Hamburg to study law at Bonn in 1819, his maintenance being provided by his rich uncle. Thence he moved to Göttingen, and then to Berlin, where his first volume of poems appeared in 1821. Hitherto he had paid little attention to law, being engrossed in German history, literature, and aesthetics, but under Ed. Gans he eagerly studied the history and theory of jurisprudence, and even began a treatise on the *Constitutional Law of the Middle Ages*. Here, also, he came under the influence of Hegel, and he was admitted into literary coteries which gave him opportunities of meeting the most eminent men of letters. He formed a friendship, which became very intimate and lasted all his life, with Moses Moser, a man possessing a wide knowledge of men and affairs, and well versed in literature and philosophy. After a period of ill-health, he returned to Göttingen in 1824 and resumed the study of law. In that year he took a walking tour through the Harz Mountains and wrote an attractive account of his journey, partly in verse and partly in prose. The journey included a brief visit to Goethe, which he describes in one of his letters to Moser.

In 1825, with the sole view of being promoted to legal office, Heine was baptized into the Christian Church, much to his regret in later years, for his action served only to render him suspect among Christians and Jews alike. Shortly afterwards he took his degree of Doctor of Laws, and in that year and the following Julius Campe published his *Reisebilder* (*Travel Pictures*) in two volumes, an autobiographical sketch called *Ideen: Das Buch le Grand*, and more poems. Heine now visited England (from April to August 1827), but formed only a poor impression of London. 'Send a philosopher to London, but on your life not a poet,' he wrote in his *Englische Fragmente*. On returning to Germany he found that his *Reisebilder* had created a very favourable impression, and that the official ban, placed on the books in Prussia and North Germany on account of his freedom of expression in treating current religious and political questions, had served as a valuable advertisement. He now confined his attention to journalistic work in Munich, and had great hopes of an academic position of importance from King Ludwig I., who was reorganizing Bavaria. Indeed, considering himself certain of his appointment, he left for a tour in Italy, which supplied materials for a further volume of *Reisebilder*, conceived after the same plan, or absence of plan, as the earlier volumes, but even more bold in criticism, directed against all conventions which he regarded as antagonistic to human liberty. He failed to obtain the professorship on which he had set his hopes, and the disappointment coincided with the news of his father's death.

Heine now engaged in literary work, but was interrupted in 1830 by the news of the July Revolution in Paris, which raised extravagant hopes among the German Liberals. Heine gave forcible expression to these hopes, and, when the effect of the Revolution in Germany proved disappointing to the Liberals, he was singled out and given the hint that he would be well advised to leave Germany. In May 1831 he arrived in Paris.

He received a generous allowance from his uncle, and his health greatly improved. He found himself admitted into circles of celebrities which included Mendelssohn, Chopin, Balzac, Hugo, Sainte-Beuve, and Michelet. He set before himself the aim of promoting greater sympathy and closer understanding between Germany and France, and wrote letters to a German periodical which gave a vivid description of the movements of thought in Paris. He attached himself for a time to the school of Saint-Simon, finding its 'Religion of Humanity' extremely congenial, and he dedicated to *Enfantin*, then head of the school, his essay, *Zur Geschichte der Religion und Philosophie*. In its German form it was mutilated by the censor, but it had previously appeared in the *Revue des Deux Mondes* under the title, 'De l'Allemagne depuis Luther.' Turning to literature, he critically described for the French people, in *Die Romantische Schule*, the origins and aims of German Romanticism. These works rank among his best contributions to literature, but they were not very successful when first published. *Der Salon* (which included *Florentinische Nächte*), in four volumes, the last of which appeared in 1840, consisted of ten pictures and sketches on a variety of topics of current interest, varying greatly in merit. In 1835, however, Heine's works had been banned in Germany and Austria by a decree of the German Parliament, along with all the productions of a group of writers referred to as 'das junge Deutschland.' The decree was afterwards repealed, but the works of these authors were subjected to a rigid censorship.

Some time after his arrival in Paris, Heine entered into intimate relations with a simple, illiterate shop-girl, who was never able to read a word of his writings. Legal marriage did not follow till some years had passed, and then only to secure a comfortable position for Mathilde Mirat if Heine should fall in a duel which followed his personal attack upon the deceased Ludwig Börne, which was resented by one of the latter's admirers. But Mathilde filled a large place in Heine's life, and in his last years was a most devoted and indispensable nurse. He secretly accepted a small pension from the French Government as one of those 'who had compromised themselves in the cause of liberty.' When the Government changed on the abdication of Louis-Philippe and, the pension being discontinued, the names of the beneficiaries under the secret funds were made public, Heine's opponents openly charged him with bartering his patriotism for 4800 francs per annum. Further financial difficulties faced Heine, for his uncle Solomon died and his cousin Karl refused to continue the annual allowance of 4000 francs which his uncle had given him. Not long before, he had paid an extended visit to Hamburg, taking his wife with him, in order to persuade his uncle to continue the allowance to his wife after his death. This blow, mitigated though it was two years later by the renewal of the allowance, so excited him that a disease which had for some time threatened him came on apace. Paralysis soon gave him all the appearance of a dying man; and, though he lived for two years, with his mind undimmed and his keen critical interest unimpaired, he endured intense agony as he lay on a pile of mattresses—his mattress grave he called it—and needed all the soothing power of morphia. The loss of his savings by a bank-failure, his anxiety for his wife's future, and the difficulty of concealing his condition from his mother never overwhelmed his eager spirit; his literary work maintained its virility, though it was necessarily less constant

He died on 16th Feb. 1856, and was buried silently in Montmartre.

The character of Heine defies analysis. Of himself he said: 'I am a Jew, I am a Christian; I am tragedy, I am comedy; a Greek, a Hebrew; an adorer of despotism in Napoleon, an admirer of communism in Proudhon; a Latin, a Teuton; a beast, a devil, a god.' His friend Gérard de Nerval extended this antithetical by-play by saying that he was 'at once cruel and tender, naïf and perfidious, sceptical and credulous, lyrical and prosaic, a sentimentalist and a mocker at sentiment, impassioned and reserved, *spirituel et pittoresque*, an ancient and a modern, *moyen-âge et révolutionnaire*.' His letters reveal a poet sceptical of poetry itself, an infidel haunted by the conviction of the spiritual. 'I am positive I have a soul,' he says, quoting Sterne's words with approval. Matthew Arnold it is who has best defined the master of irony (in *Heine's Grave*):

'The Spirit of the world,
Beholding the absurdity of men—
Their vaunts, their feats—let a sardonic smile,
For one short moment, wander o'er his lips.
That smile was Heine!'

We are here concerned with Heine not as a poet but as a personality who left a marked impression on the religious life and political practice of his age. As such, if we take Heine's own words seriously, he is, indeed, nearer to us than to the purely literary critic. He says:

'Poetry, however much I love her, was to me but a divine play-thing, or a consecrated means for a heavenly end. I have never attached great value to a poet's fame, and whether my songs be praised or blamed, that troubles me little. But a sword shall ye lay upon my coffin, for I was a brave soldier in the war of the liberation of humanity' (*Faust, Heine's Prose*, p. xlv).

2. Religious interests.—Kingsley once referred to Heine as 'a bad man, my dear, a bad man'; and Carlyle spoke of him as 'that poor blackguard Heine.' True, he hated priestcraft in all its shapes and forms, and he held in abhorrence 'State-Religion, that monster born of the intrigue between temporal and spiritual power,' but he was the friend of all sincere religion. 'I may not be over partial to anthropomorphism, but I believe in the Glory of God.' In his last will he humbly asks pardon of God and men for any offences against good manners or morals in his writings.

Despite all the attempts to attribute to cynical irony his allusions to the matter, it remains true that in his later days he became aware of a 'heavenly homesickness.' He himself has something to say of this in his preface to the second German edition of *Religion und Philosophie* (1852): 'In my latest book, *Romanero*, I have explained the transformation which took place within me regarding sacred things. Since its publication many inquiries have been made as to the manner in which the true light dawned upon me. Pious souls, thirsting after a miracle, have desired to know whether, like Saul on his way to Damascus, I had seen a light from heaven; or whether, like Balaam, the son of Beor, I was riding on a restive ass that suddenly opened its mouth and began to speak as a man. No, ye credulous believers, I never journeyed to Damascus; nor have I ever seen an ass, at least any four-footed one, which spake as a man, though I have often enough met men who, whenever they opened their mouths, spake as asses. In truth, it was neither a vision, nor a seraphic revelation, nor a voice from heaven, nor any strange dream or other mystery that brought me into the way of salvation, and I owe my conversion simply to the reading of a book. A book? Yes, and it is an old, homely-looking book, modest as nature and natural as it is; a book that has a work-a-day and unassuming look, like the sun that warms us, like the bread that nourishes us; a book that seems to us as familiar and as full of kindly blessing as the old grandmother who reads daily in it with dear, trembling lips, and spectacles on her nose. And the book is called quite shortly—the Book, the Bible. Rightly do men also call it the Holy Scriptures; for he that has lost God can find Him again in this book, and towards him that has never known God it sends forth the breath of the Divine Word.'

In his *Essay on Religion und Philosophie in Deutschland*—the first edition of which appeared in French in 1833, when Heine was in the full vigour of early manhood—it is his aim 'to explain what Christianity is, how it became Roman Catholicism, how from this it became Protestantism, and how German Philosophy is the offspring

of Protestantism.' The Christian idea he takes to be the eternal conflict of the perverse Satan and the good Christ, of the body and the soul. He looks forward to a day in which happier and fairer generations, nurtured in a religion of joy, will smile with pity when thinking of their poor ancestors, whose lives were spent in melancholy self-mortification. But he declares that Christianity has been a blessing for suffering humanity during eighteen centuries; 'it has been providential, divine, holy.'

'All that it has done in the interests of civilization, curbing the strong and strengthening the weak, binding together the nations through a common sympathy and a common tongue, and all else that its apologists have urged in its praise—all this has been as nothing compared with that great consolation it has bestowed on man. Eternal praise is due to the symbol of that Suffering God, the Saviour with the crown of thorns, the crucified Christ, whose blood was as a healing balm that flowed into the wounds of humanity. . . . The whole system of symbolism imposed on the art and life of the Middle Ages must awaken the admiration of poets in all times.'

He deals in an illuminating way with the real significance of the Reformation in Germany. It was not merely a war against Roman Catholicism, and its motive was essentially different from that of the conflict in France. In Germany the Reformation was a war begun by Spiritualism when it was perceived that Roman Catholicism possessed merely the title of authority and ruled only *de jure*, whilst Sensualism, by means of a long-established fraud, was exercising actual sovereignty and ruled *de facto*. The retailers of indulgences were expelled, and a Puritanism utterly hostile to the pleasures of the senses swept over the land. In France, however, the conflict of the 17th and 18th centuries was opened by Sensualism 'when, though *de facto* sovereign, it beheld every act of its authority derided as illegitimate by a Spiritualism that existed only *de jure*. In Germany the conflict took place in theological discussion; in France it proceeded in wanton jests and merry satire.' This statement as to the Reformation in Germany applies only to the commencement of the conflict; for, when Spiritualism had made its breach in the edifice of the Church, Germany became the arena of combatants intoxicated with liberty. Heine's irony is often delicious and salutary. After declaring that, since the great progress of the natural sciences, miracles have ceased, he proceeds:

'Perhaps the new religions that God may henceforth establish on earth are to be based solely on reason, which indeed will be much more reasonable. At least in the case of Saint-Simonianism, which is the newest religion, no miracle has occurred, with this exception, perhaps, that an old tailor's bill owing by Saint-Simon himself was paid by his disciples ten years after his death. Young grocers were amazed at such supernatural testimony, but the tailors began at once to believe.'

In the second part of the book, Heine deals with the philosophical revolution which, as the offspring of the religious revolution, is nothing else than the last consequences of Protestantism. While he has in his first part spoken of Spiritualism and Sensualism—regarded as the rival social systems—he now refers to Idealism and Materialism, taking account of the corresponding philosophical systems. He refers to his own religious convictions as embodying 'not indeed the dogmatism, but the spirit of Protestantism.'

The French edition amplifies this statement: 'Protestantism was for me more than a religion, it was a mission; and for fourteen years I have been fighting in its interests against the machinations of the German Jesuits. My sympathy for dogma has, it is true, of late become extinguished, and I have frankly declared in my writings that my whole Protestantism consists in the fact that I was inscribed as an evangelical Christian in the church registers of the Lutheran communion. But a secret predilection for the cause in which we have formerly fought and suffered always continues to nestle in our hearts, and my present religious convictions are still animated by the spirit of Protestantism' (*Rel. and Phil. in Germany*, tr. J. Snodgrass, p. 86).

Heine at one point becomes enthusiastic in proclaiming the theoretical overthrow of Deism and the rise of Pantheism among all Germany's

greatest thinkers and best artists. Germany has outgrown Deism; Pantheism is her open secret. Deism is the religion for slaves, for children, for Genevèves, for watchmakers. Kant's *Critique of Pure Reason* is the sword that slew Deism in Germany. But in the preface to the second German edition of *Religion und Philosophie*, Heine exercises 'the inalienable right of openly acknowledging his error.' He confesses that everything in this book referring to the existence of God is as false as it is ill-advised.

'No, it is not true that the *Critique of Reason*, which has destroyed the arguments for the existence of God, familiar to mankind since the time of Anselm of Canterbury, has likewise made an end of God Himself. . . . The fine-spun Berlin dialectic is incapable of enticing a dog from the fireside, it has not the power to kill a cat, much less a God.'

The *Romantische Schule*, which also first appeared in French, contains many interesting passages more relevant to our interest in Heine than to that of the literary critic. Not denying that Christian-Catholic discipline, as a wholesome reaction against the colossal materialism of the Roman Empire, conferred benefits on Europe—a hunger-cure he calls it—he sees in it the origin of a wide-spread hypocrisy; men praised what had become but a pretence of asceticism. This discipline had taught the renunciation of all worldly pleasures, branding as sin the most innocent gratification of the senses; Heine would now replace it by a vindication of our inalienable heritage, by the 'rehabilitation of the flesh.' The book abounds in acute analyses of the relations between German literature on the one hand and Roman Catholicism and Protestantism on the other.

'Alas! we must confess that Pantheism has often led men into indifferentism. They reasoned thus: if everything is God, if everything is divine, then it is indifferent whether man occupies himself with clouds or ancient gems, with folk-songs or the anatomy of apes, with real human beings or play-actors. But that is just the mistake. Everything is not God, but God is everything. He does not manifest Himself equally in all things, but He shows Himself in different degrees according to the various matters. Everything bears within itself an impulse to strive after a higher degree of divinity, and that is the great law of progress throughout all nature. The recognition of this law, which has been most profoundly revealed by the disciples of St. Simon, now makes pantheism a cosmic, universal theory, which not only does not lead to indifferentism, but, on the contrary, induces the most self-sacrificing endeavours. No, God does not manifest Himself in all things equally, as Wolfgang Goethe believed, who through such a belief became an indifferentist, and, instead of devoting himself to the highest interests of humanity, occupied himself with art, anatomy, theories of colour, botanical studies, and observations of the clouds. No, God is manifest in some things to a greater degree than in others. He lives in motion, in action, in time. His holy breath is wafted through the pages of history, which is God's true book of record' (Heine's *Prose Writings*, ed. H. H. Ellis, 108 f.).

The subject of Goethe's *Faust* (*Der Doktor Faust: ein Tanzpoem*) gives Heine an opportunity for preaching the gospel of his own earlier life—the 'rehabilitation of the flesh.'

'Knowledge, science, the comprehension of nature through reason, eventually gives us the enjoyment of which faith, that is, Catholic Christianity, has so long defrauded us; we now recognize the truth that mankind is destined to an earthly as well as to a heavenly equality. The political brotherhood which philosophy inculcates is more beneficial to us than the purely spiritual brotherhood, for which we are indebted to Christianity. . . . The German people had, for a long time, felt a profound presentiment of this, for the Germans themselves are that learned Doctor Faust; they themselves are that spiritualist, who, having at last comprehended the inadequateness of the spiritual life alone, reinstates the flesh in its rights. But still biased by the symbolism of Catholic poetry, in which God is pictured as the representative of the spirit, and the devil as that of the flesh, the rehabilitation of the flesh was characterized as an apostasy from God, and a compact with the devil. But some time must yet elapse ere the deeply significant prophecy of that poem will be fulfilled as regards the German people, and the spirit itself, comprehending the usurpation of spiritualism, become the champion of the rights of the flesh. That will be the Revolution, the great daughter of the Reformation' (*Die romantische Schule*, bk. i.; Leland, v. 800 f.).

3. Political aims and influence.—Heine's aims in his political journalism and in his personal influence are plainly expressed in his will: 'La

grande affaire de ma vie était de travailler à l'entente cordiale entre l'Allemagne et la France, et à déjouer les artifices des ennemis de la démocratie, qui exploitent à leur profit les préjugés et les animosités internationales.' The result at which he aimed was not the forced equality desired in France 'by the decapitation of the tallest stalks,' but active freedom. The Romantic School rested on the foundation of an active slavery; Goethe had preached and lived a passive freedom. Opposed to these was Heine's ideal of active freedom, of emancipation—

Emancipation 'not only of Irishmen, Greeks, Frankfort Jews, West Indian blacks, and such like oppressed peoples, but the emancipation of the whole world, especially of Europe, which has attained its majority, and is now breaking loose from the iron leading-strings of Privilege, of Aristocracy' (cf. L. A. Montefiore, in *Fortnightly Review*, new ser., xxii. [1877] 838).

Cosmopolitan Heine was, but patriotic too, for he believed in the mission of individual nations; he could not, however, view patriotism and national spirit as based on racial suspicion and international hatred. He was much attracted to communism, saying of it that its propaganda 'boasts a language universally intelligible. The alphabet of this international dialect is simple as hunger, envy, and death; it is readily learned, and will develop into a world-revolution, the great struggle between the possessionless and the oligarchies of possession.' His treatment of political questions reveals most clearly his strange combination of traits. His critical perspicacity is most sure when his wit is most sharp. Much of his self-contradiction, which is, after all, but the outward aspect of this rare combination, springs from the circumstance that he was essentially a poet, whose song was interrupted by the distant rumblings of a fast-approaching storm. 'The world-wide conflict between the powers that be and those that are to be' awakened a conflict within himself which found expression when he came into contact in Paris with the school of Saint-Simon.

'Yes! I declare it with full conviction: our descendants will be a happier and fairer race than we are. For I believe in progress; I believe that happiness is the goal of humanity. . . . Even here on earth I would strive, through the blessings of free political and industrial institutions, to bring about that reign of felicity which, in the opinion of the pious, is to be postponed till heaven is reached after the day of judgment.'

Much credit that belongs by right to men of prophetic insight and incisive expression is given to men of action. The latter are 'nothing but unconscious hod-men of the men of thought who, often in humblest stillness,' have appointed them their inevitable task. Heine has appointed to modern Europe, and to Germany in particular, several 'inevitable tasks.' Among the direct fruits of the ideals which he cherished and fearlessly advocated are the greater freedom of political expression and action, through parliamentary institutions and by personal influence, the religious emancipation, and the national unity which Germany to-day enjoys.

HELL.—See COSMOGONY, STATE OF THE DEAD.

HEMACHANDRA.—A prominent Jain author of the Śvetāmbaras who is popularly called 'the Omniscient one of the Iron Age' (*Kalikālasar-vajra*). He is famous in the history of his sect because he induced Jayasinhha Siddharāja, one of the most powerful kings of Gujārāt (A.D. 1094-1143), to favour the Jains, and actually converted his successor Kumārāpāla, the consequence being that Gujārāt has ever since been a stronghold of Jainism. Born in Dhandhūka, Aḥmadābād collectorate, in 1088 or 1089, he early became a Jain novice under Devachandra, and was ordained as *sūri* in 1110. For the greater part of his life he lived in Aṇhīlvāḍ Pātan, the capital of Gujārāt. There he won the king's favour in 1125, and became an influential person at court, especially after the conversion of Kumārāpāla. Through his exertions the ethical ideals of Jainism were brought to bear on the government of the State, at least for a time. In order to consolidate the Jain influence he revised the Indian system of politics (*nītiśāstrā*) according to the Jain principles of ethics and the political conditions of his time, and wrote the *Arhannīti*, or Jain Politics. Hemachandra's very busy career ended in 1173.

In his literary activity also he seems to have had practical aims in view. He provided his sect with text-books of the principal Indian sciences, so that the Jains were enabled to compete successfully with their Brāhmanical rivals. He wrote a complete Sanskrit and a Prakrit Grammar (the latter ed. and tr. Pischel, Halle, 1877-80), two Sanskrit Dictionaries (*Abhidhānāchintāmaṇi* and *Anekārthakośa*, ed. respectively by Böhlingk and Rieu, St. Petersburg, 1847, and by Zachariae, Vienna, 1893), a Dictionary of peculiar Prakrit idioms (*Deśināmamālā*, ed. Pischel, Bombay, 1880), manuals of Poetics and Metrics, an exposition of ethics and asceticism (*Yogaśāstra*, ed. and tr. of first 4 sections by E. Windisch, ZDMG xxviii. [1874] 185-262), a work on Philosophy (*Pramāṇachintāmaṇi*), and a number of minor treatises. In addition, he composed detailed commentaries on most of these works, and illustrated his theoretical rules in two poems, a Sanskrit and a Prakrit one, both called *Dvyāśraya Kāvya*. He also composed a long epic poem in Sanskrit, the *Triṣaṣṭīśālākāpurāṇaśācharita*, in which he sets forth the mythical and legendary history of the world as conceived by the Jains.

Hemachandra has a very extensive, and at the same time accurate, knowledge of many branches of Hindu and Jain learning, combined with great literary skill, and an easy style. His strength lies in encyclopaedic work rather than in original research, but the enormous mass of varied information which he gathered from original sources, mostly lost to us, makes his works an inestimable mine for philological and historical research.

LITERATURE.—G. Bühler, 'Über das Leben des Jaina-Mönches Hemachandra, des Schülers des Devachandra aus der Vajrasākhā,' *DWAW*, philos.-histor. Classe, Vienna, 1889; T. Zachariae, *Die ind. Wörterbücher* (=GIAP I. 8b [1897]), pp. 80-85. HERMANN JACOBI.

HEMOTHEISM.—See MONOTHEISM.

HERACLITUS.—1. Life.—The well-accredited facts of the life of Heraclitus are very few. He was the son of Blyson or Blosson, and was descended from the most aristocratic family in Ephesus. In his family the patriarchal kingship, which was traced back to Androclus the son of Codrus, continued in the priestly rank of the *basileus*; the office of priest to the Eleusinian Demeter was also connected with it. The tradition that he persuaded the tyrant Melankomas to abdicate his rule, and returned a point-blank refusal to an invitation from Darius, is doubtful. It is certain that he was dissatisfied with the democratic government in his native city, and that he violently attacked his countrymen on account of their moral (fr. 125a [Diels, *Fragmente der Vorsokratiker*, i.³ 102]) and political (104, 121) conduct. He especially censured the banishment of his friend Hermodorus, whom later writers have connected (perhaps wrongly) with the Hermodorus who had a share in the Decemviral legislation of the Romans (450 B.C.). Ancient chronology gives Ol. 69 (504-501 B.C.) as the period when he flourished, which seems to depend on his traditional connexion with Darius. He is said to have lived to the age of sixty, and (fabulously) to have died of dropsy. His date is more certainly ascertained from the fragments of his writings. For, on the one hand, he rejects the multifarious learning of his Ionic countrymen, Pythagoras, Xenophanes, and Hecataeus, who were all at the height of their influence when the 6th cent. was passing into the 5th; on the other hand, he says nothing of his bitterest opponent, Parmenides. Now, since the latter, as most modern scholars agree, clearly combats the antithetical method of Heraclitus in his verses (fr. 6, 8-9 [Vorsok. i.³ 153]), and the period of his chief influence is to be fixed somewhere about 480 B.C., it follows that the work of Heraclitus should be dated about 490 B.C. The obvious parody of the Heraclitic philosophy in Epicharmus (fr. 2 [Vorsok. i.³ 118]) is of no use as a clue to his date, as under the name of the latter were collected not only later forgeries, but also old Sicilian comedies of different periods.

2. Writings.—Heraclitus's work, of which 130 genuine fragments are preserved to us, is composed in the Ionic dialect, and is archaic, often poetic, in character. Its aphoristic form is borrowed from the Gnostic writings which were widely circulated in the 6th cent., and which, composed partly in poetry and partly in prose (e.g. the sayings of the Seven Sages), gave pithy expression to their experience of life.

In Heraclitus there is added, on the one side, an intense bitterness springing from his tone of mind and experience of life, and, on the other, an intentional obscurity taken over from the religious poetry (oracular and prophetic) of the 6th century. There is, lastly, a modern regard for rhetorical effect in the antithetical form of composition, which shows itself also in his contemporary Simonides, and was further developed in the writings of the Sophists. The division of his work into three books, treating of Nature, Politics, and Theology, either is due to later recensions, or gives the main heads of his philosophy. In the time of Heraclitus books were neither divided into chapters nor possessed titles. His successors referred to his work, as they did to those of all the pre-Socratic philosophers, under the title 'Concerning Nature.'

3. Philosophy.—Heraclitus is the profoundest thinker before Plato, and is a joint-founder with him of the Idealism which under the influence of Plato and Christianity has prevailed over other systems. It is to the profundity of his thoughts that the misunderstanding of them is due, both in his own times and later, down to the present

day. The positive character of 19th cent. thought especially has shown itself incapable of grasping the daring transcendence of his view of the Cosmos. At the very beginning of his work (fr. 1), Heraclitus complains, with bitter dejection, that, in spite of his revelation, men make themselves insensible, both before and after hearing it, to the apprehension of a homogeneous, eternal, omnipotent, invisible, spiritual Power which with the swiftness and force of lightning rules the world, the inner world of man as the outer world of nature, from one end to the other. The philosopher's system has a 'husk' and a 'kernel.' In the 'husk' he condescends to depict the world, as men are wont to fashion it for themselves from their ephemeral experiences; he portrays the mutable, inconsistent, unconscious, and childish world of change. He rejects the polymathy of his contemporaries, i.e. the conclusions of the Milesian physicists and mathematicians since Thales, which were deepened and expanded by Xenophanes and Pythagoras; for they led to a knowledge of contradictory details, not to a homogeneous conception of the world.

Therefore he demands, in place of the method of natural science and mathematics prevalent hitherto, a psychological one, proceeding not from without but from within, not from Nature but from the soul of man. 'I have inquired of myself' (fr. 101)—'To all men it is given to know themselves, and to direct their thoughts accordingly' (fr. 116). Thus it is the task of philosophy, as Socrates taught later, to obey the Delphic precept *Γνῶθι σεαυτόν*. Both Socrates and Heraclitus turned away from the superficial interpretation of Nature represented by the Ionians. But, while ethical problems chiefly attracted Socrates, the more comprehensive mind of the Ephesian directed itself vigorously to metaphysics, to 'the Invisible,' which represents the kernel of his philosophy. 'Wisdom consists in one duty and only one—to understand the Intelligence (*νοῦς*) which governs all things' (fr. 41). 'Of what profit to men is the knowledge of Nature? The fairest Cosmos is merely a rubbish-heap poured out at random' (fr. 124). Time, which drives onward everything earthly in ceaseless change, is 'like a child who plays at draughts and moves them hither and thither—a child's government' (fr. 52).

The philosopher's business, therefore, is to discern the Eternal. For 'the human mind (*ἦθος*, i.e. that portion of intellectual being which falls to man's share) has no clear understanding or aims, but the Divine has' (fr. 78). Inasmuch as Heraclitus is the first thinker to grasp the idea of the transcendental, he is, before Parmenides, Anaxagoras, and Plato, the founder of Idealism in philosophy. He is himself conscious of the far-reaching importance of his discovery. For he makes the statement (which Positivists cannot understand): 'None of all those whose words I have heard attains to recognize that Wisdom is something separated (*κεχωρισμένον*) from all' (fr. 108). What this Wisdom (*τὸ σοφόν*) is he explains (fr. 32): 'One, the only Wisdom, does not wish, and yet again does wish, to be called by the name of Zeus' (fr. 32). The new concept may be called by the old and venerable divine name, provided the latter carries with it the idea of absolute mind in the Heraclitic sense. On the other hand, to think of the Homeric Zeus in this connexion is blasphemy against the divine nature. For, in consequence of the thoroughgoing religious reformation of the 6th cent., which is represented by the names Xenophanes, Pythagoras, Orphicism, the traditional conception of religion can no longer be maintained.

But, while poets like Pindar and Æschylus,

imbued with that spirit of reform, tacitly introduce the new conception of Zeus into the ancient popular legends, contemporary philosophers like Xenophanes and Heraclitus set themselves dead against popular beliefs. Like the Colophonian, Heraclitus scornfully attacks the demoralizing aspects of the ancient Epos (fr. 42). But he also attacks the pietism of the Mysteries which had sprung up luxuriantly in the 6th century. The cult of Dionysus and of Demeter, with its ceremonial purification and coarse symbolism, is utterly repugnant to him (fr. 5, 14). It is, therefore, quite credible that, as reported (*Vorsok.* i. 68, 24), he resigned his hereditary office of King-priest, or *basileus*, after his breach with the orthodox religion. He went even so far as to reject prayer altogether, as something childish—a step which no Greek philosopher after him ventured to take. 'They pray to the images of the gods, as though they wished to converse with buildings; just because they are ignorant of the true being of the gods and supernal powers' (fr. 5).

All religious names and notions, which occur frequently in his work, are not to be interpreted in the popular religious sense, but as symbols of the higher idea of the divine nature, of which he is full. His eternal and universal God is not confined to temples or temple-rites, but is omnipresent. 'How can one escape that which never goes down?' (fr. 16). His notion of God also is not split up, as in the Homeric Olympus, into countless individual deities. 'He who perceives the law of the world, the Logos, must confess that all things form one unity' (fr. 50). This universal spirit 'unites conflicting opposites, just as one harmony is formed from various tones' (fr. 8). Here he expresses his monistic belief, in one of the figures familiar to the Pythagorean school. He speaks still more clearly in fr. 67: 'God is day and night, winter and summer, war and peace, plenty and want.'

On another occasion he seeks to render intelligible the universally operative energy of the divine Logos by a hylozoistic figure especially congenial to the science of his time. As Jeremiah had said a hundred years earlier (Jer 23²⁹), 'Is not my word as a fire? saith the Lord,' so the prophet of Ephesus proclaims (fr. 30): 'This system of the world (*κόσμος*), the same for all, neither any of the gods nor any man has made, but it always was and is and shall be an ever-living fire, kindled in due measure, and in due measure extinguished.' This conception of 'the due measure' is essential for the interpretation of Heraclitus. The modern physical theory assumes that different forces (heat, electricity, magnetism, chemical force, etc.) are convertible into each other. They are all connected by the invariable law that exactly as much force of one kind (e.g. heat) disappears as force of another kind (e.g. electricity) comes on the scene. In a similar manner Heraclitus conceives of the divine cosmic force. Just as our modern physicists assume the æther as a common substratum whence forces proceed, so Heraclitus speaks of the divine cosmic fire which is always confined within the same limits. 'The sun will not overstep his bounds; for, if he does, the Erinyes, helpers of justice, will find him out' (fr. 94). And, although the sun is kindled every day anew (fr. 6), he observes his limits.

So also the changes of fire into water and earth always take place in fixed proportions. At first the ætherial vapour is condensed into sea-water, from which the solid earth is precipitated. This is 'the way down.' In the same proportion the transformations of the solid, liquid, and gaseous states proceed upwards. Earth deliquesces into water at a time of deluge, water exhales skyward as ætherial vapour.

Of course the periods occupied by these changes are not always alike. On the contrary, the great pendulum describes smaller and greater arcs. The rotations of day and night, of seasons, of years, of great cosmic periods between a general flood and a general conflagration, vary in length, but not in quality and proportion. Opposites must always be resolved into 'the invisible harmony' (fr. 54). All that men can see is the war between them. Thus with Heraclitus war is 'the father of all things' (fr. 53), and the one thing clear and worth taking into account is change. He never becomes tired of illustrating this popular way of conceiving the flux of things by ever fresh examples. 'To him who enters the same river, other and still other waters flow' (fr. 12). 'One cannot twice descend into the same river' (fr. 91). 'Into the same river we descend, and we do not descend; we are, and we are not' (fr. 49 A).

So, for later thinkers the uniform light of the Heraclitic system appears broken up into the brilliant colour-play of relativism, the prismatic ambiguity of a materialistic scepticism (*παλιρροὺς ἀπορροὴν*, fr. 51) which threatens to turn into nihilism. 'Sea-water is very pure and very foul, for, while to fishes it is drinkable and healthful, to men it is unfit to drink and deadly' (fr. 61). Of course, in the empirical region of sense-perception everything is inconsistent and relative; on the contrary, in the realm of pure thought the Absolute is enthroned. 'To God all things are beautiful and right and good; but men suppose that some are right and others wrong' (fr. 102).

Thus Heraclitus comprehends, as exactly as his opponent Parmenides, who indeed only partially understood him, *noumena* and *phenomena*, truth and illusion (*ἀλήθεια*, *δόξα*), in his system. The sad fact with both is that the dull-witted world has comprehended their illusion better than their truth. But so it fares with all prophets.

It is necessary, after the monistic doctrine of the Logos and its counterpart, terrestrial dualism, have been made clear as the kernel and husk of his system, to expound briefly how Heraclitus applies his theory, in its metaphysical and material aspects, to the doctrine of man's constitution.

The human soul, with which the hitherto prevailing Ionian and Pythagorean philosophy had but little concerned itself, is of cardinal importance to the prophet of the *Γῆναι σκαίρον*. At first, indeed, it seems a very materialistic view that the soul should be involved in the elemental changes of the twofold way upward and downward. 'For the soul it is death to become water, and for water it is death to become earth. But from earth comes water; and from water, soul' (fr. 36).

As might be expected, the same of human existence is identical with the physical fire-ether. As fire descends, the soul passes through the intermediate stage of water into earth, i.e. into flesh, and this way signifies joy and life. Conversely, when flesh again dissolves into water (hence the legend before mentioned of Heraclitus's dropsy) and from thence returns to the cosmic ether, death takes place. 'For souls it is joy or death to become wet' (fr. 77 A). Thus, just as in the Orphic-Christian theory, soul and body are already conceived of as contraries, which stand in direct opposition to each other. 'We live in the death of souls, and again they (i.e. souls) live in our death' (fr. 77 B).

But neither in the macrocosm nor in our microcosm is a complete extinction of the primordial fire possible. In the living body also a spark of ætherial fire is preserved (Macrob. in *Sonn. Scip.* i. 14, 'scintillam stellaris essentia'; *Vorsok.* 12 A, 15, p. 74), and the freer from moisture this ingredient is kept, the wiser and the better is the

man. 'The dry beam is the wisest and best soul' (fr. 118). Of course, this divine spark is identical in essence with the God who governs, illuminates, and warms the universe. Therefore the soul rests on the deepest foundation of the Divine Logos. 'The limits of the soul thou canst not discover, though thou shouldst traverse every way; so profoundly is it rooted in the Logos' (fr. 45).

This identification of the spiritual and essential characteristic of man (to which the Greeks give the hardly translatable name *ἦθος*) with the essence of Deity interprets for us the fine saying of Heraclitus, 'A man's character is his dæmon' (fr. 119) — a saying repeated by Democritus and Menander. Therefore it follows that man's happiness cannot consist in sensual enjoyment. 'Oxen are happy when they have peas to eat' (fr. 4). 'For the best men choose one thing above all else; immortal glory above transient things. But the masses stuff themselves like cattle' (fr. 29). 'To the soul,' on the contrary, 'belongs the self-multiplying Logos' (fr. 115). The Logos, however, is not merely the special characteristic of man alone; it is at the same time the universal cosmic law, which energizes and controls everything. 'Therefore it is a duty to follow the common law. But although the Logos is common to all, the majority of people live as though they had an understanding of their own' (fr. 2). 'All human laws are dependent upon one divine law. For this rules as far as it wills, and suffices for all, and overcomes all' (fr. 114).

Thus, not only physical but moral science also is closely connected with metaphysics. The divine law (as later among the Stoics) is identical with the conscience of the individual. Men who obey this inner law, however, are extremely rare. That is a matter of course for the aristocrat of Ephesus: 'One is to me worth ten thousand, provided he be the best' (fr. 49).

From these premisses it is easy to understand the way in which Heraclitus undertakes to remodel the Greek belief in immortality. 'Gods and men honour those who have fallen in war' (fr. 24). This principle of the popular hero-worship he applies to his heroes, the heroes of the Logos. The body, as such, deserves no honour. 'Corpses should be thrown away sooner than excrement' (fr. 96). But just in proportion to the degree of purity with which a man has guarded and intensified the inner flame in his life is the fierceness of the attack on him from the terrestrial sphere, and at the same time the greater is the prize beyond. This seems to be the meaning of the saying in fr. 25 which has been torn from its context: 'Greater fates gain greater rewards,' for 'man kindles a light in the night when he is dead' (fr. 26).

To explain this better, we add a remark of G. T. Fechner, whose 'panpsychism' contains much Heraclitic doctrine: 'At the moment of death, when everlasting night seals up the eye of man's body, the dawn awakens in his spirit. Then the focal centre of the inner man will blaze out to a sun which will illuminate all that is spiritual in him, and at the same time, like an inner eye, look through things with unearthly clearness' (*Leben nach dem Tode*, Leipzig, 1866, p. 42). So Heraclitus also appears to have conceived of the new light which the spiritual man kindles for himself after the death of the body. 'There awaits men after death what they neither hope nor think' (fr. 27). Thus, starting from an idea of Hesiod, he suggests a deliverance of elect heroes of the spirit from the night of death, who now, as he believes, lead a higher life as 'watchers of the living and the dead' (fr. 63). In this sense he could say, with antithetical point: 'Immortals become mortals, and mortals immortals' (fr. 62).

For there awaits the spirit of fire, which has fallen down from aetherial heights, and appears doomed to mortality in an earthly frame, an ascension after death. This doctrine reminds us of the prophetic utterances of Empedocles, and of the Stoic doctrine of continued existence for the virtuous. Of course, even to these elect heavenly guests an endless life is not allotted. For when, finally, all things pass into fire, and the 'Great Year' of 30 × 360 years has completed its revolution, a universal conflagration will usher in Doomsday. 'For the fire which comes on all things will judge and condemn them' (fr. 66).

This doctrine of the 'last things' has been doubted, because, at the arrival of this *dies iræ*, the constant interchange between the two poles of existence disappears. This is wrong, however; for this moment, when everything melts in the universal conflagration (i.e. when God ceases to work), is only the extreme point to which the cosmic pendulum swings on one side, to which, on the other side, the Deluge, or rather a universal torpor, corresponds. That a final amalgamation of the other two elements (earth and water) is not implied in the reports of his doctrine which we possess, and probably was not taught by Heraclitus himself, is shown by the fact that the form of the fire is conceived of as the normal and primitive one, so that the end of the Cosmos, like the beginning, is linked on to the primordial principle. 'For in rotation the beginning and the end are common' (fr. 103).

4. Posthumous influence.—Heraclitus, one of the most original writers and profoundest thinkers of antiquity, has had a powerful influence on all succeeding times, from Alcmaeon and Parmenides, past the time of Democritus, Protagoras, Euripides, and the authors of the *Corpus Hippocraticum*, to the Stoics, whose popular version of his philosophy conquered the cultured Greek and Roman world. Especially important is the direct or indirect influence of Heraclitus on Philo, the Johannine Gospel, and the theology of the early Fathers (Clement of Alexandria and Hippolytus). Among the moderns, Hegel and Nietzsche in particular, the latter especially in the aphoristic form of his writing, show the deep influence of the sage of Ephesus.

LITERATURE.—I. EDITIONS.—*Heracliti reliquiae*, Bywater, Oxf. 1877 (the most complete collection of the fragments); H. Diels, *Heraclitus von Ephesus* 2 (Greek and German), Berlin, 1906, also *Fragmente der Vorsokratiker* (Greek and German), 1.3, Berlin, 1912, pp. 67–113 (ch. 12) [quotations are made from this collection].

II. SYSTEM OF HERACLITUS: F. Lassalle, *Die Philos. Herakleitos des Dunklen v. Ephesus*, 2 vols., Berlin, 1858; P. Schuster, 'Heraklit von Ephesus,' in *Acta Soc. philol.*, III. (Leipzig, 1873); E. Zeller, *Philos. der Griechen*, I.3, do. 1892, pp. 623–760; J. Burnet, *Early Greek Philos.*, London, 1908, pp. 129–179; T. Gomperz, *Griech. Denker* 3, Leipzig, 1911 (tr. of 1st ed. by Magnus, London, 1901), I. 49.

H. DIELS.

HERDER.—I. Life and times.—The century of enlightenment, the century of Locke and Hume in England, of Voltaire and Rousseau in France, re-enacted that turning of thought towards its own nature, that desertion of metaphysical subtleties, that development of empirical interest in human life and enthusiastic discussion of the problems of society, which characterized the Greek Sophistic movement. But, whilst in England the current of thought lost itself in the stagnant backwaters of a theoretical scepticism, and in France transformed itself into the motive power of political agitation, in Germany it maintained its course with little distraction, refreshed by the influx of a new stream of influences. In the interests of individual culture, without application to social revolution, the philosophical principles of Leibniz and Wolff were carried into the realms of psycho-

logy, epistemology, morality, political science, and even religion. But it was due to the assertion of the claims of poetry and a whole new world of literature that the intellectual life was re-vitalized. Lessing (q.v.) and Herder were the heralds who announced these claims.

Johann Gottfried von Herder was born at Mohrungen, East Prussia, on 24th Aug. 1744, the third child of humble parents. The father, who was sexton and master of a small school, was an earnest, strict, upright man of undoubting piety. Herder's paternal grandfather had been an immigrant from Silesia, a refugee from Roman Catholic rule, and it was no doubt from him that the boy derived his warm, imaginative spirit. As a boy, Herder was 'always grave and always alone'; he never enjoyed very good health, suffering to the end of his life from a fistula in one eye. He became even more quiet and shy during his school-years under the severe old rector of the town school, and devoted himself to reading. After a miserable period in the house of a young pastor, Trescho by name, who was blind to the boy's ability and unsympathetic towards his inclination for a clerical career—a period during which he became excessively reserved and subject to nervous depression—Herder succeeded in making his way to Königsberg. He welcomed an opportunity of studying medicine which came in his way, simply because it took him away from his cramped and wretched life as amanuensis and message-boy to a man whom he loathed. After fainting at a dissection in the hospital, he abandoned medicine, and by means of the help of a few friends and his own earnings he was able to enter the University (1762) with a view to a clerical training. He had already written some poems, and one he had surreptitiously introduced into a parcel sent by Trescho to a Königsberg publisher, who had recognized its merit and taken pains to discover the identity of its author.

Attending Kant's lectures, he was stimulated to critical inquiry and read widely; Plato, Hume, Leibniz, Diderot, and Rousseau he studied with special care and enthusiasm. But a greater influence on his mind was the friendship of J. G. Hamann, who aroused in him a deep appreciation of poetry and early national literature. He contributed poems and reviews to the *Königsberger Zeitung*. Then we find him at Riga, first as assistant-master at the Cathedral School, and later as 'additional curate'; while he was there, in 1767, he published *Fragmente über die neuere deutsche Literatur*, which rapidly reached a wide and sympathetic public and attracted Lessing's attention. Various writings followed, but their advanced views on literary and artistic topics aroused a storm of opposition, and such suspicions were rife as to his orthodoxy that he left Riga. Anxious to make certain experiments in social reform which were to rest on a reform of educational methods, he commenced a tour. With a view to investigating educational systems in different countries, he made his way to Holland and France, but his intention of visiting England and Italy was not carried out. In order to secure an independent position, he accepted a post as travelling tutor to the son of the Prince-Bishop of Lübeck, and abandoned his social schemes. He found himself in the course of his duties at Darmstadt, where he met Caroline Flachsland and became betrothed to her. In that year and the following, 1770–1771, he was in close contact at Strassburg with Goethe, who was then revelling in the exuberance of early manhood. The friendship that sprang up between the two is of great importance for the history of German literature, for Goethe frequently acknowledged, in the most definite lan-

guage, that a great change passed over him during those days.

'New vistas opened to my sight every day, nay, every hour. The more I swallowed, the more Herder had to give. . . . He imparted to me the germs of all that he carried out in after life.' 'It was he who set me in the right way. No utterance of his ever failed of its effect. I do not remember ever having torn up a single paper on which his magical handwriting was to be found.'

In 1771, Herder threw up his tutorship, and for five years was Court-Precacher at Bückeberg. Opposition on the part of the orthodox clergy, renewed and severe eye-trouble, financial straits, and the consequent delay of marriage combined to depress him abnormally. He continued his literary studies, however, and was so much affected by his reading of 'Ossian,' Percy's *Reliques*, and Shakespeare that he openly deserted the classical school and took a prominent place in the *Sturm und Drang* reaction. He and Goethe, with some others at Darmstadt and Frankfurt, issued a journal which was to be the organ of their revolt. He was able to marry in 1773, and in 1776 was appointed Court-Precacher and Superintendent of the Clergy in the duchy of Weimar.

In Weimar he spent the rest of his life in close proximity to Goethe, Wieland, and Jean Paul Richter, but suffering much loneliness of spirit. The conventional atmosphere was far from congenial, and the six other members of the Weimar Consistory opposed every reform that he projected. The story of his later years—the strained relations with Goethe, his disappointment as those whom he had influenced gradually outgrew their discipleship, illness overpowering his bodily strength—is not a pleasant one; it is relieved by his wife's devotion and his popularity among the scholars of the Gymnasium at Weimar. Some of his most powerful—though also many of his less valuable—works belong to the Weimar period. His collection of folk-songs (*Stimmen der Völker in Liedern*) appeared in 1778-79, and his famous work *On the Spirit of Hebrew Poetry (Vom Geist der ebräischen Poesie)* in 1782-83. Then came his most important achievement, *Ideen zur Philosophie der Geschichte der Menschheit (Ideas on the Philosophy of the History of Human Life)* from 1784-91. His closing years he devoted to speculations on theological and philosophical subjects, but he went to what were regarded as extremes by such friends as Jacobi, Lavater, and even his early friend Hamann, who became alienated from him. When he died on 18th Dec. 1803, aged only fifty-nine, he was planning fresh literary ventures.

Herder's influence lay in two main directions. Lessing had stimulated independence of French literature and art, but himself remained loyal to the classical canons. Herder championed the revolt against classicism, or, in other words, led the Romantic movement. But he further provided the Romantic movement with its theoretical justification. He was the founder of the genetic method of explanation, though it is somewhat misleading to speak of him as a pre-Darwinian evolutionist. This was the great achievement of his life, the fruit of his keen, synthetic imagination and equally ready appreciation of inductively important characteristics.

2. **Writings.**—Herder's chief writings may best be indicated by considering them in relation to the special subjects which he investigated, and as leading up to his great synthetic work, which had for its thesis the whole of human development treated as the subject of purely natural history.

(1) *Poetry.*—In the *Fragmente über die neuere deutsche Literatur*, published in Riga in 1767, he endeavours to demonstrate the relation of poetry to circumstances, environment, and national in-

dividuality. He illustrates his theme by sympathetic and original studies of Homer, Hebrew poetry, Shakespeare, and 'Ossian.'

(2) *Art.*—Here again his thesis is the importance of natural character; Gothic art is shown to have its own peculiar merit and significance. His chief works in this category are *Kritische Wälder* (1769), and *Plastik* (1778).

(3) *Language.*—Herder was an eighteenth-century Max Müller, and to him is due the credit of founding the comparative study of language especially in regard to its nature and origin. His treatise, *Über den Ursprung der Sprache* (1772)—an argument directed against the theory that language was divinely communicated to man—demonstrates the inevitability of language, given the complex of powers we find in man.

'If it is incomprehensible to others how a human mind could invent language, it is as incomprehensible to me how a human mind could be what it is without discovering language for itself.'

In matters of fact this treatise, like several others which he wrote, is open to the charge of inaccuracy and crudeness, but the important feature is the consistent use of the comparative method of investigation. Herder's view is that 'language arose with the first spark of consciousness, and, like every other production, gradually became more perfectly developed. Language is not the mere sound of words, for every sign and action is language. Language, indeed, relates us closely to the whole of sentient Nature.'

'It seems that the last maternal touch from the modelling hand of Nature infused the following law into all, at their entrance into the world. "Feel not for thyself alone, but let thy feeling resound." As this last creative touch was the same to the same species, the following law became a blessing: "Let thy feeling resound in unison with thine own race, and be heard with sympathy by one and all."'

(4) *Religion.*—The comparative method of study was applied also to religion, and Herder wrote under the conviction that religion in its historical development has been closely related to man's wants and impulses. His studies in religion are found in his volumes entitled *Vom Geist der ebräischen Poesie*, *Briefe über das Studium der Theologie*, and *Christliche Schriften*. In the second of these works he laid down the principle that the Bible must be read 'in a human way,' as we should read the Greek historians and dramatists, with constant effort to interpret its contents in relation to their temporal and local setting. He made bold attempts to occupy a middle position in regard to certain doctrinal questions, having for his reward only the hatred of dogmatists and the suspicion of extreme rationalists. But he clearly distinguished religion from the realm of dogmatic into which his published opinions carried him.

'Religion is that which binds our conscience; it is an inner certainty, incapable of mathematical demonstration; religion is the awareness of what we are as parts of the world, what we ought to be as men, and what we have to do. We strive over opinions, but opinions are not religion, for there is but one religion, though it appears under many forms.'

In *Vom Geist der ebräischen Poesie*, Herder investigates the earliest opinions of mankind concerning the Deity, Creation, Providence, etc. Among other things he exposes the absurdity of those who have represented religion as originally derived from the apprehensions and terrors of mankind.

'*Alciphron*: Philosophers have explained the strong emotion occasioned by that religious veneration of which you speak. It was ignorance, say they, that gave existence to the gods; stupid and servile astonishment produced the first oblations to them, whom terrified fancy represented as powerful beings, as invisible demons, from whom mankind had everything to fear.'

'*Eutyphron*: On the contrary, it is the essential and distinctive character of man, and that which places him above all classes of beings merely animal, that he is susceptible of religion. The propensity to worship one or more superior beings is known to have been present among men in all nations

and periods of the world, and why must this be derived only from anxiety and fear? Our existence, surely, is an act of beneficence and not a punishment, otherwise the love of life and the ardent desire for its duration would be unaccountable. The Great Being, therefore, to whom we are indebted for it, and by whom we subsist, must be considered as good. Daily experience must convince us of His benignity. . . . At the same time, I am willing to admit that the religion of many ancient nations was mixed with painful feelings of apprehension and terror. This was more especially the case with those who had their dwelling in rude climates, in dark caverns, amidst burning mountains, or on barren shores of unfrequented and tempestuous seas, or of such as were accustomed to frequent views of dismal objects, and of revolution accompanied by inhuman scenes of devastation and carnage.

The primitive religions, which Herder refused to attribute to the sentiment of fear, were based, he suggested, on the need for explanation; hence, for example, among the primitive peoples whose daemon-worship is revealed in Genesis, from the observance of 'the works and beauties of Nature,' from the sight of 'energy, wisdom, and self-renewed power of production and reproduction in all things' (seen in particular objects, however, and not connected 'in a general point of view') the inference was made that there existed 'separate and particular causes of particular objects, distinct creating spirits, of which each produced a particular object and contributed to its preservation with intelligence and care.' The higher, later religions Herder attributes to the persistence of deep-seated moral feeling. But his treatment of the history of religions derives its importance from his application to it of the genetic method of study rather than from his own data or conclusions.

Herder's sermons were only occasionally printed, but we have evidence to show that he preached in a manner 'straightforward, popular, and natural'—to borrow Schiller's description; and in his farewell sermon at Riga, where he had filled a church whenever he preached, he stated his own aims:

'Most of my own sermons, all my best, have been human. I have tried to show that our only happiness is to remain true to the foundations of our nature, and to follow no guide but reason and conscience. Humanity, therefore, in its widest circle, with all its noblest ideas of God, its self, and Nature, with all its feelings of brotherhood and sympathy, with all its charming duties, and high dispositions and capacities for happiness—humanity in this wide scope was always the main theme of my sermons, instruction, and exhortation.'

(5) *Human culture*.—Herder went further still in the application of his central idea, so far indeed that, had it not been for essential differences in the general level of scientific culture and in the accuracy of observation, a short step on his part would have led him to the pinnacle later occupied by Darwin. We might, indeed, have spoken today of Herderism rather than Darwinism. A volume has been written by Bärenbach under the significant title, *Herder als Vorgänger Darwins*. His *Ideen zur Phil. der Gesch. der Menschheit* applies the genetic method to the whole of human development. Whereas Kant had opposed to Nature an absolute free will, rational and independent, Herder placed human life in a natural setting; history he regarded as a natural science, investigating and describing the human powers, impulses, and activities. His work is the foundation-stone of the modern study of primitive culture, which now receives support from the sciences of anthropology, archaeology, philology, and comparative psychology. It is simple in style and impartial in tone.

(a) The first part—the science of man's place in the universe—discusses the earth's position in the stellar system, its crust as influenced by the atmosphere, and the various forms of life produced on it. The motto of the whole is the unity of creation; and with ample illustration, in which the whole field of natural science as then known is laid under contribution, we are shown how closely we are bound by nature from our earliest hour to our possessions, our country, and its language and

customs. Several passages are remarkably suggestive of nineteenth-century evolutionist theory.

'The less a nation is pressed upon, and the more truly it is obliged to abide by its simple and savage way of life, the more exactly does it also maintain its original conformation or type' (bk. vi. ch. 1). But 'nothing in Nature stands still; everything strives and struggles onward. Could we only see into the first periods of creation—how one realm of Nature is built up on another—what a procession of forces ever struggling onward would be displayed in early development?' (bk. v. ch. 3). Before ever the earth took its present form, 'millions of creatures were of necessity overwhelmed; what could remain itself has remained, and has been standing now for thousands of years in the great harmonious order' (bk. xv. ch. 2).

Herder even makes a deduction which sounds essentially modern. He sees that advance in organization means a differentiation of parts in the organism. 'The higher we go, the more various and distinct do the parts become' (bk. iii. ch. 1). This principle, accepted to-day in its application to physiology, he applies even to society. He was gifted with a penetrating, imaginative insight that would undoubtedly have led him to the far-reaching hypothesis of 'evolution' in the modern sense had the greater range of fact been accessible to him as it was to Darwin. But his emphasis was upon things as they have been, and necessarily have been, rather than upon things as they are, interpreted by the past.

(b) In the second part of the work, the science of history—of man's development in time—is the subject. We have here an account of primitive peoples. China, Tibet, Hindustan, then Babylon, the Medes and Persians, the Hebrews, and the Egyptians, are amongst the topics to which chapters are devoted. Greek life and history and Rome and its decline are next discussed. We then retrace our steps and reflect upon the growth of the human mind and of human customs. The Northern peoples are passed under review, and we are led to a whole book, brilliant but unsympathetic, on Christianity and its propagation. We return to the Northern kingdoms of mediæval Europe, the Romish hierarchy, and the influence of the Arabs; the discussion is closed by chapters on Commerce in Europe, the Crusades, and the Cultivation of Reason in Europe. Thus we have a comprehensive series of studies in Comparative Mythology, Sociology, Ethics, and Education.

The work had a mixed reception; Goethe was one of those who gave high praise to its aims and spirit, Kant one of the scoffers who stigmatized it as 'a collection of hints,' a book of travellers' tales. The boldness of the scheme, apart from its actual achievement, was in itself a powerful stimulus which is not even yet exhausted. But in a purely theoretical direction the work exercised a great influence. It emphasized the living unity of human life, spiritual and mental, and showed that reason (or understanding) and feeling (or sensibility) are not two distinct sources of knowledge, but different stages of that one activity in which the individual lives the life of the whole. One influence—negative, perhaps, but vital—exercised by this work is seen in Kant's theory of history, which was formed in view of the opposition between Herder and Rousseau. To Rousseau, history depicts the departure of mankind from an original 'natural' state of perfection. To Herder, history lays bare the necessary, natural, and self-explanatory development of an original constitution. Kant steered between the Scylla and Charybdis, carried through by a philosophical conception of the 'Fall' which explained how natural inclination, once ethically neutral, became an enemy of the Good Will. It may be noted here that in his insistence on the completion of human life through its development, Herder was probably influenced by the works of the English philosopher Shaftesbury, to whom the ethical is

the flower of human life, the natural and complete development of man's natural endowment.

(6) *Metaphysics*.—Herder's late metaphysical speculations are of less interest. In *Vom Erkennen und Empfinden der menschlichen Seele* (1778), and *Verstand und Vernunft, eine Metakritik zur Kritik der reinen Vernunft* (1799), he attacks the critical philosophy of Kant. The first of these was written under the influence of Shaftesbury, whose poetic glorification of the universe as it is and æsthetic appreciation of the artist's master-hand in Nature influenced Schiller as well as Herder. These works aim at a reinstatement of 'sensibility,' at an overthrow of the analytic tendency of Kantianism, with its apparent rather than real 'dissection' of human life. *Kalligone* (1800) opposed the theory of Kant's *Kritik der Urteilskraft*, arguing the close connexion of Beauty and Good. In opposition to Kant's theory and to the practical worship of form and style among the Weimar poets, Herder urged that the content of art is more real than its form.

LITERATURE.—i. *WORKS*.—*Sämmtliche Werke*, 45 vols., ed. J. G. Müller, Tübingen, 1805-20, 2nd ed., 60 vols., Stuttgart and Tübingen, 1827-30; *Herders Werke*, ed. H. Düntzer, 24 vols., Berlin and Leipzig, 1868-79; critical and best edition, *Herders Werke*, ed. B. Suphan, 32 vols., Berlin, 1877-99.

ii. *TRANSLATIONS*.—*Outlines of a Philosophy of the History of Man*, tr. T. Churchhill, 2 vols., 2nd ed., London, 1803; *Treatise upon the Origin of Language*, do. 1827; *Oriental Dialogues on the Spirit and Beauties of the Sacred Poetry of the Hebrews*, do. 1801; *The Spirit of Hebrew Poetry*, tr. J. Marsh, Burlington, 1833.

iii. *LIFE*.—R. Haym, *Herder nach seinem Leben und seinen Werken*, 2 vols., Berlin, 1877-85; E. Kühnemann, *Herders Persönlichkeit in seiner Weltanschauung*, Berlin, 1893, also *Herders Leben*, Munich, 1895; R. Bürkner, *Herder, sein Leben und Wirken*, Berlin, 1904; H. W. Nevins, *A Sketch of Herder and his Times*, London, 1884.

iv. *MEMOIRS AND LETTERS*.—*Erinnerungen aus dem Leben J. Gottfrieds von Herder*, collected by Carolina von Herder, ed. J. G. Müller, Tübingen, 1820; *Aus Herders Nachlass*, 3 vols., Frankfurt, 1866, and *Von und an Herder*, ed. H. Düntzer, 3 vols., Leipzig, 1861; *Briefwechsel mit Nicolai*, Berlin, 1887, and *Briefe an Hamann*, do. 1889, ed. O. Hoffmann; J. G. von Herders *Lebensbild* (with correspondence), ed. E. G. von Herder, 4 vols., Erlangen, 1846.

v. *ESSAYS AND STUDIES*.—C. Joret, *Herder et la renaissance littéraire en Allemagne au XVIII^e siècle*, Paris, 1875; R. Wielandt, *Herders Theorie von der Religion und den religiösen Vorstellungen*, Berlin, 1904; F. v. Barenbach, *Herder als Vorgänger Darwins*, do. 1877; G. Hauffe, *Herder in seinen Ideen zur Phil. der Gesch. der Menschheit*, Bonn-Leipzig, 1891; J. Sully, art. 'Herder,' in *EBD* xiii. 347.

HAROLD E. B. SPEIGHT.

HEREDITY.—Exact knowledge of the process by which one generation comes into being from another and of the relations between them is essentially a growth of the 19th century. A precise knowledge of heredity was not possible as long as the respective parts played by the sexes remained obscure. It was not until the 19th cent. that the nature of the sexual cells and of the process of fertilization was established beyond a doubt, and a sure foundation provided upon which the student of heredity could build. The earlier history of heredity is the history of attempts made to unravel the nature of the sexual process, for the account of which the reader is referred to the art. **SEX**.

1. The experimental study of heredity may be said to have begun with Kölreuter, who published the results of his researches on the hybridization of plants in a series of papers between 1761 and 1766. In spite of the earlier discoveries of Camerarius, the theory of the sexuality of plants was at this time still an open question, and Kölreuter's experiments were designed chiefly to establish this theory. He crossed different species of plants which differed from one another in definite characters, and used the fact that the hybrids so produced resembled the pollen parent in some respects and the seed parent in others as an argument for regarding both parents as making a definite contribution to their offspring. In this

he clearly succeeded, though it was not for some years that his contributions received proper recognition.

2. Much hybridization work in plants was done during the earlier half of the 19th century. Among the workers of that time the names of Knight, Herbert, Wichura, and Gärtner are specially prominent. But their efforts were not directed primarily to the discovery of laws of heredity. The problems of the nature of species, of their possible fixity or transmutability, were much in the air about this time, and it was towards these problems that the efforts of this group of hybridizers were chiefly directed. Many interesting and curious facts were brought to light, but that they were never followed up was due to an event which seemed to solve the problem they had set out to investigate.

3. This was the publication of the *Origin of Species* in 1859. The views as to the interrelation of species there put forward by Darwin rapidly gained the support of the great majority of biologists. The problem of species appeared to have been solved, and the work of the hybridizers came to a sudden standstill. Heredity and variation were the corner-stones upon which Darwin erected his edifice. Yet Darwin himself deplored the prevailing ignorance both of the one phenomenon and of the other. Had a Darwinian been challenged for a definition of heredity, he would probably have replied to the effect that it is an innate force in virtue of which offspring tend to resemble their parents more than other individuals of the species. That offspring also differ from their parents was set down, where such differences are relatively small, to an innate tendency to variation, whether induced by the environment or in some other manner. By unduly favouring the action of either of these two forces—heredity and variation—selection, whether natural or artificial, was held to be able gradually to mould the race to a different form. Where the difference between parent and offspring was very marked, as, for instance, in the production of a white animal from two coloured ones or *vice versa*, a new principle was invoked, and the appearance of the unusual progeny was explained by the law of reversion. This phenomenon was regarded as due to the crossing of distinct varieties, whereby the descendants, even after a number of generations, tend to exhibit characters found in one or other of the original parents, but not evident in the intermediate generations.

The observation of such cases depends upon a continuity of records over several generations; and for this reason the most striking cases of the phenomenon were confined to domesticated animals and plants. Hence arose the belief that the process of heredity in domesticated creatures is essentially different from that operating in wild races—a belief which is not without supporters even at the present day. For Darwin himself this hypothetical difference between the wild and the domesticated did not exist. Indeed, he used the facts of variation among domesticated forms as an argument for his views as to the nature of the process of evolution in the non-domesticated. Heredity and variation, whatever their exact nature, were throughout living things held to be phenomena of essentially the same character. This view Darwin sought to express in his well-known hypothesis of Pangenesis. He suggested that in the cells of an organism there exist particles or 'gemmules' corresponding to the individual cells, each of the different cells having its own peculiar form of gemmules. Of the gemmules it could only be said that they were larger than chemical molecules but smaller than

any known living unit. Like the latter, however, they were capable of multiplication through the normal process of growth and division. During cell-division they were distributed to the daughter-cells. Normally certain gemmules only were active in the cells of a given tissue, but under exceptional conditions other gemmules might be present in these cells, and on becoming excited lead the cell to take on other characters. Generally speaking, these abnormal gemmules would have been present in some ancestor, and would have remained latent for a variable, often a very great, number of generations. By means of this capacity for remaining latent on the part of the gemmules, Darwin sought to explain the phenomena of reversion and atavism.

The gemmules derived from some remote ancestor might remain dormant for many generations, until, under the influence of some stimulus, whether of a cross or otherwise, they were re-awakened into fresh activity, and the organism exhibited ancestral characteristics. The germ-cells Darwin supposed to contain representations of all the various gemmules corresponding to the different cells of an individual, while at the same time they might also contain gemmules derived from ancestors more or less remote. Further, in order to explain the inherited effects of use and disuse in which he firmly believed (cf. art. ENVIRONMENT), Darwin supposed that gemmules were capable of transportation from one cell to another. In this way the cells of the germ-plasm were continually receiving gemmules from the cells of the different tissues of the body. Stimuli, more especially those resulting from increased use and disuse, altered the character of the cell and also of its contained gemmules. Some of these were transported to the germ-cells, and so the altered character was transmitted to a further generation.

4. Darwin's hypothesis of Pangenesis failed to carry conviction among biologists, who regarded the assumption of the transportation of gemmules as resting upon no firm basis of fact. Nevertheless, the idea of material particles for a basis of heredity was felt to be sound and was revived a few years later by de Vries (cf. below, p. 599^a). Meanwhile, however, the attention of naturalists was being diverted elsewhere. Darwin's great achievement in the promulgation of Natural Selection was not only a landmark in biological thought; it inaugurated a new era in biological work. Thenceforward the efforts of the biologist, whether botanist or zoologist, were devoted almost entirely to inquiring whether the doctrine of community of descent would serve to explain the existing forms of animals and plants.

The study of morphology became the keynote of biological thought during the last third of the 19th cent., and its students directed their efforts to the construction of elaborate schemes which should demonstrate the genetic relationship between the various groups into which the systematist had divided the existing forms of life (cf. art. EVOLUTION). Experimental work upon the living organism practically ceased; and, where the phenomenon of heredity came up for discussion, it usually received the perfunctory treatment accorded to a subject in which there is little or nothing fresh to be discovered. It has been well called the period of the essayists, chief among whom was August Weismann. In his work on *The Germ-Plasm* (1892), Weismann elaborated a complicated system to explain the hereditary transmission of characters. He insisted upon the sharp distinction between germ-plasm, or reproductive tissue, and somato-plasm, or body tissue. Hitherto it had been considered that the germinal gland was formed from the body, and, of course, separately formed for each indi-

vidual. The body of the individual intervened between the germ-plasmas from which that individual arose and the germ-plasm to which it itself gave rise. Weismann, however, regarded the germ-plasm as the essential tissue, from which the somato-plasm was derived during the process of embryological development. The individual at first existed as germ-plasm derived from the commingling of parts of the two parental germ-plasmas. As development proceeded, part of this germ-plasm was sacrificed to the formation of the somato-plasm, undergoing various modifications resulting in the formation of the various body tissues. But part of the germ-plasm remained undifferentiated in the sexual gland, until its turn came to produce germ-cells. The essential feature of Weismann's views was that the continuity between successive generations was provided by continuous germ-plasmas mingling at intervals with one another. Wherever these germ-plasmas mingled—wherever two fragments of the germ-plasm of opposite sexes came fruitfully together—the shock of their union led to the detachment of a portion of the combined germ-plasm, which became differentiated into the various body tissues and served as a carrier of the rest of the germ-plasm which had not undergone differentiation. The main current of the species lay along the track of the germ-plasm; the body was merely a side-track from that germ-plasm, arising under special conditions from time to time, whose destiny was to carry and protect that from which it itself had sprung.

5. At the time when Weismann promulgated his views, the majority of naturalists, following Darwin, believed that the effects of use or disuse of particular structures in the organism were transmitted to the direct descendants of that organism. The changes wrought in the body tissues by stimuli from the outside world in some way or other so affected the reproductive tissues that the organisms developing from them bore the impress, in a more or less marked degree, of the changes which had occurred in the parental body. It was in order to provide a basis for this possibility that Darwin had framed his hypothesis of Pangenesis. Underlying this hypothesis was a definite conception of the relation in which the germinal and body tissues stood to one another. They were imagined as alternating with one another, the body tissues being formed from germinal tissues and these again from body tissues. Since the germinal tissue was continually being derived from the body, it was not difficult to understand why definite changes in the body should have their counterpart in definite changes in the germinal tissue, and that these changes in the germinal tissue should in their turn become impressed upon the body tissues of the next generation. In this way changes induced in the body by some modification of external conditions—'acquired characters,' as they are often termed—might be supposed to be transmitted through the germ-cells to the next generation (cf. art. ENVIRONMENT). It is evident, however, that such a conception of the relation of the germinal tissue to the organism was opposed to the view which Weismann had put forward, and this led him to challenge the evidence for the transmission of 'acquired characters.' From experiments of his own, and from a critical examination of the evidence adduced by others, he came to the conclusion that 'acquired characters' are not transmitted, and the result of more recent work may, on the whole, be said to have confirmed Weismann in the position which he then took up. It is true that cases are on record in which a change induced in an organism was evidently followed by corresponding changes in the offspring produced by that organism. But it is not improbable that in such

cases the stimulus which acted upon the parental organism acted at the same time upon the germ-plasm contained in that organism, and that the cause of the corresponding change in the offspring was not the change in the parental organism, but a change in the constitution of the germ-plasm which occurred at the same time and under the same stimulus as that in the parent.

This conception of the relation between germ-plasm and somato-plasm may be regarded as Weismann's most important contribution to the study of heredity. In the exceedingly elaborate theory which he put forward in *The Germ-Plasm*, Weismann attempted to formulate a theory of heredity which should be in accordance with recent discoveries on the minute structure of cells and their contained nuclei. He regarded the nucleus of the germ-cells as the bearer of hereditary characters, and more especially that portion of the nucleus which, from its reaction to certain dyes, is known as *chromatin*. The chromatin was held to be a heterogeneous substance composed of numbers of minute entities, or groups of entities—the determinants. Upon the number and variety of the determinants depended the variety of the characters exhibited by the organism which arose from the fusion of two sexual cells derived from two germ-plasms. Moreover, it was supposed that the union of two dissimilar germ-plasms with different sets of determinants could bring about a state of affairs under which some form of natural selection within the cells decided whether certain determinants should be eliminated.

To follow Weismann's theory in detail would be hardly profitable. More modern work has demonstrated that his conception of a heterogeneous germ-plasm and of discrete determinants in the germ-plasm corresponding to characters in the developed organism probably approximates to the truth. Nevertheless, his theory lacked compulsion because it was not based upon the facts of heredity—the one class of facts upon which such a theory could have rested firmly.

6. To the essayist period belongs one other work of some importance. In 1889, Hugo de Vries formulated his views in a work on *Intracellular Pangenesis*. He accepted Darwin's view that the individual hereditary qualities are dependent on individual material bearers in the living substance of cells, but he differed from Darwin in refusing to believe that these material bearers, or pangens, could be transported in the blood stream about the body. According to de Vries, the nucleus of every cell in an individual contains the sum-total of the pangens found in that individual, but only some of them occur in the extra-nuclear protoplasm of the cell. The nature and properties of the cell, whether muscular, nervous, glandular, etc., were held to depend upon the nature and variety of the pangens which were to be found in the extra-nuclear protoplasm. This stimulating essay may be regarded as marking the close of a period in the study of heredity, for but a few years were to elapse from its publication before a new light was suddenly flashed upon the whole subject, and heredity took its place among the experimental sciences.

7. While biologists and philosophers who were interested in these matters had been busily weaving new theories, an Austrian monk had turned aside and quietly experimented for himself. The results of his investigations were communicated by Gregor Mendel to a Natural History Society in Brunn, in the *Proceedings* of which they were published in 1865. In 1900, nearly twenty years after Mendel's death, his paper was discovered, and the remarkable nature of his achievement was rapidly appreciated. Mendel's success was largely

due to the fact that he planned his experiments on lines different from those of any of his predecessors. Instead of making numbers of somewhat random and haphazard crosses among the plants studied by him, he concentrated his attention on certain characters in which allied varieties differed from one another, and persistently followed their distribution over a succession of generations. He was careful also in his selection of a plant with which to work, choosing the edible pea (*Pisum sativum*) on account of its hardiness, its annual habit, its faculty of self-fertilization, and the number of sharply differentiated characters found in it.

The nature of Mendel's discovery may best be explained by considering some of his own results. In one set of his experiments with the pea he chose length of internode as the character with which to work. In some peas the internodes are long, and such plants reach an average height of 5-6 feet. In others, again, the internodes are short, and the plants average but 1½-2 feet. Having obtained true breeding strains of each of these varieties, Mendel proceeded to cross them, and in this case it made no difference whether the tall was used as the pollen parent or *vice versa*. In either case the result was the same; only tall plants, at least as tall as the original tall parent, resulted from the cross.¹ The seeds of these plants, which are normally self-fertilized, were collected and sown in the following year. The generation so produced (F_2) consisted of both tall and dwarfs, but no intermediates. Careful counts on large numbers showed that the proportion of tall to dwarfs was 3:1. The dwarf character receded in the F_1 generation, but reappeared in a definite proportion in the F_2 generation following. For this reason Mendel termed the dwarf character *recessive* and the tall *dominant*.

The experiment was continued into a further generation, the seeds of a number of F_2 plants being sown and special care taken to keep those from each individual entirely separate. The nature of the resulting F_3 generation showed that the dwarfs all bred true, but that the tall belonged to two classes, viz. those which bred true and those which gave tall and dwarfs in the ratio 3:1 (cf. fig. 1), behaving like the F_1 plants. Of these two classes that which threw dwarfs was found to be twice as numerous as that which bred true.

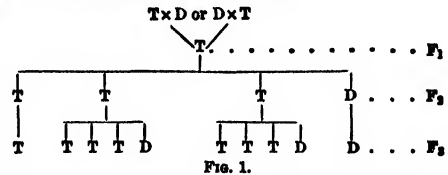

FIG. 1.

Throughout these and further generations, Mendel encountered only three classes of plants in so far as the pair of differentiating characters, tallness and dwarfness, were concerned, viz. (1) pure tall breeding true to tallness; (2) impure tall throwing tall and dwarfs in the ratio 3:1; (3) dwarfs which always breed true. Moreover, the relation worked out for this pair of characters was found to hold good for other pairs. Thus the yellow colour of the cotyledons of the ripe seed was found to be dominant to green, round seed shape to wrinkled, tough parchment-like pod to soft pod, etc.

By looking at the pea in this way it was possible to express much of the variety of forms under which they occur in terms of alternative characters, each pair of which taken separately followed the scheme of inheritance outlined above. Mendel not only provided the scheme; he also suggested the explanation. He supposed that the various characters shown by his peas existed in alternative pairs. The pea could be either tall or dwarf; the seed could be either yellow or green; the flower could be either coloured or white; and so on. The characters belonging to such alternative pairs were mutually exclusive. Every pair of characters was represented by something in the germ-cells, but any given germ-cell could carry only the representative of either one or the other of a given pair of characters. To these representatives of the characters in the germ-cells it is now usual to apply the term *factor*. On Mendel's idea there was a factor corresponding to tallness, and another corresponding to dwarfness, but a given germ-cell could carry only either the factor for tallness or

¹ It is customary to denote the result of a first cross as the F_1 —first filial generation. Similarly the offspring from the F_1 individuals form the F_2 (second filial generation), the offspring of these last the F_3 generation, and so on.

that for dwarfness—but not both. All the germ-cells of the pure tall carried the factor for tallness, and all the germ-cells of a dwarf carried that for dwarfness. The cross between the tall and the dwarf meant the union between a tall-bearing germ-cell, or *gamete*, and a dwarf-bearing *gamete*, so that the individual, or *zygote*, produced by the yoking together of these gametes contained both the factor for tallness and that for dwarfness.

Such a zygote, which is produced by the union of two unlike gametes, is termed a *heterozygote*, as distinguished from a *homozygote*, which is produced by the union of two like gametes. In the case of the peas the tall factor is completely dominant over the dwarf factor, and the heterozygous tall is in appearance indistinguishable from a homozygous tall. But the difference comes in when it forms its gametes. Its own cells must be supposed to contain both of the factors for tallness and dwarfness. But, as Mendel assumed that these cannot enter into the same gamete, a separation then occurs so that half the gametes contain the tall, and half the dwarf factor. In other words, a *segregation* of the factors occurs during the production of the gametes, and the gametes themselves are pure for either the one factor or the other (see fig. 2).

The F_1 heterozygous pea, therefore, is producing equal numbers of tall-bearing and of dwarf-bearing gametes, and this is true for both the male and the female gametes. Self-fertilization of the F_1 plant means the bringing together of two such series of gametes.

Let us suppose that the number of ova is $4x$, $2x$ of which are 'tall' and $2x$ 'dwarf.' Any 'tall' ovum has an equal chance of being fertilized by a 'tall' or a 'dwarf' pollen-grain. Of the $2x$ tall ova, therefore, x will give rise to homozygous tall, and x to heterozygous tall. Again, any dwarf ovum has also an equal chance of being fertilized by a 'tall' or a 'dwarf' pollen-grain.

found by actual experiment. The nature of the gametes given off by the F_1 plant may, as Mendel showed, be further tested by crossing such plants with the pure recessive. If the F_1 tall plants are producing equal numbers of 'tall' and 'dwarf' gametes, they ought, when crossed with dwarf plants, to give both tall and dwarf in equal numbers, and of the tall so produced all should throw dwarf. Here, again, the hypothesis was confirmed by the experimental results.

More recently these experiments of Mendel have been confirmed many times over, and it has been shown that the same scheme applies generally to animals as well as plants.

8. One modification of Mendel's view was suggested a few years ago, and has since been generally accepted by students of this subject. This is the so-called 'Presence and Absence' hypothesis. Mendel had shown that the characters of his peas could be arranged in alternative pairs, and recent work has proved that this is general for the characters of both plants and animals. Of all the many cases now worked out there is none in which there is a clear reason for supposing the existence of series of three or more characters each of which is alternative to any other. This remarkable fact has led to a modification of Mendel's original view. According to Mendel, there is a factor for tallness and one for dwarfness, and the relation between them is such that it is impossible for them to enter the same gamete. According to the 'Presence and Absence' hypothesis, there is also a factor for tallness and one for dwarfness, but there is no reason why they should not enter into the same gamete. It is supposed that every pea at present known is homozygous for the factor for dwarfness, D , and that the difference between the dwarf and the tall is that the latter possesses an additional factor, T , in virtue of which it becomes tall. If the factor T is brought in by both the gametes which make a tall plant, the result is a homozygous tall; if only by one gamete, then a heterozygous

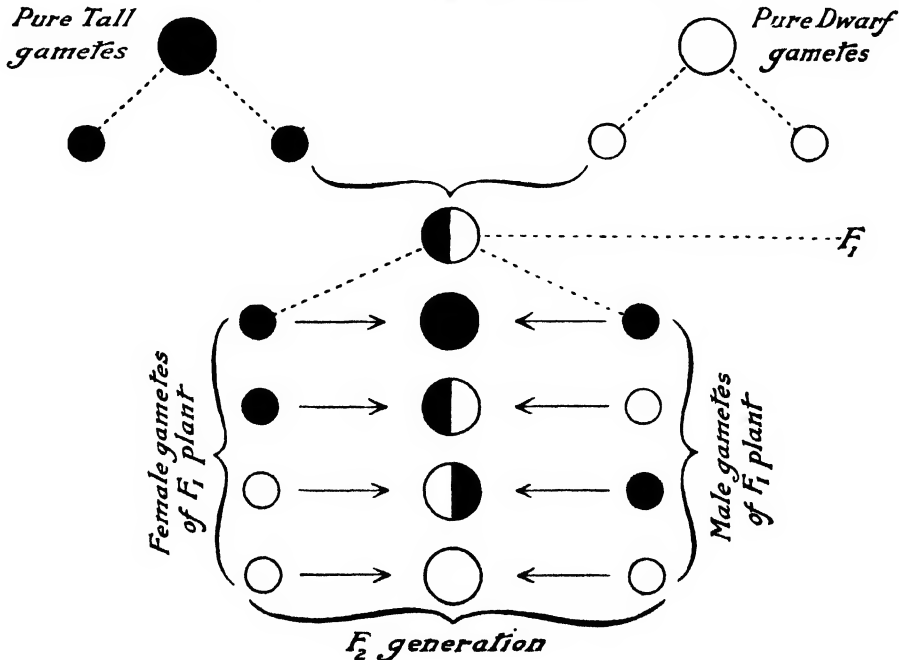

FIG. 2.

Of the $2x$ dwarf ova, therefore, x will give rise to heterozygous tall, and x to homozygous dwarfs. Hence, on this hypothesis of the relation of characters and factors in plant and germ cell, the F_2 generation should consist of x homozygous tall, $2x$ heterozygous tall, and x dwarfs—proportions which Mendel

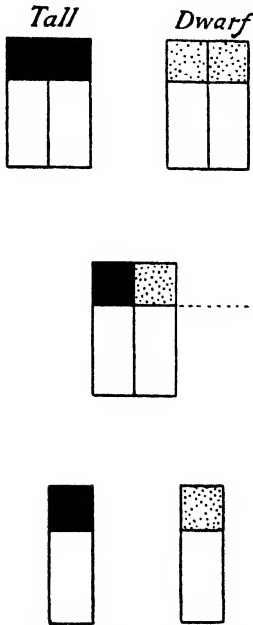

tall results. The essential difference between the two views may perhaps be rendered more clear by the help of the accompanying diagrams (fig. 3).

In this way the Presence and Absence hypothesis

offers a simple explanation of the remarkable fact that experimental analysis has shown, that the characters of plants and animals may be expressed in terms of alternative pairs. This apparent

tween a plant containing both of these factors and a plant containing neither. Since one of the plants is homozygous for both A and B , we may represent it as $AA BB$, and all its gametes as AB . The other plant contains neither A nor B , and for convenience we will express such a condition as $aabb$, the small

Mendel's Original View

'Presence & Absence' View

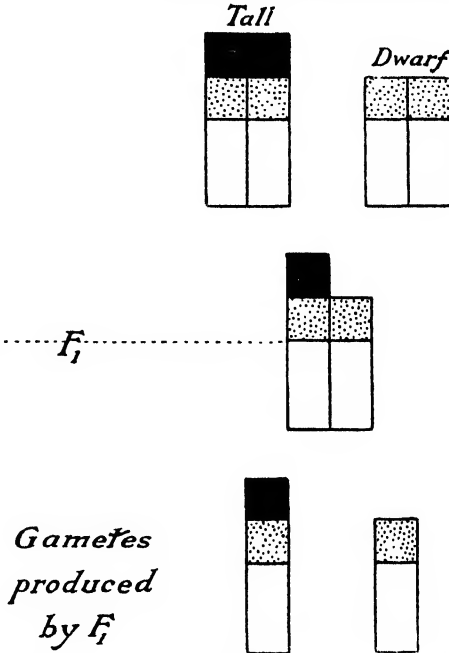

FIG. 3.—A black square represents the factor for tallness and a dotted square that for dwarfness. The unshaded portion represents the rest of the characters comprised in 'peanness'.

alternativeness is due to the fact that a given factor can enter into relation with a gamete in two ways only—it may be present or it may be absent. Mendel's own results can be explained equally well on either hypothesis. It was only when more complicated cases came to be worked out, and more especially cases where several factors affected the same structure, that the difficulty of affording an explanation on his original view became evident.

9. So far the only type of case considered is that in which the two original parents entering into the cross differ by a single character. Mendel, however, worked out instances in which several characters are concerned, and found the transmission of each character to be independent of any other, but always on the same scheme. For example, in the case where the characters round seed as opposed to wrinkled and yellow cotyledon as opposed to green were involved, a cross between a yellow round and a green wrinkled gave an F_1 generation composed entirely of yellow rounds.

Self-fertilization of these plants resulted in the formation of four classes of seeds, viz. yellow round, yellow wrinkled, green round, and green wrinkled; and the relative proportions in which these four classes appeared were as 9:3:3:1. The yellows are to the greens as 3:1, and the rounds are to the wrinkleds as 3:1 with the factor for yellowness and the factor for roundness each being transmitted according to the same scheme, but quite independently of one another. The analysis of such cases as these is perhaps rendered more simple by regarding it in the following way:

Let A stand for one of the two factors brought into the cross, and let B stand for the other, and let the cross be made be-

letter in each case being used as a symbol denoting the absence of the particular factor in question. The F_1 individual resulting from the cross, being heterozygous in both factors, must be represented as $AaBb$. Every one of the gametes formed by such a plant has an equal chance of containing A or of not containing it, and each of these two kinds of gamete has an equal chance of containing or of not containing B . Such an individual will therefore form the four sorts of gamete AB , Ab , aB , ab in equal numbers. The F_2 generation results from the meeting together of two such series of gametes, and the result can be simply expressed by writing the series horizontally and vertically in the same order in a system of 16 divisions, as is shown in fig. 4. In this way is shown not only the nature

AB AB	AB Ab	AB aB	AB ab
Ab AB	Ab Ab	Ab aB	Ab ab
aB AB	aB Ab	aB aB	aB ab
ab AB	ab Ab	ab aB	ab ab

FIG. 4.

of the F_2 generation, but also the zygotic constitution of the various individuals. A point of some interest is that 4 individuals lying along the diagonal drawn from the left top to the right bottom corner are homozygous either for the presence or for the absence of both factors. In other words, of the four visible zygotic classes there will be a definite proportion in each case breeding true subsequently, viz. 1 in 9 of the class containing both dominants, 1 in 3 of the two classes containing one dominant, and, of course, all of those containing neither dominant. The point is of considerable economic importance in connexion with the building up and fixing of new varieties of domesticated plants and animals.

This method of analysis for cases involving the presence or absence of two distinct factors is, of course, applicable to cases involving a larger number of factors, and many such cases have now

been worked out for various characters in plants and animals and shown to accord with the theoretical scheme. The nature of the F_2 generation, the number of forms which appear with it, and their numerical proportions form the first stage in the determination of the number of factors involved in a given cross, and so of the experimental analysis of the constitution of living things.

There are, however, cases in which the same scheme of heredity holds good, but in which a fresh complication is introduced by the fact that the factors concerned may interact upon one another. The factors A and B may in conjunction produce an effect which is absent when only one or other alone is present. Instances of this have been shown to occur among plants where two strains of whites, each breeding perfectly true to white, will nevertheless, when crossed, give rise only to plants with red flowers. The colour in such cases is due to the interaction of two things A and B , and colour can be produced only when they are simultaneously present in a plant. The crossing of the two whites brings together the two constituents necessary for the production of colour, and the F_1 plant is consequently coloured, being heterozygous for both A and B . Reference to fig. 4 shows that the F_2 generation from such a zygote should contain 9 individuals out of every 16 in which both A and B are present. The remaining 7 have either A or B alone or neither. Hence, from such coloured F_1 plants hypothesis would lead us to expect an F_2 generation consisting of coloured and whites in the ratio 9:7. And this is what experiment has shown actually to occur. Moreover, chemical evidence quite independent of breeding tests is gradually accumulating, suggesting that in such cases as this we are dealing with two definite substances—a ferment, and a colourless chromogen which can give rise to colour when acted upon by the ferment. One of the original whites must be regarded as carrying the chromogen and the other the ferment; whether the gametes actually carry these substances is uncertain, but in any case they carry something which is capable of developing them.

10. Analysis of these cases, which are to be interpreted by the interaction of factors, has thrown an interesting light upon what was formerly the puzzling phenomenon of reversion or crossing. Two white sweet peas may, on being crossed, give rise to a purple which is practically identical with the wild purple as it grows to-day in Sicily. The offspring of a chocolate brown and a yellow rabbit may be all of the wild grey colour. In such cases each of the two parents lacked one or more from the sum-total of the factors which go to make up the wild form. Together, however, they can make up that sum-total with the consequence that reversion at once occurs. Reversion is due to the coming together again of factors which had become lost at some point or other in the history of the species. The study of reversion opens up interesting questions in connexion with the relation between domesticated forms and their wild prototypes. It is only in some cases, of course, that we are certainly acquainted with the wild species which was the ancestor of domesticated races. Where such is the case, genetic analysis has shown that these domesticated varieties must be supposed to have arisen through the loss of one or more factors. Such is the case with almost all the many colour varieties of the rabbit and the mouse. Such is the case with all the colour and structural varieties of the sweet pea. It is probable that the change originated somewhere in the cell-division, giving rise to the germ-cells.

Asymmetrical divisions occurred such that some germ-cells obtained less than their full quota of

factors, and from these germ-cells sprang the recessive varieties. The sequence of such new 'sports' or mutations has been observed with some care in certain instances, such as that of the primula (cf. art. EVOLUTION), but at present we are without definite evidence as to the original seat of the change. There are other instances where the domesticated form possesses a character which is dominant over the wild form. The English pattern in the rabbit, the yellow coat colour in the mouse, and the rose comb of poultry are all dominant to the condition found in the wild form. The gain of a new factor is a more difficult conception to formulate than the loss of one old one, but it is not improbable that it may eventually be expressed in terms of some rearrangement of the elements already present. But, in whatever way they may eventually be interpreted, there seems no reason to doubt that new dominant characters may arise from time to time.

11. One further complication sometimes occurring in cases where the factors are concerned may be mentioned here. We may have a pair of characters due to the presence or absence of a factor A , and it may be that neither character can show itself except in the presence of a second factor B .

As an example we may take a case relating to coat colour in some rodents. The wild grey or agouti colour in mice is dominant to black, and depends upon an additional factor A which is not found in the black mouse. Animals heterozygous for A , when mated together, will produce offspring consisting of agoutis and blacks in the ratio of 3:1. Now, albinism is recessive to colour, and coloured mice must, therefore, be regarded as possessing a general colour factor B which is absent from the albino. When animals which are heterozygous for these two factors are mated together, the scheme of distribution of the factors A and B will be that already shown in Fig. 4. Of the 16 possibilities there are 12 containing A and 4 without A —the expected ratio 3:1. But 3 of the 12 containing A lack the factor B , as also does one of those which is without A . Since they lack a factor which is necessary for the production of colour of any sort, these four mice will be albinos. Judging, therefore, by visible attributes, three classes of mice should appear from this mating, viz. agoutis, blacks, and albinos in the ratio of 9:3:4. And these are the proportions actually found by experiment. The albinos are really of two different sorts, viz. those containing A and those without A —'agouti' albinos, and 'black' albinos in the proportion 3:1. That this is so can also be tested experimentally by crossing these F_2 albinos with pure black, i.e. blacks which are homozygous for the factor B . Some of the albinos, i.e. those homozygous for A , give only agouti offspring; others, which are heterozygous for A , give agoutis and blacks in approximately equal numbers; while the 'black' albinos which lack A give nothing but blacks. The 9:3:4 ratio obtained in the F_2 generation is really a 9:3:8:1 ratio, but it is not possible to distinguish the four classes by the eye, owing to the fact that the agouti factor produces no visible effect unless the factor B is also present.

That the above four classes exist is evident from appropriate breeding tests, and cases of this nature are in no way different from those already considered with regard to the complete independence in transmission of the different factors concerned. Nevertheless, there are cases in which factors must be supposed to influence one another in their distribution among the germ-cells. Cases of this nature have further been worked out most fully in the sweet pea, and it is from this plant that the following illustrative examples are taken:

Two kinds of pollen are to be found in the sweet pea, an oval or 'long' pollen which has 3 pores, and a smaller 'round' pollen which has only two pores. Only one sort, of course, occurs on any given plant. In heredity, long pollen (L) behaves as a simple dominant to round (l). Again, with regard to colour, sweet peas may be arranged in two main groups, purples and reds. To each red there is a corresponding purple, the difference between the two being that the purple contains an extra factor (R) as compared with its corresponding red. When a long pollen purple ($BBLL$) is crossed with a round pollen red ($bbll$), the F_1 plants are all long purples; and, were the case similar to those that have already been considered, we should look for an F_2 generation consisting of long purples, round purples, long reds, and round reds in the ratio 9:3:3:1. Such, however, is not the nature of the F_2 generation. The four expected classes appear, it is true, but they appear in proportions very different from those expected. The long purples are about 12 times as numerous as the round purples, while the round reds are rather more than 3 times as many as the long reds. The 8:1 ratio of purples to reds and of longs to rounds

is undisturbed, but the distribution is peculiar in that there is a great deficiency of rounds among the purples and a great excess of rounds among the reds. This, then, is the nature of the F_2 generation when the cross is so made that both the factors L and B are brought into the cross by the same parent. When, however, one of these factors is brought in by each parent, a round purple being crossed with a long red, the nature of the F_2 generation is quite different. The reds are now almost all long pollens, while the round pollens are almost all purples. This case, as well as others in the sweet pea, is explicable on the hypothesis that two of the four classes of gametes are produced by such plants in greater numbers than the other two classes. In the special instance just considered the experimental numbers are in accordance with the view that the F_1 plant made by bringing both factors from one side ($BL \times bl$) produces its four kinds of gametes in the ratio $7BL : 1Bl : 1bL : 7bl$, whereas the F_1 plant made by bringing both factors from one side ($Bl \times bL$) produces its four kinds of gametes in the ratio $1BL : 7Bl : 7bL : 1bl$. In the former case B is said to be 'coupled' with L , while in the latter case there is said to be repulsion between B and L . In both cases the two kinds of gametes representative of the original parents are produced in excess. Several other cases recently worked out in the sweet pea and other plants suggest that this excess of certain gametes is part of an orderly scheme, the nature of which may be best indicated by the following table.

No. of Gametes in Series.	Classes of Gametes.				No. of Zygotes in Series.	Classes of Zygotes.

In the table n is half the total number of gametes in the series. (Thus, in the case just considered the number of gametes in the series $7BL : 1Bl : 1bL : 7bl$ is 16, and n here = 8.) The right-hand side of the table indicates the nature of the F_2 generation arising from the cross. In the table n is represented throughout as some power of 2 (i.e. 2, 2², 2³, etc.). Where there is coupling in F_2 , the 2 forms of gamete AB and ab are $(n-1)$ times as numerous as the 2 forms Ab and aB ; where there is repulsion in F_2 , the reverse is the case. There is reason for supposing that for the same pair of factors the value of n for both the repulsion and coupling series is the same. Most of the cases hitherto discovered in plants may be regarded as belonging to one or other of the series shown in the table, and those already discovered are marked with an asterisk. It is not improbable that other series may exist, but not enough is yet known to justify any definite statement as to their exact nature. What is clear, however, is that, in the process of cell-division which leads to the formation of the gametes, factors may become linked together, or the reverse, according as the cross is made, and that the resulting 'coupling' or 'repulsion' is part of the same orderly process.

Phenomena of apparently similar nature have been witnessed in a few instances among animals, and there is little doubt that, when they come to be fully worked out, these processes will be found to play an important part in heredity. More especially is this likely to be the case where we are concerned with characters which are, as a rule, peculiar to one or other sex, for it is not improbable that the so-called secondary sexual characters are linked in this way with a sex factor. For further discussion of these matters the reader is referred to the article SEX.

12. A phenomenon of some interest in this connexion is exhibited by certain hermaphrodite plants. It has been known for many years that some strains of single stocks throw doubles as well as singles, and that, as the doubles are sterile, the only way to get them is to breed from such singles. When crossed with ordinary pure breeding singles, these double-throwing singles give a different result according to the way in which the cross was made, i.e. whether the double-thrower was used as the male or as the female parent. The F_1 generation

consists only of singles, and these when bred from behave alike, all throwing doubles as well as singles. When, however, the double-thrower is used as the female parent, the F_1 generation as before consists only of singles; but whereas some of these singles throw doubles when subsequently bred from, others of them breed perfectly true. From this and other facts of kindred nature it has been inferred that the female and male reproductive cells on the same hermaphrodite plant differ in their hereditary properties, one set being, as it were, associated with certain factors which are not found in the other set. It is not inconceivable that different portions of the germ-gland of an animal may differ in hereditary properties, but at present there is no definite ground for supposing this to be so. The solution of such problems as these depends largely upon whether it is possible to determine the exact stage at which segregation occurs. Perhaps the view most widely accepted at present is that it

occurs at that stage in the formation of gametes which is termed the 'reduction division'—a phenomenon peculiar to the vast majority of plants and animals. The nuclei of the cells composing the tissues of animals are characterized by the presence of small bodies which stain deeply with certain dyes and are consequently termed *chromosomes*. It has been found that, as a rule, the number of chromosomes in any given species is constant or nearly so, though differing for different species. Were the gametes to contain the same number, the total number of chromosomes would be doubled each time two gametes fused to form a fresh generation. This is avoided by a complex process leading up to the 'reduction division,' by which the number of the chromosomes in the gametes is reduced to one half of that found in the nuclei of the body tissues. It is plausible to suppose that the segregation of factors occurs at this stage, though it cannot be said at present that the evidence in favour of this view is sufficiently strong to put other possibilities out of court. Indeed, there are certain classes of evidence which tell markedly against it, more especially the phenomena of coupling and repulsion, and the fact that in certain heterozygous plants the ova and spermatozoa may differ in the factors which they bear. It is not altogether impossible that in these matters there may be a difference between plants and animals, but at present the question must be left open.

13. At this point mention should be made of a phenomenon which may serve to complicate the process of genetic analysis. It has been assumed in the foregoing account that any given gamete of one sex is capable of being fertilized by any gamete of the other sex, and of giving rise to a fresh individual. There is, however, some evidence to show that in certain cases fertilization may occur, but that some of the zygotes formed are incapable of developing very far.

In the mouse, yellow is dominant to the wild agouti colour, but heterozygous yellows when bred together produce yellows and agoutis in the ratio 2:1 instead of the expected 3:1 ratio. On further testing these yellows it has been found that none of them is ever homozygous for the dominant yellow factor. One of two things must therefore occur: either there is repulsion between a 'yellow' ovum and a 'yellow' sperm, so that they refuse to unite; or else they unite to form a zygote which is incapable of development. On the former hypothesis there is nothing to prevent all the 'yellow' ova from being fertilized by agouti spermatozoa; and, since there is an equal chance of an 'agouti' ovum being fertilized by a 'yellow' or an 'agouti' sperm, the expectation, on this hypothesis, of mating yellows together would be 3 yellows:1 agouti—all the yellows being heterozygous. But in many hundreds of mice so bred the ratio of yellow to agouti is definitely 2:1. Hence it must be supposed that the 'yellow' sperm can unite with the 'yellow' ovum, but that the resulting zygote is incapable of developing, at any rate beyond a comparatively early embryological stage.

This peculiar case in the mouse has recently been paralleled by an interesting one in the snapdragon (*Antirrhinum*). A form is known with light green foliage which will not breed true when self-fertilized, but always produces light green and normal green plants in the ratio 2:1. Careful examination, however, showed that three different kinds of seedling made their appearance among the progeny of such plants, viz. normal green, light green, and white in the ratio 1:2:1. The white, however, being without chlorophyll, were incapable of development and perished almost as soon as they raised their heads above the ground. The 'white' gametes fertilized one another, but the resulting zygote, though capable of a certain amount of development, was unable to attain any size owing to the absence of the chlorophyll upon which the plant depends for its nutrition. The case of the snapdragon, even more than that of the yellow mouse, points to the non-viability of certain zygotic combinations, and it is not impossible that such cases may eventually help to throw light upon some of the phenomena of sterility.

14. The opinion is held among many breeders that, in certain cases at any rate, a character may be intensified or diminished by a process of long-continued selection—in other words, that the effect of this process is a cumulative one. On the other hand, it is well recognized that there is a definite limit to the effects produced by the process of selection. There is no reason for supposing that the last half-century of careful breeding has materially increased the speed of the racehorse, or that the yield of any food-plant can be indefinitely augmented merely by saving and growing on the seed from the best plants. However the theorist may regard the matter, the practical breeder realizes that there is a limit to improvement, and that in most cases this limit is reached after comparatively few years' work.

Some confusion has been introduced into discussion on the effect of selection owing to the fact that the word conveys a somewhat different meaning to the biologist and to the practical breeder. The aim of the breeder is to obtain some more profitable type of animal or plant, and his first step is to cross two strains possessing desirable qualities, usually with the idea of uniting these qualities in a single strain. He then breeds on the individuals resulting from the cross for several generations, or else crosses them back with one or other of the parents, and from the mixed lot so obtained he picks out those he wants for subsequent breeding from. Having found a useful type, he goes on breeding from it until it breeds true, or becomes 'fixed.' The result of this combined process is generally termed 'improvement through selection.' Translated into modern terms, it means recombination of characters by means of a cross, and subsequently establishing a homozygous strain of the combination required. Neither part of this process is strictly comparable with what the biologist understands by the term 'selection.' For him the word has been coloured by the invention of the term 'natural selection'; and, as natural selection was originally conceived of as the gradual accumulation of very small variations leading slowly to a change of type (cf. art. EVOLUTION), so the term 'selection,' even when applied to alteration of type among domesticated animals and plants, was more or less unconsciously

assumed to be a similar process. Hence, when the breeder spoke of a given result having been achieved by selection, the biologist was often apt to put his own interpretation upon the process, and to attribute to the gradual accumulation of minute variations a result which was certainly not brought about in that way.

Nevertheless, there is evidence that, in certain cases at any rate, a character may be to some extent intensified through crossing, and subsequently choosing for further breeding such individuals as exhibit the character in the most marked degree; but, as has been pointed out, more especially by Nilsson-Ehle, such cases may also be interpreted in terms of factors.

Working with wheat, this observer showed that red colour in the grain is dominant to white. But in different families three distinct proportions of reds and whites may occur. The reds may be to the whites as 3:1, as 15:1, or as 63:1. The inference is that in the first case we are dealing with the presence or absence of one factor, in the second of two, and in the third of three factors. And since each of these factors produces what is apparently precisely the same effect singly, it is probable that we are concerned with a single factor throughout. It must be supposed that a gamete can bear either one, two, or three doses of this factor, and that each dose behaves in heredity independently of the others, segregating in every case in the normal way. Thus, for example, a plant may be triply heterozygous for the factor R which turns white into red, and of the constitution $R_1 r_1 R_2 r_2 R_3 r_3$. Such a plant produces equal numbers of eight sorts of gametes, $R_1 R_2 R_3$, $R_1 R_2 r_3$, $R_1 r_2 R_3$, $R_1 r_2 r_3$, $r_1 R_2 R_3$, $r_1 R_2 r_3$, $r_1 r_2 R_3$, $r_1 r_2 r_3$. Hence, when such plants are self-fertilized, only one in 64 will be without any red factors; and this plant ($r_1 r_1 r_2 r_2 r_3 r_3$) is, of course, a white. The reds, however, differ considerably in the number of doses of the red factor which they may contain. Among them will be such forms as $R_1 R_1 R_2 R_2 R_3 R_3$, $R_1 R_1 R_2 R_2 R_3 r_3$, $R_1 R_1 R_2 R_2 r_3 r_3$, $R_1 R_1 r_2 r_2 R_3 R_3$, $R_1 R_1 r_2 r_2 R_3 r_3$, $R_1 R_1 r_2 r_2 r_3 r_3$, etc. A red plant may have from one to six doses of the reddening factor, and Nilsson-Ehle found by further breeding that the red colour was deeper in those plants which contained the greater number of doses of the reddening factor ($R_1 = R_2 = R_3$). The differences, however, were not sufficiently sharp to permit of accurate sorting. Now, selection of the reddest grains from such a family would mean the picking out of those grains with perhaps 6, 5 or 4 doses of R to the exclusion of those with less. Were these reddest grains sown indiscriminately and the reddest again sorted from them, there would result a higher and higher proportion of the 6 dose grains in the sample. Repetition of this process would in a few generations eliminate the 5 and 4 dose grains; and, as the 6 dose grains are homozygous, the intenser red colour would be fixed.

At first sight it seems not unnatural to attribute this result to the action of selection taking effect much in the same way as the biologist conceives the operation of natural selection on minute variations. But it must be carefully noted here that, although the variations are small so that the various classes of reds grade into one another, yet each class has a specific constitution depending upon the number of doses of the factor R which it contains. Each class can be analyzed and identified by crossing with the white and subsequently breeding from the crosses. The net result is the intensification of the red; nevertheless, what has happened in such a case is merely the picking out of what had already come into existence as the result of the cross, and the intensification of the colour owes nothing whatever to the so-called selective process. There is no reason for supposing that such cases as these lie outside the scope of analysis, or that they cannot be expressed in terms of genetic factors.

15. From all the various investigations that have been carried out since the re-discovery of Mendel's work, there emerges one fact of cardinal importance. So far as these investigations have proceeded, it is possible to express the results in terms of definite factors segregating sharply from one another in the way that Mendel first disclosed. A new science has been brought into being—a science of which the aim is to express the composition of living things in terms of factors, just as chemistry expresses the composition of dead things in terms of molecules. How complete that expression may ultimately become it is not as yet

possible to say. Fresh data may any day make their appearance which will present the old phenomena in a new light. For the present, however, there is every reason to suppose that the properties of animals and plants depend upon the presence or absence of definite factors which in transmission follow definite and ascertained laws. Moreover, these factors are, so far as we can see to-day, clear-cut entities which the creature either has or has not. Its nature depends upon the nature of the factors which were in the two gametes that went to its making, and at the act of fertilization are decided, once for all, not only the attributes of the creature that is subsequently to develop, but also the nature and proportions of the gametes to which it itself must eventually give rise. That the nature of the environment influences the living thing is beyond doubt. Better soil, more moisture, more stimulating manure may sometimes effect a striking alteration in the habit of a plant. Better hygiene and education may largely influence the nature of a human being. But to the supposition that by such means a radical change can be brought about in the living organism the facts of heredity as we know them to-day certainly lend no countenance. Within limits the organism is plastic, and upon that plasticity alterations in the environment may play, producing changes within those limits. But there is no unequivocal evidence for supposing that those changes can be transmitted, or that a beneficial change brought about in the organism through altered circumstances can in any way alter the constitution of the germ-cells which that organism contains. It is true that strong, healthy plants generally produce better seed than those which are poorly nourished. But this is because the seed is really a larval form parasitic upon the mother plant. The parent plant not only produces the gametes from which the seed develops, but is for some time part of the environment of the developing seed; and it is in this capacity that the better nourishment of the parent is apt to lead to better formed and more vigorous seeds. Better nutrition of the mother plant has not affected the constitution of its gametes; it has only afforded a better chance to the developing embryo in the seed.

16. Another effect which must be carefully distinguished from that of heredity is that of *tradition*. Where the young of animals live for some time with their parents, they profit during early life by their parents' experience. There is little doubt that in this way modifications in behaviour may be gradually brought about, and the species become gradually adapted in certain respects to changed conditions. Rooks will avoid a man with a gun, though perhaps they have never been shot at. So also it is said that the behaviour of many wild animals differs according as they are in the presence of a white or a brown man. But of all animals the effect of tradition is strongest in man, where the intelligence and means of communication are most highly developed, and the young remain longest with their parents. Moreover, man alone has devised methods of storing up his experience. With each generation the store is added to, revised, and improved; and each generation comes into the world endowed, through the efforts of its forbears, with greater control over the conditions under which it has to live. This is sometimes spoken of as 'the inheritance which one generation receives from another.' The expression is in some respects misleading, for it cannot be too strongly emphasized that this passing on of accumulated tradition has nothing whatever to do with heredity in the strict biological sense. What may or may not be inherited is the brain capacity to take advantage of the accumulated

store of experience. Without such capacity the store becomes of no account.

In discussing questions involving evolution and progress in man, it is of the first importance to disentangle the effects of tradition from those of heredity proper. That heredity in man is of the same nature as in other animals and in plants there is no reason to doubt. Mendelian inheritance in its simplest form has already been demonstrated for a number of characters. These, it is true, are mostly of abnormal nature, because the student of genetics is at present largely dependent on the medical man for his data, and must deal with such characters as have been adequately investigated, whatever their nature. Among such characters may be mentioned congenital cataract, brachydactyls, *tylosis palmaris*, and others, while of so-called normal characters brown eye is dominant to blue; and, in certain cases at any rate, red hair is recessive to black. A peculiar feature in human heredity would appear to be the large number of characters showing sex-limited inheritance (cf. art. SEX). Though for the present man is too imperfectly known to be of much service in the elucidation of problems in heredity, there are yet two cases in the species of the highest interest, because the records in either case extend over several centuries. One of these is the well-known Hapsburg lip so characteristic of certain royal houses. The eminence of those affected has ensured a succession of portraits and documentary evidence, and there is little doubt that this character has behaved throughout as a simple Mendelian dominant over the normal form. To-day, after more than four centuries, it is as well marked as ever in the House of Spain. The other example is a case of night-blindness near Montpellier, which began to excite interest two centuries ago, and of which there exists to-day one of the most complete of human pedigrees, a pedigree numbering more than 2000 individuals and extending over ten generations. During all this time the affection has behaved as a simple dominant, and, like the Hapsburg lip, it has persisted in its full intensity in spite of continual crossing with the normal type.

17. Heredity is a new science, and its students are well aware of the magnitude of the labours in front of them. Yet enough is clear to force upon us the question whether our attitude towards many social problems is in accordance with facts. Many of those who to-day are anxious to reconstruct society lay it down as an axiom that men are all born potentially equal, and that the differences between them are due to differences in upbringing and opportunity. To this doctrine the biologist must offer an unqualified denial. The developing human body is no mere plastic thing which can be moulded by treatment to give it this or that desired character. Even from its earliest stages each embryo is endowed, by the germ-cells that made it, with a collection of factors which must inevitably develop in a given way. Hygiene and education are influences which can in some measure check the operation of one factor or encourage the operation of another. But that they can add a factor for a good quality or take away the factor for an evil one is utterly opposed to all that is known of the facts of heredity. Men are in some measure what circumstances have made them, but in far higher degree they are what they were born. Moreover, as regards parents, circumstances count for nothing in the inherent qualities of their offspring. Two things there are that go to mould society, of which the one is tradition that is handed on from one generation to another, ever changing and gathering as the generations flow, while the other is the genetic constitution of man—that collection of factors given him at his making, differing from in

dividual to individual, essentially independent of circumstances, inevitably passing on to posterity according to immutable and orderly law. Which of these two influences is the stronger there can be little question, nor can it be doubted that a social system based upon the inherent nature of man would have greater stability and a better chance of surviving than one resting upon religious or ethical tradition alone, however high the source whence that tradition sprang. The best type of social system is doubtless that combining the two, but the question of how far the one or the other is to predominate must be left for the future to decide. Before it can be settled, the inherent nature of man must be probed by deeper and more searching analysis. Cf., further, the following article.

LITERATURE.—The most important works are: W. Bateson, *Mendel's Principles of Heredity*, Cambridge, 1909 (contains a full bibliography and a translation of Mendel's original paper); E. Baur, *Einführung in die experimentelle Vererbungslehre*, Berlin, 1911 (contains a clear account of Nilsson-Ehle's researches); C. Darwin, *The Variation of Animals and Plants under Domestication*, London, 1869 (in vol. ii. will be found Darwin's statement of the theory of Pangenesis); L. Doncaster, *Heredity in the Light of Recent Research*, Cambridge, 1910; R. H. Lock, *Recent Progress in the Study of Variation, Heredity, and Evolution*, London, 1909; G. Mendel, 'Versuche über Pflanzen-Hybriden,' *Verh. Naturf. Ges. Brünn*, vol. x., 1865 (Eng. tr. in Bateson); R. C. Punnett, *Mendelism*, London, 1911; H. de Vries, *Intracelluläre Pangenesis*, Jena, 1889 (Eng. tr. by C. S. Gager, Chicago, 1910), also *Die Mutationstheorie*, Leipzig, 1901-03 (Eng. tr. by Farmer and Darbishire, London, 1910); A. Weismann, *The Germ-Plasm*, tr. Parker and Rönfeldt, London, 1893, *Essays upon Heredity and Kindred Subjects*, Eng. tr. 2, Oxford, 1891-92. R. C. PUNNETT.

HEREDITY (Ethics and Religion).—The purpose of this article is to select, from the great array of facts and considerations connected with heredity (cf. preceding art.), some which may prove of present importance to ethics and religion. Race penetrates the whole of life; it influences powerfully nations, families, individuals. It is a counterpoise or partial complement of that manifold environment whose influence was mainly regarded by Buckle and the great naturalistic historians. The known facts are not yet marshalled by a science which, though growing fast, is young; and recent more rapid increase of knowledge indicates that there is much more to know than we thought. Sometimes it seems almost certain that race is the most powerful force in history. At other times we are inclined to follow the writers who, like Bernard Shaw, think race unimportant and environment (climatic, political, social) all-controlling. Probably the relative importance of these factors varies in different parts of the field. There are races, like the Jewish, which by a more subtle elasticity rather than a greater stiffness remain unchanged in all lands. There are countries, like North America, which bring many races to a common appearance. But all that environment effects is effected in and by the responding power of an inherited organism.

Moreover, ideas about heredity touch morals and religion at many points. The wide range of these ideas—many of them familiar through all ages—is not yet viewed as a whole, and misconceptions are mixed with traditional and popular, and even with instructed and critical, opinion. The time, therefore, for definite conclusions has not yet come; but none the less some decided opinions and resolutions are possible and necessary. For the modern attention to heredity has produced a movement, and may produce results; and the results will be welcome or unwelcome to Christian moralists in so far as they foster or discourage responsibility, prudence, and unselfishness. But of these results the most important will be primarily in the sphere of thought, and will illustrate the truth that opinion may be

more effective than material fact, and a change of ideals of greater consequence to a race than a change of blood.

In view of the vigour and merit of the new movement, some opinions familiar to tradition and common sense acquire a new importance; and some decisions negative in form become positive for morals. Recognizing the great difficulty for thought in our subject, we recognize in it also a burden of sorrow, a difficulty for courage. If the problem of race is dark, the influence of race plainly includes menacing elements; and the facts of inheritance, like the rest of the world of force, put a strain upon the conviction of freedom from which there is no ready escape. That conviction must here, as everywhere, rest upon the experience or the contemplation of virtue; for the good will is the free will. The Christian student approaches that part of the frame of things which we call blood, believing in the freedom which morals require. His business is to take care that new knowledge may lead to a conception of duty at once more extended and more intense; never to the relaxation of moral effort either in self or in others; never to a lower appreciation of the value and power of ideals.

(1) *Distinctive elements in present thought.*—We have learned to look beyond the succession of individuals in a race to the changes of a race as such. Organisms change from age to age, and man as a species is changing; he can, it is alleged, control his own change. The general principles of transformation include him; the special machinery of natural selection is valid for his case; the methods of Mendelian inquiry ought to yield results in human life; the hopes of selective breeding should have a version about man and human society. The moral question about the science of heredity is, in fact, the question of the application to man of its conclusions and methods. Can we and may we use for man the investigations and the methods by which the process of improving subject-breeds is shortened through the application of a relatively certain knowledge of the sequences of variation and the exclusion of useless steps? We can do better with our sheep than by a crude elimination. May we not do better with man than leave him to 'chance'? This is the moral problem on the practical side. But behind it is a problem of knowledge. Do we know what is improvement for man? And, if we could secure this improvement, should we in the process lose something of the truly moral life, for the sake of which alone it is worth while that man, improved or unimproved, should survive? Is the knowledge that races change a ground for humility and for hope? Or is it a warrant for self-reliance and a new ambition?

And then, besides the social or political question, there is a question for the individual. Does our knowledge of the behaviour of race tend to rob a man of the conviction and the responsibilities of freedom? What scope is there in a fixed constitution for the action of that personal choice which on other grounds he has come to believe in?

(2) *Causes of the present interest.*—The existing interest in problems of heredity is (a) part of what at its highest is an interest in the 'Reign of Law,' and at its lowest an abandonment of the essential task of man in life and thought, in face of the mechanical conception of the universe. It is worth noting that all the interest of a materialistic sort exists in our society side by side with a great development of psychical studies, a belief in new continuous influences other than blood, and a greatly extended conception of the powers of personality. In this 'New Thought,' the patent facts of heredity are accounted for by re-incarnation. All this speculation, so remote from naturalism, has not in any way been co-ordinated with the

thought movements called scientific in the biological sense.

(b) In the second place, the interest is due to recoil from the exaggerated equalitarianism of the immediately preceding age. In that age, so practical and so sentimental, silk purses were to be made out of a variety of materials; and a sort of moral transformism expected the Ethiopian to change or not to need to change his skin. A just criticism of the quite imaginary superiority of some strains led to the conviction that all strains were alike in potentiality; and, when destroying a fictitious aristocracy of accident, Britain forgot that there might be a real aristocracy of health, brain, and disposition.

(c) A third cause is the reaction from an almost exclusive reliance upon the environment, physical, intellectual, and moral, which we thought we knew how, and had means, to improve indefinitely. This confidence has been destroyed, partly by the critical activity of thought, and partly by our too manifest failures in practice. The results confidently promised are not forthcoming. There is now a contrasted belief, equally dangerous when it is held exclusively, that the improvement of the environment (housing, health, air, education, training, travel) has been carried as far as possible; that the best has been done with and for the existing human material; and that for further improvement we must look not to nurture but to nature, not to education in its widest sense, but to selective breeding, by which we may get rid altogether of some mischievous features, and obtain progressively more of the best types and fewer of the worse. There is a recoil from an unreasonable reliance upon the environment alone. The value of influence is discredited, and men look to elimination instead.

(d) Fourthly—and this cause alone will be further examined—the movement in religious and popular educated thought has received its direction from the emphasis upon the subject in biology; and has been animated by the advances of biological knowledge and practice, sometimes well, but more frequently not very well, understood. In illustration of the last sentence it may be remembered that some educated persons still believe that heredity means (even exclusively) the direct inheritance of acquired characters—an occurrence denied by most biologists; or they set inherited qualities in contrast with 'innate' ones; or speak of 'cases of heredity' as if among the children of men there were some who escaped the operation of the influences of descent. All cases of human life are cases of heredity. And we may take it as certain that, at least in respect of the body, men are not born with any but inherited properties and powers. What seems and is original in a human physique is the original result of a mingling of inherited influences. Reference will be made again to the innumerable surprises of descent—the unlikeness between children and parents; the re-emergence of a remote ancestral type, recognized only in families of celebrity or enduring possessions; the incalculable appearance of genius in an ordinary stock—which are sometimes accepted as disproving the general truth of heredity. One of our interests is to escape from unbalanced studies, which exhibit the case of the Bachs or the case of the Jukes, to establish heredity as a sufficient explanation of human life; or reject it as unimportant on the evidence of genetically isolated genius and heroism—the prophetic art of Beethoven sprung of unmusical stock, the military power of men born of subject and unwarlike races. On the one hand, we must remember that what is uncalculated and uncalculable by our present means is not therefore in actual fact irregular; and, on the other, that, though race and circumstances are undoubtedly factors in the pro-

duction of a person, it does not follow that they are the only factors concerned.

If it is impossible to deny the place of nature, it is unwise to deny the force of nurture because the tremendous power of nature is recognized. Well-born must no doubt be well-bred if he is to take his place in succession to worthy forbears. But the breeding requires a fit nature for its subject; and there must be many different forms of good training, to fit the many varieties of good race. Moreover, for training, there must be—as a factor growing in importance with advance—the consent and co-operation of the subject. 'I have,' says the Countess, of the gentlewoman Helena, 'those hopes of her good that her education promises; her dispositions she inherits, which makes fair gifts fairer; . . . she derives her honesty and achieves her goodness.'

It must be remembered, besides, as correction, that distinctions originated by racial difference are maintained by other causes when the racial difference has ceased to act. A county, a district, gets character from the race that inhabits it. Other races entering the region take by association a varying share of the regional character. In England, say (for we have not much certain knowledge), the ancient stock was first driven from the seaboard. The coast, and especially the East coast, was inhabited by Teutons—Saxons, Normans, Danes. At present there are dark-haired men of the older race in some coast-places. But they have acquired the social characteristics of the seafarers who once drove out their dark forefathers. Aristocracy still has some of the features of Norman society. The country gentleman still exhibits what is probably the Saxon type. And yet no blood-relationship is concerned here. The old Universities of Oxford and Cambridge—as has been shown or suggested by W. C. D. and C. D. Whetham—though now drawing almost equally from the same mixture of stocks, still exhibit divergent characteristics which in their origin may have been determined by the different races on which they respectively drew.

General reflexions of this sort are practically required before turning to some particular heads of discussion. The moral and religious problems will fall under the heads 'individual' and 'social'; and we must in each case consider the bearing both of speculative ethics and natural religion on the one hand, and on the other of the statements and precepts of Christianity considered as based upon an accepted revelation of truth and duty. These divisions must be related to existing biological knowledge in general, to Mendelian work in particular, and to the proposals as well as the propositions of Eugenic Reform.

1. The individual. — With respect to the individual, it will be convenient to ask first what we may think of him in view of the general doctrine of heredity, and then to examine the effect, upon our provisional conclusion, of Mendelian work.

(1) *General doctrine of heredity.* — Of Original Sin (see SIN) it is impossible here to say more than that, whatever was the change or failure indicated by that doctrine, it was not an acquired character in the sense of biology. What is indicated is a fall, or failure to rise, in the relation between the spirit of man and God. The doctrine itself is not a gratuitous accusation of the race of man. It is the utterance of optimism under pressure of the experience of moral paralysis and temporal suffering. Its positive equivalent is the statement that we cannot measure either the dignity of man's origin or the splendour of his destiny by his present position and his present moral accomplishment. A will better than the will he exhibits is the

¹ *Al's Well that Ends Well*, Act I. Sc. 1.

origin of his being, and a virtue beyond his own present power is the end of his calling. It is not the Christian who declares the misery of man. What all men acknowledge the Christian interprets as the eclipse of a dignity which, through the moral effort made possible by Divine gift, man is invited to regain.

It is now necessary to exhibit the influence of biological thought; and to inquire (a) what is its bearing for morals upon the question of the individual, his responsibility, and his opportunity; and (b) what is its bearing upon the control or influence of individuals in small or large groups, in the education of the child, the management of the family, the organizing of the nation, and so forth. Under both these heads it is desirable to distinguish between the *general* influence of the study of heredity and the *particular* influence or bearing of the Mendelian researches which constitute at present its most active and promising department. Finally, turning to practice, we must ask what is the effect and what are the credentials of the eugenic proposals with which quite lately we have become more or less clearly familiar.

In speaking of the *general* effect or influence of biology, we refer not to the carefully acquired generalizations of Pearson, or Galton, or the writers in *Biometrika*, but to the strong general impression left by these studies on the minds of thinking men—that the qualities of a man are, in some sense, certainly fixed by inheritance. His ultimate character, we all admit, is a function of at least two variables, disposition and circumstance; but his disposition, it is contended, is the result of inheritance and is fixed at his birth. Moreover, at his birth it is the result of facts in his ancestry. We can no longer suppose that, while the physical frame, the diathesis in respect of disease and health, and so forth, are fixed by inheritance, the mental qualities and the personal temperament are excluded from the influence of blood. At any rate for our purpose we are content to allow—what certainly has not yet been proved—that throughout his whole complex organization a man is, in a certain sense, the result of natural inheritance. He is born what he is. *Poeta nascitur*, but not less the man who cannot enjoy the poetry is *born* with that incapacity.

If we do not seek, then, to exclude from the range of hereditary influence any part of the complex constitution of man, what room can be found for the freedom that is required for morals? May not a man conclude that, his character being fixed by inheritance, he has no responsibility for its improvement or for his actions? A doubt of the reality of responsibility on such grounds may have practical bad consequences for a man or for a generation after the doubt has passed away. It is certain that moral effort is gravely hindered in some men by the suspicion of its uselessness, and that thus—through the channel of an idea—more hindrance to improvement comes than from unfavourable inheritance. There are subjects in which a theoretical mistake when corrected leaves the life undamaged; for the apparent waste of time in unprofitable reflexion may be actually necessary to the process of discovery. But, when the theoretic mistake refers to the very possibility of 'conduct' in the real sense, then the escape from error may leave a man with diminished power of self-control to correct an increased force of unfavourable habit. And the loss which may not appear in the individual will become evident in the generation or the society.

It must be noted, however, that it is not only an abstract determinism that is unfavourable to moral effort. There is also a thoughtless libertarianism which, regarding moral events as un-

caused and without result, pursues a bad course in the belief—if the great word may be used in such a connexion—that it may be retraced whenever the agent chooses. But, when we allow this, it must be said that the despondency and irresponsibility arising from the idea of racial determination are very real; and not less real in quarters where determinism as a philosophic system is unfamiliar and unexamined. What can be said in answer to these impressions or suspicions?

(i.) First, there is an *argument from ignorance* (reduced in force, as will be presently pointed out by Mendelian research), which may be stated thus. The facts of heredity are grave enough. The drawbacks of evil inheritance are real. But, in the first place, the exact state of a man through inheritance is unknown. Older thinkers, relying principally upon the male line, and reckoning that as indicated by the patronymic, relying also upon knowledge of nearer ancestors alone, thought that the hereditary predisposition might be easily known. *Fortes creantur fortibus et bonis*. 'Like father, like son.' But the modern conception of parenthood—and it is a true one—recognizes the two parents as equally important, and knows that there are as many males in the female as in the male line. The patronymical stock, therefore, may or may not be important. To the excuse of the father-beater in Aristotle, *συγγενὲς γὰρ ἦναι*, 'It runs in our family' (*Nic. Eth.* vii. 6, 1149b, 11), the answer would be, 'In which family?' The stock is almost infinitely mixed. The emergence of a given ancestral strain is incalculable. The immediate forbears and the more remote are but collaterally related to the descendant. It is the stock, the germ, that matters. Little of importance can be learned by the study of father and mother alone. If you have bad qualities by inheritance from bad ancestors, you have many good ones in the same entail; your great-great-grandfather, like almost every one's great-great-grandfather, was by modern standards intemperate; but his wife was by modern standards a recluse and an ascetic. You cannot tell which influence is strongest in you; at any rate the result is mixed. And since you cannot tell that you have not the most favourable inheritance, it is your duty to act as if you had, and not to run the risk of debasing, under the cloak of a bad strain which you do not possess, fine qualities which may actually be yours.

This argument from ignorance is at any rate inadequate to meet a reasoned determinism. It does not touch the facts, whatever they are. But the argument is strong forensically and practically. And, whatever the facts are, the duty indicated is plain. Fate may defeat the righteous man from without; it may defeat him from within. But his effort will still have been righteous; and, if we turn for a moment to the language of positive religion, we must add that the 'judgment' upon the man will not be determined by his achievement measured on an external standard without regard to heredity, any more than by such achievement measured without regard to circumstance.

(ii.) But further—and still in spite of what will presently be advanced as resulting from Mendelian work—the inherited qualities are certainly *too numerous all to find expression in a single life-history*. They are too numerous, and, besides, they are practically incompatible *inter se*. A man inherits capacities for a dozen different lines of life. One among these is realized by suitable training. The power of training is such that it appears at first sight to originate the whole character formed. We cannot doubt that it really effects what it does by acting upon an innate capacity. Nurture develops and 'brings out'

faculties which without nurture remain not only hidden but incomplete. But nurture can only develop what is there; and it draws out one or more of a multitude of capacities. And, if this is true of the broad and definite capacities which are required by certain modes of life and livelihood, it is also true of the very numerous and subtle capacities which are used or left unused in the cultivation of virtuous or evil character. For character is not the same thing as temperament. Character is both defined and realized by the manner in which a given temperament is managed in given circumstances. The vast excess of heritable qualities affords the field for such a choice. The relatively fixed external scene does not preclude a certain limited freedom of action, because the scene, though fixed, is greater than can be used or occupied by the life confronting it. Choice must be made. In the same way a relatively fixed internal constitution does not preclude a limited freedom of choice. For the possibilities are too numerous for realization. The potentialities cannot all find room on the narrow scene of one life-history. A man is capable of refinement and of bonhomie, of luxury and of self-denial. He cannot in the same life principally exhibit good-nature and principally exhibit an exclusive sensitiveness. He encourages one of the sets of qualities, and this partly by a direct fostering of them through thought and desire, guided by ideals; and partly, and in a more important degree, by carrying out, on account of the same ideals, the actions which are the natural outcome of these qualities and which nourish the qualities as the leaves of a plant nourish the root. The results of training in armies and various professions of men drawn from a stock fairly evenly mixed show both by the contrast of different professional types and by relative uniformity within a profession that life is the result of the development by action of one or other set of qualities out of many such sets present in the subjects of training. The contrasted set of qualities, left without expression or result, is inoperative for the man, and is quite possibly *pro tanto* atrophied for the stock; for the orthodox denial of the inheritance of acquired characters does not quite for certain apply to the specific case of starvation.

Again, besides the want of room—to use a figure—for all the inherited qualities in one life, there are some qualities that are mutually exclusive of one another. A man may be both extravagant and niggardly, both shy and boastful, both arrogant and servile, both rash and cowardly. But he cannot be both proud and humble, both predominantly devoted to self and predominantly forgetful of self. Many of those inheritances which are in our view not moral, but the raw materials of morals, are in their own nature ambiguous, and can be turned to virtue or to vice. Such are irascibility, caution, self-regard, the power of admiration. But even of these some are incompatible, in exercise and cultivation, with other qualities inherited by the same person. Life is the story not only of the management of circumstance but of the management also of these interior equipments. It is the abandonment of anti-impulsive management that constitutes moral failure. Moral failure is the failure to be moral.

Using once more at this point the language of positive religion, we may say that sinful action is not always action having any moral character in itself. Sleeping, eating, striking, speaking, are morally neutral; and their wrong occurrence is the result of impulse only. Sin in such cases, and probably in all, consists in the declining of free and moral action and lapsing into the un-moral plane where action is the resultant of impulses.

A suggestion may be useful of some inheritances which are markedly disadvantageous, but which are best known as such precisely by those men who, having them, are overcoming them.

(a) The inheritance of qualities which are in themselves distinctly unfavourable, such as the tendency to deceit or cowardice. These may be correlated with helpful qualities, but in themselves they appear unfavourable. There are some others which it is difficult to believe correlated with any compensative quality.

(b) The inheritance of qualities in themselves favourable in circumstances which render them practically unfavourable; for example, the inheritance by a courtier of an indifference to unpleasant contacts, which is useful to a person born in more primitive circumstances; the inheritance in humble life of what is roughly the aristocratic temperament—pride, fierceness, the rapid concentration of attention, the expectation of swift obedience. A most practical moral disadvantage is the inheritance of warrior blood or of pleasure-seeking tendencies in persons born to dependence. It may be seen on a large scale in South Africa, where whole nations inheriting magnificent qualities for primitive war are born into an alleged civilization under which the warrior temper leads a man to the indignities of a gaol; or a whole race, as at Thaba N'Chu, to disinheritance. The adventurous spirit which was once noble wears among subject races the squalid face of 'I.D.B.,' evasion of taxes, or aggravated assault.

(c) The inheritance in combination of qualities all or some of which might separately be favourable. This is probably the commonest cause, if we take the physiological calculus, of all our moral defects; the discordance of impulses within, the discordance of a generous impulse with a saving impulse, of the parental impulse with the economic one. In fact, to take a large view, it might be said that of the moral difficulties of a nation, or indeed of man as a race, the largest single part arises from the discordance between the inherited impulses which make us men and the inherited prudential qualities which make some rich and others in consequence poor.

(d) Possibly also—and indeed experience seems to indicate it—there is in some cases a successive emergence in the course of one life-history of violently contrasted ancestral strains; so that, besides that conflict of impulses which at any one time occupies the conscience of the man, there may also be a succession of different types of prevailing impulse; and this results in the baffling of an acquired prudence, a destruction of what seemed a man's self-knowledge, and also in the disturbance of external conditions or social obligations which were fit for the earlier train of impulses, but unfit for the later.

Every one is familiar with the fact that what is undertaken in youth is not always easy to bear in old age, and that 'tasks in hours of insight willed' are only with extreme difficulty and many groans 'in days of gloom fulfilled.' But this does not adequately account for the difficulties which beset at least some individuals inheriting markedly diverse strains. A man who in youth and early manhood shares the prudent and industrious temperament of a Puritan ancestry seems to experience in middle life the sudden emergence of another set of relatives, hard-riding and money-scattering squires. It will be remembered, of course, in contrast with this, that such dislocated inheritance may be practically very favourable and act as a store of energy in societies which need explosions.

¹ Illicit diamond-buying, a crime of white men in which the native labourer is an accomplice.

Unfavourable conditions may in some cases practically eliminate a quality by refusing it sufficient expression—as the root is starved by the cutting off of the leaf. Sometimes, viz. when the quality is very robust, the conditions appear rather to concentrate energies which might have been exhausted had they received betimes their full exhibition. Thus, the influence of religious Puritanism spread so widely in the England of the 17th cent. as to cover with its sombre and austere habit of life much of the rough fighting blood of an older England, which, thus confined by the circumstances of what we now call the middle class, was released in the irresistible fierceness of the New Model Army.

The circumstances which thus strikingly alter the practical effect of an unchanged heredity may be local, national, economic, ethical, religious; depending on fashion, station, vocation.

Sometimes it seems very probable that half the surprises of public life and of private encounter arise from the introduction of rare or exotic elements of race into the familiar lines of society—a Lambton in Parliament; a Carlyle in Chelsea; the French descendants of Henri IV. through Charles II. found in the Whig aristocracy; the Cromwellian soldiers who are to this day boycotted as Catholic squires in Tipperary; Disraeli the Castilian, living in the circumstances of the lawyer son of a literary man. A man inheriting qualities unfavourable in themselves, in their combination, or their situation, nevertheless may, and often actually does, carefully avoid the occasions which give opportunity for their unfavourable effect; and they are weakened by the refusal of expression. And, though it would appear that he cannot hand down by blood to his son the improvement thus secured, and the son inherits by blood not the gain but the heirloom—not his father's acquisitions but a share of his father's patrimony—yet the father can and does leave to his son even by blood greater general strength, and he may leave, besides, better surroundings, and better ideals; thus he sets about his son the influences of a good man's home.

With some of these, indeed with all, the struggle may be lifelong. For the Christian this is a foreseen difficulty, for he has been led to put no trust in 'the flesh'; and to believe that high conduct must come not from the absence of difficulty there or from removing such difficulty, but in being delivered from the sphere of those influences. The consideration of these higher counsels does not belong to the present article. But it falls to us here to mention that the existence even of immeasurable difficulties in the blood ought not to daunt Christian thought any more than it defeats, however much it harasses, the Christian life.

(2) *Effect of Mendelian researches.*—The effect of these upon ethics is not so great as it is supposed to be in some quarters, but the impression made is prodigious and the legitimate effect is very considerable. In speaking of the impression one must confess that it has sometimes been exaggerated in the common conception of biology as well as in the common conception of morals. In respect of biology, non-naturalists believe that naturalists have deserted Darwin in a body, and have found in Mendelism a new theory of the origin of species. The real fact is that naturalists still, on the whole, follow the line that Darwin traced, but at present are engaged not in reconstructing the past history of species but in observing the present behaviour of hybrids.

With regard to morals and sociology, it is supposed that Mendelism itself is a new method of procedure, promising better results than religious conduct; or else that Mendelists have cleared up to a very large extent the facts of human inheri-

ance. These opinions are not shared by biologists. But the impressions made, first by regular results capable of tabulation, and secondly by the exhibition of a practical method of inquiry, are legitimately very great; and the actual acquisitions for anthropological thought are considerable. They can only be enumerated here.

(a) Mendelian research has reduced the force of the argument for practical freedom which was based on the fact of our ignorance—the argument in which we criticize the naive confidence or the naive despondency based upon the consideration of one line of ancestry alone, or upon the somatic life-history of immediate ancestors. This argument from ignorance retains great force, and it is certain that we have no such knowledge as can dissipate the obligation of effort for every individual. But the regular distribution through descent of such qualities as are Mendelian (that is, so unitary as to answer to the Mendelian analysis) certainly tends to a prospect of knowing one day much more of the order in which human qualities are reproduced in descent. Certain supposed laws of that reproduction had long been familiar. The repeated falsification of these laws tended to encourage those who had been daunted by their confident assertion. It was observed again and again that ancestral features, and even a complete assemblage of such features, reappeared in a family at intervals which defied all calculation and disconcerted all expectation. When the knowledge of the stock's history was small, as in ordinary private families, there was the appearance of total originality in the offspring—a strangeness of feature and temper which was only quite gratuitously traced to a forgotten ancestor; and the phenomena of a mixed race in this matter are so irregular that they appear subject to no law at all. It is certain that they really exhibit a law, which is perfectly strict and regular, if only we knew it; and the Mendelian short steps to discovery (taken within a short gamut of variation within a species) give hope of advance towards the finding of that law. To this extent the argument from total ignorance and from the impossibility of discovering the facts loses force—an argument which was practically effective for moral encouragement. For that ignorance depended upon the proposal of a law to which the exceptions were too numerous and too obvious to be ignored. Mendelian work has shown that the distribution of qualities is more complex than was supposed, and this gives promise of discerning a regular sequence in appearances which were formerly the most evidently incalculable.

In the interest aroused by the still recent re-discovery of Mendel the work of Weismann is partly forgotten. By his description of the continuous germ-plasm he showed that comparison with immediate forbears is an insufficient method for estimating the force of heredity in an individual, those forbears being in Weismannic thought collateral relations, like the leaf on a twig next above the leaf under consideration. The widening of our outlook in this matter and the more complex sequences shown by Mendelian study give a fresh hope of discovering regular sequences in inheritance, and so far lessen the appearance of physical originality in individual human lives. We have learned how a pure racial life may be found in some offspring of a mixed race; how some features may be completely eliminated by breeding; and how original heterozygotes may arise from the interbreeding of two contrasted varieties.

(b) Secondly, and more particularly, Mendelian research has upset the doctrine of the average or proportional representation of ancestral qualities in the offspring. This is perhaps the most important difference for ethics. Under the guidance of

Galton we looked for a quasi-mathematical representation of different stocks in a given descendant. A man whose great-grandmother was Swiss was eighth-part Swiss. We now know that the system of proportions within the individual does not hold; that, given a Mendelian human character, it ought, whether as dominant or recessive, to reappear uncombined in a certain proportion of the descendants of a stock. If virtue or any particular virtue could be conceived of as a Mendelian feature (which by reason of its complexity it cannot be), its non-appearance in a particular individual might be due to its recessive character. And, besides, we could no longer argue as confidently as before from the enormous excess of moral qualities inherited by every individual from his mixed ancestry. If we could distinguish the Mendelian units of a moral temperament, we might expect to find those displayed in the course of an ancestry to be manifested in an individual not in combination but pure, as a result of the process of sorting. But how far we are from such discoveries is plain when we remember the actual existence of great saintliness, great heroism, or great genius, as these appear in every variety of stock.

Major Leonard Darwin, in considering this question of the appearance of genius in the midst of families otherwise at a disadvantage physiologically, says with reference to the students of genetics:

'If you credit us with the power of being able to predict . . . sickly children, may we not also be credited with at least some power of prophesying the appearance of rare ability?'

The answer is in the negative. How perilous for practice may be such ill-founded expectation is illustrated when the same writer says:

'Surely segregation for life with kindly treatment must in the interests of posterity be the fate of all who both fall in life in consequence of some signal heritable defect and have no redeeming qualities to compensate for such a defect.'

In our present state of information such language is no doubt used by a thoughtful man only in irony or challenge. But irony needs a trained audience. The subject is very serious, very delicate, and very new to the public. And it is better to say simply and directly with Punnett:

'Except in very few cases, our knowledge of heredity in man is at present far too slight and too uncertain to base legislation upon.'

Who foresaw, and who would now foresee, with all the materials for judgment and with all the assistance of Mendelian observation, the emergence—to take no saint or hero—of Voltaire, 'si vif, si malingre, et si peu masculin'? To look at Houdon's bust in the Louvre is to recognize a mystery of personality which stands undiminished by the generalizations of science. Art, with its power to represent now and again a mixed effect of epoch, race, profession, and personality, corrects the narrow conception which rightly and, within its sphere, usefully arises from the rigid attitude and selective contemplation of science.

By Mendelian work, then, the argument from ignorance and the argument from excess of equipment are alike reduced in force. But virtue and vice are not allelomorphs, and the moral agent is not as such a heterozygote. The qualities which are the raw material of morals are not unitary in the Mendelian sense. And, in spite of the reducing process which is exhibited in Mendelian observation, and which possibly corresponds to a certain stage in karyokinesis, every man finds in himself a large excess range of possibilities; so that, even if the materials for morals are inherited as such, the life-history is the scene of an enforced exercise of a real selection, often carried out under the influence

of ideals which found their first strength in people of another blood. Both 'blood' and circumstance closely condition the moral effort, but they do not determine it. A man cannot choose whether he will be a Teuton or a Slav. If he is born Arab, he cannot reach the excellence of the Celt, or the Celt his. But he can choose between being the best Arab he can be and the worst Arab he may be. A man cannot choose whether he will be trained at a Public School or not; but he chooses between doing there as well as he can or as badly as he dares.

Religiously, we should say that a man is called upon to make the best of inherited qualities as of circumstance. He can make the worst. To surrender to temptation is to decline to the plane of the natural impulses so that behaviour becomes the resultant of their contest. The life of grace is a life in which the will declines to re-enter the sphere of necessity and is capable of an anti-impulsive effort. And, if we use the language of dogma, we must say that a man will be judged not according to his moral accomplishment, measured on an external scale but according to the degree of his fidelity under conditions moral and material, external and internal.

2. Society.—From the case of the individual we turn to the case of influence exercised by man on man, by education, and government, in the family and larger groups. Here we shall discuss (1) the non-inheritance of acquired characters, and (2) eugenic proposals.

(1) *Non-inheritance of acquired characters.*—At first sight it seems that our judgment must be greatly affected by belief in the inheritance or non-inheritance of acquired characters. Something is still said on behalf of their inheritance on *a priori* grounds. Popular thought and the thought of practical breeders still affirm this inheritance. But we have to take account here of the biological denial of such inheritance or of its occurrence in a sufficient number of cases to affect the course of variation. The importance of this difference of opinion is not so great as it may appear, for there is certainly another nexus of moral and mental inheritance besides that of the blood. Tradition and the current of ideals, religion, education, public opinion—in one word, institutions—form a link between man and man and between generation and generation, by means of which the moral ideals of one are inherited by another; and here, more securely than in the germ-plasm, we can accept the analogy between memory and heredity which has been taught by Samuel Butler and by Dr. James Ward.¹ Those ideals may find their best opportunities in a given race, but they also pass from race to race. Formed in one racial soil, they may be carried on in another.

The results of character in different races seem to show that, while race remains a factor of real importance, the divergencies of society in mental standing are to be accounted for in the main by the differences of culture. When the stock is fairly mixed, as in Britain, the results of a given culture appear to an external observation startlingly regular and uniform. It is only when viewed from within, by a member of the cultured class, that the differences of race within the class appear important.

The other bond, the bond of ideals, is the one in which the acquisitions of culture are passed on. The task of education is the same whether or not there be any such inheritance in the physiological sense. If improvement can be passed on by blood, then we must improve each generation as far as we can; and we must equally do this if every generation starts with a clean sheet, uninfluenced by the

¹ 'First Steps towards Eugenic Reform,' in *Eugenics Review*, Apr. 1912, p. 81.

² *Ib.*

³ 'Genetics and Eugenics,' *ib.*, Oct. 1912, p. 128.

¹ James Ward, *Heredity and Memory*, Cambridge, 1912.

behaviour or the experience of ancestors. Weismann has shown, even in the case of musical ability, that it is capacity and not accomplishment which is handed on hereditarily.

The case for care in its wider sense remains unshaken—care for the progressive improvement of the environment, in such matters as food, water, air, housing, medicine; care for the elimination of disease; above and beyond all, for the securing of greater liberty, greater justice, more equal opportunity, less unequal rewards. And here it may be remarked that in a recent volume of *The Practitioner*, exhibiting very fully the present condition of the study of tuberculosis, hardly anything is said of inheritance. Physicians, and indeed physiologists like Starling, assert that the future of the race depends mainly upon our care of the rising generation.

(2) *Eugenic proposals.*—Two rival schemes are in existence for supplementing or even replacing the work which we may generalize under the names of education and influence.

(a) The first, which may be associated with the name of Archdall Reid, and which suggests affinities with the thought of Nietzsche, is that of giving free play to the forces of elimination so as to secure improvement by means analogous to those of natural selection. The consideration of this need not be expanded, for it is not at present prominent. All that need be said is that we have no security that the natural forces which are dangerous or inconvenient tend by their eliminating energy towards the survival of those human forms which are fittest to promote the essential aims of human life. To invite a man, for the sake of improving the race, to diminish the force of pity within himself by lessening the action dictated by pity, is like inviting a breeder of racehorses to seek their improvement by refusing to cultivate the character of swiftness. It is an attempt to improve the race of man at the cost of those elements of character, individual and social, for the sake of which alone it is worth while that the race of man should survive.

(b) In broad contrast with this is the movement of Eugenic Reform which is animated by the desire to find some method more merciful than that of the dog-breeder, who said in explanation of his success: 'I breed a great many, and I kill a great many.' The Eugenic Movement has for its base the idea that we have done our best with the existing human material; that the improvement of environment is no longer the hopeful path; that we cannot face the alternative of allowing the free play of any destructive forces; and that the line of improvement is to be found in getting better lives as the material for nurture—more of the best and less of the worst.

This movement is both educative and legislative, both restrictive and positive; and its different aspects engage the attention of different persons. From our point of view the merits of the movement differ in its different parts. Its educational work, supposing guidance can be relied upon, must be almost entirely good. But any efforts in the direction of legislation must be surrounded with peril. While education is safe and legislation at present dangerous, it must be remembered that the educators and the moderates give the opportunity of influence to the legislative and extremer elements of the movement. It is unsafe to suppose that this movement, because of its academic character, is practically unimportant. All revolutions are prepared in studies, and carried out by minorities. Majorities always suffer.

In order to reach the more difficult consideration that is part of our subject, the case of the feeble-minded may be briefly dismissed. The control of the really and permanently feeble-minded is morally

justifiable because they are not at present free. They lack the self-control which freedom requires, and they are also open to the mischievous control of other persons. There is a strong case for their segregation, if a safe judgment can be reached in defining their condition. But it is not certain that segregation must be by legal action. It would be best at the present stage to extend very largely the voluntary help that is being given to such persons, and to supplement it by public funds. And, if further steps must be taken, they must only be taken: (i.) not at the cost of a general extension in the community of suspicion and fear, especially in the more dependent classes; (ii.) not at the cost of human dignity as such; (iii.) not as an introduction to what are known as positive movements in the improvement of the race. If by a general improvement of the environment (in which we include a general rise in wages) a greater actual freedom was given to all classes, it is probable that in the majority of cases families would take due care of their own feeble-minded members. When the whole family is feeble-minded, a case for compulsion arises; and the legislation which met this case could be framed so as to meet also the case of criminal neglect by natural guardians. The weak point in all suggested legislation so far is that it is in effect a legislation providing for the poor to be controlled by the rich.

The point for calling a halt, even in cases concerning the feeble-minded, is reached when we come in sight of a lowering of public *morale* by action giving offence even to the ill-instructed conscience; and, if the conscience is ill-instructed, it is for the educational section of the Eugenic Movement to remedy this. When we turn to the positive reformer, the moral and practical difficulties which confront us are many and grave. The reformers would have to seek the cultivation of *different kinds* of excellence. A general or average improvement would destroy the work of society. If we have only sinewy men to drive the car, where shall we find the heavy man for navy work? Different breeds would have to be formed along widely different lines of specialization. This would check the interchange of life; for, if there were free interchange, the enterprise would be defeated by 'panmixia.' We should impair still further the social unity of the human race. Instead of nations differentiated by history we should have races, as in Wells's horrible dream of the Time Machine, differentiated for menacing work and helpless pleasure. Certainly all Christian effort should be in a direction diametrically opposed to this. Moreover, in eliminating this or that bad factor we know not what good one is correlated with it; and physiological correlation is not yet exploded by Mendelism.

Further, even if eugenic methods were certainly applicable to man, even if we could count on knowing what is good for him, and could shorten the process of evolution by avoiding unprofitable variation, yet every such application of method would carry with it a diminution of that unconscious or spontaneous element in life which has undoubtedly great gains attached to it. To marry for health—in itself a nobler enterprise than marrying for money—would even more directly militate against spontaneity, because the considerations involved come nearer to the heart of the matter. In a curious and interesting study of the higher forms of affection, von Hartmann shows that their action is not to be accounted for on mechanical or consciously rational grounds. They owe nothing to calculation of benefit, nothing to mechanical or physiological necessity. It seemed to von Hartmann that a cosmic reason, not apprehended by the personal mind, produced results which are in the true interests of the race and of the mass of

individuals. Whether this speculation be true or not, there can be no doubt of the loss to human life involved in anything which unnecessarily replaces uncalculating affection by calculations extraneous to the personal attraction. It may conceivably be necessary to make such a substitution. In any case it must carry this loss. And the interest of true progress seems to be in securing the good—supposed provisionally to be certainly recognizable and securely aimed at—by means which reduce as little as possible the spontaneous element.

Such means are found when definite encouragements and prohibitions are discarded, and we have instead some system that puts on good unions a small, hardly perceptible, but constantly repeated, premium. Is not such a system found precisely in a good social code which requires in all the cultivation of what is best; not avowedly for the sake of offspring, but for the sake of social life itself in its general aspects? Is it not precisely the better environment in its truest sense—better ideals, more liberty, more self-respect, more respect for every citizen—that secures more surely even those special ends to which eugenists recall us? And is not a particular part of this really good society, and the part that most surely reacts upon parenthood, the institution of marriage itself? Where marriage is rare, or late, or mercenary, or hindered by the prejudices of caste, fashion, display, there it is least likely to be real. Where the true nature of marriage is well taught and firmly believed in, where the rule of marriage is faithfully obeyed, there, in constantly increasing effect, it tends powerfully to set a premium upon the best lives.

It is probable that monogamy made its way by reason of its genetic worth, giving an advantage in the competition of races and nations to the monogamous. Christian marriage, if only it were entirely true to its definition, would give this advantage in a much higher measure. The business of exchange, in the proportion in which it is true to its definition, steadily produces a society of men marked by industry, honesty, mutual consideration. Christian marriage, true to its definition, requires high degrees of self-government, respect for the partner of marriage, respect for other marriages, industry, sacrifice for offspring. And the qualities thus fostered are in point of fact found to be correlated, on the whole and in the long run, not only with moral excellence of all sorts, but with the other human qualities coveted, including intellectual excellence.

For Christians, in this connexion as in all others, the task undoubtedly is to guard the ideal view of life against every advance of materialistic conceptions, and to preserve in activity the spiritual forces of life, against every application of methods which are, in a bad sense, mechanical. But the difficulty is to determine what conceptions are materialistic, and what methods mechanical in the bad sense; or, rather, what use of the methods which must in every human activity involve mechanical elements falls under the reproach of being unspiritual. It is easy to declare that, when once we admit that human life is to be improved from outside—either, as in older plans, by management, or, as is now proposed, by improving, directly and physiologically, 'the pig which makes the sty'—we abandon our own peculiar quest, in which has actually been found all former real advance. But such a statement cannot pass, as it stands, among Christians who are pledged, by the doctrine of the Incarnation, to the faith that it is the business of the spiritual forces, with respect to the material, to redeem the latter from fruitlessness, and make them serve the purpose of the spiritual adventure.

It has been said, again, that the ends which

eugenists set before them may be altogether moral, and that the most powerful advocacy of the movement is animated by motives the most honourable and unselfish; but that the method recommended is in its nature mechanical and, therefore, undesirable. And it might be added that the method is undesirable on two grounds; first, as being in itself mechanical, and, secondly, as being unlikely to enlist for long the services of those whose interests are distinctly idealistic; and that it must at least tend to put ideal and spiritual methods out of sight. But such a statement as this, again, will not bear the closer criticism of a Christian philosophy. Nearly all the methods of social reform involve a mechanical element; and Christians will be the last to admit that sanitation is unworthy of Christian effort because it involves the direction of water currents, or that the healing arts are less Christian because they lay under contribution the treasures of the mine and of the field.

How can we then better define the causes of the distrust which Christians certainly, and rightly, feel in the presence of the adventurous practical proposals connected with the study of heredity? We must say, in the first instance, that we are pledged to the protection of liberty. We have to declare that society has no moral right to invade personal liberty for the ends proposed. It has already been stated that, in the case of the feeble-minded, where such moral liberty is absent, or its slender vestiges endangered, the case is different. But we are pledged against all real invasion of personal liberty; and we have to guard against all disrespect for human nature, and all that tends to lessen the sense of responsibility even in those least richly endowed. Taking this as a basis, we add that the methods of instruction and persuasion are, in an indefinite degree, more removed from the peril of invading responsibility than are external or physiological methods. Let the duties connected with race be preached; let us endeavour to extend in that direction the range of a felt responsibility, in so far as this can be done without disturbing the invaluable, unconscious element of life. But let us not provide by external restraint for an advance which might be obtained by an appeal to the mind and to the spirit.

In the second place, we have to say that in all employment of the phenomenal it is the order that is of most consequence—the order in which the spiritual and the phenomenal forces are brought into play. If the material is used in consequence of an inward change of will, then the sacramental redemption of the phenomenal is in progress; but the case is otherwise when material means are employed for the purpose of saving the cost of a truly moral change. Moreover, in a state of society in which the spiritual ambitions are faint, and the spiritual forces neglected, every addition of mechanical method to our armoury must be watched with suspicion, and with the anxious question whether we have spiritual energy to afford the use of a new weapon. Now, in the case of heredity-reform, we have the proposal to apply a method which is in its nature physical, just where hitherto persuasion and influence alone have been supposed legitimate. And we have need of a much fuller supply of spiritual force and light in our society, before we can venture on such a change. Again, we have to ask ourselves many times whether the authority is available to which such powers can rightly be trusted.

A few days before this page was written a new Mental Deficiency Bill (55. 3, Geo. v.) was brought into Parliament, and with it a Bill (no. 80 of the same year) relating to the Education of Defective Children. A careful study of the measures shows that it is impossible in such an article as this

to express a reasoned judgment on their general effect. Controversy upon them has already begun, and will secure as it proceeds an examination of the actually possible results of the proposed laws in concrete cases.¹ On the one hand, urgency is pleaded by those who are convinced of the danger to the race of leaving defective persons in freedom; and who are sure that large powers of detention will always be prudently used. On the other hand, men not less well acquainted with the facts point to the danger of including under the compulsory powers children who are merely backward; and Sir James Crichton-Browne, one of the Visitors in Lunacy, says: 'The tendency seems to be at the present moment, in England at any rate, to concentrate attention far too exclusively on heredity as the cause of degeneracy, and to look to segregation too hopefully as the one sure means of its prevention.'

The opinion of Dr. Auden, the School Medical Officer for Birmingham, is also worthy of attention, especially in view of what Sir J. Crichton-Browne calls 'almost a scare' on the subject of feeble-mindedness. Dr. Auden says that of 159 children presented to him as mentally deficient, 64·8 per cent made such progress as to fit them for the ordinary schools; and adds: 'In view of the social disabilities likely to accrue to a child under this Act (sic), it is of the utmost importance to determine whether the intellectual retardation is temporary'; and he speaks of the difficulty of diagnosis (*Report for 1912 to the Birmingham Education Committee*, pp. 54-71).

To conclude, while it is with hesitation that Christians may oppose reforms which have much of good in their motive, they must present a direct and unhesitating resistance, even at the cost (could it be proved) of grave delays in physical improvement and immense national expense and suffering, to all methods which can be justly described as offending the instinct of reverence which has become natural to Christians, or as inconsistent with the method of salvation we have received to believe—a method which seeks good not by the forcible elimination of evil, but by the long road of a sacrifice in which the Highest is involved.

LITERATURE.—The literature directly concerned with this part of the subject is not extensive; while, from another point of view, there is hardly a production of genius which is not concerned in some part with problems of race and conduct, and the general range of biography and history may be read with special attention to those problems. The works of Weismann and the other biological works upon which the ethical study depends are given in the preceding article. A few are named here as specially interesting to the general student.

The *Journals of the American Breeders' Association*, Washington, 1904 ff., are a convenient means for acquaintance with the current of publications and researches.

Out of many handbooks on Genetics may be named: W. E. Castle, *Heredity in Relation to Evolution and Animal Breeding*, London and New York, 1912. A student of Ethics inclined to believe the biological work unimportant or inexact might look through one of the monographs of the Eugenics Laboratory, e.g. 'Hemophilia,' by Bulloch and Filides, London, 1911; H. E. Walter, *Genetics*, New York, 1913; W. Bateson, *The Methods and Scope of Genetics*, Cambridge, 1908; R. H. Lock, *Recent Progress in the Study of Variation, Heredity, and Evolution*, London, 1906. [This book treats (p. 187) of the application of Genetics to human affairs. 'Education and training, however beneficial they may be to individuals, have no material effect upon the stock itself.' Lock quotes Bernard Shaw (*Man and Superman*, p. xxiii) as saying first that 'the bubble of heredity has been pricked,' and then (with an obscure consistency), 'we must either breed political capacity or be ruined by democracy.']

Under the head of Eugenics, the following are important: *Heredity and Eugenics*, a course of lectures, etc., by Castle, Coulter, Davenport, East, and Tower, Chicago, 1912; two series edited by Karl Pearson, *Questions of the Day and of the Day*, London, 1911 ff., and *Eugenics Laboratory Lectures*, do. 1909 ff.; *Problems in Eugenics*, papers communicated to the First International Eugenics Congress, held in London, July 24-30, 1912, published by the Eugenics Education Society, London,

1912; W. C. D. and C. D. Whetham, *Heredity and Society*, do. 1912, also *The Family and the Nation: A Study in Natural Inheritance and Social Responsibility*, do. 1909, and *An Introduction to Eugenics*, do. 1912; E. Schuster, *Eugenics*, do. 1913. Dr. Archdall Reid's books illustrate a different view: *Alcoholism: A Study in Heredity*, London, 1901, and *The Principles of Heredity with some Applications*, do. 1905. The thought of Sir Francis Galton, the founder of Eugenics, may be studied in his *Natural Inheritance*, London, 1889, *Hereditary Genius*, new ed., do. 1892, and *The Possible Improvement of the Human Breed under the Existing Conditions of Law and Sentiment* (Huxley Lect. 1901). C. W. Saleeby, *Parenthood and Race Culture*, London, 1909, should also be consulted. For criticism of the extreme Genetical view of mental infirmity the following publications are useful: J. Crichton-Browne, 'Child Study and School Hygiene,' in *The Child*, iii. (1912) no. 2, p. 118; and B. Hart, *The Psychology of Insanity*, Cambridge, 1912, p. 170 ff. (Speaking of the hypothesis that a vast group of insanities is founded on a repression of herd instinct, Hart says that the 'tendency to dissociation' may be an inherent factor and capable of elimination by selective breeding; but adds: 'It is equally possible . . . that the fault is not in the tendency to dissociation, but in the nature of the conflict which has produced it. The only remedy would then lie in altering one or other of the antagonists so that incompatibilities no longer existed' (p. 171)).

References to other papers in the Medical Press and elsewhere will be found in *School Hygiene*, ed. M. D. Eder and R. Elmelle, London, 1910 ff. The full synthesis of biological considerations with the principles of ethics and society, though briefly treated in books of a more general scope, has still to be attempted. Three books by Dr. F. R. Tennant, although theologically open to criticism, are of high value for the disentanglement of the idea of sin from the associated idea of ethical imperfection: *The Origin and Propagation of Sin* (Hulsean Lectures, 1901-02), Cambridge, 1902, new ed. 1906, *The Sources of the Doctrines of the Fall and Original Sin*, do. 1903, and *The Concept of Sin*, do. 1912. *Heredity and Memory*, by James Ward, Cambridge, 1913, is also an important book.

P. N. WAGGETT.

HERESIES AND HERETICS.—See SECTS AND HERESIES.

HERESY (Christian).—I. **DEFINITION AND USAGE.**—The term 'heresy' is an English transliteration of the Gr. *αἵρεσις*, which meant an act of choosing, choice or attachment, then a course of action or thought, and finally denoted a philosophical principle or principles or those who professed them, i.e. a school or sect.¹ In the LXX (Gn 49², Lv 22^{18, 21}, Neh 12³⁰, 1 Mac 8³⁰) it relates to choices good or bad. In Josephus² it means a party or sect, without disparagement. It has a similar force in Acts (5¹⁷ 15⁵ 26⁸), except, perhaps, 24¹⁴. Elsewhere in the NT it is used in a condemnatory sense, as *partyism* (1 Co 11¹⁹, Gal 5²⁰, 2 P 2¹; see Tit 3¹⁰, and cf. 1 Co 1¹⁰ 11¹⁸ 12²⁵, Ro 16¹⁷). Among the Apostolic Fathers it occurs first in Ignatius.³ He reckons it alien to Christianity because it violates the unity of the Church. Justin⁴ calls the heretics 'godless,' 'impious,' 'blasphemous,' etc. Notwithstanding the milder view of Origen,⁵ Irenæus,⁶ and Tertullian,⁷ it refers to a doctrine or system that falsely claims the Christian name but perverts the traditional teaching. The late origin of heresy is held to be evidence of its spirit of self-will. As late as Hippolytus⁸ it was used even of doctrines of pre-Christian times that contradicted the Christian faith. But its connotation became narrowed by controversy, and its evil character was finally fixed in the struggle with Arianism. Its meaning for Catholicism⁹ is a doctrine that is maintained within the Church but is disruptive of its unity. It is more serious than schism, since, while the latter refers to ecclesiastical cleavage, the former refers to spiritual alienation.

The growth of the idea of heresy is parallel with the development of the view that the Church is the Divine institute of salvation and depository of

¹ The first of these two measures (the Mental Deficiency Bill) has become an Act; and the operation of the Law as now provisionally defined is expected with very general confidence and approval.

saving truth.¹ In the long struggle to preserve the distinctive character of the Christian faith the emphasis fell on doctrine, and it became necessary to the Church's existence that there should be a duly accredited channel of the tradition. The claim of Apostolic succession in the episcopate and the creed were the outcome. When Constantine gave the Church Imperial standing, the bitterness of the contest was vastly increased. Heresy became criminal. In the reign of Theodosius II. (382) it was made a capital offence. The effect is seen to this day in the common dread of the epithet even among Protestants.

II. *SKETCH OF THE HISTORY OF HERESY.*—1. Its rise in Apostolic times.²—Almost from the very beginning of the Christian faith divergences of belief arose. These were more serious than the temporary partyism that sprang from attachment to favourite leaders (1 Co 1¹²). They represent real differences in the point of view from which the new faith was apprehended. Some of the ancient writers³ place Jewish sects and Greek schools among Christian heresies. This error points to the fact that the dangers of division arose mainly from influences emanating from these two quarters. Many of the early converts found difficulty in detaching themselves from their inherited Judaism,⁴ while Græco-Roman converts naturally clung to the ideas connected with those religious aspirations which had found fulfilment in the Christian message. Thus, while Judaism threatened to reabsorb Christianity and obliterate its distinctiveness by requiring conformity with its legal and ceremonial forms and by interpreting its richer religious spirit in the terms of an abstract monotheism, the Greek spirit threatened to engulf the faith in a speculative philosophy. From the outset Jesus Himself was the theme of central interest. The conservative, unprogressive Jewish believers would have made Him a mere man; the speculative Greek would have made Him no man in reality but a God. The former tendency produced the party later known as Ebionites, the latter the so-called Docetæ who held that Jesus' manhood was only seeming. Ebionism (q.v.) is the antecedent of the later non-speculative Adoptionism (q.v.). Docetism (q.v.) appears in varying forms in all mystical speculative Christology.

It is the second of these that chiefly alarms the NT writers.⁵ The danger was increased through the combination of Oriental forms of imagery with Greek Christian thought. The attractive profession of a secret knowledge of the unseen world tended to connect Christ (distinguished from Jesus) with a hierarchy of heavenly beings, and make Him a cosmic force, and thus to introduce a cultus with secret mystic rites and their associated moral results of asceticism or licence.⁶ Naturally, there was also the denial of the early Christian eschatology,⁷ especially the physical resurrection. The struggle with this movement called forth a considerable portion of the NT writings. There appears to have been no organization holding these views. Like the later Gnosticism, of which this was the beginning⁸ in Christianity, it represents merely a tendency. The Nicolaitans⁹ are the only party named in the NT. They are charged with anti-

Judaism and loose morals. A guess of later writers¹ traces them to the deacon Nicolas² at Antioch. It is evident that before the end of the 1st cent. the speculative movement that produced the great Nicene controversies had already begun.

2. Heresies of the Nicene Age.—1. *ANTE-NICENE HERESY.*³—(a) *Gnosticism.*—The greater part of the Christian literature of the 2nd and 3rd centuries arose out of the effort to preserve the early Christian traditions in the face of philosophic and fantastic attempts to combine them with Greek speculation and Oriental mythology. The long lists of heretics given by the Church writers represent in many instances only variants of a common type. The term 'Gnosticism' may be allowed to stand for the whole movement that threatened the unity of the Church. For Gnosticism is not the name of a separate body of people or system of doctrines, but rather a trend of thought and practice. Attempted classifications of the phenomena of Gnosticism are unsatisfactory. They are too variegated and complex. Syncretism in religion was a characteristic of the times. The advent of the Christian faith gave fresh inspiration to the hope of attaining to a final and perfect knowledge of all being. Christianity came as faith (*pistis*); it must be elevated into knowledge (*gnosis*). The prevailing Neo-Platonism of Alexandria, shot through with Oriental imagery, was the instrument for the accomplishment of this task. See, further, art. GNOSTICISM.

(b) *Origenism.*—By way of reaction a Christian Gnosticism appeared. Its centre was the catechetical school at Alexandria founded by Pantænus. Here Philo the Jew had taught his Christian successors how to marry Hebrew tradition to Platonic philosophy by means of allegorism; and Clement, by a series of speculations supported by the fiction of a secret Apostolic tradition, and Origen,⁴ in a systematic way, built up a body of greatly reduced and simplified Gnostic doctrines that mostly passed for Christian. It was able to do so by maintaining the appearance of preserving the Scriptures, the common traditions, and the Rule of Faith. We are here concerned only with those features of Origenic speculation on account of which he was later regarded as a heretic.⁵ First, in his attempt to identify the Logos with the Son of God without compromising the unity and supremacy of God or denying the reality of the sonship, he postulated the real generation, in eternity, of the Son from the essence or nature of the Father. While this set the Son within the Godhead, it subordinated Him to the Father. From the standpoint of a later orthodoxy the latter was heresy. Second, in accordance with his scheme of the origin of all things from the highest being and its return thither, he seemed⁶ to affirm the ultimate restoration of all, even of devils, to God. This too became heresy. Inasmuch, however, as Origen's speculations became the source of the later doctrines of the Trinity and the two natures of Christ, we can say that the Gnostic heresy reproduced in Origen prepared the way for orthodoxy. See, further, Origen in art. ALEXANDRIAN THEOLOGY.

⁹ Rev 2¹⁸ 18.

(c) *Marcionism*.—A powerful reaction against the prevailing tendency of speculation was headed by a merchant named Marcion, who came from Pontus to Rome about A.D. 140 and propagated an anti-Jewish, apparently Pauline, ascetic form of Christianity, with such success that there sprang up hundreds of churches which maintained his views.¹ Holding that the Gospel was the revelation of the God of grace in Christ—the good God in contrast with the Jewish God of righteousness and vengeance—and carrying the Pauline antithesis of law and grace to the end, he denied that Jahweh could be identified with the God of love who suddenly revealed Himself when Jesus came to Capernaum. Hence the world created by the Jewish God was evil, and the true Christian life was the ascetical. Marriage was forbidden in his churches. In accordance with these views he framed a canon of Christian Scriptures that included, along with only ten genuinely Pauline Epistles, Luke's Gospel and Acts with the Jewish portions expurgated. Marcion's identification of Jesus with the good God gave an impulse to orthodoxy to place Him on an equality with God, and his canon of new scriptures gave an impulse to the delimitation of a true canon. Marcionism was inevitably repudiated because of its two Gods and its rejection of the OT,² but its moral vigour was great enough to perpetuate its churches in Italy, Egypt, Palestine, Arabia, Syria, and elsewhere, for a long time. See, further, art. MARCIONISM.

(d) *Monarchianism*.—Other reactions³ against speculation took the opposite direction of a return towards the simple early Christian view of Jesus and a rationalistic Judaism. As time passed, it was powerfully supported by the critico-historical school of exegesis which grew up at Antioch in opposition to the speculative, allegorizing school of Alexandria. Monarchianism and Montanism are the principal forms of this reaction. Monarchianism may be contrasted with what we may now call Catholicism by saying that in it the intellectual and moral interest of guarding the monotheistic government of the universe prevailed over that emotional-religious interest of guaranteeing the finality and perfection of salvation which became the motive of Catholic theology. Hence they fell apart in their views of Jesus Christ. Monarchianism (*q.v.*) emphasized the reality of the events of His human life (though at times tending to Docetism), yet sought to preserve the high place assigned to Him by faith, without yielding to the prevailing tendency to polytheism. Its Christology was either Adoptianist, that is: Jesus was a man elevated to Divine sonship for His obedience; or Pneumatic, *i.e.*, Jesus Christ was more than a mere man in that He was indwelt by the pre-existent Divine Spirit and thereby empowered to save. The former perpetuated Ebionism, while the latter tended toward the prevalent speculative trend. The so-called Alogi⁴ of Asia Minor, appearing about 170, are the principal of these later Adoptianists. They opposed Montanism, were interested in Jesus' human life, repudiated the Logos speculation, and, possibly for this reason, rejected the Johannine authorship of the Fourth Gospel which they ascribed to the Gnostic Cerinthus. Paul of Samosata represented a high type of Adoptianism at a later date. See, further, art. ADOPTIANISM.

The pneumatic Christology branched in two directions according as it excluded Christ from

participation in Deity or not—the modalistic and the dynamistic Christology. The death of Christ was a great difficulty for both. The Dynamists were forced to separate Him from God in His death, while the Modalists identified Him with God, and received from Tertullian¹ the nickname of Patripassianists. See, further, art. MON-ARCHIANISM and SABELLIANISM.

(e) *Montanism*.—The Kataphrygian, or Montanist, heresy, which is the second principal reaction against the speculative tendency, got its name from Montanus, a Christian prophet of Phrygia. This man sought (c. A.D. 156) to combine the Phrygian tendency to frenzy or ecstasy with the inspirationism, simplicity, and non-worldly morality of the early Church, and, at the same time, to announce the fulfilment of the promise of the Paraclete (in himself, it was charged),² the imminence of Christ's return, and the near establishment of the Kingdom at Pepuza in Phrygia. All who received the Spirit were to be prophets; they were 'perfect,' able henceforth to live sinlessly, and would follow the ascetic life. Marriage was forbidden. Yet, recognizing the impracticability of his ideals for some, he allowed a lower grade of believers, and acknowledged two grades of sin—mortal and venial.

Montanism (*q.v.*) was doubtless highly moral and spiritual in aim. It sought to correct the prevailing laxity by denying a second repentance, and the prevalent formalism by substituting for ecclesiastical or episcopal authority the authority of immediate inspiration. The conversion of Tertullian, late in life, to Montanism is an evidence of its great moral power. The movement made great headway, and only after long controversy, lasting into the 5th cent., was it pronounced³—with hesitancy and misgiving—heresy. By its rejection the churchly trend was strengthened, the episcopal power confirmed, and the formation of the canon hastened; but, in order to win, Catholicism had to adopt its idea of two classes of Christians and two grades of sins.

There are two other forms of ancient heresy that stand somewhat apart from all the types mentioned above—Paulicianism and Manichæism.

(f) *Paulicianism*.—Paul of Samosata,⁴ bp. of Antioch and high dignitary at the court of Zenobia, Queen of Palmyra, combined Adoptianism and Origenism with an anti-metaphysical view of the relation of Christ to God. Christ, born of a virgin, and inspired by the impersonal Logos, bore a personal, moral relation to God. The perfect unity of His will with God's in His earthly life of obedience became indissoluble. At the Resurrection He was raised to eternal Divine dignity. Though Paul was condemned at a synod at Antioch in 268 or 269, his views, upheld for a time by Lucian the martyr (who recanted), never died out. Disciples were numerous in Persia and Armenia. Immigrants from Armenia carried his doctrines into Thrace and Bulgaria, where under the name of Paulicians (*q.v.*) they became a root of the great mediæval revolt against the Roman Church. In Spain during the 8th cent. their views produced a tremendous controversy, in which the famous Alcuin took part. There is reason to believe that sects holding their doctrines persisted to the Reformation. 'The Key of Truth,'⁵ discovered in recent times among the Armenians at Thonrak, attests their evangelical character mixed with asceticism.

¹ The strength of Marcionism is shown in Tertullian's elaborate refutation in a work of five books—*adv. Marcionem*. Note Harnack's high estimate of Marcion (*Dogmengesch.* i. 208 ff.).

² Apelles, his greatest follower, tended to Monarchianism (*Euseb. H.E.* v. 18. 2-7).

³ Harnack, *Dogmengesch.* i. 648-754.

(g) *Manichæism*.—It is said that a certain Mesopotamian named Mani, a traveller in many lands, reached the Persian capital in the year 245 and forthwith began the propaganda of a new faith. His success was so great that he won the royal favour; but through the opposition of the Magi lost it in the reign of a later king, and was crucified in 279. His doctrines were too deeply rooted to perish, and spread rapidly. They won many followers in Italy and N. Africa (the great Augustine was for a time one of them), and ultimately developed, through the Cathari of France, Spain, and neighbouring lands, a powerful anti-Roman religious organization in alliance with a culture that promised for a time to anticipate the Renaissance and the Reformation.

At first sight, Manichæism appears as revived Gnosticism. It united to a Christian terminology a combination of Jewish, Babylonian, Zoroastrian, and Buddhist religious beliefs and cosmological speculations. It recognized two grades of adherents—*auditors*, and *elect* or *perfect*. It offered a fantastic cosmogony, a theory of cosmic redemption, and a dualistic morality. In the last particular it went further than Neo-Platonism, since it affirmed the reality and eternity of evil matter. The physical and ethical are at bottom one. The two kingdoms of Light and Darkness, ruled respectively by Satan and God, include all things and are in conflict. God creates Primeval Man (not the earthly human being) to resist Satan, but he is defeated. Though rescued by God and the angels, he has lost meanwhile some particles of light. By the mixture of these with the darkness the present evil world comes into being. The demons now create man (proper), seeking thereby to imprison and preserve a portion of the light. But God provided a means of redemption by creating a system of heavenly bodies—sun, moon, and stars—to attract the particles of light and become reservoirs of it till the redemption is complete. Jesus—not the historical—and the elect assist men. The process goes on even after death (purgatory). At the end of the world the unredeemed souls fall to the prince of darkness.

The moral earnestness underlying this imposing philosophy, its strict asceticism—marriage, lust, impure talk, animal food, and physical violence were equally forbidden—and a simple cultus were attractive to many noble souls. It was weakened by a doctrine of indulgences. The influence of Manichæism is probably found in the Euchites, Enthusiasts, Bogomils (*q.v.*), Beghards, etc., of mediæval times.¹ See, further, art. MANICHÆISM.

ii. NICENE AND POST-NICENE HERESY. —(a) *Arianism*.²—The long battle between Monarchianism, the Antiochene historico-critical school of interpretation, and rationalism, on the one side, and Catholicism, with its realistic view of salvation, its allegorical interpretation, and its metaphysic of deity, on the other side, came to a head in the bitter conflict between the Arians and Athanasians at the Council of Nice (325). The prize to be won was not only the vindication of an interpretation of Christianity, but the Imperial support. Arius gave his name to the defeated party. Athanasius (*q.v.*) became the apologist of the Council's decision.

The immediate occasion of the conflict was the affirmation, by Bp. Alexander³ of Alexandria, that

¹ For an account of Manichæism, see the seven books of Augustine, *contra Manichæos*, translated into English with introductory essay in 'Nicene and Post-Nicene Fathers,' 2nd series, by A. H. Newman, and the extensive bibliography there given.

² See art. ARIANISM in vol. i. pp. 775-786. For an elaborate, though prejudiced, account of early Arianism, see John Henry Newman, *The Arians of the Fourth Century*, Oxford, 1871. The literature on the subject is very extensive.

³ See PG xviii. 563-568.

the pre-existent Son of God had a separate hypostasis (*ὑπόστασις*), and that the sonship was by the very nature of God, and not by His will. Arius, one of his presbyters, controverted this position, and urged that *ingenerateness* constituted the essence (*οὐσία*) of the Father alone, and *generatedness* the essence of the Son, since He was truly son. This is to say that He, like all things, came from the non-existent by the creative will of the Father, and in order to the creation of the world. There was (a time) when He was not. He was God—but by impartation; only-begotten God, the Logos. Christ had a human body, but the place of the human soul was taken by the Logos. The issue¹ was whether the Son was *homousios* (*ὁμοούσιος*=of the same nature) with the Father. A compromise term (*ὁμοοιούσιος*=of similar nature), offered by the mediating Eusebians, having been rejected, and the support of Constantine having been secured, the Council anathematized Arianism as heresy. The Council went so far as to posit in the Godhead three hypostases²—Father, Son, and Holy Spirit. Christ was thus definitely transferred from the side of man to the side of God.

The controversy was not hereby settled. Not only did victory alternate for a time as the two parties strove for the political mastery, not only did the Arian view reappear in the violent controversies that rent the Eastern Church for three centuries and left it a prey to Muhammadanism, but Arianism, carried to the nations of the Goths by Ulfilas, became the faith of many German tribes. Under the Gothic rule in Italy it became the dominant faith there, and its final political overthrow in Europe was accomplished only by the Papal alliance with the Franks and the conquest of the non-Catholics. Even so, it was not extinguished, but has had its defenders down to modern times in England.

The decision at Nice, so far from settling the Arian controversy, provoked fresh controversy,³ and raised up new bodies of heretics. The numerous deniers of the *homousios*, under the leadership of such men as Aëtius, Asterius, and Eunomius, bore the general name of Anomeans. But the most noted was Apollinarius,⁴ bp. of Laodicea.

(b) *Apollinarianism*.—At first a defender of the Nicene doctrine, Apollinarius began to recoil from the common use by the Athanasians of the term *Theotokos* ('Mother of God') to describe Mary, and also from the danger of positing in Christ two persons, a human person and a Divine. Attracted by the suggestions of Gregory of Nazianzen,⁵ that the human and Divine were mingled, and of Gregory of Nyssa,⁶ that the human lost its distinctive qualities by absorption in the Divine, he sought to escape the dualism of person and will by affirming that in Christ the Logos took the place of the rational soul or spirit, and that His animal soul and body were alone human. This implicit denial of the metaphysical redemption was condemned at an Alexandrian synod⁷ in 362, and more formally at the first Council of Constantinople⁸ in 381. See, further, art. APOLLINARIANISM.

(c) *Nestorianism*.—The vindication of Christ's perfect manhood by the Antiochene theologians, such as Diodorus of Tarsus, Theodore of Mopsuestia, and the great Theodoret, aroused Nestorius, bp. of Constantinople (428), to protest

⁷ Mansi, iii. 461.

⁸ Schaaf, II. 57.

against the growing Mariolatry. He contended¹ that, since there could be no transfer of human attributes to the Divine Logos, the Divine and human substances co-existed and co-operated in Christ, but were not made one, nor were their attributes mutually shared. Mary was the mother of the man only. Cyril² of Alexandria, supported by the Bishop of Rome, affirmed the opposite view, and was supported by the Council of Ephesus (431), which formally anathematized his opponent. The Nestorian school at Edessa was broken up and the party scattered. It found an asylum in Persia, whence it spread into India, China, Tartary, and Arabia. It still continues in Kurdistan, and a branch was found on the Malabar coast. Its ritual is simpler than that of the Greek or Roman Churches, and its organization less sacerdotal. See, further, art. NESTORIANISM.

(d) *Monophysitism and Monothelitism*.—Cyril's opposition to Nestorianism was carried so far by the monk Eutyches as to say that the two natures became one at the Incarnation, that Mary was in this full sense the Mother of God, and that Christ's body was not consubstantial with man's. Another bitter party struggle arose. The attempt of the Council of Chalcedon³ to settle the dispute by adopting the formula of two natures in one person, prescribed by Pope Leo I., increased the strife. Political interests were involved. Rome and Constantinople were at loggerheads; armed encounters became common; the Byzantine Emperors became the tool of either party by turn; and in the 6th cent. the separation became permanent. Monophysite Churches were formed in Armenia, Syria, Egypt, and Abyssinia. Notwithstanding persecution and division, they have survived in the Coptic, Ethiopic, and Armenian Churches of the present.

Monothelitism (the doctrine of one will in Christ) was a corollary of Monophysitism. It became the name of a distinct party in the 7th cent., through the attempt of the Emperor Heraclius to secure the aid of his Monophysite subjects against Persia by a compromise statement: there were two natures in Christ, but only one energy.

Another bitter feud followed. Bishops of Rome were now on this side, now on that. A succession of Eastern Emperors and patriarchs upheld the new view, but it was at last formally condemned at the Sixth Ecumenical Council, held at Constantinople⁴ in 680. The dogma of two wills was announced. Monothelitism, however, long survived. See, further, artt. MONOPHYISITISM and MONOTHELITISM.

This survey of ancient heresy shows that it was no mere product of disintegrating arbitrariness, but an essential force in the development of Christianity and an indispensable influence in the formation of orthodoxy.

3. Medieval heresy.⁵—Heresy in the Middle

¹ For materials, see PG xiv. 757 ff. (*Summus in Incarn.*) and 841 ff. (Ep. iii. ad Cael.); also Mansi, iv., v., vi., vii., ix.

⁴ Schaff, ii. 72 f.

⁵ The most important original sources of information are the Epistles of Popes Innocent III. and Honorius III., and of Bernard of Clairvaux and Peter the Venerable; chronicles, partly contemporary; decrees of Councils and Synods; 'Rescrip. Heres. Lomb. ad Leonistas in Alamannia,' ed. Preger, *Abhandl. Münch. Akad.*, dritte Classe, xiii. [1875] 234 ff.; writings against heretics, as by Rainerius Sacco against the Waldenses (middle of 12th cent.); Moneta against Cathari and Waldenses; Salvus Burca, an Italian, who wrote *Supra Stella* against the 'Poor Men'; David of Augsburg and the 'Passau Anonymous' against the Waldenses. The works of Wyclif and Hus are well known. There are also many Waldensian MSS., as *La Nobla Leycon*; J. J. L. v. Dollinger, *Beiträge zur Sektengesch. des Mittelalters*, i. ii., Munich, 1890; C. U. Hahn, *Gesch. der Ketzer im Mittelalt.*, Stuttgart, 1845; W. Preger, *Gesch. der deutschen Mystik*, Leipzig, 1874; *Beiträge z. Gesch. d. Waldenser im Mittelalt.*, Munich, 1875; H. Reuter, *Gesch. d. relig. Aufst. im Mittelalt.*, i. ii., Berlin, 1875-77; E. C. Lea, *Hist. of the Inquisition of the Middle Ages*, 3 vols., New York, 1887; A. E. Newman, *Hist. of*

Ages differs from ancient heresy mainly in that its interest was ecclesiastical and practical rather than doctrinal, though doctrinal it was. That is to say, it was the protest of individualism against an established order, rather than a rival movement of thought. Consequently it took the direction of an effort to secure a higher moral life in the individual and the community, and culminated at length in the establishment of rival ecclesiastical organizations. We do not concern ourselves here, of course, with the individual modifications or denials of particular doctrines—for these have always occurred—but with spiritual movements, common to many people, that threatened the very foundations of the Catholic Church.

The growth of the Papal power in the West, the conversion of the Franks, and the conquest of Oriental Christendom by the Muhammadans had shifted the centre of gravity for Christianity to Western Europe. Medieval heresy is European. The striking thing about it is its rapid spread. It suddenly came into notice in the 11th cent., and in a short time the whole country, from Bulgaria in the East to Spain in the West, and from England in the North to the centre of Italy, was penetrated by its influence. Heretics were especially numerous in S. France, Switzerland, and N. Italy; but they were found in good numbers in Paris, Orleans, and Rheims; in Arras and Cambray of the Netherlands; in the German cities of Goslar, Köln, Trier, Metz, and Strassburg; in Hungary; in the S.E. counties of England; and in Catalonia and Aragon. The fabric of the Papal Church threatened to collapse, and only by the most violent measures, in co-operation with the secular authorities, were the heretics finally overthrown—not finally, for the Reformation revived the movement in many respects and gave it permanence. It seems plain, though clear proof is wanting, that it must have been quietly spreading among the common people and portions of the priesthood for a long time before the hierarchy, preoccupied with the politics of the Church, awoke to the danger.

The sources of medieval heresy are fairly traceable. The older heresies had not been obliterated; Arian, Paulician, and Manichean doctrines had been carried into Europe. The early non-sacerdotal type of faith had lingered. The schools of Charlemagne and the schools of the monks had stimulated the European mind to an active interest in scientific knowledge, and universities were coming into existence. The great revival of religion that marked the growth of monastic orders of the Clugniac type permeated the life of the common people increasingly, and the growing certainty of the possession of a religious and moral life that was not dependent on priestly sacraments and was fostered by the reading of the Scriptures, now becoming accessible in the vernacular, set the individual in a position of relative independence. Moreover, the Crusades, which grew out of that very revival, ultimately revolutionized economic and social conditions in Europe, shook the feudal system, emancipated mind and body from serfdom, brought in the influence of Saracenic learning by way of Spain, the Adriatic, and the Danube, and at the same time put the Greek and Latin classics into the hands of students, and thereby broke for many the spell of the Church's authority.

Passing by individual heresies, such as the Predestinarianism of Gottschalk (9th cent.), Berengarius' opposition to Transubstantiationism (11th cent.), and the scepticism of Abelard (12th cent.), we may group those heresies that produced separate religious communities as follows: (i.) Speculative

Anti-pædobaptism, Philadelphia, 1897; P. van Limborch, *Historia Inquisitionis, cui subiungitur Liber Sententiarum Inquisitionis Tholoseanae*, Amsterdam, 1662.

heresies, or heresies based on a philosophical view of God and the world. These are akin to Gnosticism and Manichaeism and, in their asceticism, to Catholicism itself. (ii.) Heresies of Mysticism and 'Enthusiasm.' These arise out of supreme regard for the ecstatic experience and prophetism, and tend to pantheism. (iii.) Anti-sacerdotal evangelical heresies, characterized, on the one side, by radical opposition to the hierarchy and the sacraments, and, on the other side, by a democratic Biblicism. (iv.) Churchly evangelical heresies, which sought to reform the Church from within without destroying its unity and continuity. These divisions are only relative in some cases, for in many instances heresies with a fundamental difference have much in common.

i. SPECULATIVE HERESIES.—The most important of these are the dualistic heresies of the Cathari and the Bogomils, and the pantheistic heresies of the Amalricians, Beghards and Beguines, and Brethren of the Free Spirit. The first named is the most important heresy of this class.

(a) *The Cathari* ('Pure').—These Puritans of the Middle Ages first attracted the attention of the Church authorities early in the 11th cent. by their activities in Aquitaine and Orleans. In the latter place ten of the canonical clergy were burned in 1012 for adherence to their views. But already the heresy was firmly rooted, and soon spread through S.E. France and adjacent regions. The city of Toulouse was their stronghold. So numerous did they become, and so prosperous was the fine form of civilization that grew up through their intelligence, industry, and noble living that the Popes found it impossible to uproot the heresy except by summoning the neighbouring princes to a military crusade against these domains, which left the whole country of the Albigensis a smoking ruin (1229).

The Cathari (also known as Albigensians, Poplicani or Publicani, Patarins, and Bougri or Bulgari) were divided into Albanenses (Albi in France), or absolute dualists, and Concorricci (Concorrezzo in Italy), or relative dualists. The former were more numerous. They represented the influence of Manichaeism mediated through the Paulicians of Thrace and Bulgaria and the Arabian and Jewish philosophy that spread into France through Spain and Italy. There was also a reaction against the Church's degraded state. Catharism was an attempt to naturalize in Europe Oriental dualistic philosophy and strict asceticism joined to a ritual and organization that offered a contrast to the Roman establishment and a substitute for it. Its high morality and its power to satisfy the spiritual longings to which the Catholic system itself ministered were what made it so dangerous to the Church's supremacy and demanded the sternest measures for its suppression. The Cathari traced the origin of matter and spirit to two opposed beings (the Concorricci regarded Satan as a subordinate being, permitted to create), rejected those Scriptures that presented a favourable view of matter, held a fantastic view of the origin of the human race, of the Fall, and the redemption, and a docetic view of Jesus. The Holy Spirit was threefold—*sanctus*, *paracletus*, and *principalis*. Those in whom the Spiritus Principalis dwelt were the 'perfect' and sinless. The lower grade of Christians were simply *credentes*. The strictest asceticism was required of the former—prohibition of marriage, animal food, use of physical force, etc. As to 'last things,' they held that at death there was no resurrection, but a transmigration.

¹ Cf. Ital. *Gazarro*, Germ. *Ketzer*. The principal contemporary sources are: Moneta, *adv. Cath.*, at *Wald.*; Rainerius Sacco, *Summa* (ed. Martene and Durand, *Theaur. nov. auct.* v., Paris, 1717); Limborch, *Lib. Sent.*; Documents in Dollinger, *Seitridge*, etc., II.; Salvus Burca, *Supra Stella*.

It was the Catharist rival ecclesiastical and ceremonial system that especially drew the anathemas of the Church. To them the Roman system seemed to be of the devil. For the Catholic priesthood they substituted the 'perfect' in four grades—bishop, *filius major*, *filius minor*, and deacon. Ordination was by the bishop. In place of the seven sacraments were four others: the *consolamentum*, for adults only, consisting of a ceremonial laying on of hands through which the Spirit was given. Thereby the subject was 'hereticated.' This was for the 'perfect,' and its validity depended on the purity of the administrator. By an arrangement known as *convenencia* the *credentes* postponed the *consolamentum* till near death. On receiving it the *endura* had to be sustained—a smothering or stabbing that might produce death. In the ceremony named *melioramentum* a *credens*, kneeling, received the blessing of the 'perfect.' They observed the blessing of bread at the daily meal, but denied transubstantiation. They practised ordination, but refused an oath. Their lives were blameless, and they were indomitable in enduring persecution. They managed to exist until the 14th century. See, further, art. ALBIGENSES.

(b) *The Bogomils* ('Friends of God') were a sect among the Slavs of Thrace and adjoining lands, also of Paulician origin, with a cosmology and a ceremonial system like the Catharist, but less developed. They held a view of the Trinity similar to the Sabellian, repudiated image-worship, used a baptism as an initiatory ceremony, but spiritualized the Supper, rejected parts of the OT, and employed allegorical interpretation. The Emperor Alexius Comnenus (1081–1118) secured, by a treacherous profession of conversion, a knowledge of their practices and their haunts, and then massacred them. They survived for some time in the region of Philippopolis. See, further, art. BOGOMILS.

(c) *The Amalricians* were the followers of Amalric, a professor of the University of Paris, who was condemned for heresy in 1204. They held a speculative view of the world's history, dividing it into three stages: the incarnation of God in Abraham, the incarnation of God in Mary, and, finally, the age of the Spirit beginning with the incarnation of God in the Amalricians. External ordinances were then to be annulled. The resurrection, heaven, and hell were spiritualized. The *Beghards* and *Beguines* were pious brotherhoods of men and women (said to have been first instituted by a priest named Beguë), who gave themselves to prayer and ministry to the needy. They never intended to separate from the Church, but represent the growing spirit of lay piety. They gravitated towards pantheism. They flourished in the 13th cent. in many parts of Europe, but especially in the Netherlands. The *Brethren of the Free Spirit* (q.v.) were similar, and became numerous a little later, lasting into the 18th century.

ii. HERESIES OF MYSTICISM AND ENTHUSIASM.—The conflict between the Papacy and the Empire from the 10th cent. onwards, the degradation of ecclesiastical religion and morals, the apparently hopeless brutality of the times, and the long and bloody wars of the Crusades, with the inevitable economic and social confusion that followed, produced a wide-spread feeling of hopelessness, which took the form of a longing for retirement from the world, on the one hand, and an expectation of the immediate end of the present order of things, on the other. The former led to the cultivation of mystic piety and a rapid increase of monastic orders, while the latter issued in the formation of sects which cherished millenarian expectations and cultivated the gift of prophecy.

Individualism, which is the root of heresy, is of

the essence of these tendencies. Either, if widespread, would threaten existing political and ecclesiastical organizations. The Church was able to find a place for Mysticism within the established order—and, indeed, the impossibility of a universal adoption of the mystic habit favoured the dependence of the masses on the Church—but the communion-forming power of Enthusiasm and its thorough radicalism rendered it uncontrollable and demanded its suppression.

The Mystics remained in the Church; and Bernard, the great mystic of Clairvaux, was one of the bitterest foes of the heretics. Nevertheless, the great German mystics—Eckart († 1327), John Tauler († 1361), his pupil, Henry Suso († 1366), John Ruysbroek († 1381), and Thomas à Kempis († 1471)—undoubtedly laid the foundation of much of that successful outbreak of heresy which we call Protestantism (cf. MYSTICISM [Christian]).

Among the 'Enthusiastic' bodies two are especially worthy of mention, the *Joachimites* and the *Spiritual Franciscans*. The first were the followers of Joachim of Floris (1145–1202), a Sicilian, who developed an anti-Papal apocalypticism which greatly stimulated the production of this type of literature, and disseminated chiliastic expectations widely among the common people. He viewed the history of the world as divided into three periods—the epoch of the Father reaching to Christ, the epoch of the Son reaching to 1260, and the epoch of the Spirit thence to follow. The overthrow of the Catholic Church and the Empire was soon to occur, and the new age to begin. These revolutionary ideas appealed powerfully to the restless spirit of the times, and remained unextinguished at the Reformation. They revived in the teaching of Thomas Münzer, Melchior Hoffmann, and Nicholas Storch; they were represented in a wing of the powerful Anabaptist movement, and helped to produce the Peasants' War and the Münster uproar.

The so-called Spiritual Franciscans appear in the middle of the 13th cent. as a protest against the Papal secularization of the Franciscan order of monks. The influence of Joachim is seen in the 'Everlasting Gospel' which was edited by Gherardo, a professor of the University of Paris, and consists of Joachim's prophecies, with annotations and additions. They are strongly anti-Papal. Gherardo was imprisoned, and the Spirituals were severely persecuted through the Inquisition. There is no doubt that they deeply influenced Wyclif, Hus, the Taborites, and the Anabaptists. See, further, artt. ENTHUSIASTS (Religious) and MYSTICISM.

iii. THE ANTI-SACERDOTAL EVANGELICALS.—Differing from both of the foregoing, though like them in their simple democratic character, was the anti-pædobaptist heresy which named Peter de Bruys and Henry of Lausanne among its chief leaders. Its beginnings are found as far back as the 4th cent.,¹ when Arius in Pontus, Jovinian in Milan, and Vigilantius in Southern Gaul vigorously opposed the growing hierarchical tendencies, asceticism, and paganized ritual of the Church. Despite persecution, the followers of the last two seem to have succeeded in maintaining themselves for centuries in the deep Alpine valleys. The reforming movement of Claude² of Turin perhaps helped them. In the stirring times of the 11th and 12th centuries, when the Clugniac revival was affecting so mightily the religious life of Southern France and Northern Italy, these Evangelicals became aggressive, and grew in numbers greatly.

¹ Epiph. *Har.* lxxv.; C. W. F. Walch, *Hist. d. Ketz.*, Leipzig, 1762–1785, iii. 321 f., 635 f.; Jerome, *adv. Jovin.*, and *adv. Vigil.*, [PL xliii. 321–368]; W. S. Oilly, *Life and Times of Vigilantius*, London, 1844; see 'Nic. and Post-Nic. Fathers,' 2nd series, vi., tr. and introd. by A. H. Newman.

² See Lit. on WALDENSES.

Peter¹ was formerly a priest. His active career lasted from 1104 to 1124. Henry¹ was a monk, coming later (1116–48). The former was burnt to death; the latter was imprisoned, but seems to have escaped. Their work consisted of an attempt to restore the democratic simplicity and pure morality of primitive Christianity by reiterating the teaching of the NT, especially of the Gospels. They laid small stress on the OT. Their great opponent, Peter the Venerable, charges them with opposing the baptism of infants, the erection of holy temples, veneration of crosses, transubstantiation, and offerings and prayers for the dead. On the positive side this means emphasis on personal faith, spirituality, a rational view of things, simplicity, immediacy of human relation with God, and the all-importance of the present life for final destiny.

Contemporary² with them was Tanchelm, who led (1115–46) a similar movement in the Rhenish provinces, and Eudo de Stella († 1147) of Brittany. Their work was more limited in extent. Extremely important was the reform instituted by Arnold³ of Brescia. He fought the secularization of the Church, and sought to simplify and purify the lives of the clergy and the monks, to separate them from secular concerns, and to make them dependent on popular contributions. After a career of great success he was handed over by the Emperor Barbarossa to Pope Alexander III. and hanged. The Arnoldists and the Humiliati, or 'Poor Men' of Lombardy,⁴ strong anti-sacerdotalists, were to some extent fruits of his work. We find them as late as the 14th century.

The Waldenses.—The Waldenses⁵ were the most influential of the mediæval heretical bodies, and have received the most attention from students of history. There is some uncertainty as to the origin of the name. Advocates of a very early, perhaps Apostolic, source of the movement derive it from the character of the country, the valley region (*Vaux*, *Vallée*, *Val*) of the Alps where they first appear; they are often connected with the reformatory work of Claude, bp. of Turin⁶ (9th cent.); but it is altogether probable that the name arose from the work of Peter Waldo. He was a wealthy Lyonesse merchant, who came under the influence of the deep religious movement that affected France in the 12th cent., and, stimulated by the familiarity with the NT among dissenters, devoted his wealth to the procuring of translations of the Scriptures into the vernacular, and their circulation among the common people. It was thus at the first a layman's propaganda, but with no thought of separating from the Catholic Church. Ere long these advocates of Bible-reading found themselves opposed by the Church officials; and, when two Popes (Alexander III. [1179] and Lucius III. [1183]) in succession refused their petition for the right to teach and preach, and even excommunicated them, they were driven into opposition. Their zeal surmounted all obstacles, and their messengers were soon found in the whole of Central and Western Europe.

They adopted the ideal of poverty, at that time regarded as the chief mark of religiousness, and became known for a time as the 'Poor Men of Lyons.' Their spread into Italy brought them into contact with the more radical body of the 'Poor

Men of Lombardy,' with whom they were able to come to partial agreement (1217). In that country there were similar bodies known as Runcarians¹ (from John Ronco). The Waldensians of France held for a time to the Catholic view of the saving value of Baptism and the Supper, and believed in transubstantiation; but, as their cause prospered and greater opposition was met with, they drew nearer to the modern 'Evangelical' position. By the middle of the 13th cent. they had become directly opposed to sacerdotalism and ecclesiastical morality. Their pure lives attracted attention, and even became a mark of heresy. They repudiated the Church's miracles, festivals, prayers for the dead, intercession of 'saints,' and doctrine of Purgatory, and eschewed its public gatherings. They also refused oaths. Though, like the Cathari, they retained a distinction between the 'perfect' and 'disciples,' in nearly all respects they seem to have accepted at length the general views of the Petrobruscians and Henricians.

They developed a strong organization and propaganda, resembling the Franciscan, that had immense success. Their itinerant preachers found access to the numerous artisans' guilds in the cities and towns of Germany, and succeeded in imparting a deep religious feeling to the new democratic social and economic movement which overspread Central Europe. The Inquisition was on their track, but they showed great skill in evading its attacks, at times outwardly conforming. The Waldensian heresy could not be extirpated. It took a radical form in Austria, Bohemia, and Moravia, and had a large share in producing Hussitism and Anabaptism on the Continent, and Wyclifianism in England. The vast circulation that they gave to the Bible must have been one of the chief causes of the Reformation. As a distinct body they exist in considerable numbers in Italy at the present time. See, further, art. WALDENSES.

iv. **CHURCHLY EVANGELICAL HERESIES.**—Deeply influenced by the heresies just described are those which grew out of the recognition of the Church's corruptions and the imperative need of a moral and religious reform, but, through a realism in philosophy or an inability to admit a non-churchly Christianity, strove against separatism. The chief instances are the Wyclifian reform in England and the Hussite in Bohemia. Both of these had a political bearing, for they owed much of their vigour to the national spirit which had grown up in those countries in opposition to Papal claims or to alien authorities. Of these the Wyclifian reform is the earlier, and to some extent also the source of the Hussite, but the latter more deeply stirred the ecclesiastical world.

(a) *Wyclifianism.*²—The old English national feeling, subjected for a time to the Norman power, revived, and by a blending of the interests of the yeomanry and the nobility was able to assert itself powerfully against both King and Pope in the times of Magna Charta. Quarrels with the Pope over rights in Scotland, taxation of the clergy by royal authority, anger at the dominant influence of the French kings over the Popes at Avignon, the war with France, and the enactment of the statutes of *Provisors* and *Præmunire* to prevent the Popes from deriving a revenue from England—all these tended to sharpen the national antipathy to the Papacy. The reforming work of Robert

Grosseteste, bishop of Lincoln, who sought to purify the clergy and to encourage preaching by the mendicant monks, Langland's *Piers Plowman*, and Chaucer's *Canterbury Tales* show the manner in which the common people were becoming contemptuous of a dissolute clergy and in sympathy with a simpler form of religious life than was established. At this time (reign of Edward III.) John Wyclif (q.v.), professor at Oxford University, began a series of sharp attacks upon the Papal claims until he developed a view which regarded the Pope as the Antichrist foretold in the Apocalypse, advocated a kind of Presbyterian system of government for the Church, and repudiated the monastic orders. He sought to instruct the people by extensive writing in Latin and English, by translating the Bible into English (1380), and by sending out his 'poor priests' (cf. the Waldenses) two by two throughout the land, circulating his Bible and preaching. The sentiment of the country, the upward movement of the English peasantry at the time, and the access to the working men's guilds obtained by his preachers gave wide success to the propaganda. Doubtless at this time there was laid the foundation of English Protestantism, especially Puritanism. Wyclif was attacked by the ecclesiastical authorities, but up to the end of the reign of Edward the political authorities protected him. The accession of the weak Richard II. left him without support. He was driven from Oxford and retired to the parish of Lutterworth in Yorkshire, where he died in 1384.

While Wyclif's realism kept him in the Catholic Church, it also led him to a rigid predestinationism in theology which annulled the Church's prerogative in salvation. This led him in the direction of a doctrine of justification by faith, though it was never elaborated by him as excluding the necessity of good works. He held to baptismal regeneration, but did not exclude unbaptized infants from salvation. He rejected transubstantiation, and in the closing years of life apparently rejected purgatory.³ The Council of Constance in 1428 pronounced him a heretic, and had his body exhumed and burned, and the ashes thrown into the Severn.

Wyclifianism blended with the work of the Lollards from the Continent and passed into English life as a permanent influence. It became an element in the great struggle by the peasants for social betterment. During the reign of the House of Lancaster, the Church was able to persuade the authorities partially to suppress it. The first English Act of Parliament (*de Comburendo Heretico*) sentencing heretics to death by burning was passed in 1401, and the death of a priest, William Sautre, for heresy was followed by the burning of many others. During the Wars of the Roses the religious movement was mostly overlooked, but it worked silently until it broke out again in the Reformation.

(b) *Hussitism.*⁴—The Bohemian people were Slavs by race, and were converted to the faith of the Greek Church. Hence, when they came under the Empire and the Roman Church, they retained some religious and political antipathy to the established condition of things. The doctrines of the Bogomils and of the Waldenses were hospitably received in many places. Through the influence of men like Conrad of Waldhausen, Militsch of Kremsier, Mathias of Jagow, and Thomas of

Stitny, both the learned and the masses became roused to the demand for a national-religious reform. The University of Prague became the stronghold of opposition to the Papacy. Large numbers of English students were there. John Hus and Jerome of Prague had imbibed Wyclif's ideas. When, as a result of disputes, the German students abandoned Prague in 1409, the Wyclif-Bohemian influence became supreme.

John Hus (*q.v.*) became rector in 1403, and, with the aid of Jerome and the support of King Wenceslaus, attacked the Roman clergy. After the failure of other attempts to suppress the revolt, the Pope proclaimed a crusade against Bohemia. Hus was excommunicated in 1413 and cited to appear before the Council of Constance. Notwithstanding that he came under the safe-conduct of the Emperor Sigismund, he was imprisoned, and, after some months, was burned for heresy in July 1415. Shortly after Jerome suffered the same death.

Hus followed Wyclif in his doctrine of predestination and the view of Christ's sole headship of the Church, but he was less thorough, and held to transubstantiation. His nationalism was the chief cause of his execution. After his death the Bohemian and Moravian people were roused to fury against priestism. Under John Zizka and Nicholas of Hussinecz as leaders they assembled on Mount Tabor (whence the name Taborites), and manifested their democratic spirit by claiming the communion for the people in the Cup (whence the name 'Calixtines,' from *calix*) as well as in the bread. Military success, at first, was followed later by a division into two parties—the Calixtines, who sought to remain in the Roman Church while claiming the Cup for the laity; and the Taborites, who followed the Waldenses in their hostility to the Roman Church. The latter founded a theocracy and gravitated to Millenarianism, but after a long struggle they were conquered in 1453. Many of those who survived united with the Evangelicals of a peaceable, somewhat Pietist, type known as the Bohemian Brethren, *Unitas Fratrum*, and by other names. These attached themselves to the Reformation. They became blended with a similar body of Moravians, known to history as the Moravian Brethren (*q.v.*), and through them have persisted to the present day.

The story of mediæval heresy shows that the heretics were repressed but not destroyed. The Protestant Reformation sprang largely out of these movements of the spirit of dissent, and was their natural and inevitable fruit. The positions of the various Protestant bodies, including the Anabaptists, show the varying degrees in which the 'heretical' spirit found access to European spiritual life.

The story of Christian heresy properly closes with the Reformation. From the Catholic point of view, Protestantism is identical with heresy. And correctly so; for Protestantism stands for the prerogative of the individual. This is the root of all 'heresy.' But the absurdity of designating the whole of the most powerful portion of Christendom heretics in a derogatory sense is too evident to need proof. It is true that from the point of view of the Protestant confessional Churches, as well as of the Catholic Church, the Anabaptists (*q.v.*) were heretics, and were so treated. Yet they, like the mediæval dissenters, were simply radical Protestants. It is true, also, that from time to time individual thinkers who have disputed the Protestant creeds have been adjudged heretics by courts of their respective communions, but in this there is no thought that the so-called heretic has been excluded from salvation and the fellowship of the true invisible Church. The charge of heresy is rapidly becoming meaningless.

LITERATURE.—I. ANCIENT.—Justin, *Synagma*, c. 147 (lost); Irenæus, *adv. Hær.* (PG vii.), c. 185; Hippolytus, *Synagma* ('Refutation of All Heresies') (PG xvi. c. 189, and *Philosophumena* (PG xvi.), later; Tertullian, *de Præscr. adv. Hær.*, and works against Praxeas, Marcion, etc. (PL II.), early years of 3rd cent.; Epiphanius, *adv. Hær.*, largest ancient work on the subject (lost), latter part of 4th cent.; Philastrius, *de Hær.* (PL xii.), c. 387; Vincentius of Lerins (PL I.), about same time; Theodoret, *Compend. Hæret. Fabularum* (PG lxxxii.), 452; Leontius of Byzantium (PG lxxxvi.), and Isidorus of Hispala (PL lxxxi.), both 6th century. Nearly all the early ecclesiastical writers dealt with the subject at times.

GEORGE CROSS.

HERESY (Jewish).—The conception of heresy has always been vague in the Synagogue; for freedom of thought, though often denied by fanatics, has been a recurrent characteristic of Judaism. Conduct, moreover, is easier to observe and judge than opinion; and, though, under stress of pressing controversies, attempts were made to define the opinions which would exclude men from sharing the communal rights, it may be said that for long periods conformity to practice, both ritual and moral, would be held to cover a good deal of eccentricity in theory. In recent times there has been so great a modification and relaxation in conduct on ritual matters that the tendency is growing to judge of men's fidelity to Judaism by tests of faith. But, as there exists no central or even local authority to apply or enforce such tests, the question is decided by public opinion rather than by expert or technical judgment. Public opinion is always apt to move spasmodically; it soon becomes accustomed to theories which, when first enunciated, it abhors; and in the result the Synagogue may be said to be free, on the one hand, from rigidity, and, on the other, destitute of clarity as to the ideas on which a charge of heresy could be based.

Historically considered, the problem of heresy in Judaism may be said to have been for the most part dependent on contemporary exigencies. When certain fundamental dogmas or practices were being assailed, the Synagogue would feel called upon to re-assert them; and, in order to emphasize this re-assertion, it might declare that the doubters 'had no part in the world to come.' When in the 1st cent. the Sadducees disputed the doctrine of the resurrection, the Pharisees would declare the doctrine a fundamental. So in the 19th cent., when the German reformer denied the validity of the traditional law, the orthodox would demand allegiance to its every word as the mark of the Jew. In between, when mysticism threatened to become antinomian in the 18th cent., or when, in the 17th cent., the Messianic claims of a popular hero like Sabbatai Zebi well-nigh shook the Jewish world to its foundations and gave rise to all sorts of vagaries in act and thought; or when, in the 13th cent., as a result of the great work of Maimonides, the Hellenizing of Jewish thought under scholastic influences seemed likely to undermine a simple acceptance of the Scriptures; or when, earlier still, in the 7th cent., under Anan ben David, such movements as Karaism proposed a new *halakha* (or practical code of life) on the basis of a deliberate departure from the current (Gaonic) theories of exegesis—in such cases controversies more or less virulent broke out, and the litigants

would freely hurl at each other charges of heresy and threats of excommunication. The efficacy of the charge would be determined only after considerable discussion, and the practical good sense of the community would in the end prevail to soften asperities and so enlarge the place of the tent as to find room for all, if not with cordiality, at least without churlishness.

In the earlier period it is characteristic that the Synagogue never naturalized the word 'heresy.' It readily admitted, to denote 'heretic,' the Greek word *Epicurean* 'επίκουρος', e.g. Mishn. *Aboth*, ii. 14; but, though Josephus freely employs *αἵρεσις*, he uses it to mean 'sect' or 'party,' and applies it equally to the Pharisees, Sadducees, and Essenes. It may be, however, that it was Greek influence that determined the selection of the commonest Hebrew word for 'heresy,' *minutah*. The Heb. word *min* (מִן) signifies in Biblical Hebrew 'kind' or 'species'; the LXX renders *min* by γένος in Gn 1¹. The latter word is applied by Josephus (*Ant.* XIII. x. 6) to the Sadducees (τὸ τῶν Σαδδουκαίων γένος). Further, in Christian-Palestinian Aramaic, *min* corresponds to ܡܝܢ (cf. Schürer, *ThLZ*, 8th March 1899, and Bacher, *REJ* xxxviii. [1899] 45). This equivalence may have led to the predominance of the word *min* for 'heretic' in general. Just as the word 'people' (עַם) came to mean 'non-Jew,' so *min* came to signify 'heretic.' If Bacher's view be accepted, the *min* was originally the Sadducee (regarded from the Pharisaic standpoint). There has been much controversy as to the connotation of the term in the Rabbinic records. The general trend of opinion is in favour of the conclusion that, whereas the term *min* sometimes refers in those records to sectarians in general, and to the Gnostics in particular, yet it often describes specifically the Judeo-Christians (for particulars as to the controversy, see M. Friedländer, who, in his *Der vorchristliche jüdische Gnosticismus* [Göttingen, 1898], identifies the *min* with the Gnostic; and Travers Herford, who, in his *Christianity in Talmud and Midrash* [London, 1903], maintains that under the term *min* the Jewish Christians are at all events included). One thing is quite certain: the *min* was one who was, or who professed to be, a Jew; the Synagogue's concern was to deal with its own adherents, not to assail those who belonged to other religious systems. The liturgical paragraph in the Eighteen Benedictions refers not to Gentile but to Jewish Christianity; and, when the latter ceased to be a menace to the unity of the Synagogue, the formula was modified to apply to other varieties of sectarians within the Synagogue. Probably this is true of all religions. Christian law does not seem to have treated the Jew as a heretic; the Inquisition, for instance, applied its tests of heresy rather to those who, after accepting Christianity, were suspected of relapse to Judaism. So, too, in England, the Jews in the mediæval period were not subject to the heresy laws, though a Christian convert to Judaism was so subject (cf. F. W. Maitland, *Roman Canon Law in the Church of Eng.*, London, 1898, p. 158; H. S. Q. Henriques, *The Jews and the Eng. Law*, Oxford, 1908, p. 66). No doubt a Jew who publicly assailed the dogmas of the Church was liable to the laws against blasphemy (such a charge is recorded in Bristol in the year 1589; see Abrahams, *Transactions of the Jewish Historical Society of England*, iv. [1903] 99). At all events, the early Synagogue made no attack on Gentile Christianity; it merely tried to eliminate from its midst the Judeo-Christians who, in the language of Jerome (*Ep.* 89 *ad August.*), claiming to be both Jews and Christians, were neither.

Besides the two terms *Epicurean* and *min*, the Rabbis made use of another word for 'heretic.' This was the word *kôphér*, 'denier.' The full expression is 'denier of the root,' i.e. of the fundamental principles (שורש הדת, *Sifrâ*, 111b; *Baba bathra*, 16b, etc.). What the fundamental principles are is never defined; in one famous passage the definition of Judaism is negative, and any one who rejects idolatry is called a Jew (*Mcgillah*, 13a). The term *kôphér* is vaguely applied. Sometimes the Rabbis ascribed sin to the lack of belief in the fundamentals. Thus Adam's sin was preceded by his denial of the root principle, the belief in God's omnipresence (*Sanh.* 38b). Cain, again, before he slew his brother, had reached the state of mind in which he asserted that 'there is no judgment, no judge, no reward, no punishment' (*Targ. Jer.* on Gn 4⁸; cf. Schechter, *Studies in Judaism*, 1st series, London, 1896, p. 189). There is, however, no definition in the older sources of these various terms for 'heresy.' The *locus classicus* is the Mishn. *Sanh.* x. 1 (to which, be it remarked, the *Tosefta Sanh.* xii. xiii. adds further details). In the quoted Mishna certain classes are pronounced beyond the pale of future bliss: 'These have no part in the world to come: he who asserts that there is no Resurrection of the dead, that the Law was not from heaven, and the Epicurean. R. Aqiba says: also he who reads in outside books, and he who applies incantations to wounds. Abba Saul said: also he who pronounces the Name as it is written.' Some texts make the first clause run: 'he who denies that the Scripture teaches the doctrine of Resurrection'; but the best authorities read as in our translation. The phrase 'outside books' has been variously interpreted to mean extra-canonical, Judeo-Christian, or, in general, heretical books. *Epicurean* is not defined, but in after centuries it became a term generally applied to a sceptic or unbeliever, especially where the scepticism or infidelity was associated with a frivolous attitude towards the problems of religion.

In the 12th cent., Maimonides attempted to summarize the Talmudic statement as to the terms *min*, *Epicurean*, and *kôphér* more closely. There are five classes, he says (*Code*, 'Laws on Repentance,' iii. 7-8), included under *min*: (1) he who denies God, (2) he who asserts that the world is subject to more than one power, (3) he who ascribes corporeality to God, (4) he who denies that God was the first Creator, and (5) he who worships a star as a mediator between himself and God. The *Epicurean* includes three classes: (1) he who denies prophecy, (2) he who disputes the inspiration of Moses, and (3) he who denies that God regards the doings of men (cf. *Jos. Ant.* bk. x. at the end). The *kôphér* also consist of three types: (1) he who denies the complete verbal inspiration of the Torah, (2) he who denies the tradition, and (3) he who asserts (this would point to both Christian and Muhammadan polemics) that the Law has been superseded by a new dispensation. In addition, Maimonides specifies others as not belonging to the three categories just defined. In all cases, Maimonides refers to Jews who join the various categories; for, as he plainly asserts (on the basis of the *Tosefta*, *loc. cit.*), 'the pious of the nations of the world have a share in the world to come.' It is only Jewish sectarians who are excluded by him. And against them Maimonides expresses himself elsewhere (in his Commentary on the Mishna on *Sanh.* x. 1) with uncompromising vigour. He formulated thirteen articles of faith as fundamentals (these are given in detail above, vol. iv. p. 246, where Hirschfeld points out that Maimonides had in his mind certain theories and heresies of his own

time). Maimonides then declared as a heretic whoever departed from any of these; such a one had 'gone out of the general body of Israel.'

But it may confidently be stated that no proceedings were ever instituted before a Jewish Court on the ground of refusal to accept the Maimunist articles. On the contrary, for a long time their author was himself charged with heresy (see H. Graetz, *History of the Jews*, Eng. tr., London, 1891-92, iii. ch. xvi.). More than that, from the very first there were great authorities who disputed the right of Maimonides to declare heretical the denier of even so fundamental a principle as the incorporeality of God. In his criticism of the Maimunist Code ('Laws of Repentance,' *loc. cit.*), Abraham ben David of Posquières, while himself far from denying this dogma, refused to admit that, if any one chose to interpret the Scriptural and Haggadic statements on the subject literally, he could be termed a heretic, even if he went so far as to ascribe a body to Deity. The fact that in 1656 Spinoza was excommunicated for, among other things, holding that God was 'extended' is liable to misunderstanding. The Amsterdam Synagogue was not then strong enough to be tolerant of scandal in its midst, having too recently acquired its right to exist (cf. ACOSTA, vol. i. p. 74). Even so, had Spinoza consented to conform outwardly, he would not only have been safe, but even pensioned. 'The ban against Spinoza,' as A. Wolf concludes (*Spinoza's Short Treatise*, London, 1911, Introduction, p. xlvii), was the due paid to Caesar, rather than to the God of Israel.' Half a century later, when an attempt was made in London to attack Neto on the suspicion of his Spinozist leanings, nothing came of it but a good deal of heated discussion (see M. Gaster, *History of the Ancient Synagogue of the Spanish and Portuguese Jews*, London, 1901, p. 106). Moses Mendelssohn, in his *Jerusalem*, published in Berlin in 1783, most emphatically repudiated the suggestion that the Jews under emancipation should have conferred upon them the legal power to excommunicate heretics. Not unbelief or false doctrine, he held, was punishable under the ancient Jewish régime; but only contumacious rebellion against the civil law. Various sections of the Synagogue have, however, during the past century occasionally shown themselves inclined to excommunicate reformers; but they have come to regret such action, and no longer avail themselves of this, in modern times, most ineffectual expression of disapproval. So, too, the legal disabilities of the heretic prevalent in the Middle Ages under Jewish law have nowadays little validity. These disabilities are sometimes severely expressed in the Jewish Codes (see *JE* i. 686, vi. 353).

The feeling against heresy has always been weaker than the dislike of separatism. In fact, it was maintained in the Talmud that the rule held: once a Jew always a Jew (T. B. *Sanh.* 44); the Israelite on this view could not alienate himself from the community. As noted by Kohler (*JE* vi. 353), the law (Dt 14), 'Ye shall not cut yourselves,' is interpreted by the Rabbis (*Sifré, ad loc.*) to mean, 'Ye shall not make yourselves into sections, but shall all form one united band.' The same idea goes back to Hillel (Mishn. *Aboth*, ii. 5; cf. He 10^{2a}): 'Separate not thyself from the Congregation.' Here the appeal is for participation in the communal tribulations rather than in communal beliefs (cf. Talmud, *Taanith*, 30b). A similar phrase, however, 'one who separates from the ways of the congregation,' occurs in the Tosefta (*Sanh.* xiii. 5) in a context which is occupied with questions of faith. Undoubtedly the two ideas stand close together. But in the

main the Synagogue has throughout its history been desirous of retaining within its fold those united by common ideals, experiences, and hopes rather than of driving out those whose opinions diverged from the conventions generally accepted.

LITERATURE.—To the works indicated in the article, add those given in literature of art. CRRAD (Jewish), vol. iv. p. 246.

I. ABRAMMS.

HERMESIANISM.—Hermes was the chief exponent of a movement for defending the Catholic faith by pure intellectualism, adopting the ideas of Kant, which passed over Germany during the first half of the 19th century. His system (Hermesianism) had a great vogue for a time, was condemned at Rome, and is now almost forgotten.

1. *Life of Hermes.*—Georg Hermes (= Hermannssohn) was born in 1776 at Dreyerwalde in Westphalia, of Catholic peasants. In 1788 he went to the Gymnasium of Rheine (under Franciscans), and soon became first in the school. In 1792 he entered the philosophical faculty at the University of Münster. Here he studied Kant and Fichte, and for a short time wavered in his faith. He recovered it, however, but retained a great admiration for Kant. The work of his life was to convince Kantists of the truth of Catholicism by their own weapons. In 1794 he joined the Theological Faculty, gaining a free bursar at the bishop's seminary. In 1798 he accepted a post as teacher in a Gymnasium at Münster. He was ordained priest in 1799. He now devoted himself to the study of philosophy, seeking a solid basis for the Catholic system on purely philosophical and rational lines. Besides Kant and Fichte, he was influenced at this time by Statler.¹ In 1805, Hermes published his first work, *Untersuchungen über die innere Wahrheit des Christenthums*. In 1807 he accepted the chair of Dogmatic theology at Münster. Here he elaborated his principles, wrote a number of smaller works on the relation between philosophy and theology, gathered around him a body of devoted disciples, and became known throughout Germany as a leading Catholic philosopher. In 1820 he went to Bonn and became professor of theology there. From that time till the end of his life his reputation steadily increased. Nearly the whole University of Bonn accepted his ideas with enthusiasm. The only opposition came from Seher. In 1825, Seher was forced to yield to the general feeling and left the University. Hermes had by now founded a definite school; under him Bonn became the centre of a movement which was to justify Catholicism by a solid philosophical basis and to reconcile Protestants. In 1829 he published his chief work, *Einführung in die christlich-katholische Theologie*, pt. i., which contains the philosophic introduction. This is the complete exposition of his ideas. Reusch describes it as his only original and characteristic work (*Allgemeine deutsche Biographie*, xli. [1880] 192-190). His disciples applied his principles to each branch of theology. C. A. von Drost-Hilshoff wrote a *Lehrbuch des Naturrechtes* (Bonn, 1823), on Hermesian lines; W. Esser, at Münster (*Moralphilosophie*, Münster, 1827), and P. J. Elvenich, at Breslau (*Moralphilosophie*, 2 vols., Bonn, 1830), applied his ideas to ethics. J. B. Baltzer (at Breslau) wrote a work, *Ueber die Entstehung der in neuerer Zeit im Protestantismus und im Katholicismus hervorgetretenen Gegensätze, mit bes. Rücksicht auf Hermes u. seine Gegner* (Bonn, 1833), in which he proclaims Hermes' system as the hope of reunion between Catholics and Protestants. Baltzer was the most independent of the Hermesians; later he and Elvenich became supporters of Günther. Towards the end of his life, Hermes was the most famous Catholic theologian in Germany. His school captured nearly all centres: Bonn, Köln, Trier, Münster, Breslau, Braunsberg were full of ardent Hermesians. There was some opposition. Hast at Münster, A. von Sieger at Munich, the *Aschaffenburger Kirchenzeitung*, H. Klee and C. H. Windischmann at Bonn (itself already began combating the new philosophy. But during its author's lifetime the opposition did not exceed the limits of normal discussion. His bishop (F. von Spiegel, Archbishop of Köln) was always his friend and protector, sending pacifying accounts of his views to Rome. It was not till after Hermes' death that the storm burst. He died attacked by no censure, but rather applauded almost universally, on 26th May 1831. He is buried in the cemetery at Bonn. After his death, one of his chief disciples, J. H. Achterfeldt, edited a work which Hermes had prepared under the title *Christlich-katholische Dogmatik* (2 vols. and pt. i. of vol. iii., Bonn, 1834-35).

2. *System.*—The fundamental ideas of Hermes are: (1) an adaptation of Kant (and Fichte) to Catholic dogma, (2) a purely intellectual or rational basis for faith, (3) opposition against Lamennais' traditionalism (hence the Hermesians constantly accuse their opponents of sharing Lamennais' errors). He begins with the famous 'positive doubt.' We must have the courage to doubt

¹ Benedict Statler, professor of theology at Ingolstadt (†1797), was a forerunner of Hermes in the idea of a purely intellectualist basis for theology. His *Demonstratio catholica* was condemned by the Congregation of the Index in 1780 (the decree was not published till 1796). Many of his ideas reappear in Hermes' system.

everything, even faith, till we can establish an intellectually convincing reason for it. Three questions now occur: (1) Is there any truth? (2) Is there a God, and of what nature is He? (3) Is a supernatural revelation possible, and under what conditions? Certitude of truth may be either necessary (*angethan*; this certitude he calls *Fürwahrhalten*) or freely accepted (*frei angenommen*; this is *Fürwahrnehmen*). Necessary certitude may be from sense-impressions (*Vorstellungen*)—unsafe; or from reasoning (*Verstandeswissen*)—also unsafe, because it leads to a process in *infinitem*; or from immediate necessity—this last is safe.

'We find, when we seem to know something necessarily, that our consciousness is not only that we know, but also that the known thing exists. This consciousness occurs without our voluntary co-operation; it is therefore a necessary conviction, not a freely accepted one' (*Einführung*, 184 f.).

Freely accepted certitude arrives at the same end. The practical reason tells us that we cannot obey the highest moral obligation of which we are conscious (which is the preservation of our own human dignity—*die reine Darstellung und Erhaltung der Menschenwürde*) without using all means to that end which are at our disposal. Among these means is the use of the experience of others. So practical reason would command us to accept this experience, to admit the truth of history, even if theoretic reason still had doubts. Hence both sources of certitude (*Fürwahrhalten* and *Fürwahrnehmen*) bring us to the same result. From the acceptance of the truth of history, Hermes leads to that of the historical basis of Christianity. He denies that the existence of God can be sufficiently based on practical reason (this against Kant). He seeks to establish it by theoretic reason. It is necessarily, not freely, accepted truth. He proposes the cosmological argument for God very well; he rejects the ontological, physical, and moral arguments, also that from universal consent.

In explaining the errors of which Hermes was accused, we are met by the difficulty that his followers, while admitting that these are errors, deny that he held them. Hermesians declare that what was condemned at Rome was not Hermes' teaching, but a libellous caricature of it. He himself always protested that his system did not touch any point of the Catholic faith. This he accepted entirely, in the usual sense, as does every other Catholic. He is concerned only to establish a purely philosophical basis on which the faith may be accepted. However it may be with the points urged against him by his opponents, the errors which brought about his condemnation are these: Besides his 'positive doubt' as the starting-point of all apologetic (from which it would follow that a Christian should explicitly doubt the truth of his faith, of even the existence of God, till he has proved it intellectually), the general fault found with his system is that it is a shallow and narrow rationalizing of faith. Hermes conceives revelation as made only to the intellect; faith is mere intellectual conviction. Our other faculties have no part in our acceptance of Christianity. So, if Lamennais denied reason in favour of faith imposed from without, Hermes, falling into the other extreme, debases faith in favour of natural reason. All the particular errors of which he is accused come from this root—a tendency to lower the truths of revelation towards naturalism, to minimize mysteries, to meet the rationalist half-way. Even his concept of God is said to suffer from this tendency. God in Hermesianism is not the one absolute Being who fills all, in whom all being exists, source of all reality; but merely the highest individual among many who exist apart from Him, and have power and activity independently of Him. The end of creatures is not God, but their own perfec-

tion. Sanctifying grace is no real quality, but the permanent disposition on God's part to help us. Justification is an external imputation (as with Luther). Original sin is our inherited concupiscence. There was no supernatural state of primitive innocence. The death of Christ is an atonement only in the sense that God by it makes us understand how grievous sin is. Hell exists as a threat to frighten us; God is, however, compelled to fulfil this threat, in spite of His goodness, because of His truthfulness.

3. Condemnation of Hermesianism. — When Hermes died, no fewer than thirty chairs of theology were held by his disciples. On the other hand, the opposition to his ideas grew rapidly. Windischmann, F. X. Werner, and others began to denounce them and to demand their condemnation at Rome. Archbishop von Spiegel, Hermes' protector, died in 1835. The Inquisition collected reports from a number of German theologians (on both sides); at last, on 28th Sept. 1835, Gregory XVI. published a brief, *Dum acerbissimas*, condemning Hermes' system and putting his works on the Index (Denzinger, 1618-21). A further decree of 7th Jan. 1836 added the condemnation of the later work edited by Achterfeldt. Hereupon arose a great disturbance in Catholic Germany. The Hermesians agitated against the condemnation, declaring that their master was not guilty of the errors imputed to him. Two of them, Braun and Elvenich, went to Rome in 1837 and spent a year there, vainly trying to procure a repeal. Then Hermesianism, after having been the dominant influence in German Catholic theology, was banned. The Hermesians were called upon by the bishops to signify their adherence to the Papal decision. Gradually most of them did so. But, when Pius IX. became Pope (1846), those of the school who remained hoped for a reversal of the situation. They acclaimed his brief *Qui pluribus* (9th Nov. 1846, recommending philosophy and explaining its relation to theology) as practically an adherence to Hermes' idea. There was then a certain revival of the discussion. About the same time Günther began to spread his ideas.¹ They were to a great extent founded on the same line of thought as those of Hermes; so that several of the old Hermesians attached themselves to him. Pius IX., on 25th July 1847, published a decree renewing his predecessor's condemnation of Hermes' system. This is the end of Hermesianism. The political upheaval of 1848 destroyed the last remnant of general interest in it; then came a great revival of Catholic life in Germany along quite other lines, and the whole question was forgotten. Only here and there an old disciple of the once great man was faithful to his teaching, almost in secret, remaining (like the Jansenists in France after the Revolution) as a relic of a bygone age. Achterfeldt and Braun were recalcitrant for a long time. Either the powerlessness of their cause, which made it harmless, or a dim memory of Hermes' ancient fame made their bishop treat them very leniently. The worst that ever happened to them was suspension from public offices, with leave to say Low Mass; this was removed when they offered a declaration of general adherence to Papal decrees. Achterfeldt, the last Hermesian, died in 1877. The subject has now only a historical interest.

LITERATURE.—Besides works quoted above, see W. Esser, *Denkschrift auf Georg Hermes*, Köln, 1832; K. Werner, *Gesch. der kath. Theologie*, Munich, 1866, p. 415 ff. (an admirable statement of Hermes' system). For Hermes: F. J. Elvenich, *Acta Hermesiana*, Göttingen, 1836; J. Braun and Elvenich, *Acta Romana*, Hanover and Leipzig, 1838; A. Lutterbeck, *Apologie des sogen. Hermesianismus*, Münster, 1835; Blunde and Rosenbaum, *Blätter zur Orientierung in Sachen des Hermesianismus*, Trier, 1838; H. J. Stupp, *Die letzten Hermesianer*,

ADRIAN PORTESCU.

HERMES TRISMEGISTUS.—The name of Hermes Trismegistus stands, like that of Homer, for a whole literature. But this literature is philosophical and religious, not poetical. It presents a curious phase of human thought emanating from Egypt, and might roughly be described as 'Plato according to the Egyptians.' Only roughly, indeed, for the matter is far more complex than this. Take Plato, the Stoics, Philo, Catholic Christianity, Gnosticism, Neo-Platonism, and Neo-Pythagoreanism, mix them well up together, throwing in a strong flavour of ancient Egypt, and the result of the brew will be something like Hermes Trismegistus as we have him.

1. The assumed author.—Plato in two passages (*Phileb.* 18 B; *Phædr.* 274 C) mentions an Egyptian god or divine man, named Theuth, to whom were attributed many inventions—arithmetic, algebra, geometry, astronomy, draughts, dicing, but especially the alphabet and writing—which Thamus, the then King of Thebes, is said to have condemned as being destructive to the memory, instead of an aid to it. Now, according to Cicero (*de Nat. Deor.* iii. 56), the fifth Mercury, who was the slayer of Argus, was obliged on that account to flee into Egypt, where he gave laws and letters to the Egyptians. 'Him the Egyptians called Theuth, and the first month of the year among them (September) is called by his name.' Here we find the equation Hermes=Theuth. Lactantius (*Div. Inst.* i. 6) quotes this passage of Cicero, and goes on to say that this same person founded Hermopolis, and was worshipped by the Saitæ, and, though a man, was so honoured for his learning that he received the name of *Trismegistus*,¹ adding in another place (*de Ira Dei*, 11) that Hermes Trismegistus was far older, not only than Plato, but also than Pythagoras and the famous Seven Sages. Lactantius thus accepts the antiquity of Hermes, which makes for his purpose, with the same *naïveté* as Tertullian accepts the antediluvian authorship of the Book of Enoch, which must, it would appear, have formed part of the library of Noah in the Ark.

Among early modern scholars there was the same readiness to accept Hermes at his own valuation. Vergicius puts him before Moses; Patricius makes him an elder contemporary of that legislator; Flussas Candalla is inclined to put him back as far as the time of Abraham. Isaac Casaubon, Isaac Voss, and the great Fabricius stand out as exceptions to this general credulity. Fabricius begins by intimating his own opinion that the books which went under the name of Hermes were not earlier than Homer, not to speak of Moses; and ends by acquiescing in the judgment of 'certain most learned men,' who put them down as the work of a Jew or of some half-Platonic, half-Christian author about the beginning of the 2nd cent. A.D.

One of the first results of examining these works themselves is to make us deny the equation Hermes=Theuth. Hermes is represented as the father of Tat, who appears to be the same as Theuth or Thoth. In the *Asclepius* (ch. 37), Hermes is made

¹ On the bilingual Rosetta stone, 196 B.C., *Ἡμεῖς ὁ μέγας καὶ μέγας* occurs as a rendering of the Egyptian 'Thoth the great-great' or 'twice-great' (Mahaffy, *Emp. Ptol.*, London, 1896, p. 330).

to claim that he is the grandson of the god Hermes, who was worshipped at Hermopolis. Hence this person has been called 'the younger Hermes.' Similarly the Asclepius whom he is instructing is declared to be the grandson of the inventor of medicine. On the other hand, the Hermes of the 'Holy Book' (Stob. *Ecl.* i. 928) is himself one of the greatest of deities, and the instructor of Isis and Osiris. In the *Poemander* (ch. 10), Tat claims descent from Uranus and Cronus, of whom it is said that they have already attained to the beatific vision. Asclepius, who is called in the Holy Book ὁ ἱμαβίου, or simply ἱμαβίου (Stob. *Ecl.* i. 932, 1092), is the son of Hephæstus,² not, as in Greek mythology, of Apollo, and is credited with the patronage of poetry as well as of medicine.

2. Works.—From the assumed author we now turn to his supposed works. We are told by Iamblichus, or whoever wrote the *de Mysteries* (viii. 1), that Manetho (an Egyptian priest who lived in the time of Ptolemy I.) said that Hermes wrote 36,525 books. Such a number, as Fabricius remarks, has deservedly seemed incredible to many. Especially is this the case if another statement is true, namely, that this is the precise number of years assigned by Manetho to the thirty dynasties of Egypt. Let us therefore descend at once to a somewhat lower estimate. We are told by the same Iamblichus (fl. A.D. 300), this time on the authority of an author named Seleucus, that the number of books written by Hermes was 20,000—a statement which is confirmed, or echoed, by Julius Firmicus (A.D. 340). Lactantius, whose death is placed between A.D. 325 and 330, confines himself to saying that Hermes Trismegistus wrote many books.

From Clement of Alexandria (A.D. 200) we learn that books of Hermes were associated with the Egyptian religion. He describes (*Strom.* vi. 4, p. 757, Potter) a religious procession, headed by the minstrel bearing some symbol of music. Of him it is said that he must have learnt by rote two of the books of Hermes, one of them containing hymns to the gods, and the other an *ἑκατομυρία βασιλικῶν βιβλίων*. After the minstrel comes the *ὑποκρίτης* with a horologe in his hand, and a palm, as symbols of astronomy. He must have ever on his lips the four books of Hermes which treat of this subject, dealing severally with the orderly arrangement of the fixed stars, with the conjunctions and light of the sun and moon, and with their risings. Next in order comes the sacred scribe wearing feathers on his head, and carrying in his hand a book and a ruler (*καρτὴς*), containing ink and the reed with which they write. It is his business to know what are called the hieroglyphic books, dealing with cosmography, geography, the order of the sun and moon, the five planets, the topography of Egypt, and many other things. Then follows the warder of the sacred vestments, with the cubit of justice and the libation-cup. He has to know all the educational and what are called the moschosphragistic (not *moschosphagistic*; cf. Herod. ii. 39: *τὸ σαρμασφύρον κτήνος*) books; and there are ten that relate to the worship of their gods, embracing the religion of the Egyptians, as, for instance, concerning sacrifices, firstfruits, hymns, prayers, processions, festivals, and the like. After all these comes the prophet with the water-clock visible in his bosom, who is followed by the bearers of the processional leaves. He, as being the president of the temple, learns by heart the ten books that are called hieratic, comprising the laws and the gods and the whole education of the priests; for the prophet among the Egyptians is also master of the distribution of the revenues. The quite necessary books, then, of Hermes are

² In Egyptian, Imhotep, son of Ptah.

two and forty,¹ thirty-six of which, containing the whole philosophy of the Egyptians, are learnt off by the before-mentioned persons, and the remaining six by the shrine-bearers. These six are medical, and have to do with the bodily constitution, diseases, organs, medicines, ophthalmology, and gynaecology.

These books of Hermes, which were connected with the religion of the Egyptians, have been mentioned here in order to be excluded. Such books would naturally be purely Egyptian in both language and thought, whereas the books which have come down to us under the name of Hermes—those, at all events, which we are about to consider—are Greek in language and mainly indebted to Plato for their thought. Iamblichus, indeed, states that the works of Hermes were translated from the Egyptian by men acquainted with Greek philosophy, but the works now in question present every appearance of having been composed in Greek. Patricius, starting from the assumption of the hoary antiquity of Hermes, drew the conclusion that all the philosophical systems of the Greeks, the mystical mathematics of the Pythagoreans, the ethics and theology of Plato, the physics of Aristotle and the Stoics, were derived from the works of Hermes, whence he advocated the substitution of these works in the public schools and monasteries for the philosophy of Aristotle, which was far less Christian than they. This contention is logical enough on his premisses. For certainly, if the Hermetic writings are not derived from Greek philosophy, Greek philosophy must be derived from them.

The earliest author who shows acquaintance with our Hermes is Lactantius. He has frequent allusions to and quotations from Hermes Trismegistus, some of which we are able to verify by comparison with the extant works.² Plutarch (fl. A.D. 80) has a hearsay reference to the books of Hermes,³ but there is nothing to show that they are those known to us.

The most important of the works attributed to Hermes Trismegistus is the *Poemander* (ὁ Ποιμάνδρης). The name looks as if it meant 'Shepherd of men'—a derivation which is indicated by the writer (xiii. 19), and which has led to perhaps fanciful surmises of some connexion with the *Shepherd* (Ποιμήν) of Hermes. It has been thought, on the other hand, that the word is really Egyptian, though Fabricius points out that Ποιμάνδρης occurs as the proper name of a mythological person in Plut. *Mor.* 299 C, D, *Græca Quæst.* 37. In the work before us, ὁ Ποιμάνδρης is the name of a mysterious being, characterized as ὁ τῆς αἰθερίας νοῦς, who figures as the guide and instructor of Hermes. He stands for the higher mind of Hermes himself, in accordance with what Plato says in the *Timæus* (90 A), that a man's *δαίμων* is his own νοῦς. The *Poemander* gives his name to the whole work, but he is mentioned only in the first and in the thirteenth out of the fourteen chapters which constituted the work as published by Marsilius Ficinus. Outside the first chapter, Hermes is rather the instructor of others. We are given to understand that, on the basis supplied by the *Poemander*, Hermes is competent to arrive at all truth for himself (*Poem.* xiii. 15).

The *Poemander* was first given to the modern world in a Latin translation made by Ficinus from a Greek MS, which was brought from Macedonia to Florence by a monk named Leonhardus of Pistoia, and put into the hands of Cosmo de Medici. According to the statement of Fabricius, it was first published

at Venice in 1483,¹ when it appeared along with other small works translated by Ficinus. Its first title was *Mercurii Trismegisti Liber de Potestate et Sapientia Dei*. This Latin version was often reprinted at Venice, Paris, Leyden, and Basel; and it still appears at the bottom of the page in Parthey's edition, after having been touched up by successive editors—Flussas, Patricius, and Parthey himself. Vergilius is presumably alluding to the work of Ficinus when he says that a Latin translation, not very carefully done, was published at Venice by Aldus, from which an Italian translation was afterwards made, and printed at Florence. A French translation was made by Gabriel Præteolus (du Préau), Paris, 1557; another by Flussas, Bordeaux, 1579; and a recent one by Louis Ménard, Paris, 1886. The work was translated into Dutch, from the Latin of Patricius, by Nicolaus van Ravenstein, Amsterdam, 1643. It was translated into German by one Alethophilus, Hamburg, 1706; afterwards, by Dieterich Tiedemann, Berlin and Stettin, 1781. In English we have had, firstly, *The Divine Pymander of Hermes Trismegistus*, translated into English by Everard, London, 1650, professedly from the Arabic—a work which has been reprinted in many quarters, and in particular in the *Journal of Speculative Philosophy*, July 1866; secondly, *The Theological and Philosophical Works of Hermes Trismegistus, Christian Neoplatonist*, by J. D. Chambers, Edinburgh, 1882; thirdly, the large work, in 3 volumes, entitled *Thrice-Greatest Hermes*, by G. R. S. Mead, London, 1906.

The first Greek ed. of the *Poemander* was that of Adrianus Turnebus, Paris, 1554. This contains a preface in Greek by Ἀγγελος ὁ Βεργίνος; also a minor work of Hermes, called Ὁμοῖοι Ἀσκληπιδίων ῥήματα Ἀμμόνα βασιλέα (*Œthoulapii Definitiones ad Ammonem regem*), and the Lat. tr. of Ficinus. The next edition was that of D. Franciscus Flussas Candalla, in both Greek and Latin, Bordeaux, 1574. The editor in his preface acknowledges obligations to Joseph Scaliger, who was then a young man.

The remains of Hermes, including fragments, formed part of a great work by Franciscus Patricius (Cardinal Francesco Patrizi), entitled *Nova de universis philosophia*, which was published at Ferrara in 1591 and at Venice in 1593. Patricius changed the order of the pieces in the *Poemander*, with a view to improving the sequence of thought. The edition of Hannibal Roscellius appeared, according to Fabricius, at Craacow, in 1586, and was reprinted at Cologne in 1620.² In it Candalla's text of Hermes is accompanied with what Fabricius describes as a vast and foolish commentary. After this there was no edition of the *Poemander* until that of Gustavus Parthey, Berlin, 1854, which, as the editor remarks, was brought out at a time when the researches of Egyptologists were having the twofold effect of establishing, on the one hand, the vast antiquity of Egyptian history, and, on the other, degrading works for which that antiquity was claimed to the times of the Ptolemies or the Romans.

Next in importance to the *Poemander* is the *Asclepius*, which exists only in a Latin tr. attributed to Apuleius. It may be read in the Teubner edition of that author by Paul Thomas, Leipzig, 1908. This dialogue was designedly excluded by Flussas from his edition of Hermes, on the ground that the work of a divine philosopher had here been tampered with by an impious pagan. The *Asclepius* in its Latin form was known to St. Augustine, who, in his *de Civitate Dei* (viii. 23-26), has long quotations from it which are verbally exact. St. Augustine does not say that this translation is the work of Apuleius, though he has occasion to mention that writer in the immediate context, which may have suggested the idea. The *Asclepius* bears on the face of it unmistakable marks of being a translation from the Greek. A few fragments of the original have been preserved to us by Lactantius, which show that the *Asclepius* is identical, so far at least as these fragments go, with the treatise mentioned under the name of λόγος τέλειος.³

Besides the fragments of Hermes preserved by Lactantius, there are others given by Cyril in his writings against Julian (A.D. 433), and some in Suidas, including a remarkable passage on the Trinity—which is nowhere else to be found. But by far the most important contribution to our knowledge of Hermes is that made by Stobæus, whose own date is uncertain, but who quotes no

¹ Mead puts the *editio princeps* in 1471, Reitzenstein in 1468, Leonhard Schmitz in 1473 at Treviso.

² Mead says (l. 12): 'This was printed at Craacow by Læmarus, in 6 volumes in folio, from 1585 to 1590,' adding that the reprint was made in 1630.

³ Lact. *Div. Inst.* iv. 6: 'Hermes in eo libro qui λόγος τέλειος inscribitur his usus est verbis'—then follows a Greek passage which will be found in Latin in *Asclepius*, 8. Again, ib. vii. 18: 'quod Hermes tamen non dissimulavit: in eo enim libro, qui λόγος τέλειος inscribitur, post enumerationem malorum de quibus diximus, subiicit hæc' (cf. *Asclepius*, 36).

¹ We get this number by reckoning the hieroglyphic books as 10, to which the enumeration easily lends itself.

² The following are the passages in Lactantius bearing on Hermes Trismegistus: *Div. Inst.* i. 6, ii. 10, 14, 15, iv. 6, 7, 8, 9, 12, 27, vi. 25, vii. 4, 9, 12, 18; *de Ira Dei*, 11; *Div. Inst.* *Epit.* 11. ³ *De Is. et Osir.* 61, p. 575 l. 1: ὁ δὲ τοῦ Ἐρμῆος λεγόμενος βιβλίος ἑσπεροῦς γράμματα πρὸς τὴν ἰσὴν ἀποδίδωκεν.

author later than Hierocles (fl. A.D. 450). The titles of the extracts in Stobæus are as follows:

'Ερμού, 'Ερμού πρὸς τὸν υἱόν, 'Ερμού ἐκ τοῦ πρὸς Τάτ, 'Ερμού ἐκ τῶν πρὸς Τάτ, 'Ερμού ἐκ τοῦ πρὸς Ἀσκληπιόν, 'Ερμού ἐκ τῶν πρὸς Ἀσκληπιόν, 'Ερμού ἐκ τῶν πρὸς Ἀμμόν, 'Ερμού ἐκ τῶν πρὸς Ἀμμόνα, 'Ερμού ἐκ τῶν πρὸς Ἀμμόνα πρὸς Τάτ, 'Ερμού ἐκ τῆς Ἀφροδίτης, 'Ερμού τριμεγίστου ἐκ τῆς ἱερᾶς βιβλίου τῆς ἐπι-καλουμένης Κόρης κόσμου, 'Ερμού Λόγος Ἰσιδος πρὸς Ὀρον.

Under some of the titles, especially the first and most indefinite, many extracts are given. The longest are those from 'The Holy Book which is entitled Κόρη¹ κόσμου,' and that called Λόγος Ἰσιδος πρὸς Ὀρον, which seems to be another name for the same work, part of which was found by Patricius in the monastery of Enclistra, in Cyprus.

The name of Hermes Trismegistus was one to conjure with, and many works on alchemy and all kinds of subjects were attributed to him later; but those which have now been mentioned are all that concern us. Before leaving the subject, however, we must inquire whether there is anything in these works themselves to indicate their date and authorship. No one would now dispute that they are later than Plato. Neither can it be denied that they are later than Stoicism, since, without holding the materialism of the Stoics, they show familiarity with the terminology of that school. Further, they display an acquaintance with the OT, and are, therefore, presumably later than the Septuagint. In the first chapter of the *Poemander* we encounter the phrase *λόγος κυρίου*; further on in the same chapter we come across a manifest but unacknowledged debt to Genesis (12², 28): *ὁ δὲ θεὸς εὐθὺς εἶπεν ἀγίῳ λόγῳ, αὐξάνεσθε ἐν ἀξίᾳ καὶ πληθύνεσθε ἐν πληθεί, which is repeated in iii. 3. The third chapter has also the words: ἦν γὰρ σκότος ἀπειρον ἐν ἀβύσσῳ καὶ ὕδωρ καὶ πνεῦμα λεπτὸν νοερὸν. In the 'Holy Book' (Stob. *Ecl.* i. 936) we read: Εἶπεν ὁ θεὸς καὶ ἦν. In v. 6 of the *Poemander* there is a passage which might be thought suggestive of Ps 139¹²⁻¹⁶.*

Let us pass on now to the NT. The statement in *Poemander*, i. 12, that 'God begat a man equal to himself' would be an extraordinary anticipation of Christianity, if it were penned before its appearance; and the words with which the same chapter ends, *ὁ σὸς ἀνθρώπος συναγάγειν σοὶ βούλεται, καθὼς παρέδωκες αὐτῷ τὴν πᾶσαν ἐξουσίαν*, cannot but recall to us Mt 28¹⁸. In *Poemander*, ix. 3, we are reminded of Mt 13³⁸ in what is said of *δαίμων* (who, we are told, is separated from God): *ὁστις ὑπεσελθὼν ἐσπείρε τῆς ἰδίας ἐνεργείας τὸ σπέρμα, καὶ ἐκήσεν ὁ νοῦς τὸ σπᾶρὲν, μοιχείας, φόνους, πατρονυκίας, ἱεροσυλίας, ἀσεβείας, ἀγχόνas, κατὰ κρημνῶν καταφορὰς καὶ ἄλλα πάντα ὅσα κακῶν δαιμόνων ἔργα. The last words, from ἀγχόνas onwards, look like a reference to the herd of swine (Mk 5¹³), but are only a specification of different forms of suicide. The doctrine that there is none good but God in *Poem.* ii. 14 and vi. recalls to us Mk 10¹⁸, as the definition of religion in xii. 23—*θρησκεία δὲ τοῦ θεοῦ μία ἐστίν, μὴ εἶναι κακόν*—does that in Ja 1⁷, while the frequent insistence in *Poem.* i. on *φῶς* καὶ *ζωή* as being the nature of God naturally carries our thoughts to the Fourth Gospel. Many more such affinities with the NT might be added, but this line of argument is really superfluous. For, when in *Poem.* i. 10 we come across the word *ὁμοούσιος*—the great bone of contention between Arian and Trinitarian—which was first used, as far as we know, by Plotinus, the suspicion suggests itself that we are not in the first or second cent., but in the third or fourth. This impression is confirmed when we consider the subject-matter of the *Asclepius*. The lament over the decay of Egyptian religion and its prohibition as though by law,² unless we allow that this*

passage is really prophetic, must have been written at a time when the Galilæan had already conquered. The complaint that the most holy land, which was once the seat of shrines and temples, will be full of dead men's sepulchres is accepted by St. Augustine as directed against Christianity, and as being an allusion to the martyrs' memorials (*de Civ. Dei*, viii. 28 *ad fin.*). But, if Christianity is thus in the ascendant, the *Asclepius* can hardly have been written before the Edict of Milan in A.D. 313. Now the *Poemander* (ix. 1) refers to the *τέλειος λόγος*, which appears to be the same as the *Asclepius*, and therefore the *Poemander* must have been written at least a little later. But Lactantius was familiar with the works of Hermes, and his death is put not later than A.D. 330. It seems, therefore, reasonable to conclude that these works were composed between A.D. 313 and 330.

That the author or authors were Egyptian does not require proof. That is evident from the respect shown to the Egyptian religion, and from the naive national vanity which, not content with making Egypt 'the temple of the whole universe' (*Ascl.* 24), confines true intelligence to its inhabitants (Stob. *Ecl.* i. 990). The acquaintance displayed with Greek philosophy is no argument against this. Philo was saturated with that philosophy, and yet remained a devout Jew. Despite the many points of resemblance in the Hermetic literature to Christianity, there is no sign of love for that religion. It is Hermes who is the preacher of repentance; it is Hermes who is the guide of human kind; it is Hermes who teaches the way of salvation. In fact, in the Hermetic writings, Egypt is bidding against Judæa for the honour of supplying the world with a religion, just as Samaria did in the Great Declaration of Simon of Gitta, who has been confused with Simon Magus.

3. Doctrines.—The doctrines of Hermes are so many and so various as to make us doubt whether they all emanate from the same mind, notwithstanding the family likeness which runs through the works. But we must not be too rigorous in our demand for consistency. Such a contradiction as that God makes all things and yet does not make evil (*Poem.* xiv. 7, 8) is so familiar to ourselves as not to call for comment in Hermes. But there are others which court attention. We are repeatedly told that the Cosmos is the Son of God (*Poem.* viii. 2, ix. 8, x. 14), and yet we read that it is *πλήρωμα τῆς κακίας* (*Poem.* vi. 4). This, it may be said, is a matter of comparison. But here at all events is a direct contradiction. In *Poem.* ii. 4 we have the words: *ἀσώματος οὐδ' ὁ τόπος*; in xi. 18, *ὁ μὲν γὰρ τόπος καὶ σῶμα ἐστὶ καὶ ἐκίνητον*. Again, the statement in x. 19, that it is not lawful for a human soul to pass into that of an irrational animal, is irreconcilable with that in x. 8, that, if a human soul continues to be evil, it retraces the way by which it had ascended from reptiles. Nor yet does the ascetic principle that one must hate one's body if one would love oneself (iv. 6) seem to consort very well with the denunciation of celibacy and the glorification of parentage (ii. 17).

The resemblance of the Hermetic teaching to Christianity is no more than skin-deep. There is, indeed, much talk about the Son of God. But, then, who is the Son of God? Sometimes he is Logos, as proceeding from Nous (*Poem.* i. 6). Anon he is Man (i. 12), not man as we know him, but an æonian Man (like that of the Valentinians), who takes after the Nous that begat him in being bi-sexual, though it is hard to understand how there can be sex in Nous. Yet again, the Son of God is the sensible universe (ix. 8), as in the *Timæus* of Plato (31 B, 92 B). The Sun is not actually called by Hermes the Son of God, but he is called 'a second God' (*Ascl.* 29; cf. *Plat. Rep.* 517 B). Instead

¹ Probably *κόρη* here means 'the pupil of the eye'; cf.

² I am the eye with which the Universe Beholds itself and knows itself Divine.

³ *Ascl.* 24: 'quasi de legibus a religione, pietate cultuque divino statutus præscepta poena prohibito.'

of comparing the Hermetic writings with Christianity, it would perhaps be more fitting to describe them as pagan Gnosticism, or Gnosticism minus Christianity.

If we were asked what are the views of Hermes as to the problem of evil, a variety of answers would have to be given. In one place (*Poem*. xii. 3) we have the Cynic answer that every disease of the soul arises from pleasure; in another (vii. 2) the body is denounced as the source of evil; and love of the body, we are told, is the cause of death (i. 18). Then, again, it appears that good and passion (*πάθος*) are mutually exclusive, like day and night (vi. 2), and that passion is inseparable from *γένεσις*, gathering on it, like rust on iron or dirt on the body (xiv. 7). All these answers perhaps come in the end to the same thing; but we seem to be entering on a different range of thought when we are told that evil thoughts are prompted by demons (ix. 3, 5), or, as they are called in *Ascl.* 25, 'nocentes angeli.' It is the voice of Persia, not of Greece, that speaks here. But, however evil comes about, one thing is taken for granted, that God did not make it (*Poem*. xiv. 7). Moreover, evil is confined to earth; it is blasphemy to say that it attaches to the whole cosmos (ix. 4). Further, the religious man (*θεοσεβής ἀνθρώπος*) turns evil into good, so that the things which are evils to others are good to him (ix. 4).

What are the views of Hermes about God? They are polytheistic, pantheistic, and monotheistic. The stars in heaven are manifest gods, and most manifest among them is the Sun, who is larger than land and sea (*Poem*. v. 3). But besides these there are *δαίμονες*, who are of an immortal nature, to which man can attain. By a bold doctrine room is left by Hermes even for the popular religion. Man, he says, has made gods in his own image, even as the Father and Lord made the heavenly gods in His (*Ascl.* 23). 'You mean statues, I suppose,' says his auditor Asclepius, who is rebuked for his want of faith.

'Statues,' Hermes goes on, 'endowed with life and sense and spirit, statues that foreknow the future, and that declare it by divination, prophecy, dreams, and in many other ways, statues that cause and cure sicknesses in men, and dispense sorrow or joy according to desert' (*Ascl.* 24).

The reason why statues possess these marvellous powers is because the souls of demons or angels have been invoked into them. In support of his doctrine, Hermes appeals to the benefits that Isis bestows when she is propitious and the harm she does when she is angry. The passion of anger, he remarks, is natural to such terrene and mundane gods, who have been made and composed by men out of the two natures of matter and spirit (*Ascl.* 37). This theory, that statues were the abode of demons, was eagerly accepted by the Christians, subject to the proviso that they were bad ones—demons, in fact, not *dæmons*.

Side by side with this polytheism runs a pantheistic strain. When we read, 'Thou art whatever I am, thou art whatever I do, thou art whatever I say' (*Poem*. v. 11), we might fancy that we have in our hands the book of some Indian philosopher. Again, we have the declaration, 'God is himself what he makes.' All things, we are told, are living beings (*ζῶα*), and He is the one life (*ἡ ψυχή*) of all beings (xi. 14). In xii. 22 we have the explicit declaration—*καὶ τὸ αὐτὸ ἐστὶν ὁ θεός, τὸ πᾶν*. Under this pantheistic monism there breaks out a dualism, which is again resolved into a unity. Search the whole world through, says Hermes, in the height and depth thereof, and you will find but two things: (1) the maker (*ὁ ποιητής*); (2) the product (*τὸ γινόμενον*). And yet these two are in a manner one. Each is relative to the other. The maker can no more exist without the product than the product can exist without the maker. This doc-

trine has recently made its appearance in modern theology. Did Hermes owe it to ancient Egypt?

Many and various are the attempts in Hermes to define the essence of God; but there is no real inconsistency between them. Thus in one place we are told that 'the essence of God is *τὸ καλόν*.' But, then, *τὸ καλόν* is identified with *τὸ ἀγαθόν* (*Poem*. vi. 4), so that we can pass to the equation God = goodness—*τὸ ἀγαθόν αὐτὸς ἐστὶν ὁ θεός, δει* (vi. 1). But, further, *τὸ ἀγαθόν* is identified with *τὸ ποιητικόν* (x. 3), which builds us a bridge to another definition: 'The essence of God is to engender and make all things' (v. 9), in agreement with which we are told in another place that 'His one glory is to make all things, and this is, as it were, the body of God, to wit, making' (*ἡ ποιησις* [xiv. 7]). But, again, we are told that to will and to do are one with God (*Ascl.* 8), which enables us to pass on to another definition: 'The essence of God is to will all things to be' (*Poem*. x. 2). This, then, is how Hermes at his highest would have us think of God, as an ever-operative good will, bringing all things into being. Goodness is the only positive attribute of God.

'God is not mind (*νοῦς*), but the cause of there being mind; he is not spirit, but the cause of there being spirit; he is not light, but the cause of there being light' (*Poem*. ii. 14).

Hermes even hesitates to predicate being of God, since He is something behind and beyond being (ii. 5, vi. 4, xii. 1; cf. *Plat. Rep.* 509 B).

LITERATURE.—The successive editions and translations of Hermes have been mentioned in the article. The following works may be added: J. A. Fabricius, *Bibliotheca Graeca*, Hamburg, 1790-1809, lib. I. cc. 7-12, vol. I. pp. 46-88; L. F. O. Baumgarten-Crusius, *de Librorum Hermeticonum origine atque indole*, Jena, 1827; L. Ménard, *Étude sur l'origine des livres hermétiques*, being the introd. to his tr. of *Hermès Trimégiste*, Paris, 1886; R. Pietschmann, *Hermès Trimégiste, nach ägypt., griech., und orient. Überlieferungen*, Leipzig 1876; R. Reitzenstein, *Poimandres*, Leipzig, 1904; G. R. S. Mead, *Thrice-Greatest Hermes*, 3 vols., London, 1906; W. Kroll, in *Fauly-Wissowa*, viii. [1918] 792-823.

HERODOTUS.—Among the great works of genius produced in Athens during the age of Pericles, the *History* of Herodotus holds a place beside the creations of Phidias and the dramas of Sophocles. Even in antiquity it earned for its author the title of 'the father of history' (*Cic. de Leg.* i. 1). Previous writers of history, the so-called logographers, approximated in their descriptive methods to the Epic. They recorded the founding of cities, the genealogies of eminent families, the customs and institutions of particular peoples, and the geographical curiosities of foreign countries, but they essayed no deeper inquiry into the inner relations of things and events. Herodotus was really the first to undertake the task of portraying a historical movement of far-reaching importance upon a uniform plan, into which at the same time he might work the results of his own investigations over a wide field.

1. Life.—Of the historian's life we know but little. Suidas gives the names of his parents as Lyxis and Dryo (or Rhoio). He was born, probably c. 484 B.C. (*Plin.* xii. 18; *Aul. Gell. Noct. Att.* xv. 23; *Diels, Rhein. Mus.* xxxi. [1876] 48), at Halicarnassus, a town in Caria which previously belonged to the Dorian Hexapolis (*Herod.* i. 144, ii. 178; cf. vii. 99); here, however, as the inscriptions show, the prevailing dialect was not Doric but Ionic. He came of a distinguished (*τῶν ἐπιφανῶν*) and noble family, as appears from his having a *γενεαλογία* (ii. 143; cf. *Ed. Meyer, Forschungen zur alten Gesch.*, Halle, 1892-99, i. 193, n. 1). He was a cousin or nephew of the epic poet Panyasis (Suidas, s.v. Πανύσιος), with whom he resided for a long time in the island of Samos, and who probably exercised an influence upon his education and his mode of

thought. At the time of the Persian campaign under Xerxes, Halicarnassus, with the islands of Cos, Nisyrus, and Calydna, formed a small tributary State, ruled by a queen named Artemisia, of whom Herodotus writes in terms of high admiration (vii. 99, viii. 68 f., 93, 101-103). Under Lygdamis, her son or grandson, however, the city became involved in turmoils, in the course of which Panyasis was murdered by the tyrant.

That the residence of Herodotus in Samos extended over several years appears from certain features in his work—his familiarity with the topography, the monuments (iii. 60, ii. 182), and the history (iii. 39 ff., 120 ff., 139 ff.) of what was in his day a powerful naval State. It is doubtful whether he had any share in the overthrow of Lygdamis, which took place prior to 454 B.C. Thereafter he proceeded to Athens, and, as a distinguished citizen of an important federal city, came into intimate relations with Pericles, at that time the guiding spirit in Athenian politics, and with Sophocles. It is true that we have no express record of these friendships, but the historian's own pages bear unmistakable evidence of them. His intimacy with Pericles is to be inferred from his conviction of the importance of Athens for the Hellenic world, and his appreciation of its constitution, as well as from the manner in which he defends the Alcmaeonidae, the family of Pericles, and disparages their assailant, Themistocles, the greatest of Athenian statesmen. Pericles himself, indeed, is mentioned but once in the *History*, but the graceful reference is significant enough. Herodotus, by way of extolling the maternal line of Pericles, narrates the wooing of Agarista, the daughter of Cleisthenes, tyrant of Sicyon (vi. 126 ff.); he tells that her granddaughter and namesake was married to Xanthippus, the victor of Mycale, and that 'when she was with child she had a dream in which she fancied that she was delivered of a lion, and a few days afterwards she gave birth to Pericles' (vi. 131). The historian's friendship with Sophocles may be inferred from the fact that the latter incorporated in his dramas several narratives which he had learned from Herodotus (cf. ii. 35 with *Æd. Col.* 337 ff.; iii. 119 with *Antig.* 905 ff.; i. 32 with *Æd. Rex.* 1528 ff. and *Trach.* 1 ff.); and there is, moreover, a profound affinity between the views of the two writers. It should be noted, however, that the elegy on Herodotus, the opening words of which have come down to us (*Plut. An seni res publica gerenda sit*, ch. iii. p. 785 B),

Ὁδῶν Ἡρόδοτος τοῦτον Σοφοκλῆς ἐτίμων ὅν
πῶτον ἐπὶ πενήτων <ἐξέκλεε ἐξάτης> ,

was not composed by Sophocles.

It is probable that Herodotus, like many other prominent men of his time, took part in the founding of Thurii in 445 B.C.—a scheme set on foot by Pericles; he must, at least, have proceeded thither shortly afterwards. But he did not remain long in the new colony, as the ideals which the founders hoped to realize were shattered by dissensions among the settlers themselves. Certain scholars (e.g. Meyer, *Forschungen*, i. 196) are of opinion that Herodotus called himself a Thurian, and that Aristotle's version (*Rhet.* iii. 9) of the opening words of his book ('Ἡρόδοτος Θ[ε]σ[σ]αλ[ὸν] ἦδ' Ἰστροῦν ἀπὸδεῖξίς) is correct; but others dispute this view, and rightly so, especially as the words in question have been transposed—against the MS tradition—so as to form a hexameter (Stein, 'Introduction,' p. liv). Suidas also informs us that Herodotus was buried in the market-place of Thurii. The inscription commemorating him is given by Steph. Byz. (s.v. Θούριαι) as follows:

Ἡρόδοτος Δύξω κρύπτει κόμης ἦδε θαύματα
ἴδους ἀρχαίων ἱστορίας πρῶταν,
Δαρίας Βλαστὸντα πατρὸς ἀπὸ τῶν γὰρ ἀλλήλων
μύμων ὑπεκρυφύων Θούριον ἐσχ' πατρῶν.

Suidas is also our authority for the report that he fled from Halicarnassus on account of the jealousy of his fellow-citizens; but this does not agree with the facts. According to another report, Herodotus travelled from Thurii to the Macedonian court, and died at Pella (Suid. s.v. Ἡρόδοτος and Ἑλλάδικοι). As a matter of fact, we cannot say when and where he died. All that we can definitely ascertain from his own pages is that he returned from Thurii to Athens, and that the latter city was his home till the outbreak of the Peloponnesian War (A. Kirchhoff, 'Ueber die Abfassungszeit des herodotischen Geschichtswerkes,' in *ABW*, 1868, p. 16 ff.). His travels in Asia and Egypt, and the composition of his *History*, fall in the interval between his return from Thurii (c. 440) and his death (c. 425).

2. Travels.—The narrative of Herodotus is occupied to a considerable extent with what he had learned in the course of his travels, upon which he may have started when comparatively young. Just as he explored Samos, so he may, with that island, as also the city of his birth, as a centre, have become familiar with the adjacent districts, and, in course of time, with the Aegean Islands and the coast of Asia Minor. We know for certain that he visited the hallowed places on the mainland of Greece, as, e.g., Thermopylae (vii. 198 ff.) and Plataea (ix. 25, 49 ff.). He sought information from the priests at Dodona (ii. 52), and in Delphi he heard about the fall of rock that saved the temple from being plundered by the Persians (viii. 39); here, too, he was shown the numerous and magnificent votive gifts belonging to the sanctuary (i. 20, 51 f., iii. 57), and gained a knowledge of both Greek and Lydian history as read by the Delphic priesthood. In Sparta he made investigations regarding the earlier history of Lacedaemonia, and with reference to the Spartan expedition against Samos he names as his informant the grandson of one who had taken part in it (iii. 55). In his further travels northwards he was initiated into the mysteries of the Cabiri in Samothrace (ii. 51), and inspected the mines of Thasos (vi. 47). He seems to have visited the Macedonian court, as he speaks repeatedly of the royal family, and supports its claim to be of Hellenic descent (v. 22). He then made his way towards the Black Sea through the Hellespont, the Propontis, and the Bosphorus, gaining some knowledge of the more important cities on the route (iv. 14). Proceeding by way of Istria (ii. 33), he reached Olbia, visiting the fertile plains in the immediate neighbourhood (iv. 52 f., 81), and gathering information regarding the formidable peoples of Scythia. The Sea of Azov (iv. 86), the Crimea (iv. 99), Colchis (ii. 104), and—on the south coast of the Euxine—the city of Themiscyra (iv. 86) are also known to him. He likewise made a journey to Sardis, probably from Ephesus (ii. 148), and describes from his own observation the monument of Alyattes in the former city (i. 93). His account of the royal road between Sardis and Susa, on the other hand, is not based upon personal knowledge (v. 52). Susa and Babylon were probably visited by way of Syria. He writes of Babylon in considerable detail (i. 178 ff.), and his having been in Susa is shown by the narrative (vi. 119) regarding Ardericca; but his description of the royal castle of Agbatana, the capital of Media, makes it evident that he had not been there (i. 98).

In his visit to Egypt, Herodotus travelled from Canopus to Elephantine, and then back again to Pelusium. It is a very singular fact that he should say nothing of the great temples of Thebes; he refers only incidentally to the temple of Amon there (ii. 42, 143). Whether he passed from Egypt to Syria cannot be determined, but at all events he describes the route from Kadytis (Gaza) by way

of Lake Serbonis as one who had traversed it (iii. 5). He must also have visited Cyrenaica, for he speaks of its capital from personal observation (ii. 181), and gives an apt description of the terrace-like configuration of the country (iv. 199). It was here probably that he obtained his information regarding the Libyans and the interior of Africa. But his accounts of the peoples inhabiting the region between Egypt and the Greater Syrtis are more to the point than what he says of those living further to the West. He may have gained a knowledge of Southern Italy and Sicily while in Thurii. He writes also of the Etruscans, the Ligurians, and the Venetians, but makes no mention of Rome or the Latins.

There has been much discussion as to the period of his life in which Herodotus undertook these journeys. But a slight consideration of the political circumstances affords us a definite clue. As a citizen of an insurgent Persian city, he could not well have travelled in Persian territory before the opposing parties came to terms. This was brought about by the so-called Cimonian peace (448-447 B.C.). At that time, however, the interest of Herodotus was fixed upon Thurii, and it was only after he had left the colony and returned to Athens that he was in a position to begin his extensive pilgrimages. Nor, again, could he have travelled in Egypt before the conclusion of peace. Athens, however, was still lending assistance to Amyrtæus in 449 B.C. But it is clear from Herodotus' account of Egypt that the days of commotions and conflicts were long past. For these reasons Meyer would assign the longer journeys to the years between 440 and 430 B.C. (*Forschungen*, I. 156 f.; in II. 222, more definitely, 438-432 B.C.).

3. His sources.—On these numerous and extensive journeys, Herodotus was constantly adding to his store of knowledge. From the most likely persons, as, e.g., the learned men (λόγιοι) of Persia and the priests of Egypt, he sought information regarding the history of their several countries. In many parts he found interpreters (διδασκάλους) who acted as intermediaries between Greeks and non-Greeks. The numerous 'tales' which he incorporates in his work were derived from professional story-tellers (λογισταί), who were to be found plentifully in Greek-speaking lands; such are, e.g., the stories of the marriage of Agarista (vi. 126 ff.), of the fortunes of the Cypselid dynasty (iii. 48 ff., v. 92), of Croesus, and of Atys and Adrastus (i. 34 ff.). To the principles on which he judged what he heard he refers in two passages as follows: ii. 123, ἐμοὶ δὲ παρὰ πάντα τὸν λόγον ὑπόκειται, ὅτι τὰ λεγόμενα ὑπ' ἐκάστων ἀκοῇ γράφω; vii. 152, ἐγὼ δὲ ὀφείλω λέγειν τὰ λεγόμενα, πείθεσθαι γὰρ μὲν οὐ παντάπασιν ὀφείλω. But he also aimed himself of documents, precisely as do the historians of the present day. He twice makes reference to Hecataeus of Miletus—the most eminent of the logographers—as his authority (ii. 143, vi. 137). In other passages he challenges his statements, especially as regards geography, though without naming him; or else he simply reproduces his narratives (Diels, 'Herodot. u. Hekataios,' *Hermes*, xxii. [1887]; Meyer, *Forschungen*, i. 183 f.). Of his indebtedness to other logographers we have no clear proof; it would probably be confined to a few dates and memoranda, inasmuch as such sources, and notably the *γενελογίαι*, contained little but legendary history. The story of Democedes (iii. 129 ff.) is probably based upon a written narrative. In the account of the Persian expedition under Xerxes, moreover, Meyer (*Forschungen*, ii. 231 f.) recognizes a documentary original in the section extending from the massing of the army and its departure from Celenæ to its arrival in Therna, but admits that Herodotus has here made many additions from his own knowledge. With the list of peoples given in this section are closely connected the list of satrapies (iii. 90 ff.), and the account of the royal road from Sardis to Susa (v. 52 f.); and they are presumably all derived from the same source.

4. The purpose of his history.—That Herodotus delivered lectures on history may be inferred from

references in his own pages (i. 193, iii. 80, vi. 43), and also from Thuc. i. 21 f. Plutarch (*de Herodoti Malignitate*, xxvi.) says that, according to Diyllus, he received ten talents as a remuneration from the Athenian State, and later writers assert that this was given as a honorarium for a public recitation of his *History*. Meyer (*Forschungen*, i. 200 f., ii. 229), however, is of opinion that this large sum was granted him in recognition of his eminent services on behalf of Athens. Certainly he composed his work with the one object of giving prominence to what Athens had accomplished for Greece; and he did this, moreover, at a time when that city's policy was exposed to the fiercest criticism. He wrote at the beginning of the decisive conflict between Athens and Sparta. Only a knowledge of the past could furnish the criterion for a true judgment of the present. But at the same time the writer's verdicts and descriptions are coloured by the conditions of his own day. Thus, the conduct of Thebes and Corinth at the time of the Persian wars is set in a very unfavourable light; that of Thessaly and Argus is palliated; Sparta is treated with a touch of irony; the Alcmaeonidae are, for Pericles' sake, exonerated from censure. It is in all respects the Athenian point of view that finds expression in his account of the wars, and yet it would be wrong to charge him with intentional misrepresentation. He regarded it as his duty to relate what was reported to him (vii. 152). His impression of the actors in the drama he seeks to exhibit in their speeches and colloquies. But these, again, afford him an opportunity of giving utterance to the ideas of his day, and of discussing the best type of government. In military matters he does not speak as an expert, but, without any real comprehension of things, simply reproduces popular tradition. Hence his incredible figures, the purely imaginary character of which was first demonstrated by H. Delbrück (*Die Perserkriege u. die Burgunderkriege*, Berlin, 1887).

It has been frequently asserted that Herodotus did not carry his work to its intended conclusion, but there is nothing to show that this was the case. His purpose was to write the history of the Persian wars, and these ended with the battle of Mycale and the capture of Sestos in 479 B.C.; the aggressive wars of the Greeks against the Persians began in 478 B.C., and are not to be reckoned among the *Μηδικά*. He certainly begins somewhat further back; he depicts the conflicts between Greeks and Barbarians; and within these bounds he finds it possible to incorporate the abundant results of his own inquiries and researches (iv. 80: προσθήκας γὰρ δὴ μοι ὁ λόγος ἐξ ἀρχῆς ἐδίθητο). It is unnecessary to suppose that he had published these results in previous books, and tradition does not lend the slightest support to the idea. The only separate work of which he speaks is the projected *Ἀσσύριοι λόγοι* (i. 184); but this was almost certainly never written.

5. His 'Weltanschauung.'—Herodotus knows nothing of historical criticism, nor does he think of tracing out the ultimate forces from which historical phenomena spring. He proposes simply to relate what he saw and heard, and to do so with a mind clear of preconceptions. But he regards as true only what he had learned from experience or witnessed with his own eyes. Thus he refuses to believe in the Hyperboreans (g.v.), as there is no credible evidence for their existence; if they did exist, there would also be Hyperboreans (iv. 36). Similarly, he will not accept the report that the Phoenicians in their circumnavigation of Africa had the sun upon their right hand (iv. 42). He rejects the idea that there is a race of men with but one eye (iii. 116), though he speaks else-

where of the one-eyed Arimaspi without offering any objection (iv. 13, 27). He repudiates the hypothesis of an ocean flowing all round the world, saying that the name was invented by Homer or some other poet (ii. 23, iv. 8, 36), and he utters a similar verdict regarding the river Eridanus and the Cassiteride Islands (iii. 115).

He surveys the affairs of the world and the institutions of mankind with an impartial eye, though he adheres to many traditional errors and misconceptions. He does not take it ill that men should regard their own customs and practices as the best, and says that none but a madman would make sport of foreign usages (iii. 38). But experience had also taught him that the destinies of men are influenced by a supernatural power. The gods exist, and they intervene decisively in the affairs alike of individuals and of nations. It was the Divine wrath that pursued the sons of Spertias and Bulis to the death, so that the crime of slaying heralds should be duly expiated (vii. 137). It was Demeter herself who, at the battle of Plataea, prevented the fleeing Persians from taking refuge in her sacred grove, thus punishing them for their having burned her sanctuary in Eleusis (ix. 65). 'For great crimes great penalties are inflicted by the gods' (ii. 120). But, even where there is no crime at all, the gods ordain evil for mortal men: *χρὴν γὰρ Κανδαυλὴ γενέσθαι κακῶς* (i. 8). The higher powers keep jealous watch lest man should too proudly exalt himself, and they bring him low even when he is free from guilt (vii. 10e). Xerxes was impelled by a vision of the night to make war upon the Greeks, even against his will, and was thus driven to destruction (vii. 12ff.). Amasis fears the envy of the gods (iii. 40). And not in dreams only, but also by oracles, do the gods manifest their unalterable designs. As the oracle of Delphi declared (i. 13), Croesus atoned for the offence of his fifth ancestor (i. 91). It was decreed by the oracle that the whole of Attica should fall into the hands of the Persians (viii. 53). The gods are lords of all; even the innocent must undergo the severest afflictions, and thus no one should be called happy till he is dead, and death is better than life. This interpretation of life is precisely what we find in Sophocles; a profound and sincere piety animates both the historian and the poet (cf. H. Fohl, *Tragische Kunst bei Herodot.*, Borna-Leipzig, 1913).

With philosophy as such Herodotus had no direct concern. He refers to the philosophers only in so far as their ideas fall within the circle of ordinary knowledge. Thus he mentions the Orphic-Pythagorean doctrine of metempsychosis merely because that belief is met with among other peoples, and he traces it to Egypt. He refers to the eclipse predicted by Thales, and to the gnomon and Anaximander's map of the world. He mentions and discusses the various theories regarding the inundation of the Nile. Further, in his pages we may recognize the influence of the criticisms directed against the popular religion by Xenophanes and Heraclitus. His conception of history likewise is rationalistic, though not always to the point; here he follows his forerunner Hecataeus. Faith and criticism commingle in him ('mélange de scepticisme et de foi' [Hauvette,

Hérodote, historien des guerres médiques, Paris, 1894, p. 35]); and he prays that he may not on that account incur the displeasure of gods or heroes (ii. 45). In such rationalistic criticism we may distinctly trace the effects of the Sophistic philosophy of the time, and these effects may also be discerned elsewhere. It is altogether likely that Herodotus was personally acquainted with the more prominent Sophists; Protagoras, too, had gone to Thurii in 445 B.C.; and Herodotus wrote his book in Athens between 432 and 425 B.C.—at a time, that is to say, when the leading Sophists were resident there. Even the style shows signs of Sophistic influence. Herodotus has a liking for pointed antithesis, and in his hands dialogue has already become an art. This has been demonstrated in detail by W. Nestle (*Beilage zum Programm des evangelisch-theologischen Seminars in Schöntal*, 1908), who also shows that the Sophistic theories of the nature and origin of civilization, of language, and of religious and political institutions were matters of eager interest to Herodotus, and have left their mark upon the composition of his work. Nestle asserts further that Herodotus had assimilated certain specific ideas from Protagoras, Prodicus, and Hippias, and defends his view in *Philol.* lxx. (new ser. xxiv. [1911]) 242-273, where he repels objections and criticizes other theories.

The outstanding quality of Herodotus as a writer consists in his marvellous gift of narrative, and reveals itself in his delight in all the curious and interesting lore which he had accumulated and so deftly reproduces; hence his work has never lost the charm which it exercised from the very first.

6. His dialect.—Herodotus wrote his *History* in the Ionic dialect, the prevailing literary language of his time. The knowledge of this particular type of Greek soon died out, and many spurious forms were introduced into his text by the copyists. This 'Hyperionism' made its effects felt to a remarkable extent, and has been fostered by modern editors. The inscriptions and the poets furnish us with the authentic forms. The older literature relating to this question is given in R. Meister, *Die Mimiamben des Herodas*, Leipzig, 1893, p. 771 f.; cf. also H. W. Smyth, *The Sounds and Inflections of the Greek Dialects: Ionic*, Oxford, 1894; O. Hoffmann, *Die griech. Dialekte*, iii., 'Der ionische Dialekt,' Göttingen, 1898; A. Fritsch, in *Verhandlungen der deutschen Philologen u. Schulmänner in Bremen*, Leipzig, 1900, p. 158 ff.

HEROES AND HERO-GODS (General and primitive).—In dealing with hero-cults, one must distinguish between a *manes*- or ancestor-cult arising out of beliefs in ghosts and spirits and the worship which in course of time may come to be offered to the personages of astral and other myths. It is with the latter that the present article is concerned, and not with mythology as such.

The term 'hero' is usually applied to one who stands out from among ordinary mortals by his superior quality or qualities, conspicuous bravery or sustained power of endurance being the distinguishing features. But there is a large class of persons in oral tradition and literature who stand out from their fellows by reason of their inventiveness, or moral or intellectual qualities, by the introduction of new cults, and, above all, by what they have done to improve the various conditions of human existence—these are usually spoken of as 'culture-heroes.' Amongst the renowned dead there are all gradations in oral tradition—from the men who are recognized as mere mortals to those of such transcendent powers that they may be classed as demi-gods or godlings; indeed, it is often impossible to say where the possession of true godship begins. Literary records, however, have been so thoroughly worked over in many cases that a more precise classification is here generally possible.

A hero is nearly always regarded as the spirit of a dead man. His origin may be unknown; his mortal birth may be recorded; or he may have had an equivocal begetting, being the son of a virgin, or of partly divine and partly human parentage; or, again, he may be the son of supernatural parents; but in all cases he is supposed to have lived as a mortal amongst mortals and died as they do.

The belief in the continuity of life may be taken as universal, death being merely an episode between two phases of continuous existence. Under normal conditions the individual possesses the same character after as before death; and, since most persons are friendly to their kinsmen and willing to help them, so spirits, though theoretically resident in a land of their own, are ready to assist those who have not passed through the intermediate state of death. The practice of appealing, especially when danger is imminent, to the spirits or ghosts of men is very widely spread among various peoples. This appeal may take the form of an invocation or of a prayer, or simple rites may be performed, generally at stated times; thus an incipient worship may be performed which could readily pass into a definite cult. At what stage this process is interrupted depends largely upon the social and religious institutions of the people in question; and the extent to which the recognition of heroes attains may vary from time to time, as is shown by the progressive vulgarization of hero-cults by the Ancient Greeks. The hero-cult of Ancient Greece resembled that of the chthonian divinities and of the dead, and was quite distinct from that of the later Olympians. A blending of the two is seen in the case of Herakles:

'So then my inquiries show clearly that Heracles is an ancient god, and those of the Hellenes seem to me to act most rightly who have two temples of Heracles set up, and who sacrifice to the one as an immortal god and with the title of Olympian, and make offerings of the dead to the other as a hero' (Herodotus, ii. 44 (Macaulay)). 'The Teutonic heroes are, in the main, historical personages, never gods; though, like the Greek heroes, they are sometimes endowed with semi-divine attributes or interpreted as symbolical representations of natural forces' (EBR¹¹ xiii. 376).

The question more immediately before us is to determine as far as possible some of the ways in which hero-cults may have arisen among savage communities, but the evidence is by no means so extensive as might have been surmised. Personages who may be described as heroes are plentiful, but their worship, or a cult in connexion with them, is rare.

A people in a purely totemic stage of culture, e.g. the Australian natives, can scarcely originate a *manes*-cult, still less a hero-cult; and, whatever may have been the extraneous cultural influences that have penetrated into Australia, there has not been a development of either of these cults. The case is, however, different for Torres Straits; and what occurs there is given in some detail, as it seems to bring out some suggestive points. Further information will be found in vols. v. and vi. of the *Reports of the Cambridge Exped. to Torres Straits*.

Among the characters in the folk-tales of the Torres Straits Islanders all grades of individuals are found, from men to demi-gods. About some who were spoken of as men, nothing, or very little, is narrated that is miraculous, they being simple warriors, or people who had adventures. There are others who could transform themselves into animals, or to whom something supernatural happened. Many were transformed into stars, stones, animals, or other objects. None of these individuals affect the social or religious life of the natives to any great extent; they merely serve to point a moral or to explain certain objects or events. These more especially were relegated to a remote past, and some of them were spoken of by the Western Islanders as *ad* or *adi*. This word, according to S. H. Ray (*Reports*, iii. [1907] 89), now signifies a legend or honorific title; but probably it had the same significance as the term *ad* of the Murray Islanders (of the eastern group), which implies anything old and traditional, with the idea of a sanctity that is associated with ancient wont—thus certain of their folk-tales are *ad*, and all sacred and magical stones or objects are *ad*.

This idea of sanctity is also connected in varying degree with the culture-heroes. These belong to different categories. Some introduced improved methods of horticulture or fishing, and it is in this group that the marvellous begins to be prominent. The superior fertility of Murray Island is accounted for by the introduction of garden plants from Badu and Moa by two heroes—which at the same time explains the impoverishment of those two western islands. Two other heroes of the Murray Islands built the local fish-weirs, and taught variations in speech to certain other islanders, and they were

said by some to have instituted the shrine that makes coco-nuts abundant (*u sogu*). A great culture-hero for vegetable food came from New Guinea, whither he returned after visiting the western and eastern islands of Torres Straits; he instructed some islanders in language, stocked several reefs with the much-prized cone shell, and notably introduced plants useful to man. He was a very amatory person, and valuable economic plants sprang up as the result of his amours—one of the many examples of the close association in the mind of savage peoples of the sexual act with agricultural fertility. In the islands he was generally called Sido, but there appears to have been some confusion between Sido and Soido. Sido, as Landtman informs us (*Festskrift til Ed. Westermarck*, p. 59), was a great and highly praised hero in his lifetime, though he became a mischievous character during his wanderings after death. His was the first death, which was also a murder, and all men must die and follow the route of his wanderings; eventually he seems to have become the chief of the after-world. Soido is essentially an agricultural hero.

Certain death-ceremonies were introduced from the neighbouring mainland of New Guinea into some of the islands by two culture-heroes, Naga and Waiat, the relative importance of whom differs according to the island from which the information was obtained. Naga knew how to make masks in the form of animals, and instructed men in singing and dancing and in everything relating to the *kwod*, or ceremonial ground; he is stated to have lived on Nagir. Waiat, who, according to one legend, lived on Mabuiag, stole a famous fish-mask from Naga. Waiat was represented by a rude and imperfect wooden image which was lodged in a square house on the neighbouring islet of Widal. Only old men had anything to do with the shrine, and whenever the house was rebuilt they held a special death- or spirit-dance, *zara markai*, which was also danced by them after the usual death-dances. Waiat was described as the head or chief of the *tai*, the great funeral ceremony or death-dance, during which the people 'thought about what Waiat did.' We are told that Naga went to Uga, one of the eastern islands, where he taught the people how to perform the death-dance, and that Waiat went to the Murray Islands. According to the Murray Islanders, Waiat (as they call Waiat) introduced the *zera markai* and other death-dances. In Waier, the smallest of the three Murray Islands, Waiat was represented by a turtle-shell image of a man, which rested against the railings of a model of the platform of a canoe. No women were allowed to see these sacred objects, which were kept in a cave. There was an annual pilgrimage of all the people of Mer and Dauar, the other two islands, to the shrine; the men and novitiates were segregated on one side of the island, and the women and children on the other, this being the occasion for an elaborate initiation ceremony. The essential cult of Waiat on Waier, so far as our information goes, was of an erotic character.

Kwoiam, the warrior hero of Mabuiag, who fought natives of various islands, and even successfully and single-handed attacked a village in New Guinea, lived with his mother, her brothers and sisters, and his sister's son. This family-group constituted what may be termed the 'social unit' of a matrilineal community, the father being so unimportant that his name has not been handed down. Kwoiam is said to have had the shovel-nosed skate for his totem (*augud*), which, amongst other circumstances, points to the Kwoiam cult as being later than totemism. Kwoiam made two crescentic objects of turtle-shell, which blazed with light when he wore them at night, and which

he nourished with the savour of cooked fish. These objects were called *augud* (presumably because the natives did not know by what other sacred name to call them), and they became the insignia of the two phratries into which the totem clans of Mabuiag were formerly grouped. In this island Kwoiam was designated as *adi*, and occasionally he himself was spoken of as *augud*. In the Muralug group of islands he was regarded as the 'big *augud*,' and the '*augud* of every one in the island.' Connected with the cult of Kwoiam were two heaps of shells, called navels of the *augud*, which were constructed to show that the two *augud*-emblems originated there; and, when it was deemed necessary to fortify the latter, they were placed upon their respective navel-shrines. The cult of Kwoiam was associated with warfare, and when attacking an enemy the warriors formed in two columns, each of which was led by a headman who wore the Kwoiam emblem to which he was entitled. The moral value of the *augud* in war must have been very great, and the natives themselves recognized the fact; as one man said: 'Suppose we have not got an *augud*, how can we fight?' It is recorded that on one occasion the victorious Mabuiag men refused to continue fighting the Moa men on account of the temporary absence of the two *augud*-men. The Moa men also had magical emblems associated with Kwoiam, but these were less potent than those of Mabuiag, 'because Kwoiam belongs to Mabuiag and not to Moa.' The *augud* had to be treated with respect: in one foray a warrior in excess of zeal ran on in front of the column, but he stumbled and nearly broke his leg because he went in front of the relics, which should always go first, as Kwoiam was wont to do. Kwoiam's mother originally came from an island near Cape York. There are very consistent accounts that in his physical appearance and psychical characteristics he resembled Australians and not Papuans. He fought with an Australian javelin and spear-thrower, indeed, 'all he did was Mainland fashion'; he, his mother, and his nephew 'always kept to themselves, and were like Mainlanders.' It is said that the natives of Cape York Peninsula also talk of Kwoiam.

As Kwoiam was an inspiring feature in the life of the inhabitants of the western islands, so a group of brethren played a similar part for the natives of the central and eastern islands. The migrations and adventures of these heroes are enshrined in various legends which are current in several islands, though there is much obscurity and contradiction. The more probable version brings them from New Guinea, the other from Australia or some island to the south. According to the former version, the hero Bomai went to several islands, and during his journeys he temporarily changed himself into various animals. On approaching Yam, he gave birth to his brothers Sigar (Sigai) and Kulka. Sigar remained on Yam, Kulka went to Aurid, and Bomai to the Murray Islands. Some versions mention a brother named Seo, who went to Masig.

According to one tale, Sigai and Maiau were the two brothers who went to Yam, and each became associated, in his animal form, with one of the two phratries. A shrine was erected to each, which consisted of a long low hut containing a turtle-shell model representing respectively a hammer-headed shark and a crocodile, and under each of these was a stone in which the spirit, the so-called *augud*, resided, and to them were attached human skulls and jaws. Outside the enclosure which screened the shrines from profane gaze were two heaps of shells which, as in the cult of Kwoiam, had a mystical connexion with the shrines, and were similarly termed 'navels of the *augud*.' The

shrines were so sacred that no uninitiated persons might visit them, nor did they know what they contained; they were aware of the existence of Sigai and Maiau, but they did not know that the former was a hammer-headed shark and the latter a crocodile; this mystery was too sacred to be imparted to the uninitiated. When the heroes were addressed, it was always by their human names, and not by their animal or totem names. Warriors would be enabled to go immune whither they liked if they sang certain songs at the shrines. They prayed as follows: 'O *Augud* Sigai and *Augud* Maiau, both of you close the eyes of these men so that they cannot see us.' There was also a navel-shrine of Sigai on Tutu (Yam and Tutu were inhabited at different seasons by the same people). Before going to fight, the men stood around it, or around those on Yam, and thrust their bows and arrows into it so that they might not miss their aim; and during the fight they called upon the names of the heroes.

Judging from the human face-mask decorated with human skulls from Aurid, which almost certainly represents Kulka, we may surmise that there was a cult of that hero there, which was probably a war-cult.

So far as the Murray Islands are concerned, it appears that Bomai, who was often spoken of as Malu, came first and was recognized as a *zogo*, i.e. something sacred; he was represented by a human face-mask, with a beard of human jaw-bones. Later, Malu arrived with a fleet of canoes from various western islands in search of Bomai. Malu also became a *zogo*, and was represented by a mask in the form of a hammer-headed shark. The foreigners exhibited certain dances in order to please their hosts, and then returned home. The Bomai-Malu cult predominated in the Murray Islands over all other cults, and the sacred men in connexion with it attained a considerable power, which they often used for their private ends. This cult had elaborate and prolonged initiation ceremonies, and appears to have been a secret society or religious fraternity which took upon itself disciplinary functions; indeed, it was very similar to some of the secret societies that are found in Melanesia.

The western and central islands are not particularly fertile, so the natives spend a good deal of their time in fishing, and there is considerable intercourse between the various islands, due to trade or warfare. Here the hero-cults developed into war-cults. The isolated Murray Islands are fertile, and the people are much given to horticulture; thus there was little inducement for the hero-cult to develop into a war-cult, and it concerned itself more with the social life of the people, and the three temporary sacred men were on the way to become priests.

Totemism was still in force in the western and central islands at the time of the arrival of the hero-cults, but it had probably already disappeared in the Murray Islands. Everywhere, but perhaps more particularly in the eastern islands, there were numerous small family or local rituals, most of which were concerned with improving the food supply. A religion then appeared which replaced in the west the indefinite communal association of a totem with its clan by a definite personal relation with a superhuman being, and it is no wonder that it spread, being carried from island to island. These cults also provided both the Western and the Eastern Islanders with a synthesis which had hitherto been lacking, as the men could now meet as members of a common brotherhood, and a feeling of intense pride in new cults was engendered.

An interesting parallel to these hero-cults of Torres Straits occurs in Fiji. The people of Viti-

Levu are divided into two groups, the Kai Veisina and the Kai Rukuruku, which trace their descent from Veisina and Rukuruku, who drifted across the big ocean and taught the people the cult associated with the large stone enclosures, *nanga*. Veisina arrived first, and where he landed the turmeric plant sprang up; where Rukuruku first placed his foot the candle-nut grew. Their followers paint themselves respectively with the yellow or black pigment obtained from these plants. When the two heroes landed, they said: 'Let us go to the Chief of Vitongo and ask him to divide his men between us that we may teach them the *nanga*, for which purpose we have come to Fiji' (Joske, *Internat. Arch. für Ethnogr.* ii. 258). The last clause points to a definite propaganda, and it is possible that a similar movement may have taken place in Torres Straits, since there is not the slightest trace in tradition or elsewhere of secular aggression.

The great mythological personages of southern Melanesia are Qat of the Banks Group, Tagaro of the New Hebrides, and certain of their brothers. Qat, who had a mother but no father, is usually regarded as a spirit (*vui*) that never was a man, though in some places he is said to have been a great man of old times. Codrington (*Melanesians*, p. 155) says:

'It is impossible to take Qat very seriously or to allow him divine rank. . . . When he is said to create, he is adding only to the furniture of the world in which he was born.'

It is related of him that he made men, pigs, trees, rocks, as the fancy took him, and also night. He was always ready to play tricks on his envious brothers, but not in malice. He disappeared by his canoe (in which were his wife, brothers, and all living creatures) being washed out to sea in a deluge. At the legendary home of Qat,

'there is still the stump of a tree which Qat cut down for his canoe; . . . men who are cutting a canoe make sacrifices at this stump, throwing down money there that their canoe may be swift and strong and never wrecked' (p. 141 f.). 'The *tataro* of the Banks Islands, which may be called a prayer, is strictly an invocation of the dead. . . . The Banks Islands are clear that *tataro* is properly made only to the dead; yet the spirits, *vui*, Qat and Marawa (the spider, a friend of his) are addressed in the same way' (p. 146).

They were prayed for success, riches, safety when at sea, and other blessings. In the New Hebrides Tagaro takes the place of Qat. In the Banks Islands and northern New Hebrides there is an institution called *Qat*, into which a rigorous secret initiation is necessary, the *Qat* itself being a very elaborate and difficult dance in which the performers wear lofty hats or masks. Codrington says that 'the name *Qat* refers to the hats and not to the *vui*' (p. 85), and he does not allude to any connexion between the dance and the spirit. It is obvious that there is yet a great deal to learn about Qat and Tagaro, and what has been stated above probably holds good for various mythical personages in Melanesia. Qat (Tagaro) apparently represents a human ghost in process of being sublimated into a pure spirit.

The case of the Polynesian cosmic hero, Maui, is a good example of the difficulty with which a hero can become an actual and worshipped deity. The Maui legends, in a complete or fragmentary form, are found all over Polynesia and in parts of Melanesia and Micronesia; they are undoubtedly of remote antiquity, and certainly can be traced to the pre-historic Polynesians; indeed, several hints of Hindu influence have been detected in them. Maui is generally spoken of as the youngest of four brothers bearing the same name. There is much diversity of opinion as to his ancestry, though it is generally stated that his parents were supernatural beings. Although he lived a thoroughly human life, he was possessed of supernatural powers in addition to an inventive mind and a very tricky

and mischievous disposition. He was 'the fisherman who pulls up islands, and he improved fish-traps and rendered fish-hooks and fish-spears more efficacious by adding barbs. According to different Polynesian legends, Maui raised the sky, which till then had not been separated from the earth, and thus rendered the earth habitable for his fellow-men. He was also 'the ensnarer of the sun,' permitting him to pursue his course only on the condition that he went more slowly in order to increase the length of the day. Maui, by the aid of his cunning and magical powers, gave fire to mankind, and some legends make him the fire-teacher as well as the fire-finder, as he taught men how to make fire by the friction of two sticks. In seeking immortality for man Maui lost his life. There is a native saying: 'If Maui had not died, he could have restored to life all who had gone before him, and thus succeeded in destroying death.' 'Maui's death by his ancestress the Night fitly ends his solar career' (Tylor, *PC* i. 345).

Westervelt, from whom some of the foregoing information has been borrowed, remarks: 'It is a little curious that around the different homes of Maui, there is so little record of temples and priests and altars. He lived too far back for priestly customs. His story is the rude mythical survival of the days when of church and civil government there was none, and worship of the gods was practically unknown' (*Legends of Maui*, p. 11). R. Taylor says: 'Though regarded [in New Zealand] as a god, he does not appear to have been generally prayed to as one; yet he was invoked for their *kumara* [sweet potato] crops and success in fishing' (*Ta Ika a Maui*, p. 133).

If any hero deserved worship it was Maui, and yet even he does not appear to have achieved it. Tylor points out that

'Tangaroa and Maui are found blending in Polynesia even to full identification. It is neither easy nor safe to fix to definite origin the Protean shapes of South Sea mythology, but on the whole the native myths are apt to embody cosmic ideas, and as the idea of the Sun preponderates in Maui, so the idea of the Heaven in Tangaroa' (*op. cit.* ii. 346).

The Polynesian Creator is called Kanaroa in Hawaii, Taaroa in Tahiti, Tangaroa in Mangaia and New Zealand, Tangaloa in Samoa and Tonga. In Tahiti some maintained that 'Taaroa was only a man who was deified after death' (Ellis, *Polyn. Researches*, i. 323), though by others he was spoken of as the progenitor of the other gods. Tangaroa was not a very important personage in Mangaia, for he had only one *marae*, or altar, and that was almost neglected, the only offering ever presented being the firstfruits of newly planted coco-nut palms (Gill, *Myths and Songs*, p. 19). He can be linked up with Tagaro of the New Hebrides and with Qat of the Banks Islands, whose brothers were Tangaro the Wise, Tangaro the Fool, etc. It would be tedious to detail the various heroic figures that appear in the legendary lore of Oceania, but the samples selected will suffice to indicate their general character, which finds parallels all the world over.

The majority of tales about heroes belong to those classed as myths, since their object is essentially etiological. The residue are more correctly termed legends, being narratives of what is believed to have happened, though these hero-tales in many cases may be degraded myths. It has often been stated that mythology is the source neither of religion nor of morality, but of science, philosophy, poetry, and history. The tale or myth about a hero may serve to explain natural phenomena, may be in itself an interesting and amusing narrative, may inculcate social observances or illustrate the danger of neglecting them, may stimulate the listener to high endeavour, or may evoke the feeling of mystery and awe. All this may be accomplished without the hero being worshipped; e.g., no worship is accorded to the culture-heroes—often 'transformers' and even tricksters—of the North American Indians, more especially those of the north-west coast, which fact may well be due to the absence of any manes-

cult and to the existence of the belief in *manitu*. It is probably very rare for all the myths of a given people to be indigenous, but many have been borrowed along with other cultural elements at various times. With the myth comes the hero, and, whoever he was in his place of origin, he speedily becomes naturalized, and in his new home places where certain incidents took place are pointed out, and many rocks or other natural objects testify to the truth of the tale, nor does it matter though these should be reduplicated in various localities. The vitality of the myth depends less upon its explanatory significance than upon the personality of the hero, but the development of a cult of the hero would seem to depend upon the socio-religious condition of the recipients.

From an examination of the evidence from Torres Straits, it would seem that, though several men of olden time may fairly be termed culture-heroes, yet no practical notice is taken of them—another illustration of the remark that a prophet has no honour in his own country. Those who have attained such recognition are Kwoiam the Australian, Waitat, and Bomai and his companions, who came from New Guinea. For what causes may we assume that they were honoured? The answer here seems to be that it was the introduction of a new religious cult that reacted socially. The introduction of fearsome masks and new death-dances stimulated the imagination and the religious feelings of the recipients. The valorous deeds and evident supernatural power of the Australian berserker not unnaturally gave rise to a war-cult. The following testimony from a native indicates how patriotism may be engendered in a savage:

'The fame of Kwoiam caused the name of Mabuia to be feared for many a long day, and, although the island was rocky and comparatively infertile, Kwoiam covered it with honour and glory, thus showing how the deeds of a single man can glorify a place in itself of little worth' (*Reports*, v. 83).

The cult of the mysterious brethren is more difficult to explain. It is obvious that, whatever it was originally, it developed into a war-cult in the western and central islands, but the bellicose aspect died of inanition in the Murray Islands. It probably would not matter whether totemism were flourishing or waning when the new cultural influences came in from New Guinea; they introduced new religious ideas, and were not hampered by local totemic restrictions. Thus a wider social grouping became possible, the members of which were united by a common religious sentiment and cult. Additional strength would be given to the movement were it originally or ultimately connected with warfare. We are justified in concluding that here, and probably elsewhere, totemism did not develop into a hero-cult, but rather that this was grafted on to the existing totemism and eventually more or less supplanted it. It has not yet been determined whether these hero-cults originated in New Guinea, or, as is more probable, wandered from further afield, gathering mystery in their progress. What were the heroes in their home country? The problems of the Torres Straits heroes are simple compared with those of Melanesia and Polynesia. The hero, apart from the ancestor, has slight chance of being worshipped while he is still recognized as a human ghost. Time, distance, or forgetfulness may transform him into a spirit that never was a man, and a cult may begin; the same agencies may continue the process, aided perhaps by other cultural influences; and a worshipful godding or even god may have developed. *Omne ignotum pro magnifico*.

HEROES AND HERO-GODS (American).—
1. **Extent and distribution.**—Primitive America is, in a sense, the land *par excellence* of heroes and hero-gods, and its most characteristic myths and legends are those which deal with the birth, growth from infancy up to manhood, exploits, and achievements of such more or less divine or wonderful personages. Nor is the rôle of hero-god confined to man or superman alone, for the whole animal world, in its most remarkable diversities of kinds and of species, finds representatives also in the numerous divinities and semi-divinities on record—in the mythologies, national legends, etc., of the American Indian tribes from Alaska to Tierra del Fuego, and over the broad expanse of the double continent from the Pacific to the Atlantic Ocean. D. G. Brinton, the first ethnologist to devote to this interesting topic a special monograph, says, in his *American Hero-Myths* (p. 27):

'The native tribes of this Continent had many myths, and among them there was one which was so prominent, and re-curred with such strangely similar features in localities widely asunder, that it has for years attracted my attention, and I have been led to present it as it occurs among several nations far apart, both geographically and in point of culture. This myth is that of the national hero, their mythical civilizer and teacher of the tribe, who, at the same time, was often identified with the supreme deity and the creator of the world. It is the fundamental myth of a very large number of American tribes, and on its recognition and interpretation depends the correct understanding of most of their mythology and religious life.'

James Mooney expresses himself thus on the same subject (*14 RBEW*, pt. ii. p. 658):

'Probably every Indian tribe, north and south, had its early hero god, the great doer or teacher of all first things, from the Iuskeha and Manabozho of the ruder Iroquoian and Algonquian to the Quetzalcoatl, the Bochica, and the Viracocha of the more cultivated Aztecs, Muisecas, and Quichuas of the milder southland.'

The range of the culture-hero and hero-god among the American Indians is very great:

'Among the roving tribes of the north this hero is hardly more than an expert magician, frequently degraded to the level of a common trickster, who, after ridding the world of giants and monsters, and teaching his people a few simple arts, retires to the upper world to rest and smoke until some urgent necessity again requires his presence below. Under softer southern skies the myth takes more poetic form, and the hero becomes a person of dignified presence, a father and teacher of his children, a very Christ, worthy of all love and reverence, who gathers together the wandering nomads and leads them to their destined country, where he instructs them in agriculture, housebuilding, and the art of government, regulates authority, and inculcates peaceful modes of life. . . . When at last his work is well accomplished, he bids farewell to his sorrowing subjects, whom he consoles with the sacred promise that he will one day return and resume his kingdom, steps into his magic boat by the seashore, and sails away out of their sight to the distant land of sunrise' (ib.).

Such a figure, e.g., was the Mexican Quetzalcoatl, for whom the Indians mistook Cortez, the destroyer of their native culture, thinking that he was their hero returning. Elsewhere in primitive America the white man (but very briefly, since his acts soon betrayed him) has been thought a returning hero or divinity. With these ancient hero-gods of theirs some of the Indian peoples were prone to identify the Christ of the European religions.

The culture-hero idea is often more typically American than that of deity. After pointing out that 'gods are a conception that does not flourish among the American Indians,' in his sketch of 'Types of Indian Culture in California,' A. L. Kroeber says (p. 91 f.):

'The Indian substitute for the deity is the culture-hero. The god creates; by the introduction of character he can be differentiated, and the interaction of distinct deities makes god myths. The culture hero is a man; he is always alone. Where he occurs in several personages in one mythology, these are

only repetitions of one another. In North and South America he is the same. Now he is more heroic, dignified, even pathetic, a benefactor and teacher; now more inquisitive, enterprising, obscene, and ridiculous. It is a commonplace that his character varies between these qualities from episode to episode in the same mythology. But he is always a man in spirit, and he always stands alone in his world. He makes the world or re-makes it from existing earth brought him by an assistant animal; he does not create it. He changes individual men, co-existent with him, to animals; he does not create the world's animals and plants. He does not create man, but finds and helps him. He is the one and the only possible character of American mythology; he is the Indian himself in his nakedness.'

Of course, there are exceptions to this general statement, but Kroeber remarks that 'even those specific cases that are exceptions usually rest on a wider basis that conforms with the conditions here described' (p. 92).

2. **Human heroes.**—The child as hero and hero-god among the American Indians has already been touched upon (see art. CHILDREN [American], vol. iii. p. 525). Much valuable information concerning human heroes in the mythology of the N. American Indians will be found in Lowie's monograph on 'The Test-Theme' (*JAFI* xxi. [1908] 97-148), where the conclusion is reached that 'a majority of North American test-tales have human heroes and a human setting' (p. 132). He remarks further (p. 134):

'So far as the tales related of sun and moon are concerned, far-reaching similarities distinguishing them as a group from human folk-tales cannot be detected. Solar and lunar heroes are human beings named after, or somehow identified with, sun and moon.' Again (p. 132): 'The test-theme, in its fundamental ideas, the imposition of a difficult or dangerous task and a mutual or competitive trial of strength, is evidently derived from human experience.'

Among the test-themes noted by Lowie in N. American Indian tales are the following:

Flight to the sky, snapping-door, tests by cruel relatives spine-seat, wedge test, capture of animals, fights with animals, striking trees, *vagina dentata*, sweat-house, fire ordeal, trials of strength, trip to the under world, pushing hero down a precipice, attempt to drown hero, falling trees, hero swallowed by clam, fish, etc., hero sent to get berries in winter and like errands, imitation of host, killing monsters, etc.

Lowie discusses briefly, under the head of hero-tales, these types:

Western 'transformer' myths, myths of the Californian Maidu, 'lodge-boy' and 'thrown-away' cycle (Plains Indians, etc.), Pueblo twin myths, rabbit-cycle (Ponka, Menomini), blood-clot cycle (Blackfoot, Pawnee, Dakota, Arapaho, Gros Ventre), star-boy (Crow, Pawnee, Dakota, Arapaho, Kiowa, Gros Ventre, Blackfoot).

Details concerning some of these heroes will be found in Grinnell's *Blackfoot Lodge Tales* (1903) and *Pawnee Hero Stories and Folk-Tales* (1899); G. A. Dorsey's *Pawnee Mythology* (1906), *Mythology of the Wichita* (1904), *Traditions of the Arikara* (1904); G. A. Dorsey and A. L. Kroeber's *Traditions of the Arapaho* (1903).

Among the Plains tribes the 'poor boy' seems to be a common and favourite hero in folk-tales. With the Arikara, as with the Skidi Pawnee, according to Dorsey (*Trad. of Arikara*, p. 6), 'the poor boy . . . is the culture-hero, while Coyote, the great transformer of the Northwest, takes a very inferior part.' The chief heroes of this sort among the Caddo are Star-Boy, Sun-Boy, and Burnt-Hands—the last the Burnt-Belly of the Skidi Pawnee. Similar heroes are the following, in one way or another: the Wintun (California) Boy-dug-out-of-the-ground, Micmac Spring-Boy, Gros Ventre Found-in-the-grass, Bellacoola and Chilcotin Salmon-Boy, Cherokee Boy-with-scrofula, Ponka and Menomini Rabbit, etc.

According to Boas (*JAFI* xvii. [1904] 2), 'the most striking feature of Eskimo folk-lore is its thoroughly human character,' and 'with the exception of a number of trifling tales and of a small number of longer tales, the events which form the subject of their traditions occur in human society as it exists now.' Stories telling of the feats of animals are rare, and animal-stories proper may have been borrowed from the Indians by the Eskimos. This opinion as to the rarity of animal stories among the Eskimos is not, however, shared

by Radin (see art. ESKIMOS, vol. v. p. 393), who assigns a larger rôle to animal actors in Eskimo legends. Bogoras, who has made a comparative study of the folk-lore of north-eastern Asia and that of north-western America, informs us (*Amer. Anthropol.*, new ser., iv. [1902] 605) that 'the general character of the Chukchee and Eskimo tales is quite alike, and the chief topics on both sides of Bering Sea are about the same.' Hero-children and human heroes are common in both. The prevalence of human heroes in the folk-tales of the South American Indians (see art. CHILDREN [American]) will doubtless appear when we know more about this rather neglected field of primitive mythology, and the characters interpreted as personifications of sun and moon are revealed in their true nature, as has been the case with so many figures in the mythology of the northern continent.

3. Typical heroes and culture-heroes. — The Aztec Quetzalcoatl, the Mayan Itzamna, the Chibchan Bochica, and the Quechuan Viracocha have been discussed at considerable length by Brinton in his *American Hero-Myths, Myths of the New World*, etc., and by more recent authorities. They are fairly comparable with some of the great culture-heroes of the Old World. The deeds that they accomplished include the cleaning up of the monster-ridden world, the establishment of society and human civilization—all things, from making the earth fit for mankind to making mankind fit for the new earth. As in the Old World, so in the New, their memory is connected alike with the Paradise that once was and with that which is some time again to come. Besides such great figures as these there are scores of others less majestic and less attractive.

Concerning the culture-heroes of some of the tribes of the North-west Pacific Coast, F. Boas says (*Indianische Sagen*, p. 339):

'What gives the traveller (or wanderer)-tale its character, in this region, is the sharp distinction of the culture-deity from the "Eulenspiegel." Neither the Ojika of the Chinook, nor the Ojika of the Coast Salish, the Kumsanotl of the Comox, the two Travellers of the Nootka, nor the K'angiyalik' of the Newwetes play, in connection with their culture-mission, such tricks as do the Raven in northern British Columbia, the Glooscap of the Micmacs, the Manabozho of the Ojibwa, the Napi of the Blackfeet, the Coyote of the tribes of the southern Rocky Mountains, or the "Boatman" of the northern Athapascans.

Such tricks are not entirely lacking, but are transferred to different animals or other beings, such as the Bluejay among the Chinook, the Mink and the Raven among the Coast Salish, Comox, and Newwetes, as Kwotiah, the Mink, and the Raven among the Nootka. The Shuswap have not made so sharp a distinction, and, through their influence, the separation is not so clear among the Fraser River tribes as among the other Coast peoples. The separation is clearest among the Coast Salish and the Bliquia. The Coast Salish of Puget Sound have likewise not carried out the distinction.'

Boas has also discussed the question of the hero and the transformer in his Introduction to Teit's 'Traditions of the Thompson River Indians of Brit. Col.' (*Mem. Amer. Folk-Lore Soc.* vi. [1898] 1-12).

The general character of the hero-myth of the Californian aborigines is briefly sketched by A. L. Kroeber in his art. on 'The Religion of the Indians of California.' The primary feature of the mythologies of the Indians of the north-western part of the State is 'a very deeply impressed conception of a previous, now vanished, race, who, by first living the life and performing the actions of mankind, were the producers of all human institutions and arts as well as of some of the phenomena of nature'; while second in importance are 'myths dealing with culture heroes more or less of the trickster type familiar from so many other parts of North America' (p. 343). In central California, where there 'is always a true creation of the world, of mankind, and of its institutions,' the creator seldom has 'tricky exploits or defeats' attributed to him—such things belong to an antithetic secondary creature, usually the Coyote. In the

northern half of the central area, however, 'the creator is generally anthropomorphic; if not, he is merged into one personage with the more or less tricky Coyote.' In southern California appears the long origin-myth of a thoroughly south-western and Pueblo character. The mythology of the southern part of California resembles that of the south-west rather than that of the rest of the State. As Kroeber notes (p. 344), the mythology of the north-western region of California 'shows affinities to the North Pacific Coast in its prevalence of the culture-hero and trickster over the creator.'

The Maidu of northern central California furnish us with Kodoyanpe (Earth-Namer, or Earth-Maker), a transformer-creator type; also Onkoito, 'a supernaturally born destroyer, conqueror, and avenger.' The northern Wintun conception of Ollebis 'shows a developed and a lofty conception of a creator,' while among the southern Wintun 'there is little antithesis between creator and Coyote in the creation myth.' In the mythology of the Shasta, Coyote is both creator and trickster, although the resemblance to the mythology of the north-western area is not very great. The Klamath (or Lutunami) K'mukamtech, or Old Man, 'is not the "good creator" of the Maidu Wintun, Yuki, and Wishok; he is deceitful, with the character of the typical culture-hero trickster.' In many things, indeed, he suggests the Algonkian Manabozho.

The Ojibwa Nanibozhu or Nanabozhu, the Mississauga Nanibozhu or Wanibozhu, the Santeux Ojibwa Nenaboj or Nanabush, the Ottawa Nana-bozhu, the Menomini Manabozho or Manabush, the Nipissing Nenaboj, all correspond to the Cree Wisaketchak, and, more or less, to the Blackfoot Napi or Napiu, the Micmac Glooscap, etc. The stories of the deeds and exploits of this hero-god, who figures in the creation-myth and the deluge-legends of these Indians, who taught them many of the arts and inventions, and who sometimes deceived as well as helped them, have been correlated and discussed by Chamberlain (*JAFI* iv. [1891] 193-213). The most detailed account of some of the deeds of this Algonkian culture-hero is given in W. J. Hoffmann's article and monograph on the Menomini Indians (*14 REEV*, pt. i. pp. 3-328). The culture-hero of the Sacs and Foxes (also Algonkian) is Wisa'ka. A contest with the manitous appears in the story of Wisa'ka recorded by Jones (*Fox Texts*, pp. 336-379), which includes the flood-legend:

'The theme of the following story is the struggle of the culture-hero to subdue the manitous and make the world ready for the people who are to come after. It is the most sacred myth of the Foxes; and with the Saks it is the myth on which rests the *midwinwin*, a religious society which preserves the most sacred forms of religious worship. It is in two parts: first, the struggle of the culture-hero with the manitous, in which the death of his brother, the flood, and the defeat of the manitous are the leading events; second, the pacification of the culture-hero by the manitous, and the restoration of peace, preliminary to setting the world in order for a home of the people' (p. 336).

This subjugation of the manitous is also one of the labours of Manabozho or Nanabozhu among the Ojibwas, etc. The culture-hero myth of the Sacs and Foxes has been recorded by Jones (*JAFI* xiv. [1901] 225-239). After preparing the earth for mankind and driving off the manitous, who had sought to destroy him, Wisa'ka proceeded as follows (p. 237):

'Wisa'ka then created the people, making the first men and the first women out of clay, that was as red as the reddest blood [hence the Indian name of the Foxes, *Maskwa* K'igwi, 'Red-Earths']. And he made them after the race of his mother. He taught them how to hunt, and he taught them how to grow food in the fields; he taught them all kinds of sports, and he taught them how to live peacefully with one another; he taught them how to sing and dance and pray, and he taught them all manner of other good things.'

Then he left the people, going away to live in

the north, but promising to return one day to take them to their new home in the west, where they were to dwell for ever with their kindred who had gone before them. Wisa'ká is represented as being ever youthful. The culture-myth relates in detail 'the divinity's benevolent acts toward men, his teaching the people the way to live, and his preparation for them of a home after death in the spirit world.'

In his *Fox Texts* (1907) Jones published (pp. 228-379) a number of stories of the culture-hero Wisa'ká, concerning whom he observes (p. 228):

'The stories to follow are typical of that mass of narrative in which the culture-hero moves, now as a buffoon doing tricks to others and having them done to him, and now as a benefactor and as an altruistic character. Sometimes he is peevish and whimpering, like a spoiled child, and stoops to acts most degrading for the accomplishment of an end; and again he rises to the dignity of a wise, all-powerful deity. He is almost always represented as dwelling with his grandmother, whom the Foxes symbolize as the Earth.'

In one instance only is Wisa'ká referred to as having wife or children. In some of his difficulties his grandmother comes to his aid. He comes to grief often in trying to imitate his host (e.g. skunk or duck); he accepts challenges, and thereby becomes a victim of his own foolishness.

Of Glooscap, the culture-hero of the Micmac and closely related Algonkian Indians of Maine, New Brunswick, and Nova Scotia, Charles G. Leland says, in *The Algonquin Legends of New England* (p. 2), that, while he is an appalling giant in his contests with huge monsters and other creatures,

'in the family circle he is the most benevolent of gentle heroes, and has his oft-repeated little standard jokes. Yet he never, like the Manabozho-Hiawatha of the Chippewas, becomes silly, cruel, or fantastic. He has his roaring revel with a brother giant, even as Thor went fishing in fierce fun with the frost god, but he is never low or feeble.'

He informs us further (p. 13) that 'Glooscap is always a gentleman.'

Edward Sapir ('Wishram Texts,' *Publ. Amer. Ethnol. Soc.* ii. [1909] p. xi) says of one of his Indian informants, who is 'theoretically a Methodist,' but in mind-content 'to all intents and purposes an unadulterated Indian,' that

'he implicitly believes in the truth of all the myths he narrated, no matter how puerile or ribald they might seem. Coyote he considers as worthy of the highest respect, despite the ridiculous and lascivious sides of his character; and with him he is strongly inclined to identify the Christ of the whites, for both he and Coyote lived many generations ago, and appeared in this world in order to better the lot of mankind.'

Other culture-heroes are recorded from the various American Indian tribes, besides the 'transformers' of the North Pacific coast region treated of by Boas, in his *Indianische Sagen* (1895), and in the mythological data of the Jesup Expedition, published by the American Museum of Natural History (New York), and besides the cycle of animal and bird heroes and semi-heroes of the Pacific slope, such as Raven, Blue-Jay, Coyote, and Mink. The following may be mentioned:

Kiamath K'mukantch; the 'Old Man' of many western tribes of North America; the Hidatsa Itampias; the Mandan Numuckmuckonah; the Arapaho Nihangan; the Cherokee Wasi; the Cheyenne Vihuk; the Tarascan Curicaberis; the Central American Kukulkan and Votan; the Moxo Arama; the Guayano Abangul; the Tupian Carubung; and Maire Monan; the Pareasi Usale; the Guayuru Karakura; the Bakairi Kamushini; the Carayan Kabol; the Arawakan Kamu; the Guaraní Tamoi; the Izí of the tribes on the Uaupes; the Guaranan Aboye.

Some brief details concerning many of the South American heroes and culture-heroes will be found in Ehrenreich's *Die Mythen und Legenden der südamerikanischen Urvölker* (Berlin, 1905).

4. Culture-hero, clown, deceiver.—In an article on 'The Hero-God of the Algonkians as a Cheat and a Liar,' published first in the *American Antiquarian* in 1885 and then again in his *Essays of an Americanist* (1890, pp. 130-134), D. G. Brinton called attention to the curious fact of the attribution to certain culture-heroes of the Algonkian

Indians of the characteristics of trickery, deceit, lying, and clownishness of various sorts. This was illustrated from the name of the culture-hero of the Micmacs, Glooscap (*Glus-gahbe*, 'juggler with words,' 'word-breaker,' 'deceiver'); and a similar meaning was said to attach to the Cree *Wisaketchák*, the analogue of Glooscap with this western Algonkian tribe. Speaking of Michabo, to whom innumerable tricks are attributed, Brinton says (*Essays of an Americanist*, p. 133):

'Michabo does not conquer his enemies by brute force, nor by superior strength, but by craft and ruses, by transforming himself into unexpected shapes, by cunning and strategy. He thus comes to be represented as the arch-deceiver; but in a good sense, as his enemies on whom he practises these wiles are also those of the human race, and he exercises his powers with a benevolent intention.'

'Thus it comes to pass that this highest divinity of these nations, their chief god and culture-hero, bears in familiar narrative the surprising titles—"the liar," "the cheat," and "the deceiver."'

In *The Myths of the New World*, however, Brinton gives another view of the matter, as follows (p. 194):

'In many of the tales which the whites have preserved of Michabo he seems half a wizard, half a simpleton. He is full of pranks and wiles, but often at a loss for a meal of victuals; ever itching to try his magic arts on great beasts and often meeting ludicrous failures therein; envious of the powers of others, and constantly striving to outdo them in what they do best; in short, little more than a malicious buffoon, delighting in practical jokes, and abusing his superhuman powers for selfish and ignoble ends.'

'But this is a low, modern, and corrupt version of the character of Michabo, bearing no more resemblance to his real and ancient one than the language and acts of our Saviour and the Apostles in their coarse Mystery Plays of the Middle Ages do to those recorded by the Evangelists.'

That some of the Indians under Christian influence may have turned to ridicule their old gods is quite possible. J. A. Cuq (*Lex. Algonq.*, Montreal, 1886, s.v. 'Wisakedjak,' p. 443), e.g., says:

'The word *Wisakedjak* is now employed only derisively by Christian peoples. With them, *Wisakedjak*, like *Nenabujo*, is about synonymous with monkey (*ringé*) in a figurative sense. Thus, it is said of anybody who imitates what he sees done, "He is a *Wisakedjak*."

J. D. Prince, in his introduction to *Kulóskap, the Muster*, says concerning *Kulóskap* (Glooscap), the culture-hero of the Micmacs, Passamaquoddies, and Penobscots (p. 33):

'Kulóskap (Klókábe) is a god-man of truly Indian type who undoubtedly represents the principle of good, and particularly good nature, as opposed to his twin brother Malsum the Wolf, who may be called the Abrahim of the Wabanaki, although this is almost too dignified a term.'

He remarks further (p. 34):

'The tendency of Kulóskap, in spite of his name, was essentially benevolent. Oddly enough, Kulóskap means "the liar," from a stem *k'ásk*, "lie" + *ap*, "a man, person, one who stands." . . . This appellation, uncomplimentary as it sounds to our ears, was not really meant in this sense by the Indians. Kulóskap is called "the deceiver" not because he deceives or injures man, but because he is clever enough to lead his enemies astray, the highest possible virtue to the early American mind.'

This explanation is much the same as one put forward by Brinton; but, even if it did explain (it hardly does so satisfactorily) the name of the culture-hero, in his capacity of 'deceiver,' it fails to account for the clownish actions, ridiculous escapades, and mean and despicable things attributed to him. Nor does it take fully into account the rather numerous occasions on which he is completely outwitted, e.g., in the contest with the baby, with certain animals, and even with trees.

Clark Wissler, in his 'Mythol. of the Blackfoot Indians' (pp. 8-12), discusses the character of the culture-hero of these Indians and his relations to the other figures of their mythology. Of Old Man, or Napiw* (the Napi of various other writers), we are informed (p. 9):

'That the Blackfoot formerly had a well-defined creation-myth, in which the Old Man took the initiative in producing and transforming the world, is indicated by several writers. Those noted above give more or less in detail a running account of the peopling of the earth and the instruction of mankind in the art of living. While these incidents do not occur in detail

In the Old Man myths recorded in this paper, they are occasionally implied. Such origins are at present often assigned to the Old Man without the formality of a myth.

It will be noted that the greater part of the tales collected by us recite the absurd, humorous, obscene, and brutal incidents in the Old Man's career. No ritualistic or ceremonial practices appear to be based upon any of these narratives, though it may have been otherwise in the past. On the other hand, connected with them are the suggestions of origins for many aspects of material culture, such as the buffalo-drive, the making of weapons, methods of dressing skins, etc. A considerable number of places and topographical features were associated with his adventures; as Old Man's River, Tongue Flag River, Old Man's Gambling-Place, Old Man's Sliding-Place, Rolling-Stone Creek, etc. In fact there seems a tendency to give all of his adventures a definite location in Alberta.

Wissler says further (p. 9):

'For several decades at least, the Blackfoot have considered the Old Man as an evil character, in most respects trivial, who long ago passed on to other countries. Whenever the writer asked if the Old Man was ever prayed to, the absurdity of the question provoked merriment. The usual reply was, that no one had enough confidence in him to make such an appeal. In daily conversation his name is often used as a synonym for immorality. However, it must not be implied that he is regarded as an evil spirit. His name is especially associated with things obscene, and pertaining to sexual immorality. I have heard the Piegan say that So-and-so "must be trying to be like the Old Man; he cannot be trusted with women."'

It is quite probable that here, as with other Indian tribes, the culture-hero has suffered from the same disposition seen among civilized peoples of the present day to attribute actions of a certain character to their heroes and great historical figures. Wissler, therefore, seems quite justified in his statement (p. 10):

'We have occasionally noted a tendency to assign modern obscene anecdotes to this character, and it may well be that many of the tales long attributed to him have been accumulated by the laws of association. The unfortunate human tendency to appreciate keenly the humour in such anecdotes seems sufficient to account for their survival and accumulation long after belief in and respect for the Old Man as a creator, teacher, and transformer has passed the verge of extinction.'

Taking everything into consideration, Wissler inclines to the opinion that certain Old Man myths 'are survivals from a much larger group constituting the ancient basic beliefs of the Blackfoot,' and that 'there has been a disintegration of the creative and cultural origin myths concerning Old Man.' To-day the Blackfoot make Napiw* (the Old Man) and Natos (the Sun) different characters, the former secondary. According to Wissler, the Blackfoot and the Crow 'culture-heroes' are closer together than the Blackfoot and those of the Arapaho and Gros Ventre. Those of the Blackfoot, Crow, and Arapaho seem all, however, to be 'entirely human,' with no traces of any animal qualities. W. McClintock, in his *The Old North Trail*, gives much space to Old Man and the myths about him (pp. 337-348). He says concerning his character (p. 337 f.):

'The character of Old Man, as revealed, even in the more serious of these myths, is a strange composite of opposing attributes, of power and weakness, of wisdom and passion, of benevolence and malevolence. He associated intimately with the birds and animals. He conversed with them and understood their thoughts and language, and they understood him. Although believed to be the creator of all things, and as having omnipotent power, he was often helpless in trouble and compelled to seek the aid of his animal friends. He was, in fact, like an animal in his instincts and desires, which, strange to say, were exercised in conjunction with his supernatural power.'

The power of Old Man was 'uncontrolled by reason, and wanton in its exercise,' and 'he was a deceiver and a trickster and his name was a synonym among the Blackfeet, at least in later years, for mischievous and immoral adventure' (p. 338). Of some of the Old Man myths, McClintock remarks (p. 337) that they 'are samples of Indian humour, told as we tell fairy tales and using Old Man for their central figure.'

Many of the myths relating to Old Man among the southern Piegans of Montana have been published by C. C. Uhlenbeck in his *Original Blackfoot Texts* (1911) and *A New Series of Blackfoot Texts* (1912). Uhlenbeck styles Napiw* (or Napi) 'a trickster-hero.'

Robert H. Lowie, who was among the Chipewyan Indians (of Athapascan stock) about Lake Atha-

basca in 1908, reports ('Chipewyan Tales,' 1912, p. 173) that 'the Wisaketcak myths were becoming part and parcel of Chipewyan folk-lore.' He remarks further:

'While the Cree name of the hero was the only one used by my informants [Chipewyan Indians, or Indians of partly Chipewyan and partly Cree extraction] and was said to have no Chipewyan equivalent, there were indications that Wisaketcak was being brought into close relation with other Chipewyan characters of older standing. Thus, Francis Fortin regarded Wisaketcak as one of three brothers, the others being Crow-Head and Spread-Wings. While the other two always remained with the Chipewyan, Wisaketcak lived alternately among the Cree and the Chipewyan. However this may be, the Wisaketcak cycle of the Cree was certainly very well known among the Chipewyan and part Chipewyan at the time of my visit.'

The Wisaketcak myths obtained from the Chipewyan Indians are given on pp. 195-200, and are of the 'Wisaketcak was travelling' type. This passing over of an Algonkian cycle of myths into the mythological *fond* of the Athapascan Chipewyan is a most important fact in comparative folklore; it suggests the possibility of similar occurrences elsewhere in primitive America.

The correspondents of the Algonkian Nanabozho and similar characters in the mythology of the Siouan stock have been discussed by J. O. Dorsey (*JAFL* v. [1892] 293-304). These are Mactciŋge (the Rabbit), Ictinike, his great enemy, and Haxige (nearer to Ictinike than to the Rabbit). Other minor figures of like import are 'The Orphan,' 'Wears-a-plume-in-his-hair,' and 'Badger's Son.' In character and in exploits Ictinike and Haxige both resemble Nanabozho very much, many of the incidents in the legends about them being identical.

Of the Iroquoian Tawiskaron, J. N. B. Hewitt (*HAI* ii. [1910] 709) says:

'In concept Tawiskaron* is so closely identical with the mythic personage called Chakekenapok in Algonquian mythology, a younger brother of Nanabozho, that they may be treated together.'

And of Ioskeha, or Teharonhiawagon, the brother of Tawiskaron, and the great Iroquoian culture-hero, corresponding to the Algonkian Manabozho or Nanabozho, he says (*op. cit.* p. 719) that, in everything but minor details, he is identical with the conception of Nanabozho. According to Hewitt (*op. cit.* p. 19),

'Nanabozho is apparently the impersonation of life, the active quickening power of life—of life manifested and embodied in the myriad forms of sentient and physical nature. He is therefore reputed to possess not only the power to live, but also the correlative power of renewing his own life and of quickening and therefore of creating life in others. He impersonates life in an unlimited series of diverse personalities which represent various phases and conditions of life, and the histories of the life and acts of these separate individualities form an entire cycle of traditions and myths which, when compared one with another, are sometimes apparently contradictory and incongruous, relating, as these stories do, to the unrelated objects and subjects in nature. The conception named Nanabozho exercises the diverse functions of many persons, and he likewise suffers their pains and needs. He is this life struggling with the many forms of want, misfortune, and death that come to the bodies and beings of nature.'

Teharonhiawagon has by some been erroneously identified with Hiawatha, who seems to have been a real human being, a famous Iroquois lawgiver of the 16th cent. (see *HAI* i. [1907] 548); and Longfellow's so-called 'American epic,' which bears the title *Hiawatha*, is really concerned with the story of the Ojibwa hero-god Manabozho, whom the poet confused with the Iroquoian Hiawatha, believing both to be the same mythical being, following in this the mistaken ideas of Schoolcraft and others of his informants.

5. Twin-heroes and culture-heroes.—The appearance of heroes and hero-gods as twins, older and younger brothers, or a group of brothers (varying from three to seven) is common in primitive America—and the twins are often said to be born of a virgin-mother. Some of the most important culture-heroes appear at first as one of twins, etc., but soon the minor brother or brothers vanish from the story, lose their lives, or in some way become

of little or no account henceforth. Sometimes the twins or two brothers represent a conflict, one standing for good, peace, and the like, the other for evil, war, etc.; sometimes also this fraternal strife begins in the womb of the mother before birth (as with the Iroquoian Good Mind and Bad Mind), and the eagerness of the stronger and more impetuous to be born kills her. A characteristic Algonkian culture-hero, Wisa'kă, of the Sacs and Foxes, is represented to have been the eldest son of Gishă Mun'etôa, the greatest of all manitous, who lived in the days when the earth was peopled with manitous. Jones (*JAF* xiv. [1901] 225) says:

'Now the elder of the two sons [the great manitou had four] was Wisa'kă, and the younger Kujă'pă'taha. They were different from all children before them, for, even when very young and small, they were mightier manitous than those who were older than they. And, the older they grew, the stronger they walked in their might as manitous. The manitous beheld the growing might of the two boys, and became jealous.'

But it is the elder brother who becomes the culture-hero and friend of mankind. The predominance of the elder brother characterizes many other Indian myths.

The twin hero-gods of the Zuñi are Ahaiyuta and Mătsailăma, spoken of as older and younger brothers, and 'accounted immortal twin youths of small size.' Their deeds are detailed by Cushing in his 'Zuñi Creation Myths' (*13 REEW*, 1896) and *Zuñi Folk-Tales* (1901). They are also styled 'the twin gods of war,' and are looked upon as the 'right-hand' and 'left-hand' beings of the sun. A. L. Kroeber found 'the myth of the miraculous twins and war leaders' among the Uinta Utes of the Shoshonean stock in north-eastern Utah (*JAF* xiv. [1901] 252). A characteristic South American twin myth is the Bakairi story of Keri and Kame; the former, wiser and more powerful than the latter, is, according to K. von den Steinen (*Die Bakairi-Sprache*, Leipzig, 1892), the chief hero in the legends of these Indians. The names now borne by these heroes are those of the sun and moon, and, curiously enough, it is the weaker, and not the stronger one, who has the name of the sun.

Among North American twins, brother-pairs, etc., may be mentioned the following:

Noakana and Masmasalanik among the Wikeno of British Columbia; the Two Brothers of the Déné (Athapascan); the Thunder Twins of the Californian Tachi Yokuts, and Miwok (much elaborated by the Yuki); the Klamath or Lutamian Marten and Weasel; the Pensanto and Onkoito of the Californian Maidu; the Algonkian Manabozho and Chokanipok (also Miennac Glooscap and Malsum); the Iroquoian Ioskeha and Tawiskaron; the Navaho Tobadizini and Nayenezgani; the Zuñi Ahaiyuta and Mătsailăma.

From Mexico and Central America may be cited:

Quetzalcoatl and his three brothers, among the Aztecs; the Hun-Hun-Ahpu and Yukub Hun-Ahpu and Hun-Ahpu and Xbalanque of the Mayas; the Two Brothers (Twins) of the Guaymal of Costa Rica.

From South America the following:

Amaliwaca and Vochi among the Tamanacos of Venezuela; Tamendonare and Arikute among the Brazilian Tupis; Karu and Rairu among the Mundurucús; Tiri and Karu among the Yuracac; the two sons of Abuangui among the Guaranos; Pachacamac and Vichama among the Yunkas; Apocatequil and Figueroa among the Guamachuco; Keri and Kame among the Cariban Bakairi.

The legends concerning these heroes embody a great variety of incidents—co-operation, opposition, adventure, strife.

6. Re-incarnations of the hero-gods.—In the literature relating to the conflict of the Indian peoples of America with the white man, the 'Messiah movements,' the 'Ghost-Dance religion,' etc., we meet with references to beliefs in the return of the ancient divinities and culture-heroes, for the purpose of driving out the white intruders and restoring the land to the red man, in all its pristine beauty and fertility. This is sometimes a feature of the 'new religions' of the American Indians, recently discussed by Chamberlain (*Journ. Relig. Psychol.* vi. [1913] 1-49). Among the Ojibwa,

e.g., the 'prophet' Tenskwatawa (a Shawnee settler of a 'new religion,' in 1805-1812) came to be looked upon as an incarnation of Manabozho. The revolt of the Mexican Zapotecs in 1550 was led by an Indian priest, who declared himself to be an incarnation of Quetzalcoatl.

After the departure of the culture-hero, some Indians, according to the legends of not a few tribes, succeeded in making their way to his far-off abode. Leland (*Algonq. Leg.*, 1885) records (pp. 94-103) two Miennac tales of the men who went to Glooscap for gifts, and Jones (*Fox Treats*, pp. 332-337) gives the Fox Tale of how 'The Red-Earths went to where Wisa'kă was.' Upon this story he remarks (p. 332):

'This narrative is but another version of a familiar story known to other Algonkin tribes. It is the account of the visit of four men to the culture-hero at his distant home, and of how each obtained what he asked for. The visit is supposed to have taken place long after the culture-hero had departed from this world. It is not stated in the text, but the place of the home is at the frozen north.'

In the Miennac story the departed Glooscap is represented as dwelling in a land of magic and of beauty.

7. Interpretation of heroes and hero-gods.—Both in his *The Myths of the New World* and his *Essays of an Americanist*, and in other writings as well, Brinton sought to interpret the culture-heroes of the American aborigines as personifications of light, dawn, etc., calling to his aid, not infrequently, Max Müller's 'disease of language' theory. The Algonkian *Michabo*, the 'Great Rabbit,' was a light-god, because of the relationship of *wabos* (i.e. 'white one'), the term for 'rabbit,' and *wăban* (also from the root *wăb*, 'white'), the word for 'dawn'; and *Manabozho* was disposed of in a similar manner. The Iroquoian *Ioskeha*, Aztec *Quetzalcoatl*, Mayan *Itzamna*, Cilleban *Bochica*, Peruvian *Virarocha*, and many other figures, he made out to be essentially the same. The often-occurring contest of two brothers or of the twins, as, e.g., the Iroquoian *Ioskeha* and *Tawiskara*, the Algonkian *Manabozho* and *Chokanipok*, he explained as the contest of light and darkness. The culture-hero is, as was sung of Itzamna, 'son of the mother of the morning,' or 'born in the east.' To cite Brinton's own words (*Amer. Hero-Myths*, p. 29):

'The most important of all things to life is Light. This the primitive savage felt, and, personifying it, he made Light his chief god. The beginning of the day served, by analogy, for the beginning of the world. Light comes before the sun, brings it forth, creates it, as it were. Here, the Light-God is not the Sun-God, but his Antecedent and Creator.'

This is somewhat different from the solar and lunar theories of hero-myths revived in recent years, in particular by Frobenius and others, and shared also by Ehrenreich, in his monograph on general mythology (p. 233), where he identifies 'culture-heroes' with the sun, the moon, and Venus; in his special treatment of South American myths (*Myth. und Leg. der südamer. Urvölk.*, p. 24), he says of 'the so-called culture-heroes' that 'they all bear more or less the character of sun or moon beings.'

As noted above, the unsatisfactory character of the naturalistic theory for the explanation of American hero-tales and hero-myths has been pointed out by Lowie, who emphasizes their interpretation on grounds of human experience. Not more successful than the solarists and the lunarists are the Freudian school of psycho-analysts, with their *outré* dependence upon sex and sex *motifs*. One outgrowth of Freudianism in this field is Otto Rank's *Der Mythos von der Geburt des Helden* (Leipzig, 1909). Wundt's conception of the hero as 'a projection of human wishes and hopes' may perhaps hold without either the solar-lunar basis of Frobenius-Ehrenreich or the more pathological substrata of the Freudian school. Here, as else-

where, the explanation from normal humanity is always the best.

ALEXANDER F. CHAMBERLAIN.

HEROES AND HERO-GODS (Babylonian).

—The amount of material furnished by the native inscriptions, Berosus, and the Greek writers who deal with Bab. mythology indicates that the literature treating of this subject was exceedingly extensive. Moreover, not only are the narratives which have been handed down attractive and entertaining; they also reveal to us the opinions of the more cultured Babylonians concerning the origin of created things, the relationship of the gods to men, and the limit of the power of both, to say nothing of the fancies and the inventive power of their minds; and the stories of their hero-kings are probably, in certain cases, not without a historical value.

I. BABYLONIAN HEROES MENTIONED BY BEROSUS.—1. Alorus and five of his successors.—After Oannes came forth from the sea (the Persian Gulf) to teach the people, there ruled Alorus, 'the shepherd of the people,' for 10 *sari* (36,000 years). Afterwards came Alaparus (see below, III. 1, 'Adapa') for 3 *sari* (10,800 years). He seems to have been regarded, like the next, Amelon or Amillarur, who reigned for 13 *sari* (46,800 years), as a native of Pantibibla, probably Sippar, in the province of Agadé. The fourth mythical king was Ammenon (in Sumerian probably *En-men-nunna*; see below, III. 3), who reigned for 12 *sari* (43,200 years). In his time came the Musarus Oannes (? *O-anna*, 'luminary of heaven,' possibly the sun), or Annedotus, half man and half fish, from the Persian Gulf. The fifth ruler was Megalarus (Metalarus), also of Pantibibla, who reigned for 18 *sari* (64,800 years). The sixth reign was that of Daos or Daonos, the shepherd of Pantibibla, who ruled 10 *sari* (36,000 years; see below, IV. 3, 'Tammuz'). In his time four composite beings, Evedeas (Sumerian *En-we-dugga*), Enugamos

(? Sumer. *En-we-gan*), Enubulus, and Anementus, arose from the Persian Gulf.

2. Euedoreschus.—With the seventh name we have a clearer historical personage, Euedoreschus (*En-we-dur-an-ki*, possibly 'the lord of the word binding heaven and earth'), also of Pantibibla. Berosus relates that in his time another Annedotus, called Odakon (cf. Sumer. *Utuki*, a name of the sun-god), or Apodaphos, arose from the sea. The British Museum tablet K. 2486 calls En-we-dur-an-ki 'king of Sippar, . . . beloved of Anu, Bel, and Ea, . . . whom Samaš and Addu (Hadad) had placed on a golden throne.' He was a diviner, versed in all sacred things, and the perfection of his person served as a model for all who aspired to the priesthood after him.

3. Amempsinus, Opartes, and Xisuthrus.—The eighth ruler was Amempsinus of Larancha, who ruled for 10 *sari* (36,000 years), but of this personage nothing more is known. The ninth, however, was of much greater note, being none other than Otiartes (a scribe's error for Opartes, the *U(m)bara-tutu* of the Flood-legend). The Gr. text describes him as being of Larancha, but the Flood-story in the Legend of Gilgameš seems to make him a native of Surippak, now Fara, on the Euphrates. He ruled for 8 *sari* (28,800 years), and was succeeded by his son, Sisithrus or Xisuthrus (*Hasis-attra*, Bab. *Atra-ḥasis* transposed), 'the exceedingly wise.' This is simply a title which was given to Bab. heroes, and the patriarch's name seems to have been *Ūt-napištim* (*Ūta-naīštim* in the Gilgameš-legend discovered by Meissner). Xisuthrus ruled 18 *sari* (64,800 years). He probably passed for the greatest of all the mythical kings of Babylonia.

The most complete account of the Flood and the end of the great Bab. hero who figured in it is probably that given by Berosus, as quoted by Alex. Polyhistor (see *ERE* iv. 553^a). The fullest account of his life, however, was probably that known as the legend of 'Ea and Atar-ḥasis' (a variant form of *Atra-ḥasis*). Unfortunately the mutilation of the text renders the sequence and bearing of the events which it records exceedingly doubtful. A series of years up to 7 are mentioned in which distressing things occurred among the people (cf. Gn 6^a 11-13), parents and offspring being unnatural towards and suspicious of each other. There was scarcity of water and corn, and children were not brought forth. Owing to this, Atar-ḥasis appealed to the god Ea, on the second occasion setting up his abode at his door. Ea, however, took no notice, and the cries of the tormented people rose on high, troubling the god Enlil; so various sicknesses were sent among them, silencing their complaints. This apparently gave Atar-ḥasis opportunity for a fresh appeal, and the god this time answered, but the text is too mutilated for the sense to be gathered.

In the considerable gap which occurs at this point, it is not improbable that the intention of the gods to send a flood upon the earth is announced. If so, the Pierpont Morgan fragment (Scheil, *RT* xx. [1897]) probably gives the text. Though exceedingly mutilated, there appears to be a conversation between Ea and the patriarch, whom the former seems to advise to ask (the other deities), 'Why wilt thou kill the people?' Whether the Hilprecht fragment (see *ExpT* xxi. [1909-10] 364 ff.) belongs to this legend or not is doubtful, but seems not improbable. The announcement of the intention of the deity to bring a flood is given in detail, with directions as to the construction of the ark. Another doubtful fragment—that found by G. Smith and known as *D(aily) T(elegraph)* 42 (T. G. Pinches, *OT in the Light*, London, 1903, p. 117)—also covers this section of the story, and contains part of *Atra-ḥasis*' reply concerning the building of the ship.

From this point onwards the text is wanting until the last column of the large British Museum tablet (K. 3399+3934), which refers to 14 pieces of clay, out of which seven beautiful males and females were created by the goddess of generation, Mami (*bēlit ūti*, 'the lady of the gods,' also called Aruru, the creatress). These lumps of clay would correspond with the stones which the hero of the Flood and his wife threw behind them in the legend of Deucalion's flood (*ERE* iv. 554). Concerning the death of Atra-hasis nothing is known.

Such were the hero-kings of Babylonia until after the great Deluge; and, notwithstanding the fact that the Babylonians believed in their historicity, there is no doubt that they are wholly mythical—though historical personages of later date may have been transferred into that remote past which the Babylonians pictured to themselves so clearly. It is doubtful whether the first kings after the Flood can be looked upon as more historical, but it is to be noted that the successor of Xisuthrus or Atra-hasis—Evekhous, Evekhoos, Euexius, or Eutykhios, who reigned for 4 *neri* (2400 years)—is identified by Syncellus with Nembrod (Nimrod), and the latter, if really Merodach (IV. 2, below), was the first great Bab. hero-god, the beginning of whose kingdom was Babel, etc. (Gn 10⁹). He is said to have been succeeded by his son Khomasbelus, who reigned 4 *neri* and 6 *sossi* (2700 years).

II. THE BABYLONIAN HERO-KINGS MENTIONED IN THE NATIVE INSCRIPTIONS.—1. Gilgameš.—Gilgameš was, in all probability, the first important hero after Merodach, and may be the Khomasbelus who succeeded Merodach. The full form of his name seems to have been Gibilgameš, and his capital was Erech (*Uruk supuri*, 'Erech of the enclosures'). The legend concerning him covered 12 tablets, and was, therefore, of considerable length. Unfortunately, there are many lacunæ. Gilgameš is described as having been 'two-thirds god and one-third man'; and, as no being seems to have existed with whom he could associate on equal terms, Aruru (see *ERE* ii. 643^b, v. 723^a), who had created him, formed a man in his likeness—the sage Enki-du (Ea-ban), who dwelt in the wilds among the beasts of the earth. Enticed to Erech, Rêmut-Bêlti, the mother of Gilgameš, tells her son that Enki-du is to be his companion, and he accepts him at once.

Gilgameš and Enki-du go together on an expedition against Humbaba, the Elamite, whose head they cut off. Later, the renown which Gilgameš had acquired attracted the attention of Ištar, the goddess of Erech, who wished to espouse him. Notwithstanding her divinity, he had a very low opinion of her morality, and rejected her advances with reproaches. Angered, Ištar complained to her parents Anu and Anatu, and a divine bull was sent down to overawe the hero and avenge the goddess. Undismayed, Gilgameš and Enki-du killed the animal, over whose remains Ištar and her maidens lamented. Probably owing to Ištar's hostility, Gilgameš was smitten with an incurable malady, and he also had the misfortune to lose his friend Enki-du. In despair, Gilgameš roamed about the world seeking to have his friend restored to him, and to find relief for himself. Many were the people whom he met, and the wonders which he saw, and he arrived at last, accompanied by Sur-Sanabi the boatman, at the place to which Ut-napištim (Xisuthrus or Atra-hasis [see above]), the Bab. Noah, had been translated, there to dwell for ever after the Flood.

After an account of the calamity (*ERE* iv. 550^b, 551^a) and Ut-napištim's explanation that he had attained immortality as a reward for his faithfulness, certain ceremonies are performed which

restore the hero to health. Later, when on his way back, he finds and loses a plant which would have given him the life and youth which he sought. Bemoaning his loss, he reaches Erech, and takes measures for the restoration of its walls. The exceedingly imperfect 12th tablet details the raising of his old companion, Enki-du, who describes to him the state of the good and the wicked after death. The last days and death of Gilgameš are not referred to. (For other details, see *ERE* ii. 315 f.)

As handed down, the legend of Gilgameš appears as the life-history of a great and energetic ruler. H. C. Rawlinson, however, thought that the 11th tablet of the series, with the story of the Flood, corresponded with the 11th zodiacal sign, Aquarius; and the creation of Enki-du in the likeness of the hero might be held emblematic of the constellation of the Twins. In its present condition, however, the story does not lend itself to satisfactory analysis, at least from the astral point of view.

Whether the infant Gilgameš, son of Sevekhoroš, thrown from a tower, and caught by an eagle (*Ælian, de Nat. Animal.* xii. 21), refers to Gilgameš or Gibilgameš is at present uncertain.

2. Azag-Bau.—Though a woman, this ruler seems to have been looked upon as worthy of hero-fame. According to the chronological list published by Scheil (*CABL*, Oct. 1911; *Expt* xxiii. [1911-12] 306, 308), she had been a wine-seller, and is said to have founded the city of Kiš, of which she became queen, perhaps on account of her vineyards and presses being there. The length of her reign is given as 100 years. As in the case of Sargon of Agadé afterwards, events of her reign are quoted in the omen-tablets.

3. Sargon of Agadé.—This ruler, whose name in Bab. is Sarru-kin, was the great royal hero after Gilgameš. His autobiographical legend states that his mother was a priestess or devotee (of some deity), and that he knew not his father (who had possibly visited his mother without making himself known to her). After the child had been brought forth in a secret place at Azupirānu on the Euphrates, his mother placed him in a little basket-ark made water-tight with bitumen, and set him afloat on the river. Carried by the stream to Akki the libation-priest, he became his adopted son. How he attained royal rank is not known, but he had a long and renowned reign. The omens from his reign state that he crossed the Eastern sea, and conquered all the lands of the West. Besieged, during a revolt, in his capital Agadé, notwithstanding his advancing years he made a sortie, and defeated his foes. After this he subjugated Subartu, and made the boundaries of Agadé equal with those of Babylonia. He probably died in consequence of the anxieties due to a famine.

4. Narām-Sin.—This was a ruler hardly less renowned than his father, Sargon. He conquered all the regions around the State of Agadé—Apirak, Subartu, Media, Elam, Tilmun (Bahrein and the W. coast of the Persian Gulf), Magan, and Meluhha, capturing, in all, 17 kings, with 90,000 troops. Unfortunately, less than a sixth of the inscription dealing with his reign is preserved.

5. The historical and deified hero-kings.—Though the exploits of Azag-Bau, Sarru-kin, and Narām-Sin may be largely legendary, those of the deified kings Dungi, Būr-Sin, Gimil-Sin, Libit-Ištar, Eri-Aku (or Arad-Sin), Rīm-Sin, Išmē-Dagan of Isin, and the apparently non-deified Nebuchadrezzar I. are well within the range of history. Colophon-dates and contemporary inscriptions show that they carried on campaigns, performed ceremonies, and worked for the welfare of their people by digging irrigation-channels,

administering justice, and building temples. The records of heroic deeds on their part are, it is true, wanting, but a fragment, whose colophon contains the name of Dungi, gives an account of his pious works, implying that such were preferable to deeds of prowess on the battle-field. Libit-Ištar, too, although 'his weapon prevailed greatly,' enjoyed as much renown because he set up some monument 'for the admiration of multitudes of people,' and his sacrifices and prayers seem to have been acceptable to Enlil, the old patron-deity of Nippur.

In the case of Nebuchadrezzar I. (c. 1120 B.C.), the historian compares him with a lion and with the god Hadad, and his great men with lions' cubs. Finding his country wanting in prosperity, he prayed to Merodach for Babylon and his temple E-sagila; and success against Palestine (Amurru) and Elam was promised him—success which, as we know from the historical inscriptions, was realized. The glory of his namesake of later date, surnamed the Great, is known to all. Had the Bab. nation continued its career as an independent State, there is little doubt that the two Nebuchadrezzars would have figured with equal renown among its great and royal heroes.

III. OTHER LEGENDS OF HEROES FROM THE NATIVE RECORDS.—I. Adapa.—This hero is described as having possessed all the wisdom of Anu, the god of the heavens, as well as that of Ea, in whose city, Eridu, he dwelt. He bore the title of *nubātinnu*, which seems to indicate one who had the preparation and distribution of sacred food. He was also a fisherman of that city, which in his time lay on the shores of the Persian Gulf.

While he was sailing out one day, the south wind came and sank his vessel, and Adapa found himself in 'the house(s) of the fish.' He threatened to break the wings of the wind, and this was forthwith accomplished. For a week the south wind did not blow, to the annoyance of the god Anu, who summoned the wind and Adapa before him. Ascending to the heaven of Anu, Adapa saw there at the god's door Tammuz and Giš-zida, two deities who had disappeared from the earth. Adapa explained to Anu why he had broken the south wind's wings, and these two deities, speaking for him, appeased the wrath of Anu, who, however, was displeased with Ea for having thus caused to be revealed 'the heart of heaven and earth' to a man. The food of life was now offered to Adapa, but he refused to eat of it, explaining that he was acting in accordance with the instructions of Ea. He had apparently declined to eat it, however, under the impression that it was the food of death. Seemingly as a compensation for the loss, rule over the people of the earth was conferred upon him; and it may be supposed that, like Atrahasis, he attained immortality in the end at the hands of his own god, Ea. It has been suggested that Adapa is the *Adapros* of Berossus, written for *Adaparos*; but the *r* would, in that case, seem to be intrusive.

2. Etana and the Eagle.—This legend is also exceedingly imperfect. At a time when there was no king upon the earth, and apparently not even the insignia of royalty, Ištar, seeking a ruler, had come upon Etana, whose wife expected a child, destined by the gods to govern the earth. The birth, however, was retarded, and Etana sought a remedy for this delay—the divine 'herb of bearing,' which it was thought that the eagle would be of use in obtaining. This bird, unfortunately, conceived a desire to eat the young of the black serpent, and, having descended to carry out this intention, had his wings broken by the enraged reptile. The eagle having been in the end healed, Etana, clinging to its body, attempted to

reach the throne of Ištar, who is elsewhere called 'the mother of those who bring forth.' That giddy height, however, they seem not to have attained, as Etana refused to be carried so far, and they descended to earth again. How the legend ends is uncertain, but the attempt may have been successfully repeated, or the coveted herb may have been acquired in another way.

3. Other legends.—Numerous other legends existed, but in many cases the titles (first lines) are all that remain. Among these are '[The legend of En-men?-nanna' (probably Ammenon [see above, I. 1], the fourth pre-historic hero-king), by Enlil-ban-kudurri son of Hu-meme; and 'the legend of Si-du,' by Si-du the ancient (apparently an autobiography). 'The legend of Lidlil, the sage,' of which fragments are extant, is rather a philosophical work, treating of the miseries and the disappointments of life, than the story of a hero.

IV. BABYLONIAN HERO-GODS.—1. Enlil and Ninlil.—The story of these deities is contained in a bilingual composition of unusual beauty. Enlil and Ninlil are described as the youthful hero and handmaid of Dur-an and Nippur (identified with the Calneh of Gn 10¹⁰), and dwelt there, as well as in Dur-gišimmar, 'the date-palm fortress,' with its holy river, its food-store, well of sweet water, and holy brook. Therein Ninlil had the comfort of her mother Kiel-azaga, and the protecting goddesses of the holy streams made the water flow. After a gap, the text seems to speak of the ceremonial entrance of Enlil and Ninlil into Nippur, when unclean or undesirable things were to be sent forth therefrom. On their approach, Enlil calls to the gate-keeper announcing the lady Ninlil's coming, and admonishing him not to reveal her (Ninlil's) abode. Repeating his call, Enlil says:

Man of the great gate, man of the lock—
Man of the bolt, man of the holy lock—
Thy lady Ninlil cometh,
The handmaid so bright, so shining.
Let none woo her, let none kiss her—
Ninlil so bright, so shining.¹

From a kind of catch-line, it would seem that Enlil entered the city to pronounce certain decisions, but the second tablet, which would give the sequel, is wanting. For details of this deity, see *ERE* ii. 310¹; also 6 and 7 below.

2. Merodach.—Though not the oldest of the deities of the Bab. pantheon, Merodach is the most important from the present standpoint, on account of his probable human origin. The full form of his name was *Amaruduk*, 'the steer of day,' i.e. the sun in his growing strength. It is noteworthy that one of his Semitic names is *Nūr-ūi*, 'light of the god (? of day),' and the character by which this is represented was read as *Asari*, compared with the Egyptian Osiris. (In cuneiform, as in Egyptian, it is composed of the signs for 'city' and for 'eye.') He was also one of the gods designated by the character for 'king,' in Sumer. probably *Lugal*, and in Sem. Bab. *Šarru* and the above-named *Nūr-ūi*.

Concerning Merodach's earthly kingship we know nothing, but the royal title may refer either to that or to his heavenly authority. In consequence of the hostility of Tiamat (cf. *ERE* iv. 129), the gods decided to destroy her and her brood, but none of them had the courage to attack so terrible an adversary. Merodach, therefore, offered himself; and, aided by the powers which the gods bestowed upon him, he succeeded in overthrowing her, imprisoning her followers, and dividing her body (*ib.* 129^b). Installed as king of the gods in consequence of this great service, Merodach reconstructed the universe, and created mankind and all living things (see also *ERE* ii. 314^a, iv. 232).

¹ Cf. *HYMN* (Babylonian).

Other legends concerning Merodach are lost, but one of them, beginning, 'When Merodach was in Sumer and Akkad,' may have referred to his earthly existence. Another was 'The record of Merodach, the glorious lord, who was placed over the heavens,' by Gimil-Gula. For Merodach in his divine character, see *ERE* ii. 311 f.

3. The legend of Tammuz.—The descent of Istar into Hades, to bring back *Dumu-zi(da)* or Tammuz, the 'husband of her youth,' proves that the Babylonians had the legend in a similar form to that in which it was known in Syria. There is no inscription, however, dealing with the cause of his premature death, so that we are in doubt whether it was regarded by the Babylonians as having been due to 'the bear's task of winter' or to some other cause. His release by Istar from the domain of Eres-ki-gal, or Eres-e-gal, is one of the most noted productions of Bab. literature (see *ERE* ii. 313, 315^b).

4. The myth of Ura.—In this we have the legend of a seemingly purely divine hero, without any suspicion of human origin such as attached to Merodach and Tammuz. Ura (or Ira) seems to have been so called as 'the perfect one' (*[gitma]u* [*Cuneif. Texts*, xii. 13, 446]); but, as the ideograph with which the name is written is that for 'servant,' perfection of service (to the gods, or to the universe) may be intended. In the inscriptions, Ura appears as one of the forms of Nergal, the god of war, famine, plague, and destructive things in general.

In the legend, Anu, the god of heaven, gives Ura seven evil spirits to support him when prompted to 'kill the dark-heads' (mankind), and smite down the beast of the field. In a dialogue between Ura and I-sum (a destroyer like himself), the destruction wrought in Bab. cities is referred to—that at Babylon, which caused Merodach to utter 'an unloosable curse'; and at Erech, whose goddess, Istar, was moved to wrath. Ura justifies himself, and shows his impartiality by stating that he has not spared Dêr, his own city. Secure in his own justice, Ura speaks of further punishments which he intends to inflict, and I-sum promises to follow in his footsteps, whereat Ura is pleased, and finds his words 'as finest oil.' It is thought that they were not going to spare even the king of the gods, Merodach, himself. In any case, civil war was to ravage the seacoast, Mesopotamia, Elam, the Kassites, the Suttites, the Qutites, and the Lulubites; land would not spare land, or house house, or brother brother, but they would kill each other, until the Akkadian came and overthrew them all. I-sum turned, however, first against Saršar (the Amorites), destroying the mountain of the land and its vegetation. Ura was also engaged in this work; and, when he rested, all the gods bowed down to him. He then explained to them that he had destroyed mankind on account of former sin, and he seems to ask why he should make a difference between the just and the unjust more than the others. He would favour those who glorified him and sang his praises.

5. Nergal and Eres-ki-gal.—These deities were the king and queen of the under world, the former being the hero-god Ura under his more familiar name. The legend relates that the gods made a feast; but, as Eres-ki-gal was not allowed to ascend to them, they requested her to send a messenger to receive her portion. This she did, and all the gods except Nergal stood up when the messenger entered. This enraged Eres-ki-gal, who sent and demanded that the deity who had thus failed in politeness should be delivered up to her. Nergal tried to escape his doom by hiding behind the other gods, but was discovered, and sent down to Hades with fourteen companions.

Leaving these last to guard the fourteen gates of Hades, he entered, seized Eres-ki-gal, and dragged her from her throne to cut off her head. Begging for mercy, she offered to become his spouse, and was accepted. Kissing her, and wiping away her tears, Nergal granted whatever she had asked of him 'for months past.'

6. Enlil, Tisapak, and the Labbu.—Here we have a legend which seems to supply something similar to the stories of combats with dragons in the Middle Ages. The people of the land (? Babylonia) sighed and complained on account of a giant-serpent (*muš-gula*) which plagued them, and which Enlil had designed in the heavens. Its length was 60 leagues, and it had members in proportion. Who, it was asked, would kill this creature, and save and rule over the wide land? Apparently the god Tisapak (Ninip as god of lustration) volunteered, and was ordered to go. The imperfection of the record leaves us in doubt whether it was he or another deity who accomplished the dragon's overthrow; but this was done by holding up before the creature 'the seal of life,' and its blood flowed (from a wound) for 3 years, 3 months, 1 day and 10 (?) [hours?]. Hrozný regards the Labbu as typifying the mists at sea—which seems probable (cf. *ERE* ii. 315^a).

7. Zû the storm-bird, and the Tablets of Fate.—Though told at some length, this legend needs but few words. A deity seems to have sent Zû, so that he saw 'with his eyes' the Tablets of Fate, and, coveting Enlil's power, decided to take possession of them, mount his throne, and rule the *Igigi* (gods of the heavens). Taking advantage of the moment when Enlil was performing his daily ablutions preparatory to mounting his throne, Zû seized them, and flew to the security of his mountain. Enlil being thus rendered powerless, Anu, the god of the heavens, addressed himself to the gods and goddesses, asking them to get them back. All, however—Anu's son Addu (Hadad), his daughter Istar, Bara, Istar's child, and others—seem to make excuses, and are ordered not to go. After this Nin-igi-azaga (Ea as god of deep wisdom) speaks to Anu, and it seems possible that he volunteered, but after this the text is wanting.

The narrative is possibly continued in what seems to be another version, known as 'The outwitting of Zû.' In this (a bilingual document) Lugal-banda (? Nergal as the fighting-cock) goes forth to the distant mountain of Sabu 'to do to the bird Zû what was right.' He would allow Zû's wife and son to sit down to their meal, and, with the aid of the wise woman Siris (wine), prepare an intoxicating drink. The text here is wanting, but in all probability the ruse was successful. Who it was who rose from Zû's nest, and made an unknown place in the mountain his refuge, is uncertain.

The possible meanings of the legends.—Notwithstanding the simplicity of these legends of heroes and hero-gods, there is apparently in each of them some hidden teaching, concerning either the early kings of Babylonia, or the gods whom they worshipped, or the dealings of those gods with men—kings, heroes, or the people in general; and in some cases it is clear that attempts were made to reconcile the seeming hardships, meted out to the innocent and the guilty alike, with the existence of the beneficent deities whom the Babylonians worshipped. There seems also to have been the desire to reconcile the different beliefs which prevailed from time to time in Babylonia—the discarding of Enlil in favour of the milder rule of Ea, and that, again, for the divine direction of 'the merciful Merodach.' In these cases, the older deities (their names are practically records of the supremacy, at the time of their greatest influence, of the cities of which they were the chief patrons)

seem to have been classed, by the majority of the population, with those who, like Nergal the plague-god, or Addu (Hadda) the storm-god, brought misfortune upon men. Thus it comes that Enlil, 'lord of the air,' leads the gods who wish to destroy mankind by means of a flood, and forms the *Labbu*, or, according to Hrozný, mist-dragon. In like manner, the really malevolent deities, like Ura (Nergal), or the demon of the south wind, destroy mankind by means of the powers of Nature, and Ereš-ki-gal (Persephone) exacts the presence of Tammuz in the under world, producing winter and its sterility.

LITERATURE.—To the works mentioned under BABYLONIANS AND ASSYRIANS (vol. ii. p. 319) may be added T. G. Pinches, *The Religion of Babylonia and Assyria*, London, 1906, and the articles 'Gilgames and the Hero of the Flood,' *PSBA*, 1903, pp. 113 ff., 195 ff., 'The Bab. Gods of War and their Legends,' *ib.* 1906, pp. 203 ff., 270 ff., 'The Legend of Merodach,' *ib.* 1908, pp. 53 ff., 77 ff., 'Istar,' *ib.* 1909, pp. 20 ff., 57 ff., 'Enlil and Ninlil,' *ib.* 1911, p. 77 ff.

HEROES AND HERO-GODS (Chinese).—

As might be expected in the case of a people with so long an existence, the Chinese nation has produced many persons who, on account of their pre-eminence in some admirable quality, may rightly be called its heroes, and whose names are preserved in its national tradition and history. Moreover, local tradition and the system of local records have preserved the fame of many others who, though not attaining to the rank of national heroes, have a restricted celebrity. As tradition and history thus supply heroes, so the religious conceptions of the Chinese easily allow their transformation into gods.

The famous names in ancient Chinese history, back to its semi-mythical period, have been revered by the whole nation under its successive dynasties, and through all its political vicissitudes. Such names are to-day still appealed to, and must be to some extent a living force both in public and in private life. To Hwang Ti, whose reign is dated 2697 B.C., is attributed much of the beginning of Chinese polity, and for this reason it was proposed to date the Republic from his era. Yao (2356 B.C.) and Shun (2255 B.C.), virtuous monarchs of antiquity, are professed by the President of the Republic as his ideals; and in the sphere of private life a popular tract exhorts one to behave as if he beheld Yao in the pottage and Shun on the wall. These examples of heroic personages are taken from the most ancient times, and the long course of Chinese history supplies the names of many others which, being sufficiently well known to be appealed to hortatively, may be called heroic. The fame of some of these has been preserved by the salt of some pithy saying, as in the case of Yang Chên (A.D. 124), famous for his integrity, who refused a secret bribe, saying, 'Heaven knows it, Earth knows it, you know it, I know it; how can you say that none will know it?' Others have a vogue in proverbial allusion, such as Chang Ch'ang (53 B.C.), who, on the eve of unmerited disgrace and dismissal, being jeered at by an enemy as 'Prefect for but five days,' summarily vindicated his rapidly expiring authority on the person of the offender, so that the jeering phrase survives as a classical allusion to unslacking fulfilment of office. Others, again, find a place in one of those numerical categories under which the Chinese are fond of grouping men and things worthy of note, e.g. 'the Three Good Men of the Yin dynasty' (1130 B.C.), or 'the Four Sages' (Shun, Yu, Chow Kung, and Confucius). In addition to those thus commemorated in national history and literature, there are the more numerous worthies peculiar to each locality.

Many of these worthies, whether of a general or of a merely local fame, remain exemplars only.

But in accordance with what is called, perhaps not quite accurately, the animistic strain in the religious conceptions of the Chinese, it may be said that they all either are or might become objects of worship, and take rank therefore as gods. Of those who have already attained divine honour, some have been raised to it by popular opinion; in the case of others, their divine rank has been conferred or recognized by Imperial decree. Thus, the reputed inventors of some of the fundamental arts of Chinese civilization—Tsang Hieh, inventor of writing, the empress Si Ling She, of silk-worm rearing, K'i, of husbandry—are deified. The being everywhere worshipped as Genius of the Soil figures in history as one of the ministers of Hwang Ti. The fourth of the ministers of the same emperor has been 'metamorphosed into one of the controlling spirits of the universe, and regarded as the god of fire' (W. F. Mayers, *Chinese Reader's Manual*, no. 87). A skilled mechanician has become the god of carpenters. The case of Kuan-u well illustrates the way in which a hero becomes a god. A warrior of the era of the Three Kingdoms, famous for fidelity to his chief and for martial prowess, he was finally captured and beheaded by his enemies (A.D. 219). His name was handed down as that of a martial hero. Canonized under the Sung dynasty (12th cent. A.D.), he continued to receive additional honours, until in 1594 (Ming dynasty) he was raised to the rank of Ti, or god, and has ever since been worshipped as the God of War, being regarded with special favour by the late Manchu dynasty. Similarly, the Guardians of the Doors, depicted so frequently on the two-leaved doors of Chinese buildings, are historical characters of the 7th cent. A.D. They are said to have guarded the apartment of their emperor; and his commemoration of their fidelity by having their portraits painted on his doors was the first step which led to their enjoyment of divine honours. As an example of a heroine raised to divine rank, we may take Ma-tau. A girl of Fokien, sitting with her mother spinning, went into a trance, in which she saw the boat capsize in which were her father and her two brothers. In the anguish of her affection she seized with each hand one of the drowning persons, and held up the third with her teeth. Unfortunately, her mother roused her, and she opened her mouth to reply. The facts correspond to what was done in trance: the two persons grasped by the girl's hands were saved; the third was lost, owing to the untimely opening of her mouth. Such is the story which lies at the basis of the worship of this girl as Ma-tau, patron goddess of sailors.

In addition to those nationally, or at least very widely, recognized as divine, there are, as has been said, many others in whose case a local celebrity has culminated in a local worship. Thus, to give one example: in a village not far from Chao Chow Foo there is a temple and image in honour of a herd-boy, much sought after in times of drought, the idol being carried in procession and worshipped alike by mandarins and people. Of this herd-boy it is believed that in his lifetime he was able, by the waving of his bamboo sun-hat, to draw rain from heaven. His cult is quite local.

Regarding such hero-worship generally, it may be noted that it is somewhat capricious in the selection of its objects. If all heroes are possible objects of worship, still only some attain that dignity. None of the heroes of the Three Kingdom era enjoys such divine honours as Kuan-u. Moreover, the worship of any particular person may be early or late in its rise, and it is subject to ebb and flow in its popularity. Near Swatow there has arisen within recent years an extensive cult in honour of a monk, who, partly by supernatural means, gave to the district a much-needed bridge.

This cult, which has already somewhat declined in popularity, is recent, though the monk who is its object lived so long ago as the Sung dynasty. On the other hand, a worthy may begin to be worshipped even during his lifetime (cf. J. J. M. de Groot, *The Religion of the Chinese*, New York, 1910, p. 64). Of such worship it may be noted also that it is largely non-ethical. Its objects were distinguished, no doubt, by some excellent quality; but in being raised to divine rank they are potentialized rather than moralized, although as supernatural beings (*shên*) they may, *ex officio* as it were, be supposed to enforce the sanctions of the current ethical code. Thus the warrior Kuan-u becomes the God of War, and the rain-producing herd-boy is appealed to as Rain-producer. But in popular tracts Kuan Ti appears also, not specifically as the God of War, but as promulgating the ethical precepts inculcated in these tracts, and his power of sending weal or woe is brought forward as their sanction.

HEROES AND HERO-GODS (Egyptian).—From Herodotus ii. 50 (ἡρώων οὐδὲν ἄν Αἰγύπτῳ οὐδ' ἡρώων οὐδέν) it might be inferred that the worship of heroes was unknown among the Egyptians. Yet he tells us elsewhere that they worshipped Herakles (ii. 42) and Perseus (ii. 91)—names which, it is true, can here apply only to Khonsu and Min respectively, i.e. to gods in the proper sense of the term. In the Hellenistic period, however, there was in Egypt a city which was actually designated 'the City of Heroes' (Ἡρώων πόλις). The Egyptian monuments likewise show that the religion of the country had really a place for the worship of personages who, as being deified men, must be designated heroes or hero-gods. Hence, if we are not to regard Herodotus as in conflict with himself and with facts, his words as quoted above must be taken to mean only that there was among the Egyptians no such cult of heroes as corresponded exactly with that found in Greece. In point of fact, the Egyptian deities who may be styled hero-gods do not, like the Greek heroes, occupy a position intermediate between gods and men. They are not demi-gods, but have become gods in the proper sense, and, in spite of the earthly residua that still adhere to them, were worshipped along with, and in the same manner as, real gods.

Before these heroes became gods, however, they too passed through a stage of semi-divine worship, which, as in the case of the Greek heroes, was associated with their tombs, and which may have developed from the ordinary cult of the dead to something in the nature of ancestor-worship. According to Egyptian beliefs, the 'spirits' of the departed stand midway between the gods and the king and queen (Hood Papyrus, published by G. Maspero, in *Études égyptiennes*, ii., Paris, 1893). Manetho, in one particular instance where he refers to the practice of ancestor-worship, calls them *rékves* *hulθeroi* (see below, I. 2). The Egyptians themselves, referring to the same practice, sometimes speak of those ancestral spirits as gods, just as they often apply the term 'god' to the semi-divine king. The line of demarcation between a real god and a deified human spirit is thus far from rigid.

As regards the heroes of the Greeks and other peoples, the question often arises whether the hero-gods worshipped by the people were originally men who had been promoted to divine honours by reason of their achievements, or were at first real deities to whom a human form and human experi-

ences came to be ascribed; or, finally, whether they are literary creations which, born of poetic fancy, found a footing in popular belief. But no such question can arise in the case of the Egyptian hero-gods, except perhaps in a single instance (II. 1 (1)). For, on the one hand, the Egyptian gods, invested with human activities and regarded as kings who ruled upon earth in the far distant past (as, e.g., the sun-god Rê, i.e. 'sun,' the earth-god Gēb, i.e. 'earth,' the hawk-shaped Horus, and his adversary, the animal-shaped Seth—both originally local gods), are in other respects so lacking in human traits that their divine nature cannot be doubted for a moment. Then, on the other hand, the Egyptian deities who may be called heroes or hero-gods are without exception deified men, a number of whom lived in the full light of history, and of whose earthly existence we in some cases possess authentic indications.

It is to be noted that the deification of human beings in ancient Egypt was of two kinds, viz. (1) general deification, which all who occupied a certain position in life, or suffered a particular fate, shared in an equal degree—*de jure*, as it were, and independently of any action on their own part, much in the same way as the fallen warriors of the Teutons were all admitted to Valholl; and (2) individual deification, which was attained only by individuals of special eminence. The latter class comprises those who, as akin in character to the heroes of Greek mythology, are the genuine hero-gods, who were always treated by the Egyptians as if they had been real gods; the former is composed of the semi-divine beings from whom proceeded the hero-gods.

I. **GENERAL DEIFICATION.**—1. It is a well-known fact that the Egyptians, from the earliest traceable period of their history, believed their kings to be embodied forms of certain gods—in incarnations like the bull Apis, the ram of Mendes, and the other sacred animals. The reigning king was regarded as 'Horus' (the national god of Lower Egypt in pre-historic times, and, later, of the whole kingdom), or as 'Horus and Seth' (the union of the ancient national deities of Lower and Upper Egypt respectively), or, again, as 'the two mistresses,' i.e. Eileithyia and Buto (the tutelary goddesses of the two divisions of the country in the final period of the pre-historic age). The deceased king, on the other hand, ranked as Osiris (by Heliopolitan doctrine the father of Horus), and under that conception ruled over the dead, just as, under the name of Horus, he had previously ruled, and as his son and successor now ruled, over the living. From the IVth dynasty onwards the king was accounted 'the son of the sun-god Rê,' who in the form of the previous king, his human father, was supposed to have begotten him of the queen (Maspero, 'Comment Alexandre devint dieu en Égypte,' in *Annuaire de l'école pratique des hautes études* [Paris, 1897]). In a later age, again, each god was regarded within his own province as the king's father. Accordingly the reigning king was styled 'the good god' (*ntr-nfr*), or, at an earlier day, 'the great god' (*ntr*!); from the XIXth dynasty the latter designation was applied to the deceased king. When the king's real father was not himself a king, he was called 'the father of the god' (*jf-ntr*, an expression authenticated from the XIIIth dynasty), and the worship at the king's tomb—the pyramid—was, even in the Old Kingdom (first half of the 3rd millennium B.C.), performed in a 'house of a god' (*ht-ntr*, i.e. a temple specially dedicated to him, and by 'servants of a god' (*hm-ntr*) and 'pure ones' (*w'eb*), i.e. priests, appointed for the purpose, precisely like the worship of the real gods; while the worship accorded to all other human beings, even

queens, after death was performed simply by 'servants of a genius' (*hm-k*), i.e. priests of the dead, and in 'a house of a genius' (*hm-k*), i.e. chapels of the dead.

It is nevertheless probable that the ancient kings of Egypt were not honoured with divine worship in their lifetime; at least we have no evidence of such worship. When the reigning monarch appointed one of his courtiers as a *hm-ntr*, i.e. 'servant of a god,' at his pyramid (J. H. Breasted, *Ancient Records of Egypt*, Chicago, 1906-07, i. § 307), this did not imply that the person so honoured was to act in that capacity during the king's life; on the contrary, the office, with its duties, honours, and emoluments, was conferred upon him—and probably also upon his descendants—in anticipation of the king's death, i.e. for the time when the latter should be worshipped as a departed spirit. The first of the Egyptian kings to have divine honours paid to them while still alive and in conjunction with their ancestors were the Hellenistic kings of the Ptolemaic period.

2. In Heliopolis, which in the pre-historic age was for a time the capital of the whole country, a species of ancestor-worship seems to have been accorded to the *manes* of the contemporary (pre-historic) kings. They were worshipped there as 'souls of Heliopolis.' Similarly, 'souls of Hierakonpolis' and 'souls of Buto' were worshipped in these cities, the respective capitals of the two States into which Egypt was eventually divided prior to the foundation of the historical centralized State under Menes ('the union of the two lands'). As these predecessors of Menes had, in particular, worshipped the god Horus, the latter two companies of spirits were known also as the 'servants of Horus.' Moreover, they are variously designated, according to the connexion, as 'kings,' 'spirits,' or 'gods.' In Manetho they are called *νεκρὸς* or *ψυλαί*. They are depicted as gods with a human body and an animal's head, exactly like the local fetish deities of the Egyptians; the souls of Hierakonpolis have the head of a jackal, those of Buto that of a hawk, and, accordingly, they are even spoken of as 'jackals' and 'hawks' respectively. From certain allusions in the texts it might seem as if, in earlier times (till 2000 B.C.), herds of jackals and flocks of hawks were kept in the two cities just named, and were regarded as incarnations of those royal souls.

See, further, K. Sethe, *Untersuchungen zur Gesch. und Altertumskunde*, iii. (Leipzig, 1901) 3 ff.; the same author in Borchardt, *Gedenkschrift des Säulens*, Leipzig, 1913, ii. 102 f.

The 'souls of Heliopolis,' wherever they are mentioned, seem to be treated exactly like gods, and are associated with Atum, the local deity of that city. The dynastic kings dedicate temples and other monuments to them, and speak of themselves as beloved by them. It is possible that the name Ἡρώων πόλις ('Hērōōpolis, Hērō'), by which the Greeks render Pithom, Παρθούμ, i.e. 'house of Atum,' the name of the city dedicated to Atum, bears a reference to these 'souls.' In such translations we usually find that, when they do not give the name of the god in question, as in the case of Διὸς πόλις, then they have the name of his sacred animal in the plural, as, e.g., Κυνῶν πόλις for 'House of Anubis,' and Κροκοδείλων πόλις for 'House of Suchos.' In the Greek rendering of Pithom given above, therefore, the Ἡρώες seem to take the place of the sacred animals.

3. After the fall of the Old Kingdom (c. 2400 B.C.) the identification of the dead with Osiris, which had been customary in the case of kings, was gradually extended to others—first of all to members of the royal family, then to the feudal nobility (who at that time also arrogated to themselves other privileges of royalty), and finally to

all human beings without distinction of rank. The logical result of this should have been that in the realm of the dead there existed rulers only, and no subjects. But in point of fact the attribute Osiris seems very soon to have lost its original force. The deceased N, who is called 'Osiris N,' was in no sense identical with the god Osiris, who continues as before to be king in the realm of the dead, and therefore rules over the 'Osiris N' also. The dead who are so designated worship Osiris, justify themselves before his judgment-seat, etc.

4. A special apotheosis seems in later times to have been accorded to those who were drowned in the Nile, probably because, according to the legend, Osiris had suffered a like fate. Those who died in this way were regarded as having been peculiarly distinguished by the gods, and were styled 'glorified' (*hšj*)—a term which at an earlier period appears to have been applied more generally to all the blessed dead (cf. *beati*). According to Herod. ii. 90, the bodies of the drowned were entombed with peculiar pomp (cf. Griffith, in *Zeitschr. für ägypt. Sprache*, xvi. [1909-10] 132).

5. That a cult of the deified high priests of Heliopolis and Memphis existed at Pathyris in Ptolemaic times is evidenced by a number of papyri (Griffith, *Catalogue of the Demotic Papyri in the J. Rylands Library*, Manchester, 1909, iii. 132, n. 9).

II. INDIVIDUAL DEIFICATION. — 1. Deified kings and queens.—(1) The earliest instance of this may have been Osiris. This deity, so highly honoured in later times, was in some remote age, as it would seem, a hero in whose person the idea of the unity of the Egyptian people came to be embodied: hence the myth of the dismemberment of his body and the distribution of the parts among the Egyptian nomes. He was regarded as having been a good and noble monarch, who was treacherously murdered, somewhat like the Siegfried of Teutonic mythology, and then restored to life by means of magic, though he did not resume his earthly existence, but lives on in the under world as king of the dead. He is always portrayed in a purely human fashion, with certain symbols of royalty which pertain to him alone among the gods—the Upper Egyptian diadem adorned with

two ostrich feathers , as also the scourge

, and the crook , the primitive emblems

of sovereignty. It is possible, however, that these symbols may have been transferred to him from an ancient local deity with whom he was subsequently identified (see below). In the earlier religious literature of the 'Pyramid Texts' Osiris very seldom plays an active part like the other gods. The theme of interest is, nearly everywhere in these texts, found in his experiences, his death, and his resurrection. What had happened to him would happen also to the deceased king, who is, in fact, generally identified with him.

The suffering Osiris, thus conceived of as purely human, was in his origin as little a god of vegetation or of the dead as was Christ, with whom he has many points of resemblance. He, too, founded a confessional religion of a personal and ethical stamp, which forms a most decided contrast to the numerous Egyptian local cults based on fetishism, as well as to the Nature-religions indigenous to Egypt from primitive times (worship of the sun, the sky, the Nile), and which in the course of centuries gradually extended its range, to some extent with a conscious rejection of other forms of religion (the mysteries, communal life).

The earliest triumphs of his cult must certainly go back to a very remote past. Even while Heliopolis was the capital of a united Egypt,¹ and when the Heliopolitan theology instituted the 'great divine ennead of Heliopolis,' he not only found a place in that group as one of the representatives of the past—beside the great cosmic deities (sun, air, sky, earth) and the national god of the southern kingdom of Upper Egypt, which had been overthrown by the kings of Lower Egypt, and was now subject to it—but he actually became the centre of the whole artificial system. He was made the son of the divine pair, Heaven and Earth.² Horus again, who, as the national deity of the dominant kingdom of Lower Egypt, represented the present, and therefore remained outside the ennead, became the son of Osiris. Seth, the god of the Upper Egyptian kingdom, and now the last member of the ennead, was branded as the slayer of Osiris, and the arch-villain who had been guilty of dismembering the kingdom. These two local deities, Horus and Seth, were originally of a purely fetishistic character, and had at first no more to do with the hero Osiris than had the cosmic deities who had come to be recognized as his parents. Thus the Heliopolitan theology was even then completely under the influence of the Osirian faith.

Osiris seems to have become the god of the dead (Khentamentin, 'the chief of the Westerners') and the god of Abydos only in the historic era, and probably in consequence of the deceased king's identification with him and of the fact that the tombs of the earliest historical kings (Ist and IInd dynasties) were situated at Abydos, the necropolis of This, their capital. It thus came about that the grave of Osiris was sought in Abydos, and was found among the ancient royal tombs there. The function of the god of the dead and the designation 'chief of the Westerners' were thereby transferred from the dog-shaped local god Anubis to Osiris (E. Meyer, in *Zeitschr. für ägypt. Sprache*, xli. [1904] 97). Between 2500 and 2100 B.C., in consequence of this development, Abydos became a pre-eminent centre of pilgrimage for all Egyptians.

If originally Osiris had no connexion with Abydos, he would seem to have had as little with his other sanctuary, situated in the Delta, and subsequently named Busiris ('House of Osiris') after him. Here, too, he either superseded or absorbed an older local god, the *natj* depicted as an idol in

the form . It was presumably from this deity,

who in the earlier religious literature is called 'the chief of the Eastern nomes' (of the Delta), and may perhaps have been the god of a small kingdom comprising these nomes, that Osiris acquired the symbols of sovereignty by which his images were distinguished in later times.

In Memphis, likewise, Osiris seems to have been identified with the fetish worshipped there, .

'the magnificent Ded-pillar,' as also with Ptah and Soker, only after the Old Kingdom was at an end. The violent death which, according to the legend, he met with in the waters of the Nile brought him into close relations with the sacred river itself. Like the Memphite Ptah, Osiris now came to be identified with it, and the idea of his resurrection fitted in with the annual inundation. His life and death were interpreted as referring to the

growth and decay of Nature. He thus eventually became the god of vegetation, from whose corpse the corn was supposed to spring.

(2) King Sesostris III. (1887-1850 B.C.), who completed the subjugation of Northern Nubia begun by his predecessors, and protected this new province of the Egyptian kingdom by the erection of fortresses, had already become a national deity in that district in the time of the New Kingdom, and, along with the ancient Nubian deity *Ded-wm*, was worshipped under his sacred name of *Kha'-kew-ré*, which denotes his relation to the sun-god *Ré* (the *Ré*-name). Thutmosis III. (1501-1447 B.C.), who, in similar fashion, completed the reconquest of Nubia begun by his own predecessors, erected in that country temples, and instituted sacrifices and festivals, for the deified Sesostris. The latter was thus treated altogether like a god, but he is portrayed and designated as an Egyptian king, exactly as in his lifetime.

See Lepsius, *Denkmäler*, Berlin, 1849-60, III. 48 ff.; Breasted, *op. cit.* II. § 167 ff., and *History of Egypt*, New York, 1906, pp. 186, 260, 317.

(3) King Amenemmes III. (1849-1801 B.C.), the builder of the so-called labyrinth near Hawara, at the entrance to the Fayyûm, became subsequently a tutelary deity of that oasis, for the economic development of which he (the Moris of Herodotus?) must have done good service. Under his *Ré*-name of *La-ma'-ré* (*Λαμαρίς*), in its abbreviated form *Ma'-ré* (*Μαρή*, *Μαρήης*, *Μαρήης*), or, with the addition of 'Pharaoh,' the later Egyptian term for king, as *Παραμαρήης*, *Πρεμαρήης*, he is frequently mentioned in monuments of the Græco-Roman period from the Fayyûm, and especially from the vicinity of his pyramid and his mausoleum (the Labyrinth). He is there depicted in the stereotyped attitude of the gods, except that his head is that of an Egyptian king and bears the royal head-band.

See further, Rubensohn, in *Zeitschr. für ägypt. Sprache*, xlii. [1905] 111 ff.; Spiegelberg, *ib.* xliii. [1906] 84 ff.

(4) Menes (c. 3300 B.C.), the deified founder of the Egyptian centralized State of historical times, is believed by Wilcken to be identical with the similarly named deity *Πραμηνίς* or *Φραμηνίς*, who is frequently mentioned in Greek papyri from the village of Tebtunis in the Fayyûm (Mitteis-Wilcken, *Grundzüge u. Chrestomathie der Papyruskunde*, Leipzig, 1912, I. 1. p. 106).

(5) King Amenophis I. (c. 1551-1535 B.C.), son of that King Amosis who expelled the Hyksos and founded the New Kingdom, was regarded, from c. 1300 B.C., as a guardian deity of the Theban necropolis. In that capacity he is often portrayed in tombs and collins of this period—mostly in the form of a reigning king, but with the scourge and crook, as borne by Osiris. In his honour was observed the festival of *Pa-amen-hotp* ('the [festival] of Amenophis'), from which the month of Phamenôth derived its name.

(6) Amenophis III. (c. 1415-1380 B.C.), whose reign seems to mark the zenith of Egypt's position as a world-power, instituted in his own honour a divine cult in the temple of Soleb, in Nubia, built by himself, his name here being 'Neb-ma'-ré', the lord of Nubia, or 'N. the great god.' In the sculptures which adorn the walls of this sanctuary, the god is depicted as being worshipped by the king himself, and is called by him 'his living image upon earth.' In the inscriptions, the king dedicates the temple to the god, and speaks of himself as being beloved by the latter. In short, Amenophis treats his deified self in every way as an independent divinity. The god is represented as a king wearing the royal head-band, but as having around his ears the twisted ram's horns peculiar to Amun in Nubia and in the Oasis of Ammon (Siwa), and upon his head a small crest

¹ About 1000 years before the dawn of the historical era, at the time when the Egyptian calendar was introduced (3242 B.C.).

² Heaven and Earth were formerly believed to be the parents of the sun-god *Ré*, but *Ré* is now at the head of the ennead and their grandfather.

(modius) bearing the moon's crescent and disk, as worn by the ancient lunar deities, Thoth of Shmun and Khonsu of Thebes. He thus comes before us as a fusion of Amun and Khonsu.

Cf. Lepsius, *II*, 85-87; Breasted, *Ancient Records*, II, § 893 ff.

In the Græco-Roman period, the king who thus deified himself in Nubia was identified with Memnon, the legendary king of Ethiopia who came to the help of the Trojans. His colossal statues in Western Thebes, which bore the name 'Neb-ma'-rē, lord of lords' (Lepsius, *III*, 142, 144; Burton, *Excerpta Hieroglyphica*, Cairo, 1825-30, p. 30), are the famous colossi of Memnon, one of which, after being overthrown by an earthquake in 27 B.C., used to give forth a resonant note at sunrise, until it was restored in the reign of Septimius Severus (Letronne, 'La Statue vocale de Memnon,' in *MAIBL* x. [1833] 249). Its association with the Memnon of Greek mythology can be traced back to the Ptolemaic period, and is, therefore, of earlier date than its property of emitting sounds. In Greek documents of the middle of the 2nd cent. B.C. the name *ῥα μεμνόμενα* is used of the locality called in Egyptian *Diēme*, the modern Medinet Habu, in which was situated not only the sepulchral temple of Amenophis III. with the two colossi in front of it, but also a great palace belonging to him.

It is evident, from various *quiproquos*, that the identification of Amenophis III. with the Greek Memnon is based upon his Rē-name, Neb-ma'-rē, which in that age was apparently abbreviated to Marē (Sethe, *Untersuchungen*, I, 61, n. 1; II, 6, n. 2). In the Babylonian letters from el-Amarna, dating from the king's own lifetime, his name is rendered by Nimmuria or Mimmuria, and its contemporary pronunciation may, therefore, have been something like Nemmāre' or Memmāre'. It is thus not inconceivable that the Greek mythical figure of the Ethiopian or Egyptian Memnon, whose name is not unlike the form just given, was in reality the final residuum of Egypt's three centuries' supremacy in the Eastern Mediterranean, which, as has been indicated, culminated in the reign of Amenophis III. Moreover, it is precisely the names of this king and his consort that are met with repeatedly on objects of Egyptian origin found at Mycenæ and in Rhodes.

Among the Semitic peoples, again—unless all the evidence is at fault—the memory of this monarch would seem to have survived in the traditions regarding Nimrod, the mighty hunter of Cush (i.e. Nubia); and, as a matter of fact, Amenophis III. in his memorial scarabs, which, like commemorative coins, were designed to keep in remembrance the important events of his reign, has recorded not only the expansion of his kingdom from Kari in Nubia to Naharen on the Euphrates, but also his prowess as a hunter of lions and wild oxen (Breasted, *op. cit.* II, § 860 ff.).

(7) A deified king of unknown name is found in the 'Pharaoh of Saut' (i.e. the Island of Bige), worshipped in the Græco-Roman temples of the Island of Philæ. In the temple sculptures he is represented as an Egyptian king with the so-called war-helmet on his head. In a Greek inscription from the Island of Sehel he is called *Περνεσίφης*, 'the god of Bige,' and is identified with Hermes (Sethe, in *Zeitschr. für ägypt. Sprache*, XLVII, [1910] 166).

(8) King Ptolemy Philadelphus gave orders that Arsinoë, his sister and wife, 'the goddess who loves her brother' (*Φιλάδελφος*), who died in 270 B.C., should be worshipped along with the local deities in all the temples of the country as *θεὰ σύνναος*, and that a tax of one-sixth of all garden-produce should be devoted to her cult. In the Fayyūm she became a nome goddess, and this fertile region was thereafter called the Arsinoite

nome. A temple of Arsinoë at Memphis is mentioned in the inscriptions of the Memphite high-priests in the Ptolemaic period. In the sculptures of the Egyptian monuments the deified queen appears as a purely human figure, but in the inscriptions she is styled 'daughter of Amun,' and 'Divine mother of the living Apis, the king of all the other divine animals.'

Cf. W. Otto, *Priester u. Tempel im hellenistischen Aegypten*, I. (Leipzig, 1905) 348; Mitteis-Wilcken, *Grundzüge d. Papyruskunde*, I, 2, p. 284; Sethe, *Urkunden d. ägypt. Altertums*, II. (Leipzig, 1904) 100 ff.

2. Deified individuals not of royal rank.—(1) I-m-hōtep (*Ἰμούθης*), chief architect to Tosorthros of the IIIrd Dynasty (c. 2900 B.C.), the king who built the step pyramid of Saqqara, the oldest edifice of hewn stone in Egypt, is said to have discovered the art of building with that material, but was renowned in later times also as a physician, an astrologer, and the author of wise writings. In the period of the New Kingdom, i.e. after 1580 B.C. (one instance found in Thebes under Amenophis III.), it was the custom with writers, in beginning their work, to make a libation from their water-bowl in honour of I-m-hōtep as their patron (Schäfer, in *Zeitschr. für ägypt. Sprache*, XXXVI, [1898] 147; Gardiner, *ib. xl*, [1902] 146). By this time, therefore, he seems to have become a kind of demi-god, and to have lost his human character.

Afterwards, in the Persian period (from 525 B.C.), he became a god in the full sense, who was specially concerned with healing, and was subsequently identified by the Greeks with Asklepios. His cult was attached to his tomb, which, according to Egyptian usage, was situated beside the Pyramid of his patron; and here stood the Asklepieion often referred to in Greek papyri from Saqqara. To this new hero-god, as being originally a Memphite deity, was assigned a divine father in Ptah (Hephaestus), in place of his actual father, Ka-nofer, who is known to us from a genealogy dating from the beginning of the Persian period. His mother, Khredu-onekh, and his wife, Konpet-nofret, were also raised to divine rank, and are often found in association with him. Their names and titles clearly reveal their human origin.

In the numerous statuettes of this god which have come down to us, and which were, no doubt, dedicated to his temple mainly by persons restored to, or in search of, health, he is figured as altogether human, as a learned man sitting on a chair and reading a book (A. Erman, *Ägyptische Religion*, Berlin, 1905, p. 174). We certainly have figures on the temple walls which, while still giving him a human form, show him in the attire and with the bearing of the gods, but these figures date only from the Græco-Roman period. In that age we frequently meet with his cult also in Upper Egypt, as, e.g., in Thebes and Edfu, as well as in Philæ, where Ptolemy Epiphanes erected a small temple in his honour.

Even after his apotheosis I-m-hōtep frequently receives, in addition to the epithet 'Son of Ptah,' expressive of his divine origin, his erstwhile human titles, 'reciting priest,' 'expert in affairs,' etc., but only in cases where the reference is to his achievements as a man in the remote past. It is worthy of note that here he is also designated as 'Ibis,' i.e. as the sacred bird of the god Thoth, who was believed to have the form of that bird—a designation which re-appears in connexion with the deified individuals discussed below (nos. 2 and 3). It would thus seem that the sages of the past who were subsequently exalted to divine honours were thought of as incarnations of the god Thoth, somewhat in the same way as was indicated in I. 2, above.

Cf. Sethe, 'Imhotep der Asklepios der Aegypter' (*Untersuchungen*, II, [1902] 98 ff.).

(2) A counterpart to this deified sage of old is met with in Theban temples on the left bank of the Nile dating from the Græco-Roman period, and also in funerary papyri of the same era. This is the famous Amen-hotp ('Αμενώτης, Αμενώψ), the son of Hapu, and a native of Athribis, who had won renown by a long and honourable career as a minister of the Amenophis III. mentioned above (II. 1 (6)). We possess several original monuments of him, as, e.g., a portrait-statue which represents him as an old man of eighty years, and the inscriptions on which contain moral apophthegms (*Catal. général du Musée du Caire*, no. 42127; Legrain, *Statues de rois et de particuliers*, Cairo, 1906, i. 78, pl. 76), while a second bears an autobiographical inscription (Breasted, *op. cit.* ii. § 913 ff.). A third statue, four metres in height, from the temple of Karnak, and now in the museum of Cairo, likewise contains an ostensibly autobiographical record, which, however, presupposes his deification, and speaks of him in exactly the same terms as do the temple inscriptions of Euergetes II. This monument, to judge from its style and orthography, cannot be earlier than the Græco-Roman period, and it bears, above its Egyptian inscription, a Greek dedication to the name of the Emperor Augustus (*KTAP* xix. [1897] 13).

This Amen-hotp is also frequently mentioned in the monuments of his royal master. Manetho, who wrote his history of Egypt in the reign of Ptolemy Philadelphus, refers to him, under the name of 'Αμενώψ Πατριός (Egyp. *Amen-hotp Pa-hape*, i.e. 'the son of Apis'), as a wise counsellor of a king called Amenophis. It is clear, from what Manetho says of him, that Amen-hotp had not yet been deified. Hence it is no merely accidental circumstance that our earliest evidences of his being regarded as a god all date from the reign of one particular king, viz. Ptolemy Euergetes II. In all probability it was in that reign that he first became a god. With this accords the fact that, in contrast to I-m-hotep, he is still portrayed, in the temple sculptures already referred to, in a purely human fashion: he still wears the garb of his time, and his bearing is only in part that usually assigned to the gods. Moreover, though, like I-m-hotep, he too is styled 'Ibis,' and has received, in addition to his human mother—named 't—a divine mother in the form of the goddess of writing and reckoning (*Sst*) (Lepsius, *Text*, iii. 168), and while the name of his father, Hapu, was interpreted as indicating the sacred bull Apis, yet Amen-hotp still retains his human titles.

As we meet with the cult of Amen-hotp only in temples of Western Thebes, it would in all probability be associated with his tomb, which, according to the custom of his time, would be situated in the Theban necropolis and nowhere else. The sepulchral chapel attached to his tomb is referred to in a protective ordinance which survives in a later inscription, executed probably some four hundred years after the death of Amen-hotp (Möller, in *SBAW*, 1910, p. 932 ff.), and witnesses to the long survival of his cult as a departed spirit. Amen-hotp resembles I-m-hotep also in being a healing god. 'I expel all disease from thy body'—so he speaks to the king, offering sacrifice to him (Lepsius, iv. 32c; cf. *JHS* xix. [1899] 13 ff.; *Catal. général du Musée du Caire*, no. 9304; J. G. Milne, *Greek Inscriptions*, Oxford, 1905, p. 37). He too is said to have composed wise maxims, and, in fact, a number of the sayings attributed to the Seven Wise Men of Greece were ascribed to him (Wilcken, in *Aegyptiaca*, *Festschr. für Ebers*, Leipzig, 1897, p. 142 ff.). Cf. Sethe, in *Aegyptiaca*, 107 ff.

(3) Ptolemy Euergetes II., in whose reign, as

has been said, the deification of the sage Amen-hotp, the son of Hapu, seems to have taken place, erected at Medinet Habu, in Western Thebes, a small temple in honour of Thoth, the god of wisdom, who appears to have been worshipped there under the designation of 'Thoth, Teos the Ibis' (*Teopifis*), and 'Thoth stm.' We have here a deified high priest of Memphis (*stn*)¹ named Teos, who was thus identified with the god of wisdom, and hence also designated as 'the Ibis.' This would seem to be the same person who is referred to by Clement of Alexandria (*Strom.* i. 21 [p. 399]) as the 'Theban Hermes,' and as an instance of the deification of human beings.

Now there was, as we know, a Memphite high priest named Teos in the Ptolemaic period; according to the inscription on his tombstone (now in Vienna), he lived from 267 to 224 B.C. But, as the office of high priest in Memphis was hereditary, it is possible that he had predecessors and successors of the same name as himself. Cf. Sethe, 'Imhotep,' p. 9 (*Untersuchungen*, ii. 100 f.).

(4) In 238 B.C., by an ordinance of the Egyptian priests, the prematurely deceased daughter of Ptolemy Euergetes I. was deified (*εθεωρεῖται*) under the title of *Βερενίκη ἀνδραγαπήτων*, and it was also enjoined that 'statues of this goddess' should be set up in all the temples of the country (Decree of Canopus).

(5) Another deified man of the later era (after 900 B.C.) must—if we are to judge from the name—be recognized in the god Petesuchos or Petesuchis (i.e. Egyp. *Pete-subek*, 'he whom the god Suchos gave'). In Pliny (*HN* xxxvi. 84) he is erroneously identified with the king who built the Labyrinth. This hero-god was depicted as a crocodile, like Suchos, the old local deity of the Fayyûm, from whom he took his name. Here perhaps we have a parallel to the designation of the deified sages as 'Ibis,' the sacred bird of Thoth (see 1-3 above).

Cf. Wilcken, in *Zeitschr. für ägypt. Sprache*, xxii. [1884] 1867, and Mitteis-Wilcken, *Grundzüge d. Papyrskunde*, i. 1, p. 106.

(6) In the temple of Dendur in Lower Nubia, built in the reign of Augustus, there were worshipped, among others, two brothers named P'te-ese and Pa-hor, the deified sons of a certain K'wpr; their names seem to point to the later period. In addition to the usual designations of the dead, 'Osiris' and 'justified,' they bear the epithet 'glorified' (*hdsje*), or 'glorified in the necropolis,' and for this reason Griffith conjectures that they had died by drowning. P'te-ese sometimes receives the title 'the snake of destiny' (*sai* = *ἀγαθοδαίμων*) who [is] in *Ht't* (the name of the locality), placed after his own name, and, therefore, a divine epithet, while Pa-hor bears the enigmatic designation *P'hr*, 'the chief' (*Φρ*) before his own name, and, accordingly, as a human title. The two brothers are portrayed in human form, but in their bearing and garb altogether as gods.

Cf. Griffith, *Zeitschr. für ägypt. Sprache*, xli. [1909-10] 134; A. M. Blackman, *The Temple of Dendûr (Les Temples immergés de la Nubie)*, Cairo, 1911, ill.

(7) Finally, the two hero-gods just mentioned, who may possibly have owed their apotheosis to a death by drowning, would find a parallel in Antinoos, the celebrated favourite of the Emperor Hadrian. While accompanying the Emperor on his Egyptian journey, he is said to have thrown himself into the Nile in order that he might by his own death save his patron from imminent peril. On the spot where this took place Hadrian founded a Roman city, which he called Antinopolis, and in which he in all likelihood instituted a cult in honour of the youth, as a city-hero, or,

¹ The spelling of this word shows that it is not the equivalent of 'to hear,' as in the proper name *Θεοσώτης* ('Thoth, hear!'), which Spiegelberg (*Zeitschr. für ägypt. Sprache*, xiv. [1908-09] 90) would compare with it.

according to the Egyptian mode of speech, as a 'city-god' (i.e. a local deity), and this is rendered all the more probable by the fact that the Emperor caused divine honours to be paid to Antinous elsewhere. See P. von Rohden, in Pauly-Wissowa, i. 2439.

LITERATURE.—This has been sufficiently indicated in the course of the article.

K. SETHE.

HEROES AND HERO-GODS (Greek and Roman).—The belief in heroes plays a very important part in the development of Greek religion, and to an extent which literature, taken by itself, insufficiently demonstrates. The conception of a hero arose from the prevalence of ancestor-worship, when the spirit of the dead man was canonized by his descendants. Remembering the identification of demons with the ghosts of the departed (see DEMONS AND SPIRITS [Greek]), we shall not be surprised to find that demons and heroes are sometimes treated as indistinguishable (e.g. Plat. *Apol.* 27 D). But, when a distinction was drawn between them, demons, though inferior to gods, were, in their turn, regarded as superior to heroes (Plut. *de Def. Or.* 10, p. 415 B). This classification, which is the product of later reflexion, may be traced ultimately to the verses of Hesiod, who makes the demons the representatives of the Golden Age of man (*Op.* 122), but regards the Age of the Heroes as immediately prior to his own (*ib.* 159 ff.). These are they, he adds, who fought before the gates of Thebes, and crossed the sea to bring back fair-haired Helen from Troy; and after death they dwell free from care in the Islands of the Blessed beside the stream of Ocean. The heroes were definitely understood by Hesiod to have been men of renown, who lived in the age celebrated by epic poetry, and whose exploits had been immortalized as the achievements of a semi-divine race (Hom. *Il.* xii. 23; *Hom. Hym.* xxxii. 18 f.; Simonid. fr. 36). Though there is thus one point of view from which demons are preferred to heroes, it is equally true that the demonic being is a more primitive conception; and that the hero, with his clearly-marked personality and more intimate relations with his worshippers, is the product of a more advanced stage in religious thought. Further, demon is the wider term: every hero might be described as a demon, but not all demons were heroes. Although the derivation of the word *ἥρως* is unknown, there is reason for thinking that it was originally an adjective bearing some such meaning as 'strong' or 'noble' (Hesych. s.v.), so that it may have been an honorific title intended to distinguish the souls of those among the departed whose protection and favour it was desired to secure.

The old view that hero-worship arose from a weakening of the belief in gods can no longer be maintained in the light of recent research (Rohde, *Psyche*⁴, 148₃). The ritual facts, as will presently be shown, are decisive against it, and the transition of thought which it assumes is by no means characteristic of the tendency of an early society. Even if it were conceded that old divinities might be re-fashioned as men, and so at a later stage come to be worshipped as heroes, that would be insufficient to prove that a hero is ever derived immediately from a god. The heroes in their original form, as ghosts of ancestors, were neither demi-gods, if that term is used to describe living warriors, nor demons, who have never been incarnate in human shape. It is more difficult to account for the fact that hero-worship, which can be shown to have flourished in the 7th cent. B.C. or even earlier exercised—so far as we can see—hardly any influence on the practice of Homeric society. Somehow or other, old beliefs in the

power of the dead, which were temporarily obscured during the flourishing period of epic poetry, sprang anew into life and dominated popular thought in the succeeding centuries and throughout the classical era. Or it may be that, as the political system which supported the courts of the feudal chieftains fell away and decayed, the voice of the commoner, whose primitive superstition had remained unchanged, became articulate in later literature.

There are many facts which attest the connexion of heroes with the under world, and especially with the ghosts of ancestors. The central hearth of the house, under which the hero was buried (cf. Plut. *Phoc.* 37), and near to which a precinct was reserved for him, was an object of especial veneration in family-worship (cf. art. HEARTH [Greek]). Or an image of the hero might be set up close to the house-door (Callim. *Epigr.* 26), in order to protect the inmates against the approach of their enemies. At every family meal the second libation was poured out in honour of the heroes (Plut. *Qu. Rom.* 25, p. 270 A), and to them belonged all the broken fare which fell from the table (Arist. fr. 180 R.). In regard to the latter custom, Athenaeus (427 E) states that dead kinsmen are actually the recipients, and it is not to be doubted that the pouring of the wine on the ground was for the benefit of the family ghosts.

Heroes were kept in remembrance by their graves, as may be seen from the case of the shrine erected in honour of Protesilaus on the shore of the Thracian Chersonese, which, though despoiled by the order of Xerxes (Herod. ix. 116), was still an object of veneration in the time of Philostratus (*Her.* iii. 1 f.). The grave itself was a mound of earth (*χῶμα*) situated within a sacred enclosure (*τέμενος*, or, more strictly, *σηκός* [Poll. i. 6]). Over the mound a small chapel (*ἱερόν*) was raised, the precinct was planted with trees, and its limits were marked by a stone wall (*θρυγκός* [Paus. i. 42. 8]). The most distinctive feature of the locality was the cavity (*βόλπος*) communicating with the interior of the grave, into which the blood of the victim was poured or other offerings were cast. Thus, the tomb of the hero actually served as an altar (*βωμός*) for his worshippers, and might be so described (Eur. *Hel.* 547, with the present writer's note). Strictly, however, since no elevation was essential, a circular hollow in the ground (*εὐχάρα* [Reisch, in Pauly-Wissowa, vi. 615]) was the appropriate receptacle for offerings to heroes. The sacrificial terms applied to hero-worship belong also to chthonic worship in general (for *εὐαγίλειν*, as distinguished from *θειν*, see Herod. ii. 44), and the ritual was the same: the victims—generally black bulls or rams—were slaughtered so that the blood from their throats fell into the hollow of the altar, to be drunk by the ghost (*αἵμακονία*); their heads were pressed downwards so that they looked towards the earth (*ἐντροπα*, as explained by schol. Hom. *Il.* i. 459); none of the flesh was eaten, but the whole of it was consumed by fire; or—since the employment of an animal victim was by no means universal—when firstfruits of all kinds (Thuc. iii. 58) as well as cakes and cheese were offered to them, none of the gifts must be touched subsequently by the human worshippers. There is the same significance in the fact that offerings to heroes were often made by night or towards evening (Pind. *Isth.* iii. 83; Ap. Rhod. i. 587); in the custom of beating the ground (Aesch. *Pers.* 685), or of kneeling before the tomb (Soph. *El.* 453); and in the annual recurrence of the ceremony to commemorate the hero's death. The institution of funeral games over the grave of a dead hero was a common custom (e.g. Paus. viii. 4. 5), and it is generally supposed that such was the

origin of the four great pan-Hellenic festivals, which were afterwards brought into connexion with the cult of an Olympian god.

See Rohde⁴, 152; Eitrem, in Pauly-Wissowa, viii. 1126. An attempt has recently been made by F. M. Cornford, in J. E. Harrison's *Themis*, 212 ff., to explain the games as originally and essentially a New Year's festival. This view accords with the general argument of the authoress that the hero is a later conception derived from that of the year-daimon (*op. cit.* 375).

A remarkable feature in the worship of a hero is that he was supposed to appear in the form of a snake. So Cychreus was figured at Salamis, and Erichthonius at Athens (Paus. i. 36. 1, i. 24. 7). Vergil describes the arrival of an enormous snake when Aeneas was celebrating the anniversary of his father's death by the performance of solemn rites at his tomb (*Aen.* v. 84 ff.). The superstitious man in Theophrastus (*Char.* 16), if he saw a snake in the house, at once erected a small chapel on the spot. The snake is also frequently depicted in the class of reliefs known as the Dead-Feast type, in which the hero is represented as partaking of a meal (Rouse, *Gr. Votive Offerings*, Cambridge, 1902, p. 20 ff.; Eitrem, 1142 f.). Plutarch, in his Life of Cleomenes (39), says that, after Cleomenes had been put to death by Ptolemy and his body impaled, a snake was seen wound round his head; and certain learned men explained the occurrence by propounding the theory that snakes are produced within a human corpse by the thickening of the juices of the marrow. The explanation, which is also given in a speech of Pythagoras recorded in *Ov. Met.* xv. 389, is perhaps due to the rationalizing tendency of popular opinion at a time when the superstition had ceased to be credible. Although the association of the snake with death and the grave appears to be free from doubt, it has, nevertheless, recently been maintained that the snake-attribute of a hero points to his origin as a fertility-daimon, and symbolizes the resurrection of life in the new year (J. E. Harrison, *Themis*, 271, 310).

The worship of ancestors in general culminates in the worship of a hero as the representative of the family. He is no longer one of a class in which all the members are equally entitled to veneration. There has arisen a belief that, in accordance with the measure of their achievements on earth, distinguished men are to be held in esteem after death, and that in virtue of their mysterious influence they can exercise a wide range of power over their former haunts. Thus, one who has become famous as a ruler or a warrior is selected by his immediate descendants to occupy a supreme position as eponymous founder of the clan (*ἀρχηγέτης*). In this sense Cecrops may be said to give his name to the Cecropidae, Butes to the Eteobutidae, Aeacus to the Aeacidae, and so forth. It may be true that some of these name-givers never had any individual existence, but that their names were projected, so to speak, in order to express the unity of a clan-group (J. E. Harrison, *op. cit.* 267). But, however the actual particular facts may have come to pass historically—and it is unlikely that the development was uniform in every group—the conception of the hero in the classical age figured him as the remote forefather to whom the members of the clan proudly referred their birth. The wide-spread belief that gods and men were of the same race led to the further conclusion that the most glorious of mankind must have been of divine origin; the eponymous heroes of the clans were the sons of the gods. There is thus a difference not only of degree but of kind between the class of heroes and their mortal descendants; the progress of the religious sense has evolved a new grade of supernatural beings capable of recruitment from the ranks either of gods or of men (Eitrem, 1129).

The relationship of heroes to the gods must now be examined in detail. It frequently happens that

the chapel or grave of a hero is in the temple of one of the great gods. Saron lay in the temple of the Saronic Artemis (Paus. ii. 30. 7), Iphigenia in that of the same goddess at Brauron (Eur. *Iph. Taur.* 1462). Telmessus was buried under the altar of Apollo at Telmessus (Cleni. Alex. *Protr.* ii. 45), Eurystheus in the temple of Athena Pallenis (Eur. *Herac.* 1025), and Cleobis and Biton in the Heraeum at Argos (Herod. i. 31). The list might be very largely increased; but, in order to appreciate its significance, we must rule out any suggestion that the shrines of these local worthies were superimposed on the existing sanctuaries of the Olympian gods. We should rather infer that hero-worship was a survival from an older system of religion, which preceded the establishment of the greater cults.

There are other indications which point to a conflict between the representatives of an older and a later system. Apollo drove out Hyacinthus at Tarentum (Polyb. viii. 30. 2); Artemis came to terms with Callisto in Arcadia (Paus. viii. 35. 8); and Aphrodite was identified with Ariadne at Naxos (Plut. *Thest.* 20). Sometimes the superseded hero assumed the functions of founder of the new cult, or of minister and attendant to the new god. Thus we read that Aristavrus built an altar to Zeus Ikmaios in Ceos (Ap. Rhod. ii. 522); and hence the numerous stories of a god welcomed by a mortal, who was held in honourable remembrance on that account, as when Dionysus was welcomed by Icarus and Pegasus. Sometimes the god took over the honours instituted for a hero, as when Zeus succeeded to the funeral games established at Nemea as a memorial to Archemorus (Arg. to Pind. *Nem.*), or when the Rhodian celebration dedicated to Telepolemus was transferred to Helios (schol. Pind. *Ol.* vii. 146). Sometimes, again, the Olympian has entirely effaced the reputation of the hero, whose name has been forgotten: Pausanias (i. 1. 4) mentions that there were altars at Phalerum dedicated to certain unknown gods and heroes, and also that an altar which was inscribed to an anonymous hero was known by antiquarians to belong to Androgeos. Whenever the hero has been subordinated to the god, but the recollection of his former eminence has not entirely passed away, a preliminary offering made to the hero precedes the celebration of the chief sacrifice. In this way Pelops was honoured at Olympia (schol. Pind. *Ol.* i. 149), and Scaphrus at the festival of Apollo Agrieus at Tegen (Paus. viii. 53. 3); and on Mount Helicon the worshippers made offerings every year to the hero Linus before the sacrifice to the Muses (*ib.* ix. 29. 6).

If we find certain mythical personages appearing now as gods and now as heroes, the variation may be attributed either to the promotion of a hero to the status of a god or to the reduction of a god to that of a hero. The latter process, as we have already seen, cannot be used to explain the origin of hero-worship in general; but it is currently assumed as an element in the possession of heroic attributes by certain of the greater gods (Usener, *Götternamen*, Bonn, 1896, pp. 254 f., 273; Rohde⁴, 148; Eitrem, 1129). When Dionysus is addressed as a hero in the old ritual chant of Elis (*Poet. Lyr. Gr.* iii. 656)—the earliest example of the cult title—an explanation is drawn from his recent association in legend with Semele, the daughter of Cadmus. The growth of legendary stories about the gods, or the introduction of their names into the genealogical tables of princely families, accounts for the ambiguous position of the Dioscuri and Helen, of Asclepius and Heracles, of Theseus and Amphiaraus. Another view has recently been advocated: that the conception of an Olympian god is always later than that of the

hero from which it was developed (J. E. Harrison, *Proleg.* 326 ff., *Themis*, 365 ff.), that the individual history of the hero is due to a re-fashioning of elements derived from still more primitive cults, and that the Dioscuri and Theseus are ultimately the impersonations of fertility-daimons (*Themis*, 304, 317). The difference in treatment is exaggerated by the ambiguity of the terms employed, when one investigator uses 'god' (*θεός*) in a wider sense as including 'demon,' and another in a narrower and more refined. Thus, it is unreasonable to doubt that Helen was worshipped as a 'goddess' in the Peloponnese before the details of her heroic story were commemorated by Homer; but, on the other hand, so far from having attained to Olympian dignity, she may have been nothing more than a tree-spirit (Dendritis in Rhodes [Paus. iii. 19. 9]) or a local demon. The advancement of a hero to divine rank is less disputable: the Phocæan colonists at Pityoessa paid divine honours to Lampasce, who had previously been worshipped as a heroine (Plut. *Mul. Virt.* p. 255 E); the hero Tepleomus received burnt sacrifice as a god at Rhodes (Pind. *Ol.* vii. 77); and Hippolytus was raised to heaven as a divine charioteer (Paus. ii. 32. 1).

When the significance of the hero as a being intermediate between gods and men was generally recognized, it became natural to apply the name—as a synonym of 'demon'—to various supernatural potencies of secondary rank. Hence it was transferred to the gods of limited jurisdiction (*Sondergötter*), whose importance for the history of religion has been demonstrated by Usener (p. 75 f.). To this class belonged the hero Acrotapotes (drinker of unmixed wine) at Munychia, and the heroes Matton (baker) and Ceraon (wine-mixer) at Sparta (Athen. 39 C), whose function was that of superintending the slaves engaged upon the preparation and service of the meals. Similar to these were the Telelin Mylas, the demon Eunostos (miller), and the bogey Alphito (white-meal). Another group comprised the spirits which watched over vegetation. Phytius, the Atolian, son of Orestheus and father of Ceneus (Hecat. fr. 341), and Phytalus, who entertained Demeter in his house near the Cephissus (Paus. i. 37. 2), became individualized in spite of the obvious significance of their names; but Calamites (reed-spirit), Cyamites (bean-spirit), and Hadreus (spirit of ripening) were on another footing. Another department belonged to the spirits which protected against particular evils, such as the wind-stiller (*Εὐδάμειρος*) at Athens, or the fly-bunter (*Μυλάρπος*) at Aliphæa in Arcadia; and another to the guardian spirits, the sentries (*Τερχοφύλαξ*), and night-watchers (Lucian, *Peregr.* 27). Phylacus was the significant name of one of the two heroic warriors of more than human stature who protected the Delphians against the Persian invaders (Herod. viii. 39). In the temple of Asclepius at Epidaurus was found an inscription on the entablature of a limestone column in honour of the hero Key-bearer (*Κλειροφόρος*), who, according to Usener (p. 265), had undertaken the responsibility for the safe-keeping of the temple. The Hesycheide, who ministered to the worship of the Semnæ on the Areopagus, claimed descent from the hero Hesyclus, and on every occasion when an offering was made to the goddesses a ram was sacrificed to him (schol. Soph. *Œd. Col.* 489). He was the impersonation of religious silence, and corresponded to the Doric hero Euphemus, who, however, is known solely from the Argonautic saga as the steersman of the Argo. In all the cases which have been enumerated, the heroes, except where they acquired a legendary personality, became shadowy abstractions which failed to maintain their privileges on

the advent of the fully-developed forces of the greater gods. The usual result was that they lost their identity, and survived only as epithets attached to the name of the Olympians. Hence we find Zeus Myleus and Demeter Himialis, Zeus Phytius and Poseidon Phytalius, Zeus Apomiæus and Apollo Parnopios, and Zeus Euphamius, Heracles Hoplophylax, and Apollo Prophylax.

It will have been observed that the hero was believed to exercise protective power within a prescribed sphere. The grave, as we have already seen, was the cult-centre, and the influence of the hero may be said to have radiated outwards from it. Just as the hero, so long as he was regarded merely as a family guardian, was buried beneath the hearth or close to the doorstep, so, when his influence had spread to a wider circle, his tomb was placed where it might best serve the interests of the township. Thus Adrastus lay in the central agora at Sicyon (Herod. v. 67); Melanippus in the Prytaneum, the hearth of the State, at the same place (Pind. *Nem.* xi.); and Ætolus hard by the city-gate at Elis (Paus. v. 4. 4). As the blessing anticipated from the hero was dependent on the security of his grave, it was a matter of supreme importance that the remains of national heroes who had died abroad should be brought under the control of the State. Hence Cimon restored the bones of Theseus from Scyros to Athens (Plut. *Thes.* 35); Orestes was brought from Tegea to Sparta (Herod. i. 67), and Khesus from Troy to Amphipolis (Polyen. vi. 53); and the lost shoulder-blade of Pelops was recovered for Elis (Paus. v. 13. 4). Or, if a foreigner whose assistance might be needed had died in the country, it became the duty of the government jealously to protect his grave, as in the classic instances of Œdipus (Soph. *Œd. Col.* 409 ff.) and Eurystheus (Eur. *Heracl.* 1025 ff.). In the case of Tiresias, who died at Haliartia, the Thebans were obliged to be content with a cenotaph (Paus. ix. 18. 4). There were good reasons, therefore, for keeping the hero's place of burial concealed from strangers, lest they should molest it for their own purposes (Soph. *Œd. Col.* 1522 f.). This consideration may serve to explain why the position of the graves of Neleus and Sisyphus at Corinth was always unknown (Paus. ii. 2. 2). The result of such secrecy was that in certain cases the name itself was forgotten, and the locality passed under the protection of the grave of an unknown hero (Rohde⁴, 161 ff.). This scrupulous concern for the remains of the mighty dead was one of the features which the Christian Church inherited from paganism; and it is sufficient in this connexion to refer to the custody of sacred relics, and the burial of monarchs and bishops within the cathedral sanctuaries (Eitrem, 1122).

The saving qualities of the heroes might be manifested in various ways. Some of these have already been indicated, and particularly the exercise of their power by those who furthered the increase of crops. Hippolytus and Protesilaus heard the vows of lovers, and assisted or consoled them as occasion might require (Philostr. *Her.* iii. 3. 14; Eur. *Hipp.* 1423 ff.). But that was a form of activity altogether exceptional. The benefits normally to be derived from heroes may be put into three classes: (a) Help in time of danger, and especially in battle. Thus Theseus and Echelos assisted the Athenians against the Persians at the battle of Marathon (Plut. *Thes.* 35; Paus. i. 32. 5). Spectres of armed men were seen holding out their arms to protect the Athenian ships at Salamis: these were the *Acacia*, whose assistance had been invoked before the battle (Plut. *Them.* 15). On the same occasion the hero Cyclops was alleged to have appeared in the form of a serpent (Paus. i.

36. 1).—(b) Health in time of sickness was especially invoked from Machaon and Podalirius, the sons of Asclepius, and others of his descendants such as Polemocrates, who healed in Thyreatis (Paus. ii. 38. 6). The ritual of incubation, according to which the suppliant slept in the temple on the skin of the victim which he had sacrificed (Lycophr. 1050), is full of interest, but must not detain us here. At Athens there was a sanctuary of the hero physician (Dem. xix. 249), which reminds us of the baker and miller heroes previously mentioned. But the power of healing was not confined to those who claimed it as their particular province: Heracles was a healer in Boeotia (Paus. ix. 24. 3) and elsewhere, and Helen is said to have changed an ugly child into a beautiful woman (Herod. vi. 61).—(c) The function of divination was regularly exercised. All over Greece were oracular shrines, where the tutelary hero forecast the future, and imparted his advice to the inquirer by means of a dream. The most famous was perhaps that of Trophonius at Lebadea in Boeotia, the procedure at which is described in detail by Pausanias (ix. 39). From many others we may select as representative the sanctuaries of Alemeon near to Thebes on the road leading to Delphi (Pind. *Pyth.* viii. 58), of Ino-Pasiphae at Thalamæ in Laconia (Paus. iii. 26. 1, Frazer), and of the seer Anios—the father of the three Enotropi—at Delos (Rohde⁴, 176).

The power of the heroes to help corresponded with the measure of their revenge if slighted. They might bring defeat, as they did to the Persians in punishment of their impiety (Herod. viii. 109), or drought and barrenness, as when Actæon in anger ravaged the land of Orchomenos (Paus. ix. 38. 5), or when Theagenes punished the Thasians for flinging his statue into the sea, because it had fallen on one of his enemies and killed him (*ib.* vi. 11. 6 ff.). The hero Anagyros executed a terrible revenge upon an old man who had cut down a tree in his sacred grove. He inflamed the man's mistress with a passion for his son, and when, like Potiphar's wife, she accused him who had slighted her, the father blinded his son and bricked him up in a vault. Finally, the old man hanged himself, and the woman threw herself into a well (Suid. s.v. *Ἀναγυρίος*). No wonder that men dreaded to come into the presence of such baleful spirits, that they passed by their sanctuaries in fearful silence (Aclephr. iii. 58), and averted their eyes lest they should encounter their apparitions (schol. Aristoph. *Av.* 1493). To the vulgar the heroes seemed more disposed to injure than to help; but it is a hyperbole when they are described as responsible for all the sufferings of mankind (Babr. 63).

The belief in heroes and their worship can be shown to have been firmly established in Greece from the 7th cent. B.C. onwards, so long as the framework of the ancient Greek civilization continued to persist. The ordinance of Draco commanding the Athenians to worship gods or heroes in accordance with inherited tradition (Porphy. *de Abst.* iv. 22) proves that in his days hero-worship was no innovation; and its permanence is shown by the regular combination of the names of heroes with the gods in the oaths taken upon solemn occasions (Dinarch. i. 64). The reforms of Cleisthenes recognized the importance of the heroic ancestor, whose presidency was extended from the sphere of the clan to the artificial units of tribe and deme. The hero, as local demon, had sometimes merged his identity in the name of the settlement, as may be seen from the examples of Tænarus, Marathon, and Corinthus. In other conditions he was regarded as the leader and founder of the newly-established State, as was Danaus at Argos, Battus

at Cyrene, and Tlepolemus at Rhodes. It was a natural consequence in historical times that the personage to whom a new society owed its origin or its prosperity should be advanced to the rank of these mythical chieftains. Thus we find the cult of Miltiades established in the Thracian Chersonese; and in the same neighbourhood at Amphipolis, where a festival had been founded in honour of Hagnon as *ἀκιστής*, the citizens afterwards transferred their veneration to Brasidas by consecrating his tomb and investing him with the annual honours of games and sacrifices (Thuc. v. 11). Other military and political services were recognized in the same way: the cult of Leonidas survived at Sparta until the age of the Antonines (Paus. iii. 14. 1), and Harmodius and Aristogiton received heroic honours at Athens (Pollux, viii. 91).

But political merit did not stand alone in earning this posthumous honour. Cleomedes of Astypalea and Cleotas of Dyme were canonized as Olympian victors (Paus. vi. 9. 3, vi. 3. 4); Bias of Priene for his wisdom (Diog. Laert. i. 88); and Philippos of Croton for his beauty (Herod. v. 47). Here may be added the honours freely accorded to literary celebrities, among whom may be mentioned Homer, Hesiod, Archilochus, Pindar, and Æschylus. The case of Sophocles was peculiar: he had welcomed Asclepius in his home, and honoured him with regular and formal worship, and consequently he was himself worshipped as a hero after death, under the title of Dexion, 'the Entertainer' (*Etym. Mag.* 256). The philosophical schools were organized as religious societies (*θλασσί*), and it became the rule to honour the founder as a hero (Wilamowitz, *Antigonos von Karystos*, Berlin, 1881, p. 263 ff.). There is less of historical certainty in the heroization of Drimacus, the leader of runaway slaves in Chios (Athen. 266 D), and of Pixodarus, the Ephesian shepherd, who directed the officials charged with the building of a temple to a quarry of beautiful marble (Vitruv. x. 7).

Throughout historical times the influence of the Delphic oracle in recommending the establishment of a heroic cult (*e.g.*, Herod. i. 167) was very conspicuous; for the Delphian Apollo was regarded by every Greek as the greatest of seers in all that appertained to the worship of gods and heroes. The priests, we may well believe, shared the current superstitions of their age, even if they pursued a policy of self-interest by spreading cults which owed the charter of their establishment to Delphi (Rohde⁴, 180).

The belief was ultimately degraded by the heroization of living men. The earliest recorded example is perhaps the Syracusan Dion (Diodor. xvi. 20). The servility of the age of the Diadochi was reflected in the extravagance of the rewards showered upon Demetrius by the Sicyonians (*ib.* xx. 103). Posthumous honours, not merely heroic, but divine, were granted to the representatives of the dynasties of Ptolemy and Seleucus; and the second Ptolemy took a further step forward by permitting himself to be raised to the rank of a god during his life.

An entirely different cause—the increase of affectionate regard for the dead—contributed to the secularization of hero-worship. It became the practice for religious corporations so to honour one who had held high rank in the society, or even for private individuals to endow a religious foundation in honour of themselves or members of their own family. The best-known example of the latter is the will of Epicteta of Thasos, who left directions for the heroization of herself, her husband, and her two dead sons (Hiller v. Gärtringen, in Pauly-Wissowa, vi. 124). Copious evidence of private consecration will be found in the heroic reliefs, which 'from prehistoric days to the last period of

Greek art maintain their connexion with the dead' (Rouse, 36). (For the details, see Deneken, in Roscher, i. 2556 ff.; Rouse, 19 ff.; Eitrem, 1142; J. E. Harrison, *Themis*, 313.) In Boeotia and Thessaly the word 'hero' was used from an early date as a customary epithet of the dead (*ἥρωες* *χαίρει* [Roscher, i. 2549 ff.]), and as such was applied even to children and to slaves. In this connexion may be mentioned the declared intention of Cicero to build a shrine in honour of his daughter (Cic. *Att.* xii. 18). The last phase of hero-worship returns to the point from which it started, the family-worship of the souls of the dead.

Hero-worship was entirely alien to the native religion of Rome (Mommson, *Rom. Hist.* i. 174, Eng. tr. [ed. 1877]); but the fully-developed notion of the hero as a warrior of Homeric epos and as a superhuman or semi-divine being passed over to the Romans as part of the mental equipment which they borrowed in consequence of their contact with Greek civilization. As the Romans had no heroic past of their own, they refurbished their ancient traditions by introducing Greek heroes into Italy, or by assimilating the forms of their native kings to the foreign pattern. The legends of the exposure of Romulus and Remus, of the translation of Romulus, and of his apotheosis, are demonstrably of Greek origin. The story of the assistance given to the Romans by the Dioscuri at the battle of Lake Regillus is exactly typical of the epiphanies of Greek heroes; and it has been shown that the details were transferred directly from a Greek account of the battle at the river Sagras between the Locrians and the people of Croton (G. Wissowa, *Religion u. Kultus der Römer*, Munich, 1902, p. 216). Later poets, of course, spoke of heroes entirely after the Greek manner, as when Horace put Numa and Cato on the same level as Hercules and the Tyndaridae (*Odes*, i. 12), or when Vergil prophesied that the glorious child to be born in Pollio's consulship would join the throng of gods and heroes on equal terms (*Ecl.* iv. 16).

Kulturaltümer*, Munich, 1908, p. 124 ff.; J. E. Harrison, *Prolegomena*, Cambridge, 1903, pp. 323-363, *Themis*, do. 1912, pp. 260-363.

A. C. PEARSON.

HEROES AND HERO-GODS (Hebrew).—1. Hebrew heroes.—The record of heroes among the ancient Hebrews, viewed apart from the mythological idea attaching to the second part of the title at the head of this article, must be allowed to have been a particularly great one. The Book of Judges alone, with its long series of heroic struggles under the successive (and partly contemporary) leadership of men of extraordinary daring and valour, is sufficient to attest the presence of a very high degree of the heroic quality among the Israelitish settlers;¹ and the exploits of Saul, Jonathan, and David fitly round off the tale of deadly conflicts which ended in complete victory over the hostile forces on all sides.

In the history that follows these events the more distinctly spiritual type of heroism overshadows—in our view, at any rate, though it may not have appeared so at the time itself—more or less completely the military form of it, the 'hero as prophet' acquiring, and for several centuries retaining, a very high degree of significance both for his own time and for the distant ages to come. The spiritual hero wielded for the most

part his powerful influence independently of the priesthood, or even in antagonism to it; though at times, and very powerfully so in the case of Jeremiah and Ezekiel, prophetic inspiration rested on members of the priestly order. In Ezra, again, we have a hero-priest endowed with special gifts for teaching and the re-organization of the religious life of the nation; and in the latter period of independent Hebrew polity the military successes of the Hasmonean priest-warriors appeared to revive the heroic glories of the reign of David before the astonished eyes of the Græco-Syrian world around.

The common source of energy of all these different types of heroism lay for the ancient Israelite in the mighty strength of Jahweh. The steady possession or occasional onrush of the Divine spirit was as much required for great military and administrative achievements as for the utterance and action of the psalmist and the prophet (see, e.g., Jg 14^a, 19, 15¹⁴ [Samson's case], 3¹⁰ [relating to the judge Othniel, son of Kenaz], 1 S 11⁶ [Saul's first warlike undertaking], 2 S 23² [sacred minstrelsy], Is 11² [the ideal king]); and in special emergencies even the functions of the priest, ceremonial though they were, were invigorated by a special Divine afflatus proceeding from Jahweh, as can be seen from Hag 1⁴, where the high priest Joshua is, equally with the prince Zerubbabel, Divinely stirred up to the performance of his office, and where, indeed, the people generally are said to be similarly affected by the spirit of Jahweh.¹ Heroism in ancient Israel was, therefore, conceived as a direct effluence from Deity acting on the individual human spirit, and it may be readily conceded that Carlyle's great postulate of the 'primal reality of things' as the basis of heroism almost pales into a philosophical abstraction by the side of the intense, personal, and all-compelling manifestation of Divine force which went to the making of a hero among the Hebrews.

2. Traces of mythology.—So far, then, we have historical fact, with which—as may be admitted—a certain amount of mythical and legendary matter has in some cases been combined. Legend and myth, or speculation as to such, in the full sense of the word, first meet us when we set about to answer the question whether, or in what specified instances belonging to the period preceding the conquest of Canaan, the hero was in the mind of the primitive Hebrew identical with one form or another of Deity.

It is first of all to be noted that this part of the subject is very closely connected with the problem of ancestor-worship (see 'Hebrew' art. in vol. i. p. 444 ff.), or may in fact, in one view of it, namely that of the euhemeristic interpretation of myths,² be regarded as a branch of ancestor-worship in its wider sense, the special feature of the 'hero as divinity' consisting in this, that, whilst an ancestor or a ruler may in the course of time attract to himself the worship of men, mainly on account of relationship or exalted official position, the hero can become a god only by virtue of his inherent personal greatness. The case would, on the other hand, look entirely different if an original deity is supposed to have become transformed into a human hero, but it so happens that, in the first mythical record (designated as *a*) which we have to consider,

¹ Even for special degrees of mastery in arts and craftsmanship the indwelling and informing spirit of Jahweh was required; see Ex 28² 313.

² No opinion is here, however, intended to be pronounced on the question whether in any given case an originally human hero became a divinity (in accordance with euhemeristic principles), or whether an original deity later on acquired the character of a human hero. In many cases a solution of this problem is, in the present state of our knowledge, probably impossible. Our Biblical mythologists (Winckler, Ed. Meyer, and others), as will be seen later, assume the second alternative.

¹ Even Winckler, whose mythical theories may be said to reach to the farthest possible limit (see under § 2 (b)), cannot help admitting an historical basis for the history of the Judges (see *EAT*, 213-219). Concerning Samson, see note on p. 652.

the two aspects of the case appear, in a manner, combined.

(a) The myth in question is contained in Gn 6¹⁻⁴. It is there related that the sons of God (or, rather, 'sons of the gods') took human wives, and that the offspring of these unions were the Nephilim (RVm 'giants'), the same having been 'the mighty men which were of old, the men of renown.' The literal meaning of this passage was for a long time naturally distasteful to both Jewish and Christian interpreters. The former (in the Targums, etc.) therefore explained the term 'sons of God' (*bēnē 'ēlōhim*) to mean sons of judges, i.e. the noble and élite of the land, whilst to the latter the narrative referred to intermarriage between the godly men of the line of Seth and the sinful women of the line of Cain. Modern students are, however, undoubtedly right in regarding the passage as a genuine 'torso' of ancient mythology. As Driver puts it (*Westminster Com., in loco*):

'The expression "sons of God" (or "of the gods") denotes elsewhere (Job 16²¹ 38⁷ . . .) semi-divine, supra-mundane beings, such as, when regarded, as is more usually the case, as agents executing a divine commission, are called *mal'akhim* or *γγελοι* (i.e. "messengers"). And this, which is also the oldest interpretation of Gn 6² (LXX [A] Enoch 6² . . .), is the only sense in which the expression can be legitimately understood here.'

The Nephilim, who are in Nu 13³³ identified with the sons of Anak, therefore represented a race of giants¹ who were believed by the Israelites—in common, no doubt, with others—to have been the offspring of gods and human women, thus blending in their persons the character of deity with that of the human hero. As they were not racially connected with the Israelites, the belief in the existence of these hero-gods cannot, of course, serve as a *point d'appui* for interpreting the nature of genuine Hebrew heroes on a similar principle; but the belief must all the same be regarded as a genuine part of the mythological ideas prevalent in Israelitish circles (on Hebrew ideas concerning giants among other nations, see also Dt 2¹⁰⁻¹² 31. 13).

(b) A mythological theme of a different kind confronts us in the cycle of ideas which several modern writers connect with the Biblical account of the patriarchs and other personages of early Hebrew history.

There are at present in the field three main modes of interpreting the histories of Abraham, Isaac, Jacob, and Joseph (to lay special emphasis on these great Biblical figures, without, however, intending to confine ourselves to them absolutely). (1) They were real persons, and their histories are, in outline at any rate, true. If so, they head the list of the genuine Hebrew heroes of the purely human type, such as lie before us in the history of the conquest of Canaan and later times.² (2) They are historico-genealogical—that is to say, they originally represented, not individuals, but tribes or clans. (3) They are mainly, if not absolutely, to be regarded as mythological figures whose

¹ As the clause stands ('the sons of Anak are some of the Nephilim'), an identification, or rather a genealogical connexion, is clearly intended; but the clause reads like a gloss (see Gray, *ICC, in loco*), and may represent a later genealogical interpretation. The word נְפִילִים apparently means 'long-necked' people, in allusion to their gigantic height; cf. Dt 3¹¹, where the bedstead of Og, king of Bashan, is described, though that king is stated to have belonged to the נְפִילִים, for these are—like the נְפִילִים—in all probability connected either racially or in the manner of descent with the נְפִילִים. The etymology of the terms נְפִילִים and נְפִילִים is, however, very doubtful (see, e.g., F. Schwally, *Das Leben nach dem Tode*, Gießen, 1892, p. 64 f.). On the whole subject, see, e.g., art. 'Giant,' in *HDB* ii. 106 f. The term גִּבּוֹרִים, which also occurs in Gn 6⁴, indicates mainly physical strength coupled with warlike prowess.

² This view of the original nature of the patriarchs would not be affected by the distinct trace of later apotheosis referred to in *ERF* i. 445, though it must be admitted that the passage of Deutero-Isaiah there referred to (63¹⁶) might possibly relate to an original divinity-myth attaching to Abraham and Jacob.

legends were later on set out in the form of human histories.

Of the mythological interpretation, with which alone we are concerned in this part of the article,¹ two main streams of theory, respectively identified with the names of Hugo Winckler and Eduard Meyer, are to be distinguished.

Winckler (see *Gesch. Israels*, ii. [Leipzig, 1900] 23 and *passim*, *KAT*¹, Berlin, 1903, p. 222 and *passim*, *Altorient. Forschungen*, pt. iii. [Leipzig, 1902], pp. 385–470), whose theory is dominated throughout by data drawn from Babylonian mythology, declares Abraham, Isaac, and Jacob to represent forms of the moon-god as conceived by the Semitic mind in successive stages of its astral religious contemplation, whilst he interprets Joseph, as also Lot and Esau, as forms of the sun-god. Sarah is identified with the Babylonian Ishtar, and the wives of the other patriarchs are, of course, supposed to be in one way or another the divine counterparts of their husbands. Nor does Winckler's cycle of astral deities terminate with the patriarchs and their associates. Moses is to him the sun in spring-time, and even the lives of Saul, Jonathan, and David are held to embody mythical elements of the same class, though in their case no pronouncement against their historical reality is hazarded.³

Meyer's mythological theory is in form as different as possible from that of Winckler. Rather than seek identifications for the figures of the patriarchs among the Assyro-Babylonian cults, he attempts to establish a connexion between the Biblical account of the hero-ancestors of the Hebrews and sacred localities in Canaan. To him (see *Die Israeliten*, Halle, 1906, p. 249 ff.) Abraham was originally the *numen* of Hebron, or, rather, he was one of the four divinities who had their habitation in that locality, which accordingly also bore the name עַרְבֵי הָרָק, or 'the city of four' (i.e., as Meyer suggests on p. 264, Abimán, Sheshai, and Talmái [who are called the offspring of Anak in Nu 13²²], besides Abraham). Naturally associated with him was a deity residing in the near neighbourhood, who was called Sarah, or 'princess,' Isaac, again, is a *numen* connected with Beersheba, whilst the figure of Rebecca has to remain undefined. Jacob, according to E, was as a deity mainly associated with Bethel, whilst in J a locality in Gilead is assigned to him. His wives remain for the most part indefinite. With regard to Joseph, the possibility that a tribal eponym lies before us rather than the legend of a hero-god is left open, special stress being, however, laid on his connexion with Sichem.⁴

It will thus be seen that, however much Winckler,

¹ It should be noted that the historico-genealogical interpretation of the data is the most in vogue among critics at the present time. Driver, however, who combines clear critical insight with a strong conservative tendency, holds that 'the view which may be said best to satisfy the circumstances of the case' is that 'Abraham, Isaac, and Jacob are historical persons, and that the accounts which we have of them are in outline historically true' (*HDB* ii. 534).

² It should here be noted that Winckler has not only had an interesting immediate predecessor in E. Stucken (*Astralmythen*, Leipzig, 1896–97), but that Ignaz Goldziher, basing very largely on Aryan parallels, and also employing the Jewish *Aggadah*, produced a rather similar cosmic theory in his *Mythology among the Hebrews* (R. Martineau's tr., London, 1877). Abraham, according to Goldziher's view as then formulated, represents the heaven at night; Sarah is the princess of heaven, i.e. the moon; Isaac ('Laughter') was originally the sun; Jacob ('Follower') is the sky at night, and his family are the moon and the stars, etc.

³ Meyer had originally (in *Gesch. des Alterthums*, Stuttgart, 1884, etc.) strongly advocated a mythological interpretation of the patriarchal history (which was also the view shared by Noldeke). But the occurrence of the Palestinian place-names generally read Ya'kub-el and Yoseph-el in the List of Thutmose III. inclined him in 1886 to the adoption of Stade's view that Jacob and Joseph were originally names of tribes or clans. His reversion to his original mythological theory was largely due to the labours of Bernhard Luther, who collaborated with him in the preparation of *Die Israeliten* (see p. 249 f.).

Meyer, and their respective associates and predecessors may differ as to the special form of the mythological scheme to be adopted, they are in full agreement on the main point: the declaration that the patriarchs were originally divinities, and that the elaboration of their histories as human heroes is a late interpretation of the myths, the order of development being the exact reverse of that which is associated with the name of Euhemerus. The question as to the amount of probability with which the theories are to be credited may be regarded as an open one. A fine destructive criticism of Winckler's view was furnished by K. Budde (see *Das Alte Testament u. die Ausgrabungen*¹, Giessen, 1903). Cheyne expressed the following opinion (*EBi* ii. 2312): 'That there are somewhat pale mythological elements in some of the biblical narratives may be admitted; but to many minds Winckler's proof of his hypothesis will seem almost too laboured to be convincing.' The following argument (or, perhaps more fairly put, *point d'appui*) used by Winckler in *Allorient. Forschungen*, pt. iii. p. 406, will (though possibly one of the extreme instances) show how deeply steeped the mind must, as a preliminary, be in the astral mythological cycle of ideas in order to admit even a slight degree of probability in favour of his method in interpreting the Biblical text. It is said in Gn 13² that Abraham was very rich *נָחֵץ* ('in cattle'). Winckler argues that in this Hebrew word we have the root *נָחַץ*=*נָחַץ*, but *נָחַץ* is nothing but an appellation of the *deus summus*, i.e. the moon. The use of *נָחֵץ* therefore shows that Abraham was originally a moon-god.

Meyer's theory is, of course, quite as much as that of Winckler at variance with the usual critical interpretations of the data. Thus Cheyne, who himself adopts the genealogical scheme of interpretation, pointedly speaks of it as Meyer's 'present view' (see *Review of Theology and Philosophy*, ii. [1907] 414 ff.); and Gunkel (in *Die deutsche Literaturzeitung*, 1907, pp. 1925-31), though not specially referring to this part of Meyer's thesis, throws doubt on the correctness of much in his method of interpretation in general. All that can be said at present is that it would be both uncritical and unfair definitely to negative the Palestinian *numen* theory of the patriarchs in its entirety simply because it may appear startling at first sight. Specially to be noted is that for the phrase *פֶּחַךְ אִשָּׁא* (*the Fear of his father Isaac*) in Gn 31³³ (see also v. 42) Meyer adopts (p. 254) the very doubtful explanation which identifies Isaac himself with *פֶּחַךְ* (i.e. 'Dread'=divinity). The forms *Ya'kub-el* and *Yoseph-el* found in the list of Palestinian place-names belonging to the reign of Thutmosis III. he would take to mean 'Ya'kub, the god' and 'Yoseph, the god' (p. 252), instead of 'El supplanteth' and 'El addeth.'

(c) Under (a) and (b) we considered respectively a myth concerning non-Israelites believed in by the Israelites, and certain mythological speculations regarding traditional Israelitish heroes. We now come to a group of heroes belonging partly to pre-Israelitish times and partly to purely Israelitish tradition. These are, to confine ourselves to leading figures of the highest order, Enoch the son of Jared, Noah, Moses, and Elijah.¹ It was shown in *ERE* i. 441 f. (see also p. 438) that there are, in the case of these spiritual heroes, clear indications of a kind of apotheosis; and it will be sufficient to add in this place that Winckler and Meyer only partially attempt to carry us here beyond the idea of deified or semi-deified ancestral heroes. Winckler, as has been seen (§ 2 (b)), believes Moses to represent

the sun in spring; and Meyer (p. 217) regards Enoch as 'Gott (oder Personifikation) des 365-tägigen Sonnenjahres' (see Gn 5²; Enoch lived 365 years).¹

LITERATURE.—Besides the works named under the art. ANCESTOR-WORSHIP (Hebrew) in vol. I., and the publications referred to in the body of the present article, the reader may specially consult: F. Lenormant, *Les Origines de l'histoire d'après la Bible*, etc., 3 vols., Paris, 1880-84 (Eng. tr. of vol. I., London, 1883); K. Budde, *Die bibl. Urgeschichte*, Giessen, 1883; H. Gunkel, *The Legends of Genesis* (tr. W. H. Carruth, Chicago, 1901), particularly pp. 119-122; F. Schwally, 'Ueber einige paläst. Völkernamen,' *ZATW* xviii. (1898); Ed. Meyer, 'Der Stamm Jacob u. die isrl. Stämme,' *ib.* vi. (1886) 1-16 (expressing, for the time being, agreement with Stade's genealogical theory advocated in l. 112 ff.); artt. 'Nephilim,' and on the different patriarchs in *HDB* and *EBi*.

G. MARGOLIOUTH.

HEROES AND HERO-GODS (Indian).—In Sanskrit there is no word corresponding to the Greek *hērōs*, denoting a famous warrior or hero promoted to divine rank and worshipped as the patron of a town, district, gild, etc. But similar ideas, though not well defined and of a much wider application, have always been prevalent in India; they have given rise to the belief in, and the worship of, a great variety of superhuman beings, of whom some are regarded as local patrons, saints, and godlings, while others have attained to the rank of supreme gods.

There is a class of Brāhmanical heroes to be mentioned hereafter, who are duly recognized in the religion of the Brāhmins; but most other Indian heroes seem to have belonged to popular religion, to the undercurrent of the various forms of higher religion acknowledged and sanctioned by the Brāhmins. We therefore find only occasional notices of, or vague allusions to, them by Sanskrit writers. As a rule, those heroes only who had become the subject of a more general or quasi-universal homage are mentioned by the Brāhmins and admitted into their pantheon. In order, therefore, to form an idea of the extent and nature of hero-worship in India, it will be well to advert first to the state of things in modern India. W. Crooke devotes the second chapter of his *Introd. to the Popular Religion and Folklore of Northern India* (London, 1896) to 'The Heroic and Village Godlings,' whom we may regard as the equivalents of the ancient heroes. Such are Hanuman of the *Rāmāyana*, Bhīma and Bhīṣma of the *Mahābhārata*, and, besides, a great number of local or village godlings of whom Crooke believes 'that most, if not all, belong to the races whom it is convenient to call non-Aryan or aboriginal, or at least outside Brāhmanism, though some of them may have been from time to time promoted into the orthodox pantheon.' In the fourth and fifth chapters ('The Worship of the Sainted Dead' and 'The Worship of the Malevolent Dead,' i. 175 ff., 230 ff.) he describes the class of semi-divine beings who in life had been men—warriors, chiefs, even robbers, or holy men—and after death had become the object of worship. Sir Alfred Lyall,² in his suggestive account of the 'Religion of an Indian Province' (Berar), bears testimony to the deification of famous men after their death. The process can be observed best, though not exclusively, with regard to saints and hermits.

Of the numerous local gods known to have been living men, by far the greater portion derive from the ordinary canonisation of holy personages' (i. 26 f.). 'The number of shrines thus raised in Berar alone to these anchorites and persons deceased in the odour of sanctity is large, and it is constantly increasing' (i. 28). The process of deification he describes as follows: 'But, in India, whatever be the original reason for venerating

¹ Winckler's strikingly drawn parallel between Enoch, the seventh primeval patriarch in Genesis, and Enmeduranki, the seventh primeval patriarch of the Babylonian record (see *KAT*, p. 540 f.), need not necessarily move in the sphere of ancestral heroes rather than that of original gods, though he also refers to the number 365 in Gn 5².

² *Asiatic Studies*, 2 vols., London, 1907

¹ Samson, whose history, as is well known, is held to embody myths of a form of the sun-god, should, however, also be mentioned in this connexion.

a deceased man, his upward course toward deification is the same. At first we have the grave of one whose name, birth-place, and parentage are well known in the district; if he died at home, his family often set up a shrine, install themselves in possession, and realise a handsome income out of the offerings; they become hereditary keepers of the sanctuary, if the shrine prospers and its virtues stand test. Or, if the man wandered abroad, settled near some village or sacred spot, became renowned for his austerity or his afflictions, and there died, the neighbours think it great luck to have the tomb of a holy man within their borders, and the landholders administer the shrine by manorial right. In the course of a very few years, as the recollection of the man's personality becomes misty, his origin grows mysterious, his career takes a legendary hue, his birth and death were both supernatural; in the next generation the names of the elder gods get introduced into the story, and so the marvellous tradition works itself into a myth, until nothing but a personal incarnation can account for such a series of prodigies' (l. 29 f.).¹

These references to popular beliefs and religious practices in modern India will enable us to detect the traces of hero-worship in ancient India. That it always existed cannot be doubted. For the most important factor in producing it—the cult of the *manes*—has always formed a part of the Indo-Aryan religion; even after the primitive ideas about the life after death, on which ancestor-worship is based, had been replaced by the tenet of the migration of the soul, which is incompatible with it, the offering of *śrāddha* sacrifices, which are performed in honour of the *manes*, continued to be one of the most sacred duties of the twice-born.² The close connexion between *manes* and heroes is best illustrated by the fact that the words *dis manibus*, occurring on so many Roman tombs, are rendered in Greek inscriptions of the same time *δαίμονος ἥρωος* or *θεοῖς ἥρωων*. Not every ancestor, however, who is habitually worshipped by his descendants may be regarded as a hero in this technical sense of the word, but only such as were believed to have, in their life, achieved great or wonderful deeds. It matters little how this belief

¹ Not only holy men are venerated as gods after their decease, but also criminals, as will be seen from the following note by W. Crooke:

'Deification of robbers and bandits.—A peculiar form of deification in India is that of bandits, who are specially regarded as heroes by the criminal tribes. The Maghaiyā (sons of Bihār and the adjoining region worship Gaṇḍak and make pilgrimages to his tomb. According to their traditions, he was hanged for theft a long time ago, and when dying promised to help the Maghaiyās in time of trouble. He is worshipped by the whole tribe, and is invoked on all important occasions; but he is pre-eminently the god of theft, and a successful raid is always celebrated by a sacrifice and feast in his honour (Crooke, *TC*, 1896, II. 326). Of the same class is Sālhes, who is worshipped by the Dusādhs (q.v.), a caste in Bihār and the neighbouring districts, whose profession is stealing and acting as village watchmen, preferably the former. Sālhes, they say, was the first watchman and a noted bandit, in whose honour a popular epic is chanted in Bihār (Grierson, *JASB*, pt. I. 1882) p. 3ff.). The Dusādhs of Bihār also worship Gaurāiā or Gornāyā, another bandit chief of this tribe, whose shrine is at Sherpur, near Patna, to which members of all castes resort. The higher castes make offerings of meal, the lower sacrifice pigs and pour oblations of spirits on the ground. The cultus of this deity is, however, in a state of transition, because this low-caste robber is now identified with the potter of Bhimes, who is quite a respectable minor god, already occupying a niche in the Hindu pantheon. Doubtless before long both Sālhes and Gaurāiā will be accepted as manifestations of one or other of the Hindu gods (Riley, *TC*, Calcutta, 1891, I. 256; Buchanan, in Martin, *Eastern India*, London, 1838, I. 192). The Banjāra (q.v.) tribe of carriers and sutlers, again, have a similar deity, the freebooter Miṭṭhu Bhūkhīya. In every camp there is a hut set apart and devoted to him. No one may eat, drink, or sleep in this hut, which is distinguished by a white flag. When a criminal expedition is arranged, the members of the gang meet at night in this hut, and an image of the tribal Sati is produced. A wick soaked in butter is placed in a saucer and lighted, and an appeal is made to it for a favourable omen, the worshippers mentioning the direction and object of the proposed expedition. If the wick should drop, it is regarded as a favourable omen. The worshippers immediately rise, make obeisance to the flag, and start then and there on the business which has been arranged. After the plunder has been secured, a share is set aside for the deity. Cooked food, spirits, and incense are taken to his hut, the liquor is poured at the foot of the flagstaff, the incense is burnt on the altar, and the food left in the hut. The tribal priest makes an obeisance, and all assembled thank Miṭṭhu Bhūkhīya for accepting the offering (Cunliver, *JNIV* IV. [1894] 173 ff.).'

² J. Jolly, *Recht und Sittē*, Strassburg, 1896, p. 153 f.

was brought about: by tradition, by superstition, or by fiction; whether the renown of the hero lived in the traditions of chroniclers and genealogists, in the talk of the people, in tales and legends, in the song of the bard, or in epic poetry. If the fame of a great person, historical or imaginary, is once firmly established, he is likely to become invested with a semi-divine character and to command the homage of the many. This quasi-religious veneration felt for great men of the past, though not part of the religion of the Brāhmins as taught in their books, was none the less generally acknowledged. The Sanskrit name for it is *bhakti*, a word which denotes all degrees of veneration from respectful love to the devotion of the worshipper. The feeling of *bhakti* is deeply rooted in the Indian mind, so much so that it has left traces in the structure of the language. Pāṇini (iv. 3, 95) teaches how words are formed to denote that a person or thing to whose name certain affixes are applied is the object of *bhakti*, love, or veneration, as the case may be. Thus from *sūtra* 98 we learn that the worshippers of Vāsudeva (i.e. Kṛṣṇa) and Arjuna were called Vāsudevaka and Arjunaka, and *sūtra* 99 teaches the formation of the names of those who venerate a man with a *gotra*-name or a Kṣatriya. We thus see that already at the time of Pāṇini, in the 4th cent. B.C. or earlier, hero-worship was a wide-spread custom. We have no detailed knowledge of the form which this worship assumed; all that can be reasonably asserted is that the places sacred to the memory of heroes were included in the great number of *tīrthas*, i.e. places of pilgrimage. To visit such places (*tīrthayātrā*) and to worship at them was considered very meritorious.¹ The *Tīrthayātrā-parvan* of the *Mahābhārata* (iii. 80–90) enumerates a great many *tīrthas*, especially in Gangetic India; the epic, of course, would mention only *tīrthas* of great fame. Some of them are dedicated to renowned *ṛṣis*, but the names of many suggest that they belonged originally to less famous saints or local celebrities, and only later on had divine myths or legends of *ṛṣis* attached to them. By the natural tendency to increase the sanctity of a *tīrtha* it came about that in the exceedingly numerous *Mahātmyas*, or descriptions of holy places, which are being fabricated up to our days and usually pretend to be parts of *Purāṇas*, many insipid myths of gods and incarnations are told, but few records are preserved of the humbler hero who may originally have been worshipped in that place.

We shall divide what may be called Indian heroes into two classes: ancestral heroes, and epic heroes. This division, however, is not strictly correct; for the characteristics of one class are frequently present also in members of the other; e.g., many ancestral heroes have become the subject of epic poetry, and are, therefore, also epic heroes in a wider sense.

I. Ancestral heroes may be called the founders of families (*gentes*), of clans, and of dynasties. Now the Indian *gentes*, especially those of the Brāhmins, are called *gotra* (q.v.). Max Müller² says:

'All Brāhmanic families who keep the sacred fires are supposed to descend from the Seven Ṛṣis. These are: Bhṛgu, Aṅgīras, Viśvāmitra, Vasiṣṭha, Kāśyapa, Atri, Agastī. The real ancestors, however, are eight in number: Jamadagni, Gautama and Bharadvāja, Viśvāmitra, Vasiṣṭha, Kāśyapa, Atri, Agastya. The eight Gotras, which descend from these Ṛṣis, are again subdivided into forty-nine Gotras, and these forty-nine Gotras branch off into a still larger number of Gotras. . . . A Brāhman who keeps the sacrificial fire is obliged by law to know to which of the forty-nine Gotras his own family belongs, and in consecrating his own fire he must invoke the ancestors who founded the Gotra to which he belongs.'

These *ṛṣis*, then, are the ἥρωες ἐπώνυμοι of the Brāhmanical *gentes*, and as such they receive a

¹ *Mahābhārata*, III. 82.

² *Hist. of Ancient Sanskrit Literature*, London, 1880, p. 879 f.

kind of worship in prescribed forms. It may be added that some of them, especially those whom Max Müller calls the real ancestors, are the subject of legends related in the epics and *Purāṇas*, while about many tradition is silent except in so far as they are regarded as the authors of the hymns of the R̥gveda. Not only the Brāhmins but also the Kṣatriyas¹ and Vaiśyas seem to have had, in ancient times, *gotras* of their own, some of which at least were identical in name with those of the Brāhmins. But we know practically nothing about them; they seem in the early centuries of our era to have fallen into disuse, probably because the Kṣatriyas were split into a great many clans, and the Vaiśyas into an ever-increasing number of castes, and these divisions acquired a greater importance than the old-fashioned *gotras*.²

We pass now to such ancestral heroes as are regarded as the founders of clans and dynasties. The dynasties of ancient India belong either to the Solar race (Sūrya-vaṁśa) or the Lunar race (Soma-vaṁśa). Both races go back to Manu, the son of the Sun (Vivasvat), but with this difference, that the solar race contains the descendants of Manu's sons, the lunar race those of his daughter Ilā and Budha, the son of Soma, the Moon. In this way it is explained that the Sun (Vivasvat) and the Moon (Soma) are the progenitors of the solar and lunar races respectively, while to either belongs Manu, the father and eponymous hero of mankind. The nine sons of Manu, Ikṣvāku, etc.³ are said to have founded as many branches of the solar race, and must, therefore, be regarded as their ancestral heroes. But these genealogical traditions seem to have been fixed at a time when they were already on the point of dying out; for there is some confusion even about the number and the names of these ancestors. It deserves, however, to be mentioned that one of them, Nābhānediṣṭha (who is also reckoned as two, Nābhāga and Nediṣṭha, or is called Nediṣṭha the son of Nābhāga), became a Vaiśya, and another, Prṣadhra, became a Śūdra, and a third one, Karūga, founded a warrior tribe called after him. In the lunar line the first king was Purūravas, whose amours with the nymph Urvāṣi have been celebrated in the Vedas, the epic, and Kālidāsa's famous play. His third successor, Yayāti, had five sons, Yadu, Turvaṣu, Druhyu, Anu, and Puru, the ancestors of as many clans or dynasties, of which the Yādavas and Pauravas were the most conspicuous. In the line of Puru was born Bharata, the ancestral hero of the race of the Bhāratas, from whom India got its Purāṇic name Bhārata Varṣa. In his line rose Kuru, the ancestor of the Kauravas, the cousins and foes of the Pāṇdavas, whose internecine war is the subject of the *Mahābhārata*. The line of the Yādavas contains also such branches as the Vṛṇis, Andhakas, Sattvatas, Madhus, Krathas, and Kuśikas, named after their founders.⁴ These instances, which might easily be multiplied, may suffice to show that the ancient history of India, of which the epics and the *Purāṇas* have preserved only fabulous and distorted records, abounds with ancestral heroes. Some of them may have been historical persons, but many have probably been invented and set up by bards and genealogists in order to account for the origin of a clan or a line of rulers whom they served. Such a process of hero-making is, of course, not confined to ancient times; it was going on also in

mediæval India, as will be seen from the following instances. The Rāṣṭrakūṭas descended from a prince of that name, the son of Raṭṭa, who belonged to the Sātyaki branch of the Yādavas.¹ The Chālukyas derived their origin from a hero sprung from the *chuluka*, or water-vessel, of Brāhmā. From him descended the Chālukyas, a race of heroes, among whom Hārīta is reckoned as first progenitor, and Mānavya arose who humbled the kings of the earth.² Paramāra, the eponymous hero of the Paramāra race of Kṣatriyas, issued from the sacrificial fire of Vasīṣṭha on Mount Arbuda.³ According to modern tradition, the races or mediæval regnal houses of the Chālukyas, Chahamānas, Pratihāras, and Paramāras are the four *agnikūlas* which originated from the *agni-kunḍa* on Mount Abu. Prominent rulers have arisen in these races who have in their turn been acknowledged as heroes by their clans and become the subjects of the homage of their descendants.

Another class of ancestral heroes which was very numerous and important in Greece, the founders of cities and patrons of districts, is not absent in India; but it is of little importance. Most famous towns, according to popular opinion, are of a fabulous antiquity; witness the legends of the Buddhists and the Jains. These relate events which are believed to have occurred many millions (even oceans) of years ago, and yet lay the scene in countries and towns that flourished in historical times. Yet some legends about the founding of towns are met with in the epics and *Purāṇas*. According to *Rāmāyaṇa*, i. 32, the four brothers Kuśāmba, Kuśanābha, Asūrtarajas, and Vasu founded the towns Kuśāmbi, Mahodaya (Kānyakubja), Dharmāranya, and Girivraja; Viśāla, son of Ikṣvāku, founded Viśālā (i. 47); Satrugna, Madhupuri, or Madhurā (Mathurā) (vii. 70); Bharata's sons Takṣa and Puṣkala, Takṣila and Puṣkalāvati; Lakṣmaṇa's sons Aṅgada and Chandraketu, Aṅgadiya and Chandrakantā (vii. 102); Rṣabha became the second founder of Ayodhyā, after it had been deserted on the death of Rāma (vii. 111), etc. These epic notices about founders of towns, whether they be records of popular traditions or inventions of the poet, prove at least that this kind of hero was known in India, and we may assume that as local heroes they got their share of *bhakti* in one form or another.

2. We now come to the epic heroes, i.e. those personages described in the epics whom popular admiration and veneration have promoted to a superhuman or semi-divine rank. Epic poetry seems to remove from the everyday sphere all persons and things that make part of the narrative, and to invest them with an exalted character. Every beginner in Sanskrit remembers how, in the opening of the story of Nala, Indra inquires after the warriors and kings who used to visit him as his dear guests, but at that time stayed away on account of Nala's *svayamvara*. Thus, the principal persons of the epics have a tendency to become heroes in the technical sense of the word, and, once having entered upon their upward career, they may end with being regarded as gods. The most instructive instance is the hero of the oldest epic, the *Rāmāyaṇa*. In the original parts of that work (viz. books ii.-vi.) Rāma is still a human hero, the best of men, the supreme model of morality and loyalty; notwithstanding his association with superhuman beings, the monkeys, and his fight with, and victory over, the demons (Rākṣasas), he remains essentially a man. But in the first and last books, which are decidedly later in origin and of a different

(*Purāṇa*-like) character, the authors regard him already as a god—an incarnation of Viṣṇu.¹ As such he has been adored ever afterwards down to the present day. The case is somewhat different with regard to Kṛṣṇa in the *Mahābhārata* and the *Purāṇas*. The authors of these works frequently declare him to be a supreme god, an incarnation of Viṣṇu; yet in most of his adventures, from his killing of his uncle Kaiśa down to his death by the arrow of the hunter Jara (Old Age), we seem to recognize the miraculous records of a tribal chief who had come to be worshipped as a true hero by the members of his clan. But he seems early to have been combined or identified with a cowherd-god, Govinda, 'the cow-finder,'² and this coalescence with a deity probably brought about the deification of Kṛṣṇa as an incarnation of Viṣṇu. He became one of the most popular gods of the Hindu pantheon.

Rāma and Kṛṣṇa are the epic heroes who have reached the highest possible rank; others have become minor deities, e.g. Hanuman, and some true epic heroes of human standing, e.g. Bhiṣma. But at the time when such heroes were celebrated in epic songs they had already, as it were, accomplished a part of their career. Some may always have been regarded as men who were the centres of an ever-increasing epic cycle; others, however, may once have been popular gods who were losing their rank somehow, and therefore were represented by the poets only as superior men; e.g., Arjuna seems to retain some marks of an originally divine nature; he is intimately connected with Indra, his father, in whose heaven he lives for five years, and he vanquishes the Asuras (Nivātakavachas, Paṇomas, Kālakañjas); Pāṇini, iv. 3, 98, mentions his worshippers along with those of Vāsudeva (Kṛṣṇa). Karna, the son of the Sun-god, is born with the mail-coat and the earrings of that god, of which he is cheated by Indra. Bhiṣma, who is now worshipped as a hero in the whole of India, betrays, in the great epic, many traits of a demonic (Rākṣasa) nature: his association with Rākṣasas, his ravenous appetite (Vṛkodara), and his ferocity (he tears off the arm and drinks the blood from the breast of Duṣṣāsana). The heroine of the *Rāmāyaṇa*, Sītā, is described in the old parts of that work only as the loving spouse of Rāma; but, as her name, which denotes 'furrow' and 'agriculture,'³ her origin from, and her return to, the interior of the earth, indicate, she was originally a chthonic deity. The present writer is also inclined to believe that Hanuman was a godling before Vālmīki sang of his friendship with Rāma, whereby he came to be recognized as a popular deity throughout India. We thus see that epic heroes may be men, historical or fictitious, on promotion; or, on the other hand, they may be gods and divine beings on the decline.

Now, as regards the epic heroes who actually were worshipped, besides Rāma, Lakṣmaṇa, Sītā, and Hanuman, Kṛṣṇa, Baladeva, etc., who are generally acknowledged gods of the Hindu pantheon, we must chiefly rely on the testimony of

modern popular religion and folklore. They seem to form a class of superhuman beings who are known as the *chirajivins*, i.e. the long-living or immortal ones. A *versus memorialis* in Sanskrit¹ enumerates seven *chirajivins*: Aśvatthāman, Bali, Vyāsa, Hanuman, Vibhiṣana, Kṛpa, and Paraśurāma; a quotation in the *Śabda Kalpa Druma*² adds an eighth—Mārkaṇḍeya. The belief in *chirajivins* can, however, be traced back to comparatively early times. In the 108th *sarga* of the Uttara-kāṇḍa of the *Rāmāyaṇa*, Rāma commands that Hanuman and Vibhiṣana should live as long as the *Rāmāyaṇa* shall exist; verse 33 adds Jāmbavat, Maṇḍa, and Dvividā, and says that they will live 'till the Kali comes.' The commentator says that Hanuman and Vibhiṣana will live till the destruction of the world, but Jāmbavat, Maṇḍa, and Dvividā³ will die during the incarnation of Kṛṣṇa. It is, therefore, probable that the class of heroes continuing to live and removed to a higher sphere was originally more numerous than the verse alluded to above would make us believe.

Besides these never-dying heroes there probably were a great many others who were believed to have died, yet still received some kind of homage, though in most cases we have no accurate information about them. On the evidence of modern folklore, we may safely reckon among them Bhiṣma and the five Pāṇḍavas, especially Bhīma, who seems to have been a favourite of the people in many parts of India.

3. In modern India there is a third class of heroes—the departed saints and ascetics. There can be no doubt that there were such in ancient India also; but, being of local importance only, they did not find their way into general literature, and were ousted, as it were, by the great *ṛṣis*. Those, however, who might be included in this class have been treated of above among the ancestral heroes.

LITERATURE.—The necessary references have been given in the article itself. It may be mentioned that the subject has not been treated before.

HERMANN JACOBI.

HEROES AND HERO-GODS (Iranian).—In the conventional sense of the word, the Iranians possessed many heroes of whom more or less legendary tales were told; and several passages of the Avesta—notably *Yasna* ix., and *Yasht* v., xiii., xix.—record traditions of a number of them, such as Vivahvant, Yima, Athiuya, Thrita, Urvāxsaya, Keresāspa, Haosyañha, Thraētaona, Usan, Haosravah, Tusa, Paurva, Jāmāspa, Ašavazdah, Vistaru, Yoista, Vistāspa, Zairi-vairi, Urupi, Kavāta, Aipivanhu, Usadhan, Aršan, Pisiñah, Byarsan, and Syavaršan; and these heroic figures, with others, recur throughout Pahlavi literature and in the *Šah-nāmah* of Firdausi.

Of heroes in the technical sense, however, Zoroastrianism knows nothing, though in that religion marked traces of ancestor-worship exist (see artt. ANCESTOR-WORSHIP AND CULT OF THE DEAD [Iranian]; FRAVASHI). In all Zoroastrian literature the nearest approach to anything in the least suggestive of a hero-cult is *Yasht* xiii. 17.

'They, the *fravashis* of the righteous, give most help in battle fierce; the *fravashis* of the righteous are most mighty, Spitama [Zarathuštra], those of the first teachers of the faith, or those of men unborn, of the Saosyants, the preparers [of the world for the final restoration]; but the *fravashis* of other living righteous men are more mighty, Spitama Zarathuštra, than [those] of the dead.'

Old Persian literature is silent on the subject of heroes, but in Greek references to the Persians we find what seem at first blush to be allusions to these apotheosized men of renown. On arriving at Pergamum, on the river Scamander, Xerxes

¹ Quoted in *Indian Antiquary*, 1912, Supplement, p. 54, note.

² Böhtlingk-Roth, *Skr. Wörterb.*, St. Petersburg, 1856-76, s.v. 'Chirajivin.'

³ Maṇḍa and Dvividā are also two demons killed by Kṛṣṇa and Baladeva.

¹ In an inserted passage of the sixth book, vi. 170, Rāma is still ignorant of his divine character, and Brahmā is introduced to explain the identity of Rāma with Nārāyaṇa. It may be mentioned that the Jains, both Svetāmbaras and Digambaras, possess a very old version of the story of the *Rāmāyaṇa* fabricated with a strong sectarian bias. In this Jain *Rāmāyaṇa* (Padmācharita and Padmāpurāṇa), Rāma is frequently called Nārāyaṇa; but his most common name is Padmanābha (abbreviated into Padma), a synonym of Viṣṇu.

² According to Kātyāyana (Pāṇini, iii. 1, 138, *varttika* 2), Weber's explanation of *govinda* as the Prakrit for *gopendra* is scarcely admissible, for the supposed change of *p* to *v* belongs to a more advanced state of the Prakrit language than may be assumed for the Prakrit at the time of Kātyāyana.

³ Sītā has this meaning in the title of an official in the king's service—*siddhāyaka*, 'superintendent of agriculture' (*Kautilya Arthashastra*, ii. 24).

'sacrificed a thousand kine' to Ilian Athene, and the magi poured libations to the heroes' (χοῆς δὲ οἱ μάγοι τοῖσι ἥρωσι ἐχέοντο [Herod. vii. 43]). Furthermore, Xenophon makes Cyrus the Great offer prayer 'to the gods and heroes who occupy the Persian land' (θεοῖς καὶ ἥρωσι τοῖς Περσίδα γῆν κατέχουσιν [Cyrus. II. i. 1; cf., however, the simple θεοῖς τοῖς Μηδῶν γῆν κατέχουσιν immediately following]), 'to the heroes who inhabit and protect the land of Media' (ἥρωας γῆς Μηδίας οἰκτροπας καὶ κηδεμόνας [ib. III. iii. 21]), to 'the gods and heroes of Assyria' (ib. § 22), and 'to the heroes who hold Syria' (ἥρωσι τοῖς Συρίαν ἔχουσι [ib. VIII. iii. 24]). Yet, side by side with Xenophon's reference to 'the gods and heroes who occupy the Persian land,' Herodotus (vii. 53) makes Xerxes pray simply 'to the gods who guard the Persian land' (τοῖσι θεοῖσι τοῖς Περσίδα γῆν λελόχασσι). A. Rapp had, therefore, good reason to declare (ZDMG xix. [1865] 66 f.) that the Greeks, in their references to the Persians, used ἥρωας and θεοὶ synonymously; and in this connexion it is noteworthy that Strabo (p. 733) says that 'the deeds of the gods and of the noblest men' (ἔργα θεῶν τε καὶ ἀνδρῶν τῶν ἀρίστων) were imparted in the course of instruction, the omission of all allusion to heroes being at least curious if their cult was of any importance.

There is, however, a possible identification of these 'heroes' of Persia and of other countries, for the Greek accounts seem to be in general more accurate than is often supposed. It would appear that the 'heroes' in question are none other than the *fravashis*, who not merely guarded the house, village, district, etc., but were also 'for the protection of the Aryan lands' (*thrātrāi airyanām dahyundām* [Yast xiii. 43]), and, indeed, 'of all lands' (*vispandām dahyundām* [ib. § 21; cf. *Yasna* xxiii. 1]). It is possible that there may have been a hero-cult in ancient Iran at a very early period; but, if there was, it had been merged in the worship of the *fravashis* before the date of our oldest records concerning the Iranian race; and all traces of it, if it ever existed, have long since vanished.

LOUIS H. GRAY.

HEROES AND HERO-GODS (Japanese).—

The essential basis of Shintō was a primitive Naturism, from which Animism was gradually developed. Just as the ancient Japanese used to worship the forces of Nature, so they bowed before human powers. Out of the admiration which they felt for certain visible and living men grew the more abstract worship of the same men after their death. The deification of heroes began, then, in the adoration of famous living men—a form of worship which constitutes a sort of transition between Naturism and Animism, and which is the tangible germ of all after-development.

In order to understand this basis aright, we have only to remember that, in the conception of the Japanese, as, indeed, of many other peoples, a god is not, as he is to our modern ideas, a being immeasurably above and beyond humanity, but simply, as the word *kami* indicates, a 'superior' being. Between a powerful man and a god there is a difference only of degree, and a great man may easily become a minor god. We find a confirmation of this, in historical times, in the divine honours paid to the Emperor—an evident survival of a wider deification.

Originally all men of note who were above the ordinary level seem to have been worshipped. The first objects of this adoration were the ancient chiefs or independent kings, of whom we are continually reminded, even after the triumph of

Imperialism, by the 8th-cent. annals (see *Kojiki*, 167 ff., 173, 185, 189, etc.). The Emperor himself is often required, and consents, to worship local gods, who are the souls of ancient chiefs (ib. 179, 215, etc.); and the honour thus paid to the shades of departed chiefs, like that given to Imperial ancestors, leads us to think that these chiefs must have been worshipped in their lifetime, just as the Emperor himself was. Besides, mythology is full of descriptions of wars between 'gods,' who were, without doubt, human chiefs (ib. 167, 178, 260 f., 264, etc.). The worship of the Emperor was only the synthesis of the cults of these local chiefs, just as the Imperial power finally united in its own person all the separate local powers which had formerly existed.

The next in order are the sorcerers, who were originally, before the division of social work, often identified with the chiefs themselves; thus, on the day of his accession to the throne, we find Jimmu, the first legendary Emperor, instructing one of his followers in the magic formulæ (*Nihongi*, i. 133). These sorcerers, when they accomplished anything which seemed particularly wonderful to their neighbours, were naturally the object of an admiration which finally merged into worship, continuing at first during their lifetime, and, later, even after their death. Just as the adoration of powerful chiefs was an instinctive homage paid by weakness to superior force, so the worship of a 'medicine-man,' famous for his miraculous gifts, is the natural homage paid by ignorance to superior intelligence. The Japanese gods are magicians (see *Kojiki*, 83 ff., 149 ff., etc.), and it may readily be conceived how, on the other hand, magicians may easily turn into gods. Thus, even to-day, by a titular survival of these ancient beliefs, the high-priest of Kizuki, in Idzumo, is called *iki-gami* ('living god').

In the same connexion we must mention also the inventors of arts, the importers of useful articles, and all the great benefactors whose intelligence or skill arouses gratitude and demands respect. In Shintō mythology, we find first of all the worship of the group of illustrious gods, who, under the direction of Omohi-kane, the god of cunning, invented the principal arts, beginning with the art of the blacksmith, whom the primitive people were most willing to consider as a veritable magician (*Kojiki*, 63-65). Then come the gods Ōho-kuni-nushi, a powerful chief, and Sukuna-biko-na, a dwarf-wizard, who not only completed the material construction of the country, begun by the Creator-Pair, but also taught men magic and medicine (see *Nihongi*, i. 59); then the great god Susa-no-wo, who had already gained fame, in a well-known myth, by delivering a young princess from the monster-serpent of Koshi, which was about to devour her, and who also, with the help of his son Itakeru, the 'deserving god' (*isaooshi no kami*), created, by tearing and dispersing the hairs of his body, the cedars and camphor-trees for the construction of ships, the thuyas for the building of palaces, the podocarps for the manufacture of coffins, while at the same time he sowed and caused to grow all kinds of fruit for the nourishment of human beings (*Nihongi*, i. 58). Along with these gods appears another beneficent being, Mi-wi-no-Kami, who sank wells in several parts of the country (*Kojiki*, 88).

All these gods, who were at the same time magicians and inventors, were without doubt originally real personages, whose fame was only increased by legend. So, Sukuna-biko-na, the mysterious dwarf who is depicted as arriving on the crest of the waves in a tiny boat made out of a berry in the form of a long gourd, and dressed in the skin of a bird, and who, after having done

¹ The sacrifice of a thousand kine (together with a hundred stallions and ten thousand sheep) has a genuinely Iranian ring; cf., for example, *Yast* v. 21, 25, etc., ix. 3, 8, etc.

wonderful deeds, disappears by climbing up a stalk of millet, from which he is carried away to another world, no doubt finds his prototype in the miraculous visit of some strange sorcerer (see *Kojiki*, 103; *Nihongi*, i. 59 f.). Strangers, indeed, were often considered as beings of superior nature; the god who imported plants, Itakeru, seems to have belonged to Korea (see *Nihongi*, i. 58), and here and there we find traces of the worship of other Korean 'divinities' (*Nihongi*, i. 11, 169, 225, 378).

Finally it may be said in a general way that, just as the natives, crushed by the conquerors, are deified under the general name of 'evil gods,' 'demons,' or 'savage gods' (*Kojiki*, 167, 178, etc.; *Nihongi*, i. 198, 202 f., etc.), so the conquering race as a whole also invests itself with divinity, and, claiming descent from Heaven (*Kojiki*, 72, 112-135, etc.; *Nihongi*, i. 110 f., 128), proclaims itself as the only true race of gods.

All these elements—the power of the political chiefs, the magic of the sorcerers, the skill of the inventors, the quarrels between tribes—intermingle and end in one central cult which is at once the result and the proof of its manifold origin. The Emperor, having become both the undisputed master and the high-priest of the nation (*matsuri-goto*, 'government,' comes from *matsuri*, 'cult'), and being considered as the direct descendant of the most illustrious gods—from the goddess of the Sun downwards—ends by being the supreme personification of all the glories of the State. He is regarded as the only 'incarnate god' (*ara-hito-gami*, or *ara-mi-kami* [*Nihongi*, ii. 198, 217, etc.]); he believes himself to be so, and assumes this title in his own edicts (*ib.* ii. 210, 226 f., 359). Sometimes, even in his own lifetime, he has the funeral-mound erected, the immense *misasagi*, where he will continue to be worshipped after his death (*ib.* i. 298 ff.; cf. ii. 178). So much is the Emperor considered all-powerful, that, in the ancient annals, the most famous heroes are always classed, like personages of secondary importance, under the name of the Emperor whose reign they have served to make famous. For example, in the *Kojiki*, the whole legend of Yamato-dake is entitled 'Emperor Keikō,' in spite of the small part played by him, and the entire story of the Empress Jingō, the legendary conqueror of Korea, is called 'Emperor Chuai,' although the exploits of the heroine begin exactly on the death of her husband (*Kojiki*, 248-278, 283-293).

Here we have a proof of the existence of a movement in the evolution of Japanese hero-worship which tends to diminish little by little the importance of individual famous men so as to increase the glory of the Emperor, in whose person all the traditions are united. But at the same time there still exists, and that in a profoundly living form, the worship of true heroes—ancestors who have wrought mighty deeds, and great benefactors, the conquerors of the islands and the civilizers of the country, the monster-killers and inventors, all those eminent men whose memory has been handed down by popular favour, and whose fame occupies an increasingly large place in the heart of new generations.

As a typical example of these deified heroes, we may quote Yamato-dake, 'the Brave of Japan,' the most famous figure of legendary times. This hero, who, according to traditional chronology, lived about A.D. 100, was the third son of the Emperor Keikō. The first of his exploits, while showing his loyal respect for his father and sovereign, is sufficient to indicate the violent character of the mighty deeds which were to make his career famous. He began by assassinating one of his elder brothers, who had omitted to appear at the 'morning-and-evening-great-august-repasts.' The

Emperor, angry at such negligence, had charged Yamato-dake, then a youth of sixteen, to recall his elder brother to a sense of his duties, and five days later, as there had been no appearance of the brother, he asked his youngest son if he had fulfilled his orders. Yamato-dake replied that he had not failed to do so, calmly adding an explanation of how he went about it: 'I grasped hold of him, and crushed him, and, pulling off his branches [i.e. limbs], wrapped them in matting and flung them away.' It may be imagined that the Emperor showed himself somewhat 'alarmed at the valour and ferocity of his august child's disposition.' He therefore sent him off at once to the West, to fight against two warriors of the country of Kumaso, who were rebelling against the authority of the Emperor. The manner in which the young prince acquitted himself on this mission will be a sufficient example of the general character of these heroes of primitive Japan, with whom cunning occupies as large a place as courage.

'On reaching the house of the Kumaso bravoes, His Augustness Wo-usu [the name given to Yamato-dake as a child] saw that near the house there was a three-fold belt of warriors who had made a cave to dwell in. Hereupon they, noisily discussing a rejoicing for the august cave [a house-warming], were getting food ready. So he sauntered about the neighbourhood, waiting for the day of the rejoicing. Then, when the day of the rejoicing came, having combed down after the manner of girls his august hair which was bound up, and having put on his aunt's [Yamato-hime, the high-priestess of Ise] august upper garment and august skirt, he looked quite like a young girl, and, standing amidst the women [concubines], went inside the cave. Then the elder brother and the younger brother, the two Kumaso bravoes, delighted at the sight of the maiden, set her between them, and rejoiced exuberantly. So, when the feast was at its height, His Augustness Wo-usu, drawing the sabre from his bosom, and catching the elder bravo of Kumaso by the collar of his garment, thrust the sabre through his chest, whereupon, alarmed at the sight, the younger bravo ran out. But pursuing after and reaching him at the bottom of the steps of the cave, and catching him by the back, Prince Wo-usu thrust the sabre through his buttock. Then the Kumaso bravo spoke, saying: "Do not move the sword; I have something to say." Then His Augustness Wo-usu respited him for a moment, holding him down as he lay prostrate. Hereupon the bravo said: "Who is Thine Augustness?" Then he said: "I am the august child of Oho-tarashi-hiko-oshiro-wake [the governing Lord, the prince perfect and great, primitive name of the Emperor Keikō], the Heavenly Sovereign who, dwelling in the palace of Hishiro at Makimuku, rules the Land of the Eight Great Islands; and my name is King Yamato-woguna [the young man of Yamato, another name for the prince]. Hearing that you two fellows, the Kumaso bravoes, were unsubmitive and disrespectful, the Heavenly Sovereign sent me with the command to take and slay you." Then the Kumaso bravo said: "That must be true. There are no persons in the West so brave and strong as we two. Yet in the Land of Great Yamato there is a man braver than we two. Therefore will I offer thee an august name. From this time forward it is right that thou be praised as the August Child [i.e. Prince] Yamato-dake [i.e. 'Yamato-Brave,' the Bravest in Yamato]." As soon as he had finished saying this, the Prince ripped him up like a ripe melon, and slew him. So thenceforward he was praised by being called by the august name of His Augustness Yamato-dake.'

After this exploit, which reminds us of Zeus, in disguise, entering the dwelling of Lycaon, and then killing him and his sons in the midst of a feast, Yamato-dake triumphed, again by cunning, over another enemy, an Izumo warrior. Yamato-dake, who was armed with a trusty sabre, got his enemy to fight against him with a wooden sabre, which he had cunningly substituted for the weapon of his adversary. That done, he returned to the capital, but very soon his father sent him off to do battle in the East. He set out, and to protect him against the dangers which awaited him, his aunt, the high-priestess, gave him a weapon famous in Japanese mythology, the 'Herb-Quelling-Sabre,' with an 'august bag,' the use of which will be seen later on.

'So then, when he reached the Land of Sagamu, the Ruler of the land lied, saying: "In the middle of this moor is a great lagoon, and the Deity that dwells in the middle of the lagoon is a very violent Deity." Hereupon Yamato-dake entered the moor to see the Deity. Then the Ruler of the land set fire to the moor. So, knowing that he had been deceived, he opened the mouth of the bag which his aunt, Her Augustness Yamato-

hime, had bestowed upon him, and saw that inside of it there was a fire-striker. Hereupon he first moved away, the herbage with his august sword, took the fire-striker, and struck out fire, and, kindling a counter-fire, burnt the herbage and drove back the other fire, and returned forth, and killed and destroyed all the rulers of that land, and forthwith set fire to and burnt them.

This legend, so often depicted by Japanese artists, is followed by another no less famous story:

"When he thence penetrated on, and crossed the sea of Haashiri-mizu (Running-water), the Deity of that crossing raised the waves, tossing the ship so that it could not proceed across. Then Yamato-dake's Empress (i.e. his consort), whose name was Her Augustness Princess Ototachibana ["Younger-orange"], said: "I will enter the sea instead of the August Child. The August Child must complete the service on which he has been sent, and take back a report to the Heavenly Sovereign." When she was about to enter the sea, she spread eight thicknesses of sedge rugs, eight thicknesses of skin rugs, and eight thicknesses of silk rugs on the top of the waves, and sat down on the top of them. Then upon the violent waves at once went down, and the august ship was able to proceed. Then the Empress sang, saying: "Ah! thou whom I enquired of, standing in the midst of the flames of the fire burning on the little moor of Saganu, where the true peak pierces [probably Mount Fuji]." So seven days afterwards the Empress's august comb drifted on to the sea-beach, which comb was forthwith taken and placed in an august mausoleum which was made."

The heroic devotion of his wife drew from the bereaved prince an exclamation of sorrow which for many centuries echoed through the whole of Japanese poetry—where the name of Azuma, the traditional meaning of which is given below, still stands for Eastern Japan:

"When, having thence penetrated on and subdued all the savage Yenishi [the ancestors of the Ainu, now confined to the island of Yezo, but formerly occupying a large part of the empire], and likewise pacified all the savage Deities of the mountains and rivers, he was returning up to the capital, he, on reaching the foot of the Ashigara Pass [leading to Mount Fuji], was eating his august provisions, when the Deity of the pass, transformed into a white deer, came and stood before him. Then forthwith, on his waiting and striking the deer with a scrap of wild chive [used, in Japanese magic, against evil spirits], the deer was hit in the eye and struck dead. So, mounting to the top of the pass, he alighted three times and spoke, saying: "Azuma ha ya! [oh! my wife!]." So that land is called by the name of Azuma."

Yamato-dake, however, soon married another princess, with whom he left the sacred Sabre. Then he set out to make an unarmed attack upon 'a boar as big as a bull' who was the god of Mount Ibuki (a mountain famous on account of this legend, a large part of which disappeared in the earthquake of 1909). But this god led him astray into the mountain and caused heavy hail to fall on him, which paralyzed his limbs and finally caused his death. After a long and wearisome march, interrupted by songs in praise of Yamato, in which he envied the young people who still danced in that land with their crowns of oak-leaves, and welcomed the clouds coming from his native land and mourned for the divine Sabre which might have saved his life, he finally died on the return journey, without having seen the capital again. His wives and children came to look for his body; but it was transformed into a large white *chidori* (plover), which flew away towards the sea. All his relations 'with sobbing song' followed the bird to the spot where it alighted, and there erected a tomb. "Nevertheless, the bird soared up thence to heaven again, and flew away" (*Kojiki*, 254-275).

It is of importance to note that, in this curious ending to the legend of Yamato-dake, it is not only his soul, as we might imagine at first sight, but also his body, that is transformed into a bird and disappears. According to the corresponding version of the *Nihongi*, the Emperor had his son buried in one of these rock-tombs, surmounted by a vast tumulus, where great men were interred; but Yamato-dake, in the form of a white bird, flew away towards Yamato. 'The ministers accordingly opened the coffin, and, looking in, saw that only the empty clothing remained, and that

there was no corpse' (*Nihongi*, i. 210 f.). With this narrative we may compare another, found in the *Nihongi* (i. 297), where a guardian of the Shiratori-no-misasagi, the 'Tomb of the White Bird,' erected to the memory of Yamato-dake, is transformed into a white deer under the eyes of the terrified Emperor—a story which is easily enough explained by the frequent presence of deer and plovers round these ancient tombs. The origin of such a legend, as far as Yamato-dake is concerned, may easily be imagined: some one is mourning over a tomb; suddenly, a bird flies off, and the idea naturally arises that it is the dead man that is escaping. At the same time it may be conceived how such an illusion must have favoured the deification of the hero.

We have laid special emphasis on this legend of Yamato-dake, because he is the most famous of all Japanese heroes. Naturally, after those primitive heroes, of which he is the typical example, other more civilized personages were deified in their turn. For example, Sugahara no Michizane, a famous statesman and man of letters of the 9th cent., was afterwards deified under the name of Tenjin Sama, and is still worshipped, especially in a temple at Kyôto, as the god of wisdom and calligraphy. But it is probable that, if the Chinese cult of Confucius had not here furnished a model, the Japanese would never have thought of attributing to this minister of historical times the magic powers of action on Nature which were one of the causes of his deification. It is then safer, if we wish to confine ourselves to Shintô pure and simple, not to attach too much importance to those apotheoses which follow the introduction of Chinese culture.

Nevertheless, we must note that the normal deification of heroes, particularly of warrior-heroes, continues through the whole course of Japanese history, and that, until recent times, quite a number of personages were the object of a well-defined worship. While the obscure mass of the vulgar dead were regarded as descending to the darkness of the under world, certain heroes were considered as for ever haunting the land of the living, and some of them were even raised to the stars. In 1877, when the famous Saigô Takamori, the chief of the Satsuma insurgents, committed suicide after a crushing defeat, popular imagination raised him to a place in the planet Mars.

MICHEL REVON.

HEROES (Slavic).—The Slavs as well as other nations have preserved the memory of the heroic period of their past and of their prominent national heroes, but the heroic legends were developed in epic songs only by some Slavic tribes. Heroic epic thrived mainly among the Russians, Southern Slavs, and Little Russians.

1. Russians.—Russian heroic songs are called *byliny* (derived from the word *byl*='the past event'). They began to appear in the 10th-12th centuries, and have been preserved—of course, in a form considerably altered—by oral tradition down to the present day. They were originally composed by professional bards who lived at the courts of princes and wealthy noblemen (*bojari*) and sang the brave exploits of every hero of the prince's suite. From these bards they were received by wandering minstrels (*skomorochi*=*jongleurs*), who considerably modified the contents of the original songs, enlarged them with new *motifs*, and partly composed new songs of a similar character. Through the medium of wandering minstrels these songs penetrated into the very heart of the nation, and popular singers (*skasiteli*) took possession of

them. In the northern regions of Russia, especially in the government of Olonetz, Archangelsk, and in Siberia, Russian national epic has preserved its full vigour and freshness down to the present time. Some of the popular singers are acquainted with about 20 songs, containing in all some 3000 lines. The extant songs are considered as remains of a rich epic repertory which was diffused, many years ago, in the districts of Kieff and Novgorod.

The first collection of Russian epic songs was made by Richard James, an Oxford graduate, who came to Moscow in 1819 with the English embassy and had six epic songs written out for him. The manuscript of them is kept in Oxford, and was reprinted several times in the 19th century. The first collection of Russian heroic songs was published in 1804; it contains those collected by Kiril Danilov in Siberia in the 18th century. Other large collections were published by Pavel Ribnikov (1861-67, 4 vols.); Petr Kirjevskij (1869-74, 3 vols.); Alexander Gillerding (1873); Tichonravov and V. Miller (1894); A. Markov (1901); and A. Grigorjev (1904-10, 3 vols.).

Russian heroic epic has frequently been the subject of careful study. Among its first investigators there appeared scholars (e.g. Buslajev, Orest Miller) who explained the contents of the songs mythologically according to Grimm's theory. Thinking that their original scheme was mythical, they saw in every hero a representative of pagan, especially solar, gods. Other scholars were influenced by Benfey's theory of the Indian origin of European oral tradition; they derived the Russian heroic songs from Oriental legends and songs, and explained them accordingly. Minute analysis led other scholars to assume that in the heroic songs various subjects, both national and international, were developed; and the aim of their study was to discover separate strata in these songs and to distinguish them as to their origin, place, and time.

The chief representative of this comparative method was Alexander Veselovskij, an excellent authority in the world's literatures; he is the author of the significant saying: 'The national epos of every historical nation is inevitably international.' Comparative studies did much to explain the composition and style of Russian oral epic, but they did not lead to any positive results as to its origin. In recent times, however, this one-sided accumulation of comparative materials, international parallels, and motives has been given up, and the main stress has been laid upon the historical evolution of the songs and upon an investigation of the elements of national culture and history which are deposited in them. This is certainly the only correct standpoint. On this principle the songs have been studied by Vsevolod Miller, Ivan Zdanov, S. Sambinago, A. Lohoda, etc., who have already reached more reliable results.

On the ground of its contents, Russian heroic epic may be divided into two principal groups: (a) the cycle of Kieff, (b) the cycle of Novgorod.

(a) *The cycle of Kieff*.—In this are celebrated the heroes who lived at the court of the epic prince Vladimir, who, like king Arthur, was the centre of a heroic suite. The chief figure among these heroes was *Ilja Murometz*, by birth a peasant's son. He remained thirty years at home, being unable to move hand or foot; wandering pilgrims succeeded in curing him and bestowed prodigious powers on him. Ilja joined the court of the prince Vladimir in Kieff; on the way he defeated a great Tatar army and captured the robber Solovej, who had his seat upon seven oaks grown together. In the service of Vladimir, Ilja performed feats of bravery in his fights with the Tatars, and gained the renown of an invincible hero. The historical Ilja Murometz probably lived in the 12th cent. and became famous by his heroic deeds; he is mentioned also in Germanic sagas (in the 13th cent.).

Popular singers adorned him with all the qualities of an ideal hero of Russia, and connected with him various mythological and fabulous legends.

Another prominent hero of Vladimir's suite was *Dobrynja Nikitič*. He rendered himself illustrious mainly by killing a terrible seven-headed dragon which devastated the Russian country. The well-known legendary motif of a dragon-killer was transferred to Dobrynja, who lived in the 10th cent., and is called the uncle of the prince Vladimir.

Aleša Popovič is mentioned as a comrade of Dobrynja. The songs particularly celebrate his victories over the enormous giant Tugarin, in whose name is preserved the memory of the Khan of Polovci, Tugorkan, who devastated the Russian country in the 11th cent., and was killed in a combat. The historical Aleša Popovič was not born till about the beginning of the 13th cent., but the popular singers praised him as the real victor over Tugorkan.

In the service of the prince Vladimir, *Dunaj Ivanovič*, *Suchman*, *Saur Vanidovič*, etc., are mentioned as famous heroes. Foreign heroes also would come to Kieff to pay their compliments to the prince Vladimir and to make acquaintance with his brave suite. To their number belong: *Curila Plenkoritč*, boasting of luxury and riches, *Djuk Stefanovič*, *Solovej Budimirovič*, and others.

(b) *The cycle of Novgorod* differs from that of Kieff in that the persons celebrated in these songs are not knights, but sons of rich merchants. The great Novgorod, an important commercial centre of the Hanseatic league in the 12th cent., was famed for the luxury and wealth which it had attained owing to its wide-spread commerce. The city had a republican constitution, and the foremost municipal posts were occupied by the nobility and the rich merchants. Quarrels occasionally arose between the two, which form topics of some of the songs. There are also descriptions of other scenes from public life, e.g. family disputes, love adventures, robberies of brides. The principal heroes are: *Vasilij Buslajevič*; *Sadko*, a rich merchant; *Stavr Godinovič*; *Ivan*, a merchant's son.

A separate group is formed by the songs which deal with fabulous and legendary subjects. For example, the song about *Ivan Godinovič* is an expansion of the fabulous theme of an unfaithful wife; the songs on *Polyk Ivanovič* and *Kasjan Michajlovič* have a similar subject. The song about *Vanka*, a widow's son, is based upon the story of a princess who will marry only the man who manages to hide from her, etc.

The Russian heroic songs are penetrated with those deep religious and moral ideas which characterize the Russian people; but in some cases the symbols used are still unexplained. The renowned figure of the Russian epic is *Svjatogor*, a huge giant, whose head touched the clouds, and who had such extraordinary strength that he could set the whole world in motion. When crossing the steppe, he saw lying in front of him a little bag, filled with earth, and was about to lift it up; but the bag was so heavy that Svjatogor broke through the ground and perished. As is explained in another variant of this song, what was hidden in the bag was the terrestrial gravity. By this poetic symbol the sway of the earth over mortal man is beautifully illustrated. The songs about *Volch Svatoslavovič* and *Mikula Seljaninovič* have also symbolical meanings. Volch, the hero of the Vladimir group, well instructed in all knowledge and wisdom, noticed the ploughman, Mikula Seljaninovič, at work in a field, and conceived the notion of tearing his plough from the earth; he tried to do so, but failed. Then Mikula with one hand seized the plough, lifted it up easily, and threw it aside. The simple ploughman, the representative

of agriculture, triumphs over the knowledge and wisdom of the representative of military and princely power.

The typical figure of Russian epic is *Ilja Muromets*, in whom the people have incorporated their ideal of a national hero, democrat, and altruist. Born in a peasant family, Ilja remained all his life a man of simple customs, upright character, and noble mind. Although first among the heroes as regards power and fortitude, he did not become proud of the glory he had gained, and never boasted of his deeds. He considered it his first duty to protect the oppressed, and to fight for his creed, people, and country against the enemies who ravaged Russia. At the same time, he was pious, and fully trusted in the help of God. Deep moral meanings attach to the songs about the three expeditions he undertook before his death. Towards the end of his life, Ilja happened to encounter a stone where three roads divided. On the stone was written: 'Who goes the first road will be killed; who takes the second will marry; who enters the third will become rich.' Ilja chose the first road, and, having come to some high mountains, he met with robbers, who tried to kill him. Ilja took an arrow and shot it at an oak-tree with such force that it split to pieces. The robbers, terribly afraid, fell from their horses. Then Ilja returned again to the stone and set out along the second road. He came to a magnificent palace, where a beautiful queen lived. Ilja did not allow her beauty to seduce him, and put her in chains. He set free the knights whom the cunning queen kept imprisoned in her palace, and distributed amongst them all the wealth that he had found in the palace. He returned once more to the stone and took the third road, where he found huge treasures of gold, silver, and pearls. Out of this treasure he ordered churches and monasteries to be built, and did not take anything for himself. During the building, Ilja was carried over by the invisible power of an angel into the monastery of Pečersk, near Kieff, where he breathed out his soul. It is surely impossible to imagine a more beautiful apotheosis than that with which the Russians have celebrated their well-beloved popular hero.

2. **Southern Slavs.**—Popular epic flourished richly among the Southern Slavs (Serbs, Croats, and Bulgarians). When, at the beginning of the 19th cent., the first collections of their songs appeared, they aroused genuine admiration in learned Europe, owing to their variety as well as their cultivated poetic form. They differ from the Russian epic, especially in their contents, which are more simple; each song usually contains only one epic *motif*, whereas the Russian poems are, as a rule, compositions made up of different subjects, and represent a higher and more artistic degree of epic evolution. The greatest merit in the collection of the popular songs of the Southern Slavs is due to Vuk Stefanović Karadžić; his example was followed later by many other collectors.

There is no certainty as to the age of the epic of the Southern Slavs. Some scholars place the beginning of these epic productions as far back as the 12th and 13th centuries; others fix on the 16th century. It is probable that the epic creative faculty of the Southern Slavs did not begin to develop until after the great historical revolutions in the second half of the 14th century. Its highest development is to be placed, therefore, in the 15th century.

As among the Russians, so among the Southern Slavs, heroic songs were composed at first by professional bards, who were educated in special vocal schools. Afterwards they were taken up by popular singers, the *guslari*, so called after the musical

instrument *gusle* (a sort of violin) on which they accompanied their songs.

Historical events are the chief topics of the South Slavic epic; very few nations have preserved the image of their past events in their national poetry so vividly as the Serbs and Bulgarians. First of all, the songs celebrate certain monarchs of the *Nemanic family* (1168–1371), who are praised for their pious disposition, which they often evinced by founding churches and monasteries. Far richer is the cycle of songs whose central theme is the ill-fated battle on the field of *Kosovo* (1389), with which the Turkish supremacy began. The songs of this cycle describe partly single events in connexion with that battle, partly the principal heroes who took part in the fight (Miloš Obilić, the Czar Lazar, Vuk Branković, the brothers Jugović, etc.). It is curious that the defeat of Kosovo is related as a disaster predestined by God to the Serbian people.

The most beloved hero of the South Slavic epic is *Prince Marko* († 1304). Nearly a hundred songs about him are current, describing his life and heroic deeds, from his birth to his death. They contain very few historical reminiscences; popular singers have connected various Biblical, legendary, and fabulous *motifs* with him, and transformed him into a semi-mythical being. He was educated by mythical beings, *vile* (fairies), who bestowed superhuman power on him. Marko makes use of this power for the benefit of his fellow-men, succours the oppressed on every occasion, and administers stern justice. He hates violence and loves liberty; he sets prisoners free, and willingly helps the unhappy. He is at the same time pious, and undertakes the hardest battles for the Christian faith. When dying, he bequeaths one part of his gold to him who will bury him, the second for the embellishment of churches, and the third to the blind bards that they may sing his glory.

Another cycle represents the historical events after the battle of Kosovo, and describes battles between the Serbs and the Turks down to the complete enslavement of Serbia in 1521. The chief heroes of this cycle are the Serbian monarchs of the family of *Branković*, and the *Kings of Hungary* who fought against the Turks. Under the cruel Turkish yoke, these songs took the place of history and poetry among the Southern Slavs. They celebrated not only subjects from the glorious past, but also contemporary events, especially the petty battles of the Slavs in revolt against the Turks. The most recent ones celebrate the wars of liberation of modern times.

Besides these historical subjects, which, of course, the popular singers changed and adorned in various ways according to their imagination, there were included in the living stream of South Slavic epic many *motifs*, partly apocryphal (creation of the world), partly legendary (about incest, immolation of one's own child), and partly fabulous (about the dead brother, immurement of people in buildings, the serpent-bridegroom, the unfaithful mother, etc.). Owing to this great variety of poetic *motifs*, the epic of the Southern Slavs takes its place high above all similar epic products of other nations.

The most notable names in the interpretation of the South Slavic songs are Stojan Novaković, F. Miklošić, V. Jagić, T. Maretić, M. Chalanskij, and Asmus Sørensen.

3. **Little Russians.**—The heroic songs of the Little Russians (Ukrainians) are called *dummy*. They took their rise among the famous Cossacks, and their authors were professional minstrels, educated in vocal schools, the number of which was very considerable in Ukraine. The name of the present singers of the *dummy* is *kobzari*, from the musical instrument *kobza*, similar to the guitar.

Professional singers used to follow the Cossacks on their expeditions, and give expression to their feelings in melancholy songs. They sing either the battles of the Cossacks with the Tatars and the Turks, or those of the famous Chmelnicki, *ataman* of the Cossacks (in the 17th cent.), against the Poles who oppressed the free Cossacks. Besides the historical events, touching scenes from domestic and family life are described in the *dumy*. The songs of the Little Russians are penetrated with a fervent love of native land and liberty, and a sincere piety. Their melancholy character, as well as their tone and composition, reminds us somewhat of the Psalms of the OT.

The best interpreters of these songs are Kostomarov, Antonov, Dragomanov, Ziteckij, Franko, and Grinchenko.

4. The Bohemians and the Poles have many heroic legends; but these did not become subjects of epic poetry. They were noted, however, by old chroniclers. The Bohemian legends deal with the ancestor *Cech*, who came with his suite from the trans-Carpathian regions and settled in Bohemia. Among the pagan Bohemian princes, *Krok* is mentioned as eminent for wisdom, etc. His youngest daughter, *Libuše*, a famous prophetess, chose for her husband *Premysl Oradč* (ploughman), founded *Praha* (Prague), and with her husband gave wise laws to the country. The Poles have similar legends. Their pagan prince *Krak* had a daughter *Vanda*, who reigned after his death, and offered her life for her country's liberty. According to popular legends, the founder of the national dynasty of Poland was the farmer *Piast*; as a reward for the hospitality he showed to two pilgrims, his family was elevated to the throne, instead of the cruel ruler *Popel*, who was devoured by mice.

HEROES AND HERO-GODS (Teutonic).—

The most explicit reference to the practice of hero-worship among Teutonic peoples occurs in the following passage from Jordanes (*de Getarum Origine*, 13):

'proceres suos, quasi qui fortuna vincebant, non puros homines, sed semi-deos, id est Anses, vocaverunt.'

This, it will be seen, is a parallel to Hesiod, *Works and Days*, 156-173. Trustworthy evidence is, however, necessarily scanty, as the Germanic races adopted Christianity soon after the Heroic Age, or towards its close. The existing records of the heroes date, for the most part, from even later times, and are therefore almost entirely coloured by Christian beliefs and practices. An example of worship paid in the form of libation to a hero of the Heroic Age occurs in *Ynglinga Saga* (41):

'So she (i.e. Hildigunn) took a silver bowl, and filled it, and went before King Hiorvarðr and spoke: "Hail to you all, Ylfiang! This in memory of Hrólftr Kraki!"'

Further reference to a similar custom is found in the *Saga of Hákon the Good* (*Heimskringla*, iv. 16): 'Men drank also a cup to their dead kinsmen who had been buried in hoves, and that was called the cup of memory.'

An extreme case of the representation of a hero as a supernatural being is that of Dietrich von Bern; in this instance the hero becomes, not a god, but a demon—a point of view due to ecclesiastical hostility towards the Arian king, and the slayer of the Pope. Hence he occurs in legend as the Wild Huntsman, and the connexion of his

name with places such as the Castle of Saint Angelo and the Amphitheatre of Verona shows him under the aspect of a local, though hardly tutelary, hero (cf. *Deutsche Predigten*, ed. K. Roth, Leipzig, 1839, p. 76; Grimm, *Deutsche Mythologie*, Berlin, 1875-78, vol. iii. ch. xxxvi.). A classical parallel may possibly be found in the story of Minos. In Attic tradition—naturally unfavourable—this king is generally represented as 'a tyrant . . . and violent, and an exactor of tribute' (Strabo, x. 4. 8 [p. 476]); while his sea-power, his connexion with the Minotaur, and his position as one of the judges in Hades after his death, combine to endow him with a semi-supernatural character.

In later times, up to the 10th and 11th centuries, we hear among the Scandinavian peoples of beings, apparently human, receiving divine honours. In *Landnámabók* (pt. i. ch. xiv.), mention is made of one Grímr, who 'because of his popularity was worshipped when dead, and called Kamban.' By this name he is twice referred to elsewhere in the same work. Similarly in *Flateyjarbók* (*Olaf's Saga hins helga*, ch. vi.) an account is given of Ólaf, brother of Hálfdán the Black, who after death is worshipped under the name of Geirstaðarálfr, and receives sacrifices offered to ensure a plentiful harvest. This mention of sacrifice in connexion with the barrow of a dead hero is reminiscent of the cult of the dead to which Burchard of Worms bears witness (*Decreta*, bk. xix. ch. v., 'de Superstitione'): 'the offerings that in certain places are made at the tombs of the dead.' An illustration of the virtue supposed to emanate from the dead body of a hero is found in the story of Hálfdán the Black (*Heimskringla*, ii. 9), where we are told that his body was claimed by four districts, each 'thinking that they who got it might expect to have plenteous seasons thereby.' To avoid discord, the body was then divided into four parts, and the resting-place of the head is specially mentioned.

An extreme case, amounting to more than hero-worship, is found in the deification of King Eric of Sweden, narrated by Kimbert in his *Life of Anskar* (ch. 26). Bishop Anskar found his missionary efforts among the Swedes, in the middle of the 9th cent., temporarily checked by a man who claimed to have received a message from the gods. They deplored the decay of their sacrifices, and offered an inducement to renewal of worship:

'If you desire to have more gods, and we are not sufficient, then do we now, with unanimous decision, admit your former King Eric into our community, so that he henceforth is one of the gods.' The people, therefore, 'built a temple to King Eric, who had died long before, and began to offer to him vows and sacrifices as to a god.'

Reference is made to this by Adam of Bremen in his *Gesta* (iv. 26): the Swedes

'also worship gods made from men, to whom they ascribe immortality because of their mighty deeds, as it is recorded that they did with King Eric in the Life of Saint Anskar.'

Deification was probably by no means uncommon, but the circumstances in this case are somewhat unusual.

Reference is frequently found to some supernatural beings who may at one time have been regarded as human, or who have taken certain elements of heroic worship. The euhemeristic account of Frey in *Ynglinga Saga* (4. 13, and *passim*), and of his priest-kingship over the Swedes, if at all reliable, would point to a fusion of human and divine attributes—the priest-king combined with the deity of fertility. Members of the Swedish royal house claimed descent from Frey, and were called Yngvi, from the god's full name Yngvifreyr (*Ynglinga Saga*, 20); similarly Skjöldr appears as the eponymous ancestor of the Danish kings, the Skjöldungar or Scyldingas. The name Yngvi can be traced in Tacitus (*Germania*, 2), who, basing his account on ancient native poems, states that the

ances of the Germani trace their descent from the god Tuisto and his son Mannus; from the latter spring 'three sons, from whose names those who are nearest to the Ocean are called Ingaevones [probably for Inguæones], the central tribes Herminones, and the rest Istaenones.' These names occur again in Pliny (*HN* iv. 28) as group-names of the Germani; while in the Frankish genealogy the descent of thirteen nations is traced to three brothers, Ermenus, Inguo, and Istio. From the reference to Ing in the Anglo-Saxon Runic poem, it seems that he must have had a distinct personality, however mythical, and this is borne out by the conception of Frey in the *Ynglinga Saga*. An extension of the idea of Frey's power of controlling the weather is to be traced in the identification of the object of reverence with the offering, and in the idea of the efficacy of a king as a sacrificial victim. Thus in *Ynglinga Saga* (18 and 47) King Dómaldi and King Ólafr are offered up by their subjects to stay the famine and to ensure plenty.

Turning now to women, we may possibly trace a human element in Thorgerðr Hölgabrúðr and Yrpa, her sister. In *Njála Saga* (88), where Hraþpr commits sacrilege in their temple, and in *Jómsvíkinga Saga* (44), where Earl Hákon, their votary, sacrifices his son to them in order to gain victory, they are obviously goddesses; but in *Skáldskaparmál* (45), as in Saxo (bk. iii.), Thorgerðr appears in connexion with a character Helgi, who is apparently the eponymous hero of Halogaland. The importance, among Germanic races, of women as prophetesses is attested by Strabo in his description of the part played by 'holy prophetesses' in the sacrifice of captives, and in divination from their blood (vii. 2. 3). Tacitus (*Germ.* 8) says:

'They attribute to them some holy and prophetic power . . . ; many others are venerated, not out of servility, or as if they were deifying mortals.' As examples, he refers to Aurinia [probably for Albruna] and to Veleda, and a further account of the latter is found in his *Historia* (iv. 61, 65): 'Veleda, a maiden of the tribe of the Bructeri, who possessed extensive dominion; for by ancient usage the Germans attributed to many of their women prophetic powers, and, as the superstition grew in strength, even actual divinity. . . . She dwelt in a tower, and one of her relations conveyed, like the messenger of a divinity, the questions and answers, i.e. in her intercourse with the Roman ambassadors.'

It is attribute possible to regard the Germanic reverence for women, and the large part played by them in divination and sacrifice, as a parallel with the importance attached to the cult of the *Matres*. Though this is considered to have been originally a Celtic cult (cf. Roscher, s.v. 'Matres'), it was apparently common to Germany and Gaul. One aspect especially of the *Matres*, whereby they are saluted as 'Matres campestris,' or guardians of the military camp (cf. M. Siebourg, *de Sulevis Campetribus Fatis*, Bonn, 1886), may be compared with the account by Tacitus. It must, however, be borne in mind that the function of the *Matres* is essentially protective, not warlike. If it were possible to connect Bede's interesting reference (*de Temporum Ratione*, 15) to the sacrifices on *Modraniht, id est matrum noctem*, on the one hand, with the *Matres*-cult, and, on the other hand, with the *disablot* of the Scandinavians (cf. *Ynglinga Saga*, 33), a link would be formed between the different phases of Germanic goddess-cult. Similarly, too, if the *disir* may be identified in part with the Valkyries, the human element recurs again, for certain of the Valkyries, e.g. Brynhildr, undoubtedly have some human characteristics.

With regard to the ethical aspect of non-deified heroes in the Teutonic epics, the extant accounts either date from Christian times or are so largely overlaid with Christian thought as to render it difficult to form a definite idea of any rules of conduct governing their lives. As far as we can

gather from the records, the chief virtues throughout the Heroic Ages seem to have been courage and generosity; the combination of the two would appear to have been the ideal, but proof of either sufficed to win fame, and thus to attain the real object of a hero's existence, as Beowulf confesses:

'Let him who can, win for himself glory before he dies; that is the best thing that can come to a knight in after times, when he is no more' (1387 ff.).

The individual impatience of all restraint resulted in faults of excess, and crimes of passion and savagery. Revenge was not only allowed, but was a duty, and was taken not only for shedding of blood, but also for lesser wrongs; thus Egil revenges himself on Arnóð for scanty hospitality, by insulting him and blinding him in one eye (*Egils Saga Skallagrímssonar*, 75). One virtue, however, does appear clearly—personal loyalty and honourable devotion, as that of a retainer to his lord. It may be objected that this was won and retained chiefly by gifts, but proof of its power is given even by foreign historians; thus, when Polchere (Phulcaris) dies, overpowered by the Franks, 'upon his body his followers fell to a man' (Agathias, i. 15). Treachery, infidelity, and cunning were hated, but were probably largely practised, especially in the interests of self. The tendency of the age was individualistic, and its annals have many dark records; but it may be urged in extenuation that the aspect of heroic life and deeds which would naturally appear in history and song is one-sided, and omits far more than it records.

LITERATURE.—No definite literature on the subject exists. Compare the references quoted in the course of the article, and such general works as E. Mogk, in Paul, *Grundriss der germ. Philologie* 2, iii. (Strassburg, 1900); E. H. Meyer, *Germanische Mythologie*, Berlin, 1891; Chantepie de la Saussaye, *Religion of the Teutons*, Boston, 1902. M. E. SEATON.

HESIOD.—For the Greeks of the 5th cent. B.C. Homer and Hesiod stood side by side as the two great poet masters: Homer the singer of war and adventure, Hesiod the inspired teacher of practical wisdom. Thus Aristophanes (*Frogs*, 1030-36) puts into the mouth of Æschylus these words:

'Consider from the beginning how useful the noble poets have been. Orpheus taught us mystic rites and to refrain from murder; Mousaios taught us healing of diseases and oracles; Hesiod taught us the tilling of the earth, the seasons of crops, ploughing; and the divine Homer, whence got he honour and glory save from this, that he taught men good things—even marshalling of troops, deeds of valour, arming of men!'

The contrast between the Homeric and the Hesiodic epic is concisely put in the words which, as Hesiod tells us, the Muses addressed to him when they gave him his call to poetry (*Theog.* 26 ff.): 'Shepherds of the fields, evil things of shame, bellies only! We know to speak full many things that wear the guise of truth, and know also when we will to utter truth.' To tell 'true things' is the characteristic of didactic poetry.

The *locus classicus* as to the poems attributed to Hesiod in antiquity is Pausanias, *Description of Greece*, ix. 31. 4 f.:

'The Boeotians who dwell round Helicon record it as the traditional opinion that Hesiod wrote no other poem than the *Works*; and from that they take away the Preface [i.e. l. 1-10], saying that the poem begins with the lines on the Strife [i.e. ll. 11-17]. And they showed me a leaden tablet where the fountain (Hippocrene) is, for the most part, destroyed by time, and on it is inscribed the *Works*. But there is another and different opinion to the effect that Hesiod composed a large number of epics, those on women, and the so-called *Great Boiai*, and the *Theogony*, and a poem on the seer Melampus, and how Theseus descended into Hades along with Peirithoos, the *Adices to Cheiron* for the instruction of Achilles, and all that is embraced by the *Works and Days*. These same people say also that Hesiod received instruction in prophecy from the Acarnanians. And there exist prophetic verses which I myself have read, and *Explanations of Portents*.'

Fragments of most of these poems have come down to us, and we possess in an approximately complete form the *Works and Days*, and the *Theo-*

gony, as well as the so-called *Shield of Herakles*, which may be a fragment from the *Eoiai*.

It is impossible here to enter into minute questions of date and authenticity. The ancients seem to have regarded Hesiod as contemporary with Homer, and as author at least of the *Works* and of the *Theogony*. Thus Herodotus (ii. 53) says:

'Whence each of the gods came or whether they all existed forever, and what form particular gods have, [the Greeks] did not know until (so to say) the other day. For I consider that Hesiod and Homer lived four hundred years before my time, and no more. And it was they who created the theogony of the Greeks, and who gave their names to the gods, and assigned to them their honours and arts, and marked their forms. And the poets who are said to have lived before Hesiod and Homer were, in my opinion, later.'

Without dogmatizing about particular lines, if we assume that the bulk of the *Works and Days* and of the *Theogony* belongs to about 800 B.C., we shall probably be sufficiently near the mark. It may be noted that in the *Works* (564 ff.), Hesiod says: 'When Zeus hath completed sixty days after the turning of the sun, then the star Arcturus, leaving the sacred stream of Ocean, first riseth in his radiance at eventide' i.e. the evening or acronychal rising of Arcturus takes place sixty days after the winter solstice, which for lat. 38° gives a date 900 B.C. But, as there was a tendency to give conventional dates for the rising of stars, we cannot perhaps build too much on this.

In considering the theology of Hesiod, it is well to remember that we must not expect to find either the lucidity or the consistency which we should require in a modern theologian. We shall expect to find elements of quite different date and of quite different stages of spiritual advancement existing side by side, with no attempt at reconciliation. As some great river carries to the sea the gathered testimony of its long wandering from the trickling spring in the lonely glen which gave it birth—'in his high mountain cradle in Pamere'—so the poet, using the materials of his nameless and unknown predecessors, refining here, adding something there, creates at last the literary masterpiece which henceforth bears his name and his name only, though many a long-silent tongue, and many a long since darkened brain, had contributed to the common end. We shall find in Hesiod only a few traces of the conscious reflexion, tending towards the reconciliation and purification of the ancient myths, which is so marked in Pindar and Æschylus. Hence the reproach of Xenophanes of Colophon (c. 550 B.C.): 'Homer and Hesiod ascribed to the gods all things that among men are a shame and a reproach—to steal, and to commit adultery, and to deceive one another.' But men cleave piously to an ancient tradition long after they have intellectually and morally renounced it, and we shall form a truer conception of the ethical advancement of the early poet, if we judge him not by his lowest but by his highest.

The purpose of the *Theogony* is to give a systematic account of the genealogy of the gods; cf. *Theog.* 104 ff.:

'Hail! daughters of Zeus, and grant delectable song. Sing ye the holy race of the deathless gods which are for ever: even them that were born of Earth, and starry Heaven, and dusky Night, and those whom the briny Sea brought forth. And declare ye how in the beginning Gods and Earth came into being, and Rivers and the Infinite Sea with raging flood, and the shining Stars, and the wide Heaven above, and the Gods which sprang from them, givers of good things; and how they divided their wealth, and how they apportioned their honours; yea, and how at the first they possessed them of manyfolded Olympus. These things, even from the beginning, declare ye unto me, O Muses, who dwell in the halls of Olympus, and tell me which of them was first created.'

But it includes also some cases of the union of gods with mortal mothers (940 ff.), and (965 to end) a somewhat more detailed account of the union of goddess mothers with mortal sires.

In broad outline the order of creation in the *Theogony* is as follows. First came Chaos. i.e.

void space; then Earth and Eros (Love). From Chaos sprang Erebus and Night, and from Night in union with Erebus sprang Æther and Day. Earth first bore Ouranos (Heaven), and the Mountains and the Sea (Pontos). These she bore without wedlock. Then in union with Ouranos she bore the Titans, of whom the youngest was Kronos, 'of all her sons most terrible, who hated his valiant sire.' Now, as each of his sons was born, Ouranos hated them, and 'he would hide them every one in a covert or Earth, and allow them not to rise up into light.' Then Earth fashioned a sickle of adamant, with which her son Kronos cut off the privy parts of Ouranos and cast them into the sea. Kronos in union with his sister Rhea became father of Zeus, Hera, Demeter, Hestia, Hades, Poseidon. Now 'these did mighty Kronos swallow, even as each came forth from the holy womb to his mother's knees, that none other of the glorious sons of Ouranos should hold the kingly honour among the immortals. For he learned from Earth and starry Ouranos that it was fated him to be overcome by his own son, for all his strength, by the devising of mighty Zeus.' Now, when Rhea was about to bring forth Zeus, she asked counsel of Earth and Ouranos; and they carried her to Lyktos in Crete, where 'Zeus was born and brought up. But she wrapped a great stone in swaddling clothes and gave it to Kronos, who swallowed it for his son, and so was induced to vomit forth first the stone and afterward his children whom he had swallowed.' So Zeus came to be king of the immortals.

It is sometimes said that the myth of Ouranos is unknown to Homer. It is true that the myth does not occur in his writings; but there seems no reason to doubt the line in *Il.* v. 808 where we have *εἰσέπρεος Οὐρανίου*—'lower than the sons of Ouranos', i.e. lower than Kronos and the other Titans. It may be noted that while, according to Homer, the fate of Kronos is to be imprisoned with the other Titans in Tartaros (*Il.* xiv. 274, xv. 225; cf. *Æsch. Prom.* 222), in Hesiod he is king in the Islands of the Blest (*Works*, 109; cf. Pindar, *Ol.* ii. 77 ff.).

Zeus in Hesiod, as in Homer, is supreme among the gods, omnipotent and omniscient. But, just as Homer apparently did not feel it to be inconsistent with omniscience that he should be deceived by Hera (*Il.* xiv.), so Hesiod (*Works*, 48 ff.) represents him as deceived by Prometheus. There is, indeed, a hint of reflexion in *Theog.* 534 ff., where, in recounting the same tale, he says that Zeus was not really deceived, but only pretended to be: 'Zeus, who knoweth counsels imperishable, knew and failed not to remark the guile.'

Since gods and men alike are children of Earth, they are said to be sprung from one stock (*Works*, 108: 'from one stock spring gods and mortal men'; cf. Pind. *Nem.* vi. 1 ff.: 'One is the race of men, one the race of gods, and from one mother do we both have breath. But we are sundery by altogether diverse powers, so that man is naught, while the brazen heaven abides an unshaken habitation for ever'). But mankind is the direct creation of the gods.

The Hesiodic conception of the history of man is, like the Hebrew, that of a fall from a primitive state of sinlessness and happiness into a state of sin and misery. Hesiod's most detailed account is the story of the Five Races of men (*Works*, 109–201).

(1) First the gods created a Golden race of men. This was while Kronos was still king in heaven. The men of the Golden race knew neither toil nor sorrow. The earth of its own accord gave them abundant livelihood. Moreover, they never grew old, but died as if overcome by sleep. But this race passed away—we are not told how or why—and now they are,

'by the devising of mighty Zeus, spirits (*daimones*) of good upon the earth, guardians of mortal men; who watch over dooms and the sinful works of men, faring everywhere over the earth, cloaked in mist, givers of wealth. Even this kingly privilege is theirs.'

(2) Next the gods created 'a far inferior race, a race of Silver, nowise like to the Golden race in body or in mind.' These had a long childhood, but a short life after they grew up.

'For a hundred years the child grew up by his good mother's side, playing in utter childishness in his home. But when he grew to manhood and came to the full measure of age, for but a brief space they lived and in sorrow, by reason of their foolishness. For they could not refrain from sinning the one against the other, neither would they worship the deathless gods, nor do sacrifice on the holy altars of the Blessed Ones, as is the manner of men wheresoever they dwell.'

So Zeus 'hid them,' being wroth because they did not give honour to the blessed gods. They now dwell beneath the earth and 'are called the blessed dead: of lower rank [*i.e.* than the Spirits of the Golden race], yet they too have their honour.'

(3) Next Zeus created a third race—a race of Bronze, sprung from the Ash-tree nymphs, or Meliai. The men of the third race were fierce and warlike, strong of arm and of heart. They did not eat bread (*i.e.*, apparently, they lived on flesh). 'Of bronze was their armour, of bronze their dwellings, with bronze they wrought. Black iron was not yet.' This race perished by their own hands and 'went down to the dark house of chill Hades, nameless.'

(4) Next Zeus created a fourth race, 'a juster race and a better, a godlike race of hero men who are called demi-gods (*ἀνδρῶν ἥρωων θεῶν γένος*, *ὁ καλέονται ἡμίθεοι*), the earlier race upon the bounteous earth' (*i.e.* the race which immediately preceded the present). This race is the men of the Heroic Age, who perished at Thebes and at Troy. These are now in the Islands of the Blest:

'Zeus the Father, the Son of Kronos, gave them a life and an abode apart from men, and established them at the ends of the earth and far from the deathless gods: among them Kronos is king. And they, with soul untouched of sorrow, dwell in the Islands of the Blest beside deep-eddyed Okeanos: happy heroes, for whom the bounteous earth beareth honeysweet fruit fresh thrice a year.'

(5) Then followed the fifth race (*i.e.* the present race), which 'is verily a race of Iron,' and Hesiod expresses the wish that he had 'either died before or been born afterwards.' It is destined to become progressively more wicked:

'Father shall not be like to his children, nor the children like to the father; nor guest to host, nor friend to friend, nor brother to brother shall be dear as aforetime; and they shall give no honour to their swiftly ageing parents, and shall chide them with words of bitter speech, sinful men, knowing not the fear of the gods. These will not return to their aged parents the price of their nurture; but might shall be right, and one shall sack the other's city. Neither shall there be any respect of the oath-abiding or of the just or of the good; rather they shall honour the doer of evil and the man of insolence. Right shall lie in might of hand, and Reverence shall be no more; the bad shall wrong the better man, speaking crooked words and abetting them with an oath. Envy, brawling, rejoicing in evil, of hateful countenance, shall follow all men to their sorrow. Then shall Reverence and Awe veil their fair bodies in white robes and depart from the wide-wayed earth unto Olympus to join the company of the Immortals, forsaking men; but for men that die shall remain but miserable woes; and against evil there shall be no avail.'

The end of this race—'for whom also good shall be mingled with evil'—is foretold in the curious words: 'This race also of mortal men shall Zeus destroy when they shall be hoary-templed at their birth.' The expression becomes quite intelligible if we remember what was said of the Golden and Silver races. The men of the Golden Age knew no old age. They remained 'unchanged in hand and foot' until they 'died as if overcome by sleep.' The men of the Silver race, again, had a childhood of a hundred years. The idea is that childhood becomes progressively shorter until finally men are grey-haired at birth; this shall be the sign of the end. It is interesting to compare the myth in Plato's *Politicus* (268 E–274 E; see J. Adam, *Plato's Rep.*, London, 1902, Appendix to bk. viii. vol. ii. 295 ff.). Ridgeway's notion (*Early Age of Greece*, Cambridge, 1901, i. 628), that it is 'some sort of

oracular utterance referring to fair-haired invaders of some Teutonic stock,' is entirely fanciful.¹

In this account of the fall of man no reason is given for the fall. But in *Works*, 90 ff., and *Theogony*, 535 ff., we have another account of the history of human degeneration which, taking no account of the Five Races, ascribes the coming of evil into the world to the creation of woman. In the *Theogony* (*i.e.*) we read how, when the gods and mortal men were contending at Mekone (Sikyon), Prometheus 'cut up a mighty ox and set it before them, deceiving the mind of Zeus. For he set for them the flesh and the innards with rich fat upon a hide, and covered them with an ox paunch; but for Zeus he set the white bones, arraying them craftily, and covering them with glistening fat. Then the Father of Gods and men spake unto him: "Son of Iapetos, most notable of all princes, how unfairly, O fond! hast thou divided the portions!" So spake Zeus, who knoweth counsels imperishable, and mocked him. Then spake to him in turn Prometheus of crooked counsels, smiling quietly, but forgetting not his crafty guile: "Zeus, most glorious, mightiest of the everlasting gods, of these portions choose whichever thy soul within thy breast biddeth thee." So spake he with crafty intent. But Zeus, who knoweth counsels imperishable, knew and failed not to remark the guile; and in his heart he boded evil things for mortal men, which were destined to be fulfilled. With both his hands he lifted up the white fat. And he was angered in his heart, and wrath came about his soul when he beheld the white bones of the ox given him in crafty guile. And thenceforth do the tribes of men on earth burn white bones to the immortals upon fragrant altars. Then, heavily moved, Zeus the Cloud-Gatherer spake unto him: "Son of Iapetos, who knowest counsels beyond all others, O fond! thou hast not yet forgotten thy crafty guile." So in anger spake Zeus, who knoweth counsels imperishable. And thenceforward, remembering evermore that guile, he gave not the might of blazing fire to wretched mortals who dwell upon the earth. But the good son of Iapetos deceived him and stole the far-seen gleam of unwearied fire in a hollow fennel-stalk, and stung to the depths the heart of Zeus who thundereth on high, and angered his heart when he beheld among men the far-shining gleam of fire. And straightway he devised evil for men.'

Hesiod goes on to tell how, to punish men, Zeus made Hephaistos fashion woman of earth, and (590 ff.) we have a tirade upon the sins of woman; but the *Theogony* gives no hint of any definite fall brought about by the creation of woman. In the *Works* he is somewhat more explicit. He first tells how

'Zeus in his anger hid the bread of life, for that Prometheus of crooked counsels had deceived him. Wherefore Zeus devised sorrow for men, and hid fire. But the good son of Iapetos stole it again for men from Zeus the Counsellor in a hollow fennel-stalk, what time the Hurler of the Thunder knew not.' To punish men, we are told, Zeus caused Hephaistos to fashion the first woman (47 ff.). Then Hesiod proceeds to say (90 ff.): 'For of old the tribes of men lived on the earth apart from evil and grievous toil and sore diseases that bring the fates of death to men. For in the day of evil men speedily wax old. But the woman took off the great lid of the Jar with her hands and made a scattering thereof and devised baleful sorrows for men. Only Hope abode within in her unbreakable chamber under the lips of the Jar and flew not forth. For ere she could, the woman put on the lid of the Jar, as Zeus the Lord of the Aegis, the Gatherer of the Clouds, devised. But ten thousand other evils wander among men. For the earth is full of evil, and the sea is full. By night and by day come diseases of their own motion, bringing evil unto mortal men, silently, since Zeus the Counsellor hath taken away their voice. So surely may none escape the will of Zeus.'

Hesiod continues (80 ff.): 'and he named this woman Pandora, for that all the dwellers in Olympus had bestowed on her a gift.' It seems that the truth is rather that Pandora is only another name for Ge, 'Earth,' as the giver of all things. Hesiod's account seems to imply that the contents of the jar were evils; later accounts vary between evils and goods. There is in any case some difficulty about the inclusion of Hope (*Ελπίς*). A comparison with Æschylus (*Prom.* 248 ff.)—*Prom.* 'I made men cease to foresee their doom.' *Cho.* 'What cure didst thou find for this disease?' *Prom.* 'I planted in men blind hopes (*τυφλάς ἐλπίδας*)'—suggests that *ἐλπίς* may mean 'anticipation of the future,' so that *ἐλπίς* might itself be reckoned an evil. But the matter cannot be discussed here.

¹ It should be noted that the epithets 'golden,' 'silver,' 'bronze' have no other meaning than merely to indicate progressive degeneration. They do not mean either 'made of gold, etc.,' or 'working with gold, etc.'

cussed here (see HOPE [Greek and Roman]). (For the Pandora myth, see J. E. Harrison, *JHS* xx. [1900] 99 ff.)

The cardinal virtues in Hesiod are Industry and Justice.

'Work is no reproach, idleness is a reproach' (*Works*, 811). 'Work, Perseus, that hunger may abhor thee, and that Demeter may love thee and fill thy barn with livelihood' (299 ff.). 'The gods are angry with the man who lives in idleness, like the drones which devour the labour of the bees' (308 ff.; cf. 308 ff.). 'Whatever your fortune be, to work is best' (814).

The praise of Justice runs through the whole of the *Works and Days*, e.g.:

'The other way is better, the way of Justice. Justice in the end is better than violence, and the fool learns it by suffering.' Horkos attends to punish crooked judgments (216 ff.). 'The Immortals are nigh among men and remark them that with crooked judgment oppress one another, taking no heed of the anger of the gods. Yea, thrice ten thousand Immortals are there on the bounteous earth who keep watch over mortal men; who watch over judgments and froward works; clad in mist, faring everywhere over the earth. Also, there is the maiden Justice, the daughter of Zeus, glorious and worshipful among the gods who hold Olympus. And whenever one injureth her with crooked reviling, straightway she sitteth by Zeus the Father, the son of Kronos, and telleth of the unrighteous mind of men, till the people pay for the folly of their rulers, who with ill thoughts wrest aside judgment, declaring falsely' (240 ff.).

Industry is punished in this world by all manner of evil—barren wife, poverty, disaster by land and by sea (242 ff.). On the other hand, those who do justice prosper:

'Peace is in their land, the nurse of children, and Zeus doth never decree war for them. Neither doth famine nor doom consort with men who deal straight judgments, but they do their work in gladness. For them earth beareth much livelihood, and on the hills the oak's top beareth for them acorns, the oak's midst bees; their fleecy sheep are heavy with wool; their wives bear children like unto their parents; they flourish with good things continually, neither go they on ships, but bounteous earth beareth fruit for them' (228 ff.).

Hesiod is confident that justice is better in the end:

'Now may neither I nor son of mine be just among men. For it is an ill thing to be just, if the unjust shall have the greater justice. Howbeit, this I deem not that Zeus, the Hurler of the Thunder, will bring to pass' (270 ff.).

Justice, indeed, is the great distinguishing mark between man and the lower animals:

'This law hath the Son of Kronos appointed, that fishes and wild beasts and the fowls of the air should devour one another, since there is no justice among them. But to men he hath given justice, which is far the best' (276 ff.).

The sins of the fathers are visited on the children, but the children of the just are better in the after days (284 ff.; cf. *Aesch. Ag.* 758 ff.).

Specific prohibitions enjoined by Hesiod are: Thou shalt not commit adultery (328). Thou shalt not wrong the suppliant or the stranger (327). Thou shalt not wrong the orphan (330). Thou shalt not revile thy aged parent (331); Zeus is wroth with one who does so, and for his unrighteousness lays upon him in the end a heavy recompense. Thou shalt not steal (355). Thou shalt not bear false witness (709).

Among specifically religious precepts the duty of worshipping the gods is insisted on:

'According to thy power do sacrifice to the deathless gods in holy wise and purely, and burn splendid thigh pieces; at other times propitiate them with libations and incense, both when thou goest to bed and when the sacred light comes; that they may have a propitious heart and mind toward thee; that thou mayest buy another's estate, not another's thine' (336 ff.).

In particular, ceremonial purity is emphasized: libations are not to be made to the gods with unwashed hands (724 ff.; cf. *Hom. Il.* vi. 266 ff.). Certain necessary functions are to be performed discreetly even by night; 'for the nights too be-

J. E. Harrison, *Themis*, 95 ff., writes of Hesiod that 'when it came to real definition of his duties, these duties are, not to glorify Athena or to offer burnt sacrifice to Zeus, they are not prayer or praise or sacrifice in any form, but simply the observance of sanctities, attentions, positive and negative.' For this there seems no ground. Miss Harrison's treatment of Hesiod's birds is equally ill-founded. She assumes that for Hesiod the bird is a prophet of the weather, and on her theory the bird is a 'maker of the weather.' Hesiod nowhere speaks of the bird as a prophet. He simply says that when a particular bird arrives—crane, cuckoo, swallow—certain things are to be done.

long to the blessed gods' (727 ff.). The nails of the hand should not be cut at a festival of the gods (742 ff.). Sexual uncleanness is recognized (733 ff.).

There is not space here to speak of the various precepts of traditional lore of a practical kind to be found in Hesiod; of the things which it is unlucky to do; of the days which are lucky or unlucky, either altogether or partly and for specific works (765-828).

The most striking thing about the Hesiodic teaching is that here, as in the Hebrew 'Wisdom,' there is no question of a life after death. It is in this life that the just man finds his reward. It is in this life that the unjust meets his punishment. Good and bad alike, without distinction, go down to Hades—as far beneath the earth as the heaven is above the earth—and there is no distinction of fortune for the dead.

Death 'hath a heart of iron, and brazen and pitiless is the soul within his breast. Whomsoever among men he once hath seized, he keepeth; and he is hated even of the deathless gods. There in front stand the echoing halls of the god of the under world, of strong Hades and dread Persephone. And a dread dog keepeth watch before them; pitiless is he and hath an evil guile. On them who enter he fawneth with his tail and with both his ears; but to come forth again he alloweth none, but keepeth watch and devoureth whomsoever he catcheth coming forth from the gates of strong Hades and dread Persephone' (*Theog.* 764 ff.; cf. *Cerberus*).

There is a hint of the doctrine of atonement in *Theog.* 783 ff., where we are told that, if any of the gods swears falsely,

'he lieth breathless till a year be fulfilled. And he never draweth nigh to eat of ambrosia and nectar, but breathless and speechless he lieth on a strewn bed, and an evil stupor covereth him. But when he hath fulfilled his disease for a great year, another and another more grievous ordeal awaiteth him, and for nine years he is separated from the everlasting gods, and never cometh to their counsels or their feasts for nine whole years; but in the tenth year he entereth again the assemblies of the immortals who hold the halls of Olympus.'

But such atonement is made by the gods. There is no hint of any such thing for mortal men.

LITERATURE.—Hesiod, ed. D. J. van Leenep, Amsterdam, 1847 ff.; J. E. Harrison, *Themis*, Cambridge, 1912; J. Adam, *The Religious Teachers of Greece*, Edinburgh, 1908; A. W. Maier, *Hesiod* (Translation and Appendixes), Oxford, 1908; E. K. Rand, *Amer. Journ. of Philol.* xxxii. [1911], 131-165; A. Rzsch, in *Pauly-Wissowa*, viii. [1913] 1167-1240.

A. W. MAIER.

HIERODOULOI (Græco-Roman).—In classical antiquity this term designated certain temple ministrants who were below the rank of priests, and usually, if not invariably, of servile status; but how far it was, or ought to be, applied to all temple slaves, and even to certain free persons who gave voluntary service, is very doubtful. E. Curtius (*Anec. Delph.*, Berlin, 1843, p. 16 ff.) led the way in giving it a very wide application, inclusive even of slaves manumitted by dedication or sale to a god, and he has been generally followed (cf., e.g., Daremberg-Saglio, s.v.). But the rarity of the occurrence of the term itself in Greek authors and inscriptions; the distinction sometimes implied in our authorities between *hierodouloi* and certain other ministrants, e.g. temple-sweepers (*νεωκόμοι*); and the peculiar nature of the cults in connexion with which the term does actually occur—these considerations suggest that *hierodouloi* were an extraordinary class, not found in all temples or cults, and not to be confounded with the mass of sacred slaves.

The term itself has not been found in any author or inscription of earlier date than the Augustan period. Strabo uses it of ministrants in the temples of Ma at the two Comanas (535, 559), of Zeus at Venas in Morimene (537), and of Men Pharnaces at Cabeira-Sebaste. These shrines are all Cappadocian. He uses it also in connexion with two temples of Aphrodite—one at Eryx in Sicily (272), and the other at Corinth (378). It is not used by Lucian in connexion with the cult of the Syrian goddess at Hierapolis; and its only other occur-

rences in literature seem to be where Philo employs it of Jewish ministrants (ii. p. 420)—probably a loose use of translation—and where Plutarch (*Amator*. 21) speaks rhetorically of the power of love over great men, who καθάπερ ιεροδούλοι διαταύσσει.

As for inscriptions, we have a cippus from an unknown Cyclad isle, recording the death of a *hierodoulos*, a dedication to Hermes by one Asklepiades ιεροδούλος at Pselchis in Nubia, and another at Rome (in the time of Marcus Aurelius) to Zeus Helios by one who describes himself as ιεροδούλος πάσης ιεροδουλείας. At Ostia a νεωκόρος of Serapis dedicates to the ιεροδουλεία; and at Smyrna, in a text concerning the erection of public buildings, we hear of a Stoa πρὸς τὴν οἰκίαν τῶν ιεροδούλων καὶ τὸν θεὸν θεραπεύοντων (CIG 2327, 5082; CIG, Ital. and Sic. 1024, 914; CIG 6000; Dittenberger, *Syll.*³, Leipzig, 1898, p. 583).

At each of the two Comanas, according to Strabo, there were about 6000 *hierodouloi*; at the southern they formed the major part of the population; at the northern they were at the disposition of the high priest for every kind of service, but might not be sold. In both cases they were of both sexes. At Venassa there were 3000, and they formed a καουκία. At Cabeira they were numerous, and tilled the sacred soil. At Eryx and Corinth only females are mentioned; and these were prostitutes, dedicated, we are told, by both men and women, to the service of the goddess. At the first shrine they had been numerous, but in Strabo's time the practice of dedicating them had largely declined; at the second there were above 1000, famous among seafaring men for their beauty and greed. It was to these women, doubtless, that Pindar devoted the *scholion* of which we have a beautiful fragment (87); but he did not call them ιεροδούλοι.

At Eryx and Corinth, then, we see that the ιεροδούλοι were nothing but female prostitutes, who gave all, or a share of, their gains to the temple. At Comana Pont., Strabo (p. 559) evidently means us to understand that a part of the ιεροδούλοι were included in the πλῆθος γυναικῶν ἐργαζομένων ἀπὸ τοῦ σώματος, who made the place a 'little Corinth.' But at Comana Capp., Venassa, and Cabeira we are not explicitly informed that the ιεροδούλοι did anything but cultivate the temple lands. At the first shrine they were distinguished from a class of bearers of sacred images or emblems, θεοφόροι, who took part in the θεωρορία, mentioned also at Comana Pont., and are credibly supposed by Ramsay (*Cities and Bishoprics of Phrygia*, i. [Oxford, 1895-97] 136) to have been voluntary servants of free condition. There is, therefore, no doubt that the term *hierodouloi*, in all the instances so far discussed, means serfs, whose bodies were absolutely at the god's service and the priests' discretion, to be used either for purposes of labour or prostitution. They were inalienable, but probably could not acquire freedom; on the whole, they represent a class of slave whose condition was worse than was customary or generally approved in Hellas, whatever its sacrosanct character. Was the term, however, more generally used in popular or official parlance? Philo (l.c.) couples νεωκόροι καὶ ιεροδούλοι, but it would not be safe to say that he intends any precise distinction. Nor can we say whether the νεωκόρος of the Ostian inscription was included in the ιεροδουλεία to which he dedicates. The Smyrna inscription, however, seems clearly to distinguish ιεροδούλοι from mere θεράποντες; and the ιεροδούλοι of the Roman text equally clearly seems to be proud of his condition and to magnify his office—ιεροδούλος πάσης ιεροδουλείας. If other temple ministrants are to be included popularly under the term, it should only be temple slaves, such as, e.g., the οἰκῆται of Zeus at Olympia (Strabo, p. 532), the δοῦλοι

of Asclepius Archagetas on Parnassus (Pausan. p. 879), and such captives as the Φοινίσαι of Euripides, or the νεωκόροι and ζάκοροι mentioned by Herodotus.

The term cannot have included free men and women who offered their services to the god for life or for a time, such as the Armenian ladies who prostituted themselves in Acilisene, or the θεράπναι of Apollo (*Hom. Hym. Apoll. Del.* 157). Even such a case as that of Ion in Euripides' drama seems to be excluded; for, though a foundling, he can say *ιερόν τὸ σώμα τῷ θεῷ δίδωμι ἔχειν*, i.e., his service was voluntary like that of all whom he calls Φοίβου θέραπες (*Eur. Ion*, 1284, 109). More clearly akin, probably, to the Eastern *hierodouloi* were certain cultivators of sacred lands in Sicily and Italy, the Venerei of Eryx and the Martiales of Larinum (*Cic. Verr.* ii. 3. 20, § 50, ii. 5. 54, § 141, *pro Cluentio*, xv. § 43).

It is true that such a class as the ιεροδούλοι was not likely to secure frequent mention in ancient authors or inscriptions; but it is impossible not to attach weight to the fact that only in a very few localities do we actually hear of ιεροδούλοι, and even in these not till a period at which Asiatic cults had become known and introduced to Greece. We prefer, therefore, to regard them as a peculiar class of servile ministrants not identical with the usual temple slaves of Greece or Italy. Their condition and their name seem alike usually to have been eschewed on Greek soil; and we must infer that the nature of their servility, both as cultivators and as prostitutes, was such as was less congenial to the West than to the East.¹

If we are right, then there is no further question of the manumission of slaves by sale, real or fictitious, to a god being a preliminary to the state of ιεροδουλεία, although it may very well have led to their becoming in many cases ordinary temple servitors, or even *lepoi*.² That a slave could be dedicated to actual service in a temple is proved by a curious inscription of Lebadea,³ wherein a son, acting under his father's will, manumits a slave by dedicating him to Zeus Basileus and Trophonius, stating that his duty will be *λειτωργῶμεν ἐν τῇ θούλῃ τῶν θιῶν*, but only after he shall have rendered ten years' more service to the family which freed him. Such a condition, however, was undoubtedly not the rule. In the vast majority of cases the slave had no further obligations after being thus manumitted—e.g. at Delphi, where the god's payment really came out of the slave's own pocket. Probably local usage varied. Some temples had need of a large number of slave attendants, cultivators or prostitutes, and were prepared to support them; others had not the same needs, or were poorer. In any case, as it happens, we are unable to say that this custom of sacred manumission and the institution of *lepodouleia*, expressly so called, co-existed at any one shrine.

LITERATURE.—This is given in the article.

D. G. HOGARTH.

HIERODOULOI (Semitic and Egyptian).—The term, which signifies simply 'sacred servants,' is employed by scholars to designate religious officials whose functions included sexual rites. Such officials can be traced in connexion with several shrines, and probably existed at others, concerning which no testimony has survived. These officials were of both sexes, though, as is natural, evidence for the existence of female *hierodouloi* is much more abundant than for male.

¹ Cf. Ramsay, *Cit. and Bish.* i. 147: 'It is probable that the *hieroi* represent the *hierodouloi*, as the institution was modified by the development of western civilization in Asia Minor.'

² So Hicks, in *Ann. Gr. Insor. Brit. Mus.*, London, 1874-80, iii. 2, p. 86. Ramsay expresses doubts (l.c.). See art. *Hieroi*.

³ *Recueil Insor. jur. grecques*, Paris, 1892-1904, 2nd ser., p. 228.

1. **Babylonian.**—Evidence for the existence of female *hierodouloi* at Erech, in Babylonia, in connexion with the worship of the goddess Ishtar, is found in the Gilgamesh epic. The first tablet of the epic contains the story of Eabani, a wild man, who terrified a hunter whom Gilgamesh sent against him. The hunter was directed to take with him a *harimtu*, 'a woman who was *herem*,' or consecrated to a deity; this woman, when they approached Eabani, opened wide her garments, exposing her charms, yielded herself to his embraces, and for six days and seven nights gratified his desire, until he was won from his wild life.¹ In the light of the evidence from other shrines, to be presented below, there can be little doubt that this woman who was *herem* was a sacred prostitute belonging to the temple of Ishtar at Erech.²

From the code of Hammurabi, which was set up in Esagili, the temple of Marduk at Babylon, it appears that similar functionaries existed elsewhere, and were given a legal status by the code. The code was meant for Hammurabi's whole realm, and accordingly implies that such women might be connected with any temple of the land. Direct proof of the wide-spread nature of the institution is found in § 182, where 'women of Marduk,' the god of the city of Babylon, are granted greater rights in the inheritance of the property of an intestate father than other women of this class, as well as in the business documents, which mention the consecrated women of various gods.

Several terms are applied by the code to such women. They are called *NIN-AN*, 'woman of a god'; *SAL-zikrum*, 'vowed woman,' or possibly 'man-woman,' if *zikrum* be taken from a different root; *SAL-NU-GIG*, which is defined in the bilingual texts as *qadistu*, 'holy one'; and *SAL-NU-BAR*, which is defined as *zērmaštu*, 'seed-purifying' or 'seed-forgetful' ones. It is probable that these terms referred to different grades of this peculiar priesthood. The term most frequently used in the code is *SAL-zikru*. This class would seem to have been the most numerous. These women were hedged about with certain restrictions, but also had in some respects larger privileges than women in common life. There were special houses for them, in which they ordinarily lived, though they were not compelled to live there. If one did not reside in one of these special houses, she was forbidden, on pain of death, to open a wine-shop (§ 110). They were protected from slander by the same law which guarded the good name of married women (§ 127). A father could leave to such a woman an inheritance by will. In that case her brothers were to work her portion of the estate and pay her the income. Should she become dissatisfied with their management, she might take the property from their hands, and leave it to whomsoever she pleased. Her father's will might give her the power of leaving her property by testament after her death; if it did not, her share, when she died, reverted to her brothers. If she was accorded no portion by her father's will, she was to inherit equally with her brothers, if she was a *SAL-zikru*; if a *qadistu* or a *zērmaštu*, she received one-third of a brother's share (§§ 178, 179, 180, 181, 182). That the two classes last mentioned were temple prostitutes is sufficiently indicated by their names, especially when the use of *qādhēsh* and *qādhēshāh* in Hebrew (cf. e.g. Dt 23¹⁸) is compared. That the *SAL-zikru* were women of the same character appears from the fact that they might have children, and that these children stood in such a peculiarly orphaned condition that they were apparently frequently adopted into regularly constituted families (§§ 187, 192, 193). The 'women

of Marduk,' for whom the code legislates especially, were apparently of the classes *qadistu* and *zērmaštu*, for, like these, they received, when no provision was made for them in a father's will, only one-third of a son's portion. Their advantage over other women of their class was that they could always dispose of their property at death as they chose (§ 182). Probably it was one of these 'women of Marduk,' who, Herodotus (i. 181) tells us, passed the night on the couch in the sanctuary at the summit of the *ziggurat* of the temple. Apparently she was supposed to act as the wife of the god. These votaries of Marduk appear in the contract literature.³ One of them, Lamazatum, married, and it was agreed that her children should be her heirs.⁴ Votaries of Shamash appear with especial frequency in contracts;⁵ votaries of Enmashtu (*NIN-IB*),⁶ sisters of Suzianna,⁷ votaries of Zamama,⁸ *qadistu* of Adad,⁹ also are found. The relations of these women to the world, both when married and when unmarried, are to some extent revealed in the contracts. Thus a votary and her husband adopted a son and agreed that, if they had other children, this one should always be regarded as the elder brother.¹⁰ A *zērmaštu*'s marriage is recorded.¹¹ A man and his wife adopted the son of a votary of Shamash;¹² a votary of Shamash gave her daughter in marriage and received five shekels of silver;¹³ a votary of Shamash gave her daughter in marriage to her brother, stipulating that as long as the brother lived he should support his sister;¹⁴ another votary of Shamash gave her property to her grand-daughter, stipulating that the grand-daughter should support her as long as she lived.¹⁵ A woman consecrated her two daughters to Shamash, stipulating that they should support her as long as she lived.¹⁶ A *qadistu* and her sister divided an inheritance.¹⁷ One votary adopted a child;¹⁸ another brought suit for a share in an estate; another, who was the daughter of a king, was prominent in transactions in grain;¹⁹ while no fewer than three consecrated women appear in a lawsuit in which one sued another and the third appeared as a witness.²⁰ Votaries entered, accordingly, into the active affairs of life, much as other people did.

Lyon,²¹ like Johns,²² endeavours to support the improbable view that these consecrated women were chaste. His arguments are three in number: (1) one who slandered them was punishable in the same way as one who tarnished the name of a married woman; (2) one of them adopted a child; therefore, when it is said that one of these women had a child, probably it was adopted; (3) when one of these women married, the possibility that she might present her husband with a child is not expressed by the word *aladu*, but by *ušarū* or *uštābū*. Lyon thinks that this was because votaries generally did not marry till they were advanced in years, so that it could be presumed that they would be barren.

With reference to these arguments the following points should

be noted. (1) The law against tarnishing the good name of a votary no more implies of necessity that she was a perpetual virgin than it implies that a married woman must be. We learn from Herodotus (i. 199) that certain rules had to be observed by women who became temporary *hierodouloi* (see below), and it is altogether probable that intercourse with one of these consecrated women was regarded as innocent only if practised under certain conditions. If such were the case, it is easy to see why the law should protect such a woman from the reputation of being a common prostitute, just as it protected married women. When the nature of the *harimtu* of Erech, the nature of the *q'dhshsh* in Israel, and the testimony of Herodotus are taken into account, together with the fact that unmarried votaries had children, one is compelled to interpret the law in the way suggested. (2) The idea that all the children of votaries were either adopted or born in wedlock is mere assumption. It has no support in the texts. (3) Lyon's explanation of the use of the words *uarku* and *utabbi* may possibly be right; but, even if it is, it does not follow that the consecrated women were virgins until married.

It is sometimes asserted (as by Johns¹) that these women were virgins who, when they married, still maintained their virginity. Johns supports his view by a reference to a text of the time of Hammurabi published in *CT* ii. 83, which, as he interprets it, states that a certain woman purified her daughter and then married her to another man, at the same time vowing her to perpetual virginity. In reality there is no reference to perpetual virginity in the text; it simply repeats the statement that the daughter was pure.² What this process of purification was we can only conjecture. It is clearly to be connected with the purification of a maiden before her adoption, to which another text refers,³ which has been thought to be connected with circumcision (see *Circumcision* [Semitic], in vol. iii. p. 679⁴). It clearly has no bearing on the marriage of female *hierodouloi*.

Two passages in the code refer to a class of men, called by the Sumerian name *NER-SE-GA*, whose children are classed with those of the *SAL-zikru*. An old syllabary defines *NER-SE-GA* as *manzapani*, 'foremost place,' equivalent, as the name of an official, to 'dignitary' or 'magnate.' A legal document of the Hammurabi period⁵ describes certain men as *NER-SE-GA* of the temple of Marduk. It is clear, therefore, that they were religious officials; and, since the code accords their children the same treatment accorded to children of female *hierodouloi*, it is probable that they were sodomites, though full proof of this is lacking.

Closely connected in principle with the service of these permanent *hierodouloi* was the temporary pre-nuptial service in this capacity required of every Babylonian woman. According to Herodotus (i. 199), once in her life every Babylonian woman had to sit in the temple of the goddess of fertility until some stranger came and threw into her lap a piece of silver, uttering the formula: 'I beseech Mylitta (i.e. the goddess who helps women in travail) to favour thee.' Thereupon the woman lay with the stranger outside the temple precincts. The money thus given was sacred. Having discharged her obligations to the goddess, the woman returned home to a normal life. No disgrace, but rather honour, attached to her for this act. Strabo (xvi. i. 20 [p. 745 f.]), as well as the apocryphal Epistle of Jeremiah (v. 48), bears witness to this custom.

2. Syrian.—Among the Syrians of the upper Euphrates the Semitic mother-goddess was worshipped at Hierapolis-Bambyce under the name Attar, and this worship was closely akin to her cult elsewhere.⁶ Probably it is her worship to which the Syrian Father, Ephrem, alludes, when he says that, on the feast of their idol, women prostituted themselves, and virgins forthwith vowed their virginity to prostitution.⁷ These remarks would seem to point to the existence of both permanent and temporary *hierodouloi* at Bambyce.

At Hierapolis in Lebanon, the modern Baalbek,

custom required every maiden to prostitute herself to a stranger in the temple of Ashtart,¹ as the women of Babylonia were required to do for their goddess. Whether the regular sacred harlots were maintained there we do not know, but Eusebius says that even matrons as well as maids prostituted themselves in the service of the goddess. Perhaps this is not to be taken literally, but may refer to a regular order in which such women grew old. Constantine abolished the practice, destroyed the temple, and built a church in its stead.

3. Phœnician and Punic.—In Phœnicia these rites were, no doubt, practised in the worship of the same goddess, wherever her temples existed; for the Hebrews, who regarded Sidon as the chief city of Phœnicia, speak of the goddess as 'the abomination of the Sidonians' (2 K 23¹⁸). Definite evidence comes to us, however, through Lucian,² of the existence of this worship in a modified form in connexion with the worship of Adonis, or Tammuz, at Byblos (Gebal). At his festival, we are told, all women who were not willing to sacrifice their hair were compelled to prostitute themselves for a day. Only strangers might solicit their charms, and the money received in payment of their shame was dedicated to the goddess. Lucian bears witness to the existence here of the institution of temporary harlotry as a sacred service, but shows that the custom had been modified, so that a modest woman might purchase immunity from this service by sacrificing her hair.

At Paphos in Cyprus, according to the testimony of Herodotus,³ Clement of Alexandria,⁴ Justin,⁵ and Athenæus,⁶ there was a similar practice. Each woman, whether princess or low-born, offered herself in prostitution before marriage. Justin, through a misunderstanding, says that they did it to obtain money for a dowry; but the reason for the custom is clearly religious, like that at Babylon. Whether there were at Paphos women permanently devoted to this type of sacred service, we do not know, but it is probable that at some time there had been. The pre-nuptial sacrifice of virtue, however, may have long outlived the permanent institution of *q'dhshsh*.

At the other end of Cyprus, in connexion with a Semitic temple at Kition, we have evidence of the existence of a class of male prostitutes. A fragmentary inscription (*CIS* i. 86) records the provisions granted for the festival at the beginning of a given month to various classes of temple officials. Although the ends of the lines, where the rewards were enumerated, are broken away, the beginnings, where the officials are mentioned, are preserved. Thus we learn that sustenance was apportioned to builders who repaired the temple of Ashtart, to doorkeepers, men set for the sacred service of this day, slaves, slaughterers, barbers who worked for the sacred service, engravers, the chief scribe, and resident aliens. The last-mentioned class consisted of foreigners, who, in accordance with ancient custom, had taken refuge in a strange land under the protection of the sanctuary.⁷ It is clear from its context that the 'dogs' (𐤍𐤁𐤍) must refer to a class of people, and equally clear that the word is to be interpreted by Dt 23^{18, 19}, where 'dog' (𐤍𐤁𐤍) is equated with *q'dhshsh*, or 'male prostitute.' If the Semitic settlement here supported male *hierodouloi*, the female were, without doubt, not lacking, though as yet evidence of their presence has not been recovered. At Eryx in Sicily the presence of a Semitic colony and a temple of Ashtart is attested by Phœnician in-

scriptions.¹ Strabo (vi. ii. 5 [p. 272]) testifies that formerly the temple of Aphrodite (Ashtart) was 'full of women *hierodouloi*.' In view of the nature of this class elsewhere, the functions of these *hierodouloi* need not be elucidated.

Among the Semites of North Africa the Semitic mother-goddess was worshipped under the two names of Ashtart and Tanith. Hundreds of votive inscriptions attest the popularity of her cult. The change of sentiment which came over the world with reference to the relation of the sexes in the early centuries of the Christian era led the worshippers of these goddesses to call them 'celestial virgins'; at least, that was the case with Tanith. St. Augustine² testifies that once in his youth he attended her festival, and that 'such foulness of obscene speeches and actions as the players would be ashamed when rehearsing to act at home before their own mothers, they acted publicly in the presence of the mother of the gods, in the sight and hearing of a very great company of both sexes.' He goes on to say that 'chastity was shamelessly outraged.' This language is vague and oratorical, but, in view of evidence from other parts of the Semitic world, it is probable that the devotees of the goddess at the time of her festivals became temporary *hierodouloi*, even though evidence for the existence of permanent *hierodouloi* in North Africa is wanting.

4. *Arabian*.—Among the pre-Muhammadan Arabs the worship of the mother-goddess was practised; in some places she was called Al-Lât, in others Al-'Uzzâ. Few traces of the worship have survived from the non-literary pre-Muhammadan time, but Patristic references to the worship of Arabian goddesses imply that from the Christian standpoint it was, like that at Bambyce and Carthage, sexually impure,³ and the great Muhammadan festival at Mecca, which was taken over from heathenism, is still marked by sexual irregularities.⁴ We are safe, accordingly, in assuming that in Arabia the worship of the mother-goddess was accompanied by the temporary practice of sacred prostitution. Owing to the unsettled character of nomadic life, it is hardly probable that permanent officials dedicated to this service were maintained.

5. *Hebrew*.—As *hierodouloi* in some form are traceable in so many parts of the heathen Semitic world, it is probable that it was a primitive Semitic institution, which survived in practically all the Semitic nations. It becomes, then, an interesting question whether these officials had a place in early Hebrew religion. There is some evidence to show that they had. We are told (1 K 14²⁴) that the 'sodomite' (*qâdhesh*) was in the land, and that in this respect Hebrew ritual did not differ from that of other nations. Again (1 K 15¹²), we read that King Asa drove the sodomites (*qâdheshim*) out of the land. This reform must, however, have been but temporary, for Hosea (4¹⁴) declares that the women and brides of Israel not only commit harlotry (i.e. become temporary *hierodouloi*), but that the guides of the nations themselves, her rulers and priests, offer their sacrifices with sacred prostitutes (*qâdheshôth*). The author of Deuteronomy, in the next century, bears witness to the existence of both male and female *hierodouloi* in his land, for he prohibits them for the future (Dt 23¹⁷). As legislators in modern times do not find it necessary to prohibit the sale of intoxicating drinks where such drinks are unknown, this law on the pages of Deuteronomy is evidence of the presence in Judah of the

institution legislated against. Further testimony to the same effect is found in 2 K 23⁷, where it appears that, in carrying out the reform, which he based on Deuteronomy, King Josiah found it necessary to destroy the houses of the sodomites (*qâdheshim*) in the very temple of Jahweh. It is clear from the context here that *qâdheshim*, though a masculine plural, refers to sacred prostitutes of both sexes, for the last clause of the verse describes these houses as 'where the women wove hangings for Asherah.' It seems, accordingly, that down to the time of Josiah *hierodouloi* of both sexes had been attached to the temple of Jahweh, and that the prophetic teaching had not sufficiently awakened the public conscience to dislodge them.

Two explanations of the presence of these ministers in Israel have been offered. The Hebrew prophets believed that they were no part of the ritual of Jahweh, but that they were an importation from other Semitic religions. Some modern scholars believe that the religion of Jahweh had its roots in the soil of primitive Semitic ritual, and that *hierodouloi* were one of the features which Jahweh's religion, like other Semitic religions, inherited from the parent stock. Whatever the origin of the institution, it is certain that, aided by the Deuteronomic law, the prophets imposed their view upon Judah, and finally uprooted this debasing type of religious service, banishing it from their land. How debasing it had become, and what frank appeals it made to those sensual passions which men have more need to control than to inflame, the excavations at Gezer make it possible for us to realize as never before. Such art as they possessed was employed to extend the appeal by which these sacred courtesans in the service of deity enticed men to indulgence.¹ That the prophets succeeded in removing from Judah's religion an institution consecrated by religious sanction and hoary with age, which appealed so powerfully to the animal element in man, is eloquent testimony to the fact that they were working with God and for Him.

6. *Egyptian*.—Among the Egyptians the institution of *hierodouloi* can be most clearly traced at Thebes. Strabo (xvii. i. 46 [p. 816]) declares that here 'a very beautiful virgin of most distinguished lineage was consecrated to Zeus (Amon), and that she played the concubine and had intercourse with whomsoever she desired until the natural purification of her body was accomplished (i.e. until the expiration of a month); then, after her purification, she was given to a husband.' This points to the existence of an institution kindred to that which we have traced among the Semites. That this practice was not confined to one woman, but was one manifestation of a more general institution, is indicated by an inscription of Ramses III., in which he tells of the disposition of the booty taken in his Syrian war. In speaking of the captives he says: 'I have carried them away: the males to fill thy storehouse; their women, to be subjects of thy temple.'² Breasted is undoubtedly right in thinking that these women became *hierodouloi*.³ This is confirmed by scenes pictured on the wall of the temple erected by Ramses III. at Medinet Habu, which one must see in order to appreciate. They are usually spoken of as '*harm* scenes,'⁴ but their occurrence in a temple would seem to indicate that it was no ordinary *harm*. On the great festival days the priestesses of Hathor and other deities danced before the god (or goddess) just as the women of the *harm* were accustomed

to do for the entertainment of their earthly lord,¹ and it can hardly be that the dances were chaste.

At Thebes the wife of the high priest bore the title 'chief concubine,' while a queen or princess was called 'wife of the god.'² This recalls the statement of Herodotus (i. 182), that a bed on which a wife of the god slept for his enjoyment was placed in the inner sanctuary at Thebes for Amon, as in the sanctuary at the top of the *ziggurat* of the temple of Bel at Babylon. That it might be claimed that this relationship on the part of the wife of the god to him was no mere fiction is shown by the account which the famous queen, Hatshepsut, of the XVIIIth dynasty, gives of her parentage. She claims that the god Amon came and actually had intercourse with her mother.³ When it was thought that a god could thus treat women—and women, too, who had earthly husbands—it is probable that, under religious regulation, provision was made for similar conduct on the part of his worshippers. Osorkon II., of the XXIInd dynasty, declares that he had assumed 'the protection of the sacred women of the house of Amon and the protection of all the women of the city, who have been maid-servants since the time of the fathers.'⁴ The sacred women of the house of Amon are classed by him with the maid-servants throughout the city as having no natural protectors. They were probably of the class under consideration. The existence of *hierodouloi* in connexion with other Egyptian deities is not so clear. The god Min, of Coptos, is pictured with phallus erect, and it would seem probable that some such institution attached to his cult. Ramses III. says that he made decrees for the administration of the 'pure' settlement of women of the god Ptah of Memphis.⁵ 'Pure' is here used in a ceremonial sense; they were women consecrated to the god, whose functions were probably similar to the functions of the women of Amon. Perhaps it was a garbled report of the functions of such consecrated women, among whom were princesses, that reached Herodotus, and led him to say (ii. 128) that Khufu (Cheops), in order to obtain money for his pyramid, prostituted his own daughter. If there is any truth behind the story, it is probable that the princess was a priestess of Ptah and acted as a *hierodoulos*. That the Egypt of the Old Kingdom was not unacquainted with the circle of ideas which we have traced at Thebes is shown by the fact that one of the Pyramid Texts describes the king as 'the man who takes women from their husbands whither he wills and when his heart desires.'⁶ In the Old Kingdom the king was a god, and his actions were divine. Probably other gods, through such practices as we have traced, were thought to do the same.

The goddesses Hathor and Bastet were mother-goddesses, and were pictured nude, as were the Semitic goddesses of the same type.⁷ Hathor was praised in a chorus of dancing women.⁸ That women became temporary *hierodouloi* at the festival of Bastet at Bubastis is implied by Herodotus (ii. 60), who says that men and women went in large numbers together in boats to this feast at Bubastis, playing and singing the whole way. At towns they would disembark, sing, dance, and taunt the women of the town, some of the visitors pulling up their clothes. In the light of the goddesses' character, the nature of the services of these women is not difficult to divine.

A similar service seems to have attached to the worship of the god of Mendes, whom Herodotus

identifies with the Greek god Dionysus. He tells us (ii. 48) that at his festival women carried about in procession images of the god with the member nodding, and that the member was about as large as the image. The women were singing the praises of the god. It seems clear that these women were playing the part of temporary *hierodouloi*, though they may have been in part permanently dedicated to that vocation. The institution seems to have been as wide-spread in Egypt as among the Semites, though its details cannot be so clearly traced.

The ideas which called into existence this institution, so revolting to modern feeling, can now be only conjectured. It seems most likely that it originated in a polyandrous society, and in that circle of ideas, traceable in many parts of the world, in which originated the custom of giving a bride the first night to a king or priest in order to secure the blessing of fertility. Priesthood and kingship in their later senses were unknown among the primitive Semitic and Hamitic tribes, and hence, probably, it was thought to secure the divine blessing by leaving the first and consecrating act to divine chance.

The temporary *hierodouloi* were a survival of this custom. The more permanent and professional *hierodouloi* were a later development, and grew out of the conception that intercourse with a supernatural being produced fertility and a remarkable offspring (cf. Gn 30² 6²⁻⁴). The consecrated *hierodouloi* were the representatives of deity, to give concrete expression to this idea. Fertility was thought to come to women through intercourse with these sacred males, and virile power to men through commerce with the consecrated women.

GEORGE A. BARTON.

HIEROI (*lepoi*, *lepal*).—This word, as noun substantive, is found only in inscriptions, and, with very few exceptions, only in inscriptions of Western Asia Minor. Although much light has been thrown on *lepoi* by recent explorations in Anatolia, much remains obscure concerning them (cf. Ramsay, *Cit. and Bish. of Phrygia*, i., Oxford, 1895, pp. 135, 147). On the mainland of Greece only two inscriptions have been found which mention *lepoi*—the great Mystery Rule of Andania in Messenia, which is headed *Ἐπὶ ἱερωῶν καὶ ἱερῶν* (Dittenberger, *Syll.*, Leipzig, 1898, no. 853), and another Messenian text discovered at Calamata (*CIG* 1487). In the first text certainly, and the second probably, the word is simply equivalent to *μύστης*, and means 'initiated.' Whether that is its sense also in inscriptions of Tenos and Delos (*CIG* 2339^b, 2953^b) is unknown. The word is not otherwise used in Greece of initiated persons; its Messenian use may safely be put down as local and singular.

In Asia Minor the name certainly does not mean the initiated, but temple ministrants. It seems clear that all *lepoi* did not come to be so in the same way, nor had they the same tenure and conditions of service. (1) At certain shrines free

⁸ *ib.* 61 ff.

persons either dedicated themselves or were dedicated by parents and guardians to the service of a deity; but sometimes only for a period. So, for example, at Tralles, one L. Aurelia Æmilia, of good native family, boasts in an inscription (cf. Ramsay, p. 95) that, sprung from a family which had always done divine service by practising ceremonial prostitution, she likewise has so served by order of the god. At the shrine of Anaitis in Acilise, 'the highest nobles consecrate their daughters while virgins; and among these it is the rule to live as prostitutes before the goddess for a long time before being given in marriage' (Strabo, p. 532). (2) The larger body of evidence seems to refer to involuntary *lepoi*, either of servile origin and status or at least of a status below civic freedom. At Erythræ, for example, we find that they were not included in the *Demos*, but had so well recognized a political position that they co-operated with the civic body to erect an honorary inscription. At Ephesus the evidence of the Mithridatic decree, concerning the payment of debts and future constitution of the city, is clear. The *lepoi* (doubtless of the Artemesium) are enumerated as a class to be enfranchised after the *παρόικοι* or resident aliens, but before the *ἀπελευθέρωτοι* or freedmen (Wadd. 136a). At Magnesia ad Mæander (if *lepoi* be really noun substantive and not adjective in this inscription), *lepoi* of Apollo appear as gardeners (O. Kern, *Die Inschriften von Magnesia am Mæander*, Berlin, 1900, p. 115^a); and a Smyrna text shows a *lepos* holding a servile relation to an individual citizen (Wadd. 1522a). The Delian text, quoted above, seems also to imply that a *lepos* could be a private slave.

These instances, and especially the relative place of the *lepoi* in the Ephesian constitution, make it more than probable that in most cases the temple ministrants either had been slaves, or at best held a sort of freedman status from the first. Hicks, commenting on the Ephesian inscriptions (*Anc. Gr. Inscr. Brit. Mus.*, London, 1874-90, iii. 2, p. 86), confidently suggested that *lepoi* were the outcome of manumission by dedication or sale to a divinity—a revival of E. Curtius' view about *hierodouloi* (q.v.). But Ramsay (*op. cit.* i. 148), while inclined to admit this as possibly one among several origins of *lepoi*, objected that, if those so freed always became *lepoi*, we ought to meet more often and more widely with the class. It may be added to his objection that we have, as it happens, no records of this sort of manumission at Ephesus, and there is no reason to think it was a universal practice. On the evidence available, it is preferable to suppose that most *lepoi* had never been themselves slaves, but, if not of the voluntary class, were drawn from foundlings and orphans, either adopted by a priesthood of its own motion or consigned to it by outsiders (cf. the common modern practice of conventual institutions adopting foundlings and orphans, who act as servants). This origin is strongly supported by the inscriptions of the shrine of Apollo Lermenus (or Lairbenus), discovered in 1887 by Ramsay and Hogarth on the Upper Mæander, which throw more light on the condition of *lepoi* than any others.¹ In the ruins of the temple itself were found parts of several records of the dedication of *θερατὰ* and *θετραμμένοι*, words the usual sense of which is 'foundling' (cf. Ramsay, i. 147, who cites Pliny, *ad Tray.* lxxv). One of these gives explicit information to the effect that a child, now dedicated (*καταγράφειν*) by its proper parents, had been exposed in obedience to a dream, and found and reared (*ἐθρεψεν*) by a stranger. In no case is there mention of a *δοῦλος*. From

the same shrine and its neighbourhood came also a large number of inscriptions concerning *lepoi* and *lepal*, which are of a class known as *exemplaria*. In these the ministrant, having failed in some duty or obligation of service, and been visited with divine vengeance (sickness?), acknowledges his or her fault, and sets up a warning to all other *lepoi*. Here it is reasonable to relate one class of inscription to the other, and to infer that the local *lepoi* were the outcome of a common practice of dedicating foundlings or orphans. If, moreover, it be borne in mind that the children of these dedicated persons, in all likelihood, retained their parents' status and functions, and that there were also certain voluntary and temporary recruits, we get a class quite numerous enough to account for all the *lepoi* for whose existence we have evidence in Western Asia Minor; a class, moreover, of sufficiently respectable origin to explain the political position which the *lepoi* held at Erythræ and Ephesus. In literature the case of Ion, the Delphic foundling, may be compared.

The duties of *hieroi*, of whatever origin, seem to have been in part those of *hierodouloi* elsewhere, but, in greater part, of more honour. In fact, it is very probable that, as Ramsay says (*l.c.*), they 'represent the *hierodouloi*, as the institution was modified by the development of western civilization in Asia Minor.' By an inscription of Chalcedon (Dittenberger, *Syll.*² no. 595), we see that they took part in the sacrifices and ritual, holding, no doubt, as Ramsay suggests, the same position as the *θεοφόρητοι* of Comana, and probably also as the *ἄλλο πλῆθος ἀνθρώπων ἱερῶν*, the musicians, *castrati*, frenzied women, and prostitutes, whom Lucian saw performing *ἔργα* in the precinct of the Temple of Atargatis (Atcheh) at Hierapolis of Syria.³ If, like the *hierodouloi*, the *hieroi* in some cases practised ceremonial prostitution, and always did menial offices about the shrine, we have no reason to suppose that they were to the same extent serfs of the soil, although those of Apollo Lermenus inhabited a sacred settlement, *χωρίον* or *κώμη* (both words occur in the texts), and must have constituted a *κατοικία* not dissimilar to that of the *hierodouloi* of Venasa (Strabo, p. 537). It appears from the Lermenus inscriptions that they had obligations of personal service in the *hierion* at stated seasons, and were bound then, and probably for a certain period previously, to maintain ceremonial purity in garments and person, and abstain not only from lewd sexual actions, but from marital intercourse. The inner meaning of the latter obligation has been interpreted with great probability by Ramsay (p. 136) to imply, not that all sexual acts entailed impurity (for they might even be obligatory in the divine service), but that those usually held to be sanctioned by wedlock were especially repugnant to the cult of the Nature-goddess of West Asia, the Great Mother, which was a negation of true marriage altogether, and typified the matriarchal principle. In a well-known inscription of Laurium in Attica, recording the formation of an *eranos*, or religious club, by a Lycian slave, the conditions of ceremonial purity according to the usage of West Asia Minor are enumerated; and, with modifications, these may be predicated of all *lepoi*. They included, besides sexual abstinence, the avoidance of a corpse and of certain foods, including pork and garlic, and freedom from skin complaints or contact therewith (see Foucart, *Assoc. rel. chez les Grecs*, Paris, 1873, p. 119 ff.). We find, in fact, in an obscure Lermenus text, that eating some part of the flesh of a goat called down the divine wrath on a *lepos*; but in this case probably because the

¹ See Hogarth, in *JHS* viii. (1887), and Ramsay, *op. cit.* i. ch. 4. In the latter publication the inscriptions are considerably added to and revised.

² *de Dea Syr.* xliii.-l. Lucian distinguishes them from the priests (*ἱερείς*), of whom he saw above 800 at once, performing the higher offices of actual sacrifice, libation, and service of the altar.

animal was sacred. *Hieroi* and *hierai*, when not actually serving the shrine, seem to have lived as other people; and, as we have seen, the voluntary ministrants of the class could in some places (as, e.g., Acilisene) return altogether, after a time, to ordinary secular life; but, while engaged in the *hieron*, they evidently had to ignore their private condition. Those born free must for the time adopt a lower political status, wives must act as unmarried (*παρθέναι*), and married men must forget their marital duties. They must live, in fact, the divine life.

It is much to be hoped that further discoveries of inscriptions may throw clearer light on this peculiar institution of ancient religion. It seems to have contained certain elements of later monastic institutions, and may well have had a good deal to do with those which were developed at an early period in Christian Asia.

The use of *lepos* as an adjective for persons dedicated to sacred service is, of course, common. It is found in literature as early as Herodotus (ii. 54, two *ἱεραὶ γυναῖκες* at Dodona); but such dedication must have been much older. The best known literary instance is Ion. The word is also, doubtless, used sometimes for *hierodouloi*, as by Strabo in speaking of the prostitutes of Comana Pontica—*ὧν αἱ ἱερεῖς ἐστὶν ἱεραὶ*.

LITERATURE.—This is given in the article.

D. G. HOGARTH.

HIGH PLACE.—I. Name.—The Heb. is *הַרְבָּה*, *bāmāh*, pl. *הַרְבָּתִים*, *bāmōth*, signifying 'high ground' or 'crest'; cf. the Assy. *bāmātu*, pl. *bāmāti*, 'height(s)'. The equivalent in the LXX is *ὄρηαι* (in the Prophets also *βουαί*; in the Historical Books, *ὄρη*, *ὄρηλά*); Vulg. *excelsa*; Pesh. 'alawāthā, 'high places,' sometimes *pērakkē*, 'idol shrines.' The Heb. terms *הַרְבָּה* and *הַרְבָּתִים*, which likewise signify 'height,' are not true synonyms of *הַרְבָּה*. The pl. *bāmōth* is used four times in the OT either as a proper name or compounded with some other proper name (Nu 21¹⁹, 22, 28 RVm, Jos 13¹⁷). It is also found as an element in a place-name on the Moabite Stone (line 27), and is likewise the name of a Moabite sanctuary for Chemosh (line 3). The origin of the name is unknown. In Hebrew it may have been—probably was—borrowed from the Canaanites. Ezekiel's derivation (20²⁹) of *bāmāh* as from *bā*, 'go,' and *māh*, 'what,' is, of course, a mere pun, by means of which the prophet expresses his contempt for high-place practices.

2. Location.—In the OT *bāmōth* are generally associated with elevations. People approaching them are said to 'go up' to (1 S 9^{12, 13}, Is 15²), and departing to 'come down' from, them (1 S 9²⁶ 10⁵). In Ezk 20^{28, 29} the singular *bāmāh* is synonymous with *gibb'ah rāmāh*, 'high hill.' They were usually located near cities (1 S 9²⁶ 10⁵), and were sometimes said to be in cities (1 K 13³², 2 K 17^{26, 29} 23⁹), or 'at the entrance of the gate' of the city (23⁹), or 'at the head of every way' (Ezk 16^{22, 21}); but also in valleys (Jer 7³¹ 19^{2, 3} 32³⁵, Ezk 6³). They were often on the hill above the town, as at Ramah (1 S 9¹²⁻¹⁴). Probably every city and village had one (2 K 17²¹ 23⁸, Ezk 6³). They were evidently artificially constructed, for they are spoken of as having been 'destroyed,' 'broken down,' and 'burnt' (2 K 21²³ 23¹⁶; cf. Ezk 8³, Lv 26³⁰, Nu 33⁵²). They were ordinarily 'built' (1 K 11⁷ 14²³). It is possible that they resembled the *ziggurats* of the ancient Babylonians. On the other hand, there is little doubt that they closely resembled, and in many cases were identical with, the ancient shrines of the Canaanites (Dt 12², Nu 33⁵²). This was in keeping with early religious custom. In primitive cults the crests of conspicuous mountains were regarded as the distinct territory of Deity. Zeus of the Greeks had many such mountain-abodes.

The gods of Persia, India, Java, and other lands were thought to dwell on lofty peaks. There were high places in Moab (Is 15² 16¹²), on which altars were erected (Nu 22⁴¹ 23¹⁻¹⁴, 28-30, Jer 48³⁰). From Jer 3² it may be inferred that *sh'phayim*, 'bare heights,' were chosen because from them the view of heaven was unobstructed. In Ps 68¹⁶ Zion is regarded as 'the mountain which God hath desired for his abode'; while in 1 K 20^{23, 28} Israel's victory is ascribed by the Syrians to Jahweh who is 'a god of the hills.' All this is in keeping with the representations in the three great poems of the OT, which make Sinai Jahweh's primitive abode (Dt 33², Jg 5^{4, 5}, Hab 3⁹), whither Elijah fled when threatened by Jezebel (1 K 19¹⁻⁸).

3. Significance.—*Bāmōth* in the prose of the OT are commonly places of sacrifice. They are pre-eminently religious centres (1 S 9¹²⁻¹⁴, 1 K 32⁴, Is 16¹², Lv 26^{30, 31}); in Am 7⁹ 'high place' is synonymous with *mikdash*, 'sanctuary.' In poetry, however, *bāmōth* are occasionally spoken of as 'mountain fastnesses' (Ezk 36², according to the received text), and are symbolical of dominion (Dt 32¹³ 33²⁹, 2 S 22³⁴, Is 14¹⁴ 58¹⁴, Am 4¹³, Mic 1⁵, Hab 3¹⁹, Ps 18³³, Job 9⁸); but the term is used in the plural only, in this sense.

4. Sacred furniture.—Ancient high places possessed various sacred accessories, of which the principal one was: (1) the altar, or place of sacrifice (1 K 3⁴, Hos 10⁸). It might consist of either hewn or unhewn stone, even of a mere mound of earth. In the OT it is distinguished from the high place itself (2 K 23¹⁸, Is 36⁷, 2 Ch 14⁴). Before it the sacrifices were presented.—(2) Near the altar stood the *maṣṣēbāh*, or sacred pillar of stone (Hos 10¹⁻²). It might consist either of a rough unhewn boulder or of a chiselled pillar, which the worshipper regarded as the abode of Deity. In very ancient times these pillars were left unhewn because they were regarded as sacrosanct, the belief being that, if they were cut or carved by human hands, the *numen* would be driven out of the stone. Later, artificial obelisks took their place. To the ancient Canaanites the *maṣṣēbāh* was the symbol of the Divine presence, and was worshipped as the representation of Deity (Ex 23²⁴, Dt 7⁵ 12⁸). By the patriarchs such pillars were regarded as symbols of the true worship of Jahweh (Gn 28¹²⁻²² 31⁴⁶⁻⁵¹; cf. Ex 24⁴, Is 19¹⁹); but later they were proscribed as illegitimate because of their heathen and idolatrous associations (Dt 16²², Mic 5¹³). Among the Arabs they were smeared with blood in order that the offering might be brought into closer contact with Deity. Jacob poured 'oil' upon his *maṣṣēbāh* at Bethel (Gn 28¹⁸). In general the worship of stone pillars was a species of idolatry, their presence being the distinguishing mark of the sanctuary.—(3) Another important part of the furniture of a high place was the *āshērāh*, or sacred pole. It consisted of an artificial pole of wood, or stump of tree, planted in the earth (Dt 16²¹), and was regarded as a symbol of the goddess Astarte, according to some, though this is not demonstrable. The *āshērāh* was artificially constructed of wood (Jg 6²⁶, 1 K 14^{15, 22} 16²⁸, 2 K 17^{10, 16}, Is 17⁹), in image-like form (1 K 15¹³), and could be 'plucked up' (Mic 5¹⁴), 'cut down' (Ex 34¹³), 'broken to pieces' (2 Ch 34⁴), and 'burnt' (Dt 12⁸). It stood in close proximity to the *maṣṣēbāh* and to the altar (Jg 6²⁶), and might be set up even beneath living trees (2 K 17¹⁰). What its origin was it is impossible to say, but it was evidently akin to tree-worship, the tree probably being revered as an abode of Deity (Dt 11³⁰), and as the symbol of fertility. A famous *āshērāh* stood in Samaria in the days of King Jehoahaz (2 K 13⁶), probably the one made by Ahab (1 K 16²⁶). Manasseh also made an *āshērāh*, which he set up in the Temple in Jerusalem (2 K

21⁷), but it was destroyed by Josiah (23⁶⁻⁷).—(4) Not infrequently, also, connected with *bāmōth* there were *rooms, chambers, or sacred halls*, called 'houses of high places' (1 K 12³¹ 13², 2 K 23¹⁹). These were used probably as dwellings for the priests, and as the houses where the sacrificial meals were eaten (1 S 9²²); quite possibly also as the places of the most immoral worship—religious prostitution (Am 2⁵; cf. the 'vaulted chambers' mentioned by Ezekiel 16^{24, 31, 39}). These chambers also sheltered the images of the gods worshipped (2 K 17²; cf. Jg 17⁵). Tents, however, were used for the same purpose (2 K 23⁷, Ezk 16¹⁶; cf. Hos 9⁶); for example, David pitched a tent to shelter the ark (2 S 6¹⁷ 7⁶; cf. 1 K 2²⁶, Ex 33⁷⁻¹¹; cf. also the proper name *Oholibamah*, signifying 'tent of the high place,' Gn 36²). The Carthaginians are said to have used tents as portable sanctuaries (Diod. Sic. xx. 65).—(5) There were *attendants* also at the high places, sometimes called *kōhanim*, which is the ordinary word in Heb. for 'priests' (1 K 12³² 13²⁻³³); sometimes called *k'mārim*, 'idolatrous priests' (2 K 23³). Besides these, there were *g'dheshim*, 'male prostitutes,' and *k'dheshoth*, 'sacred harlots,' in connexion with high places (2 K 23⁷, 1 K 14²⁴ 15¹², Dt 23^{17, 18}, Hos 4¹⁴).

5. The cultus.—In general the worship practised at the *bāmōth* was not only ceremonial but sensual. It was borrowed largely from the Canaanites. Joy and feasting characterized their ritual (1 S 9¹²⁻¹³). The rites performed probably typified the annual renewal of Nature. Tithes were brought thither (Am 4⁴; cf. Gn 28³⁰⁻³²). Doubtless many of Canaan's high places became dedicated to Jahweh. Solomon, for example, sacrificed and burnt incense in the *bāmāh* of Gibeon, offering a thousand burnt-offerings upon the altar there (1 K 3⁴), and to please his foreign wives he built other high places to Chemosh and Molech, burning incense and sacrificing to their gods (1 K 11⁷⁻⁸). The Canaanites and Israelites may, indeed, have joined in the worship of Baal at some of these *bāmōth*. Whether they did or not, by the introduction of foreign cults the worship of the sanctuaries became corrupt. It is no exaggeration to say that the grossest and most sensual forms of religion described in the OT are associated with 'high place' worship. Hosea paints a vivid picture of their practices, though he mentions *bāmōth* by name only once in all his prophecies (10⁸). To him the high places of Aven were 'the sin of Israel.' Accordingly, he warns Israel against such sacrifices and libations (9⁴); points a finger of scorn at their rewards of adultery—bread, water, wool, flax, oil, drink, grain, new wine, silver and gold, which in turn they bestow upon Baal (2⁶, 7¹⁴); denounces them for burning incense to other gods, themselves clothed in gala dress and decked with earrings and jewels (2¹³); threatens destruction upon the rewards of licentiousness received from their lovers (2¹³); and pronounces the ruin of all those who give themselves over to divination and harlotry in the name of religion (4¹²⁻¹⁴). Isaiah likewise gives a most striking description of heathen rites practised at the *bāmōth* (57³⁻⁸), explaining how the people inflame themselves among the oaks, slay their children in the valleys among the smooth stones (regarded as the abode of the *numina*, or gods), pour out drink-offerings as sacrifices on high mountains, and set up memorials of shame (perhaps alluding to phallic worship; cf. Ezk 16¹⁷). The same prophet describes Moab as literally wearying himself praying upon his high places (Is 16¹²; cf. 1 K 18²⁶).

6. History of high places in OT.—(1) *In the Pentateuch and Joshua*.—*Bāmōth* are not mentioned in either Genesis or Exodus; or, indeed, as places of worship, in the entire Book of Deuteronomy; cf. however, the figurative allusions in Dt 32¹³ 33²⁰,

in which to 'ride' or 'tread' upon the enemies' high places signifies to march over them in triumph. In Lv 26³⁰ and Nu 21²⁸ 22⁴¹ 33⁵², however, they are spoken of as places of worship. Two of these passages (Lv 26³⁰, Nu 33⁵²) warn Israel against the contaminating and despiritualizing influences of the heathen practices associated with such sanctuaries. They are the only passages in the Hexateuch which use the term with a religious significance. In Nu 21^{19, 20} and Jos 13¹⁷ the word is used as a proper name. The plural form is employed in all these instances.

(2) *From Joshua to Solomon*.—There is no mention by name of high places in the Book of Judges, and only a few cases (all in a single context) in the Books of Samuel refer to *bāmōth* as sanctuaries. The allusions in 2 S 1¹⁰⁻²² 22³⁴ are poetical and figurative. In the classical passage in 1 S 9¹²⁻¹³, 14, 15, 25, 10²⁻¹³, Sammel the seer is represented as going up to a *bāmāh* to worship, where the people await him, expecting him to bless the sacrifice (1 S 9¹²⁻¹⁴). While there, he is visited by Saul, who, with his servant, is searching for his father's lost asses. Saul and his attendant are invited to join in the sacrificial meal, which they eat together in the *ḥḥḥ*, or sacrificial dining-room (1 S 9¹⁶⁻²³). Later in the account, mention is made of a band of prophets who are expected to come down from the high place, having presumably been there engaging in religious service (1 S 10⁹). The story gives no hint that there is anything illegitimate in sacrificing at such a sanctuary. In David's day, Gibeon was the great high place (1 Ch 16³⁹ 21²⁹). Under Solomon, also, the people continued to sacrifice at the high places, 'because there was no house built for the name of Jahweh until those days' (1 K 3²). Even the king himself 'went to Gibeon to sacrifice there, for that was the great high place' (1 K 3⁴, 2 Ch 1⁵⁻¹⁸). All this was in strict keeping with the traditional laws of Moses; namely, Ex 20²⁴, which allowed sacrifices to be made 'in every place' where Jahweh should record His name. Dt 12¹⁰⁻¹¹ insists upon the unity of sanctuary *only when God has given Israel rest from all their enemies round about*; when Israel should conquer Canaan and dwell in safety, *then* they should bring their sacrifices to the place which Jahweh should choose. This may be interpreted to mean that the law of the one sanctuary was not expected to come into practical operation until Solomon's time. Yet the fact is that Solomon did not observe this Deuteronomic law, for he built high places for his foreign wives; but he is explicitly rebuked for not having observed it (1 K 11⁷⁻¹⁸).¹

(3) *In North Israel*.—The revolt of the Ten Tribes under Jeroboam, and the gradual declension of religion in the Northern Kingdom, can be explained only in the light of the religious syncretism which had grown up in the nation before the death of Solomon. On entering Canaan, Israel had taken possession of the high places of the Canaanites. The common illiterate people did not grasp clearly the difference between the pagan worship of the Canaanites and the worship of Jahweh. As time went on, the upper classes also became indifferent, and dedicated Canaanite sanctuaries to Jahweh. The construction of the Temple did not, of course, change at once the people's devotion to local sanctuaries. Jeroboam built 'houses of high places, and made priests from among all the people,' and placed in Bethel the priests of the high places (1 K 12^{21, 22} 13^{32, 33, 34}), and the result inevitably was that Israel departed

¹ It is held by the majority of OT scholars that this rebuke is relevant only from the standpoint of the redactor of the Books of Kings, who reviews the history by the standard of the Deuteronomic code, which is believed by these scholars to have been first introduced in the time of Josiah (621 A.C.).

farther and farther from the worship of Jahweh, imperfect as that already was. Elijah, as a patriot, could protest only against the worship of Israel's sanctuaries rather than against the sanctuaries themselves (1 K 19¹⁰⁻¹⁴). On the other hand, the prophets of the 8th cent. attempted more than merely to reform the cultus of these sanctuaries. Hosea predicts that the high places of Aven, the sin of Israel, shall be destroyed (10⁸). Amos also declares that 'the high places of Isaac shall be desolate, and the sanctuaries of Israel shall be laid waste' (7⁹). The only other allusion in Amos to high places is figurative—that of Jahweh as treading upon the high places of the earth (4¹²). When the redactor of 2 Kings sums up the reasons for the downfall of North Israel, he ascribes it to their having built high places in all their cities and there burnt incense, as did the nations whom Jahweh carried away before them (17⁹⁻¹¹).

(4) *In Judah.*—Under Rehoboam the people built high places in Judah, and the king appointed priests for them (1 K 14²³, 2 Ch 11¹⁵). Asa is said to have taken them away out of Judah (2 Ch 14²⁻⁵), but not out of Israel (2 Ch 15¹⁷, 1 K 15¹⁴). Jehoshaphat likewise removed the high places from Judah (2 Ch 17⁴), but not from Israel (1 K 22²⁸, 2 Ch 20²⁸). On the other hand, Jehoram, who married the idolatrous daughter of Ahab, actually made high places in the mountains of Judah (2 Ch 21¹¹), which none of his successors—Jehoash (2 K 12²), Amaziah (14⁴), Uzziah (15⁴), and Jotham (15²³)—removed. Ahaz actively 'sacrificed and burnt incense' on them (16², 2 Ch 28²⁴⁻²⁶). Hezekiah, on the other hand, removed them, instituting a genuine religious reformation (2 K 18⁴, 2 Ch 31¹), the historicity of which is most reasonably attested (2 K 18²², 2 Ch 32¹²). But Manasseh rebuilt them (2 K 21⁴, 2 Ch 33¹⁷⁻¹⁹). Josiah, however, undertook and carried out a most drastic reformation, putting down the idolatrous priests and destroying the high places of all his predecessors, including Solomon's (2 K 23^{8, 12-15, 20}, 2 Ch 34⁴). During all this period of schism the prophets of Judah say little or nothing against the high places as such. Isaiah, for example, shows no pronounced hostility to high places themselves (14¹⁴ 15¹ 16¹³ 36⁷ 58¹⁴). Micah, likewise, is all but silent concerning them, his allusions being figurative rather than literal (1²⁻³ 3¹²; cf. Jer 26¹⁸). Jeremiah is more explicit and pronounced. He emphatically rebukes his people for having 'built the high places (the LXX has 'high place') of Topheth, which is in the valley of the son of Hinnom, to burn their sons and their daughters in the fire' (7³¹ 19⁵ 32³⁵), because they are centres of sin throughout all their borders (17³), and he threatens in Jahweh's name to cut off in Moab him who sacrifices in a high place (48²⁸; cf. Is 15² 16¹²). Ezekiel in similar strains protests against Judah's high places, and threatens in Jahweh's name to destroy them (6²⁻⁵). He points a finger of reproach at those who labour to make them attractive (16¹⁶), and warns those who congratulate themselves on possessing 'the ancient high places' (36³). Habakkuk's single allusion to high places is a figurative one (3¹⁹).

The only other references to *bāmōth* in the OT, with one exception, are Job 9⁸ and Ps 18²³, both of which are figurative; the exception is Ps 78³⁸, which is a literal commentary on Israel's repeated deflection from the true worship of Jahweh.

(5) *After the Exile.*—After the downfall of Jerusalem we hear little of high places. The captivity accomplished what neither Hezekiah nor Josiah could do. The people had learned at great cost the folly of idolatry, and her sons and grandsons, who returned after 536 B.C., had no disposition to revive the old local cults whose continuity had

been so long interrupted. In the 5th cent. B.C., however, there were altars to Jahweh in Elephantine, and, in the 3rd cent. B.C., at various places in the Delta of Egypt.

7. Recent discoveries.—During the past fifteen years several ancient *bāmōth* have been discovered, chief among which is: (1) the *Great High Place at Petra*, the capital of Edom, which was discovered by the present writer on 3rd May 1900. S. I. Curtiss was shown it in July of the same year. For location, size, completeness, and importance this high place still holds first rank among all the ancient sanctuaries as yet found to exist. A recent writer speaks of it as 'undoubtedly' existing already in the days of Moses (F. E. Hoskins, *From the Nile to Nebo*, Philadelphia, 1912, p. 336). It is situated on the very top of one of the most conspicuous peaks which surround the unique capital of Edom. Rock-cut stairways lead up to it from different directions. Two *massēbāhs*, or pillars, 100 ft. apart, situated on the brow of the promontory, mark the approach from the S.E. The oval rock-dome on which the *bāmāh* proper stands is some 300 ft. long (N. and S.) by 100 ft. broad (E. and W.). The view from the summit is unobstructed. Among the principal features of the sanctuary is the large, deep rock-cut court, 47 ft. long (N. and S.) by 20 ft. broad (E. and W.), where the worshippers probably stood. Near the centre of this court there is a raised platform 4½ in. high, measuring 5 ft. 1 in. (E. and W.) by 2 ft. 8 in. (N. and S.), on which the victims for sacrifice may have been slain. To the west of the court, some 15 ft. distant, with four steps leading up to it, is an altar, 9 ft. long (N. and S.) by 6 ft. broad (E. and W.), and 3 ft. high, with a rock-cut passage 32 in. broad, running about it on the N., W., and S. sides. In the surface of the altar there is a rectangular depression hewn out, intended perhaps for fire. Three of the corners of the altar seem to have been prepared by cuttings to receive 'horns.' Close by the altar and of about the same height, but extending nearer to the court, is an irregular oval rock platform, some 12 ft. 9 in. square, with circular depressions on the top surface (the one circle being inside the other), the diameter of the outer circle being 3 ft. 9 in., and that of the inner 17 inches. These were probably used as the place for pouring out libations (Ex 29¹⁹). A drain from the centre of the inmost circle would carry the blood, or water, as the case might be, towards the stairway by which the platform was approached (2 S 23¹⁶). In the sides of this platform there are two water cavities, which were probably used for purposes of ablution. About 32 ft. S. of the court is a pool or cistern excavated in the rock, and at one time cemented, whose dimensions, though somewhat irregular, are approximately 10 ft. long (N. and S.) by 8 ft. broad (E. and W.) and 4 ft. deep, with a drain to carry off the overflow. Two trees, of stunted growth naturally, and yet in one case measuring 2 ft. 10 in. in girth, are to-day growing in the near vicinity. From any part of the sanctuary the traditional Mt. Hor is visible. While this *bāmāh* is old, it cannot be demonstrated that it is the most ancient high place discovered, or even the oldest of those (in all 20 or more) now known to exist at Petra; all are devoid of inscription and ornamentation. At the same time, there is no doubt that this Great High Place was at one time the central sanctuary of the Edomites, and it may, indeed, mark the very spot where religious rites were celebrated by the sons of Esau three thousand years ago.¹

(2) *The High Place at Gezer.*—This *bāmāh* was

¹ A plan of the Great High Place at Petra is reproduced in Driver's *Schweich Lectures* (London, 1909), p. 61 (see also pl. facing p. 62); and in *HDB* iv. 386.

discovered by R. A. S. Macalister in 1902, and is described by him in the *PEFSt* of Jan. 1903 (pp. 23-36). It is situated in an open square just about the middle of the city, on the east declivity of the western hill, and was, doubtless, the centre of the city's religious life. It is the largest *bāmāh* as yet found in Palestine proper. Several of the essential features of an ordinary high place, however, are wanting. For example, there is no court for the worshippers; no certain place for the *āshērāh*, or pole; and it is doubtful whether there is an altar, though Macalister thinks it possible that the bank of hard earth some distance to the south of the pillars, which was about 11 ft. in length and excessively difficult to cut, may have been the altar of the *bāmāh*. A similar altar of baked earth, ornamented with figures of animals in relief, was found by the Austrians at Taanach. The majestic series of eight huge unhewn monoliths, standing in a row on bases of smaller stones, due N. and S., and ranging in height from 10 ft. 6 in. to 5 ft. 5 in., define this place as a genuine *bāmāh* of the ancient Canaanites of Gezer. In breadth the largest of these obelisks measures 4 ft. 7 in., in thickness 2 ft. 6 inches. There were originally ten, but only the stumps remain of the two at the north end. The laver is identified with a square block of stone, 6 ft. 1 in. long by 5 ft. broad and 2 ft. 6 in. thick, standing beside the row of pillars, and having a rectangular hollow cut in the top of it, intended probably for ablutions. A remarkable feature of this high place remains still to be described. On the east of the northernmost of the monoliths there is an entrance leading down into two large caves, which are connected with each other by a narrow, crooked passage. They were once the residences of the 'cave-dwellers' in Gezer, and were originally independent but are now connected. The smaller of the two was found to have large blocks placed against its door on the inside. When the passage was clear, however, hearing was possible between the two, but seeing was not; accordingly it has been conjectured that the inner cavern was used as a secret chamber from which oracles were given forth, a priest or a boy being sent into the inner chamber before the inquirer was admitted to the outer. The human voice issuing from the mouth of the narrow tunnel would be regarded as the voice of a spirit or of a god. In Solomon's temple provision was made for an oracle (1 K 6¹⁶; cf. 1 S 28⁷⁻²², Is 8⁷). Underneath the *bāmāh* in a stratum of earth were found also some twenty earthen jars containing the skeletons of infants, all newly born, probably not more than a week old. Beside these jars, or, as in some cases, inside them, other smaller vessels were discovered, in which, perhaps, food was deposited for the infant in the other world. These bones are supposed to have been those of first-born children who had been sacrificed to some deity, either to appease his wrath or to obtain his help (cf. 2 K 3²⁷, Mic 6⁷). Finally, a bell-shaped pit resembling an ordinary cistern, situated a little to the east of the sacred cave, and apparently a little outside the sacred precincts of the sanctuary, used probably as the depository of the refuse from the sacrifices, completes the equipment of the Gezer high place.¹ In 1905 another *bāmāh* was found at Gezer, having four standing *maššēbāhs* and the base of a fifth (cf. *PEFSt*, 1907, p. 267 f.).

(3) *Other high places.*—Still other altars and pillars have been discovered from time to time in Palestine, but it would be perhaps incorrect to speak of them all as *bāmāhs*. For example, Sellin of Vienna, in 1904, unearthed at Taanach, on the southern edge of the plain of Esdraelon in Galilee, a double row of five *maššēbāhs*; Schumacher of

Haifa more recently found two others at Megiddo; and, more recently still, Kittel of Leipzig discovered cup-shaped depressions or hollows in the rock surfaces at Mizpah, near Jerusalem. A complete list would also include the ancient rock-altar discovered at Zorah (Samson's birthplace, Jg 13³⁻²⁰) by Baurath Schick in 1887; and other 'finds' of similar character discovered at Tell el-Mutesellim, Gibeon, Tell es-Sāfi, and Tell Sanda hannah by Guthe, Vincent, and others. The latest discovery reported is that unearthed during June and July 1912 by Duncan Mackenzie, field-director of the Palestine Exploration Fund, at 'Ain Shems, the ancient Bethshemesh (cf. *PEFSt*, Oct. 1912, pp. 171-178). While cutting a trench, from north to south, across the central area of the city, Mackenzie found, towards the middle of the trench, five pillars lying on their sides as though they had been knocked down, the one on the east side being broken in two as if it had been purposely smashed. These stones are regarded by him as the sacred pillars, or *batyls*, of a high place. Their tops are rounded, but their bottoms are flat for better standing. Three of the five bear marks of tools. Two are flat like the headstone of a tomb, and are composed of a rough-surfaced, stratified kind of limestone which seems foreign to the environments of Bethshemesh. Mackenzie conjectures that they were set up in veneration of the dead, the spirit of the departed being imagined by the ancients to take possession of his pillar on the performance of certain ceremonial and magic rites for that purpose. At a point west of the high place a circle of stones was found, which leads by a shaft through the rock down into a great subterranean chamber, or burial cave, resembling those found at Gezer and Taanach. The cave extended away beneath the pillars of the high place, and contained all the paraphernalia of the cult of the dead, there in position as they had been left thousands of years ago.¹

GEORGE L. ROBINSON.

HIGH PRIEST.—See PRIEST.

HILLEL.—Hillel was a most distinguished teacher, and head of the Sanhedrin in Jerusalem during part of Herod's reign. Known as 'the Babylonian' (*Pesahim*, 66a; *Sukkah*, 20a) be-

¹ See figures reproduced in Driver (l.c.), p. 63.

¹ See figures reproduced in Driver (l.c.), facing p. 66 and following pages.

cause he was a native of Babylon, he is also designated as 'Hillel the elder,' either to distinguish him from later teachers of the name or to indicate his official rank (*Beṣah*, 16a). The dates of his birth and death cannot be fixed accurately. From the fact that he was one of the pupils of Shemaiah and Abtalion (see C. Taylor, *Sayings of the Jewish Fathers*², Cambridge, 1897, p. 18), and that tradition is emphatic in describing him as in his prime when he first arrived in Jerusalem, the inference is warranted that he was born about a century and a half before the destruction of the second Temple. No credence attaches to the statements (*Siphre Berākiah*, 36) that he was forty years of age when he left Babylon, that he spent forty more as a student under the 'pair' (see Taylor, p. 14, note 9), or that he was named and elected president of the Sanhedrin at the age of eighty, and filled that office for forty years more. All this is clearly due to an endeavour to make Hillel's career a parallel with that of Moses, just as he is hailed elsewhere (*Sukkah*, 20a) as a second Ezra, who, like the first, comes from Babylon to rescue God's Law from complete oblivion. Talmudic report names him among the men who held the Presidency about 100 years before the national catastrophe (*Shabbath*, 15a). There is, therefore, good ground for dating his death at about 10 B.C.

Of his family little is known. Tradition traces its pedigree, through the female line, back to king David (Jerus. *Ta'anith* iv. 2). His father's name is not given, but a brother of his, Shebna, is mentioned as engaged in mercantile pursuits (*Sotā*, 21a), and from him Hillel is supposed to have received substantial pecuniary assistance, though the passage just referred to admits also of the contrary interpretation.

Hillel from his earliest youth is represented as a student. Babylon then offered only scant opportunity for acquiring sound education in the things pertaining to the Law. 'What may one look for in a Babylonian?' was the constant scornful query which came from the tongue of the Palestinians, who held the would-be scholars from Babylon in slight esteem—a fact which Hillel was to discover the very first time he took a decided part in settling a controverted point of ritual practice (Jerus. *Pes.* vi. 1). The limited facilities which his homeland afforded for attaining full mastery of the intricacies of the Law induced him, in the prime of his manhood, to emigrate to Jerusalem (see *Siphra Tazria*, § 10, where the perplexities are enumerated on which he felt light would be shed in the Jerusalem academy). Without means of subsistence, he braved the hardships of the poor student's life in order to satiate his mind with abundance of knowledge. Arrived in Jerusalem, he supported his family and himself by precarious manual labour. (Later Rabbinical authorities report his occupation to have been that of a hewer of wood [*Keseph Mishneh* to Maimonides, *Hilkhoth Talmud Torah* i. 9].) Out of his meagre earnings he was able to save enough to pay the small fee which the doorkeeper exacted from the students attending the lectures. But—so runs the story—one Sabbath eve he found himself without money. Yet this did not deter him. He climbed up at the window, listening intently to the word of God as explained by Shemaiah and Abtalion. It was in the month of Tebeth, midwinter, and the night was cold and snow fell thickly. Unmindful of physical discomfort, absorbed in following the explications of the teachers, he neither felt numbness creeping on, nor was he aware of the increasing mass of snow that enveloped him. In the morning, Abtalion, trying to discover why the room continued dark long after the expected hour of light, spied Hillel under a mantle of snow three cubits

thick, his life well-nigh extinct. Though it was the Sabbath, they brought him in and proceeded to revive him, saying that for one so worthy the Sabbath might be desecrated. This experience of his came to be cited against the plea of poverty as an excuse for neglecting study (*Yoma*, 35b).

If Hillel's personal circumstances were not of the easiest, the political conditions of the times were by no means propitious to the peaceful pursuit of his studies. Herod persecuted the teachers of the Law unsparingly. Internal dissensions between the contending politico-religious factions (Pharisees and Sadducees) added an element of uncertainty to the situation. This may have been the reason why Hillel returned to his native land. It is not known when he left Jerusalem, or how long he stayed in Babylon. The fact that when he emerged into publicity—according to some, in consequence of a call sent him to Babylon—the 'sons of Batheira' were at the head of the school, and the practice of the 'pair' who preceded them apparently was forgotten, would seem to indicate that his absence had been of long duration. The identity of these 'sons of Batheira' is in doubt. The name is most likely that of a Sadducean school, partisans of Herod. This would explain their ignorance of the practice of their predecessors, and their disinclination to base decisions of ritual matters on reasoning by analogy and *a fortiori*, and the other methods of exegesis employed by Hillel. This is shown by the incident related in the Talmud to account for the withdrawal of the sons of Batheira from, and the elevation of Hillel to, the Presidency (Jerus. *Pes.* vi. 1, Bab. *Pes.* 66a).

The fourteenth day of Nisan, the eve of Passover, chanced to coincide with the Sabbath. Grave doubts arose whether the Paschal lamb could be slaughtered at such a time. But one who remembered that Hillel had been one of Shemaiah's and Abtalion's students suggested that the matter should be submitted to him, notwithstanding the jeering comment of others that he was a Babylonian (see above). Hillel came and decided the question in the affirmative, contending that the Passover sacrifice set aside the Sabbath-injunction (כסח רוחה שבת). He based his opinion on these considerations: Passover was, like the daily offering (*tamid*, תמיד), a community, and not a private offering; and, as the *tamid* set aside the Sabbath, so did the Passover lamb. Moreover, when speaking of the *tamid*, Scripture employs the term *h'mō'āhō*, 'in its season'—a term used also in connexion with the Passover-sacrifice. Hence the latter is in the same category as the former. Again, neglect of the *tamid* entails lighter punishment than non-observance of the Passover, which is visited with *kareth*, 'excision.' The presumption in favour of the Passover is, therefore, all the stronger than it reasonably could be in the case of the others. These arguments failed to convince his opponents until Hillel remembered that he had heard them from his teachers, whereupon he was appointed *Nasi*, 'head.'

The historical accuracy of this story may safely be doubted. The narrative proves, however, that 'the Babylonian' for some time must have led a growing opposition to the Bené-Batheira, bringing to bear on the text of Scripture a method of interpretation not in favour with them, and clinching his arguments by appealing to the authority and precedents of his masters. Finally, Hillel succeeded in dislodging the Batheirites. His main support may have been Herod, who at this period of his reign was anxious for peace, and, therefore, not disinclined to the election of a 'man of peace,' such as Hillel was (see below), to the presidency.

Certain it is that Hillel is associated with the formulation of exegetical rules (מדות, *middot*, 'measures'). He is credited with having developed seven of them—by later teachers enlarged to thirteen. Though probably not the inventor of the method, which orthodox Jewish tradition regards as of Mosaic origin (*Sanh.* 99a), Hillel may be held to have been among the first to divide these rules into distinct categories (Hillel's catalogue is given in *Siphra* at the end of the *Baraita d'E. Yishmael*, and again in ch. 37 of the *Abhoth of R. Nathan*, and in the *Tosefta Sanh.* 7).

Not many ritual-legalistic decisions are remembered as Hillel's. On a few points he is reported to have differed from his Vice-President Shammai, who inclined to more rigid constructions of the Law. Both of them founded schools, not always agreeing in theory or practice. But these controversies are of too technical a character to be noticed here. Hillel is also mentioned as a compiler of *Mishnayoth* (*Yebhāmōth*, 37a).

Of greater interest as throwing light on the attitude of Hillel to the letter of the Law are the *Tekanoth*, the modifying arrangements of which he was the author. War, failure of crops, and the policy of spoliation pursued by Herod, which led to excessive burdens of taxation, had reduced the people to distressing poverty. The dispossessed were forced to resort to loans, while those in better circumstances were little inclined to make the advances in view of the provision of the Pentateuch, according to which the advent of the Sabbatical year 'outlawed' all indebtedness. To meet the situation, Hillel devised the *proscol* (*πρός σκολῆν*), which enabled the creditor, by making the court his agent, to whom before the Sabbatical year he had assigned his claim, to collect his due from his debtors even after the Sabbatical year (*Shebhi'ith* x. 3; *Gittin* iv. 3). Similar relief was obtained by another of his 'arrangements,' which provided that in case of the absence of the (temporary) purchaser of a house in a walled city the original proprietor could repay the purchase price into the hands of the court or deposit it in the 'hall of the hewn stones' (*lishketh hāgāzith*) and re-enter into the possession of the house. He was prompted to devise this procedure in order to circumvent the strategy of the purchaser, who often went into hiding the last day of the year—the period of grace for the redemption of such property, according to the Pentateuch—and, not being repaid, refused to release the house (*Araklin* ix. 4). The legitimacy of the issue of certain marriages contracted in Alexandria being doubted, Hillel, construing the marriage contract according to its intent, declined to stigmatize the children as bastards (*Baba meši'a*, 104a).

Hillel's great distinction, however, was won as a teacher of ethics, both by precept and by example. A man of peace-loving disposition, of tender, humane sympathies, of genuine piety, of true humility, he stands forth a shining exemplar of the virtues which his religion consecrated. Beloved by his contemporaries, he has lived in the memory of posterity as the teacher in whom came to flower the sweetest and the strongest gifts that faith in Israel's God had power to stimulate.

Of his 'sayings'—reported partly in Aramaic, his native idiom, partly in Hebrew, and some of them in both Hebrew and Aramaic versions—some are contained in the collection of Jewish ethical maxims left by the Tannaim, the masters of the Mishna (Taylor, *op. cit.*). The high estimate he placed on peace is revealed by this saying:

'Be of the disciples of Aaron, loving peace and pursuing it; loving all mankind (or all created beings) and bringing them nigh to the Torah' (*Abhoth* i. 13).

Humility, wholly free from pretence, is the keynote of this observation:

'A name made great is a name destroyed; he who increases not, decreases; and he who will not learn (perhaps teach) deserves slaughter; and he who serves himself with the tiara (is arrogant) perishes' (*ib.* 14).

The clearest insight into the relation between egoism and altruism, positing the duty of self-reliance and self-development as the means of rendering service unto others—a conception which is characteristically Jewish and soundly and sanely limits both self-effacement and self-aggrandizement—is exhibited in the words:

'If I am not for myself, who is for me? And if I am only for myself, what am I? If not now, when then?' (*ib.* 15).

Egoism and self-sufficiency found no favour in his eyes.

'Separate not thyself from the community, and trust not in thyself before the day of thy death; judge not thy fellow until thou comest into his place; do not delay teaching; say not, "When I have leisure, I shall study"; perchance thou mayest not have leisure' (*ib.* ii. 5; see Taylor, *op. cit.* p. 30, note 11).

Ignorance and vulgarity preclude piety.

'No boor is a sinner; nor is the unrefined pious; the shamefaced is not apt to learn, nor the passionate (prone to anger) fit to teach. Nor is every one who has much traffic wise. In a place where there are no men, endeavour to be a man' (*ib.* 6).

The thought that, as we do unto others, so will we be done by he put into this language, suggested by the sight of a skull floating on the water:

'Because thou drownedst, they drowned thee; and they that drowned thee shall in turn be drowned' (*ib.* 7).

That ease and luxury are, in the ultimate analysis, burdens is the dominant emphasis of this saying of his:

'More flesh, more worms; more maid servants, more lewdness; more men servants, more theft, etc. (*ib.* 8). 'But he who hath gotten unto himself the words of the Torah hath gotten unto himself life in the world to come' (*ib.*).

For most of the preceding sentences, he could easily have selected as supporting authority one or the other Biblical passage. In recording other sayings of his, this has been done (see W. Bacher, *Die Aguda der Tannaiten*, i., s.v. 'Hillel'), and, as the apostrophe to the skull in *Abhoth* ii. 7 suggests, he was by no means averse to employing the *maschal*, parable, or simile. Pointing to the statues of the kings in the theatres and the circuses, he deduces from the duty to keep them clean by washing and scouring them, which is incumbent on the keeper, that laid on man to keep his body clean by bathing, for the human body is made in the image of God (*Midrash Lev. Rabba* xxxiv.; *Yalkut* to *Pr* 11¹⁷). The soul he likens to a guest whose entertainment (i.e. study) was expected of man (*ib.*).

The proselyte anecdotes of which Hillel is the hero are characteristic tributes to his humanity, his forbearance, his patience—traits which stand out all the more prominently because they are in contrast with the contrary dispositions of his colleague Shammai. How Hillel remains unperturbed under the greatest provocation is told in the story of the man who made a wager that he would succeed in angering Hillel, and failed ignominiously (*Shab.* 31a; Taylor, p. 23, note 33). The 'Golden Rule,' virtually the saying, 'Thou shalt love thy neighbour as thyself' (Lv 19¹⁸), he names the fundamental principle of the Jewish religion, and designates everything else as an unfolding thereof. Thus, in conversation with a proselyte who promised to accept Judaism provided it could be taught him during the time he could stand on one foot (i.e. *stante pede*, briefly and without unnecessary delay), Hillel replied: 'What is hateful unto thee do not do unto thy fellow. This is the great foundation; the rest is commentary. Go now and learn.' This negative formulation of the 'Golden Rule' is not less comprehensive than its NT counterpart (see *J.E.*, art. 'Golden Rule,' vi. 21; and art. under that title in the present work).

The esteem in which Hillel was held led posterity to attribute to him the knowledge of God's true name and that of the speech of plants and birds and of many peoples (A. Jellinek, *Beth Ha-Midrash*, Leipzig, 1853-78, ii. 117; *Mass. Sopherim* xvi. 9). But the tribute paid him at his bier in the lament, 'Woe! Departed is the pious man. Woe! gone is the humble man, the disciple of Ezra' (*Sanh.* 11a; *Sofa*, 48b), showed how his worth was recognized by those who had heard him 'praise God every day' (*Bērah*, 16a), who had been inspired by his faith in God, so intense that he was confident 'outcry at adversity did not proceed from his house' (*Berakhoth*, 60a; *Jerus. Berakhoth*, 14b),

who had been taught by him true charity, which endeavoured to restore to the dependent all the comforts and honour of his better days (*Ketubhoth*, 67b), and who had by him been brought 'to scatter (learning generously) when there are men to gather in' (*Berakhoth*, 63a).

HIMYARITES.—See AFRICA, SABEANS.

HINAYĀNA.—*Hina* means 'abandoned,' 'low,' 'mean,' 'miserable'; *yāna* means 'carriage,' 'means of progression,' 'vehicle'; the compound word *Hinayāna*, as used of religious opinions, means a wretched, bad method, or system, for progress on the way towards salvation. It was a term of abuse occasionally used by some of the later Buddhist authors, who wrote in Sanskrit, to stigmatize or depreciate those older teachings which they desired to supersede. The use of the term in India, however, is exceedingly rare—not that the theologians of the later deistic Buddhist schools were not sure they were right; but the word was not polite, and the needs of controversy could be met without it. It might be now left in fit obscurity, had it not been adopted by one or two well-known Chinese and European writers, to whose sympathies it appealed, and who have made it a cornerstone of their views on the history of Buddhism. This makes it desirable to summarize the little that is known on the subject of the so-called Hinayāna schools.

1. **Origin and date of the term.**—In the present stage of our knowledge of the history of Buddhism we suffer from a serious gap in the chain of available authorities. From the rise of Buddhism down to the time of Aśoka (q.v.), we have documents of varying age and importance, which enable us to draw a fairly accurate picture of the original Buddhism as understood by the early Buddhists, and also of the changes in doctrine down to the close of that period. The majority of these documents are in Pāli, but there are a number of side-lights as to detail from other sources, both early and late.

The following period of about three centuries, from Aśoka to Kanishka, is an almost complete blank. Even the date of Kanishka is uncertain. The able and sober discussion of the question by H. Oldenberg in the *JPTS* for 1912, the latest utterance on the point, suggests the end of the 1st cent. A.D. or the commencement of the 2nd as the most probable approximate time of Kanishka's accession. We have notices from Chinese sources as to national migrations in Central Asia, which resulted in successive movements of nomad tribes into the districts adjacent to the extreme N.W. of India. These notices are not always very clear, and at times appear conflicting; but they are sufficient to show that such movements in Central Asia were continually taking place during the centuries immediately preceding the Christian era, and culminated in the conquest, not indeed of India, but of Kashmir and the Panjāb, and of the districts round Mathurā and Gujarāt, by hordes of uncivilized nomads, mostly Huns or Śakas by race. These aliens adopted the religion, language, and civilization of the Indian peoples, mostly Buddhist, whom they conquered. Kanishka, the most famous and powerful of their princes, became a Buddhist; and lavishly supported the Buddhist scholars in Kashmir, who belonged to the *Sabbatthivāda*, the Realist school.

The result of these events was a momentous change affecting all the subsequent history of India.

Politically the centre of power was moved, for centuries, from the east to the west of the continent. Linguistically the Kosala dialect, of which Pāli is the literary form, had to yield its place, as the *lingua franca* of political, religious, and literary circles, to the dialect of Kashmir, of which Sanskrit is the literary form.¹ In religion a complete transformation was gradually but surely brought about. The brave barbarians became Buddhist so far as they were able. But they were so soaked in animistic superstitions that their ability was equal to the task only after they had brought down the religion to the level of their own understanding. There had been a slackening already. It is apparent in the later parts of the *Nikāyas* themselves, and is shown quite clearly by the questions considered in the *Kathā Vatthu* as being discussed in the schools at the date when that work was composed (c. 250 B.C.). From the time of Kanishka the whole power and influence of the Imperial State were thrown on the side of the animistic tendencies, and it was within the boundaries of the empire of the Kushan Tatars that the more important of the innovations were introduced into Buddhist doctrine.

A precisely similar series of events took place in Europe. A wave of invasion, similar to that which broke on the N.W. frontiers of India, and due, indeed, to similar national movements in Central Asia, broke in its turn over Europe. The Goths and Vandals adopted the faith of the Roman Empire. But, in adopting it, they contributed largely to the changes—some would call them deteriorations—that had already set in. When the conflict of nations subsided, the religion of the Roman Empire had become Roman Catholicism; politically the Continent was broken up among a large number of petty principalities, and such philosophy as survived was perforce of one and the same authorized pattern.

At the corresponding period in India, we find Buddhists who had borrowed from the pagans, and pagans who had adopted and improved upon the conflicting speculations of the many Buddhist schools. Philosophy was very much alive; and quite a number of conflicting systems were able, in the absence of even any attempt at authoritative suppression, to appeal to the suffrages of inquirers. It was at this stage that the word *Hinayāna* came into use. The oldest datable mention of the word is in the *Record of Buddhist Kingdoms* by Fa-Hian, written shortly after his return to China in A.D. 414. He states, in his account of Shen-Shen (N.W. of Tibet):

'The King professed our Law (Dharma), and there might be in the country more than three thousand monks who were all students of the Hinayāna.'²

In about half a dozen other passages he has similar statements. Legge, in his note on this passage, says that there were three vehicles—the larger, smaller, and middle (*mahā, hina, and madhyama*), suggesting, therefore, that Fa-Hian had these three in his mind. It is, however, by no means quite certain what the word, at that date, exactly meant, or what Fa-Hian had in view, whether he had learnt the phrase in China, or picked it up during his travels in India. It is not probable that Legge's suggestion is right. That group of three vehicles has not been found elsewhere. The *Saddharma Puṇḍarīka*, which is later, gives a different group of three: *brāhva, pacceka-buddha*, and *mahā*—in which *Hinayāna* does not occur. This group seems to have been widely known, as it is found also in the 3rd cent. in Ceylon, only applied to the word (*vachana*) instead of to the vehicle (*yāna*).³

¹ Rhys Davids, *Buddhist India*, London, 1905, ch. ix., and R. O. Franke, *Pāli und Sanskrit*, Strassburg, 1902, p. 872.

² J. Legge, *Travels of Fa Hien*, Oxford, 1860, p. 16.

³ R. Morris, *Buddhavamso* (PTS, 1882), p. xi.

The word occurs in the *Lalita Vistara*,¹ in a long list of qualities or states of mind, each of which is said to conduce to some other quality. In this list it is said :

'Thought, that opening (or beginning) of religious light, conduces to scorn for a mean method' (*hinayāna*).

Unfortunately, the date of the existing text of this work (which has been certainly recast once, and perhaps oftener) is late and uncertain.² Such a list as this lies peculiarly open, in a re-casting of the work, to sectarian interpolation; and the passage throws little light on the meaning of the word, as it is short and ambiguous. It might equally well be rendered 'scorn for the Hinayāna.'

Nearly two centuries and a half later we know that another Chinese pilgrim, I-Tsing, explained the word *Hinayāna* as meaning one who did not believe in the various deities and heavens created by the later schools. Fa-Hian may have thought the same, or he may have had, not a negative, but a positive test: that a Hinayānist, for instance, was one who still believed in the Aryan eightfold Path; or he may simply have considered that a Hinayānist was a man who belonged to one or other of the eighteen primitive schools. The last seems the most probable explanation. It was the easiest way to draw the line. We know from Fa-Hian's 36th chapter (Legge, p. 98) that he was familiar with the list of these schools current among so many of the Buddhists. But, whatever be the exact meaning attached to the word *Hinayāna* by Fa-Hian, it is probable, from his use of the Chinese equivalent of it, that the word, and with it the division of Buddhists into Hina-yānists and Mahā-yānists, was already current in India in the 4th cent. A.D.

2. The *Hinayāna* schools.—We have quite a number of copies of the list just referred to. The Sinhalese give it in half a dozen different books, from the 4th cent. A.D. downwards. They all agree in the names, having taken them from the still older, but now lost, Sinhalese *Atthakathā*. St. Julien³ reproduces five distinct lists from the Chinese. Schiefner, Wassilief, and Rockhill give us other lists from the Tibetan.⁴ These eight differ from one another, and from the Pāli list, in a few of the names; omitting one or two, and adding others. Each of them also pretends to be able to say of each school that it arose out of some other, and gives the name of the latter. In the details of these statements they also differ; and it is most unlikely that their language can ever have been exact except in a very limited sense. They can, at most, when they agree, afford us some guide to the relative age of the various schools within the period of a century and a half—from the time of the Council of Vesālī to that of the Council of Patna (about 400–250 B.C.)—within which they are all said to have arisen.

All the lists agree, however, in one point of great historical importance. Each of them gives one particular school, 'the School of the Presbyters' or 'the School of Distinction' (*Thera-vādins*, *Vibhajja-vādins*), as the original from which each of the seventeen others was ultimately descended.⁵

We have information as to some of the doctrines of several of these schools in the *Kathā Vatthu* (3rd cent. B.C.) and its commentary (5th cent. A.D.).

¹ R. Mitra's ed., Calcutta, 1877, p. 88.

² See M. Winternitz, *Gesch. der ind. Literatur*, II. (Leipzig, 1918) 190.

³ J.A., 1859, p. 227 ff.

⁴ See W. Geiger, *Mahāvastu* (tr. PTS, 1912, p. 277). He has made a comparative table of all the lists.

⁵ B. Fischer (*Leben und Lehre des Buddha*, Leipzig, 1910, p. 6) expresses this by saying: 'The Pāli canon is only the canon of one sect.' This is inaccurate in several ways. It implies that there were sects (like European sects); that each had a separate canon; and that each canon stood on a level in respect of age. Not one of these implications is supported by the evidence.

This has been specified, and discussed, together with other information, in two articles by the present writer.¹ The conclusions reached are:

(1) The data are not sufficient to enable us to give a complete description of the doctrines, or even of the innovations, current in any one particular school.

(2) The principal innovations discussed in the *Kathā Vatthu* relate, not to ethics or philosophy, but to Buddhism.

(3) Both the commentator and Fa-Hian, writing in the 5th cent. A.D., are agreed in granting only to three or four of these schools any considerable importance.

(4) Yuan Chwāng, writing at the end of the 7th cent. A.D., attaches importance to the same schools only. It is very doubtful whether any of the others had had, at any time, either large numbers or much influence.

(5) The figures given us by Yuan Chwāng—he stayed many years in India, travelled extensively, and usually recorded, where he stopped, the approximate number of members of the Order, and the school they adhered to—reveal the astounding fact that even as late as the end of our 7th cent., that is, the 13th cent. of Buddhism, no fewer than two-thirds of the 200,000 *bhikkhus* in India and its confines still adhered to one or other of the primitive schools. The allurements of the myriads of resplendent deities created by the Mahāyānist theologians, and that of the new ethics based on belief in those deities, had equally failed to attract them.

(6) These schools have been, and are still, often called 'sects.' This is a mistake. They had no separate hierarchies, presbyteries, or other forms of church government; no separate dress, churches, or services. They were more like the Low, Broad, and High Churchmen among the Episcopal clergy. And, as in the Anglican Church, each individual combined the various tendencies in varying degrees. This may explain how the same people are classed under the names of different schools. Thus, the *bhikkhus* in Ceylon called themselves *Thera-vādins*; Fa-Hian, who stayed two years in the island, apparently thinks (Legge p. 111) that they were *Mahāsākas*; Yuan Chwāng (Watters, *On Yuan Chwang's Travels*, London, 1904–05, ii. 234) calls them Mahāyānist *Sthaviras*.

(7) From what has been stated above as to the many lists of the 18 schools it seems clear that the number 18 is purely conventional—a round number. Were we to make a new list, including all the names found either in the old lists or in inscriptions (such, for example, as those mentioned in *JRAS*, 1891, p. 410; 1892, p. 597), we should have 28 or 30. That none of the names appears in the earliest inscriptions would seem to show that not much weight was attached to them in the earliest times. When the schools are mentioned, the name of each is given separately. A Hinayāna school as designating a body of men is never referred to. So with the Mahāyāna. There are a score or more of schools that must be included under that name. Some of them to-day in Japan have become sects with separate revenues, government, dress, doctrines, and services. To compare Hinayāna with Mahāyāna it is necessary, if one would serve any useful historical purpose, to compare the whole of the one with the whole of the other. The position will best be understood in the West if it be pointed out that the Mahāyāna schools bear a relation to the Hinayāna schools similar to the relation borne by the various Roman and Greek Catholic schools to the early Christian ones. This similarity is due to similar causes (one of which was mentioned above). But there are also remarkable and interesting differences. The most noteworthy of these is that the early forms of thought subsisted

¹ *JRAS*, 1891, 1892.

in India through so many centuries, while in Europe they were allowed to persist, if they persisted at all, only underground. When toleration was the rule in India, the Inquisition was busy in Europe.

Those schools, apart from the original school of the Theravādins, which would seem, from our late and scanty evidence, to have been of some importance, are the following:—

(i.) *Sammitiya*.—Yuan Chwāng estimates their numbers in the 7th cent. as about 43,000 *bhikkhus*, of whom about half were in Sind, and the rest scattered through the Ganges valley or in Avanti. They are referred to nineteen times in the commentary on the *Kathā Vatthu*.

(ii.) *The Sabbatthivādins* (Realists).—In the 7th cent. they were in the territories beyond the extreme N.W. frontier of India, and Yuan Chwāng reckons their number there at about 12,000. Fā-Hian does not mention them, and Buddhaghosa (*q.v.*) refers to them only three times. But Takakusu, in his important article in the *JPTS* for 1905, has shown how very great was the influence of this school of thought at the court of Kaniska, and afterwards; and has given a summary of the contents of seven of their works. Probably Āsvaghosa (*q.v.*), the celebrated court-poet and dramatist in Kaniska's time, was a Realist. The *Lalitā Vistara* is believed to be founded on the text of an older biography of the Buddha current in this school; and about half of the legends in the collection called *Divyāvadāna* are also thought to have been taken over from a work on Canon Law used by the Realists.¹

(iii.) *Andhaka* (Andhras).—Buddhaghosa, in his commentary on the *Kathā Vatthu*, attaches more importance to these, the inhabitants of the S.E., than to all the other schools put together. But they are mentioned nowhere else, and we do not know even the titles of any of their books.

(iv.) *Mahā-sāṅghika*.—They are mentioned by Buddhaghosa sixteen times, and a branch of them, the Lokottara-vādins, was found still existing in the 7th cent. by Yuan Chwāng in Bamiyan. They are particularly interesting as being the original authors of the collection of legends called the *Mahāvastu*, where we find the germ of the docetic theories, dealt with under DOCETISM (Buddhist).

A good deal of the literature of these, and of the other schools of early Buddhism, is still extant in Chinese translations. It is not likely that, in the fine collection of translations of Buddhist Sanskrit works into Tibetan, made from the 9th cent. onwards, there will be anything left of the works of these older schools. In the Buddhist Sanskrit MSS in our libraries there are, however, many books, whose titles we know, that will undoubtedly throw much light on the interesting and important historical problem of the gradual growth and change of early Buddhist thought and doctrine. The publication of these works is the greatest desideratum in the present state of our knowledge. The beginning we know well. The Pāli Text Society has now (1913) published 73 volumes of the works, early and late, of the original school, the Theravādins. We know a good deal about the end—the final shapes taken by the various schools of later Buddhism still existing in China, Tibet, and Japan. For the intervening periods very little, apart from story-books and collections of edifying tales, has as yet been made available for European scholars. It will be sufficiently evident from the above why it is that no attempt has yet been made in Europe to elucidate the history of these schools, or to trace the development of their doctrine.

LITERATURE.—The authorities have been given in the article.
T. W. REYS DAVIDS.

¹ Winternitz, *op. cit.* pp. 198, 232.

HINDUISM.—I. Definition.—‘Hinduism’ is the title applied to that form of religion which prevails among the vast majority of the present population of the Indian Empire. Brāhmanism (*q.v.*), which is the term generally used to designate the higher and more philosophical form of modern Hinduism, is more properly restricted to that development of the faith which, under Brāhman influence, succeeded to Vedism, or the animistic worship of the greater powers of Nature.

The name ‘Hindu’ carries us back to the period of the invasion of the Peninsula by the Aryan tribes from the N. or N.W. The word *Sindhu* was applied by them to the great river of the west, the modern Indus; and, though in Vedic literature *sindhu* was used as an appellative noun for ‘river’ in general, throughout Indian history it remained the name of its powerful guardian river, the Indus. A common term for the ancient Aryan settlements in the Panjāb was ‘the Seven Rivers’ (*sapta sindhanah*). The name ‘Hindu’ appears in the form *Hindia* in the inscription on the monument of Darius Hystaspes near Persepolis (c. 486 B.C.); *Hōdādyā* in the later Heb. literature (Est. 1:1⁸); and in its modern form (c. 440 B.C.) in Herodotus (iii. 98). The question of the so-called ‘Aryan invasion’ of N. India has been re-opened, from the Dravidian standpoint, by P. T. Srinivas Iyengar (*Journal Royal Society of Arts*, lx. [1912] 841 ff.), who opposes Risley's theory of a complete occupation of the Panjāb by Aryan tribes accompanied by their women, and a subsequent interruption of communication with Central Asia, which ensured the purity of the race in that province. He asserts that the ‘only certain difference between the Arya and the Dasyu . . . is one of cult, that is, of fire-rites. ‘The language and the cult of the Aryas were borrowed from without, and profoundly altered on Indian soil. If this cultural drift had been accompanied by any appreciable racial drift, if the cult and language had been brought into India by any considerable body of foreigners, who formed a race by themselves, and lived apart from the native races, neither the cult nor the language would have undergone such serious alterations as they have, but would have remained relatively pure. Hence we may conclude, with a fair degree of certainty, that in the second millennium B.C. a foreign tongue and a foreign cult drifted into India, and were adopted by certain tribes, later called Aryas, among whom the cult and the speech developed in new ways, and distinguished the tribes that possessed them from the other tribes of this country.’

a. Statistics.—According to the Census of 1901, the total population of the Indian Empire was 294,381,056, of whom 207,147,028 (70·3 per cent) declared themselves to be Hindus. Of these the vast majority (207,050,557) professed to follow the Brāhmanical or orthodox form of the faith, the small minority belonging to the modern theistic sects, such as the Brāhma and Arya Samājes. If to the body of declared Hindus be added Sikhs (2,195,339) and Jains (1,334,148), both of whom claim to be Hindus, the total adherents of Hinduism amount to 210,676,518. If the estimates of H. Zeller be accepted, Hinduism thus stands numerically third among the religions of the world, being exceeded only by Christians (584,940,000) and followers of Confucius (800,000,000).

The distribution of Hindus throughout the Empire varies greatly. The most Hindu province is Orissa, in Bengal, where 94·7 per cent of the total population follow this faith. In succession to this follow Mysore (92·0 per cent); Madras (89·1); Bombay, excluding Sind and Gujarat (88·9); Hyderabad or the Dominions of the Nizam (86·9); the United Provinces of Agra and Oudh (85·4); the Central Provinces (82·7); Central India (80·9); Baroda (79·2); Bombay, the whole Presidency (76·5); Travancore (68·9); Bengal, the whole Presidency (68·3). The least Hindu portions of the Empire are the N.W. Frontier Province with the Panjāb (35·6), Sind (23·4), and Burma (4·3); in the first two Hinduism having given way to Islam, in the third to Buddhism. In Eastern Bengal the percentage of Hindus has been reduced by the notable extension of Muhammadanism, and in Travancore of Christianity.

Hinduism is thus strongest in the more isolated portions of the Peninsula—Orissa, Mysore, Madras, and the Deccan or central plateau—where the influence of foreign religions has been weakest; in regions like the Panjāb, the Frontier Province, and Sind, Islam has been dominant; in Eastern Bengal in later times it has grown at the expense of Hinduism. The accuracy of these statistics is, however, seriously impaired by the difficulty of dealing with the beliefs of the non-Aryan or so-called ‘Dravidian’ population. The well-organized forest tribes, who in 1901 numbered 8,584,149 (2·9 per cent of the total population), were generally classed as Animists. But besides these there are vast masses of people drawn from the lower strata of the population throughout the Empire whose connexion with orthodox Hinduism is hardly more than nominal. Besides the Hindus settled within the Empire, some adherents of the faith are found beyond its

limits. Early traditions in W. India tell of fleets from the coasts of Sind and Gñjarāt conveying emigrants to Cambodia and Java, and Ptolemy's map of the Indo-Chinese coast contains Skr. names, indicating the existence of Hindu settlements as early as the 1st cent. A.D. In Cambodia the remains at Angkor, Nakhon Wat, Borobūdūr, and other places are of Indian origin in their details. In Java, as in Sumatra, the early ascendancy of the Hindus is supported by tradition, and there was certainly a period of Buddhism, and then a period of aggressive Saivism, followed by an age of apparent compromise between the rival faiths. Hinduism finally gave way to Islām, and has been extinct for more than four centuries (see *ERE* ii. 239; *EBR* xv. 288 f., 292, xxvi. 74). But in Bali, or Little Java, it still holds its ground in a corrupted form, sanctioning the custom of widow-burning (*sati*) and the traditional fourfold Hindu caste system. It is now largely blended with the baser forms of Buddhism and the animistic cultus of evil spirits (*kāla*). For Hindu emigration to the Far East, see V. A. Smith, *Hist. of Fine Art in India and Ceylon*, Oxford, 1911, p. 259 ff. In the early centuries of the Christian era, Hindu literature, art, and religion penetrated extensively into Khotan and all Chinese Turkestan up to the frontier of China Proper. The discussion of the influence of Hindu belief on the religions of the West is beyond the scope of this article; but Flinders Petrie has discovered portraits at Memphis of an Aryan woman from the Panjāb and a seated Hindu figure.

These are the first remains of Indians known on the Mediterranean. Hitherto there have been no material evidences for that connection, which is stated to have existed, both by embassies from Egypt and Syria to India, and by the great Buddhist mission sent by Asoka as far west as Greece and Cyrene. We seem now to have touched the Indian colony in Memphis, and we may hope for more light on that connection which seems to have been so momentous for Western thought' (W. M. Flinders Petrie, *Mem.*, viii. [1908] 129; cf. V. A. Smith, *Asoka*, Oxford, 1909, p. 43).

Within recent times Hindu emigrants to S. and E. Africa and various ports and trading centres in other parts of the world have, in spite of the Brāhmanical prohibition of ocean travel, carried with them their religion and some of their social institutions.

3. Materials for the study of Hinduism.—The subject of Hinduism, in many of its varied phases, is considered in several articles in this work—those describing the great provinces of the Empire; those tracing the development of the faith as illustrated by Aryan Religion, Vedic Religion, Brāhmanism, etc.; those dealing with the greater gods, religious sects, and sacred places. The purpose of this article is to discuss, in a general way, the progressive evolution of Hinduism, and to group the facts, as far as is possible, in their historical setting. It must be remembered, however, that the materials for such a survey are in many directions incomplete and fragmentary. In the first place, the Hindu religious records are of much later date than those of Babylonia or Egypt. In Babylonia inscriptions from Nippur earlier than the third millennium before our era are available (*HDB* v. 532; for various other estimates, see *EBR* iii. 108 ff.); the oldest Egyptian dynasty of which remains have been discovered goes back, according to Flinders Petrie, to 4777 B.C., or, in a later estimate, to 5510 (*EBR* ix. 69). The accounts of the origin of Hinduism start with the Vedic age, which is believed to date from about 1500 B.C. Secondly, while the hymns of the Veda embody the naive speculations of the early Indo-Aryans on the character and functions of their gods, the writings of the later Brāhmana period were compiled by the priestly class to support its claims to the leadership of the Aryan community. A comparison of these writings with those of the Buddhists and

Jains, so far as they have been examined, leads to the conclusion that this Brāhmana literature does not accurately represent the early development of Hinduism (Iliys Davids, *Buddhist India*, 1903, p. 149 ff.). The historical side, again, of this literature is vague and incomplete. These ancient religious teachers had little of the historical sense, and were not concerned to compile a systematic account of political events or of the phases of social progress. The inference which they desired to suggest was that Brāhmanical Hinduism dates from the most ancient period; that Brāhmans have always been the political, religious, and social guides of the community; that the orderly progress of religious development was never interrupted by any violent cataclysm. The literature prepared by them contains no adequate account of the rise, progress, and decay of Buddhism and Jainism; and in a great measure it ignores the successive invasions of N. India by Greeks, Parthians, Scythians, and Huns, of which the two last races profoundly influenced the religious and social life of the Hindus. To this must be added that lack of historical insight and national patriotism which the Hindus share with other oriental races. The priestly record of the early Hindu period cannot, to any large extent, be supplemented from independent sources. The true historical period does not begin before the 7th cent. B.C., and

'up to about that time the inhabitants of India, even the most intellectual races, seem to have been generally ignorant of the art of writing, and to have been obliged to trust to highly trained memory for the transmission of knowledge' (V. A. Smith, *Early Hist.*, Oxford, 1908, p. 241.).

No extant inscription can be assigned to a date earlier than that of Asoka (q.v.), the middle of the 3rd cent. B.C., while numismatic evidence begins to be of value only from the time of the invasion of Alexander (ib. 13 ff.). The architectural remains of the earlier period which have survived are Buddhist or Jain, not Brāhmanical; and the art and style are, for the most part, independent of religion. We possess no historical records and no sacred literature of the non-Aryan races of S. India, until they came into contact with the Hindus of the North. That of the Tamils is said to date only from about 100 B.C. (V. Kankasabhai, *The Tamils: Eighteen Hundred Years Ago*, 1904, p. 2 f.).

4. Vedic Animism.—The Vedic religion will be discussed in a separate article. Here it is only necessary to point out that the methods employed by the school of mythologists represented in Great Britain by F. Max Müller, who evolve a complex divine personality from a single physical concept, such as the wind or dawn, are now generally discredited in the study of Indian as in that of Hellenic myths (Farnell, *CGS*, Oxford, 1896-1909, v. 9 n.). The identification of the titles of the Vedic gods in languages akin to the Skr. has been widely contested and found to be in a great measure unfruitful; and attention at present is more generally concentrated on the comparison of cults rather than of divine titles.

The priests and higher classes of the Indo-Aryan community, whose beliefs are represented in the Vedic hymns, had raised to the rank of gods the greater spirits which control the chief energies of Nature; but the lesser spirits, which were dreaded and propitiated by the mass of the people, were to a large extent ignored in the religious literature. The latter and lower form of Animism, though it has been denied that it formed 'anything like a complete background to Vedic mythology,' can be traced in the Veda (F. Max Müller, *Contrib. to the Science of Mythology*, 1897, i. 211).

'Everything that impressed the soul with awe or was regarded as capable of exercising a good or evil influence on man, might in the Vedic age still become a direct object not only of adoration but of prayer. Heaven, earth, mountains, rivers, plants might be supplicated as divine powers; the horse, the cow, the bird

of omen, and other animals might be invoked; even objects fashioned by the hand of man, weapons, the war-car, the drum, the plough, as well as ritual implements, such as the pressing-stone and the sacrificial post, might be adored' (A. A. Macdonell, *Vedic Mythology*, pp. 2, 86 f., 147 f.).

Again, many myths (though an attempt has been made by Max Müller [*op. cit.* ii. 429, 532, 573] to derive them from physical concepts) are of the type common to all primitive races. The tales of Indra overcome with drink, and committing adultery with Asura women; of the incest of Prajapati; of the creation of all things out of the severed limbs of a magnified non-natural man, Puruṣa, are all common to savage folk-lore, and 'in the religions of even the lowest races, such myths . . . are in contradiction with the ethical elements of the faith' (A. Lang, *Myth, Ritual, and Religion*, London, 1899, i. 9 f.). The practice of magical rites also forms a link between the Aryan and the purely savage culture. It is true that magic, in its crudest form, does not appear in the original Veda; but the belief in the power of formulæ (*mantra*: see CHAKRS AND AMULETS [Indian]); the practice of sympathetic or mimetic magic, such as the use of figures which are wounded to destroy an enemy; magical practices connected with marriage, initiation, the anointing of the king; the use of homœopathic magic for the cure of baldness or jaundice, are all similar to those current among savages at the present day (H. Oldenberg, *Die Religion des Veda*, Berlin, 1894, pp. 508, 59, 477, 420 f., 507; M. Bloomfield, *Atharvaveda* [SBE xlii. [1897] 7 f., 263 f.]). Ideas of this kind are most largely found in the Atharvaveda, which was compiled from very ancient materials after the Aryans had penetrated some distanced down the valley of the Ganges (Bloomfield, *op. cit.* Intro. xl, xlv). The fact that such beliefs were common to Aryans and non-Aryans naturally facilitated that contamination of the earlier and purer theology which developed first into Brāhmanism, and at a later date into Hinduism.

5. Foreign influence in Aryan culture and belief.

—The view is now gaining ground that the Indo-Aryans were not unaffected by foreign influences.

(a) Some authorities recognize a stratum of Babylonian culture. If about 1400 B.C. the hegemony of Babylon had been established in W. Asia, it is not unreasonable to suppose that its influence may have extended to India. The great trade routes through Persia and Turkistan must have been controlled by the rulers of the Euphrates-Tigris valley; ruins of terraced fields and irrigation channels in Baluchistan prove that in ancient times it must have been a most fertile land, through which communication between the Euphrates-Tigris and Indus valleys could have been maintained. As early at least as the 7th or 8th cent. B.C. sea commerce was carried on between the non-Aryans of S. and W. India and Babylon; and by this route the pre-Semitic alphabet, which is the basis of the Indian scripts, reached India (J. Kennedy, *JRAS*, 1898, p. 241 f.; Smith, *Early Hist.*², 25 n.; Sayce, *Origin and Growth of Religion* [HL, 1887], London, 1891, p. 137 f.). Various lines of coincidence between the Babylonian and early Hindu culture have been traced: the resemblance of Babylonian charms against disease, evil spirits, and other invocations to those of the Atharvaveda (M. Jastrow, *Rel. of Bab. and Assy.*, Boston, 1898, p. 253 f.); the belief in sorcery, witchcraft, omens, lucky and unlucky days (*ib.* 286, 328 f., 380; Sayce, 150, 327); the custom at Taxila of selling maidens who failed to secure husbands, which was in force at Babylon (Herod. i. 196); the habit of burying in terra-cotta coffins, found in S. India, which closely resemble those of Babylonia (*IA* v. 255; Jastrow, 597 f.). It has also been suggested that India owes to Babylonia

the introduction of brick masonry (*IGI* ii. 103), the adoption of the seven-days week, and of the system of the twenty-four or twenty-seven lunar mansions (*nakṣatra*) (A. Weber, *Hist. of Indian Lit.*, 1878, p. 246 f.). On the other hand, Max Müller (*India, What can it teach us?*, 1883, p. 125 f.) strenuously denies that the Vedas show traces of Babylonian influence, and M. Haug (*Āitareya Brāhmaṇa*, 1863, i. 46) suggests that the early astronomical observations of the Hindus must have been made in N. India. In any case, the lunar mansions were a late introduction in Babylonia, and, if the Hindus borrowed them, it was probably later than the 7th cent. B.C. (J. Kennedy, 261, 269; cf., further, F. K. Ginzel, *Handb. der mathemat. und techn. Chronologie*, Leipzig, 1906 ff., i. 74-77). A recent discussion of the influence of Babylon on the religion of Greece shows that 'so far as our knowledge goes at present, there is no reason for believing that nascent Hellenism, wherever else arose the streams that nourished its spiritual life, was fertilised by the deep springs of Babylonian religion or theosophy' (L. R. Farnell, *Greece and Babylon*, Edinburgh, 1911, p. 307). Further investigation may show that these conclusions apply to the relations of Babylonia with India. On the whole, the influence of Babylonian on Hindu culture seems to have been comparatively late, and the results of the intercourse of the two races have been so thoroughly assimilated that they are no longer visible on Indian soil.

In the case of religion and myth, the primitive elements having become worn down or absorbed, it is difficult to trace the connexion between the two cultures. If the goddess Nānā Devī worshipped at Hinglāj (*q.v.*) be identical with the Babylonian Nana of Erech, we may suppose that the cults of the Mother-goddesses of east and west may here have been combined; her name, in the form Nano, appears on the coins of the Kuṣān king Huviṣka, who ascended the throne about A.D. 150 (*JRAS*, 1908, p. 60; Smith, *Early Hist.*², 252 f.; cf. J. G. Frazer, *GB*², pt. i. *The Magic Art and the Evolution of Kings*, London, 1911, i. 37 n.; T. Holdich, *The Gates of India*, do. 1910, p. 162 f.). An echo of the Babel legend has been traced in the Brāhmaṇas, where the demons pile up a great fire-altar by which they hope to scale the sky; when they have climbed some distance, Indra pulls out a brick; they fall to earth, and all but two, who fly away and become the dogs of Yama, are turned into spiders (Bloomfield, *SBE* xlii. 500). The conception of the upper or heavenly sky appears in the Veda as well as in the Avesta and in the cosmogony of Babylonia. It has been urged that the coincidences between the Babylonian and the Hindu Flood-legend can hardly be accidental (*Atharvaveda*, xix. 39. 8; *Satapatha Brāhmaṇa*, i. 8. 1. 6; Jastrow, 518). But the Hindu Flood-story is comparatively late, and it has been suggested that its independence of the legends in the Avesta and the Bundahish shows that it was not derived from Irān, but possibly, by Dravidian intermediaries, from Babylon, after the opening of communication by sea (J. Kennedy, *JRAS*, 1898, p. 260 f.; also see T. K. Cheyne, in *EB*⁹ vii. 976 f.; *EB* i. 1065 f.; F. H. Woods, *ERE* iv. 555 f.). It must also be remembered that such myths prevail in many parts of the world (E. B. Tylor, *Researches into the Early Hist. of Mankind*, London, 1865, p. 317 f.); and that India has its own legends of the same kind, such as those prevalent among the Lepchas, Korkus, Mundas, Karens, and Andamanese, which are almost certainly independent of Aryan tradition. The question of Babylonian influence on India has been discussed by R. von Ihering (*Vorgesch. der Indo-Europäer*, Leipzig, 1894, Eng. tr. *The Evolution of the Aryan*, by A. Drucker, London, 1897),

whose conclusions must be accepted with caution. For the wide-spread influence of Babylonian culture, see L. W. King, *A Hist. of Sumer and Akkad*, London, 1910, Pref. p. vii.

(b) Among the western kinsfolk of the Indo-Aryans their connexion with the Iranians, as is shown by their common knowledge of geography and its nomenclature, was particularly intimate. The affinity of the Avesta to the R̥gveda in the domains of mythology and cult is remarkable; and the resemblance would certainly be greater if we possessed Avestan literature as old as the Vedic, the reforms of Zarathustra having caused a very considerable displacement of mythological conceptions (Macdonell, *Vedic Myth.*, 7; Max Müller, *Selected Essays*, 1881, ii. 132 ff.; J. Muir, *Orig. Skr. Texts*, ii. [1860] 477 ff.). Risley (*Census Report India*, 1901, i. 548) suggests that the Brāhmanical theory of castes 'may be nothing more than a modified version of the division of society into four classes—priests, warriors, cultivators, and artisans—which appears in the sacerdotal literature of ancient Persia.' Haug (*Alt. Brāh.* i. 60) remarks that the Agniṣtoma rite, from its complete similarity to Iranian ceremonial, must be extremely ancient. It is certain that the great Medo-Persian Empire must have profoundly influenced N. and W. India; they certainly held the Indus valley and considerable parts of the S. Panjāb and Rājputāna (Strabo, xv. 10; *JASB*, 1892, p. 198; Malik Muhammad Din, *The Bahawalpur State*, Lahore, 1908, p. 22 f.). At a later date, under the Greek successors of Alexander the Great, Iranian sun-worshippers entered India, and were adopted into the Brāhman ranks under the title of Śakadvīpiya, or 'those of the Scythian island.' To this intercourse with Irān may be attributed the extension of sun- and fire-worship in N. India; though, of course, it is possible that cults of this kind may have sprung up in India independently of foreign teaching. The traditions of W. India indicate a connexion of the rulers of Valabhi in Kāthiāwār with the Sasanian dynasty, and a similar story is told of one of the great Rājput houses (*Ain-i-Akbari*, tr. Blochmann and Jarrett, Calcutta, 1873-94, iii. 338). The extent of the indebtedness of Indian art and architecture to that of Irān is disputed, and the origin of certain symbols, such as that of Garuda, the winged vehicle of Viṣṇu, is uncertain (Perrot-Chipiez, *Hist. of Art in Persia*, Eng. tr., London, 1892, pp. 5, 339 n.; A. Grünwedel, *Buddhist Art in India*, Eng. tr., do. 1901, pp. 16, 21, 48, 50, 56 f.; Fergusson-Burgess, *Cave Temples of India*, do. 1880, pp. 21, 34 f., 243, 307, 522 f.). The dominant influence of Persia on Indian art in the time of Aśoka is clearly established (V. A. Smith, *Hist. of Fine Art in India and Ceylon*, pp. 60, 377 f.). For the early relations between India and Persia, see the summary in *BG* ix. (1901) pt. ii. 183 ff.

(c) The Greek campaigns of Alexander the Great produced little effect upon the history, politics, or religion of India (Smith, *Early Hist.*, 110). A pillar inscription recently discovered at Besnagar, near Bilhisa in the Gwālor State, records that it was set up in honour of Vāsudeva or Viṣṇu by Heliodorus, son of Dion, a devotee of Bhagavata, who came from Taxila in the reign of Antalkidas of the Græco-Bactrian dynasty (c. 150 B.C.). It is uncertain whether Heliodorus accepted Vāsudeva as an Indian god or identified him with Herakles or some other Greek deity; in other words, whether he was a Hinduized foreigner or had remained a Greek and was merely anxious to profess conformity with an Indian cult. In any case, it throws new and interesting light on the relations between Greeks and Hindus (Smith, *Early Hist.*, 65 f.).

6. The religious isolation of India.—But, even

if it be admitted that in certain regions and in certain departments of religion or art the influence of foreign races on India may be detected (see Smith, *Early Hist.*, 377), the fact remains that the beliefs and cultus of the Hindus are, in the main, of indigenous origin, and that they developed on national lines of evolution. The Peninsula on east and west is bounded by an ocean, which in the early period was not open to the navies of the world. To the north and west India was cut off from the neighbouring Asiatic kingdoms by a gigantic mountain barrier, a great river, wide tracts of desert, and a borderland held by savage tribes. This isolation of the country promoted that confidence in, and respect for, their national religion and customs which are inherent in the Hindu mind. 'The Hindus,' said al-Bīrūnī, 'believe that there is no country but theirs, no nation like theirs, no kings like theirs, no religion like theirs, no science like theirs' (*India*, tr. Sachau, London, 1888, i. 22). In short, the leading characteristics of Hinduism are the result of its environment. Its pessimism results from a depressing climate, where the population is successively exposed to malaria, tropical heat, and torrential rain. Hence, naturally, as was the case in Babylonia, the evil spirits which bring famine, disease, and other calamities are objects of propitiation, while those of a benignant nature are often neglected. The molecular character of Hinduism is due to the varieties of race and culture in the population, the localization of its deities resulting from the worship of the guardian spirits of the isolated communities which formed their settlements in its jungles.

'The Indians are the only division of the Indo-European family which has created a great national religion—Brahmanism—and a great world-religion—Buddhism; while all the rest, far from displaying originality in this sphere, have long since adopted a foreign faith. . . . In spite of successive waves of invasion and conquest by Persians, Greeks, Scythians, Muhammadans, the national development of the life and literature of the Indo-Aryan race remained practically unchecked and unmodified from without down to the era of British occupation. No other branch of the Indo-European stock has experienced an isolated evolution like this. No other country except China can trace back its language and literature, its religious beliefs and rites, its domestic and social customs, through an uninterrupted development of more than three thousand years' (A. A. Macdonell, *Hist. of Skr. Literature*, London, 1900, p. 71).

7. Pre-animistic and animistic beliefs.—The religion of the Vedic period was a form of that higher Animism found among other savage and semi-savage races. It has been recently suggested that this type of Animism is not the most primitive form of belief; in other words, that Animism, as we find it in ancient and modern India, does not account for what some recent authorities are disposed to regard as distinct phases in the religious consciousness—the belief in the spirit world and the recognition of a God. It is urged that Animism, in the sense in which it is recognized by E. B. Tylor and his school,

'explains only the dead material of religion, viz., that material which concerns the human, the natural, the world of the dead, of animated nature, ancestor-worship, and so on; that is, all that lies on this side of the gulf. What lies on the other side, the truly supernatural, cannot originate in Animism, and Animism does not explain it. The idea of God is derived from Nature worship, at the back of which lies Mana; and this is not contradicted by the recognition of possible links between souls and gods, or between magic and prayer.' The facts 'seem to point uniformly to decaying phases of monotheistic belief—belief in a power to which, or to whom, evil of any kind is displeasing—as existing among widely separated savage races whose religion is now admittedly animistic' (*Athenæum*, 5th June 1909).

This *mana* among the Melanesians is defined by R. H. Codrington (*The Melanesians*, Oxford, 1891, p. 118) as the supernatural power or influence which operates to effect everything which is beyond the ordinary power of men, outside the common processes of Nature; and it is equivalent to the Algonquin *manitou*, the *oki* or *orenda* of the Iroquois (see E. S. Hartland, *British Associa-*

tion Report, Dublin, 1908, London, 1909, p. 5; E. Clodd, 'Pre-Animistic Stages in Religion,' *Fortnightly Rev.*, June 1909, p. 1130 ff.). The monotheism of the peasant is discussed in § 39 below.

Beliefs of this kind have been traced by Risley in India.

'If one must state the case in positive terms, I should say that the idea which lies at the root of their [the jungle peoples'] religion is that of power, or rather of many powers. What the Animist worships and seeks by all means to influence and conciliate is the shifting and shadowy company of unknown powers or influences making for evil rather than for good, which resides in the primeval forest, in the crumbling hills, in the rushing river, in the spreading tree, which gives its spring to the tiger, its venom to the snake, which generates jungle fever, and walks abroad in the terrible guise of cholera, small-pox, or murrain. Closer than this he does not seek to define the object to which he offers his victim, or whose symbol he daubs with vermilion at the appointed season. Some sort of power is there, and that is enough for him. Whether it is associated with a spirit or an ancestral ghost, whether it proceeds from the mysterious thing itself, whether it is one power or many, he does not stop to enquire. . . . When the era of anthropomorphism sets in and personal gods come into fashion, the active and passive powers of the earlier system are clothed in appropriate attributes. The former become departmental spirits or gods, with shrines and temples of their own and incessant offerings from apprehensive votaries. The latter receive sparing and infrequent worship, but are recognised, *en revanche*, as beings of a higher type, fathers and well-wishers of mankind, patrons of primitive ethics, makers of things who have done their work and earned their repose. The Santal Marang Buru represents the one; the Bongas or godlings of disease are examples of the other' (*Census Report India*, 1901, i. 352 f.; cf. R. E. Marett, *The Threshold of Religion*, London, 1909, p. 18 ff.).

There is nothing antecedently improbable in the theory that the belief in one Supreme God may have prevailed in India from a very early period, even before the rise of Vedic polytheism, because it is not confined to races in a high stage of culture, and is not infrequently found among primitive peoples (A. Lang, *The Making of Religion*, London, 1898, ch. ix. ff.). If pre-animistic beliefs assumed the form to which Risley has called attention, it would go some way to account for the 'higher gods of the lower races,' which have been recognized in various parts of the world. This conception has been traced in some of the later Vedic hymns, where the idea is expressed that the various deities are but different manifestations of a single Divine Being (Macdonell, *Vedic Myth.*, 16 f.). It is unnecessary to apply Max Müller's term 'Henotheism' to this form of belief, because it amounts to little more than the poetic exaggeration with which a singer magnifies the deity whom for the moment he is addressing. The germs of monotheism which have been traced in the cult of Varuna seem to have been exaggerated; but it appears to be clear that at the close of the Vedic period, and more particularly in that of the Brāhmanas, Prajāpati has come to be realized as the chief and father of the gods, existent from the beginning, a conception which in the Upaniṣads gives place to Brahma, the universal soul or the Absolute (E. W. Hopkins, *Rel. of India*, 1896, pp. 67, 172; Macdonell, *Vedic Myth.*, 118 ff.). The later development of monotheism has been illustrated by G. A. Grierson, in art. BHAKTI-MĀRGA, vol. ii. p. 539; 'The Monotheistic Religion of Ancient India,' *Proc. Oxford Congress of Religions*, 1908, ii. 44 ff.; L. J. Sedgwick, 'Bhakti,' in *JRASBo*, xxiii. (1911).

8. Contributions from Vedism to modern Hinduism.—As is often the case with the great gods of savage races, the deities of the Vedic period have become otiose, take little part in the control of earthly affairs, receive scanty worship, and, if recognized at all, occupy a much lower position than that assigned to them in the early literature.

(a) *Varuna*.—At present Varuna, the old god of the firmament, is only vaguely conceived as one of the minor gods of the weather. At high-caste weddings in the Deccan he is installed in a brass bowl filled with water; the father of the bride draws four lines with sandal paste on the outside

of the jar, and with extended hands prays to Varuna to bless the wedded pair (*BG* xviii. [1885] pt. i. p. 200). On the western sea-coast he is believed to reside in the sea, wells, and streams, and he is propitiated by sailors and others whose business is in the great waters (*ib.* ix. [1901] pt. i. p. 349). In N. India he is supposed to preside over the weather and the rivers, and when a boat is launched the boatman flings an offering into the stream in his name.

(b) *Indra*.—The worship of Indra still survives, but in an attenuated form (see art. BRĀHMANISM, vol. ii. p. 804). Even in the Epic period he had suffered some loss of dignity, and he is now generally conceived as lord of a paradise of delights to which he conveys the souls of warriors slain in battle. In Buddhist mythology, under the name of *Sakka*, the Pāli form of the Vedic *Śakra*, 'the mighty one,' he retains some measure of respect. In the older Buddhist Sūtras he is almost the only deity of a well-defined type; at a later period he is conceived as reigning in a heaven of his own, whence he occasionally descends to interfere in earthly affairs (H. Kern, *Manual of Indian Buddhism*, 1896, pp. 16, 33, 45; A. Grünwedel, *Buddh. Art in India*, Eng. tr., 1901, pp. 7, 38). Hence among the Buddhists of Nepāl the thunderbolt (*vajra*) of this god has become the favourite religious symbol. 'Buddhists regard this thunderbolt of Indra as the sacred symbol of their divine Master's victory over the king of the Hindu heavens, and they venerate it accordingly'; all classes of Newārs, Buddhist as well as Hindu, perform the annual festival (*Indra-jātra*) with processions, performances by masked dancers, and illuminations; figures of Indra with outstretched arms appear in all parts of the city of Kāṭhmāndu (*q.v.*), and are invoked in memory of the sainted dead; in some places the old Vedic rite of uplifting the standard (*dhvṛjotthāna*, *indrādhwaja*) is still performed in his honour (H. A. Oldfield, *Sketches from Nepāl*, London, 1880, ii. 119, 312 ff.; cf. art. ASSAM, vol. ii. p. 137). Among the Hindus of the plains, his heaven (*Svarga*), said to be situated on the peak of the sacred mountain, Meru, is most closely associated with him. There he watches the dances of the nymphs who form his court—a view of his character which naturally commends itself to erotic Hinduism. His culture extends even to the forest tribes, like the Bhils (*q.v.*). In Bengal the non-Aryan Koch venerate a local god under the title of *Hudum Deo*, who is identified with Indra, and rides on his elephant, Airāvata; and in Dinājpur he has suffered still further degradation, seeming 'to be androgynous, and is represented by two figures, male and female, made of clay or cowdung. When drought is feared, the women make offerings of curds, parched rice, and molasses, and dance round the images at night, performing many obscene rites and abusing Indra in the foulest language, in the hope of compelling him to send the much-needed rain' (*Census Report Bengal*, 1901, i. 190 f.). In other places in the same province, after worship is done to him, his image is flung into the river as a mimetic rain-charm, or with the object of purifying the deity, and fitting him to answer the prayers of his worshippers during the coming year (W. Ward, *The Hindoos*, 1817, ii. 32).

(c) *Agni*.—As Indra was the special god of the warriors, so Agni was closely connected with the Brāhmanas; and this devotion, with the intensified belief in the efficacy of the sacrifice, was fully developed in the Brāhmana period. This deity seems to have developed from the cult of the sacrificial fire; but his personification, like that of the Greek Hestia, was never sufficiently anthropomorphic to disguise his ritualistic origin (Farnell, *CGS* v. 358). Some Brāhmanas, known as

Agnihotra, still, in accordance with the sacred law (Mann, iii. 67, xi. 66), maintain the sacred fire, which is produced by means of friction with the fire-stick (*arani*). The sacred fire is also kept up at certain temples, such as those in Nepāl (Oldfield, ii. 242; D. Wright, *Hist. of Nepāl*, Cambridge, 1877, p. 35; Monier-Williams, *Brāhmanism and Hinduism*, 1891, p. 363 ff.). At Juālamukhi (*q.v.*), in the Panjāb, the goddess Devi manifests herself in the jets of combustible gas which rise out of the earth near her shrine. Fire is also venerated as the agency by which the savour of the sacrifice reaches the gods; in the form of the *homa* it is an important part of the ordinary domestic ritual (see art. BRĀHMANISM, vol. ii. p. 803 ff.).

(d) *Sun-worship*.—At the present day worship is performed in honour of Sūraj Nārāyan, the Sūrya of the Vedic period, also known under the titles of *Āditya* and *Savitṛ* (see *ERE* ii. 804 ff.). All pious Hindus revere the rising sun, and he is invoked when the pilgrim bathes in sacred rivers, and at other domestic rites. But, like the Greek Helios, he is now regarded as a minor god rather than a great divinity, the most probable explanation of his loss of dignity being that his functions have been in a great measure transferred to Viṣṇu. As Farnell (*CGS* v. 420) remarks: "Earth," "hearth," "sun" were names of palpable objects, regarded indeed with some sense of mystery that is the emotional background of religion, but liable to be transformed by the healthy materialistic perception, and in any case too limited in respect of local position, movement, or function to satisfy the true Hellenic idea of godhead." The sun being a visible god whose beneficence is obvious to all, the Hindu conceives that he has little need of images, and, though some temples, like those at Konārak in Orissa, Gayā in Bengal, and Ayodhya in the United Provinces, are dedicated to him, they are far less numerous than those of the sectarian gods; and his worship as a tribal deity is confined to tribes like the Kāthi of W. India, who are probably a branch of the Gurjaras, and comparatively late emigrants from Central Asia (J. Kennedy, *JRAS*, 1907, p. 987). The Saura sect, which was specially devoted to this form of worship, seems to have practically disappeared (H. H. Wilson, *Works*, London, 1861, i. 19). The cult of this deity which prevails among the non-Aryan tribes is probably not based on imitation of the practices of the Aryans.

(e) *Forgotten Vedic deities*.—This list of four gods—Varuna, Indra, Agni, and Sūrya—practically exhausts those cults of the Vedic gods which survive in modern times. Of Mitra, the sun-god, Uṣas, the dawn, the twin Āsvins, Vāyu-vāta, and the Maruts, Pūṣan, deity of roads and cattle, hardly even the names survive. Their places have been taken by a host of minor deities of tribe or village, or their cults have been appropriated by the sectarian gods. The cults of stars and sacred animals, mountains, rivers, and the like, which appear in the Veda have now assumed forms presenting only a faint analogy to the primitive tradition. One cult, well established in Vedic times, that of the Pitṛi, or sainted dead, continues perhaps more than any other to impress the imagination of the modern Hindu (see ANCESTOR-WORSHIP [Indian], vol. i. p. 450 ff.).

9. *Transition from Vedism to Brāhmanism*.—The leading note of the Vedic hymns is cheerfulness; the great gods are the benevolent patrons of their worshippers; they lead the Indo-Aryan in his struggles with the Dasyn, or dark indigenous races; the evils which assail men are the work of demons, against whom the kindly gods wage successful warfare. In the period which

follows, that of the Brāhmanas (c. 800-500 B.C.), the prevailing feeling is very different. Its pessimism is perhaps due to climatic environment, and to the general acceptance of the doctrine of metempsychosis. The atmosphere of this age is that of religiosity rather than religion—the quibbles and elaborate ceremonialism of professional priests, contrasted with the peaceful poetry and naive speculations of the Vedic singers on things Divine and human. It may be compared with the transition from the prophetic literature of the Hebrews into legalism, and its crystallization in the later Pharisaism. This change of feeling may be attributed partly to climatic, partly to political, conditions. The Indo-Aryans had by this time advanced some distance down the Ganges valley, where the climate is damper and more depressing than that of the Panjāb. They had apparently broken up into a number of petty States which waged warfare one against the other. They had also come into contact with the non-Aryans, by some called Dravidians, but more probably members of the Mon-Khmer family, who, according to recent investigations, do not seem to have entered the Panjāb in any considerable numbers. Against these Mon-Khmer or Dravidian tribes, known as Dasyn, 'destroyers of the good,' they waged constant war. The clash of these rival cultures formed the source from which modern Hinduism ultimately sprang.

It is a popular error, which vitiates all conclusions regarding the early history of the Hindus, to suppose that these indigenous tribes were all savage barbarians. Many of them were probably forest-dwelling tribes, like the Gonds or Mūṇḍas, or nomadic hordes, like the modern Bedyās or Sānsiyas. Collectively they were known to the Indo-Aryans as 'those who do not maintain the sacred fire' (*anagnitṛa*), or 'flesh-eaters' (*kravyād*). Some of them seem to have attained a fairly high level of culture, even possessing, as the jealous Vedic singers admit, forts and cattle, and practising a rude form of husbandry (Muir, *Orig. Skr. Texts*, ii. 395 ff., 399). Their religion, like that of their modern successors, was a form of Animism, and they had reached the belief in the existence of the soul after death. 'They adorn,' says an early text, 'the bodies of their dead with gifts, with raiment, with ornaments, imagining that thereby they shall attain the world to come' (Muir, ii. 361). In short, it seems probable that in material culture, as well as in religious belief, they were not far below the standard of the mass of the Indo-Aryans. The importance of this consideration lies in the fact that this uniformity of culture facilitated the union of these two rival stocks, and led to that amalgamation of the cults of the conqueror and the conquered from which modern Hinduism was evolved.

10. *Contributions to modern Hinduism from the Brāhmaṇa period*.—The chief contributions from this period to Hinduism were: (a) a great system of religious philosophy known as the Vedānta; (b) the supremacy of the Brāhman; (c) the dogma of the efficacy of sacrifice; and (d) the doctrine of metempsychosis.

(a) *Vedāntic pantheism*, 'which is breathed by every Hindu from his earliest youth, and pervades in various forms the prayer even of the idolater, the speculations of the philosopher, and the proverbs of the beggar' (Max Müller, *India, What can it teach us?*, 249), and which has been traced in a hymn of the Rīgveda (x. 90), is fully developed in the philosophical literature known as the Upaniṣads. It forms the subject of a special article (see VEDĀNTA, and *ERE* i. 471, 137 ff.). Its chief interest at the present time lies

in the fact that its revival is one of the most important movements in the Neo-Hinduism of our day (see § 35).

(b) *The supremacy of the Brāhman.*—The priest, who, in his most primitive form, is an exorcist or medicine-man, appears in Vedic times; but the priestly order does not seem at that period to have been organized into a profession, nor did its members claim to hold office by hereditary right, though transmission of magical powers from one generation to another may have been recognized. The household worship of the early Aryans, conducted by the head of the family, gave way to the intricacies of ritual, and thus led to the creation of the office of *purohita* (*praepositus*, 'he that is set before'), or family priest, whose claim to office mainly rested on his skill in magic (Bloomfield, *SBE* xlii., Introd. lxvii ff.). Haug, however, is inclined to date this office back to the period when Iranian and Hindu formed a single community (i. 67); and it seems clear that the hereditary magical power of the priestly class was recognized even before Vedic times (see *ERE* ii. 43^b). The supremacy of the Brāhmins was doubtless closely connected with the denial by the Indo-Aryans to the Dasys of the right of *connubium*, which was one of the causes which contributed to the establishment of the caste system (Rhys Davids, *HL*, 1881, p. 22 f.). But it is not till the Brāhmana period that Brāhman claims are fully developed. 'The gods,' says the *Āitareya Brāhmaṇa* (Haug, ii. 528 f.), 'do not eat the food offered by a king who has no house priest.' There are, we are told, two kinds of gods, the Devas and the Brāhmanas, the latter being 'deities among men.' At a later time Manu (xi. 85) lays down that 'by his origin alone a Brāhmana is a deity even for the gods, and his teaching is authoritative for men, because the Veda is the foundation for that'; and, again (ix. 317), 'a Brāhmana, be he ignorant or learned, is a great divinity, just as the fire, whether carried forth or not carried forth, is a great divinity.'

The Brāhman of the present day lays claim to the rights accorded to him in the early sacred books; and some of them, like the Nāgars of Gujarāt and the Nambūtiris of Malabar, surround themselves with rigid tabus of various kinds in order to ensure personal purity (A. K. Forbes, *Rās Mālā*, London, 1878, p. 554; J. A. Dubois, *Hindu Manners*,³ 1906, p. 178 ff.; F. Fawcett, *Bull. Madr. Mus.* iii. 33 ff.; *Census Report Cochin*, 1901, p. 136 ff.; L. K. Anantha Krishna Iyer, *Cochin Tribes and Castes*, ii. [1912] 169 ff.). Owing to its isolation and to the special environment of Orissa, the local Brāhmins, with their metropolis at Jāipur, possess more power and property than in almost any part of India (W. Hunter, *Orissa*, London, 1872, i. 265 ff.; *Ethnograph. Survey Central Prov.*, pt. v. [Allahabad, 1911] p. 28). But in the case of some of the southern Brāhmins this affectation of extreme personal purity is not deemed incompatible with the strange marriage law under which some of them, like the Nambūtiris, live in a recognized system of concubinage with women of the Nāyar caste.

The position of the Brāhman in S. India in relation to popular belief is specially interesting, as the respect paid to him depends partly on race, partly on history, and partly on environment. Thus, in the great delta of Tanjore in the S.E. part of the province,

'Brāhmin influence is predominant in social and religious matters. In almost all non-Brāhman castes the services of a Brāhman *purohita* [family priest] are indispensable at weddings, funeral and other domestic ceremonies; and the rites observed on these occasions are tinged with Brāhmanical observances to a degree which is unapproached elsewhere. Brāhmanical Hinduism is here a living reality, and not the neglected cult, shouldered out by the worship of aboriginal godlings, demons

and devils, which it so often is in other districts. Almost every village has its temple dedicated to one of the orthodox gods, holy places are legion, and every important town possesses a *matham* [monastery, lodging-place for ascetics] where ascetics may find shelter, and in which are held discussions by the erudite on disputed questions of doctrine or ritual. Brāhmins versed in the sacred law are numerous in Tanjore; Vedic sacrifices are performed on the banks of its streams; Vedic chanting is performed in a manner rarely equalled; philosophical treatises are published in Sanskrit verse; and religious associations exist, the privilege of initiation into which is eagerly sought for, and the rules of which are followed earnestly, even to the extent of relinquishing the world' (F. R. Hemingway, *Gazetteer of Tanjore*, Madras, 1906, i. 67 f.). The explanation of this predominance of Brāhmanism probably lies in the influence of the great Chola kings, to whose religious fervour are due the fine temples numerous in the district (Smith, *Early Hist.* 3, 414 ff.).

In the adjoining District of Madura, however, the situation is different. Though Madura itself is a well-known centre of Brāhmanism, the religious sentiment of the people is Dravidian. The important temple-worship at the chief city creates the impression that the people must be devoted to the worship of the orthodox gods; but a closer examination shows that large areas are devoid of any important shrine dedicated to the members of the Brāhmanical pantheon, and the village people are given over to the worship of the lesser Dravidian godlings. The cult of Siva is predominant. One reason why Brāhmins have been unable to impose their rites to any great extent upon the people is that large sections of the community do not regard it as necessary that their marriage or funeral rites should be attended by any professional priest (W. Francis, *Gazetteer of Madura*, Madras, 1906, i. 84).

Passing to the northern Districts of the Presidency, in Bellary on the N. slope of the Deccan plateau,

'the real worship of the people is paid to the shrines of Hanumān [the monkey god] and those of the village goddesses. The former abound, and there is a saying that there is no village without a cock or a Hanumān temple. The village goddesses are many. Besides the usual Māriamma and Durgamma (of whom the former presides over small-pox, while the latter is malignant), the water goddess Gangamma [see GANGES], and the numerous unnamed Uramma, or village mothers, there are several local Ammas [mothers] held in great repute. . . . Brāhmā is worshipped in the form of four-faced images, sometimes without any tangible image, a fort well and one of the pillars in a temple being declared to be habitations of him' (W. Francis, *Gazetteer of Bellary*, Madras, 1904, p. 63 ff.).

In the Godāvāri District on the east coast, partially composed of a deltaic region, with tracts of hill country occupied by wild tribes,

'in addition to the orthodox gods, three other classes of deities are worshipped—village goddesses, essentially local in character; caste deities; family deities, namely the *virudu*, or soul of some dead bachelor of the family (*FRS* l. 230, 261), and the *perantam*, or spirit of some woman outlived by her husband, who have been accorded apotheosis because they appeared in a dream to some member of the family, and announced that they have been made immortal. The Telugu Brāhmins, though in Vedic learning and observance of caste customs not inferior to those in the southern districts, are less scrupulous in minor matters. They will, for instance, smoke and eat opium. They also perhaps have less influence in religious and social matters; the lower castes do not salute them so readily as in Tanjore, nor is there the same desire for their services in social and domestic ceremonies. They do not hold themselves aloof from non-Brāhman castes as in the south' (F. R. Hemingway, *Gazetteer of the Godāvāri District*, Madras, 1907, i. 47, 52 f.).

Of the Brāhmins of the Deccan, Shridhar V. Ketkar (*An Essay on Hinduism, its Formation and Future*, 1911, pp. 87 note, 80–83) writes:

'Marāṭha Brāhmins . . . regard themselves as the élite of mankind, not only because they are Brāhmins, but also because they believe themselves superior to all other Brāhmins in India. To them Gujrāth Brāhmins [the Brāhmins of Gujarāt] are only a caste of water-carriers, and Telang Brāhmins [Telanga or Carnatic Brāhmins] are a caste of cooks. They look upon Śārasvata Brāhmins and the Brāhmins of Northern India as degenerate because the latter are "fish-eaters." They again believe that all other Brāhmins, like those of Northern India, are unable "to pronounce Sanskrit speech correctly." On account of their pretensions to political and scholarly wisdom the Marāṭha Brāhmins are far from popular, irrespective of the respect which they may inspire' (p. 87 f.). 'The Brāhmanas are still a power, but their power is extremely limited. All the power they have is that of advisers. They can tell what

is proper and what is improper. They can tell which actions and conduct have scriptural sanction, and which have not, but they cannot compel any other caste to do anything. They again have a power of conferring Vedic or Puranic sacraments, as they are the priests of the nation, but the possibilities of this power, and the good uses to which this power can be applied, are not yet fully realized by them' (p. 80). ... 'The Peishwas are gone, and so is the power of the Shāstris and Pundits in Poona.' They 'still like to play their excommunication formalities. They often excommunicate persons, either those who have returned from England, or married a widow, or drank tea with Englishmen; but nobody pays attention to their excommunication excepting their own circle, which to-day has become very small and unimportant' (p. 83).

The Brāhmins of N. India, doubtless as the result of a long period of foreign domination, are much less pretentious and exacting. The laxity of practice among those of Kāśmīr and Rājputāna is notorious; and, though the Kanaujiyas exercise extreme care in the matter of food, on the whole the priestly class, particularly in regions occupied by manlier races like the Jāt or Rājput, have lost much of the influence which they once possessed (J. Wilson, *Indian Caste*, Bombay, 1877, ii. 139, 145, 151; Ibbetson, *Punjab Ethnography*, 1883, p. 120). Many of them, like the Gayawāl of Gayā, the Prayāgwāl of Allahābād, the Chaubē of Mathurā, all of whom are pilgrim guides at these sacred places, bear an indifferent reputation. Among the ordinary village Brāhmins the theory of vicarious sacrifice has been so far extended that many of them exist only for the purpose of being fed at funeral and other feasts, and perform no priestly duties. The Brāhmin exorcist and astrologer still maintains much of his influence even among those classes which pretend to have assimilated the learning of the West, and particularly among women, who are specially devoted to the traditional domestic rites.

(c) *The efficacy of sacrifice.*—With the supremacy of the Brāhmin was combined the dogma of the efficacy of sacrifice. 'By sacrifices,' says the *Taittiriya Brāhmaṇa*, 'the gods obtained heaven' (Monier-Williams, *Brāhminism and Hinduism*, 23). According to other Vedas, should sacrifice cease for an instant to be offered, the gods would cease to send the rain, to bring back at the appointed time the dawn and sun, to ripen the harvest, because they would no longer incline to do so, and also, as is sometimes surmised, because they could no longer do so (Barth, *Rel. of India*, 1882, p. 36). There is not much evidence to support the belief that the Indo-Aryan sacrifices depended on the assimilation of the divine life through the eating of the totem animal—a view advocated in the Semitic sphere by W. R. Smith (*Rel. Sem.*, 385 ff.) and further extended by F. B. Jevons (*Introd. to History of Rel.*, London, 1896, p. 103 ff.). There is little trace of totemism in Vedic literature, and we find little proof that the Vedic Indians believed that the sacrifice meant the slaying of the god, or of the conception of the Semitic sacramental meal (Macdonell, *Vedic Myth.*, 153; A. B. Keith, *JRAS*, 1907, pp. 931, 939). It is also improbable that sacrifice in all its complicated details could have been developed from one only of a group of kindred ideas included in the general system of primitive worship. In India it would appear that

'the first aim of sacrifice was to present a simple thank-offering. The second aim was to nourish the gods with the essence of the offered food, and to strengthen them for their duty of maintaining the universe. The next idea was that of making these oblations the means of wresting boons from the invigorated and gratified deities, and so accomplishing some specific earthly object, such, for example, as the birth of a son. A still more ambitious object was that of employing sacrifice as an instrument for the attainment of superhuman powers and even exaltation to heaven' (Monier-Williams, 22).

It gradually became a mystic rite, which of itself gave supernatural power to the worshipper apart from the aid of the god; or it was simply mimetic, the offerer imitating the action which he

desired the god to perform; or it was intended to propitiate spirits or tutelary gods. It gradually became surrounded with that air of mystery which Hindu thought associates with things in themselves trivial, that 'making a parade of symbols which at bottom signify nothing, and of playing with enigmas which are not worth the trouble of trying to unriddle' (Barth, 29).

The great Vedic sacrifices, at which thousands of victims were immolated by hosts of priests—the rite lasting, it is said, in some cases three generations—have quite fallen into disuse; and the number of Brāhmins fully skilled in the elaborate ritual is now small. Human sacrifices, rare in Vedic times, and possibly adopted from the non-Aryan races, increased at a later period; and, though the *meriah* sacrifice of the Kandhs (*q.v.*) has long been suppressed, isolated examples of such practices are still occasionally reported (H. H. Wilson, *Works*, ii. 268 f.; W. Crooke, *Things Indian*, London, 1906, p. 262 ff.; Rājendraśāla Mitra, *Indo-Aryans*, London and Calcutta, 1881, i. 111 f.). At the present day sacrifices are of two kinds—bloody and bloodless offerings. The former are usually made to the Mother-goddess in one of her many forms, especially in Bengal and Madras, and among the lower classes of the people rather than among the higher. Their object is to avert the anger of the goddess, to propitiate malignant spirits, or to remove disease or other calamity, or they are made in fulfilment of a vow. Sometimes a compromise is made, the animal being merely laid before the shrine, or its ear is pierced and its blood presented, after which it is released. Bloodless offerings consist of the fire-sacrifice (*homa*), in which butter is cast into the flame so that the sweet savour may reach the gods, or presentations are made of grain, fruit, flowers, or leaves of some sacred tree or plant, which are laid before, or laid upon, the image, and are sometimes accompanied by a water oblation. Siva, except very rarely in the case of his Himālayan manifestation Paśupati, which was probably adopted from some non-Aryan cult, receives none but bloodless offerings; and this is, of course, the rule in the worship of Viṣṇu, the humanitarian Buddhist tradition being clearly traceable in his cultus. The intention of the modern worshipper is to propitiate the god; 'man needs things which the god possesses, such as rain, light, warmth, and health, while the god is hungry and seeks offerings from man; there is giving and receiving on both sides' (Barth, 35 f.).

(d) *Metempsychosis, palingenesis.*—The most important dogma which was admitted into the official creed during the Brāhmin period was that of the transmigration of the soul. It is not found in the Veda, which inculcates a belief in immortality, and that of a personal nature; but in the *Satapatha Brāhmaṇa* (x. 4. 3) we are told that those who do not perform rites with due knowledge are born again after their decease, and repeatedly become the food of death. As E. S. Hartland points out (*Primitive Paternity*, London, 1909, i. 192 ff.), it was in origin not philosophical dogma, but rather a development of the savage belief in transformation. In many different parts of the world it seems to have been independently discovered (Tylor, *PC*, 1871, ii. 1 ff.); and by some authorities its adoption by the early Hindus is attributed to the non-Aryan tribes (Rhys Davids, *HL*, 82; Macdonell, *Hist. Skr. Lit.*, 387; A. E. Gough, *The Phil. of the Upanishads*, London, 1882, p. 24; G. Oppert, *Orig. Inhabitants*, Madras, 1893, p. 553). It appears, for instance, among the Kāchāria and Kābhās of Assam (*Census Report*, 1912, i. 78). For the development of the doctrine in S. India under the influence of the monism of Śāṅkarāchārya, see *Census Report Madras*, 1912, i.

49 f. When it was taken over by Buddhism, Gautama did not teach the doctrine of the transmigration of souls, for which there is no place in his system, but the transmigration of character; and he held that 'after the death of any being, whether human or not, there survived nothing at all but that being's *karma*, the result, that is, of its mental and bodily actions . . . not a single instance has been found in the older parts of the Pāli Pitakas of man being reborn as an animal' (Rhys Davids, *HL*, 92; cf. Waddell, *Buddhism of Tibet*, London, 1895, p. 100 ff.). It is particularly prominent in the Buddhist *jātakas*, or birth-stories, in which the Master describes events which occurred in a previous birth. Closely connected with this doctrine is that of *ahimsā*, the respect for animal life, which was accepted by Buddhism, more fully developed by Jainism, and is now observed by the Vaiṣṇava sectarians, who owe the inspiration largely to Buddhism. In opposition to Barth (p. 97), Hopkins (*Rel. of India*, 199 f.) denies that 'aversion to beast-sacrifice is due to the doctrine of *karma*, and re-birth in animal form. The *karma* notion begins to appear in the Brahmanas, but not in the *sam-sāra* shape of transmigration. It was surely not because the Hindu was afraid of eating his deceased grandmother that he first abstained from meat. For, long after the doctrine of *karma* and *sam-sāra* is established, animal sacrifices are not only permitted but enjoined; and the epic characters shoot deer and even eat cows.'

At the present day the dogma is widely accepted. In N. India most Hindus believe that wrong-doing is displeasing to Parameśvara, the great god, and that the wrong-doer must suffer for his acts, possibly in the present existence, but certainly in his future life or lives. It is, however, doubtful whether the future penalty is in any way connected with that to which the sinner is liable in the present life, because the operation of the law of *karma* is regarded as so certain that the specific condemnation by Parameśvara in each case is seldom required (*Census Report United Provinces*, 1901, i. 76). The same writer remarks that a fundamental difficulty in the way of the spread of Christianity results from a belief in transmigration, which is in direct conflict with the belief in a Divine atonement. H. A. Rose, again (*Census Report Panjāb*, 1901, i. 161 ff.), quotes, as a development of the transmigration theory, the belief that certain classes and castes possess powers of causing evil or curing disease which are believed to be supernatural and to pass from one generation to another. These powers are independent of worldly status, and a person who possesses them retains them even when he pursues a menial occupation, provided it be not so disgraceful as to involve ostracism by his brethren. This, however, is the recognition of the influence of heredity rather than of direct transmigration. Several birth customs in the Panjāb—burial of infants near the house door; offering of milk after the death of a child; the belief that, if jackals or dogs disinter the corpse and drag it towards the house or village, the child will return to its mother; the preservation of the clothing of dead infants—illustrate the same belief (*Census Report Panjāb*, 1912, i. 299). On the subject of metempsychosis, see A. Bertholet, *The Transmigration of Souls*, London, 1909.

11. The anti-Brāhmanical reaction. — While, during the period represented by the Brāhmana literature, the priestly body was engaged in elaborating the cultus, and the philosophers were engrossed in the study of the nature and destiny of the soul, the mass of the people was little affected by ritual or speculation, and the time was ripe for

change. Hence arose both Buddhism and Jainism, almost contemporaneous movements, due to the reaction against the claims of the Brāhmins to a monopoly of admission to the ascetic orders (see Hoernle, *JASB*, 1898, p. 39 ff.).

'When Buddhism arose, the accepted and general belief was that the souls of men had previously existed within the bodies of other men, or gods, or animals, or had animated material objects; and that when they left the bodies they now inhabited, they would enter upon a new life, of a like temporary nature, under one or other of these various individual forms—the particular form being determined by the goodness or evil of the acts done in the previous existence. Life, therefore, was held to be a never-ending chain, a never-ending struggle. For however high the conditions to which a soul had attained, it was liable, by an act of wickedness, or even of carelessness, to fall again into one or other of the miserable states. There was a hopelessness about this creed in direct contrast to the child-like fullness of hope, the strong desire for life, that is so clearly revealed in the Vedas' (Rhys Davids, *HL*, 17). It was this distinguishing characteristic of Buddhism that it swept away the whole of the animistic soul theory, 'which had hitherto dominated the minds of the superstitious and the thoughtful alike. For the first time in the history of the world it proclaimed a salvation which each man could gain for himself, in this world, during this life, without the least reference to God, or to gods, either great or small' (ib. 29).

The main distinction between Jainism and Buddhism lay in the fact that the former specialized and intensified the earlier ascetic discipline, and prescribed reverence for life, not only human, but immanent in animals, plants, fire, earth, water, and wind; while Buddhism advocated asceticism in a milder form, and found salvation for its members in knowledge and right living.

It has often been suggested that this movement was part of a wide-spread religious and social revival.

'The sixth century B.C. is one of those epochs in the history of our race which mark a widespread access of spiritual vitality. In the case of Hellas it is still a moot question how far some fresh impact from Egypt or from further east had to do with this. But a sort of pantheistic awakening, at once intellectual and religious, beginning from many centres, of which the names of Pythagoras, Heraclitus, Parmenides, and the mythical Orpheus may serve to remind us, had set going a wave of mingled speculation and aspiration, which at one time threatened to destroy mythology, at another to transmute it into novel forms. Wants hitherto unmet were met in various ways. Individuals were not satisfied with the traditional and conventional worship of the family or of the state. There was a deepening sense, we know not how infused, of guilt requiring atonement, of pollution crying for purgation, a feeling which had its roots in very early times, but was now becoming universal' (L. Campbell, *Religion in Greek Literature*, London, 1898, p. 127 f.; cf. also Casartelli, in *Spiegel Mém.*, Vol., Bombay, 1908, pp. 180-182).

According to the most probable theory, this was the age of Zoroaster (660-583 B.C.; West, *SBE* xlvii. [1897], Introd. xxvii, xxxviii). The Hebrew prophetic literature, starting in the 8th cent., continued during this period (*HB* iv. 112). In the Tigris-Euphrates valley, Nineveh fell in 607-6 B.C.; Babylon was captured by Cyrus in 539 B.C.; the life of Buddha may approximately be fixed between 567 and 487 B.C. (see *ERE* ii. 881). As in the case of the Heroic Age in Europe, racial disturbances, tribal unrest and movement, promoted individualistic tendencies in this new grouping of peoples. It is at present, however, impossible to trace any real connexion between these almost contemporaneous historical and literary events, or to find any evidence of the communication of the ideas underlying Buddhism from the east to the west, except that they were all the results of a long series of previous movements; 'and these previous movements were, in fact, so similar that they ran on nearly parallel lines resting on the common basis of animistic conceptions. And similar causes acting in these parallel lines took about, though by no means exactly, the same time to produce corresponding results' (Rhys Davids, *HL*, 123).

12. The relations of Buddhism to the rival religions.—Buddhism and Jainism, as we have seen, were the results of parallel and almost contemporaneous movements, organized outside the Holy Land of the Brāhmins, by Kṣatriyas, in

opposition to Brāhman claims. But, in spite of this initial antagonism, during the early period the three rival faiths seem to have existed side by side in comparative harmony. The lay members of the Buddhist and Jain orders, while they looked for spiritual guidance to their own teachers, retained the services of their Brāhman priests for the performance of domestic rites. Buddhism has so completely disappeared from the Indian northern plains that it is impossible from modern facts to illustrate the conditions which prevailed at the period of its origin and vigour.

Even to the present day the heterodox Buddhists of Nepal combine the worship of Śiva with that of Buddha, and employ Brāhmans in sacred and domestic rites (Oldfield, II. 147). The same fusion between Buddhism and Brāhmanism, especially in the cult of Śiva, prevails in Ceylon, and was recognized under the late Burmese dynasty at Mandalay (R. S. Hardy, *Eastern Monachism*, London, 1850, p. 201 ff.; Shway Yoe [J. G. Scott], *The Burman*, 1882, I. 173; H. Yule, *Mission to Arr. 1855*, London, 1858, p. 501.). In continental India the same conditions prevail in the case of Jainism. Jains, as a rule, at present freely worship the Hindu gods that are connected with the legends of their saints. In Bombay, Mārwarī Jains worship Viṣṇu and Kṛṣṇa as Rājāṇi, and observe Hī du fasts and holidays; some even worship the Śaktis, or Mother-goddesses (Fergusson-Burgess, *Cave Temples*, 1880, p. 487; *BJ* v. [1880] 52, ix. [1901] pt. I. p. 111, xxi. [1884] 105, xxii. [1884] 125; Wilson, *Works*, 1861, I. 321). In Baroda the Valsuva and Jain sections of the Vāpi or merchant caste freely intermarry; and, when a Valsuva girl is married in a Jain family, she attends Jain rites while she is at her husband's house, and worships the old Brāhmanical gods when she visits her parents—a condition of things which prevails among similar castes in other parts of the country (*Census Report Baroda*, 1901, I. 492 f.; *BJ* ix. [1901] pt. I. p. 109; Ibbetson, *Punjab Ethnography*, 130). In S. India, while a Śaiva will neither eat food nor intermarry with a Valsuva, the ancient hostility between Jains and Hindus has nearly disappeared; but in the Central Provinces, though they may dine together, they do not intermarry (R. V. Russell, *Gazetteer of Nagpur*, 1908, I. 67, 71). The line, in fact, which divides Jains from Hindus can with difficulty be traced; and there are other sects, admittedly Hindu, which present greater divergence from orthodox Brāhmanism.

The evidence of the Chinese pilgrims and that derived from other sources proves that the same tolerance of the rival faiths prevailed during the greater part of the period when Buddhism was in the ascendant, and even when it began to show symptoms of decay. The actual decay of Buddhism, which was due to internal weakness and the competition of the revived Brāhmanism, seems to have set in about A.D. 700; and, while it still held its ground in remote parts of the land, its final disappearance was due to the Muhammadan occupation of N. India. Buddhism in its early form was probably too simple, and was thus ill adapted to supply the religious needs of a race which has always found a sensuous type of worship more attractive. It demanded from its followers a standard of morals which was in advance of their stage of culture. It involved the discontinuance of sacrifice, and of the myriad ritualistic devices by which the Hindu has ever tried to win the favour, or avert the hostility, of his gods. It abolished the personality of Brahma, into whom most orthodox Hindus hope eventually to be absorbed, and it substituted the vague conception of Nirvāṇa, which meant to Buddha the extinction of lust, anger, and ignorance; to the Jains and some Buddhists eternal blissful repose; to other Buddhists extinction and annihilation (Hopkins, 321; Rhys Davids, *HL*, 283).

The State in India has always been tolerant of every form of religion (see A. Lyall, *Fortnightly Review*, Nov. 1908, p. 717 ff.); and this rule was followed by the great Buddhist Emperor Aśoka (q.v.). Though it may be true that the gradual downfall of Buddhism in the Indian plains was due to causes other than persecution, it is also certain that fanatical rulers from time to time indulged in savage outbursts of cruelty, and that both Buddhists and Jains were victims of outrage.

*That such outbursts of wrath should have occurred is not wonderful, if we consider the extreme oppressiveness of the

Jain and Buddhist prohibitions when ruthlessly enforced, as they were by some Rājās, and probably by Aśoka. The wonder rather is that persecutions were so rare, and that as a rule the various sects managed to live together in harmony, and in the enjoyment of fairly impartial official favour' (Smith, *Early Hist.*, 191; for a somewhat different view, see Rhys Davids, *Buddhist India*, 319).

13. The continuity of Brāhmanism and the rise of Hinduism.—Thus Brāhmanism, even during the ascendancy of Buddhism, never suffered complete extinction, though it undoubtedly lost much of its dignity and importance when Buddhism in N. India and Jainism in the S. and W. enjoyed the patronage of ruling powers and were elevated to the rank of State religions. The extension of Indo Aryan colonization, the continuous absorption of the non-Aryan tribes, and, finally, the establishment of the great Maurya Empire under Aśoka (272-232 B.C.), which ruled the greater part of the peninsula, led to a modification of the earlier forms of Hindu belief. The Hindu has always been accustomed to localize his gods, and probably from the earliest times the tutelary village-gods received more veneration from the masses of the population than the deities of a higher class whose cultus was the monopoly of the priestly body. This was the case with the Roman colonists under the Empire.

'The conditions of health and disease are so obscure, the influences of will and imagination on our bodily states are so marked, that, in all ages, the boundaries between the natural and the unknowable are blurred and may be easily crossed. . . . On hundreds of provincial inscriptions we can read the catholic superstition of the Roman legionary. The mystery of desert or forest, the dangers of march and bivouac, stimulated his devotion. If he does not know the names of the strange deities, he will invoke them collectively side by side with the gods whom he has been taught to venerate' (S. Dill, *Roman Society from Nero to Marcus Aurelius*, London, 1904, pp. 459, 480; and see artt. DRAVIDIANS).

It was from this combination of Aryan and non-Aryan cults and beliefs that the Neo-Brāhmanism took its rise.

14. The Scriptures of the Neo-Brāhmanism.—The literature of the new form of Brāhmanism is all the work of, or inspired by, the Brāhman hierarchy. The theory which it suggests is that there was no violent break between the older and the newer faith. Hence it is difficult to trace the stages of the evolution by which the theology was reconstructed.

(a) *The Purāṇas*.—This difficulty has been increased by a long-standing error regarding the date of that body of literature known as the Purāṇas. To the Hindu mind their name—'Archæologia,' 'the ancient writings'—suggests immemorial antiquity. It has been the habit of critics to date the best known of them, *Viṣṇu Purāṇa*, about A.D. 1045 (H. H. Wilson, *Viṣṇu Purāṇa*, London, 1840, Introd. lxvii). It has, however, recently been proved that this and other important works of the same series must be dated about A.D. 500, while the *Vāyu Purāṇa* is referred to the 4th cent., and all the principal works, which in their present form are recensions of a much older body of literature, were re-edited in the Gupta period (A.D. 320-480), when the study of Sanskrit was revived (Smith, *Early Hist.*, 19 f.; Macdonell, *Skr. Lit.*, 299). From this conclusion the important result follows that the growth of the Neo-Brāhmanism was contemporaneous with the decay of Buddhism in N. India, and its development naturally progressed side by side with that of the later Buddhism and Jainism.

(b) *The Law literature*.—The second body of literature connected with this religious revival is that of the Law-books. These, like the Purāṇas, are the result of various recensions. The two most important, the *Vaiṣṇava Dharmasāstra* and the *Mānava Dharmasāstra*, probably assumed their present form about A.D. 200; and the latter is closely connected with the *Mahābhārata*, contain-

ing many verses quoted from that Epic (Bühler, *Manu* [SBE xxv. (1886)], Intro. xxi; Macdonell, *Str. Lit.*, 428). But, according to Bühler, the Law-book did not borrow from the Epic; both authors used the same materials; and those materials were not systematic treatises on law and philosophy, but the floating proverbial wisdom of the philosophical and legal schools, which already existed in metrical form. Manu's treatise, which has become for modern Hindus the text-book in matters connected with religion and social observances, represents the period before the recognition of the sectarian gods in the schools where it originated. It nowhere teaches the performance of rites other than Vedic; it nowhere inculcates the worship of any of the deities of the Paurāṇic school; nor is there any hint that it was intended to form a digest of the sacred Law. It rather bears unmistakable marks of being a school book, intended for the instruction of all Aryas (Bühler, *SBE* xxv., Intro. iv). It contains no allusion to the post-Vedic Trimūrti, the triad consisting of Brahmā, Viṣṇu, and Śiva, the last two gods being only once mentioned by name (xii. 121); and it ignores the cultus of the Śakti (female powers), and the efficacy of fervent faith in Kṛṣṇa (see art. BHAKTI-MĀRGA, vol. ii. p. 539 ff.). The great god is Prajāpati, lord of created beings; the Brāhman and his teacher are objects of reverence, and hell is the fate of those who insult or injure them (ix. 319, iv. 165). A Brāhman who serves his teacher until death enters forthwith the eternal mansions of Brahma. Image-worship is casually observed, but temple priests are spoken of with a measure of contempt (iii. 152, 180). The doctrine of transmigration is clearly stated, and, as a consequence of this, the various hells described, though places of terrible torture, resolve themselves merely into places of temporary purgation, while the heavens become only steps on the road to union with Brahma. The dignified isolation or calculated reticence of the school is shown by the absence of reference to Buddhism; and two verses which speak of the Mlecchha, or barbarian (ii. 23, x. 45), are devoid of any particularity which would identify them with the Greeks or any other foreign races. For the ethical tone, see *IA* iv. [1875] 121 ff.

(c) *The Epics; the Mahābhārata*.—It is in the Epic literature, represented by the *Mahābhārata* and the *Rāmāyana*, that the literary evolution of the Neo-Brāhmanism is most fully illustrated. This period may be fixed roughly from 500 to 50 B.C. But behind this probably lies a long period, when, as in the case of Homer, the ballads out of which the Epics were compiled existed in an oral form. Episodes are embedded in the existing texts which may be regarded as fragments of older narratives, the antiquity of which is proved by the fact that their subject-matter often refers to the resistance offered by the warrior class to the growing claims of the Brāhman hierarchy.

The *Mahābhārata*, after undergoing various recensions, is believed to have grown round a legendary nucleus during some eight centuries (400 B.C.–A.D. 400) (see Hopkins, *The Great Epic of India*, London, 1901, p. 398). The war between the Pāṇḍavas and Kauravas, which forms the main subject of the poem, has been supposed to represent the contest between two successive bodies of Indo-Aryan immigrants, the former a Himālayan tribe practising polyandry, whose deity was Kṛṣṇa Vāsudeva, the traditional founder of the anti-Brāhmanical monotheistic Bhāgavata religion; the second much later comers and supporters of official Brāhmanism (G. A. Grierson, *Census Report India*, 1901, i. 287 ff., *JRAS*, 1908, p. 604 ff.; A. Weber, *IA* xxx. [1901] 281 ff.). The Kṣātriya party won the day, but had in the end to yield to the

supporters of Brāhmanism. In this Epic the transition from the older to the newer Hinduism is marked in various ways. The facts have been carefully collected and analyzed by E. W. Hopkins (*Rel. of India*, 351 ff.). There is, first, an abnormal growth of *yoga*, or mental concentration.

'In the Brāhmanas it is the sacrifice that is god-compelling; but in the epic, although sacrifice has its place, yet when miraculous power is exerted, it is due chiefly to Yoga concentration, or to the equally general use of formulae; not formulae as part of a sacrifice, but as in themselves potent; and mysterious *mantras*, used by priest and warrior alike, serve every end of magic.'

Caste distinctions are now fully recognized, and the most heinous crime is to commit an offence against caste order. On the other hand, the greatest merit is to present gifts to priests, whose insolence, greed, and rapacity are constantly dwelt upon. This, however, applies chiefly to court Brāhmanas and to ascetics, who are above all law, while the village Brāhmanas and hermits are free from the reproach attaching to their hypocritical, debauched brethren. Apart from the sectarian gods, the chief objects of worship are priests, the *manes*, and, for form's sake, the Vedic gods. These, with the addition of Kubera, god of riches, are now degraded to the rank of 'world guardians' (*lokapāla*), and are definitely subordinated to the newer divinities. Among the latter is now included Dharma Vaivasvata, the god of justice, son of the Sun-god. Another new and interesting figure is Kāma, god of love, who, in the form of the personification of sexual desire, is as old as the Atharvaveda (ix. 2, iii. 25) and is still the subject of a Mystery Play in S. India (E. Thurston, *Castes and Tribes of S. India*, iv. 399 ff.). In the Purāṇas he is provided with a consort, Rati or Revā, goddess of desire; and it has been suggested that his eminence is due to association with the Greek Eros, through the agency of Greek slave-girls, who about this time were imported into W. India (J. W. McCrindle, *Periplus*, Calcutta, 1879, p. 123; *IA* ii. [1873] 145). The old Nature-worship is represented by the cult of mountains, rivers, and sacred trees, many ancient rites and beliefs being concealed under the 'all-embracing cloak of pantheism,' which appears in the Epic. It has been alleged that phallus-worship is often mentioned in the *Mahābhārata*, as if it had always been common everywhere throughout N. India; but this assertion has been disputed (Rhys Davids, *Buddhist India*, 165 f.; B. C. Mazumdar, *JRAS*, 1907, p. 337 ff.). The local theriolatry is illustrated by the cult of Hanumān or Hanumat, the monkey hero of the *Rāmāyana*, who in later times has become the chief village guardian deity. Serpent-worship appears in the cult of Nāgas.

From the religious point of view the most interesting portion of the Epic is the *Bhagavad-gītā*, in which the Supreme Being incarnate as Kṛṣṇa expounds to Arjuna the result of the eclectic movement combining the Sāṅkhya, Yoga, and Vedānta doctrines (see *ERE* ii. 535 ff.). It is now certain that portions of this poem, in which the doctrine of *bhakti*, or fervent faith, is taught, are pre-Christian, and therefore the doctrine itself is of indigenous Indian origin (*ib.* ii. 547^b).

'Nothing in Hindu literature is more characteristic, in its sublimity as in its puerilities, in its logic as in its want of it. It has shared the fate of most Hindu works in being interpolated injudiciously, so that many of the puzzling anomalies, which astound no less the reader than the hero to whom it was revealed, are probably later additions. It is a medley of beliefs as to the relation of spirit and matter, and other secondary matters; it is uncertain in its tone in regard to the comparative efficacy of action and inaction, and in regard to the practical man's means of salvation; but it is at one with itself in its fundamental thesis, that all things are each a part of One Lord, that men and gods are but manifestations of the One Divine Spirit, which, or rather whom, the Vāishnavite re-writer identifies with Kṛṣṇa, as Vāishnav's present form' (Hopkins, *Rel. of India*, 390).

It has become the Gospel of the Vāishnava sectarians, and is the inspiration of the new school led

by Vivekānanda (see § 35). For a criticism of its theology from the Christian standpoint, see Slater, *Higher Hinduism*, 1902, p. 126 ff.

(d) *The Rāmāyaṇa*.—While the *Mahābhārata* thus collected and popularized the legends and traditions which had their centre in the Holy Land of the Hindus, the Eastern Panjāb, the same service was done by the second Epic, the *Rāmāyaṇa*, for the eastern stories which originated in the kingdoms of Magadha and Kosala, the present W. Bengal. Like the *Mahābhārata*, in its present differing forms, it is the result of a long series of recensions, and considerable additions have been made to the original nucleus, which 'appears to have been completed at a time when the epic kernel of the *Mahābhārata* had not as yet assumed definite shape'; and this earlier portion seems to be pre-Buddhist (Macdonell, *Hist. of Skr. Lit.*, 306 f.; Rhys Davids, *Buddhist India*, 183 f.). The first portion, that treating of the banishment of the hero Rāma, is in form a historical saga, widely differing from the second part, which records the extension of Brāhmanism into S. India; but the story is based on N. Indian myths, and in the heroine, Sītā, who is represented as having emerged from the earth when her father was ploughing, we recognize the favourite myth of the Earth-spirit mated to a consort, from whose union, by a sort of mimetic magic, the fertility of men, cattle, and crops is assured.

From a religious point of view the *Rāmāyaṇa* is much less interesting than the *Mahābhārata*, because it has been remodelled by a single hand, that of Vālmiki, the traditional author, who has manipulated his materials to produce at once an artistic poem and a religious treatise, in the interest of the Rāma-worshipping section of the Vaiṣṇavas.

15. The historical development of Neo-Brāhmanism.—The scanty information which we possess of the history of this period has been collected and arranged from materials derived from the writings of Greek travellers and Buddhist pilgrims, with the aid of inscriptions and coins, by V. A. Smith (*Early Hist.* 2).

The Maurya dynasty, founded by Chandragupta Maurya (321 B.C.), attained its supremacy under Aśoka-varādhana (see *ERE* ii. 124 ff.), who made Buddhism the State religion. It was destroyed in 184 B.C. by Puṣyamitra Śuṅga, who, in order to assert his claim to be paramount sovereign, performed the antique rite of the horse-sacrifice (*āśvamedha* [q.v.]), thus marking the beginning of the Brāhmanical reaction against Buddhism, which was fully developed under Samudragupta and his successors five centuries later. At the same time, there is no evidence that Buddhists or Jains suffered persecution. Under the next dynasty, the Kāpiya, we find the king supporting the ideal system of Manu, and acting under the advice of Brāhman ministers. This was followed by the Andhra dynasty, among the kings of which Hala is famous as a patron of Prākṛit literature.

In the obscure period which followed, N. India was overrun by hosts of invaders from the north under the names of Śakas or Scythians, and Pahlavas or Parthians. The dates are much disputed; but it appears that about A.D. 60 the Yuehchi or Kuśān dominion was consolidated in the N.W. by Kadphises I., and that his successor, Kadphises II., annexed N. India and destroyed the Indo-Parthian power in the Panjāb. This Kuśān empire lasted till A.D. 226. The important point to be noted here is that these foreign chieftains rapidly succumbed to the influence of their new environment. Kanishka and Huviska seem, at least formally, to have become Hindus; Vāsudeva (c. A.D. 185-226) bears an Indian name, and adopted Śaiva symbols on his coins (J. Kennedy, *JRAS*, 1907, p. 967).

From this point we have hardly any information until the rise of the Gupta empire under Chandragupta I. (A.D. 326-375), whose successor, Samudragupta, showed his sympathy with orthodox Brāhmanism by performing the horse-sacrifice. The claim to perform this rite, symbolic of supreme power, was asserted by various Hindu princes in S. India in the early centuries of our era (Rice, *Myths and Coorg from the Inscriptions*, 1909, p. 209 f.). 'Whatever may have been the causes, the fact is abundantly established that the restoration of the Brāhmanical religion to popular favour, and the associated revival of the Sanskrit language, first became noticeable in the second century, were fostered by the western satraps during the third, and made a success by the Gupta emperors in the fourth century. These princes, though apparently perfectly tolerant of both Buddhism and Jainism, . . . were themselves, beyond question, orthodox Hindus, guided by Brahman advisers, and skilled in Sanskrit, the language of the pundits. An early stage in the reaction against Buddhist condemnation of sacrifice had been

marked by Puṣyamitra's celebration of the horse-sacrifice towards the close of the second century. In the fourth, Samudragupta revived the same ancient rite with added splendour; and in the fifth, his grandson repeated the solemnity. Without going further into detail, we may sum up the matter in the remark that coins, inscriptions, and monuments agree in furnishing abundant evidence of the recrudescence during the Gupta period of Brāhmanical Hinduism at the expense of Buddhism, and of the favour shown by the ruling powers to "classical" Sanskrit at the expense of the more popular literary dialects' (Smith, *Early Hist.* 3, 287).

The Gupta empire fell before the attack of another body of invaders, the Huns, about A.D. 500.

These successive invasions produced important results on the ethnology of N. India. The progress and final absorption of these foreigners in the Hindu population have recently been fully investigated for W. India (*BG* ix. [1901] pt. i. p. 433 ff.). The Hūyas, or Hun, invaders were admitted by the Brāhmins among the Kṣatriya or warrior class—a fact disguised under the legend of the fire-initiation at Mount Abū (*ERE* i. 51 f.). Similar legends describe the successive introduction of foreigners into the Brāhman hierarchy (V. A. Smith, 'The Gurjaras of Rājputāna and Kanauj', *JRAS*, Jan.-June 1909; D. B. Bhandarkar, 'The Guhlots', *JASB*, 1909, p. 167 ff.).

The influence of these foreigners on Hindu beliefs must have been considerable; but the official Brāhman literature gives little or no indication of the process of the reconstruction of the faith during the period of foreign rule. When we come to the establishment of the national power under Harṣa (A.D. 606-645), the evidence is more complete. He was a Hindu, but in his later life favoured Buddhism. He worshipped at times Śiva or the Sun, or followed the Buddhist rule, and he impartially erected temples to all three. Most of his subjects worshipped the sectarian gods, and selected as their patron deity whichever god they preferred (see Cowell-Thomas, *The Harṣa-carita of Bāṇa*, London, 1897, Introd. xii ff.; M. L. Ettinghausen, *Harṣa Vardhana*, Louvain, 1906, ch. ii.). Thus the modern sectarian worship was gradually established in N. India; and the same revival occurred in the Deccan under the Chalukya king, Puṣkeśin I. (A.D. 550-608), who, in the decadence of Buddhism, is said to have performed many Hindu sacrifices, including the *āśvamedha*, or horse-rite (*BG* i. [1896] pt. ii. p. 191). The activity of the new faith is shown in the erection of numerous cave temples in the period A.D. 500-800 (Fergusson-Burgess, *Cave Temples*, 1880, p. 403).

16. The extension of Brāhmanism in S. India.

—The extension of Hindu influence into the South was obstructed by the great forest tract known as Dandakāranya, the present Marāṭha country, and by the ranges of the Sātpura and Mahādeo hills which cross the Peninsula, dividing the North from the plateau of the Deccan. Hence, at the outset, Brāhman missionaries seem to have made their way along either the eastern or the western coastline, or by the sea route. The question has been discussed in the article on the Bombay Presidency (*ERE* ii. 788), and the facts there collected need not be repeated. The Aryans before the 7th cent. B.C. seem to have had little knowledge of the Deccan; and R. G. Bhandarkar dates their acquirement of information regarding the southern region about 350 B.C. (*BG* i. pt. ii. p. 141). The question has also been discussed by Rhys Davids (*Buddhist India*, 23 ff.), by Caldwell (*Dravidian Grammar* 3, London, 1875, p. 114 ff.), and by H. A. Stuart, quoted by Thurston, *Castes and Tribes of Southern India*, i. 373 ff. Burnell (*IA* i. [1872] 310) believes that about A.D. 700 Brāhmanical influence was inconsiderable in the South, and that the Skr place-names which are found appear only in the fertile deltas and at the seaports, where they were probably introduced by Buddhist missionaries. The latest discussion of the subject (A. Govindacharya Svāmīn (*IA* xli. [1912] 227 ff.) rejects Burnell's view, and places the 'Arianization of the South' after the 6th and before the 3rd cent. B.C., which is too early. The modern school of S. Indian scholars naturally adopts the higher

series of dates. Whatever may be the exact date of the introduction of Brāhmanical beliefs and practices into S. India, it was certainly, when contrasted with N. India, comparatively late; and this fact accounts for the characteristic form of S. Indian Brāhmanism, which has developed on lines of evolution quite different from those of the North (V. Kankasabhai, *The Tamils: Eighteen Hundred Years Ago*, 1904, p. 227 ff.; L. K. Anantha Krishna Iyer, *Cochin Tribes and Castes*, ii. [1912] 171 f.; Rice, *Mysore and Coorg from the Inscriptions*, 204 ff.).

17. The establishment of Hinduism in its modern form.—We have now reached the stage at which the Brāhmanical reaction against Buddhism and Jainism was completed, and Hinduism, as we find it in existence at the present time, was firmly established. The Brāhmins now controlled the law and social institutions of the people. The theory of caste was fully adopted, and they were placed at the head of society; the movement led by the Kṣatriyas in opposition to them had collapsed.

All philosophy, except their own pantheistic theosophy, had been driven out of the field. But Vedic rites and Vedic divinities, the Vedic language and Vedic theology, had all gone under in the struggle. The gods of the people received now the homage of the people. Bloody sacrifices were still occasionally offered, but to new divinities; and brāhmins no longer presided over the ritual. Their literature had had to recast to suit the new worship, to gain the favour and support of those who did not reverence and worship the Vedic gods. And all sense of history had been lost in the necessity of garbling the story of the past so as to make it tally with their own pretensions. . . . A small and decreasing minority continued to keep alive the flickering lamp of Vedic learning; and to them the Indian peoples will one day look back with especial gratitude and esteem' (Rhys Davids, *Buddhist India*, 167 L., who possibly somewhat overstates the case).

18. The development of Hinduism.—The Neo-Brāhmanism, henceforward to be called 'Hinduism,' was developed in two ways: first, by the creation, mainly illustrated by the Epic and Paurānic literature, of a gallery of deified personages, the legends regarding whom were largely drawn from the current folk-lore or popular tradition, and, by a reconstruction of the traditions, were in a measure connected with the system which they had superseded; secondly, by the adoption of deities, religious myths, and cults derived from the races beyond the Brāhmanical pale.

We have examples of the first class in the deified heroes of the *Mahābhārata*, the five Pāṇḍava brethren, whose cults still prevail in various parts of the country; at many sites in the Himalaya; at Benares; in the Konkans and the Deccan; in S. India (Atkinson, *Himalayan Gazetteer*, ii. [1884] 281 f.; M. A. Sherring, *The Sacred City of the Hindus*, London, 1868, pp. 67, 177, 217; *BG* i. pt. i. [1896] p. 278, xxii. 389, xiii. 404; Fergusson-Burgess, p. 113; Thurston, *Ethnogr. Notes*, Madras, 1906, pp. 146 ff., 249, 301). The second process by which the pantheon has been formed was by the adoption and absorption of the local deities, this localization being a feature which Indian polytheism shares with the Semites and the Egyptians (W. R. Smith, *Rel. Sem.*, 2, 38 ff.; Sayce, *ILL*, 89, 121; A. Erman, *Life in Ancient Egypt*, Eng. tr., London, 1894, p. 259 f.; A. Wiedemann, *Rel. of the Anc. Egyptians*, do. 1897, p. 8 f.). Naturally, the process of absorption, in India as in Greece, assumed many and varied forms.

*We recognize now that the personages of the Greek and other polytheisms were not pure crystallized products of a single and identical people, but were modified variously by their environment, borrowing traits and epithets from other local powers whom they may have dispossessed or with whom they may have shared their rule. . . . The divine name, especially in ancient religions, was a powerful talisman, a magnet attracting to itself a definite set of cult-ideas and legends' (Farnell, *CGS* v. 86 f.).

The worship of vague spirits of the forest by the most primitive tribes, as the stage of settled agriculture displaces nomadism, develops into the

cult of spirits which promote the fertility of the soil, cattle, and men. In Manipur, for instance, no fewer than 'four definite orders of spiritual beings have crystallized out from the amorphous mass of animistic Deities' (Hodson, *The Meithei*, 1908, p. 96). By degrees, one of these local deities, usually known in N. India as Devī, in S. India as the Grāmadevatā and Aiyānār, the central figure of the Dravidian pantheon, pushes itself into notoriety, and is finally adopted by Brāhmanism. This may occur because the shrine is on the borders of the territory occupied by more than one allied tribe or village, and thus acquires a reputation more than local; or because at this particular place there has been a manifestation of special spiritual power, shown by the 'possession' of the medicine-man or his followers, or by some notable case of healing. Such a shrine is, in process of time, appropriated by some low-caste Brāhman priest, and the local deity comes gradually to be identified with some manifestation or incarnation of one of the greater gods. Hence arose the Devī or Kālī of Calcutta, of the Vindhyan hills, of Devipātan in Oudh, and the Bhavānī of Tuljāpur in the Nizām's Dominions, who possess powers of magic, wonder-working, and healing superior to those of the village-goddesses from whose ranks they have been promoted. The same is the case with the shrines dedicated to men who gained a reputation for good works or wickedness in this life (Lyall, *Asiatic Studies*, i. 11 ff.). Of course, it is not always possible to trace the exact course of the evolution. This difficulty is increased in India by the absence of expressive cult-titles, which in Greece have so largely facilitated the analysis of the elements of the pantheon (*CGS* i. 35 ff.).

19. Modern Hinduism defined.—In tracing the evolution of religion in India, no problem is more difficult than that of framing a definition of Hinduism as we observe it at the present day. Many of the tests which have been proposed from time to time are obviously inadequate. Thus it has been said that a Hindu is one who cremates the adult dead. But certain classes of Hindu ascetics, like the Bishnois of the Panjab and the Lingāyats of the Deccan, always bury their dead; and among the lower classes of Hindus both forms of disposal of the corpse are in use. Again, it is said that a Hindu is one who receives religious service at the hands of Brāhmins. But in the Panjab nearly all Sikh villagers reverence and employ Brāhmins as their Hindu neighbours do, and the same is the case with the Jains; while many Hindus who have been converted to Islām appoint the Brāhman to conduct their marriages according to the Hindu rule, adding the Muhammadan ritual as a legal precaution (Ibbetson, *Punjab Ethnography*, 112 f.).

The difficulty of framing a definition of Hinduism arises from the fact that under the general title 'Hindu' are included classes whose belief, ritual, and mode of life are strangely diverse—the learned Brāhman, who is a follower of the Vedānta philosophy; the modern theist or agnostic, trained in the learning of the West; the semi-barbarous hillman, who eats almost any kind of food without scruple, knows little of Brāhmanical mythology, belief, or ritual, and in time of need bows before the stone which he supposes to be occupied by the god of his tribe or village; lastly, there is the vagrant, or the member of a caste like the Chuhārā or Bhangī of N. India or the Pariah of the South, who is abhorred by all pure Hindus. The difficulty, in short, lies in separating the Animist from those classes of Hindus whose beliefs have a more or less animistic basis. Hence a recent writer proposes to include among Hindus

*all natives of India who do not belong to the Musalmān, Jain, Buddhist, Christian, Parsi, Jew or any other known religion of

the world, and whose form of worship extends from monotheism to fetishism, and whose theology is wholly written in the Sanskrit language' (*Census Report Baroda*, 1901, i. 120 f.).

This definition is unsatisfactory, inasmuch as it ignores the fact that Hinduism is not a religion in the sense of the word as used by European scholars. Thus a Hindu writes: 'Hinduism is that which a Hindu does'; in other words, it is a question of ritualistic and social observance (Guru Proṣad Sen, *Introd. to the Study of Hinduism*, 1893, p. 9). The current terms, 'Hinduism' and 'Brāhmanism,' are of European origin, the only Hindu general term for 'religion' being *dharma*, defined as 'established order, usage, institution, custom, prescription; rule, duty; virtue, moral merit, good works; right, justice, law' (Macdonell, *Skr. Eng. Dict.*, London, 1893, s.v.). According to Manu (*Laws*, ii. 6 [*SBE* xxv. 30]), 'the whole Veda is the (first) source of the sacred law, next the tradition and the virtuous conduct of those who know the (Veda further), also the customs of holy men, and (finally) self-satisfaction.' *Dharma* is distinct from 'the path' (*mārga*), inasmuch as 'the path' came into existence at a definite period, while *dharma* is eternal. 'The path' and 'the doctrine' (*mata*), combined together, are often expressed by one word, *sampradāya*, literally 'that which is given,' which Monier-Williams (*Brāhmanism and Hinduism*, 61) defines as 'a particular body of traditional doctrines handed down through a succession of teachers,' also designated 'darsana or mata—that is, particular views or opinions on religion or philosophy.'

'The great difference between the Hindu conception of the "dharma" and the European conception of "religion" is this. To a European, Christianity or Christian religion are self-defined terms, and the acceptance of those ideas and practices that are indicated by the word would make a man Christian. In the case of Hindu—"dharma," the relation is different. Hindus are a definite body, and Hindu—"dharma" is that indefinite thing which the Hindus consider their own "dharma." . . . The word *Hindu* is itself a foreign one. The Hindus never used it in any Sanskrit writing, that is, those which were written before the Mohammedan invasion. In fact there was no need of calling themselves by any particular name [all the rest of the world being 'foreigners' (*melechha*, Greek *βάρβαρος*)]. . . . Hindus define a Hindu as a man who has not fallen from Hinduism, that is, taken up the membership of any community like Christian or Mohammedan, which is not considered as a Hindu community. The distinction between the Hindus and the Animists is thus based only on ignorance. . . . The distinction drawn between a Hindu and non-Hindu is merely a provisional one. It may change at any time. Hinduism may, in future, include Christians, Mohammedans, and Buddhists. Hinduism is an ever-changing society, which may expand and take in races and peoples irrespective of their religious beliefs. What societies it will absorb depends almost entirely on the circumstances' (Shridhar V. Ketkar, 18, 22, 33).

For practical purposes the definition proposed by Lyall may be accepted, that Hinduism is 'the collection of rites, worship, beliefs, traditions, and mythologies that are sanctioned by the sacred books and ordinances of the Brahmans and are propagated by Brahmanic teaching. And a Hindu is one who generally follows the rules of conduct and ceremonial thus laid down for him, particularly regarding food and marriage, and the adoration of the gods' (*Rel. Systems of the World*, London, 1889, p. 114). Or—to use the words of a Hindu writer—the modern Hindu 'should be born of parents not belonging to some recognised religion other than Hinduism, marry within the same limits, believe in God, respect the cow and cremate the dead' (*Census Report Panaji*, 1912, I. 109). For criticisms of other proposed tests of Hinduism, see *Census Report*, 1912, *United Provinces*, I. 121, *Madras*, I. 50 f., *Travancore*, I. 108 ff.

20. Hinduism as a missionary religion.—Though concealed by various fictions and conventions, the theory which underlies the system is that all residents of India are born Hindus. This is illustrated by the controversy which arose upon the question whether Hinduism is, or is not, a missionary religion. In the Lecture on Missions delivered in Westminster Abbey in 1877 (*Selected Essays*, 1881, ii. 49), F. Max Müller argued that three religions—Judaism, Brāhmanism, and Zoroastrianism—are 'opposed to all missionary enterprise'; while 'three have a missionary character from their very beginning—Buddhism, Mahom-

edanism, and Christianity.' Comparing Brāhmanism with Judaism, he argued that

'a very similar feeling prevented the Brahmans from ever attempting to proselytise those who did not by birth belong to the spiritual aristocracy of the country. Their work was rather to keep the light to themselves, to repel intruders; and they went so far as to punish those who happened to be near enough to hear the sound of their prayers, or to witness their sacrifices.'

This was written from the point of view of a student of the Hindu sacred books, not of a practical observer of the people; and, as he afterwards explained, by 'missionary religions' he meant 'those in which the spreading of the truth and the conversion of unbelievers are raised to the rank of a sacred duty by the founder or his immediate successors' (*ib.* i. 94). This view is so far correct that Hinduism was not the creation of any single founder, and that no authority has ever controlled its organization or systematically promoted the conversion of the heathen. In his reply to these remarks, A. Lyall (i. 134 ff.) contended that

'so far from it being a non-missionary religion, in the sense of a religion that admits no proselytes, one might safely aver that more persons in India become every year Brahmanists than all the converts to all the other religions in India put together. . . . If by Brahmanism we understand that religion of the Hindus which refers for its orthodoxy to Brahmanic scriptures and tradition, which adores the Brahmanic gods and their incarnations, venerates the cow, observes certain rules of intermarriage and the sharing of food, and which regards the Brahman's presence as necessary to all essential rites, then this religion can hardly be called non-missionary in the sense of stagnation and exclusive immobility. . . . If the word proselytism may be used in the sense of one who has come, and who has been readily admitted, not necessarily being one that has been invited or persuaded to come, then Brahmanism might lay claim to be by far the most successful proselytising religion of modern times in India' (*ib.* i. 135 f.).

The question thus resolved itself into a controversy between two writers who discussed the question from two different points of view—one a student of the sacred books, who treated Hinduism as an organized religion founded on an ancient literature, and who regarded proselytism as a conscious, well-defined procedure carried on under conditions analogous to those which characterize Christian missionary work; the other an acute observer of the almost unconscious, unorganized methods by which the non-Aryan tribes are induced to enter the fold of Hinduism. The controversy is now somewhat obsolete, and in the opinion of all competent observers has been finally settled in favour of the views advocated by Lyall. For a recent discussion of Hinduism as a missionary religion, see Shridhar V. Ketkar, *op. cit.* 66 ff.

21. The conversion of the non-Aryans to Hinduism.—The process by which the non-Aryan tribes are converted to Hinduism has been described by Lyall in an essay familiar to all students of comparative religion (i. 157 ff.). Such conversion is naturally most common on the outskirts of the territory long occupied by the Hindus. Thus in Assam the Koch Rājās, who are without doubt of non-Aryan descent, have been recognized by the Brahmans as sprung from Siva, the god having taken the form of one of their ancestors and visited the queen, who was herself none other than an incarnation of his divine spouse, Pārvatī.

The Kachāri kings of Hiramba were similarly converted, and after their ancestry had been satisfactorily traced back to Bhīm [one of the Pāṇḍava princes of the *Mahābhārata*] the two chiefs were placed about A.D. 1790 in the body of a large copper image of a cow, and thence produced as reclaimed Hindus. . . . For the Ahoms, Indra was selected as the progenitor of the kings, but no special origin seems to have been assigned to the common people, so that an Ahom on conversion takes as low a place in the Hindu caste system, in his own estimation, as he does in that of orthodox Hindus' (*Census Report Assam*, 1892, I. 83; cf. art. ASSAM, vol. ii. p. 137 f.).

The process is often gradual. When the Kachāri first puts himself under the guidance of a *gōsāin*, or teacher of the Vāisṇava sect, he is a Hindu in little more than name, eating pigs and fowls, and continuing to drink strong liquor. After a time he somewhat modifies these abominable practices,

and then, after several generations, when the family has given up or concealed its taste for forbidden food and drink, and has become, in appearance at least, ceremonially pure, its members are finally promoted to the rank of orthodox Hindus.

'This, however, is a matter of many years, as spirits and pig's flesh are dear to the aboriginal palate, and many a man who would fain be admitted as a pure Hindu remains outside the pale, because it is not in him to forswear the nourishing diet of his ancestors' (ib. i. 84).

Some Assamese, when they profess a desire for conversion, are compelled to fast for a day or two (fasting being a form of purification from malignant spirit influence [A. E. Crawley, *The Mystic Rose*, London, 1902, p. 153 ff.]), after which they undergo a rite of atonement (*prāyaścitta*) at the hands of their teacher, who claims a suitable fee. But for at least three generations they are somewhat despised, and take no part in social affairs; after this they rank as Hindus (*Census Report Assam*, 1901, i. 225). The condition of things in the Central Provinces, where tribes like the Gonds (*q.v.*) are rapidly embracing Hinduism, is very similar (*Census Report*, 1901, i. 95).

22. Hindu sectarianism.—The process of the formation of new sects provides another method by which outsiders are admitted into Hinduism. The worship of the sectarian deities grew up during the period represented by the Epics and the Purāṇas; but the material for tracing their evolution is very scanty.

(a) *Brahmā*.—Of the members of the Hindu triad, *Brahmā* has now become an otiose, decadent divinity, mainly because he was always a god of the philosophers rather than of the common people. The process of his degradation is clearly marked in the *Mahābhārata*. It is commonly said that he has only a single shrine, that at Puskara in Rājputāna. But he has also a temple at Khed *Brahmā* in the State of Māhikāṇḍha in Gujārat (*BG* v. [1880] 437 f.); in S. India his cult is more persistent, shrines being dedicated to him at Chebrolu in the Kistna District, at Kālahasti in S. Arcot, at Mitranandapuram close to Trivandrum, and possibly in a few other places (Oppert, 288 f.; V. N. Aiyar, *State Manual Travancore*, 1906, ii. 49; *Census Report Travancore*, 1901, i. 97). In the domestic ritual he is worshipped under the form of Viḍhātṛi, personified fate; but even here he is placed second to Śaṣṭi, the goddess presiding over the sixth day after birth (*BG* ix. [1901] pt. i. p. 33 f.; see BRĀHMANISM, vol. ii. p. 810 f.).

(b) *Śiva*.—The philosophical side of the cult of Śiva represents him as 'the earliest and universal impression of Nature upon men—the impression of endless and pitiless change' (Lyall, ii. 306). But he has also assimilated much of the demonolatry and Animism of the non-Aryan races, as in his manifestation as Bhūteśvara, 'lord of goblins,' in which form his cultus was well adapted to serve the needs of the devil-worshipping Dravidians of S. India. He is the descendant of the Vedic Rudra, who has a beneficent as well as a malevolent character (Muir, iv. 339; Macdonell, *Vedic Myth.*, 77), the latter being veiled under his euphemistic title, Śiva, 'the auspicious one.' There seems no good reason to assign the origin of Śiva, the special Brāhman god, to the non-Aryan races, though his cultus may have been contaminated by their influence (Muir, iv. 349). It must be noted, however, that his temples are very commonly served, not by Brāhmins, but by members of the ascetic orders connected with his cult. His association is rather with the Himalāya (H. A. Rose, *Census Report, Punjab*, 1901, i. 127 f.). This is also shown by his cult-titles, Girīśa and the like, 'mountain-god,' and those of his consort Umā as Pārvatī, 'mountain-goddess,' and Haimavati, 'she of the Himalāya,' and some Greek writers

identified him with Dionysus (J. W. McCrindle, *Ancient India as described in Classical Literature*, 1901, p. 64 n.). It has been suggested that the introduction of the cultus was due to the movement of Hun tribes from the north (*BG* ix. [1901] pt. i. p. 476). He is at once a god of Nature, the impersonation of re-integration and destruction; the typical ascetic; the contemplative philosopher and sage; the wild and jovial mountaineer, surrounded by troops of dancers. Hence his personality attracts two different classes of worshippers—the Brāhman philosopher, who sees in him the All-god from whom the Universe is evolved; and the peasant, who associates him with the mysteries of the reproduction of life.

The worship of the līṅga.—In modern Hinduism the symbol of Śiva is the *līṅga*, or phallus. Phallic worship appears in the Veda in the *śiśnadevāḥ*, 'those who have the phallus as their deity'; but this seems to be regarded as a non-Aryan cult, and Indra is besought not to allow them to approach the sacrifice (Macdonell, *Vedic Myth.*, 155). In Buddhism and in the Atharvaveda we meet phallic genii (*kumbhāṇḍa*, *kumbhumuṣka*; Weber, *JA* xxx. [1901] 282), and in the *Mahābhārata* it is mentioned as if it had been common in N. India; but it is not included in the superstitious forms of worship described in the Buddhist Nikāyas (Rhys Davids, *Buddhist India*, p. 165 f.). The origin of the cult in India is obscure. Fergusson was disposed to connect the symbol with the Buddhist *dāgaba*, one of which has been found adapted to Śaiva worship in a cave at Wāl (*Hist. of Indian Arch.*, London, 1899, p. 304 f.; Fergusson-Burgess, 213; F. A. Maisey, *Sanchi*, London, 1892, p. 16 n.). Oppert suggests that it was derived from the Greeks—a view which seems improbable (*Orig. Inhab.*, 381; Muir, iv. 161, 421). Stephenson (*JRAS* viii. [1842] 330) and F. Kittel (*Ueber den Ursprung des Līṅga-kultus in Indien*, Mangalore, 1876) connected phallic worship with the non-Aryan tribes. In opposition to this view, we have the important fact that of the twelve great *līṅga* shrines, only three, those at Omkāra on the Nerbaddā, Triyambaka at Nāsik, and Bhīma-śankara in the Deccan, can be reasonably claimed as outside the distinctively Aryan area, and early traditions associate the establishment of *līṅgas* in N. India with Aryan saints and worthies (Muir, ii. 202, iv. 189 ff., 405 ff.). It may also be said that phallic worship is not general among the forest tribes at the present day. Thus, though the Todas are apparently immigrants from Malabar, there is no evidence of phallic worship among them (W. H. R. Rivers, *The Todas*, London, 1906, p. 447). On the whole, the facts seem to indicate that, though the cult may have prevailed among some of the indigenous tribes, it was not confined to them, and that in the form in which it now appears its extension was largely due to the Aryans.

The prevalence of this ancient symbol of fertility and life in the cults of India 'shows that in the more naive religion of the older age there was not yet that divorce between the physical and moral world which the spiritual law of modern religion has made' (*CGS* v. 11 f.). It is 'by no means as early or a universal cult. It can only become prominent in a population having a settled abode and cultivating the soil; its orgiastic developments are sporadic' (Hartland, *Primitive Paternity*, i. 122). It seems to be an aberrant form of the cult of stones and pillars which was widely distributed in Greece, and among the Semites (Frazer, *Pausan.*, London, 1898, ii. 539, iv. 110, 154, 318 ff., v. 314 ff.; *CGS* iv. 149, 307; *HDB* iii. 879 ff., v. 110 ff.; art. BAAL, vol. ii. p. 287 f.). Some of the great Indian *līṅgas* have no sexual connotation (cf. *ERE* v. 829 f.). Thus, that at the

shrine of Yajñśvara at Benares is 'simply an enormous block of stone, round and black, six feet in height, and twelve in circumference' (Sherring, *Sacred City*, p. 117). That of Bhojpur in Bhopāl is 7½ feet high and 17 feet 8 inches in circumference, raised on a massive platform (*IGI* viii. [1908] 121). The kindred pillar-cult is, as A. J. Evans has shown, widely distributed (*JHS* xxi. [1901] 99 f.). One of the pillars of Aśoka at Benares (*ERE* ii. 466) has now become the famous *lāṭī*, or pillar, of Śiva. The symbol, in itself, is not necessarily indecent (Rājendralāla Mitra, *Indo-Aryans*, i. 146 f.; *IGI* xviii. 202). Among the Śaivas it is not connected with eroticism, a tendency distinctly absent from the cult of Śiva. This, however, refers only to the devotees of the higher class; and, when it is worshipped in connexion with the female symbol (*yoni*), or among the *Līṅgāyat* (*q.v.*) sect in the Deccan, it undoubtedly has a sexual suggestion (cf. Elliot, *Hist. of India*, iii. 91; Hartland, *Primitive Paternity*, i. 123). Its connexion with Śiva may probably be traced to his manifestation as a god of reproduction, as, for instance, when he appears as Mrtyuñjaya, 'destroyer of death.' Even in the Veda, he, as Paśupati, 'lord of beasts,' a title of Rudra, is regarded as the agent promoting fertility in cattle (Macdonell, *Vedic Myth.*, 75). In parts of the Deccan, as a mode of mimetic magic, the marriage of Śiva and Pārvatī is periodically celebrated (*BG* xxiii. [1884] 676; V. A. Smith, *Hist. of Fine Art in India and Ceylon*, p. 215; cf. *CGS* v. 217; Frazer, *GB* ii. 204 ff.), and in parts of the Central Provinces he seems to be connected with tree-worship (*ERE* iii. 312). The same conception doubtless underlies his manifestation as Ardhā-nārīśvara, half male and half female, symbolizing the union of Puruṣa and Prakṛti, the central idea of Nature-worship (see *ERE* ii. 38ⁿ). We may also compare the phallic processions which occasionally accompany the Holi celebrations in India, as in the cult of Nāthurām at Gwalior (Crooke, *PR* ii. 319 f.), the *φαλλοφορία* of the Dionysus worship in Greece, 'which arises from the same idea as that which prompts the corporeal union of the husbandman and his wife in the cornfield at the time of the sowing or after reaping' (*CGS* v. 197, 205; Frazer, *GB* ii. 205 ff., *GB*³, pt. i. vol. ii. p. 97 ff.). The story of Viṣṇu cutting up and scattering the fragments of the *liṅga* throughout the world reminds us of the mutilation of Osiris, and the Kandh custom of distributing the ashes of the human representative of the spirit of vegetation as a fertilizing charm (Frazer, *Adonis*, *Attis*, *Osiris*², London, 1907, p. 331; *CGS* iii. 19 f.). As in the case of other gods of fertility, the bull is the appropriate emblem of Śiva (Frazer, *Adonis*, pp. 96, 130, *GB*³ ii. 312, 277 ff.; *CGS* iii. 11, v. 97; Jastrow, 632; Wiedemann, 178 f., 187 f.). The conception, also, of the phallus as a protective (*ἀπορροῖα*) may, as in the case of the Greek *Hērmai*, have contributed to its popularization (*CGS* v. 32). On the worship of the *liṅga* in India, see Muir, iv. 343 ff.

23. The popularization of the cult of Śiva.—The popularization of the cult of Śiva involved a process of syncretism, the adoption of various local deities as his manifestations. The most respectable of these is Gaṇapati, or Gaṇeśa, lord of the troop of demons attending the god. His worship starts from the Paurāṇic period; and, except in one legend contained in the northern recension of the *Mahābhārata*, he does not appear in the Epic literature (*JRAS*, 1898, p. 380 ff.). His symbols of the elephant and the rat connect him with some local theriolatry; but he is now independent, and, though he is a member of the Śaiva group of deities, he has become almost non-sectarian, and all sects agree in doing him honour as the god of

luck (*IA* xxx. 255 f.; cf. BRĀHMANISM, vol. ii. p. 807 f.). Another deity of the same class is Skanda, or Kārttikeya, who was the family-god of some W. Indian dynasties, and now, under the name of Subhramanya, is most popular in S. India, where his association with the Mother-goddesses shows that he is connected with non-Aryan cults (*BG* i. pt. ii. pp. 180, 287; Oppert, 303, 370). In a much lower class is Khandobā, or Khandarāv, 'sword father,' probably a deified non-Aryan prince, now the chief guardian-deity of the Deccan, where his cult shows obvious signs of contamination with those of the forest tribes (*BG* xviii. pt. i. pp. 290, 413 f.). Similar instances are to be found in the identification of Śiva-Viṣṇu as Harihara with the non-Aryan Aiyānār, or Vetāla, the demon-leader and ghost-scarer of the Tamil, Kanarese, and Deccan peoples (*ib.* xxiii. [1884] 556, xviii. [1885] pt. iii. pp. 347, 388).

24. The yoga and asceticism.—The system of *yoga*, by which, through strange postures, suppression of the breath, self-restraint, and meditation, the soul seeks union with the Supreme World Spirit, was an outgrowth of the Sāṅkhya philosophy, and, though dogmatically no part of the Vedānta, reached its fullest development under Patañjali about the 2nd cent. B.C. In the time of Buddha it was recognized, as it continues to be in the later forms of Buddhism, and the condition of ecstatic abstraction was held in high esteem (H. Kern, *Manual of Indian Buddhism*, 11; Macdonell, *Hist. Skr. Lit.*, 396 ff.; L. A. Waddell, *Buddhism of Tibet*, 126, 141). It assumes special prominence in the *Mahābhārata* epic, where concentration, with the use of magical formulae, supersedes the power of the sacrifice (see artt. YOGA, ASCETICISM [Hindu], vol. ii. p. 87 ff.; AUSTERITIES, vol. ii. p. 225 ff.; BRĀHMANISM, vol. ii. p. 802 f.).

The development of asceticism in its coarser forms is one of the main contributions of Śaivism to modern Hinduism. It represents, in a measure, a revolt against the tyranny of caste. It has its literary origin in the Brāhmanical rule which divides life into a series of stages (see *ERE* ii. 802); and the life of the ideal ascetic served as a model for the rules regulating the conduct of the ordained monks of the Buddhist and Jain orders (Manu, vi. 41; Kern, 73 ff.; Bühler, *Indian Sect of the Jainas*, 1903, p. 13 f.). Perhaps the closest imitation of the observance of the stringent rules of ancient asceticism is to be found in the remarkable colony of Tibetan hermits at Shigatze (Waddell, *Lhasa and its Mysteries*, London, 1905, p. 234 ff., *Buddhism of Tibet*, 223 f.). At the present day, among some of the Śaiva orders instances are found of genuine asceticism carried on according to the ancient rule in caves and forests; but such enthusiasts are not numerous. Occasionally at bathing fairs and places of pilgrimage may be observed the Ūrdhvabāhu, who extends one or both of his arms above his head until they become fixed in that position; the Akāśamukhin, who keeps his neck bent back gazing on the sky; the Bhūmimukhin, who hangs by his feet with his head nearly touching the ground; the Nakhin, who allows his nails to grow to an excessive length; those who recline on a couch studded with nails; and others of the same kind who present an obvious parallel to the early Christian hermits, the social and religious results of such excessive devotion being in both cases equally disastrous (J. C. Oman, *Mystics, Ascetics, and Saints of India*, London, 1903 [useful so far as the personal experience of the writer goes]; artt. CELIBACY [Indian]; BRĀHMANISM, vol. ii. p. 801 f.).

25. Development of the cult of Śiva.—We know little of the early development of the cult of Śiva.

The Sibæ of the Panjâb, according to Megasthenes, who visited India about 20 years after the death of Alexander the Great, branded their cattle with the trident symbol of the god, or rather perhaps with the mark of the club of Hercules, who was identified with him (McCrindle, *Anc. India as described by Megasthenes*, 1877, p. 111; *JRAS*, 1907, p. 987). Bardesanes, who seems to have lived in the beginning of the 3rd cent. A.D., and whose account is preserved by a late compiler, Johannes Stobaios (c. A.D. 500), apparently describes the worship of the god in the hermaphrodite form of Ardhanārīśa (McCrindle, *Anc. India as described in Classical Lit.*, 172 f.). His image, attended by that of his bull Nandi, with the noose, trident, and other symbols, appears on the coins of the Kuṣān kings Kadphises II. (c. A.D. 90-100) and Vāsudeva (A.D. 185-226). In the 3rd cent. his cult seems to have been established throughout India (*JRAS*, 1907, p. 972). In S. India, Śaivism was the oldest form of Brāhmanism, and its rise is connected with a teacher named Lakulīśa, as far back as the first century of our era (Rice, *Mysore and Coorg*, 205; cf. D. R. Bhandarkar, *JRASB* xii. [1910] 151 ff.). At a later period his worship was adopted by Saśāṅka, king of Bengal, who persecuted the Buddhists, and by the emperor Harsa, both of whom reigned early in the 7th cent. A.D. (Smith, *Early Hist.*, 285 f., 318 f.).

The popularization of the cult was the work of a series of missionary preachers, who, like the founders of the revived Vaiṣṇavism, came from S. India, where Hinduism, comparatively safe from the inroads of the foreigner, was allowed to follow the natural course of its evolution undisturbed. This is shown by the greater abundance of the inscriptions surviving in that region, where the Muhammadan powers, remote from the centres of fanaticism in the N., were less hostile to Hinduism, and did less damage to the temples and the records in stone (*IA* xxx. 17).

The first of these teachers was Kumārila Bhaṭṭa, a learned Brāhman of Bihār, who in the 8th cent. A.D. restored the ancient Vedic rites, and encouraged the persecution of Buddhists and Jains—a tradition which has magnified into the extermination of Buddhism from the Himālayas to Cape Comorin. A follower of the Mīmāṃsā school, he ascribed the universe to a Divine act of creation, and assumed an all-powerful Deity as the cause of the existence, continuation, and destruction of the world. He adopted, as a philosophical argument in opposition to Buddhism, the Vedānta principle of the non-duality (*advaita*) of the God-head. His mantle fell upon his more famous disciple, Śaṅkarācārya (c. A.D. 737-769), who moulded the Uttara-mīmāṃsā philosophy in its final form (*Śrī Śaṅkarācārya: His Life and Times, his Philosophy*, by C. N. Krishnaswami Aiyer and Pandit Sitanath Tattvabhushan, Madras, n.d.; *Census Report Travancore*, 1901, p. 101 f.; L. K. Anantha Krishna Iyer, *Cochin Tribes and Castes*, ii. [1912] 256 ff.).

'He seems to have risen as an inspired genius to throw a quick, bright light, like to the momentary after-glow of an Indian sunset before darkness descends over the land, on the fading glories of Aryanism before they sink into the dimness of the dear days of Hinduism. . . . According to the teachings of Śaṅkara, the entire system of Vedāntic thought finds its natural culmination in an uncompromising declaration that the sole object of the sacred literature of India was to reveal the delusive appearance of what appeals to the senses as reality and the doctrine of non-duality. . . . The question of metaphysics is solved, not as Kant resolved it, by referring all objective reality to perceptions of the intellect where he sought a solution, but in endeavouring to pierce, in the manner of Plato, and Parmenides, beyond the reality itself. This objective form was held by Śaṅkara to be but the mode in which the delusion of life was mirrored forth' (R. W. Frazer, *Literary Hist. of India*, 1898, p. 826 f.).

To him is due the foundation of the Smārta sect among the Brāhmins of the Deccan, who take their

name from their adherence to authoritative tradition (*smṛiti*), as opposed to the Vedic Scriptures (*śruti*). They worship the Triad, Brahmā, Viṣṇu, and Śiva, under the symbol of the mystic syllable Om; and while admitting these three deities they exalt Śiva to the highest place. They hold the pantheistic Vedānta doctrine of non-dualism (*advaita*), asserting God and matter to be identical, and everything only an atom of the Divine, they themselves being part of the Supreme Being (Rice, *Gazetteer of Mysore*, 1897, i. 236, 471 ff.).

But these Brāhman movements were too philosophical to be comprehended by the common folk; and the real popularization of Śaivism in S. India was left to the Brāhman Basava, as he is called in the Līṅgāyat Purāṇas, the date of whose death is fixed by tradition in A.D. 785. But it has recently been discovered that the real founder of this sect was the Brāhman Ekāntadarāmayya, who revived Śaivism in its popular form in the latter half of the 12th cent. A.D. (*IA* xxx. 2; *BG* i. pt. ii. p. 225 ff.; Rice, *Gaz. Mysore*, i. 476, *Mysore and Coorg*, 206). The Līṅgāyats (*q.v.*) may be described as Hindus who deny Brāhman ascendancy, and claim to receive from their own priests (*gāṅgama*) the 'eight-fold protection' (*aṣṭavarṇa*), or, as others term the rite, 'the eightfold sacrament' (*aṣṭavarṇa*). With the denial of Brāhman ascendancy they have discarded other orthodox rites, such as the cremation of the dead (for which they substitute inhumation) and the observance of caste, pilgrimages, and penance. As is so often the case with such movements in India, there appears now to be a tendency among them to revert to orthodox Brāhmanism (Rice, *Gaz. Mysore*, i. 476 f.; *Census Report Bombay*, 1901, i. 180 ff., 197; *Census Report Mysore*, 1901, i. 530 ff.; *BG* xxiii. 219 ff.).

26. **Vaiṣṇavism.**—In one sense the cult of Viṣṇu may be regarded as in direct antithesis to that of Śiva. Like the latter, it has its philosophical side. Viṣṇu 'impersonates the higher evolution; the upward tendency of the human spirit. He represents several great and far-reaching religious ideas. In the increasing flux and change of all things he is their Preserver; and although he is one of the highest gods, he has constantly revisited the earth either in animal or in human shape' (Lyall, *Asiatic Studies*, ii. 306). In the Veda he occupies a subordinate position, his only anthropomorphic traits being the strides which, as a solar god, he takes across the heavens (Macdonell, *Vedic Myth.*, 37). He is closely related to Indra, but his connexion with Kṛṣṇa is still obscure (Weber, *IA* xxx. 284 f.; see BRĀHMANISM, vol. ii. p. 811 f.). The historical evolution of this deity has, however, exercised little effect on the view of his personality held by his modern worshippers. His cult is less gloomy, less tinged with asceticism, more kindly, more human, than that of Śiva; and it has found its expression 'in more striking literary works, which, translated into, or rather reproduced in, the principal languages, Aryan as well as Dravidian, have furnished an inexhaustible quarry for popular poetry' (Barth, 216 f.). Its eclecticism is clearly marked. Its theory of incarnations or descents (*avatāra*) at once links it to Vedic mysticism and at the same time permits it to absorb the deities, with their cultus, or the non-Aryan racial elements out of which Hinduism was developed. The doctrine of incarnations is peculiar neither to Hinduism nor to Vaiṣṇavism. But in the latter the conception of a god becoming incarnate through compassion for suffering meets the needs of worshippers craving for a personal God who sympathizes with the sorrows of humanity (see BHAKTI-MĀRGA, vol. ii. p. 542 f.; *JRAS*, 1908, p. 245 ff.). There is no reason to refer this animal cultus to totemism, which appears among the Indo-Aryans, if at all,

only in aberrant form (J. G. Frazer, *Totemism and Exogamy*, London, 1910, iv. 13). More probably the animal cultus sprang from the Aryan or non-Aryan theriolatry, the sacred animals being 'regarded in relation to a more generalized conception of the Divine power, which lies behind them and finds expression through them' (*HDB* v. 114). As Sayce points out in the case of Babylonia (*HL*, 112), the local god was originally theriomorphic, and when he assumed an anthropomorphic shape there was no room for the primitive animal forms save as the vehicle (*vāhana*) or attendant of the god. To the modern believer it is sufficient to be told that the god assumed these successive forms to save mankind from ever recurring attacks of the forces of evil.

It is in his later developments that the influence of the non-Aryan races is most apparent. On this question Molony (*Census Report Madras*, 1912, i. 51) remarks:

'Whatever be their present-day union or intermixture, it is difficult to imagine any original connection of the Aryan Brāhmins, and their subtle philosophies, with the gross demonolatry of the Dravidian peoples who surrounded them. Philosophic Hinduism or Brāhmanism, it has already been suggested, is rather the attempt to find an answer, without the aid of a final revelation, to an enigma probably insoluble, than a religion in the sense understood in modern days. Holding certain philosophical opinions, which they neither expected nor particularly desired their Dravidian neighbours to share, it is unlikely that the early Aryan theists made any serious efforts to obtain adherents to their way of thinking. But, satisfied with the acknowledgment of their undoubted intellectual superiority, they built gradually many a connecting bridge between their own somewhat unpractical speculations and the extremely material demonologies of the Dravidians.'

There is some force in this statement; but, when the Brāhmins, at some period subsequent to their arrival in S. India, seriously undertook the task of absorbing the local idolatries, the result of the compromise was that at the present day, except among special groups like the Nāmbūtiris, Brāhmanism survives merely as a veneer over the indigenous beliefs. This process of absorption assumed varied forms. Thus in the Deccan and S. India, Viṭhobā, or Viṭṭhal, of Pandharpur (*q.v.*), who is generally believed to have been a deified Brāhmin, is accepted as an incarnation of Viṣṇu. It has been suggested that his name is derived from Viṣṭu, a form of Viṣṇu, modified under Dravidian influence (*JRAS*, 1907, p. 1053). So Bālaji, usually identified with the infant Kṛṣṇa, is now the great god Vyaṅkaṭeṣa of Tripetty, or Tirupatti (*q.v.*), and is claimed to be a local deified saint. The same process appears in the Himālaya, where Vāsudeva or Bāśdeo and Puruṣottama, 'best of men,' are believed to be mountain-deities absorbed into the Viṣṇu cultus (Atkinson, *Himalayan Gazetteer*, ii. 752; Muir, iv. 297). In Travancore, under the title of Padmanābha, 'he from whose navel springs the lotus,' he is at Trivandrum connected with a serpent-cult. In A.D. 1752 the Mahārājā dedicated his royal person and kingdom to this his tutelary god, and at his succession his first official title is that of Śrī Padmanātha, 'slave of the god' (S. Mateer, *Land of Charity*, London, 1871, p. 160 ff.; *State Manual Travancore*, i. 362).

These local manifestations, however, are of small importance compared with Rāma and Kṛṣṇa. Their cults present so many intricate problems that the consideration of them must be left to special articles. The influence of Christianity on their development is discussed in art. BHAKTI-MĀRGA, vol. ii. p. 549 ff.; also see BRĀHMANISM, vol. ii. p. 811 f.; J. Kennedy, *JRAS*, 1907, p. 951 ff.

27. The popularization of Vaiṣṇavism.—As was the case with Saivism, the popularization of the Vaiṣṇava cultus was the work of several missionary teachers, and in this case also the inspiration came from S. India. The first of these teachers was Rāmānujāchārya, also called Emburumānār, who,

according to the common tradition, was born at Śrī Permatūr about A.D. 1127, and, after a life which is said to have extended to 120 years, was buried in the temple of Śrīraṅganātha at Trichinopoly, where a shrine has been dedicated to him.

'The chief religious tenet of the sect of Rāmānujas or Śrī Vaiṣṇavas is the assertion that Viṣṇu is Brahṇā, that he was before all worlds, and was the cause and creator of all. Although they maintain that Viṣṇu and the universe are one, yet, in opposition to the Vedānta doctrines, they deny that the deity is void of form or quality, and regard him as endowed with all good qualities and with a two-fold form—the supreme spirit, Paramātma or cause, and the gross one, the effect, the universe or matter. The doctrine is hence called *viśiṣṭādvaita*, or doctrine of unity with attributes. Besides his primary and secondary form as the creator and creation, the deity has assumed at different times particular forms and appearances (*avatara*) for the benefit of his creatures' (Rice, *Gaz. Mysore*, i. 475; cf. Monier-Williams, *Brāhmanism and Hinduism* 4, 119 f.).

His teaching is followed by the Śrī Vaiṣṇava sect in N. India, who hold that Viṣṇu, the one Supreme God, though invisible as cause, is, as effect, visible in a secondary form in material creation. They are the most respectable of the reformed Vaiṣṇava communities, and show their adherence to the more primitive tradition in their refusal to worship Rādhā, the consort of Kṛṣṇa. They are divided into two sections—the Southerners (*Tengalais*) and the Northerners (*Vadagalais*),

'who differ on two points of doctrine, which, however, are considered of much less importance than what seems to outsiders a very trivial matter, viz., a slight variation in the mode of making the sectarian mark on the forehead. The followers of the Tengalai section extend the middle line down to the nose itself, while the Vadagalai terminate it exactly at the bridge' (F. S. Growse, *Madhura* 3, Allahabad, 1883, p. 193 f.; *State Manual Travancore*, ii. 292 f.; Monier-Williams, 125 f.; Thurston, *Castes and Tribes*, i. 348 f.).

The second Vaiṣṇava teacher was Mādhva or Anandatīrtha, a S. Indian Brāhmin, who was born at Udipi in S. Kanara about A.D. 1200. The result of his teaching was to effect a certain compromise between the cults of Viṣṇu and Śiva, maintaining, however, the supremacy of the former (Rice, *Gaz. Mysore*, i. 236, 477). He taught the existence of Viṣṇu, or Hari, and the doctrine of duality (*dvaita*) in opposition to the monism or non-duality (*advaita*) of Saṅkarāchārya. He held that 'there are two separate eternal principles (instead of three, as asserted by Rāmānuja), and that these two are related as independent and dependent, as master and servant, as king and subject. The one is the independent principle, God (identified with Viṣṇu), the other is the dependent principle consisting of the human spirit, or rather spirits' (Monier-Williams, 130 f.; see C. N. Krishnaswami Aiyer, *Sri Madhva and Madhvaism*, n.d.).

The third and most important agent in the spread of Vaiṣṇavism in N. India was Rāmānanda, of whom little is known, even his date being uncertain. He seems to have lived between the end of the 14th and the first half of the 15th cent., and the distinctive note of his teaching was the exaltation, as a form of Viṣṇu, of Rāma and his consort, Sītā (M. A. Macauliffe, *The Sikh Religion*, Oxford, 1909, vi. 100 ff.). His followers are closely connected with the school of Rāmānuja, except that they are not so exclusive in regard to privacy at meals (*Census Report Baroda*, 1911, i. 77; *BG* xv. [1883] 176; *PE* i. 293). The name Rāmāndi is now usually given to a branch of the Bairāgis (*q.v.*). In fact, until the missionary career of Rāmānanda, this order had little importance, and it has been suggested that his teaching represented a revolt of the more liberal northern school against the older and stricter leaders. He advocated the principle that all personal distinctions of rank or caste merged in the holy character (Rice, *Gaz. Mysore*, i. 477 f.). He seems to have admitted members of the lower castes to his sect—a privilege which most teachers reserved to the Brāhmin and Kṣatriya. Thus the movement was essentially popular, and the books published by this school were written in Hindi, not in Sanskrit—a

reform which led to important results throughout N. India, and especially in the Punjab (*Census Report, Punjab*, 1891, i. 122 f.; *Census Report, Baroda*, 1911, i. 77; *BG* xv. [1883] 175).

28. The Muhammadan conquest.—The course of the evolution of Hindu beliefs was rudely interrupted by the Muhammadan conquest of N. India.

The history of the new power which appears upon the scene falls roughly into three periods: first, a time of incursions ending in final conquest (A.D. 637-1206); that of the kingdoms founded as a result of the first conquest (1206-1526); and, lastly, the Mughal Empire, which finally passed away when British ascendancy was established. During the earliest period the Muhammadan annals abound in descriptions of ruthless massacres of Hindus, of destruction of their temples and other religious institutions. In A.D. 1024, Mahmūd of Ghazni penetrated Kāshīwār and destroyed the famous Somnāth (q.v.) temple. Qutb-ud-din (1206-10) captured Benares, destroyed nearly a thousand temples, and raised mosques on their foundations (Elliot-Dowson, *Hist. of India*, 1867-77, ii. 223). Alā-ud-din (1296-1316) sacked the temple city of Bhillāsa, and sent the idols to one of the gates of Delhi to be trodden under the feet of true believers (ib. ii. 148). Even Firūz (1351-88), more merciful than many of his predecessors, prides himself on destroying temples and torturing unbelievers (ib. 380). The invasion of Timūr in A.D. 1398 was accompanied by massacre and rapine at Hardwār and other places (ib. 394 f., 501 ff.). It was not till the reign of the great Akbar (q.v.) (1556-1605) that the faith of his Hindu subjects was deemed worthy of protection. This change of policy was due mainly to his laxity on questions of Muslim orthodoxy, to his religious eclecticism, when he dallied with Hindu Pāṇḍits, Parsi priests, and Jesuit missionaries, dreaming of a new religion which was to reconcile the many creeds of his Empire, and to his statesmanlike desire to conciliate the powerful Rājput tribes (Blochmann-Jarrett, *Ain-i-Akbari*, Calcutta, 1878-94, i. 162 ff.). His son and grandson were too indifferent to religious questions, and too dependent upon the support of their Rājput kinsmen, to engage in a crusade against Hinduism. This was not renewed until the accession of the Puritan iconoclast, Aurangzib (q.v.) (1659-1707), who ordered the destruction of Hindu temples, such as that of Kēśava Deva at Mathurā (q.v.), that of Adī Deva at Brindāban (q.v.), and the Adī Viśveśvara shrine at Benares (q.v.), on the ruins of which rose the stately mosque which now overlooks a myriad Hindu temples (Growse, 34 f., 37, 255; Sherring, *Sacred City*, 316 ff.). In early Muhammadan times it is not too much to say that every great mosque was erected from the materials of ruined shrines of the older faith of Hindu or Jain, such as that adjoining the Qutb Minār at Delhi, those at Kanauj, Ajmer, Jaunpur, and many other places (Fergusson, *Hist. of Ind. Arch.* 502, 510, 521, 540; *JASB* xlv. 190 f.). Some of the kings of the Ahmadābād dynasty also spread the faith in Gujarāt by persecution (*BG* ix. pt. ii. p. 4 f.). But the Muhammadan dynasties of S. India were more tolerant, and their rulers lived on good terms with the Marāṭhas of the Deccan.

But it is possible to exaggerate the destructive effect upon Hinduism of the Muhammadan invasions. Persecution and the competition of the new creed stimulated religious activity among the Hindus, and during the Muhammadan period various spiritual teachers arose, new sects were formed, and theological controversies divided the intellectual classes—a revival to which the early Muhammadan rulers seem to have been generally indifferent (Lyall, *Fortnightly Review*, Nov. 1908, p. 729). The numerous conversions to Islām were not so much the fruit of active persecution as the result of a desire to gain the favour of the Court, or of missionary teaching (T. W. Arnold, *The Preaching of Islam*, London, 1896, p. 208 ff.). It is also significant that at the present day the proportion of Muhammadans is comparatively small in the neighbourhood of the chief centres of Mughal power—Delhi, Agra, and the cities in the Bengal Delta. The explanation is that, in the neighbourhood of the great Muhammadan cities of N. India, Islām was confronted by the powerful Rājput tribes, devoted to their ancestral faith, and offering strong resistance to proselytism, in which they were supported by their marriage alliances with the Mughal princes. In E. Bengal the animistic tribes had imbibed little of the tenets of Hinduism, and were ripe for conversion by the missionary agents of Islām. Hinduism would have collapsed during the reign of Aurangzib had it not been protected by Rājputs and Marāṭhas. Outside Rājputāna and the Deccan its strength lay in its amorphous character. Buddhism collapsed when its monasteries were

burnt and its monks slain. But Hinduism possessed no single administrative body, no centre of religious life, the destruction of which might have involved a general collapse. It survived because it depended upon its caste and tribal organization; because it represented the basis of social life, with its perpetual round of ceremonial observances; because it possessed a great and indestructible religious literature.

29. The influence of Islām on Hinduism and of Hinduism on Islām.—The contact of these two great religions profoundly affected the evolution of both. The pure monotheism of Islām, which became the State religion of N. India, could not fail to exercise influence on Hinduism. At this time, also, Christian and Jewish teaching began to affect Hinduism. It is significant that the Saiva and Vaiṣṇava missionaries came from the S. and W. of the Peninsula, where Arab, Jewish, and Christian communities first settled; and Islām in S. India has adopted many Hindu practices—worship of local deities, the black art and divination, rites of birth and marriage (*Census Report Madras*, 1912, i. 54). Some are inclined to believe that the theory of fervent faith in the Godhead was derived from Christianity (see BHAKTI-MĀRGA, vol. ii. p. 539 ff.; and on the effect of the dogmas of the Nestorians, see *JRAS*, 1907, p. 477 ff.). On the other hand, by the adoption of beliefs and practices derived from the indigenous Animism, Islām became fitted to enter upon the task, which it still pursues, of establishing itself as the national religion. To foreign influence of various kinds Hinduism was indebted for the effort to suppress the cults of the mythological and sectarian deities, and for the recognition of a single Divine Power, the Almighty Ruler of the universe. It must also be remembered that Persia contributed to Indian Muhammadanism that form of mysticism or super-sensuous knowledge, that influence which diverts emotional souls from the insight which they hope to attain through the veil of illusion into the deeper mysteries which lie behind it. The origin of this belief, known as Sūfism, is obscure. Some have regarded it as a revolt of the Aryan spirit against a Semitic religion imposed by force of arms upon a conquered people; to others its wide diffusion in India at an early period of its development suggests that it was home-born; others, again, connect it with Buddhist preaching (E. G. Browne, in *Rel. Systems of the World*, 315 ff.; *JRAS*, 1904, p. 125 ff.; and for the influence of Buddhism, *EBR*, xxi. 31 f.). At any rate, if it was not ultimately derived from the principles of the Vedānta preached in W. Asia by Brāhman or Buddhist teachers, it was so closely allied to the Indian pantheism that it was readily assimilated on Indian soil. Whether, as E. G. Browne observes (p. 317), 'its practical part, its quietism, its renunciation of worldly objects, its passionate longing for closer commune with God, preceded, and, indeed, led to its theoretical part, its pantheism, its idealism, its scorn of outward forms, its universal tolerance,' or not, the doctrine was well adapted to the needs of the prophets of the reformed Vaiṣṇavism. Their teaching, as well as that of Kabīr and Nānak, seems to have been largely indebted to it.

30. The spread of Vaiṣṇavism.—The results of these religious and political movements led to the popularization of Vaiṣṇava doctrine, which has continued to the present time, when it has become the working force in Hinduism. Its predominant note is the growth of a democratic feeling tending towards universal comprehension. Many sects were founded by men of the lower castes, Kabīr the weaver, Senā the barber, Rāmdās the tanner. While the movement was in many ways healthful and inspiring, it resulted in the toleration of the

abuses which contaminated Vaiṣṇavism in its later stages. It also encouraged a more personal tone in the teaching of the reformers. The Śaiva sects, which are differentiated more by distinctions of practice than of theology, as a rule, take impersonal titles. The Vaiṣṇava sects, on the contrary, are often named from their founders, and, as a necessary consequence, there is a constant tendency to exalt the founder to a position of divine or semi-divine authority, in which the worship of the Deity becomes of secondary importance.

Kabir (c. A.D. 1488-1512), one of the twelve disciples of Rāmānanda, has become one of the most prominent figures in the popular Hinduism of N. India. His career illustrates the eclecticism of Hinduism. His leaning towards Islām was no bar to his becoming a Hindu *bhakta*, and his writings display a wonderful combination of beliefs drawn from Christianity, Sūfism, and Vedāntism (*JRAS*, 1908, p. 245 ff.). The result of his attempt to fuse Hinduism with Islām is that in Bombay some of his followers describe themselves as Hindus, some as Muhammadans (*Census Report*, 1901, i. 61; cf. *Census Report Panjāb*, 1912, i. 121 f.). As in other reform movements of the same kind, his later followers have not maintained the ideal of their founder. They now occupy a position between idolatry and monotheism, and some of them have almost completely succumbed to Brāhman influence. Among the peasantry of the present day Kabir retains his authority as a hymnist more than as a religious reformer. His racy religious and moral apophthegms are constantly on the lips of the middle-class Hindu. They inculcate a pure and tender morality which has strongly affected popular feeling. To his writings the Ādi-granth, the Scripture of the Sikhs, is largely indebted. (See KABIR; G. A. Grierson, *Modern Vernacular Literature of Hindustan*, Calcutta, 1889, p. 7 f.; G. H. Westcott, *Kabir and the Kabir-Panth*, London, 1908; Macauliffe, *The Sikh Religion*, vi. 122 ff.)

31. *Vaiṣṇavism in Bengal*.—Another side of the Neo-Vaiṣṇavism is shown in the teaching of Mīrā Bāī, a prophetess who was born about A.D. 1504, and preached the doctrine of fervent faith in Kṛṣṇa in its most ecstatic form (Grierson, 12; Macauliffe, vi. 342 ff.; H. H. Wilson, i. 136 ff.). This form of mysticism found a congenial soil in the Bengal Delta, among an emotional race little affected by Aryan influence, and steeped in Animism.

The leader of this movement was Chaitanya, born two years after Luther (A.D. 1484-1527). He taught the sufficiency of faith in the divine Kṛṣṇa and his consort Rādhā; and the only form of worship prescribed was the repetition of the name of the Deity without any concomitant feeling of genuine devotion. This creed naturally found acceptance among the sensuous people of Bengal, who still retained some leaning towards Buddhism, were depressed by the results of long-continued social disorder, and had no alternative but to accept either Śāktism or Animism. The stress laid by Chaitanya on ecstatic devotion towards Kṛṣṇa and Rādhā had encouraged sensuality, and the Bairāgi Vaiṣṇavas of Bengal have acquired such an evil reputation that Vaiṣṇavi, the title of the female members of the order, has become synonymous with courtesan (Wise, *Notes on the Races, Castes, and Trades of E. Bengal*, 1883, pp. 154, 162). For Chaitanya and the Vaiṣṇavas of Bengal, see *Calcutta Review*, xv. [1851] 169 ff.; E. A. Gait, *Census Report Bengal*, 1901, i. 182 ff.

32. *The adoration of the guru*.—The slavish adoration of the spiritual teacher (*guru*, *gosaīn*), though no part of the original teaching of Chaitanya, who held that the Deity was all in all, and the teacher only the spiritual father of his flock, is the essence of this type of modern Vaiṣṇavism;

and the worship done to him differs in no way from that addressed to the Godhead (see *ERE* ii. 546). Respect for the *guru* is not a modern idea, because it was inculcated by Manu (ii. 130, iv. 251 f., xi. 1, ix. 235 ff.). Such reverence, however, when paid by the pupil, ceased on the completion of the term of religious training.

* From the twelfth century, on the contrary, the founder rises to the rank of Buddha or Jina; he becomes what the Prophet or the Imams are for the Moslem, a revealer, a supernatural saviour. He is confounded with the god of whom he is an incarnation. Like him, he is entitled to *bhakti* (devotion); and if the sect admits of a traditional hierarchy, his successors share more or less in the same privilege. Rāmānuja, Rāmānanda, Anandātīrtha, Bāṣava, and many others who established subordinate divisions, or who have been distinguished saints or poets, were from an early date regarded as *Avatāras* (incarnations) of the deity' (Barth, 229).

The same pretensions are now displayed by some of the Bengali *gurus*, and, in particular, by those of the Vallabhāchārya sect, whose headquarters are at Gokul (*q.v.*). Similar claims made by the Śaiva *gurus* in Madras are fully described by Dubois (p. 123 ff.). In more recent times their authority has much decreased.

The great heresiarch, Vallabhāchārya, a Brāhman from S. India, was born in A.D. 1478; gained his first triumphs as a disputant at Vijayanagar; visited all the holy places in N. India; and at Brindāban (*q.v.*) saw Kṛṣṇa in a vision, who directed him to establish a new cult of Bālākṛṣṇa, or Bālgopāl, the god in the form of a boy cowherd, which is the form of worship still most popular among the members of the sect. This cult seems to have been later in date than that of Kṛṣṇa as a hero, from which it appears to have developed (J. Kennedy, *JRAS*, 1907, p. 975 ff.). In his later years Vallabhāchārya renounced the ascetic life, married, became the father of sons, and died at Benares A.D. 1531. His followers are the Epicureans of the East, and frankly avow their belief that the ideal life consists in social enjoyment (*puṣṭi-mārga*, 'the primrose path of dalliance'), rather than in solitude and self-mortification. The doctrine of the sect which has specially aroused popular resentment is the deification of the *guru*, with the corollary that his devotees, in body, soul, and substance (*tan*, *man*, *dhan*), are at his disposal, this rule being enforced specially in the case of the female votaries. The sect is found in the largest numbers at Gokul and in the commercial cities of W. India. At Bombay the immoralities of their leader, the Mahārājā, were exposed during a famous trial in 1861 ([Karsandās Mūlji], *Hist. of the Sect of the Maharajas in W. India*, London, 1865; *BG* ix. pt. i. p. 555 ff.; *Census Report Baroda*, 1912, i. 77 f.). The same criticism applies to another sect of wandering beggars in W. India, known as Mānbhāv (Skr. *māhānubhāva*, 'respected'); and this evil reputation is enhanced by the contempt in which they are held by the Brāhman who serve the orthodox gods (*BG* xiii. pt. i. p. 199, xvii. 181 ff.; art. CELIBACY [Indian]).

33. *The Śāktas*.—This licentious type of Hinduism appears still more clearly in the form of Śāktism, the worship of the active female principle (*prakṛiti*) as manifested in one or other of the forms of the consort of Śiva—Kālī, Devī, Pārvatī, and many others. The general character of this, the most debased side of Hinduism, is fairly well known; but comparatively little study has been devoted to it by European scholars, and the secrecy under which its rites are celebrated ensures that its mysteries are revealed to none but the initiated. It is believed that the Tāntrik ritual and beliefs are older than the age of the Buddha (*JRAS*, 1904, p. 557); but in its present form it seems to have been popularized among the sensuous population of Assam and E. Bengal about the 5th cent. A.D.

On the one hand, it has been supplied with a philosophical justification, being a popularized version of the Sāṅkhya principle of the union of the soul of the universe (*puruṣa*) with the primordial essence (*prakṛiti*). It regards the self-existent Being as not only single, solitary, and impersonal, but also quiescent and inactive. Once it becomes conscious and personal it is duplex, and acts through the associated female principle which, again, is conceived to be possessed of a higher degree of activity and personality. Combined with this is a literal and misconceived interpretation of various passages in the Veda, in which the will and power to create the universe are represented as originating from the Creator, as co-existent with Him, and as part of Himself. On this theory, the belief is more closely connected with Śaivism than with any other religious system, originates in philosophical Brāhmanism, and traces back its history through Brāhmanism to the earliest Vedic conceptions (Monier-Williams, 180 f.; H. H. Wilson, i. 241 f.; Waddell, *Buddhism of Tibet*, p. 129 f.).

On the other hand, Śāktism has a second and less reputable side, and this is more present to the majority of its adherents than any philosophical speculations and reminiscences of Vedic doctrines. The impersonation of the female energy in the form of Mother Earth appears among the non-Aryan tribes in the cult of the village-goddesses (*grāmadevatī*), some of whom are purely local or tribal, while others, like Kālī or Māriamma, though they still retain some local characteristics, have become national deities. Even in the Veda, Pṛthivī appears as a kindly guardian-deity (Macdonell, *Vedic Myth.*, 88); but with her, by a process of syncretism, has been associated the non-Aryan Mother-cult, which has been described in the art. DRAVIDIANS.

The progress of this syncretism is indicated in various ways. In the Bādāmi cave-temple, for instance, Pṛthivī is identified with Bhūmi-devī, or Bhū-devī, the Earth-Mother of the non-Aryans, goddess of patience and endurance, who in Manu and in the formal ritual of Brāhmanism receives special adoration (Fergusson-Burgess, 409; Manu, iii. 85 f., ix. 311; Colebrooke, *Essays*, 1858, p. 85). In one of the S. Indian temples, again, Devī appears in the form of a female image in stone, of which the head alone is visible, while the body is still concealed in the earth (Oppert, *Orig. Inhab.* 468). This conception also appears in Buddhist art, where she rises under the feet of the horse of the Master (Grünwedel, *Buddhist Art in India*, 98 ff.); and in the Greek representations of the goddess Ge (Farnell, iii. 25, 27, 55, 216, 223 f., 256, v. 245 f.; J. E. Harrison, *Proleg. to the Study of Gr. Rel.*, Cambridge, 1903, p. 276 ff.). In its benevolent manifestation the cult of the Earth-goddess is shown in that of the Rājput Gaurī, 'the brilliant one,' whose annual marriage to Śvara or Śiva is intended, by a sort of mimetic magic, to stimulate the growth of the young corn (Tod, *Annals of Rajasthan*, Calcutta reprint, 1884, i. 602 ff.; Frazer, *Adonis, Attis, Osiris*², 199 f.). In other cognate manifestations she is known as Sākambhārī, 'herb-nourisher,' or Āśāpūrnā, 'she who fulfils desire' (BG i. pt. i. p. 158, xxiii. 679 f.; Atkinson, *Himalayan Gaz.* ii. 328; Tod, i. 67).

But, besides these benevolent manifestations, she exhibits more of the non-Aryan feeling when she displays her chthonic and malignant nature. Cults of this class are especially common in S. India. Such is that of Ellamma, 'mother of all,' whose ritual includes animal-sacrifice, and the brutal rite of hook-swinging, intended as a mimetic charm to promote vegetation, the plant springing as the victim rises in the air; Māriamma, 'plague

mother,' at whose shrine an officiant known as Potrāz, 'ox king,' tears open the throat of a living ram and offers a mouthful of the bleeding flesh to the goddess, as in the frenzy of the cannibal or murderous orgy which was a feature of the Dionysiac ritual (CGS v. 156, 166); or Piḍārī, the Tamil form of the Skr. Viṣaharī, 'poison-remover,' a passionate, irascible goddess, with a red-hot face and body, and on her head a burning flame; when drought or murrain prevails, she is propitiated with fire-treading and the sacrifice of a bull; lambs are slain in the route of her procession, and the blood, mixed with wine, is flung into the air to propitiate the powers of evil (*Bull. Madr. Mus.* iii. 265; Oppert, 471 ff., 491 ff.). The cults of these goddesses have recently been carefully investigated by H. Whitehead, bishop of Madras (*Bull. Madr. Mus.* v. 107 ff.; cf. Gopal Panikkar, *Malabar and its Folk*², Madras, 1904, p. 128 ff.; Dubois, 286 f.).

From deities of this class the transition to the orthodox cults of Kālī and Devī, shorn though they may have been of some of their brutality and licence, is easy. A modern orthodox Hindu, however, traces goddess-worship to the Veda, and denies its connexion with Earth cults (*Census Report Panjāb*, 1912, i. 114 ff.).

Devī still retains much of her chthonic character, as when she manifests herself as Vinḍhyavāsini, the presiding goddess of the Vinḍhyān hills, or the Saptāśrī Devī of Sāgaragṛh in the Kolāba district of Bombay, who have their homes in caves, and represent the original aniconic cult of the vague, disembodied spirits which haunt mountain-gorges; or when, as in the Panjāb, she is manifested in a young girl, who performs mimetic magic to foster the growth of crops; or when, as in Nepāl, in the form of Kumārī, 'the maid,' she is accompanied by boys representing Gaṇeśa and Mahākāl (Śiva) in his malignant form (*Census Report Panjāb*, 1901, i. 126; Oldfield, ii. 315). Kālī has been adopted into the Mahāyāna Buddhism of Tibet (Waddell, *Lhasa and its Mysteries*, 370). Durgā (*q.v.*) seems to be a non-Aryan goddess imported into Hinduism, and identified with the Vinḍhyavāsini Kālī (see *ERE* v. 117 ff.). She does not appear, at least by name, in the early Vedic or Brāhmaṇa literature, though there are several prototypes from which she may have been developed, and it is believed that her identification with Kālī took place about the 7th cent. of our era (*JRAS*, 1906, p. 355 ff.). By others she has been connected with Nirrti, the Vedic goddess of evil—which would account for the malignity of her character (see BRAHMANISM, vol. ii. p. 813). When she appears seated on a lion, she represents a well-known Oriental type, indicating that these deities

'were originally indistinguishable from the beasts, and that the complete separation of the bestial from the human or divine shape was a consequence of that growth of knowledge and of power which led man in time to respect himself more and the brutes less' (Frazer, *Adonis*², 107).

Śāktism is thus a direct offshoot of the Mother-cultus, and it has developed on lines similar to those of Ishtar, Ashtart or Ashtoreth, the Paphian Aphrodite, the Phrygian Cybele, and 'Diana' of the Ephesians.

Closely connected with these is the cult of the divine Mothers (*mātrī*), of whom there are various enumerations, the catalogues including seven, eight, or sixteen (Monier-Williams, *Skr. Dict.*, Oxford, 1872, *s.v.* 'Mātrī'). Each of them is usually associated with one of the greater gods as his female energy. The eight Mothers are represented on the shrine of Gaṇeśa at Kirtipur in Nepāl (Oldfield, i. 130). In Gujārat, some of them represent the malignant ghosts of Chāraṇ women who perished in some tragic way, the chief of

them being Khorīyār, the embodied curse of the spirit (A. K. Forbes, *Rās Mālā*², 242 f.; *BG* viii. [1884] 643). In Madras also many of the Mothers are of human origin; Gaṅgammā was a Brāhman woman, and Puṅgammā one of three sisters who constructed a famous tank (Cox-Stuart, *Manual of N. Arcot*, Madras, 1895, i. 186). Such worship readily develops into that of a single female deity, like Ambā Bhavāni of Gujarāt, who is propitiated by animal-sacrifice and offerings of spirituous liquor, her image being a block of stone rudely hewn into the semblance of a human face (*BG* v. 432 f., ix. pt. i. Intro. xxxv f.; for Mother-worship, see Monier-Williams, *Brāhmanism and Hindūism*⁴, 222 ff.). The cult may be compared with that of *ai θεαί ματέρες* at Engruim in Sicily, which Cicero calls 'augustissimum et religiosissimum fanum' (*in Verr.* iv. 44, v. 72), and the *Deae Matres* of the Romans. It is, however, in Assam and Bengal that the cultus appears in its most popular form (see *ERE* ii. 134^a, 491 f.). Here the old savage beliefs, temporarily sub merged, but not extirpated, by Buddhism, assume a new development. The cultus is believed to have originated at Kāmṛup in Assam, and may be older even than the preaching of Buddha (*Census Report Assam*, 1891, i. 80, 1901, i. 39 f.; *JRAS*, 1904, p. 557). The goddess revels in blood sacrifice, and satisfies the desires of her votaries for a diet of meat by permitting the use of the flesh of the animals sacrificed (Wilkins, *Modern Hinduism*, 1887, p. 168). In one Assamese form, Kāmākṣā, 'goddess of desire,' 'the most abominable rites are practised, and licentious scenes exhibited which it is scarcely possible to suppose the human mind could be capable of devising'; and up to quite recent times these were accompanied by human sacrifice (*Census Report Assam*, 1891, i. 80; cf. *ERE* ii. 134 f.). Human sacrifice, though it appears in the legend of Hiranyakaśipu, is not a characteristic of the Vedic religion, and was probably derived from some non-Aryan cult. In former times human victims were immolated at shrines of Kālī in Assam; when the temple of Kāmākṣā was rebuilt in A.D. 1565, Nārāyaṇ consecrated it with numerous human sacrifices, the heads of the victims being offered to the goddess on copper plates; similar sacrifices were frequently offered at the copper temple at Sadiyā, and at Beltolah in Kāmṛup; it was owing to the seizure of four British subjects for this atrocious purpose that the Rājā of Jaintiā was deposed in 1835 (*Census Report*, 1891, i. 80). In Bengal, again, the worship of Durgā is accompanied by wearisome puerilities and gross idolatry (Pratapachandra Ghoshā, *Durgā Pūjā, with Notes and Illustrations*, Calcutta, 1871). The cult of Kālī-Devī is also associated with the horrors of Thagī (E. Thornton, *Illustrations of the History and Practices of the Thugs*, London, 1837; W. H. Sleeman, *Ramaseena: Vocabulary of the Peculiar Language used by the Thugs*, Calcutta, 1836; *Report on the Depredations connected with the Thug Gangs*, Calcutta, 1840).

34. Later developments of Hinduism.—The modern development of Hinduism aims at the reconstruction of the faith in order to adapt it to new conditions. On the one hand, it proposes to reconcile it with the social uprising of the more depressed classes resulting from the impartial reign of British law; on the other, to meet the requirements of the educated classes who have to some extent assimilated the results of Western thought and culture, and among whom the general use of English, like that of Greek under the Roman Empire, or of Latin in the Middle Ages, tends to form a bond of union, and results in the growth of a feeling of common nationality among

the diverse races of the Peninsula. The first movement is illustrated by the growth of sects founded on social revolt; the second by those which seek to reconcile the faith with European philosophy, mysticism, or agnosticism, the method employed being usually to reject the more objectionable dogmas and practices of Hinduism, and to substitute for them the ancient Vedic rites and beliefs.

(a) *Sects founded on social revolt.*—Before the British occupation this type may be illustrated by the rise of Sikhism. The ground was prepared for it by the Musalmān dominion in the Panjāb, which encouraged the growth of unitarian beliefs, and by the eclectic preaching of Kabir and his followers. It was originally an attempt at religious reform, and, in process of time, arousing the patriotism of the people, ended in becoming a political organization. Founded by Guru Nanak (A.D. 1469–1539), it was further developed by his successors, notably by Guru Govind Singh (A.D. 1675–1708). The creed in its strictest form enjoins the belief in a single God, condemns the worship of other deities, idolatry, pilgrimages to the great shrines of Hinduism, faith in omens, charms, and witchcraft; and does not recognize ceremonial impurity at birth or death. As a social system it aimed at abolishing caste distinctions, and, as a necessary consequence, Brāhmanical supremacy and ordinances, in all family rites. But this ideal system is accepted by few, and there is a growing tendency, now strongly resisted by its leaders, to conform more closely to official Hinduism (see Macauliffe, *The Sikh Religion*). Recent investigations show the difficulty of differentiating Sikhism from Hinduism (*Census Report Panjāb*, 1912, i. 154 ff.). In more recent times a similar movement has been started among the depressed castes, who resent the contempt in which they are held by the punctilious high-caste organizations, particularly in S. India. Thus the Pariahs of Madras have founded an organization of their own, and now assert claims to privileges from which in former times they were rigidly excluded. This movement has caused considerable alarm among some of the leaders of Hindu society, who recognize that, unless the position of these outcasts is seriously considered, there is a risk that they may, in despair, adopt Christianity, as many of them have already done (for recent efforts to relieve the so-called 'untouchables,' see *Census Report Baroda*, 1912, i. 262; *Madras*, 1912, i. 161 f.). In the same way the Satnāmīs (*q.v.*) of the Central Provinces have revolted against Brāhman domination, and are now divided into rival groups, one of which refuses intermarriage with the other, and has adopted a ritual which admits some of the fouler practices of the Vaiṣṇava and Śākta sects (*Census Report Central Provinces*, 1901, i. 89).

(b) *Sects aiming at the reconstruction of Hinduism.*—This movement owes much of its inspiration to the translations of the Hindu sacred books into English, which now, in this form, appeal to a wider educated public. The results of the Brāhma Samāj (see *ERE* ii. 813 ff.) have not been encouraging.

⁴ Many who are really Brahmos, other than those of the Sādhāran Brāhma Samāj sect, prefer to describe themselves as Hindus; and 'so far as outward appearances go, the present-day tendency amongst the educated classes of Bengal, to whom alone the [Brahmo] sect . . . is likely to appeal, is towards agnosticism or indifference in matters of religion, and Brahmoism has no special attractions for them when orthodox Hinduism allows them all the latitude they need' (*Census Report India*, 1901, i. 293; *Bengal*, i. 159).

Its most important innovation has been the establishment of public congregational worship, hitherto unknown in India (see *ERE* ii. 813 ff.). The Ārya Samāj, which repudiates idolatry and in a large measure ignores the sectarian deities, studies Christianity chiefly in the works of its

opponents, adopts towards it the attitude of hostility rather than eclecticism, and depends mainly for its influence on the sympathy of the advanced political parties in N. India (see *ERE* ii. 57 ff.).

35. The new Vedāntism.—Some attention, particularly in America, has been directed to the new development of the old Vedāntism taught by Śrī Rāmākṣṣa Paramahansa, and expounded by his disciple Swāmi Vivekānanda.

He thus delivers the message of his master: 'Do not care for doctrines, do not care for dogmas, or sects, or churches, or temples; they count for little compared with the essence of existence in each man which is spirituality, and the more that this is developed in a man, the more powerful he is for good' (*Speeches and Writings of Swāmi Vivekānanda*, Madras, n.d. [s. 1908], p. 31). He denies the existence of polytheism in India. 'In every temple, if one stands by and listens, one will find the worshippers apply all the attributes of God—including omnipresence—to the images. This is not Polytheism' (ib. 46). The earnest worshipper before an idol 'recognizes in it a necessary stage of his life. "The child is father of the man." Would it be right for the old man to say that childhood is a sin or youth a sin? Nor is image-worship compulsory in Hinduism' (ib. 48). His ideal religion is what 'we call in India Yoga, union between God and man, union between the lower self and the higher self. To the worker it is union between men and the whole of humanity; to the mystic, between the lower and the higher self; to the lover, union between him and the God of love; and to the philosopher it is union in all existence' (ib. 96). The Hindu mythology is consistent with the principle of evolution, because it 'has a theory of cycles, that all progression is in the form of waves' (ib. 215). The claims of the Vedānta to universal acceptance rest on the fact that it is associated with no single founder, that 'it is the one scripture the teaching of which is in entire harmony with the results which have been attained by the modern scientific investigations of external nature. . . . Most of our modern reform movements have been inconsiderate imitations of western means and methods of work, and that surely will not do for India' (ib. 462 ff.). 'The most hideous ceremonies, the most horrible, the most obscene books that human hands ever wrote or the human brain ever conceived, the most heinous forms that ever passed under the name of religion, have all been the creations of degraded Buddhism' (ib. 504). 'My idea is the conquest of the whole world by the Hindu race' (ib. 553; on Rāmākṣṣa, see, in general, Max Müller, *Rāmākṣṣa, his Life and Sayings*, London, 1899).

36. Theosophical Hinduism.—Another movement, having as its object the reconciliation of Hinduism with more advanced forms of thought, may be called Theosophical Hinduism, which has its centre at the Central Hindu College, Benares, under the guidance of Mrs. A. Besant.

The 'Catechism for Boys and Girls in Hindu Religion and Morals' (Benares, 1907) begins by expounding the 'Basic Principles of Hinduism', under the name of 'Eternal Religion' (*Sanātana Dharma*). It claims to be the oldest of the world religions, eternal because the truths taught by it are eternal. It depends upon the four Vedas, and other Scriptures written by the *ṛṣis*, or Saints, such as the *Law of Manu*, the great *Purāṇas*, the *Mahābhārata* and *Rāmāyaṇa* Epics. There is one Boundless Eternal Being, Brahman or Parabrahman, who is known only when revealed as *Īśvara*, 'the Lord, the loving Father of all the worlds, and of the creatures which live in them.' He helps us to know Him 'by taking different forms, each of which shows us a little portion of Him.' These forms are the three great Devas—Brahmā, Viṣṇu, and Śiva, or Mahādeva. Brahman creates, Viṣṇu sustains, Śiva dissolves the worlds again 'when they are worn out and useless.' He also manifests Himself in the form of Devas and Devis—Vāyu, god of wind, Agni, of fire, Varuṇa, of water, Kubera, guardian of the earth. Besides these are Sarasvatī and Gaṇeśa, 'who will help us to learn, if we ask them.' He lives in us, in our hearts, in our inner self; 'He shines out on us when we are loving and pure, and is clouded when we are cruel or unclean.' 'He lives in all animals, and even in plants and stones. He is everywhere, helping everyone and everything, and we cannot do harm to any without hurting Him.' He appears in incarnations (*avatāra*), specially in the ten manifestations of Viṣṇu. Man is composed of spirit (*jīva*), a portion of *Īśvara*, of whom our bodies are the coats. The *jīva* cannot die; at death he leaves the body behind 'like a worn-out cloth,' and 'goes into the next world, dressed in his other bodies. Then he puts off another of these and goes on to Svarga, and is very happy there, till his Svarga body is also worn out.' In the next world a very good man is happy, 'but does not stay long; but a bad man is very unhappy, and suffers a great deal. People who tell lies, who get drunk, who are cruel to women, children, and animals, have to stay there a long time.' When the Svarga body is worn out, 'the *jīva*, helped by the Devas, begins to make some new bodies for himself, as a man might get new clothes. Then he comes back to the earth and is born in his new baby-body.' The conditions of his new birth are controlled by his desires, thoughts, and actions in his previous lives. Desires condition it 'because we must have the things we have wished for, and must be born

where we can get them'; thoughts, 'because we become that which we think about. . . . So our character, that governs our conduct, is made by our thoughts'; actions, 'because we are paid back that which we have done.' The law of *karma* determines all this. The second great law is that of *yajña*, or sacrifice. 'The bodies in which the *jīvas* live can only be kept going by feeding them with other bodies. The bodies of the *jīvas* living in minerals go to feed vegetables. The bodies of the *jīvas* living in vegetables go to feed animals and men. As the *jīvas* living in animals and men sacrifice the bodies of others to keep themselves alive, they in turn must sacrifice their bodies to those about them. Thus the young should sacrifice their bodies to the old, by serving and helping them; fathers and mothers sacrifice their bodies to their children by taking care of them. . . . Every one should give the sacrifice of prayer to God, who gives him all things, and should try to do kindness to the people round him.' A man knows what bodies he should use 'by avoiding the infliction of pain. Grasses and roots, and leaves, and fruits, and vegetables generally do not suffer pain when they are picked and eaten. To avoid giving pain is the highest sacrifice, says the great Bhishma. We should try always not to give pain.'

The account of the 'General Hindu Religious Customs and Rites' begins by defining the *mantra*, or mystical formula, as 'a succession of sounds in a definite order, arranged so as to bring us help and protection from *Īśvara*, or from some Deva or Devi.' The order of the words is important, because 'if notes are played in a particular order, we have a tune; if the order is changed, the tune is spoiled.' If a *mantra* be translated into another language, it loses its use, as 'an Indian tune, played on an Indian musical instrument, cannot be played on an European musical instrument, because the latter has not all the notes that the Indian one has.' Sacraments (*saukṣṭra*) are 'ceremonies performed at particular times during the life, to make the bodies more useful to the *jīva*.' The chief of these are the giving of the sacred thread (*upanayana*) and marriage (*vidha*). The funeral mind-rite (*śrāddha*) helps the *jīva* 'to pass quickly through the world into which he goes at death, and to reach the happy world of Svarga much sooner than he would do if he were left to himself.' Purity (*śauca*) is essential because dirt is poisonous; 'bad smells are the warnings of the Devas of disease.' Worship is 'love of *Īśvara*; being devoted to Him, thinking about Him, praying and singing praises to Him, and trying to serve Him in all the forms He takes, by kindness to everyone and everything.'

37. Hindu eclecticism.—This summary account of Hindu sectarianism may tend to exaggerate its extent. It would be a mistake to suppose that the faith is divided into so many water-tight compartments between which intercommunication is impossible. The position of the advanced Hindus on the question of sectarianism has been defined as follows:

'The attitude of an educated Hindu towards the question of doctrine and worship is this: What God is is not entirely knowable, as it is an infinite conception. Of this infinite conception only a fraction in the form of an idea of either power, miracle or material, comes to the knowledge of man, by an occasional and wonderful manifestation. It is vain for a man to be proud of any particular manifestation and to exclude the rest from cognizance. All worship, therefore, should be tolerated. Any deity may continue to be worshipped provided the worshippers' conception becomes widened. It is neither proper nor necessary to replace one deity by another, because it is not a matter of importance whether the absolute and infinite conception is called Shiva, Viṣṇu, Durgā, or Buddha. Whether a man worships the Sun, Jupiter, or Saturn, or any historical great hero, or a saint, or a river like the Ganges, or any other object that inspires awe or creates fear, is a matter of no importance. All these gods or manifestations are but starting-points. To disturb the faith of a man in a finite God is foolish as long as his mind is not fit to accept the higher' (Shridhar V. Ketkar, 161).

While the Śāktas are more distinctively separated from Śaivas and Vaiṣnavas, these two are, in the view taken by most Hindus, complementary rather than antagonistic. Both appeal to the *Purāṇas* as their Scripture; members of one sect may venerate the deities of another. Thus in some places Harihara (Viṣṇu-Śiva) is worshipped (Rice, *Mysore and Coorg from the Inscriptions*, 205). In Malabar we find 'none of the strict differentiations between worshippers of Viṣṇu and Śiva, or, indeed, between any of the forms of the deity, whether venerated as gods or goddesses, which are to be seen elsewhere in S. India beyond Malabar and Travancore. . . . The people generally do not, as a rule, give much regard to such differentiation. The Nambūtiris do, but by no means to such an extent as one sees, for example, among the Śrī Vaiṣṇava Brahmins of Holy Conjeevaram, who are divided into two sects, each hating the other with the most acrid bitterness' (*Bull. Madr. Mus.* iii. 79; cf. *Census*

Report Cochin, 1912, p. 22; Thurston, *Castes and Tribes*, v. 369). In those regions, again, into which Hinduism and the rules of caste have recently been introduced, the distinction of sect is often a matter of diet, the vegetarian being a Vaiṣṇava, the meat-eater a Śākta. But in Assam, where the Vaiṣṇava teachers follow the strict law of Chaitanya, new converts, accustomed to a diet of pork, refuse to abandon it (*Census Report*, 1901, i. 39). In Bengal many worshippers of the goddess Durgā, who demands animal sacrifices, are in private worshippers of Viṣṇu (Wilkins, *Modern Hinduism*, 43); in W. India many Vaiṣṇavas worship the Mother-goddesses (*BG* v. 51 f.); and in Mudras change of sect is common (Dubois, *Hindu Manners and Customs*, 119). For a discussion of the relation of Vaiṣṇava and Śaiva beliefs, and of the suggestion that all Hindus of the Province can be classed under one or other of these sects, see *Census Report Panjāb*, 1912, i. 125 ff. The same eclecticism prevails in the worship of images. The sacred place is the home of many gods, who are all impartially worshipped by pilgrims. Again, in many places we find a syncretic combination of cults, the lesser gods being regarded as the 'doorkeepers' (*dvārapāla*) of, or subordinate to, the chief deity. Many of the greater gods have absorbed non-Aryan beliefs and ritual—a process which is often marked by special legends.

It was a non-Aryan Savara who discovered the image of Jagannāth, and it was not till a Brāhman married a daughter of the finder that the cult was established. It was a Pulayā, an out-caste, who found the child, an incarnation of Viṣṇu, now worshipped as Padmanātha in Travancore (Hunter, *Orissa*, London, 1872, i. 89 ff.; Oppert, 76 f.). The same fusion of cults appears at many shrines, the place having been adopted by rival sects in succession. The sculpture of the great gates at Tanjore is all Vaiṣṇava, while everything inside the courtyard is Śaiva; and 'one of the great difficulties of an antiquary before the 8th century is to ascertain to what divinity any temple or cave is dedicated' (Fergusson, *Hist. of Indian Arch.* 744, 441). In the same way, Benares, a Śaiva stronghold, is a museum of cults associated with other gods (Sherring, *Sacred City*, 63, 102, 130, 172). The shrine of Śiva, as Mahākāla, at Kāthmāndu (*q.v.*) is visited by all sects and by all ranks of the people, from the Hindu Gorkhā king and queen down to the humblest Buddhist Newār; Bāhhras, or Buddhist priests, officiate at Hindu celebrations, and Hindus regard the Buddhist deities as eminent saints (Oldfield, ii. 285 f.). The association of the cultus of Śiva and his consort with that of Viṣṇu at the temple of Jagannāth, a chief seat of Viṣṇu worship, is specially noteworthy (Hunter, *Orissa*, 128). In Ceylon, Buddhists continue to worship many of the Hindu gods (Hardy, *Eastern Monachism*, 201; cf. Waddell, *Buddhism of Tibet*, 325). In W. and S. India many Christian shrines command respect from Hindus, and in a less degree from Muhammadans (*BG* xiii. pt. i. p. 209; N. Manucci, *Storia do Mogor*, London, 1907, iii. 343; *JGI* x. 167). In the N.W. Frontier Province the predominance of Islām has seriously influenced the local Hinduism (*Census Report*, 1912, i. 93). Hindus and Muhammadans worship at the shrine of the Virgin Mary at Cochin, and the bust of a well-known missionary at Madras was recently associated with the image of Sarasvatī at a Hindu religious rite (Thurston, *Ethnogr. Notes*, 361; *Bombay Ethnogr. Survey*, 1909, 'Kharva', no. 114, p. 5). On the other hand, many groups of Christian converts retain Hindu beliefs and observances (*Census Report Cochin*, 1901, i. 59 f.). In N. India the high-caste Brāhman keeps in his private house-chapel an amonite

śālagrāma representing Viṣṇu, and a pair of phallic emblems of Śiva and his consort; when he goes on pilgrimage to sacred places he pays homage both to the Śaiva and to the Vaiṣṇava shrines (Jogendra Nath Bhattacharya, *Hindu Castes and Sects*, Calcutta, 1896, p. 364). In Bombay every Brāhman householder worships a group of five deities—Śiva in the *linga*; Viṣṇu in an amonite or in a picture; a metal image of the Śākti, or Mother-goddess; Gaṇapati, or Gaṇeśa, god of luck and wisdom; Śūrya, the Sun, or Hanumān, the sacred monkey (*BG* ix. pt. i. Intro. p. xxxv). In the temples of the Mādhavachārī sect in the Baroda State are found images of Śiva, Durgā, and Gaṇeśa side by side with those of Viṣṇu and his consort, the explanation given by members of the sect being that the founder, originally a worshipper of Śiva, afterwards adopted the cult of Viṣṇu (*Census Report Baroda*, 1901, i. 137 f.). In this State any hostility towards adherents of rival sects is not felt by the population at large, but by the leaders and inner circle of devotees (*ib.*, 1912, i. 74).

The continuity of religious life is exemplified by the successive occupation of the sacred sites by various forms of religion. Benares and Mathurā were centres respectively of Buddhism and Jainism, the former being at present devoted chiefly to the cult of Śiva, the latter to Viṣṇu in the form of Kṛṣṇa. At Sakhi Sarwar (*q.v.*), near the Sulaimān range, Hindus perform their rites of prayer and ablution, Sikhs venerate a shrine of Nānak, Muslims the tomb of a Muhammadan saint (*JGI* xxi. 390). Nāsik and Wāi, both at the present day important centres of Hinduism, have lines of Buddhist caves (Fergusson-Burgess, 263 ff., 211). In Kāśmīr, in spite of the nominal conversion of the population to Islām, their shrines stand on the sites of the holy places of the Hindus, and receive a veneration not accorded to the modern mosques and their Mullas (*JGI* xv. 102). But, though Hinduism is eminently eclectic and tolerant, disputes between rival sectarians, ending in bloodshed, are not uncommon. Serious riots between rival bands of ascetics have occurred at Hardwār (*q.v.*). Rival Vaiṣṇava sects have come in contact in the Madras Presidency, and Vaiṣṇavas have resisted the Śaiva *Līṅgāyats* (*q.v.*) (*JGI* x. 257, 378; Dubois, 119 f.). Conflicts between Vaiṣṇavas and Jains frequently occurred in S. India in the 14th cent. (Rice, *Mysore and Coorg*, 177). In N. India, processions of the Jain 'naked gods' have led to serious riots between them and orthodox Hindus.

38. *Idolatry*.—The feature of modern Hinduism which attracts the attention and provokes the contempt of foreign observers is the universality of idol-worship. The earlier forms of Hinduism were aniconic. The older Buddhism paid reverence to relics and symbols. It was the later Mahāyāna development which introduced images of the Master. In its modern form the Hindu idol has little of the artistic beauty which we find in Greek anthropomorphism, which,

'although falling far short of the grandeur and purity of the Infinite, yet furnishes its noblest image, because it has glorified by artistic genius the human body, which has been chosen as the earthly home of the rational soul' (Dill, *Roman Society from Nero to Marcus Aurelius*, 1905, p. 422).

The Hindu theory of the idol is in sharp contrast with that of the Greek. To the former human form is merely the ephemeral clothing of the soul, in which, unhappily, it is forced to linger for a time. Though in the sculptures of the age of Aśoka an interest in portraiture, at least in that which represents national characteristics, begins to appear, the child-like naturalism, somewhat refined in the delineation of woman, tends to become rococo in style. As idol-worship advanced, from the 7th or 8th cent., energy exhibited itself in gigantic images, or was expressed in a multiplica-

tion of the limbs or symbols of the deity. It is a mistake to suppose that idolatry was introduced into India by the example of the Greeks, and that it was rarely practised until the beginning of the Christian era. Images of the gods were certainly common in the Maurya period (321-184 B.C.), and doubtless at a much earlier time; but of these ancient images none has survived (V. A. Smith, *Hist. of Fine Art in India and Ceylon*, p. 79 n.). In the modern idol the rigid conservatism of the race limits artistic invention as the forms become stereotyped; and the growth of æstheticism has exercised little influence on the development of the Hindu image. (For the development of the Buddha images, see Shway Yoe, *The Burman*, i. 237.)

The image may be regarded in two aspects: as a symbol merely bringing close to the sense the spiritual idea of divinity, and serving to stimulate the prayerful thought of the worshipper; or it may be venerated as the indwelling abode of the divinity, in which he habitually resides, or into which, by spells and blood-offerings, he may be compelled to enter' (Farnell, *Evolution of Religion*, London, 1905, p. 42 f.).

The first is the view of orthodox Brāhmanism, which corresponds with the apology for anthropomorphism given by Platonists like Dion or Maximus of Tyre.

The justification lies in the vast gulf which separates the remote, ineffable, and inconceivable purity of God from the feebleness and grossness of man. Few are they who can gaze in unaided thought on the Divine splendour unveiled. Images, rites, and sacred myth have been invented by the wisdom of the past, to aid the memory and the imagination of weak ordinary souls. The symbols have varied with the endless variety of races. Animals or trees, . . . or the miracles of Pheidias in gold and ivory, are simply the sign or picture by which the soul is pointed to the Infinite Essence which has never been seen by mortal eye or imaged in human phantasy' (Dill, 394 f.). 'Idolatry is in fact nothing more than a representation of the abstract by the concrete, of remote by proximate, and of the principal by the agent.' No man on earth 'can conceive of infinities like time, space, or God with the same vividness as that of a finite object' (Shridhar V. Ketkar, 48; and cf. the apology for idolatry by an orthodox Hindu [*Census Report Travancore*, 1902, i. 201 ff.]).

In the same way, the Buddhist defends the use of images as 'a means to the pious of localising their feelings and concentrating their thoughts on the supreme model' (Shway Yoe, i. 221, 227). This view, however, is not that of the masses of Hindus. They regard the image as being, for the time, occupied by the deity. When the image of Durgā is installed at the Durgā-pūjā festival, the priest makes this invocation:

'O goddess, come and dwell in this image, and bless him that dedicates it.' Then, naming the person on whose behalf the rite is being performed, he touches the eyes, lips, forehead, cheek, and other parts, saying: 'May the soul of Durga long live in this image!' (S. O. Bose, *The Hindus as they are*, Calcutta, 1881, p. 102).

In Nepāl, while the idol of Grāmadevī Jayabāgheśvari is being re-painted, the spirit of the deity is extracted and kept in a jar until the work is finished, when it is restored to its abode (Wright, *Hist. of Nepāl*, 127). The same idea, in a grosser form, appears in the degraded northern Buddhism, when internal organs made of dough or clay are inserted in the larger images; in those most highly valued, precious stones, filings of the nobler metals, consecrated rice, scrolls containing the Buddhist creed, texts, and sacred relics are placed (Waddell, *Buddhism of Tibet*, 329).

The luxuriance of modern idol-worship is best observed at the more important holy places.

In 1868, Sherring estimated that there were 1454 temples in Benares; and this enumeration did not include the minor shrines and wall-niches, each containing one or more images, which are found everywhere in the streets. 'These inferior shrines were, on one occasion, by a curious contrivance immensely increased; and yet the increase could hardly have been generally perceived. Rājā Mān Sīdh of Jeypore, wishing to present a hundred thousand temples to the city, made the stipulation that they were all to be commenced and finished in a single day. The plan hit upon was to cut out in blocks of stone a great many tiny carvings, each one representing a temple. The separate blocks, on the work being completed, exhibited from top to bottom, and on all sides, a mass of minute temples. These blocks are still to be seen

in various parts of Benares. . . . In regard to the number of idols of every description actually worshipped by the people, it certainly exceeds the number of people themselves, though multiplied twice over; it cannot be less than half a million, and may be many more' (*Sacred City*, 42 f.). **OL IMAGES AND IDOLS (Indian).**

39. The beliefs of the peasant classes.—The primitive animistic or pre-animistic beliefs (see § 7) have been to some extent obscured or modified by the predominant Brāhmanism among the menial races of the plains, and in a less degree among the forest tribes. The Hindu villager, like the Jew at the period of the growth of Christianity (W. R. Cassels, *Supernatural Religion*, London, 1902, p. 57 ff.), lives in an atmosphere peopled by spirits, generally malignant, capable of being repelled or conciliated by sacrifice, spells, incantations, amulets, and other magical or semi-magical means.

'A belief in every kind of demoniacal influence has always been from the earliest times an essential ingredient in Hindu religious thought. . . . Certainly no one who has ever been brought into close contact with the Hindus in their own country can doubt the fact that the worship of at least ninety per cent. of the people of India in the present day is a worship of fear' (Monier-Williams, *Brāhmanism and Hinduism*, 4, 230).

The Hindu villager has no conception of the reign of law in the natural world. The occurrence of miracles is a matter of daily observance. He appeals to the minor rather than to the greater gods, because the latter have, in his belief, in a large measure lost touch with humanity, and no longer interest themselves in the petty details of his ordinary life ('Magna di curant, parva neglegunt' [*Cic. de Nat. Deor.* ii. 66, 167]). In all matters of practice, custom is conceived as a moral rule, which decides what is right and what is wrong. 'The custom handed down in regular succession since time immemorial . . . is called the conduct of virtuous men' (Manu, ii. 18; cf. Westernarek, *MI* ii. 161 ff.). The rites connected with the cult of this vaguely conceived spirit agency are generally performed in the house or at some spirit-haunt, not at a regular shrine or temple. They are usually done by the head of the household, or, when the services of a regular officiant are needed, he is not a Brāhman of the higher class, but a hedge priest drawn from the inferior Brāhman ranks or from one of the menial or forest tribes, the members of which, being assumed to be autochthones, are supposed to be better acquainted with the local spirits and more skilled in repelling or conciliating them than the newer comers. Sometimes the conduct of the rites is entrusted to women, whose greater susceptibility to spirit influence is believed to qualify them for such duties. While the men often worship, with more or less regularity, the official god or gods of their choice, the propitiation of village deities or spirits is often left to women, who are much more conservative than the other sex in matters connected with religion.

It has been suggested that, as in the case of the Greek goddesses, the cult of the female powers or Sāktis has its origin in the matriarchate—a view advocated by J. E. Harrison (*Proleg.* 260 ff.), and vigorously opposed by Farnell (*HJ* ii. [1904] 825 f.). It is possible that mother-right once widely prevailed in India, as is indicated by the common rule of inheritance through females, the position of the maternal uncle at marriages, and the priestly functions assigned to the sister's son. But there seems no good reason for connecting the prevalence of Sāktism with mother-right. In N. India the daily worship of the peasant is confined to bowing to, or pouring out a little water in the name of, the sun on rising, as the Greek prayed to Helios (*CGS* iv. 139); to making reverence to the deity or deities embodied in the village-shrine as he passes it on his way to work; to naming Śiva or

one of the incarnations of Viṣṇu when he feels piously inclined. For the rest, his religious wants are sufficiently provided for by an occasional visit to a sacred river or place of pilgrimage, where he bathes, visits the chief temples, and feeds a Brāhman or two; to the propitiation of his deceased ancestors; to attendance at village or local festivals, where the religious service is only an adjunct to trade or amusement. There is little or no domestic worship save the rites at birth, marriage, and death, the first two being discharged by his family chaplain (*purohit*), the third by some degraded Brāhman who acts as funeral priest. Occasionally a pious man hires a Brāhman and invites his friends to attend a recitation (*kathā*) of one of the sectarian Scriptures. Such rites involve considerable expense, which the thrifty peasant avoids as far as he can consistently with the desire to conciliate his gods and escape the contempt of his neighbours. Among the trading classes it is the custom at the close of life to devote considerable sums to the erection of a temple in their native village or at some sacred place. The peasant may thus seem to be lax in the discharge of his religious duties. But this is not actually the case, because all his ordinary social rites are performed from a motive which to him is religious, that is to say, in obedience to the laws of the caste to which he belongs. It may be said that there are few races among whom religion, as they conceive it, forms a larger part of their daily life. In the eastern Panjāb he

'has practically no belief in the transmigration of souls, but he has a vague idea that there is a future life, in which those who are good in this world will be happy in a heaven, while those who are bad will be wretched in a hell. His devotional offerings to demons, saints, and godlings are meant rather to avert temporal evils, or secure temporal blessings, than to improve his prospects in the life to come. . . . He believes vaguely that it is good for him to meditate on the deity, and to show that he is not forgetting him he mutters *Rām! Rām! Rām!* or repeats the name of some other Hindu god when he gets up in the morning, and if he is piously inclined, at other times also, in season and out of season. Notwithstanding all the numerous saints and deities whom he endeavours to propitiate, he has a vague belief that above all there is one Supreme God, whom he calls Nārāyaṇ or Paramēśvar, who knows all things, and by whom all things are made, and who will reward the good and punish the bad in this life and in the life to come' (Wilson, *Settlement Report of the Sirsa District*, Lahore, 1882, p. 133).

In Gujarāt, as the peasant wakes, he mutters the name of his patron deity, Mahādeva or Śiva, Thākurji or Viṣṇu, Ambābhavāni the Mother-goddess; and if he knows a little Sanskrit he repeats the verse: 'I call to mind in the morning the Lord of deities, the Destroyer of the fear of death!' If he is a layman under a special vow, he chants the praises of his personal deity in a verse from some vernacular poet, or meditates upon his attributes and perfections. If he is a Brāhman or man of high caste, he always bathes, invokes the sun, and pours water in his name, and, thrusting his right hand into an ornamented bag, known as the 'cow's mouth' (*gaumukhī*), he runs over his rosary, repeating the ancient Gayatrī, or prayer to the sun. His house oratory contains images of Bālmukund or the infant Kṛṣṇa, the *śālagṛāma* ammonite representing Viṣṇu, figures of Śiva, Gaṇeśa, Durgā-Devī, Sūrya the sun-god, Hanumān the monkey-god, and others, thus showing the extreme eclecticism of his beliefs. These he washes, dresses, crowns, and adorns with flowers and other offerings, and, if truly pious, he performs the sixteen rites of worship, including all modes of service to the deities, and ending with the circumambulation of the images and a hymn of praise (Forbes, *Rās Māla*, pp. 552 f., 596 f.).

In Berār the peasant is both a polytheist and a monotheist, believing in one God, to whom the others are subordinate. His special deities are the village Māruti or the monkey-god who is the village guardian, and his family tutelary deities. His

chief religious duty is to make pilgrimages, but these are not compulsory. All life he more or less regards as sacred. He is tolerant, regarding every religion as true and good for him who is born to it.

'He believes that a very strict account has been kept of his good and bad actions; and that he is as sure of getting his reward as his punishment, very often in this world, but generally after death. His belief in a region beyond the grave is very firm. There he will meet with his deserts, and after enjoying the bliss of heaven or enduring the tortures of purgatory, he will be sent back to this world in the incarnation of a man or a beast, according as he has made good or bad use of his time in this life' (*Census Report Berar*, 1901, i. 64 f.).

For similar beliefs in Madras, see J. E. Padfield, *The Hindu at Home*, 1896, chs. iii. and iv.; for Bengal, *Census Report*, 1901, i. 186 ff.; for the Panjāb, Ibbetson, *Punjab Ethnography*, ch. iv. pt. ii.

40. The ethics of Hinduism.—The influence of Hinduism on life and character is a subject too wide to receive detailed treatment here, and it has been elsewhere discussed (*ERE* v. 496 ff.). The supernatural beings of savage belief frequently display the utmost indifference to questions of worldly morality; and in the early stages of the evolution of public justice, the community interferes only on supernatural grounds with actions which are regarded as endangering its own existence (Westermarck, *MI* i. 663, 709 f.; L. T. Hobhouse, *Morals in Evolution*, London, 1906, i. 119). In other words, sin is regarded as a social or ritual offence, not as the defilement of the individual soul. From the earliest period, it is true, the evil of sin is fully recognized, and its removal is stated to be the work of the gods; but the first mention of the public confession of sin appears in Buddhist literature (Hopkins, 42, 60, 65, 329). It was fully developed under the Bhāgavata monotheism (see *ERE*, vol. ii. p. 544; and cf. EXPIATION AND ATONEMENT [Hindu], vol. v. p. 659). It is also true that the official Hinduism of the sacred books 'cannot be charged with indifference to moral ideals. Its sacred literature teems with reflections on the vanity of human life, the glory of renunciation, the necessity of good works, the duty of sympathy with all living things, the beauty of forbearance, the hatefulness of revenge, and the power of man to determine his own fate by right conduct. It appeals both to the intellect and to the emotions, and it derives a certain measure of support from the penalties imposed by the caste system' (Risley, *The People of India*, 235).

Such is the official view of the Brāhmanical teachers, who share with the lay members of the community a craving for moral formulas and programmes, and an incapacity for applying them in practical life. Much of this teaching is thus merely idealistic, and is beyond the comprehension and above the moral standard of their disciples. Much, again, of this official morality is open to criticism. Thus, though a regard for truth is taught in Hindu literature from the earliest period, Manu admits that false evidence given with a pious motive does not involve the loss of heaven (F. Max Müller, *India, What can it teach us?* 64 ff.; Manu, viii. 105 f., 112). At the same time, the lawgiver reprehends perjury in certain cases (Manu, viii. 97–101, xi. 57). On the other hand, the assertion of Dubois (p. 171) that neophytes, as a part of their training, are instructed in the art of lying, has no foundation, at the present time at least. A recent native writer remarks that the chief ethical defect in the Hindu Scriptures is that penance is regarded as an atonement for sin.

'Every Hindu believes that he will be able to wash off his sins by performing a penance or by giving *dān* [gifts] to Brāhmins, who have proclaimed that pardon or even merit will be attained through their agency. . . . It leads to the monstrous belief that evil deeds, of whatever enormity, can be atoned for and expiated by money' (*Census Report Baroda*, 1901, i. 135).

The belief, again, that morals depend not on religion, but on the relations of family, caste, or tribe, tends to produce dangerous results.

'Murder is an offence against caste involving severe penalties. But there are no caste penalties for forgery, perjury, cheating, or theft, and this is perhaps the reason why Hindus frequently find it difficult to realize that there is anything morally wrong in this category of offences' (*O'-neus Report Central Provinces*, 1901, i. 81).

The theory, again, that Brāhmins are above all social and moral law saps the foundations of morality. Probably the most effective rule of morals for the average Hindu is the Indian Penal Code, which, for the first time in the history of the race, has carefully defined all criminal offences, and has assigned a fitting punishment for each. There is no doubt much indecency in the outward observances of Hinduism—in temple carvings, the original purpose of which was probably to repel evil spirits, but which have now ceased to subserve this purpose in the eyes of most worshippers; in some religious processions; in the institution of the Devadāsī dancing-girls, attached, like the *hierodouloi* (q.v.) of some Greek shrines, to a few of the greater temples. But much of this indecency of word and act is common to all Eastern races, and is not necessarily pornographic among people who have never learned, like those of the West, to treat normal and abnormal sexual questions and relations with reticence. It is this condition of things, sufficiently apparent to any competent observer of native life and manners—not to speak of the secret obscenities which disfigure much of the Śākta and Vaiṣṇava cultus—which has called forth the unmeasured criticism of missionary writers. But it is certain that, if the majority, or even any considerable portion, of the Hindu population were infected with the pollutions against which writers like Ward and Dubois have justly protested, society ere now would have collapsed through its own corruption, just as the Roman world, had it been as debased as it is painted by Juvenal and Martial, must have speedily perished through sheer rottenness. The truth probably is that such vices have always infected only a minority of the people. At the same time the real influence of Hinduism on public morals is small. An experienced missionary writes:

'As far as I can gather from observation and conversation with the people [of Bengal], by their acts of worship there is no attempt after real purity of heart, the conquering of an evil nature, and a desire to please God in return for His goodness. Men sin at the shrines as they do in their houses, and on their return as before their visit. Nor is it thought anything remarkable that this should be so, excepting perhaps in the case of those who have gone to some sacred place in the hope of ending their days there. In cases of this kind I have heard of a higher, purer life being attempted, and of the expectation of this by those who know them. But certainly there is neither the attempt nor expectation of this in the minds of the large majority of the people who go on a pilgrimage. It is not that they may be made pure, but that, by an act of penance, they may give an equivalent to the gods for their sins' (Wilkins, *Modern Hinduism*, 313).

But it must not be forgotten that, behind the immoral beliefs which disfigure some aspects of Hinduism, there is much good sense, benevolence, self-control, self-abnegation, active charity, and kindness which are characteristic of Hindu home life, and are particularly noticeable in those parts of the country where the institution of the joint family prevails.

Hinduism, then, in its practical aspect, exercises little influence over morals. As Farnell, discussing the Dionysiac cultus, remarks, 'As the highest flight of religion rises above mere morality, so a religion may be most powerful in its appeal, and yet remain directly non-moral' (*CGS* v. 238; cf. F. B. Jevons, *An Introduction to the Study of Comparative Religion*, New York, 1908, p. 215 ff.). In default of a well-defined religious sanction for morals, Hinduism has made the ordinary sinner responsible to the caste council for breaches of the moral or social law as interpreted by the elders of the caste. The only agency which really provides moral teaching is the *guru*, or religious preceptor.

He whispers into the ear of the neophyte the secret formula which is to be his guide during life, and he thus admits him to caste privileges and responsibilities. In after life the influence of such teachers is often valuable. In Bengal the *guru* ranks higher than in the Panjāb or the United Provinces, where he seldom makes official progresses to visit his disciples and inquire into questions of morals and caste discipline (Buchanan, *Eastern India*, London, 1838, ii. 751; Wilkins, 26 ff.). In S. India he is an important personage, vested with wide powers of control and discipline over the members of the sect of which he is the leader (Buchanan, *Journey through Mysore*, London, 1807, i. 144 f.; Nelson, *Manual of Madura*, Madras, 1868, pt. iii. p. 160 ff.; Dubois, 123 ff.).

41. The lack of organization in Hinduism.—Hinduism thus provides a characteristic example of the primitive, unorganized polytheisms—an example probably unique among the races of the modern world. This is partly due to the peculiarities of the Eastern temperament, the devotion to mystical speculation, and the incapacity for political organization, which are obvious throughout the history of the Hindu people. It extends over an enormous area, inhabited by many races, all differing in origin, language, and character. The absence of a great and permanent Hindu empire, except under Aśoka and Harṣa, with a single capital city as a centre of religious and political life, prevented the consolidation of the local cults into a State religion, like that of Babylonia or Egypt. This condition of things has been often compared (as by Lyall, i. 159) with Gibbon's account of the state of religion in the Roman Empire (*Decline and Fall*, ed. Smith, i. 165 ff.):

'The various modes of worship which prevailed in the Roman world were all considered by the people as equally true; by the philosopher as equally false; and by the magistrate as equally useful.' Like the Brāhman Vedāntist, 'the devout polytheist, though fondly attached to his national rites, admitted with implicit faith the different religions of the earth. Fear, gratitude, and curiosity, a dream or an omen . . . perpetually disposed him to multiply the articles of his belief, and to enlarge the list of his protectors.' The modern semi-educated Hindu resembles 'the ingenious youth . . . alike instructed in every school to reject and to despise the religion of the multitude.' There is, again, a philosophic class who, 'viewing with a smile of pity and indulgence the various errors of the vulgar, diligently practised the ceremonies of their fathers, devoutly frequented the temples of the gods.' Lastly, the Anglo-Indian magistrates 'know and value the advantages of religion, as it is connected with civil government.'

Hence Hinduism has never prepared a body of canonical Scriptures or a Common Prayer Book; it has never held a General Council or Convocation; never defined the relations of the laity and clergy; never regulated the canonization of saints or their worship; never established a single centre of religious life, like Rome or Canterbury; never prescribed a course of training for its priests. This is not due to the fact that war, or civic tumult, or foreign domination prevented the growth of institutions of this kind; but simply to the fact that all such action is essentially opposed to its spirit and traditions. Added to this is the prevailing tendency towards pessimism.

Lyall (ii. 28), writing under the guise of an orthodox Vedāntist, says: 'The innermost religious idea of the Hindus has for ages been the supreme unimportance, if not the nothingness, of this particular stage of existence, and they have lapsed into a deep indifference for humanity at large, a feeling that is probably as much the product of their environment as are their dark skins and physical delicacy. The lords of life may be pleasure and pain; but though we have deified them under various symbols, we have always sought to escape from the servitude of their dominion, believing that the soul's true liberty lay beyond their realm.'

The links which bind together this chaotic mass of rituals and dogmas are, first, the general acceptance of the Veda, representing under this term the ancient writings and traditions of the people, as the final rule of belief and conduct; secondly, the recognition of the sanctity of the Brāhman Levite

caste as the custodians of this knowledge and the only competent performers of sacrifice and other ritual observances, though the respect paid to them varies in different parts of the country (§ 10 (b)); thirdly, the veneration for sacred places; fourthly, the adoption of Sanskrit as the one sacred language, which plays a part like Latin in Europe during the Middle Ages; fifthly, the general veneration for the cow (see W. Crooke, 'The Veneration of the Cow in India,' *FL* xxiii. [1912] 275 ff.).

42. The future of Hinduism.—The progress of Hinduism, as compared with that of the other religions of India, does not readily lend itself to statistical analysis. In recent enumerations of the people, the figures have been obscured by exceptional outbreaks of famine, plague, and other epidemic diseases; and, as has already been observed, it is practically impossible to discriminate the Animists from the general body of Hindus.

During the twenty years preceding the Census of 1901, the recorded proportion of Hindus to the total population fell from 74.32 to 70.37 per cent in the Empire as a whole; from 72.03 to 68.6 in the British provinces; from 82.99 to 77.56 in the Native States. On the other hand, in the whole Empire the percentage of Muhammadans has in the same period risen from 19.74 to 21.22 per cent; that of Christians from .78 to .99 per cent.

The result is thus slightly unfavourable to Hinduism. But it is probable that the Hindu, owing to his vegetarian diet, more than the followers of other religions, is exposed to the exceptional disasters to which reference has been made. At the same time, there has been a notable increase of vigour in Hinduism, owing to its connexion with an active political agitation.

*In late years the strength of the Hinduising movement has been greatly augmented by the improvement of communications. People travel more, pilgrimages can be more easily made, and the influence of the orthodox section of society is thus more widely diffused. Railways, in particular, which are sometimes represented as a solvent of caste prejudices, have in fact enormously extended the area within which these prejudices reign supreme' (Risley, *The People of India*, 178 f.).

The future development of Hinduism must remain purely a matter of speculation, and the materials on which a reasonable forecast can be based are scanty and uncertain. Hinduism meets the needs of two classes of the people: one, the small intelligent class which is accessible to foreign influences, and at the present day is easily affected by that wave of unrest which has troubled the usually calm surface of the Eastern world; the other, the mass of the population, chiefly rural, uneducated, immersed in the constant struggle for existence conditioned by their environment, strongly conservative in their views, and caring little for the new theological and political controversies, which are mainly confined to the residents in the towns and great cities. For the former, Hinduism admits the new ideas and principles which are the result of Western culture, and enforces no rigid standard of orthodoxy. For the latter it provides the traditional form of belief, largely animistic in spirit, and well adapted to the intellectual capacity of an ignorant, superstitious body of worshippers. It was at one time the fashion to assume that the fresh Western learning, and increasing home and foreign travel, would inevitably sap the power of caste, and with it the religion to which it is so closely linked. But this view loses sight of the extreme immobility of the masses of the people, who are as little disposed to leave their crowded hamlets in search of novel modes of livelihood as to abandon their ancestral beliefs and ritual, and seek the protection of deities other than the gods of their native village. On the other hand, the conditions of the country prevent any uniformity of belief; and, until a general *lingua franca* is established, it is impossible that the diverse elements in the people can be welded into a single whole.

Hinduism is obviously confronted with serious difficulties, due to the spread of new beliefs and theological speculation. The most obvious parallel is the position in the Roman Empire during the early centuries of our era, when the official paganism was assailed by Christianity, Neo-Platonism, and sundry foreign cults. It was not till the close of the 4th cent. that paganism finally succumbed. In India the movement has already extended over a much longer period, and the process has been much more protracted. It is now some twelve centuries since the attack of Islam began, and Hinduism shows no obvious signs of weakness. It possesses wonderful powers of adaptation to novel conditions. It has held its ground for long ages against anarchy and persecution; it has proved victorious against the assault of Buddhism. If it yields, it yields very slowly before Muhammadanism and Christianity. Even if in the present conflict it has to surrender much, it is possible that it may emerge from the struggle purified and reinvigorated. The question has been thus treated by A. C. Lyall:

'Taking things as they are now, and looking upon the actual state and movement of religions in India, an eye-witness would still be justified in affirming that this religion, although powerfully affected by social and political changes so strong and sudden that they would try the constitution of any national creed, is nevertheless not yet dead, nor dying, nor even dangerously ill; and, moreover, that so far from it being a non-missionary religion, it converts more than all the other Indian faiths. . . . Although polytheism still prevails and multiplies throughout the land, and although the Brahmanic system, deep-rooted and wide-spreading, shows no signs of vital decay, one may nevertheless venture to anticipate that the end of simple paganism is not far distant. . . . Though it would be most presumptuous to attempt any kind of prediction as to the nature or bent of India's religious future, yet we may look forward to a wide and rapid transformation in two or three generations, if England's rule only be as durable as it has every appearance of being. It seems possible that the old gods of Hinduism will die in these new elements of intellectual light and air as surely as a net full of fish lifted up out of the water; that the alteration in the religious needs of such an intellectual people as the Hindus, which will have been caused by a change in their circumstances, will make it impossible for them to find in their new world a place for their ancient deities. Their primitive forms will fade and disappear silently, as witchcraft vanished from Europe, and as all early modes of thought and symbolism become gradually changed. In the movement itself there is nothing new, but in India it promises to go on with speed and intensity unprecedented' (Lyall, *Asiatic Studies* 2, i. 124, 37, 319).

Regarding this forecast, it may be urged that too little stress has been laid upon the numerical weakness of the educated or semi-educated classes, and upon the immobility and ignorance of the rural population; and that the possibility of the rise of some great religious teacher, a new Buddha or Saṅkara, has not been sufficiently considered.

Another writer, N. Macnicol (*IJ* vi. [1907] 63 ff.), has discussed the same question from the standpoint of Christianity. He points out that

'the two features of Hinduism that have been emphasised as peculiarly characteristic of it, its lack of articulation as a system of belief, and its adaptability to new circumstances, have been possible to it because of another peculiarity which is a main source of its strength and yet is likely to prove a fatal weakness. The danger of anarchy is avoided by reason of the fact that Hinduism is, at the same time, a fully organised and articulated social system. However frequently and completely the spiritual cabinet may change, the permanent department of caste carries on the government and maintains continuity. In this lies its strength to resist assaults upon the reasonableness or the truth of its doctrinal tenets. However it may be stricken and overcome as a system of truth, so long as it retains its authority as a social system it is unconquered and presently its vigour revives. But in this also lies a fundamental weakness, for time will at the last wear out even the most tenacious social system that rests on privilege and prejudice; and if, by that time, the spiritual content of Hinduism has not found a fitter tenement, the one may perish with the other' (p. 65). . . . 'This religion is striving, with a success that is certain to be increasing and enduring, to slough its superstition and to recover and conserve the spiritual contents of its ancient heritage' (p. 66). But he urges that 'no thoughtful observer, whether Indian or European, will deny that the main factor in producing the movement of thought and the recombination of beliefs in the country is Christianity' (p. 67). He refers specially to the new Vedāntism,

'which has overshadowed the old Theistic churches, like the Brahma and Arya Samaj.'

There are three main factors in securing Hinduism in the crisis which is now imminent. The first is the general acceptance of the system of caste, with the social rights which it confers, and the social duties which it enforces. This system, indefensible though in theory it may be, shows at present no signs of decadence. On the contrary, we find that those groups which possess claims to social respect are most tenacious in asserting and maintaining them; that those in the second rank, that is, below the 'twice-born' classes, are endeavouring to claim equality with them; and that even the depressed and despised races, like the Pariah of the South and the sweeper of the North, are anxiously seeking an escape from their present position, and are quite prepared to join the caste-system whenever its doors are opened to them. The second force is the universal recognition of the power of *dharma*—a term which connotes much, but may be roughly explained as personified social law. The third is the influence of women: 'without their support, both Brahmanism and Hindûism would rapidly collapse' (Monier-Williams, 388).

As regards the influence of foreign creeds, Islâm wins adherents by its clear-cut monotheism, and its democratic constitution, which, to a large extent, frees the convert drawn out of the lower ranks of society from the bondage of caste. Its religious ideals—action as opposed to hypnotic contemplation—its practical spirit which allots a single life to man and bids him make the best of it, its repudiation of the doctrines of *karma* and transmigration, commend it to the vigorous and progressive sections of the community. It is, again, highly eclectic, offering shelter to the fanatical Wahhâbî, who is a puritan in spirit, while it also receives the low caste convert, whose animistic preferences are met by that worship of saints, their tombs, and relics, which is an abomination to the Wahhâbî. It is thus rapidly increasing, not so much as the result of a regularized religious propaganda, for which its lack of organization renders it incompetent, as by a process of natural growth, due to the liberality of its marriage rules and the absence of restrictions in the matter of diet.

Christianity, in the same way, offers a new hope to the Animist, haunted by a host of greedy, malignant demons. Its future progress depends upon the regulation of its missionary methods—a question which cannot be considered here. In the near future it will probably be obliged to modify its dogmas to suit the new environment, many competent observers, for instance, admitting that the Indian Christianity of the future will necessarily take a Vedântic colouring. The discussion of missionary methods involves many tangled problems; as, for example, whether it is possible or advisable to revert to the type of propaganda employed with such striking, but only temporary, success by St. Francis Xavier, and, with less sensational but perhaps more enduring results, by Dubois, who deliberately accepted the rôle of the *yogi* and followed the ascetic rule of life; whether educational and philanthropic work is more or less effective than a policy of active proselytism; whether it is possible for the missionary to combine with his other activities the study of Hindu philosophy and dialectics and the investigation of the animistic cults of the forest and menial tribes, among whom the prospects of success are most favourable; whether in the future the morals and modes of thought of professing Christians will assist or impede the spread of Christianity.

On questions such as these and others raised in the course of this article it is presumptuous to

speculate, because the religious situation is at present in a condition of instability, and is liable at any time to be modified in unexpected directions. We need a more sympathetic attitude towards the measures of reform which are now in progress, and a wider knowledge of the working and development of the system of caste, of asceticism and monasticism, of the ritual of temple worship and domestic rites, of abnormal cults, such as those of the Śāktas and Vāṣṇavas, of the beliefs and practices of the forest, menial, and nomadic tribes. In all these departments the information at present available is fragmentary, incomplete, and often misleading. Such inquiries will throw much light on the darker places of Hinduism, and may stimulate the work of the reformers. Above all, we must endeavour to rid ourselves of the prejudices natural to Western inquirers in attempting a detailed examination of this ancient and highly developed polytheism. In India we possess a greater and more important storehouse of information for the study of comparative religion than is perhaps available in any other region of the world. But its secrets will remain hidden except to those who possess the only key to its treasures—the feeling of sympathy which will encourage their guardians to disclose the mysteries to foreign inquirers. To quote the words of Dill in relation to the decaying paganism of Rome:

'The gulf which separates us from the world of heathen imagination is so wide, and old associations in matters of religion are so powerful, that we may easily do injustice to the devout sentiment of paganism. Grotesque or barbarous religious symbols, even those tainted in their origin with the impurity attaching to nature-worship, often sloughed off their baser elements, and with the development of a more sensitive morality, and a higher conception of the divine, may have been the vehicles of a real religious emotion. What the worshipper will find in a worship depends greatly on what he brings' (*Roman Society in the Last Century of the Western Empire*, London, 1898, p. 84).

LITERATURE.—Under the various articles dealing with the many phases of Hinduism a special bibliography is given, and many of the more important books have been quoted throughout the article. Here it is necessary only to name those works which are useful for a general survey of the subject or throw light on special topics.

1. GENERAL ACCOUNTS OF ONE OR MORE ASPECTS OF HINDUISM: L. D. Barnett, *The Heart of India*, London, 1900, *Brahma-Knowledge*, do. 1907, *Hinduism*, do. 1906; A. Barth, *The Religions of India*, Eng. tr., London, 1892; H. T. Colebrooke, *Essays on the Tel. and Philol. of the Hindus*, do. 1858; J. A. Dubois, *Hindu Manners, Customs, and Ceremonies*, ed. H. K. Beauchamp, Oxford, 1906; P. Deussen, *Philos. of the Upanishads*, Eng. tr., Edinburgh, 1900; H. J. Eggeling, 'Hinduism,' in *EBR* xiii. 501 ff.; J. N. Farquhar, *A Primer of Hinduism*, Oxford, 1912; R. W. Frazer, *Lit. Hist. of India*, London, 1898; E. W. Hopkins, *The Religions of India*, do. 1890; C. N. Krishnaswami Aiyer, *Sri Madhwa and Madhwaism*, Madras, n.d.; C. N. Krishnaswami Aiyer and Pandit Sitanath Tattvabhushan, *Sri Sahakarcarya: his Life and Times, his Philosophy*, n.d.; M. M. Kunte, *The Vicissitudes of Aryan Civilization in India*, Bombay, 1880; A. C. Lyall, *Asiatic Studies*, London, 1907, 'Hinduism,' in *Rel. Systems of the World*, do. 1889; A. A. Macdonell, *Hist. of Skr. Lit.*, do. 1900, *Ved. Mythol. (GIAF)*, Strassburg, 1897; A. A. Macdonell and A. B. Keith, *Vedic Index of Names and Subjects*, London, 1913; J. D. Mayne, *Hindu Law and Usage*, do. 1878; J. Murray Mitchell, *Hinduism Past and Present*, do. 1897; M. Monier-Williams, *Hinduism*, do. n.d., *Brahmanism and Hinduism*, do. 1891, *Ind. Windom*, do. 1876; J. Morrison, *New Ideas in India during the 19th Cent.*, do. 1907; J. Muir, *Orig. Skr. Texts*, do. 1858-72; F. Max Müller, *Chips from a German Workshop*, do. 1867-75, *Contrib. to the Science of Mythol.*, do. 1867, *Hist. of Skr. Lit.*, do. 1856, *Lects. on the Origin and Growth of Religion, as illustrated by the Religions of India (H.L. do. 1878), Selected Essays on Language, Mythology, and Religion*, do. 1881, *India, What can it teach us?* do. 1883; Guru Prasad Sen, *Introd. to the Study of Hinduism*, Calcutta, 1893; Shridhar V. Ketkar, *An Essay on Hinduism, its Formation and Future*, London, 1911; T. E. Slater, *The Higher Hinduism in relation to Christianity*, do. 1902; W. Ward, *View of the Hist., Lit., and Relig. of the Hindus*, do. 1817; A. Weber, *Hist. of Ind. Lit.*, Eng. tr., London, 1878; W. J. Wilkins, *Modern Hinduism*, do. 1887, *Hindu Mythology, Vedic and Puranic*, Calcutta, 1882.

2. TRANSLATIONS OF THE SACRED BOOKS OF THE EAST: see esp. F. Max Müller, *The Upanishads*; G. Bühler, *Sacred Laws of the Aryas, Institutes of Manu*; J. Jolly, *Institutes of Vyāsa*; K. T. Telang, *Bhagavadgītā*; J. Eggeling, *Satapatha Brāhmaṇa*; H. Jacobi, *Jaina Sūtras*; G. Thibaut,

Vedānta Sūtras—all published in the Oxford Series, 1879-1900. To these may be added M. Haug, *The Atareya Brahmanam*, Bombay, 1863; Kesari Mohan Ganguli, *Mahābhārata*, Calcutta, 1893-96; R. T. H. Griffith, *Ramayana*, Benares, 1895; F. S. Growse, *Rāmāyana of Tulsi Dās*, Allahabad, 1877-80.

iii. *GENERAL HISTORIES OF INDIA*: Mountstuart Elphinstone, *Hist. of India*, London, 1874; H. M. Elliot, *Hist. of India*, as told by its own historians, ed. J. Dowson, do. 1867-77; V. A. Smith, *Early Hist. of India*, Oxford, 1908, *Āśoka*, do. 1909, *History of Fine Art in India and Ceylon*, do. 1911; the series of tr. of Gr. and Lat. authors describing India, by J. W. McCrindle, *Anc. India as described by Megasthenes and Arrian*, Calcutta, 1877, *The Commerce and Navigation of the Erythraean Sea*, London, 1879, *Anc. India as described by Ptolemy*, do. 1885, *Anc. India as described in Classical Literature*, do. 1901, *The Invasion of India by Alexander the Great*, 1st ed. 1893, 2nd ed. 1896. See also tr. of the travels of the Buddhist pilgrims—*Pa-hien*, by J. Legge, Oxford, 1886; *Sik-yu-ki, Buddhist Records of the Western World*, by S. Beal, London, 1884. Other important books on early Buddhism are: A. Cunningham, *The Bhilsa Topes*, London, 1854, p. 164, *Mahābhūti*, do. 1892, *The Stupa of Bharhut*, do. 1879; T. W. Rhys Davids, *Buddhism*, do. 1878, *Buddhism, its Hist. and Lit.*, New York, 1896, *Origin and Growth of Religion, as illustrated by Indian Buddhism* (UL, London, 1881), *Buddhist India*, do. 1903. On Jainism: J. G. Bühler, *The Indian Sect of the Jainas*, ed. J. Burgess, London, 1903; U. D. Barua, *History and Literature of Jainism*, Bombay, 1909; H. Warren, *Jainism*, Madras, 1912.

iv. *GENERAL TREATISES ON THE ETHNOLOGY OF INDIA*: M. A. Sherring, *Hindu Tribes and Castes in Benares*, Calcutta, 1872-81; H. H. Risley, *TC*, do. 1891-92; D. C. J. Ibbetson, *Punjab Ethnography*, do. 1883; J. Wise, *Notes on the Races, Castes, and Trades of Eastern Bengal*, London, 1883; E. T. Dalton, *Deser. Ethnol. of Bengal*, Calcutta, 1872; W. Crooke, *TC*, do. 1896, *PR*, do. 1896; E. Thurston, *Castes and Tribes of S. India*, Madras, 1909, *Ones and Superstitions of Southern India*, London, 1912; H. A. Rose, *A Glossary of the Tribes and Castes of the Punjab and North-West Frontier Province*, Lahore, II (all published 1911); A. Baines, 'Ethnography (Castes and Tribes),' in *GIAP*, Strassburg, 1912.

v. *THE SERIES OF CENSUS REPORTS*, of which the most useful are: *India*, by J. A. Baines, Calcutta, London, 1893, E. A. Gait and H. H. Risley, 1903, the latter revised and reprinted in *as The People of India*, Calcutta, 1908; *Bengal*, by C. J. O'Donnell, 1893, E. A. Gait, 1902; *Assam*, by E. A. Gait, 1892, E. C. Allen, 1902, J. McSwiney, 1912; *Punjab*, by D. C. J. Ibbetson, 1883, E. D. MacLagan, 1892, H. A. Rose, 1902, Pandit Harikishan Kaul, 1912; *Bombay*, by J. A. Baines, 1882, R. E. Enthoven, 1902, P. J. Mead and G. L. Macgregor, 1912; *Madras*, by W. Francis, 1902, J. C. Molony, 1912; *Mysore*, by T. Ananda Rao, 1903, V. R. Thyagaraja Aiyar, 1912; *Baroda*, by J. A. Dalal, 1902, Govindbhai H. Desai, 1912; *Travancore*, by N. S. Aiyar, 1903, N. Subramanya Aiyar, 1912; *North-West Frontier Province*, by C. Latimer, 1912; *United Provinces of Agra and Outh*, by E. A. H. Blunt, 1912.

vi. *VARIOUS MONOGRAPHS ON SPECIAL SUBJECTS*: J. M. Campbell, *IG*, Bombay, 1873-1901, *Notes on the Spirit Basis of Relief and Custom*, do. 1886; E. T. Atkinson, *Himalayan Gazetteer*, Allahabad, 1882-84; B. L. Rice, *Gazetteer of Mysore*, 1897, *Mysore and Coorg from the Inscriptions*, 1909; V. N. Aiyar, *State Manual of Travancore*, 1906; C. Achyuta Menon, *Cochin State Manual*, Ernakulam, 1911; *Bulletins of the Madras Museum*, ed. E. Thurston, Madras, 1897 ff.; E. Thurston, *Ethnographic Notes in S. India*, do. 1906; L. K. Anantha Iyer, *Cochin Tribes and Castes*, do. 1 (1909), II (1912); the series of monographs on the tribes of Assam: P. R. T. Gurdon, *The Khams*, London, 1907; E. Stack, *The Mikirs*, do. 1908; T. C. Hodson, *The Meitheids*, do. 1908, *The Naga Tribes of Manipur*, do. 1911; A. Playfair, *The Garos*, do. 1909; S. Endle, *The Kacharis*, do. 1911; J. Shakespear, *The Lushei Kuki Clans*, do. 1912; V. Kankasabhai, *The Tamils: Eighteen Hundred Years Ago*, Madras, 1904; H. Kern, *Manual of Ind. Buddhism* (GIAP, Strassburg, 1896); J. E. Padfield, *The Hindu at Home*, Madras, 1896; Shway Yoe (J. G. Scott), *The Burman, his Life and Notions*, London, 1882; *Gazetteer of Upper Burma and the Shan States*, Rangoon, 1900; Sarat Chandra Roy, *The Mundas and their Country*, Calcutta, 1912.

W. CROOKE.

HINGLĀJ (said to be derived from Skr. *hīṅgula*, a preparation of mercury with sulphur, vermilion; possibly, on account of the smearing of a sacred stone with red pigment, a survival of a more primitive blood-sacrifice [Tylor, *PC* ii. 164]).—One of the most famous places of pilgrimage in Baluchistan; situated in lat. 25° 30' N., long. 65° 31' E., in British Makran, on the W. bank of the Hingol river, a few miles from its mouth. The place is specially interesting inasmuch as it is the furthest western point to which Hindu polytheism extends. By Hindus it is held sacred to the goddess Pārvatī, Mātā, or Kālī, the mother-goddess in her malevolent form. The local legend

tells that after the quarrel between Śiva and Dakṣa, Viṣṇu cut in pieces the body of Umā, wife of Śiva, and that the crown of her head fell here (*Gopātha Brāhmaṇa*, Calcutta, 1872, p. 30 ff.; *Āin-i-Akbarī*, tr. Blochmann and Jarrett, do. 1873-94, ii. 313).

Like many other sacred places in the East, Hinglāj is venerated by other faiths. Muhammadans revere it as the abode of Bibi Nāni, 'the lady grandmother.' This title, as was suggested by Masson (*Narrative of a Journey to Kulāt*, 1843, p. 391), may be identified with Nanon (RV Nanā) or 2 Mac 11¹⁰⁻¹², the mother-goddess, worshipped in Syria, Persia, and Armenia, and other parts of Asia, under the titles of Anaiti, Anāa, Aneitis, or Tanais, the primeval Babylonian goddess Nanā, the Lady of the temple E-anna of her city Uruk (Erech) (*HDB* iii. 485; G. Maspero, *Dawn of Civ.*, Eng. tr.², London, 1896, p. 665 ff.; M. Jastrow, *Rel. Bab. Assy.*, Boston, 1898, i. 81, 85, 206). Scholars are now beginning to admit that there is possibly a stratum of Babylonian culture underlying the early civilization of India, either antecedent to, or possibly influencing, the Aryan or Dravidian culture, or both. This view seems to be not unreasonable. The Tell el-Amarna records disclose an extension of Bab. culture in W. Asia as early as the 12th cent. B.C., and a wave of the same culture may well have passed eastward, particularly if, as Risley (*Census of India*, 1901, i. 509 ff.) remarks, remains of buildings, irrigation works, and terraced cultivation indicate that at an early period—how early it is at present impossible to decide—Baluchistan, which now is largely desert, was a highly cultivated, thickly populated country (see HINDUISM, § 5). It is not possible to assign a date to this western extension of Hindu polytheism; but it is certain that long before the invasion of Mahmūd of Ghazni (A.D. 1001-30) the mass of the people in that region were Buddhists (H. M. Elliot, *Hist. of India*, London, 1867-77, i. 136, 147, 190, 504); and this condition of things must have existed from a very much earlier period.

This inaccessible shrine has been visited by few Europeans. The best account of it is that of Goldsmid, who explored it in 1861. Moving along the course of a stream bisecting the Hinglāj hill (3740 ft. high), he observed the place of sacrifice, a hollow in the hill smeared with the blood of animals sacrificed to the goddess, and the rocks decorated with sectarian marks (*tilak*) in a red pigment. From this place up to the temple itself many of the stones under foot were smeared with blood. About a quarter of a mile higher up the hill is the shrine itself, quite surrounded by mountain peaks. It 'boasts of no architectural magnificence or beauty. It is the sort of thing that an infantine taste for architecture would create out of wooden toy bricks. But its appearance and site are in good scenic effect.' In a cavity to the left, far deeper and more confined than the sacrifice hollow, is visible, surmounted by a long arch of pale sandstone, the so-called abode of Mari or Nāni, the presiding goddess of the place. It is a low castellated mud edifice with a rude wooden door. In the penetralia of the temple 'we found the shrine of the goddess. Two diminutive domes, one at the head and the other at the foot, of short, tomb-shaped mud erection, marked the chosen sanctum of this divinity of the Hindu pantheon. A wooden rail has been set at the front and at the sides.' This, as is the case at the shrine at Pandharpur and at other places, seems to be intended to prevent access to the holy place. 'Some rods steeped in vermilion were placed near the wall at the back. These were intended for the use of pilgrims unprovided with the wand of office borne by their *agwas*, or leaders.' The ritual

directs that the worshipper should creep on all-fours through a narrow entrance, and it is believed that no person burdened with grievous sin can accomplish this feat.¹

There appears to be no image of the goddess; at least, nothing of the kind is noticed by travellers. Though situated in a dreary, desert region, Hinglāj is surrounded by abundant verdure—the wild plum and various other shrubs and flowering plants; one report states that 'near the Hinglāj Zīarat [shrine] there is verdure enough to make glad the heart of a pilgrim even from Southern India. To the Panjābī it must be a veritable garden of Eden.'

Bands of pilgrims from all parts of India, each conducted by a leader known as *agwā*, make the journey by land from Karāchi. Fees are collected at Miāni by a *bhārtī*, or hereditary pilgrim overseer, from all except devotees and unmarried girls. The proceeds amount to about £40 annually. On the return of the pilgrim, at Tatta he is invested with a string of white beads like grains of pulse, which, he is told, is the petrified grain of the Creator, left on earth to remind men of the Creation. These are found and pierced at Jhirak in Sind (Burnes, *Travels into Bokhara*, ii. 33 f.). A native pilgrim, Hāji Abdul Nābi, who recently visited Hinglāj, adds that near the shrine is a well,

'the water of which rises up at times with a bubbling noise, discoloured like that of a river fresh swollen after rain, and carrying mud in suspension. The Hindu pilgrims, when this takes place, throw in betel-nuts, cloves, cardamoms, and coconuts. Should there be a delay in the rising, pilgrims in the most abject manner call on Mātā to give them a sight of herself, exhorting each other to reveal their sins and inwardly repent. When the water rises, they salaam with both hands joined, and throw in their offerings, which, after some time, on a second rise, are brought back again, when they are collected and formed into large cakes, which they bake near the spot.'

It is thus an example of those oracular wells from which omens are taken in many parts of the world (Frazer, *Pausanias*, London, 1898, iii. 388, iv. 151). The shrine is much frequented by the Kāpālī devotees of the goddess Āśāpūrnā, 'she who fulfils desires,' who is much revered in Cutch. It is said that, if dawn overtake their Rājā or headman at the Hinglāj hill, the goddess will drown or otherwise destroy him (BG ix. [1901]

¹ The habit of creeping under a sacred stone or through an orifice pierced in it is common in many parts of the world. Sometimes the intention seems to be that the person performing the rite may receive some benefit from the stone, or rather bring himself into communion with the spirit occupying it, and thus gain some spiritual or material advantage. This belief is illustrated by the English custom of passing children through a cleft ash-tree as a cure for rupture or rickets, a sympathetic connexion being thus established between them and the tree (J. G. Frazer, *GB* ii. 394 ff.). E. W. Lane (*Mod. Egyptians*, London, 1860, i. 325) describes how women pass in silence, with the left foot forwards, seven times under and over the stone table on which the bodies of decapitated criminals are washed before burial, as a cure for ophthalmia, to obtain children, or to expedite delivery. Muslims at Samarkand creep under the marble desk which holds the Qur'ān in the great mosque as a cure for spinal disease (E. Schuyler, *Turkistan*, London, 1876, i. 250). The custom of creeping through the *foramina* of rocks, dolmens, and other megalithic monuments is common in Ireland as a means of procuring spiritual benefits (W. C. Borlase, *The Dolmens of Ireland*, London, 1897, iii. 757 ff.). Women in Gujārāt creep under the litter of a Jain monk when he has taken the vow of suicide by abstinence, believing that they thus obtain male offspring by communication with the spirit of the holy man (A. K. Forbes, *Rās Mālā*, London, 1878, p. 611). In the present case the performance of the feat is regarded as a test of virtue or chastity. At the tomb of a Muslim saint at Baroda there is a perforated slab through which it is believed that no thief can creep; and at Malabar Hill, near Bombay, a famous perforated rock is supposed to purify or regenerate those who pass through it, as the Mahārājā of Travancore, on his installation, passes through a golden cow, and thus becomes a member of the 'twice-born' class (BG vii. [1893] 548; J. Douglas, *Bombay and W. India*, London, 1892, ii. 240 n.; S. Mateer, *Land of Charity*, do. 1871, p. 60; E. Thurston, *Ethnographic Notes*, Madras, 1906, p. 271). A good instance of the rite as a test of virtue is found in the case of the 'threading' of St. Wilfrid's 'Needle' in the crypt of Ripon Cathedral (*FLJ* ii. [1884] 286 f.; R. Burton, *Anatomy of Melancholy*, ed. Shilleto, London, 1893, iii. 328; *NQ*, 8th ser., iii. [1898] 386 f.).

pt. i. p. 85). The goddess has another shrine on a hill at Cheul in the Kolāba District of the Konkan (ib. xi. [1883] 287, 301). The Hinglāj Devi is revered throughout India. A Rājputānā legend tells that Ugrā Prabdh, one of the early rulers of Mār-wār, made a pilgrimage to her shrine, and that the goddess caused to rise from her fountain a magic sword with which he conquered all the southern countries touching the ocean (Tod, *Annals of Rajasthan*, Calcutta reprint, 1884, ii. 6). She is the family-goddess of many tribes in W. India (BG v. [1880] 49, 74, ix. [1901] pt. i. p. 247); and even as far west as Mirzapur in the United Provinces the Kharwārs sacrifice a goat to her, saying: 'O Devi Hinglāj! Go and destroy my enemy!' (*NINQ* i. [1891] 195). Many Dasnāmī Gosāins from western Bengal make the pilgrimage to her shrine (Buchanan, in M. Martin, *Eastern India*, London, 1838, i. 197).

LITERATURE.—This article is based mainly on a collection of original, unpublished reports on the place, for which the writer is indebted to Mr. R. Hughes-Buller, Superintendent of the Ethnographical Survey of Baluchistan. Among accounts by earlier travellers may be noted: C. Masson, *Narrative of a Journey to Kalāt*, London, 1842-43, p. 390 ff.; A. Burnes, *Travels into Bokhara*, do. 1834, iii. 52 ff.; M. Postans, *Cutch*, do. 1839, p. 166; A. W. Hughes, *Gazetteer of Sind*, do. 1876, ii. 96 f., also *Baluchistan*, do. 1877, p. 148 f.; T. H. Holdich, *The Indian Borderland, 1880-1900*, do. 1901, p. 206. W. CROOKE.

HISTORIOGRAPHY.—The profound changes which have so drastically altered the whole situation in the religious thought and practice of modern times make their appearance in various spheres, and assail the traditional Christian view of the world from the most diverse quarters and with the most manifold results. To begin with, there is the modern conception of Nature, which, as comprised in the mathematico-mechanical method, has dissolved the purely metaphysical teleology of Nature given by Aristotle, demolished the cosmology of the Bible, and provided modern philosophy with all its essential problems. There is, secondly, the new conception of history, which has radically altered our whole attitude to the past and the future, and with which the present is a link in the whole concatenation of things. Thirdly, there is the modern ethics of humanity, which, besides the unworly virtues of love to God and one's neighbour, has emphasized the intrinsic excellences of artistic and scientific culture—treating them, indeed, as peculiar and indispensable ideals—and has also recognized the positive ethical imperatives involved in political, social, economical, and industrial problems. There are, finally, the new conditions of social life on its economical and industrial sides, and the sociological mode of thought issuing from them, which, in contrast to mere abstract speculation, insists upon the novelty of the whole situation in its social and economical aspects. The first three movements sprang from the Renaissance, while the fourth is a product of the Illumination, and, under the influence of 19th cent. thought, has become a force that towers above all else.

Among these various tendencies, of course, there exists a manifold inter-relation and inter-action. But, if they are to be properly understood, they must be isolated and severally analyzed. In this article only the second, i.e. modern historical reflexion, will be specially dealt with, and its nature and results set forth in the shortest possible compass.

1. The development, function, and results of modern historiography.—In history, as in natural science, systematic thought is the product of a relatively high state of civilization. Primitive man is content with the recollections of his family and clan, his tribe and race. As all unknown things coalesce in his mind with religion and mythology, so, in particular, his ideas of the

beginning and primitive history of things are bound up with religious cosmology, the myths of holy places, and the legends of his tribal deities. In this domain he delights in the extraordinary and the fantastic, the ingenious and the intricate. Hence the beginnings of history are found in religious traditions, legends, myths, and tales, and among almost all peoples primitive recollection is embedded in a vast romanticism. At this stage there is not the slightest trace of a desire for real knowledge or of a critical spirit. And not only does primitive man lack the sense of continuity and criticism; he likewise tends to regard himself as something apart and absolute. His origin, his mode of life, and his morality seem to him to be the only true and primordial forms, in comparison with which all that is foreign is barbarian and inferior. The ties of custom and morality avail only in his own circle, and do not concern those beyond it. He has no conception whatever of the unity of mankind or of the concatenation of events. The chronological eras with which he deals are purely fanciful—sometimes idyllically short, sometimes fabulously long. The only people of ancient times who in the fullest sense consciously passed beyond this stage of popular legendary reminiscence, of priestly tradition and royal annals, were the Greeks; and in this, as in all other provinces, it was they who laid the foundations of science. Among the Greeks, the traveller and the inquirer, untrammelled by the traditions of temples and the archives of princes, and impelled only by a thirst for knowledge, began to investigate and reflect historically. Here Herodotus, Thucydides, and Polybius, partly as a result of their contact with the non-Hellenic world, partly from the need of elucidating their own people's affairs and the operation of them, and, finally, impelled by their predilection for a philosophical generalization of knowledge, laid the foundations of history as an explanation of public movements by material or psychological causes, and, in particular, as a reasoned concatenation of events occurring in the Europeo-Asiatic arena. Even these early writers took account of analogies and uniformities with a view to reaching general historical conceptions; and in their idea of a Hellenic civilization, and, later, of a cosmopolitan civilized State organized by the Roman Empire, they had a focus into relation with which they endeavoured to bring all that occurred.

These earliest manifestations of historical reflexion, however, were extinguished by Christianity and the great religious revolution of later antiquity. It is true that Christianity itself operated throughout with historical conceptions of universal application, and that for the purely anti-barbarian civilized State it substituted the central conception of humanity, and a supreme ethical and religious end for the race. These provided new and powerful incentives to historical reflexion. In reality, however, they served to produce, not a scientific, but a revived mythological representation of history. The early Christian conception of mankind, alike as regards time and as regards space, was narrow in the extreme, and was involved in all manner of purely speculative pre-conceptions. The history of the human race, with respect to both its beginning and its end, was saturated with mythology; in the middle stood the miracle of the Incarnation and the rise of the Church. Interest was once more concentrated upon the inexplicable, and the desire to explain came to be regarded as the mark of a profane mind. Heathen and Biblical myths regarding the origin of things were combined: Paradise with the Golden Age, the primeval transgressions of Cain and Ham with the spiritual lapse to the Silver and Iron Ages, Nimrod's tower-

building with the Trojan war; and, again, the Messianic outlook of the prophets with the hymns and eclogues of Vergil; the miracles of Elijah, of saints and martyrs, with those of Orpheus and Herakles. In the eschatological sphere, again, the Second Advent of Christ was brought into connexion with the universal conflagration of the Stoics, Heaven with Elysium, Hell with Hades, and the stages of the soul's purification with the Empyrean. The history of the intervening period fell into three parts: a relatively short and wholly supernatural period, in which prophecy and miracle prepare the way for the coming of the God-man; an intermediate epoch, in which the God-man Himself appears as the bodily investment of the whole supersensual world, leaving behind Him His permanent incarnation in the Church as a Divine institution for the redemption and salvation of man; and, finally, the longer and for the most part non-miraculous era of secular history, which, although it is largely controlled by Satan and by demons, does not wholly fail to show the intervention of a redeeming God. The mythology of redemption, assimilating the mythical traditions of the ancients, now takes the place of historical reflexion. The all-embracing scheme of the four Danielic world-kingdoms was constructed by Jerome, and held its ground till the 18th century. Mediæval thought grafted its histories of the world and of nations upon this scheme, and combined with it its love of the fabulous and its legends of the saints. The fresh narratives of fact or arid annals occasionally incorporated with them produced no essential modification.

It was in reality Humanism and the Renaissance that first reverted to the traditions of ancient historical composition and historical reflexion, and thus laid the foundations of modern historiography—as in the school of Bruni, where it was influenced by the style of the ancient rhetoric; in that of Blondus, where it showed proficiency in the rendering and criticism of documents; and in that of Machiavelli and Guicciardini, where it sought to explain events by their psychological and material causes. Wherever the culture of the Renaissance took root, there also modern history was evolved, being written, for the most part, by commission of State. From this, again, sprang the historiography of the Illumination in the school of Voltaire, in the hands of Hume, Gibbon, Robertson, and Schlözer—a type of history which elaborated and appraised its materials with the freedom of an emancipated scholarship, extended its operations to the whole compass of human history and to the various factors of civilization, and, in its criticism of tradition as in its psychological explanations and its search for causes, far surpassed the methods of antiquity and the Renaissance. Then, in the 19th cent., there arose philological criticism, the idea of organic evolution, the new analyses of the State and of parties, pre-historic ethnography, the historical study of economics and society, the development of a history of art, of literature, and of religion, taking a place beside the too restricted political history, and, finally, the expansion of politics on a world-wide scale in its bearing upon European events.

This vast array of facts, ideas, and judgments has greatly amplified and complicated the subject-matter of historiography, has made its procedure more delicate and more difficult, and has enormously enlarged and at the same time disintegrated the web of causality. From all this has accrued an immense mass of historical work, moving on various lines, yielding magnificent results, and, nevertheless, with every supposed solution of its problems, giving rise to a fresh group. The total result, however, is not a mere mass of unsolved

problems, but is rather the full development of modern historical reflexion, which, notwithstanding all misgivings as to its conclusions, consists, precisely like the modern conception of Nature, in a purely scientific attitude to facts. The history of mankind merges in the evolutionary history of the earth's surface; it takes its rise in the prehistoric life of primitive peoples; it is determined throughout by the general laws of geographical conditions, and by the various phases of social life, and forms an unspeakably complex, yet altogether coherent, whole of immeasurable duration both in the past and in the future. It is as a part of this array and system that we must survey and estimate our own existence, and find its rationale and origin. On the analogy of the events known to us we seek by conjecture and sympathetic understanding to explain and reconstruct the past. From this point, again, we advance to the criticism of extant traditions and to the correction of generally accepted historical representations. Since we discern the same process of phenomena in operation in the past as in the present, and see, there as here, the various historical cycles of human life influencing and intersecting one another, we gain at length the idea of an integral continuity, balanced in its changes, never at rest, and ever moving towards incalculable issues. The causal explanation of all that happens, the setting of the individual life in its true relations, the interpretation of events in their most intricate interaction, the placing of mankind in a rounded system of ceaseless change—these constitute the essential function and result of modern historical reflexion. The latter, viewed as a whole, forms a new scientific mode of representing man and his development, and, as such, shows at all points an absolute contrast to the Biblicotheological views of later antiquity.

2. The purely scientific character of historiography.—Modern historical reflexion, precisely because of what has been said, certainly involves a multitude of fresh and difficult problems. These relate partly to the significance of such a view of history for our conceptions of ideal truth, and for our theory of the universe in general, and partly to the question regarding the scientific nature of historical study itself. The latter is the more restricted problem, and must be discussed first. It is, at the same time, the only problem that is directly concerned with historical reflexion as such. Here it is necessary to emphasize one particular principle. In so far as historical thought purports to be scientific, its specifically theoretical or scientific element must be clearly marked off and defined. For, besides the purely scientific attitude to historical fact, there are numerous other attitudes which must be rigorously distinguished from it, but are seldom distinguished in a proper degree. There is, for instance, the æsthetic attitude to history, which centres in its teeming wealth of incident, and the suggestive action and romantic charm of the individual; or which is concerned with an artistically rhythmical construction of the course of events. There is mere curiosity, and that liking for the remarkable, the astonishing, and the unconformable which is ever ready to be excited and kindled to sympathy by graphic description. Then there are some whose aim it is to estimate the ethical value of human actions, and to derive from history an insight into that which reveals itself everywhere as moral force. Others, again, see in history a manual of politics and a means of educating national and political opinion—an education which, they hold, can never be acquired by merely abstract doctrines, but results only from the concrete observation of the whole historical process. Some seek in history support for the sociological and

economical principles which, they believe, can be attained only by abstracting from various particular developments, and which must form the basis of our own conception and organization of society. Finally, history often serves as a school of scepticism and caution, on the ground that very divergent representations of historical facts may be given, that criticism is uncertain and tradition not uniform, and that, accordingly, history yields but little real information, and more than anything else brings home to man the limitations of his knowledge.

Now, these various attitudes to the facts of history are all quite competent in their own place and in their own way, and the idea of excluding or avoiding them altogether is not to be entertained. Nevertheless, they all lie outside the purely cognitive and theoretical sphere, and within that of judgment and appraisal. So far as historical study is concerned with distinctively theoretical and scientific interests, these other interests, as being here of secondary importance, must be scrupulously guarded against and excluded. We may grant that, if descriptive historical works were composed upon such rigid lines, they would lack interest and charm for the majority of readers, and that the impression they make depends precisely on the effective combination of purely historical knowledge with the motives and incentives that may be drawn from it. Delineations of this type, however, are necessarily composite, and must be recognized and studied as such. They combine the interest of the first degree, i.e. that of purely historical knowledge, with interests of the second degree, i.e. those relating to the significance of such knowledge for human feeling and human action. Such works are, accordingly, not purely scientific at all, and historical knowledge is to be obtained from them only by a process of elimination.

What is it, then, that constitutes the essential element of pure historical knowledge? The answer to this question is furnished by the foregoing discussions, and it becomes increasingly clear in the history-writing of the present day. History as pure theoretical science is different from history as an element of *belles lettres*, politics, economics, and the like. In history, as in other things, purely theoretical knowledge is knowledge based upon general conceptions, and that signifies primarily knowledge derived from causal conceptions. The sole task of history in its specifically theoretical aspect is to explain every movement, process, state, and nexus of things by reference to the web of its causal relations. That is, in a word, the whole function of purely scientific investigation. What is so explained may then quite well become the subject-matter of interests lying outside the sphere of theoretic science, and the resultant treatment may unite the two constituents as closely as desired. But it will always be possible and necessary to isolate either element, and this will be the more or less easy as the specifically scientific side has been the more or less conscientiously dealt with.

Only in one single point is this simple process of discrimination attended with any real difficulty. One may ask whether, in view of the peculiar nature of psychical causation, or motivation (which will be more fully discussed presently), the insight necessary to determine and appreciate it must not be drawn from personal experience and personal judgment. Such insight, it will be said, is always bound up with subjective estimates of what ought to be. Thus, e.g., only those who feel that certain ethical, political, and artistic excellences ought to exist will seek and discover them as real springs of action, while those who do not so regard them

will seldom be able to recognize them as motives, and the less so as historical causes do not lie on the surface or force themselves into notice, but are, as a matter of fact, always brought to light by the sympathetic imagination. Such a view is certainly not wrong. Yet it does not subvert our fundamental principle, since the causes so discovered and realized are, in the sphere of historical study, taken account of as facts only, and not as grounds for the corrections and criticisms of the historian, whose subjective attitude to the facts must, accordingly, be once more discounted. Besides, every supposed and, on grounds of analogy, probable cause must be shown to be actually operative in the particular case. Knowledge of the power of motives is thus, as a means of discovery, doubtless bound up with personal judgments, and the knowledge of what should be often serves as a heuristic principle for the understanding of forces actually at work. But the 'ought-to-be' must in turn always be separated from what really is. Historical study is concerned only with the latter, and the personal judgments which have lent keenness to the power of perception must give way before the evidence of the real facts. Historical investigation is, in practice, always subjectively conditioned by the fullness, depth, and range of the personal experience of the investigators themselves, and is thus always marked by irreducible differences in their several starting-points. But the purely scientific aim of historical reflexion is not thereby surrendered.

3. The nature of historical causality.—This brings us at length to what is really our main problem, viz. that relating to the nature of historical causation. Here we find ourselves in the sphere of the logic or epistemology of history. Of the various provinces of knowledge this was the last to be won for modern logic, and it is as yet the most imperfectly elucidated. The Aristotelian philosophy dominant in the Mediæval Church found no difficulty here. It regarded the operations of Nature and the processes of history as essentially of the same kind, and it applied to both spheres a metaphysico-teleological conception of development, and knew nothing of the modern conception of a causality immanent in experience. The latter conception was first set forth by natural science, and by philosophy as modified thereby; but it was, in fact, framed originally to suit Nature only. Down to the time of Herder and Hegel, accordingly, modern philosophy either took no account of history at all, and abandoned it to historians, litterateurs, or theologians; or else brought historical occurrences under a causal conception, which was simply that of natural science philosophically generalized. Descartes surrendered history to the theologians and to revelation; Hobbes and Spinoza treated it in a naturalistic fashion. The naturalistic view prevailed also in the case of Hume and Kant, notwithstanding the great diversity in their respective views of causality. This is the case even to the present day among the successors of Hume—the adherents of the Positivism of Comte—and we need here recall only the names of Buckle and Taine. In the Kantian school, in its development towards Hegel's Panlogism, the knowledge and ætiology of Nature were, on the other hand, subjected to extreme violence by historical thought, inasmuch as the latter became simply the application of the law of dialectical movement to the cosmic process and the course of human affairs. But if this was a violation of natural science, it was no less a violation of historical thought itself, which by such procedure gained only a finer sense of order and continuity, but no clearer comprehension of its own fundamental conceptions. It was only with the return

to the Kantian theory of knowledge, and the emancipation of psychology, that the task of framing a logic of historical science, in contradistinction to the logic of natural science, came to be clearly recognized. Wundt, Dilthey, Windelband, and Rickert were the pioneers of this new and powerful method of investigation.

Here the primary fact was the recognition of the difference between the causality of natural science and that of historical science. The causality of natural science implies the absolutely necessary principle that events are bound together by a changeless, all pervading, and, in all particular cases, identical law of reciprocity. The scientist demonstrates the laws thus ascertained by artificially constructed examples or experiments, and by means of these submits natural processes to exact calculation. The method finds its highest expression in the establishment of a perfect equivalence between the amount of energy that disappears in the first form of an occurrence and that which re-appears in the second, i.e. the law of mere transformation and quantitative conservation of energy. To this end, by abstracting from all qualitative distinctions, the method of natural science reduces events to mere manifestations of energy, and attends only to the aspects of reciprocity and transformation in the quantity of energy present. Now, historical causation is something entirely different, being almost exclusively a matter of psychological motivation. In the historical sphere nearly everything passes through the medium of consciousness, and in the last resort all turns upon the constant interaction of conscious efforts, into which even the unconscious elements tend to resolve themselves. Thus the peculiar irrational quality and initiative of the individual consciousness make themselves felt in the ultimate result, alike in the individual life and in the life of groups. Here, therefore, it is not permissible to reduce events to non-qualitative forces, or to explain effects by causal equivalence. Then we must also bear in mind the infinite complexity of the motives that arise on all sides and act upon one another—a complexity which gives a special and peculiar character to every particular case, and so defies all calculation and experimental proof. Further, all occurrences, whether in the individual life or in the life of groups, are so affected by the entire psychical condition of the individual or the group that another quite incalculable element is introduced. In the historical process, moreover, there ever emerges the fact of the *new*, which is no mere transformation of existent forces, but an element of essentially fresh content, due to a convergence of historical causes (cf. art. CONTINGENCY, vol. iv. p. 89^a). Accordingly, psychological motivation differs in all respects from natural causation.

It might thus appear that the peculiar character of historical ætiology could be interpreted and methodized by means of psychology, as is proposed by Dilthey and Wundt. But on various grounds this is impossible. For one thing, historical study does not work with psychological motivation alone, but very frequently has recourse to natural causation as well. Polar limitations, glacial periods, earthquakes, famines, destructive winters, uninhabitable regions, and the like, often play a great part in history, and certainly not always by their purely psychological effects. The destruction of Napoleon's army by the Russian winter was due only in part to the psychological effects of the cold; and even in cases where geographical and physiological conditions eventually produce psychological results, we have something very different from purely psychological motivation. Further, psychology cannot supply any kind of real pre-

calculation of historical events and developments. If that were possible, it would imply that the facts of history were known beforehand, and then traced back to the soul, as something that had issued from it. This is the case especially with the so-called folk-psychology, which is simply a rendering of history in terms of psychological laws, but does not explain the former by the latter. Here, indeed, the facts are always anterior to the psychology, and it would be more accurate to say that the history helps to explain the psychology than to assert the converse. The peculiar nature of the causality of motives points, no doubt, to the distinctive nature of historical knowledge, but it cannot properly provide a basis for it. Nor can such basis be found in the subject-matter; it is to be derived from the method alone. The method, however, is determined, not by the subject-matter, but by the epistemological end in view; for knowledge is never a mere reproduction of experience, but always an abstract selection of particular elements of experience for a definite intellectual end. Thus, *e.g.*, the method of natural science is determined by the interest of selecting that aspect of experience in which it manifests itself as absolutely determined by universal laws, and, accordingly, the method in question abstracts from all that is qualitative and individual. The method of historical science, on the other hand, is determined by the object of selecting from the flux of phenomena that which is qualitatively and uniquely (1) *individual*, whether on a larger or on a smaller scale, and of making this intelligible in its concrete and specific relations. It therefore abstracts from the universal laws which may possibly regulate even its subject-matter, but which fail to explain the peculiar and concrete elements of it, and it operates not with the conception of causal equivalence, but with that of individual causes, which, precisely because of their infinite complexity, produce the unique.

Now the method of history, with its logical determination by a distinct intellectual end, answers to the peculiar characteristics of the historical material, just as the method of natural science answers to those of its material. The processes of the physical world demand in greater degree the first-mentioned type of isolating interest (universal law); those of the psychical world, the second (individual causality). It is not the methods themselves, but their respective intellectual ends, that spring directly from the nature of the subject-matter; and, accordingly, the distinctive characteristics of the material correspond in either case to the ends determining the respective methods. The physical world invites us to understand it by the deduction of general laws; the psychical world by a sympathetic reconstruction of the causal connexions in which the actual facts of history have taken shape. Here, then, the true nature of historical knowledge comes to light. Historical knowledge selects its materials as it may require—a national history, a state of civilization, a biography, an intellectual development, etc.—and seeks, by means of the individual causality proper to history, to make it as intelligible as if it were part of our own experience. Even the history of mankind, were it within our grasp, would be a freely selected and individually concrete subject-matter, inasmuch as its development could be understood only as a particular concatenation, and in no sense as an instance of the operation of universal laws. Such purely objective causal explanation, based upon the widest possible experience and the most methodical application of experience, constitutes the distinctive character of history as a pure theoretical science.

Precisely because of this, however, historical thought shows itself to be (2) *conceptual* thought,

though the concepts which it must frame are different from those of the natural sciences. The universal application of the category of causality in the special form of individual causality subjects the entire material to a uniform conceptual mode of treatment. Moreover, the several isolated subjects of inquiry which are to be causally explained in this way are conceptual unities, for which, it is true, we have as yet no logical term, but which may be designated 'historical aggregates' (*historische Totalitäten*). Such would be, *e.g.*, a human life, a nation, a condition of affairs, the spirit of an age, a legal constitution, an economical condition, a school of art, etc. These aggregates are selected freely and one after another by the investigator, but may be re-combined, till at length the highest concept of historical totality, *i.e.* humanity itself, is reached. It is, indeed, true that this highest concept can be described only by the successive descriptions of its separate components and factors. The conception of mankind as a whole, just because mankind cannot be brought within a single, simultaneous, and all-embracing view, can never be more than an incomplete work of the imagination.

Now, inasmuch as these totalities are processes, and internally coherent congeries of phenomena, there emerges a third fundamental principle of historical reflexion—(3) the principle of *development*. This conception must certainly be taken in its purely historico-empirical sense, and must not be confounded either with the idea of development in natural science or with that found in metaphysics. The scientific conception of development signifies the explanation of becoming by the addition of infinitesimal mechanical changes; the metaphysical conception denotes the interpretation of reality as the expression of an absolute intelligence which realizes itself therein. In contradistinction to these, the conception of historico-empirical development denotes the progress that issues from the essential element of certain psychical efforts, the working out of the consequences that are latent in the earliest beginnings, the dynamic element in psychical forces which are not exhausted in a single manifestation, but work out towards a result—forces in which exists a tendency to a development akin to logical evolution. Thus there is development in religious, ethical, and philosophical ideas; likewise in the character of individuals and peoples, as also in forms of government and economic conditions. Wherever this tendency asserts itself, it constitutes a principle that organizes the aggregates, and moves them onward from within—a principle that absorbs and elaborates the various causes, and supplies them with a focus of attraction or repulsion.

Nevertheless, the value of the conception of historical development must not be over-estimated, as it often is at the present day. For, in the first place, it does not mean an infinite progress, but in every particular case implies only a single concrete impulse controlling a given aggregate. It manifests itself in the fact of exhaustion as well as in that of advance. All progressive developments work also towards regression, so as to make room for fresh movements. The conception in question has, therefore, nothing to do with the conception of an unlimited and continuous progress found in the philosophy of history. Then, again, besides the fact of continuity, we must also recognize the fact of historical contingency, *i.e.* the convergence of a series of mutually independent causes (see art. CONTINGENCY, vol. iv. p. 87 ff.). In virtue of this contingency, processes of development are commingled, furthered, amplified, obstructed, and sometimes even completely arrested; though, of course, the syntheses thus fortuitously brought

about may occasionally give rise to new and fruitful developments, for the spiritual life of man has everywhere a tendency to unify the elements of a given situation, however produced, and thus also to mould them into new stimuli to development. To the sphere of accident or contingency belong the supremely important influences of climate, atmosphere, fertility, geographical position, and natural wealth. That sphere also embraces physiological occurrences and conditions—deaths, interbreeding, mixture of races, food-supplies, and the like. To the domain of chance must likewise be reckoned, so far at least as we at present know, the distribution of individual qualities, as, *e.g.*, talent and genius, which sometimes occur but sparsely, sometimes in amazing profusion. It is true that such 'accidents' are rightly so designated only when judged with reference to the conception of historical aggregates and the developmental tendencies that give rise to them. They may, to a very great extent at least, be brought under the conception of natural law. The idea of contingency is, in fact, one in regard to which the historical and scientific modes of thought are discriminated with special clearness.

In the sense specified, accordingly, the causal explanation of historical aggregates constitutes the purely theoretical function of historical investigation. It is certainly obvious that such causal explanation has a rather restricted range. It is dependent upon the existence of a tradition, upon a critical examination of that tradition, and upon the imaginative and synthetic powers of the investigator. It can never re-constitute its objects in their entirety, but must decompose them; it can depict them only consecutively, and never in their simultaneous inter-dependence. Hence it can proceed only by analyzing, and by moving from subject to subject. This explains why the work of history must ever be taken up afresh. The accession of new material, the fresh sifting of facts by criticism, new ideas and views in the linking of causes to historical aggregates—all of these call for ever new beginnings, and lead to a revision of previous delineations. The writing of history can never be exhaustive, and never complete; it will never be able to compass the All in its extension and in its intension. It will never be able fully to analyze the individual peculiarities of souls or groups of souls, or to explain that power of initiative and self-determination which we call freedom. It will never be able to find the ultimate derivation of a historical world of personalities, or even of the movements at work within that world, in anything else. There will always be limits to its realization of its intellectual end, and always residua incapable of being rationally determined. But the writing of history is not on that account futile or valueless. For it enables man to comprehend himself so far as a causal comprehension of himself is possible or necessary. It is, in fact, only on the basis of such causal self-comprehension that our own historical work can be clearly and circumspectly extended. The ages of naive traditionalism and naive rationalism required no such understanding of oneself. But, as they pressed against their narrow bounds, and made a beginning with historical reflection, they found it necessary to carry the latter to its ultimate issues. The cultured man of to-day is a person who thinks historically, and can construct his future only by means of historical self-knowledge. This holds good for every sphere of life, even for the religious sphere, in which, it is true, such self-knowledge is still opposed by the naive traditionalism and rationalism of large masses of mankind.

4. The relation of historiography to the philosophy of history.

Our concern with history, however, is by no means exhausted in causal interpretation and the formation of aggregates. For, on the one hand, there arises the problem regarding the relation of the historical process in the world to the fundamental forces of the universe, and, on the other, the problem regarding the significance of that process for the living and operative will of each particular age—the will which is nurtured by the events of history, and yet manifests at every instant a creative power of its own. To the former problem belong the questions concerning the foundation of the psychical world in the Universal Spirit, the connexion between the physical and the psychical world, the Divine direction and sustaining of the cosmos, and the distinction between the purely natural life of the soul and the spiritual and civilized life that strives to transcend it. The second problem comprises the questions relating to the teachings of history for the active and constructive will, to the inward meaning and significance of that substance of life which takes concrete form in the process of history, the ideal values to be won from that process and to be recognized in it; and, finally, its ultimate meaning and aim. These questions all lie outside the sphere of empirical historiography, and belong in reality to the philosophy of history which explains and estimates metaphysically. Empirical and philosophical history must be clearly distinguished in principle, though in the actual delineation of events they are usually found in some degree of combination.

But the philosophy of history itself, as has just been indicated, includes very different kinds of problems. The questions of the first group noted above relate to purely metaphysical matters; and, whether they are dealt with as lying within the sphere of a complete system of metaphysics, or agnostically set aside as unanswerable, it is comparatively easy to keep them apart from history proper. The metaphysical background will be discerned only in delineations on a large and comprehensive scale, and even there it will assert itself rather in the intellectual attitude as a whole and in occasional aphorisms than in elaborately constructed theories. This is, at all events, what we find in so purely empirical a historian as Ranke. Modern historiography, as contrasted with the mediæval and theological types, has certainly in principle wrenched itself free from the metaphysical element, whatever the personal views of the historian regarding the latter may be. This, however, is no more than a theoretical emancipation. In view of the practical importance of the metaphysical presuppositions, their separate consideration and discussion are matters of the highest import to philosophy, and the historian must take care to keep such vital questions open, and not to foreclose them by casual remarks and ostensible truisms.

The other group of questions in the history of philosophy are not so easily kept distinct from historical composition. It is true that purely historical delineations, like the delineations of natural science, may conceivably be given in purely empirical categories, as, *e.g.*, Tocqueville, Fustel de Coulanges, and Eduard Meyer endeavour to do. This, however, cannot possibly be the regular procedure, because the reader aspires not only to a knowledge of causes, but to a point of view from which he may pass judgment on the facts of history, and because the questions that thus arise cannot be answered by themselves alone, or apart from a mental picture of the entire field of history. Nevertheless, with a view to clearness in the questions involved, the distinction must, in principle at least, be strongly insisted upon. This

is demanded also by the fact that the valuations and interpretations thus conjoined with description are sometimes contradictory to one another. We meet here with interpretations from various points of view—political, legal, artistic, moral, and religious. These may show an altogether one-sided character, or they may be combined with one another. Each of these points of view, moreover, may itself exhibit variations, and may even give rise to extreme contrasts within its own sphere. This chaos of value-judgments, the perplexing impression made by which is but intensified by the perpetually fluctuating course of history, can be transcended only by grouping the questions together and finding their answers in (1) *a complete system of values*. Such a system of values, however, is neither more nor less than Ethics—to take that term in its ancient sense of a doctrine of absolutely essential qualities and goods, as formulated anew most definitely by Schleiermacher among modern thinkers, and as employed—in effect—in the Hegelian ethics and philosophy of history. On this view history is to be interpreted and evaluated by comparison with a system of values which it is the task of ethics to construct. Every single historical aggregate must, therefore, be judged by the measure of its approximation to this system, or to particular standards forming part of it. Whether that judgment is carried out with glowing personal emotion or with graphic and impressive imagery, it is always based upon such an objective system of values, of which the writer may be unaware, but whose validity he assumes.

The great obstacle to this procedure, however, lies in the fact that ethics itself must derive its knowledge of values from the facts of history, and can furnish nothing more than a critical delimitation and adjustment of these values. We are thus confronted with a logical circle: we must interpret history by the degree in which it approximates to ethical values, and at the same time we must derive these ethical values from history. The circle is not to be evaded, and the difficulty can be solved only by the thinker's own conviction and certainty that amid the facts of history he has really recognized the tendencies that make for ethical ideals, and that he has truly discerned the dynamic movement and progressive tendency of the historic process. A complete proof of the accuracy of his view, i.e. of his system of values, is impossible, and, accordingly, ethical interpretations of history will exhibit manifold divergences in the future, just as they have done in the past. Still, such a system of values, notwithstanding its irretrievably subjective character, involves no mere abstract subjectivism; on the contrary, the critical survey of the objective phenomena is through and through a matter of *insight*, and proceeds upon a true homage to the facts. The system would be more accurately described as intuitional rather than subjective. Its demonstration can, therefore, be given only by letting the critic repeat the observation in his own experience, and by leading him to draw from the historian's view of the facts a view of his own in keeping with it. This shows how great a part imagination plays in the framing of those conceptions. But the process cannot be dispensed with except by such a claim to have received a system of the kind by revelation.

From the standpoint of such a system, the historical process appears as an approximation to the complete harmony of ethical values. But here emerges another important conception of the philosophy of history, viz. that of (2) *metaphysical or ethical development*. This, as already noted, must be carefully distinguished from the conception of historical development in the empirical

sense, and is not to be demonstrated by means of the latter. The empirical conception of historical development shows only partial, or progressive and regressive, developments, but not the advance of mankind as a whole towards a final and universal end. It certainly exhibits the formation of ethical aggregates, but not their synthesis in a uniform and progressive continuity. Hegel made the mistake of reducing each of these conceptions of development to the other, and also of basing both together upon the metaphysico-logical movement of the Absolute. In reality, the conception of ethical development is merely a postulate of faith—in the Kantian sense—a postulate based upon the actual occurrence of the aggregates of ethical life, and our personal experience of them. Consequently, it must remain an open question whether this kind of development attains its end in the present life, or in a further progress of souls in a life beyond. Certainly experience does not support the former alternative. Similarly, as the system of values can be realized only approximately, and as the possibilities of an approximation are, for the individual, so varied, his share in the final system must also remain an open question.

In connexion with this conception of development, mention must be made, finally, of still another important element in the philosophy of history, viz. (3) the problem of *individualization*. The system of values is no rationally demonstrable abstract system, such as would confront all the phenomena of empirical history as an absolute and everywhere identical standard. If we designate the system of values as the 'Idea,' then the course of history is not a sometimes more and sometimes less effective progress towards the realization of the ideal, which is everywhere the same. The truth is, rather, that all spiritual manifestations—in individuals, in groups, or in periods—are individualizations or concrete manifestations of the ideal. This accords perfectly with the earliest, merely descriptive, and non-nomothetic type of historiography; and it accords likewise with the metaphysic of spirit—which cannot be more fully dealt with here. But in that case every historical phenomenon, viewed from the standpoint of the ethical philosophy of history, bears a double character: it is, on the one hand, a concrete manifestation of the Idea, having a relative right of its own, and, on the other, a mere approximation to the absolute system of values. In spite of all obstacles and defects, there obtains everywhere an individual and concrete progress towards the ideal. Final perfection itself, indeed, might be conceived of as simply the sum of the individual realizations of the Idea. Here, however, we encounter the antithesis between universal validity and individualization—an antithesis which cannot be theoretically reconciled at all. Hence each historical phenomenon is to be estimated by reference only to that degree of approximation to the Idea which is set before it and is possible to it. In this way every epoch has a relative justification, though it must, at the same time, be judged in the light of an absolute end. This shows the necessary relativity of the philosophy of history, and yet makes it possible that the relative shall appear to be included in the movement towards the absolute. The absolute in the relative, yet not fully and finally in it, but always pressing towards fresh forms of self-expression, and so effecting the mutual criticism of its relative individualizations—such is the last word of the philosophy of history. This implies, however, that in the writing of history and the description of historical phenomena—in spite of all appraisements by reference to final and absolute values—there still remains the concrete individual character of the objects dealt with, and there

remains also the non-rationality of personal life, with its rightful claims in face of all the ideals of universal value that hover before the human mind.

HITTITES.—1. Ethnography and history.—

The Hittites were a people, possibly of mixed Aryan and Caucasian elements, who controlled, during the second millennium and a part of the first millennium B.C., large portions of the Nearer East. In the OT they are frequently mentioned under the name Hittim (חִתִּים), rendered in the Greek by the word *Xetiaoi*. They appear on the Egyptian monuments under the name *Ht*, commonly rendered in English as *Kheta*, and they were known to the Babylonians, Assyrians, and Hadians as *Hatti*, the form of the name by which, according to the Cappadocian tablets, they called themselves.

In early times there seems to have been no central Hittite power, but a number of separate and independent city-states, each with its king, who seems also to have been chief priest. Later, the Mitannians, apparently a Hittite people, established a centralized Hittite kingdom, with Carchemish perhaps as their capital; and the rulers succeeded in extending their sway not only over the north Mesopotamian region, their proper domain, but also over North Syria and, possibly, the plain to the east of the Tigris.

The Hittite sphere of influence can be fairly well determined by their monuments and mounds. Two groups of isolated rock sculptures,¹ near the Aegean Sea, and close to the end of the natural trade-route from the great central plateau of Asia Minor, would seem to indicate that they controlled this route for a time, though they apparently did not hold sway over the mountainous regions west of Lycania and Phrygia. Beginning, however, with the territory represented by those two provinces, their influence was felt eastward to the Euphrates, as well as in North Syria, northern Mesopotamia, and Assyria. It is interesting to note that both the first builder of the wall of the city of Ashur in Assyria and the founder of the temple to the god Ashur in the same city bore Hittite names²—a fact which goes far to prove Hittite or Mitannian control of this region before the end of the third millennium B.C. It was, doubtless, an army from this southern band of Hittites that invaded Babylonia about 1800 B.C.,³ overthrew the first dynasty of Babylon, and set a Hittite king on the throne, maintaining their power there for something like twenty years. In the same general period, the beginning of the second millennium B.C., or possibly at the end of the third millennium, must have occurred the southward expansion of the same people into Palestine, where we find their early importance reflected in the Abraham episode (Gen 23), despite the late origin of the present narrative. Whether they made their way south by force of arms or through peaceful migration is uncertain; but they are, at any rate, considered in the Biblical passages as a part of the settled population.

Our knowledge of the Hittites up to the 14th cent. B.C. is very fragmentary. An Egyptian stela of the XIIth dynasty¹ may possibly refer to Hittites settled in Southern Syria, and Thothmes III. records² that he received tribute from Kheta. However, the magnificent find of some 2500 cuneiform tablets, unearthed by H. Winckler³ at Boghaz Keui, enables us, with the help of the Amarna tablets, to form a fairly clear idea of the succession of events in the 14th and 13th centuries B.C.

The central figure of this period is Subbi-luliuma, ruler of the Hittite capital in Cappadocia known as 'he City of Hatti,' the modern Boghaz Keui. At the beginning he seems to have been little more than a city-king; but, by uniting the neighbouring States in friendly alliance, and by a series of campaigns in North Syria and northern Mesopotamia, he succeeded in establishing a Hittite Empire, including Syria north of Kadesh on the Orontes, the Mitannian kingdom, and the central portions of Asia Minor. Subbi-luliuma was followed successively by two sons, Arandas and Mursil, both of whom lacked the energetic spirit of their father, to the extent that both Assyria and Egypt made successful campaigns into the Hittite territory. Mursil's son and successor, Mutallu, immediately upon his accession, set about rebuilding the Hittite power. His influence may be judged from the array of nations that gathered to his standard: troops from Arinna and Pisidia, Dardanians and Mysians, Lycians and Cataonians, together with contingents from all North Syria, banded together and marched to meet the Egyptians led by Ramses II. Battle was joined at Kadesh on the Orontes. Neither side seems to have been signally victorious. Shortly after, Mutallu was assassinated, and his brother Hattusil fell heir to the throne. This ruler, about the year 1271 B.C., made an offensive and defensive alliance with Ramses II., the terms of which were inscribed on a silver tablet and sent by the Hittite king to Ramses. The treaty is preserved to us in an Egyptian translation engraved on the wall of the temple at Karnak, and another translation, now very fragmentary, in the Ramesseum, as well as in a cuneiform tablet from Boghaz Keui, written in the Bab. language.

The rising power of the Assyrians and of the Muski on the north now not only checked any further desire for conquest which the Hittites may have had, but gradually reduced the limits of their realm. Only two further rulers of the Hattil dynasty, Dudhalia and his son Arnanta, are named in the Boghaz Keui tablets. It is very likely that not long after this the Hittite Empire was dissolved, and before the end of the 8th cent. B.C. the greater part of its territories had been absorbed by Assyria and Phrygia.

2. Religion.—The chief sources of our knowledge of Hittite religion are the sculptured monuments and seal cylinders, the inscriptions in Assyrian and Egyptian, and the Boghaz Keui tablets. Pending the complete decipherment of the Hittite language,⁴

³ *Mittheilungen der deutschen Orient-Gesellschaft*, xxxv. (Dec. 1907) 1 ff.

⁴ Contributions towards the decipherment of the Hittite pictographs have been made by J. Halévy, F. Hommel, J. Menant, L. Messerschmidt, and others, while more or less complete systems have been put forward by C. J. Ball, C. R. Conder, P. Jensen, F. E. Peiser, and A. H. Sayce. Only the systems of Sayce and Jensen have received recognition from scholars, and it is now generally considered that the chief value of Jensen's work consists in his excellent list of symbols, and his division of inscriptions into word groups. Sayce's system, on the contrary, is slowly gaining adherents. His work began with the investigation of proper names such as Carchemish, Tyana, Marash, Ilnath, and Sandan, appearing in various forms, purely phonetic or partly ideographic. A considerable list of values has thus been formed. Doubtless, many of these values will require modification; but the system seems in the main

these sources are meagre. While the sculptures deal, in the great majority of cases, with representations of deities and scenes from the cult, they afford us at present none of the names of the gods concerned, and in very few instances can the deity be identified and the name supplied from the Assyrian and Egyptian sources. The case is much the same with the carvings on the seal cylinders. A fairly large mass of material is preserved in the later Græco-Roman writers; but, like the historical material they present for the Nearer East, this can be used with confidence only when checked by the sources already mentioned.

Primitive animistic conceptions stand out clearly in the historical form of the religion. Springs, rivers, trees, and mountains were considered sacred. At Aflatun Bunar, west by south from Iconium, is the familiar monument which stands as the remains of a building, with sculptured front, dedicated to the spirit of the copious fountain which here flows forth. On the shoulder of Mount Argæus, the highest peak in Asia Minor, is another fountain, whose sacred character was marked in Hittite times by a spring house with an inscription, parts of which remain. The tetrastyle temple, which is a feature of some of the Argæus coins, may have stood on the same spot; and that the sanctity of the place was transmitted to later times is evidenced by the discovery, in the same place, of the remains of a Christian church or chapel. High up in the Anti-Taurus range above Comana Aurea, and near the small village of Qoqar Quyu, is a lion monument¹ with Hittite inscription, which owes its position, no doubt, to the sacred character of the mountain. The peak of Argæus likewise was considered sacred, and further evidence is furnished by the representation in various instances of deities standing on mountain tops. Moreover, the treaty of Hattusil with Ramses II. mentions 'the Lady of mountains and rivers.' The sacred tree appears in one perfectly preserved sculpture from Sakje-Geuzi, and it is perhaps used as a symbol in the inscriptions.

However, in the period represented in the Hittite monuments, the religious belief of the people had long passed the primitive stage. Animals were still used as emblems, and the people may have continued to believe in the sacred character of springs, mountains, and trees; but a higher plane had been reached, and we may believe that the religion stood on about the same level as that of Babylonia before the time of the first dynasty of Babylon. The selective processes of time had exalted a comparatively small number of the primitive Nature-spirits into gods directly concerned with the welfare of the people; and these had taken on anthropomorphic forms, assuming the appearance and dress of the Hittites. The distinguishing garb of the male deity, as seen on the monuments, consists of the short tunic and conical hat; that of the goddess, the long robe and high cylindrical hat. Shoes pointed and turned up at the toes were a feature common to the dress of both. The Hittite artist, as a rule, made no attempt to differentiate the deities through varied portraiture, but relied in

well grounded, notwithstanding the fact that translations of connected passages are not altogether satisfactory. The chief obstacle to further advance is lack of well-preserved inscriptions, though new material is constantly coming to light. It is confidently expected that the Hittite language will be recovered in great part from the cuneiform material discovered by H. Winckler at Boghaz Keui, which is now being investigated by Ernst Weidner of Berlin. The grammatical structure of the language and a considerable vocabulary once determined, the complete decipherment of the hieroglyphic inscriptions will shortly follow (cf. P. Jensen, *Hittiter und Armenier*, Strassburg, 1898; L. Messerschmidt, 'Bemerkungen zu den hechtischen Inschriften,' *MVG*, 1898, p. 178; A. H. Sayce, 'Hittite Inscriptions,' *PSBA*, 1907, pp. 207-213, 253-259).

¹ Olmstead, Charles, and Wrench, *Travels and Studies in the Nearer East*, vol. I. pt. 2, figs. 27-29.

this matter on accessories such as insignia, arms, or totemistic emblems. In many cases the name also is appended, so that to one who knew the native writing there need be no uncertainty.

The status of the Hittite religion in the early period was much the same as that of religion in early Babylonia. Each city-State had its own gods worshipped in the local temple or temples; and this situation seems, as in Babylonia, to have continued to the end of Hittite history, notwithstanding the later establishment of a pantheon. Predominant among these city deities seem to have been some of the local forms of the Mother-goddess and of the storm-god. The former, as the personification of the productive forces, and, in connexion with her son, of the reproductive forces of Nature, was always a favourite with the Hittite peoples, as with the later races who occupied Asia Minor; and it is not surprising that a land so favourable to this cult should at a later time prove such fertile soil for the development of the cult of Virgin and Son. Among male deities, the storm-god, who seems to have been the tutelary deity of the armies, was the favourite. When, therefore, with the formation of an empire, a well-defined imperial pantheon was established, it was but natural that this pair should stand at the head; and thus we find them represented in the sacred gallery of Yazly Qaya,¹ the holy place of the city of the Hatti.

Although in the enumeration of the Hittite gods preserved in the famous treaty the sun-god is mentioned first, the storm-god seems actually to have held the foremost place in the pantheon. From a perusal of the list in the treaty it is evident that the native translator has made a rather unsatisfactory attempt to render it into intelligible Egyptian. As the sun-god, if actually a native deity, appears to have received scant recognition among the Hittites in general, his appearance at the head of the list would seem to demand explanation. Three explanations suggest themselves: (1) the native translator considered the Mother-goddess a solar deity, and, unable or unwilling to conceive of such a deity as feminine, identified her with the sun-god, lord of heaven; (2) the Hatti themselves, as a concession to Egypt, may have placed the solar deity, as an adopted god, at the head of the list; (3) the Hittite king, whose emblem is formed in part by the winged solar disk, may himself be the sun-god referred to.

The chief male member of the pantheon, then, was the storm-god. He was known in the capital as Teshub—a name common also among the Mitannians and Haldians as the designation of important local storm-gods. He corresponds closely to the West Semitic and Babylonian god Adad. Representations of him vary considerably, but he generally bears in one hand his distinctive weapon, the three-pronged thunderbolt. His most characteristic representation is that found at Malatya.² He is here clothed in the typical dress of the male deity, and bears the bow and thunderbolt as weapons. He stands on a bull, whose roaring, apparently represented by a line drawn from his mouth to the thunderbolt held in the god's hand, is a fit emblem of the thunder, while from the horns issue flames, typical of the lightning. In the procession in the sacred gallery at Boghaz Keui his weapons are the trident and mace, and he is borne on the necks or shoulders of two men, possibly priests; while in the Zinjerli sculpture he is a bearded god armed with trident, hammer, and dagger, and does not support bull or priest. The monument at Isbekjür,³ on which he stands

¹ Garstang, *op. cit.*, pls. lxiv-lxxi.

² Olmstead, Charles, and Wrench, *op. cit.*, fig. 41.

³ *Id.* fig. 33.

on a charging bull, may be taken as depicting the god in action.

The name of the Great Mother is not yet determined, though it seems likely that the original Cappadocian form was something like *Mā*—the name under which she was worshipped later at Comana. Perhaps the most satisfactory representation of her is that in the sacred procession at Boghaz Keui. Her skirt is here pleated and provided with a train. Her hair falls in a long braid, and on her head is the 'mural crown.' She has no weapons, but bears in her left hand her peculiar symbol and in her right a staff. The totemistic emblem on which she stands is the lioness or panther. Her son, who follows her in the procession, is a beardless youth in the typical masculine dress, bearing in one hand a staff, and in the other a double axe, while a dagger rests in its sheath at his belt. The animal on which he stands is the same as that of his mother. His Hittite designation has not been determined, though he was known in the West as Attis. A similar deity of fertility, perhaps Sandan or a local form of the son of the Great Mother, is the bearded god in the Ivriz sculpture, carved near a copious spring.¹ He holds in his right hand a cluster of grapes and in his left the heads of several stalks of grain. That he is not a god of the harvest or a Bacchus is evident from the fact that both grain and grapes are seen to be still attached to growing stalk and stock. A reminiscence of this or a similar early god still lingers in Damascus in a tradition, reported by J. E. Hanauer,² of a steel idol representing the deity who guaranteed the crops, holding in one hand, as a symbol of his function, a cluster of grapes, and, in the other, stalks and ears of wheat and barley.

The numerous other deities, male and female, in the sacred procession, like the majority of divinities pictured by the Hittites, cannot at present be identified. Prominent among them may be mentioned a mountain-god who stands behind Teshub, the two goddesses of the double-headed eagle, and a grotesque figure with human head, body formed of lions, and lower extremities replaced by the blade of a dirk or dagger.

Among other deities who seem to be native, but of whom little more than the name is known, may be mentioned Hipa, Sallu, Tarqu or Tarhu, and Tilla, most of whom appear only in personal names.

Though each city had its tutelary deities and the Empire its pantheon, there was no hesitancy in recognizing and adopting foreign gods; and as a result native and foreign deities are often so associated that, in the present state of our knowledge concerning such religious systems as the Phœnician and the Assyrian, it is difficult, and at times impossible, to assign a god to his rightful people. Ashur (or Ashir) appears frequently in personal names in the so-called Cappadocian tablets;³ and, notwithstanding the rôle he played as chief Assyrian god, his origin is by no means certain. Ishhara is mentioned in the treaty with Egypt as a Hittite goddess, and her name appears on the Indilimma bilingual,⁴ but she may have been adopted from a neighbouring people. A Hittite Reshpu is mentioned in the Egyptian records, but this also is a Phœnician and Aramæan deity.

Perhaps the most remarkable element in this complex of divinities connected with the Hittites is represented by four names of Mitannian gods found on one of the Boghaz Keui tablets:⁵ *mi-it-*

ra-as-si-il, u-ru-w-na-as-si-el, in-da-ra, na-sa-at-ti-ia-an-na; that is, Mithra, Varuna, Indra, and perhaps Nāsātya, the 'Twins.' An attempt to discuss this interesting admixture would be premature, but it clearly shows some very close connexion between the Hittite culture and that of the Aryans of India, possibly the addition to the Western people of a fresh stratum of population, representing a migration during the middle of the second millennium.

We shall doubtless find, when the tangled mass of Asiatic religious ideas is understood, that the Hittite religion contributed in no small degree to the later classical mythology. Two of the sculptured blocks dug from the mound of Arslan Tepe near Malatya¹ contain a scene which reminds us forcibly of a classical myth. One block contains the figures of two gods in ornate pointed caps and the ordinary short tunics. One of these, a bearded god, bears a dagger, club, and lance. He is preceded by a beardless figure who seems to be combating with his lance a many-headed serpent coiled in the water. The scene is not complete, but several of the serpent's heads with open mouths and fangs ready to strike are clearly discernible. This may prove to be the prototype of Hercules' slaying of the hydra, assisted by his friend Iolaus.

The sanctity of Mount Argæus from Hittite to Christian times is well attested. Moreover, *Argæus* is a title of Zeus in Cappadocia, and Argæus is known from Maximus of Tyre to have been a god as well as a mountain. This god Argæus, then, must be identified with the Apollo-like deity represented on the Argæus coins, who was doubtless originally the Hittite god of this mountain. It is interesting to note that in this instance the myth seems to have come down to the present day; for we must see in the modern legend to the effect that Ali Dagh, the cone-shaped mountain below Argæus, was formed by a basketful of earth which fell here as the result of the breaking of Ali's basket an adaptation of an earlier legend in which the god Argæus was the actor.

It is very possible that the sources of the Amazon stories will also be found among the Hittites, perhaps suggested to the story-teller of later times by a vague tradition of some rite connected with the cult of the Mother-goddess, or by an actual warring band of women. The possibility of this source is suggested by the discovery of an armed lady sculptured on a post of one of the gates of the Boghaz Keui fortifications.

The figure,² which is one of the best examples of Hittite art, is that of a woman with short skirt, girdle, coat of fine mail, and the pointed hat adorned with horns, her dress thus closely resembling that of the male deities. The lady's arms are the single-bitted axe, which she bears in her right hand, and the dagger, which rests in a sheath attached to her belt. While the figure is of great interest in its suggestion of a possible connexion with the Amazon legends, too much stress must not be laid upon this theory. It is more natural to suppose that the sculpture represents a Hittite Athene, and that she stands here as the guardian of gate and city.

3. Death, etc.—The common method of burial among the Hittites seems to have been interment in large jars after a partial cremation of the bodies. In 1907 a mound was discovered by the Cornell Expedition in the plain south of Mount Argæus, at the hamlet of Egri Keui, which was used as a cemetery and seemingly also as a crematory. Here were found human bones, fragments of large jars, some of them painted ware, and pieces of charred

wood. This and the further discovery of such jar-burial at the pre-classical Iconium as well as at Carchemish would indicate that this was the chief method. That other methods were in vogue is suggested by the discovery, made by the Cornell Expedition, of an instance of cist-burial at Sevinjik in Lycaonia south of Ilghin, the grave in this case containing a small earthen pot unmistakably Hittite in type. Persons of note, however, were interred in mounds built in a conspicuous spot, such as the summit or shoulder of a mountain. Whether the manner of interment was the same as in mounds further west is not known, as no tumulus definitely shown to be Hittite has been investigated.

It is to be expected that a people so favourable to the cult of the Mother-goddess who yearly revived Nature should have a steadfast belief in a life after death. Strangely enough, none of the larger monuments sheds any light on the subject. Several most interesting seal cylinders,¹ however, though showing strong Babylonian and Egyptian influence, may be taken as pictures of the Hittite lower world. In these the deity who judges the dead sits in a high-backed chair, and the soul of the departed is brought before him by an attendant with two faces, one of which he turns towards the judge, while with the other he watches the deceased. Three figures following the dead suggest the three assessors, Minos, Æacus, and Rhodamanthus, associated by the Greeks with Pluto, and indicate one more line of connexion between pre-Hellenic Greece and Asia Minor. Other scenes on the cylinders represent the dead partaking of food, some of which is furnished by kindly monsters; and in one place² we seem to have a cremation scene.

4. *Status of woman.*—From the prominence of the Great Mother cult as well as from the importance of other female deities in the pantheon, it was natural to conclude that the status of woman among the Hittite peoples must have been comparatively high. This conclusion is confirmed by the records. Whether monogamy was the rule is uncertain, but it is interesting to note that, when Subbi-luliuma supported Mattiuaza as heir to the throne of the Mitanni land, he conditioned his support on a monogamous marriage of the Mitannian prince with a princess of Hatti. The high position of woman is shown further by the importance of the queen as chief priestess alongside the priest-king, as well as by her prominence in State affairs, as evidenced by her seal affixed to treaties and royal edicts. A similar position of importance was held by the queen-mother, whose seal also appears on such documents; and one queen-mother of the Hatti dynasty, Putu-hipa, is mentioned as co-ruler, and later as regent, during a short interregnum.

5. *Cultus.*—In the course of the excavations at Boghaz Keui, the foundations of four buildings which seem to have been temples were laid bare, three in the upper city and one on a lower terrace. The last mentioned is the site where a portion of the collection of cuneiform tablets was unearthed. The foundations of all four temples are massive, and in their plan and construction have features in common with buildings excavated at Cnossos, Tiryns, and Mycenæ. The lower temple, which Winckler considers to have been the sanctuary of Teshub, consists in the main of a large rectangular court, with entrance from the south, opening northward through a hall of columns or pillars into the *adyton*, another rectangular room at the north side of which stands an immense basis, undoubtedly the pedestal of the god's statue. Added

to this main plan is a system of long, narrow chambers, which served as magazines for the stores and accessories of the temple; and the whole is surrounded by paved streets. Only the foundations of the temple complex remain. These consist of massive squared blocks of limestone forming a socle about a metre high, the upper surface of which is provided with rows of holes, doubtless designed for the reception of long poles supporting the clay superstructure. The three buildings in the upper city have a similar plan and structure, though the construction is not so massive. It is of interest to note in this connexion that the Anu-Adad temple at Ashur in Assyria shows a distinct departure from the usual Bab. type, revealing features which may prove to be Hittite.¹

Very little of the cult can be reconstructed from the monuments. These clearly show that libation and animal-sacrifice played an important part, the victims, so far as we can judge from the sculptures, being sheep and goats. The king or queen is represented in various instances as standing before the deity pouring a libation with a high one-handed pitcher, the stream from which, in some cases, falls into a two-handled urn set on the ground, as in the sculptures at Malatia and Isbekjür.² In several scenes of this character an attendant is pictured in the background, leading or holding the sacrificial animal. The Fraktin sculptures show the priest pouring a libation while the offering is on the altar, presumably burning.

6. *Divination.*—Among the interesting discoveries made at Boghaz Keui was that of a number of clay representations of sheep's livers closely resembling the Bab. model coming from the time of Hammurabi. This shows clearly that hepatoscopy, introduced from Babylonia, was practised among the Hittites, and we may believe that other forms of divination were adopted at the same time; indeed, it is not at all unlikely, considering the long occupation of these regions of the Nearer East by the Hittites, that this people, whose intercourse with the Ægean races is well attested, transmitted hepatoscopy and astrology to the West.

7. *Relation to other civilizations.*—Our present knowledge of the Hittites is too meagre to permit a discussion of the mutual interchange of cultural elements between the Hittian and the Assyro-Babylonian civilizations on the one hand and the Ægean world on the other. That such interchange between Hittites and Assyro-Babylonians occurred, and in no small measure, might, if no other evidence existed, be safely conjectured from the facts that before the end of the third millennium B.C. we find Hittites or Mitanni in control of Assyria, that from very early times Hittites lived peacefully in Babylonia and Assyria, and that in a period possibly as early as 2000 B.C. we find Assyrian names and name-elements in the Cappadocian tablets. We have seen that Bab. divination, in one of its phases at least, was borrowed by the Hittites, and that they were not averse to recognizing Assyro-Babylonian gods. Their greatest debt to the Euphratean civilization, however, is represented by the cuneiform script, which came to be used in all their commercial and legal transactions as well as in their international correspondence. With every advance in our knowledge of the Hittites it becomes increasingly apparent that these debts were not left unpaid. It seems clear from a study of the monuments and seal cylinders that the Hittites exerted a by no means inconsiderable influence on the architecture, as, for example, in the well-known *bit hilani*, and on

¹ Ward, *Seal Cylinders*, nos. 854-860.

the art, a notable example of which is found in the Maltaya sculptures¹ so obviously akin to the processions of gods at Boghaz Keui; while a strong Hittite influence on the religion must be predicated from the large number of names of Hittite deities forming a part of the personal names found in the Assyrian business documents.² That the Hittites exerted an equally important influence on the peoples of the Aegean cannot be doubted; but how far the constant similarity between the two is due to actual influence and how far to racial identity no one may safely say. These and similar questions which meet one at every stage of the investigations we may raise, but even such general hypotheses will continue to be of doubtful value until we have much more complete collections of material, and especially until the deciphering of the Hittite and allied languages has been accomplished.

LITERATURE.—For the native inscriptions: L. Messerschmidt, 'Corpus Inscr. Hettitarum', in *MFG*, Berlin, v. (1900) nos. 4-5, vii. (1902) no. 3, xi. (1906) no. 5; A. T. Olmstead, B. B. Charles, and J. E. Wrench, *Travel and Studies in the Near East*, vol. 1, pt. 2, Ithaca, 1911. The results of the Boghaz Keui excavations are given by H. Winckler, in *OLZ* ix. [Leipzig, 1906] 621 ff., and by H. Winckler and O. Fuchsstein, in *Mitteilungen der deutschen Orient-Gesellschaft*, xxxv. (Dec. 1907) 1 ff. The best study of the Hittite-Egyptian treaty is that by W. Max Müller, 'Der Bundesvertrag Rameses II. und des Chetiterkönigs', in *MFG* vii. [Berlin, 1902] 193 ff., and the best Eng. tr. is to be found in J. H. Breasted's *Ancient Records of Egypt* (Chicago, 1906-07), iii. 163 ff. For the history: J. Garstang, *The Land of the Hittites*, London, 1910; J. H. Breasted, *Hist. of Egypt*, New York, 1911; G. Maspero, *Struggle of the Nations*, do. 1897, *Passing of the Empires*, do. 1900. Cf. for the later period also A. T. Olmstead, *Western Asia in the Days of Sargon of Assyria*, New York, 1908. For the art and architecture: F. von Luschan, C. Humann, R. Koldewey, and others, *Ausgrabungen in Sendschirli*, Berlin, ii. (1898), iii. (1902), and iv. (1911); J. Garstang, *Land of the Hittites*; O. Fuchsstein, *Bauwerke von Boghazköi*, Leipzig, 1912. Cf. also Perrot-Chiplez, *History of Art in Sardania*, etc., New York, 1890. The seal cylinders are collected in W. H. Ward, *Seal Cylinders of Western Asia*, Washington, 1910. The religion is discussed, sometimes in considerable detail, in most of the foregoing works. There is a special study by W. M. Ramsay, in *Luke the Physician*, London, 1908. The religions of Asia Minor in general are fully dealt with in J. G. Frazer's *Adonis, Attis, Osiris*, London, 1907. Special phases of the subject are treated in the various special periodicals in art, by Ramsay, Sayce, Ward, and others. B. B. CHARLES.

HUIEN TSIANG.—See YUAN CHWANG.

HOS.—A tribe classed by Risley as Dravidian or non-Aryan, found in the Singhbhum District of the Chota Nagpur Division of Bengal, where, according to the Census of 1901, they number 385,125. The tribal name seems to be a contracted form of the word *horo*, 'man,' which is used by the cognate Mundas and Santals tribes as their national designation, and which appears in various forms in the tribal names Oraon, Kol, Korwa, Korku, etc. Risley further remarks that the Mundas and Santals are not called *horo* by outsiders; and 'in the case of the Hos, the tribal name of the original stock whence Hos, Mundas, and Santals are sprung has obtained popular recognition, in a slightly altered form, as the distinctive name of the branch which inhabits Singhbhum, and which may now be regarded as a separate tribe. For intermarriage between Hos and Mundas or Santals, though not absolutely forbidden by custom, is certainly unimportant, and may be expected soon to fall into disuse' (*PC* i. 319 f.).

1. Tribal legends.—The Hos possess a remarkable tradition concerning the creation of the world and the origin of the human race, recorded by Tickell (*JASB* ix. [1841] 797), and thus summarized by Dalton (*Descrip. Ethnol. of Bengal*, 185):

'Otā Borām and Sing Bongā were self-created, and they made the earth with rocks and water, and they clothed it with grass and trees, and then created animals, first, those that man domesticates, and, afterwards, wild beasts. When all was prepared for the abode of man, a boy and girl were created, and Sing Bongā placed them in a cave at the bottom of a great

ravine, and finding them to be too innocent to give hopes of progeny, he instructed them in the art of making ill, rice beer, which excited the passions, and thus the world became peopled' (cf. Tylor, *PC* 4, London, 1903, ch. xvii.; Lang, in *EB* ii. xix. 142 ff.). 'When the first parents had produced twelve boys and twelve girls, Sing Bongā prepared a feast of buffaloes, bullocks, goats, sheep, pigs, fowls, and vegetables, and, making the brothers and sisters pair off, told each pair to take what they most relished and depart. Then the first and second pair took bullocks' and buffaloes' flesh, and they originated the Kols (Hos) and the Bhūmij (Matkum); the next took vegetables only, and are the progenitors of the Brahmans and Chattris (Skr. *Kṣatriya*, the warrior class); others took goats and fish, and from them are the Śūdras (menials in the Hindu caste system). One pair took shell-fish, and became the Bhūyās [q.v.]; two pairs took pigs, and became Santals. One pair got nothing, seeing which, the other pairs gave them of their superfluity, and from the pair thus provided spring the Ghasis, who toil not, but live by preying upon others [for the Ghāsi or Ghāsiya tribe of out-castes, see Risley, *TC* i. 277 f.; Crooke, *TC*, Calcutta, 1896, ii. 408 f.]. The Hos have assigned to the English the honour of descent from one of the first two pairs, the elder. The only incident in the above tradition that reminds one of the more highly elaborated Santal account is the divine authority for the use of strong drink' (cf. the legends which attribute the invention of wine to Noah, Dionysus, and Osiris).

From the ethnological point of view this legend is interesting, as it admits the common origin of the forest tribes occupying this region. On the other hand, it is ætiological, inasmuch as it purports to explain the present status of these tribes; it is comparatively recent, since it embodies Hindu beliefs; and the account of the origin of the English must be quite modern.

2. Religion.—According to Dalton, the Hos at the present day have no conception of a heaven or hell which may not be traced to Brāhmanical or Christian teaching.

'They have some vague idea that the ghosts of the dead hover about, and they make offerings to them; and some have, like the Chinese, an altar in the house on which a portion of the "daily bread" is offered to them; but, unless under a system of prompting often inadvertently adopted, they will not tell you that this after existence is one of reward or punishment' (op. cit. 204).

Their burial customs certainly indicate a belief that the spirits of the dead abide in the neighbourhood of their graves. Ball (*Jungle Life*, 64), writing of them under the name of Laṛkā Kols, describes one of their cemeteries which contained a number of ancient stone monuments:

'The major part of them had a sort of truncate pyramidal shape, and were marked superficially with groovings, which may possibly have some significance; they recalled to my recollection the ancient Ogam inscriptions of Ireland, though not actually similar to them in form. In this neighbourhood, too, I saw an ancient cross; but regret to say, I do not retain any description of it, as I did not, at that time, fully recognise the importance of the symbol occurring otherwise than in connection with the Christian religion. The assumption, however, that it is the exclusive property of Christianity is clearly unwarranted by certain now well-established facts' [quoting *PASB*, 1877, p. 189; *JASB* xlv. (1877) pt. ii. p. 179; to which may be added D'Alvielli, *Migration of Symbols*, Eng. tr., London, 1894, p. 12 ff. and *passim*]. 'Most of these stones were erected as memorials to worthies of the tribe' (op. cit. 168).

Another account of the death-rites shows more clearly the belief in the survival of the soul after death. After the cremation of the corpse, the ashes are placed in an earthen vessel until all the arrangements for interment have been completed.

'Then the chief mourner, carrying the vessel with the remains of the deceased on her head, leads the funeral procession to every house in the village, the inhabitants of which come out and pay their last tribute of respect to the dead. The deep solemn notes of the drum and the low-voiced grief of the women form a weird funeral march as the procession winds from house to house, returning at last to the grave prepared close to the house of the deceased. Rice and other food is first thrown in, and then the vessel containing the remains is lowered into the hole and covered over with earth [see FOOD FOR THE DEAD]. A huge uncut slab of stone is placed over the spot to mark the grave and guard it against desecration. Outside the village, the Hos, like the Mundas, put up another monument to the deceased's memory in the form of a huge pillar of rock varying in height from four to twelve or fourteen feet' (Bradley-Birt, *Chota Nagpore*, 101).

3. Other religious beliefs.—Besides the cult of deceased ancestors, the worship of the Hos is directed towards the propitiation of a host of malignant spirits of forest, hill, and stream, which

are practically identical with those of the kindred tribes, Kols, Mundas, and Santāls (*q.v.*).

HOBBES.—1. **Life.**—Thomas Hobbes, known to his friends as 'Malmesburiensis Philosophus,' an original and forceful English writer on political philosophy, was born at Westport, in Wiltshire, on 5th April 1588. His early education was received at the Westport church school, at a school in Malmesbury, and also at one kept by a Mr. Latimer, who is described as 'a good Grecian, and the first that came into our parts since the Reformation' (J. Aubrey, *Brief Lives*, ed. A. Clark, Oxford, 1898, i. 329). Later, Hobbes entered Magdalen Hall, Oxford, where he became discontented with the traditional learning of the University and turned his attention to the study of men and current affairs. After admission as bachelor on 5th Feb. 1608, he became tutor to the son of William Cavendish, later the second Earl of Devonshire, and began the life-long intimacy with a family whose social position and political fortunes carried him into that turmoil of public life wherein his opinions were formed. Through the travels incident to this connexion, Hobbes became acquainted with the work of such men as Galileo, Kepler, and Montaigne. This fired his imagination and led him to conceive a system of philosophy worked out in the spirit of the new learning, and applied especially to the moral, social, and political problems of human life. He felt his project to be the more urgent because of the political disturbances of his time and the uncertainties of life and fortune incident to the Civil War. Although his political writings were not his earliest essays in philosophy, and although his political theory was probably worked out as a part of his general theory before the Civil War gave to it a special impetus, the publication at Amsterdam in 1647 of *de Cive*, and at London in 1651 of *Leviathan*, was felt by Hobbes himself to be a matter vitally important for the trend of events. He professed the ambitions of a scholar, owned a preference for scientific inquiry secure from the excitements of public life, and yet, in spite of self-confessed timidity, sought repeatedly the opportunity to make his writings felt by those in power. His contributions to political theory, together with his observations on human nature, are by far the most important parts of his philosophy. His own time and times subsequent have found little of marked significance in his other work. Yet the student of philosophy can find many illustrations of keen insight into logical problems and the theory of science, and the student of literature can find a real treasury of forcible and clear English prose. He died on 4th Dec. 1679, in his ninety-second year, and 'was buried,' as told by James Wheldon, 'in the parish church of Hault Hucknall, close adjoining to the raille of the monument of the grand-mother of the present Earle of Devonshire, with the service of the Church of England by the minister of the parish' (Aubrey, i. 382).

Hobbes is described by John Aubrey, his friend and contemporary, as six feet high and something better; with a good eye of hazel colour; with a head of mallet form approved by the physiologists, and with a temperament 'sanguineo-melancholicus,' similarly approved; of temperate and regular habits; as an harmonical soul and not a woman-hater, although never married; of a sharp wit which was also sure and steady; as one who contemplated more than he read, and who remarked 'that if he had read as much as other men, he should have been as ignorant as they'; and as a man who 'would have been the worship of God performed with musique' (*ib.* I. 348 f., 354).

2. **Writings.**—The writings of Hobbes show how wide his intellectual interests were. Especially

noteworthy is his interest in Greek literature, rhetoric, and mathematics. His translations are vigorous and suggestive. His rhetoric is largely an unacknowledged reproduction of Aristotle. His mathematical writings expose his deep interest in the subject and also an incapacity to handle the more difficult problems. He believed he had squared the circle, and he engaged in controversies which redounded more to the credit of his adversaries than himself. The complete list of his writings is as follows:

The History of the Grecian War written by Thucydides, London, 1628; *de Mirabilibus Pecci*, do. 1636; *Objectiones in Cartesii de Prima Philosophia Meditationes*, Paris, about 1641; *Tractatus Opticus*, do. 1644; *Elementa Philosophica de Cive*, Amsterdam, 1647 (a few copies were privately printed in Paris, 1642, with the title *Elementorum Philosophica Sectio Tertia, De Cive*; in English: *Philosophical Rudiments concerning Government and Society*, London, 1651); *Human Nature*, do. 1650; *de Corpore Politico, or Elements of Law*, do. 1650; *Answer to Davenant's Preface before Gouffier*, Paris, 1650; *Leviathan*, do. 1651; *Of Liberty and Necessity*, do. 1654; *Elementorum Philosophica Sectio Prima, de Corpore*, London, 1655, published in English, do. 1656; *Six Lessons to the Professors of Mathematics*, do. 1656; *Questions concerning Liberty, Necessity, and Chance*, do. 1656; *Marks of the Aburd Geometry, etc.*, of John Wallis, do. 1656; *de Homine, sive Elementorum Philosophica Sectio Secunda*, do. 1657; *Examinatio et Emendatio Mathematica Hodierna*, do. 1660; *Dialogus Physicus, sive de Natura Aeris*, do. 1661; *de Duplicatione Cubi*, do. 1661; *Problemata Physica*, do. 1662; *Considerations upon the Reputation, etc.*, of Thomas Hobbes, do. 1662; *de Principiis et Ratiocinatione Geometrarum*, do. 1666; *Appendix ad Leviathan*, Amsterdam, 1688; *Quadratura circuli, Cubatio sphaerae, Duplicatio cubi*, London, 1669; *Letter to the Right Honourable Edward Howard*, do. 1669; *Rosetum Geometricum*, do. 1671; *Three Papers presented to the Royal Society*, do. 1671; *Principia et Problemata aliquot Geometrica*, do. 1672; *Lux Mathematica*, do. 1672; *The Voyage of Ulysses*, do. 1673; *Epistola ad Anthony a Wood*, do. 1674; *The Iliad and Odyssey of Homer*, do. 1675; *Letter to the Duke of Newcastle, on the Controversy about Liberty and Necessity*, do. 1676; *Decameron Physiologicum*, do. 1678; *T. Hobbes Malmesburiensis Vita Carmine Expressa*, do. 1679, published posthumously; *An Historical Narration concerning Heresy*, 1680; *Behemoth: the History of the Causes of the Civil Wars of England*, London, 1680 (an edition from a defective MS was published without the authority of Hobbes in 1679 shortly before his death); *T. Hobbes Malmesburiensis Vita*, do. 1681; *The Whole Art of Rhetoric*, do. 1681; *The Art of Rhetoric*, do. 1681; *The Art of Sophistry*, do. 1681; *A Dialogue between a Philosopher and a Student, of the Common Lawes of England*, do. 1681; *Answer to Bishop Bramhall's Book called 'The Catching of Leviathan'*, do. 1682; *Seem Philosophical Problems*, do. 1682; *Historia Ecclesiastica*, do. 1688; a few letters have been published by Molesworth in vol. v. of the *Latin Works* and vol. vii. of the *English Works*.

3. **Philosophy.**—Although Hobbes is best known for his political theory, he himself regarded that theory as a part of a comprehensive and unified philosophy, and as a specific illustration of its principles. His statement in the 'Preface to the Reader' prefixed to his *Philosophical Rudiments* is a characteristic expression of his point of view:

'I was studying philosophy for my mind sake, and I had gathered together its first elements in all kinds; and having digested them into three sections by degrees, I thought to have written them, so as in the first I would have treated of *body* and its general properties; in the second of *man* and his special faculties and affections; in the third, of *civil government* and the duties of subjects. Wherefore the first section would have contained the *first philosophy*, and certain elements of *physics*; in it we would have considered the reasons of *time, place, cause, power, relation, proportion, quantity, figure, and motion*. In the second, we would have been conversant about *imagination, memory, intellect, ratiocination, appetite, will, good and evil, honest and dishonest*, and the like. What this last section handles, I have now already shewed you. Whilst I contrive, order, pensively and slowly compose these matters (for I only do reason, I dispute not;) it so happened in the interim, that my country, some few years before the civil wars did rage, was boiling hot with questions concerning the rights of dominion and the obedience due from subjects, the true forerunners of an approaching war; and was the cause which, all those other matters deferred, ripened and plucked from me this third part. Therefore it happens, that what was last in order, is yet come forth first in time' (*English Works*, vol. II. p. xix).¹

The Latin titles of his three principal works reflect this general plan—*de Corpore, de Homine, de Cive*. These main divisions of philosophy are in their turn subdivided, but his philosophy finds its unity in the conception of bodies and their

¹ All references are to the Molesworth edition of Hobbes's works.

relations to one another. There are two kinds of bodies, 'one whereof being the work of nature is called a *natural body*, the other is called a *commonwealth* and is made by the wills and agreement of men' (*ib.* i. 11). Accordingly, the whole body of knowledge may be divided, as he divides it in the elaborate table of the sciences in ch. ix. of the *Leviathan*, first of all into those sciences which deal with 'consequences from the accidents of bodies natural' and those which deal with 'consequences from the accidents of politic bodies.'

This general and comprehensive scheme of a system of philosophy indicates one of the two chief ideas which are characteristic of Hobbes's thinking. Bodies, that is, things which can be moved, are the elements with which he deals. They are, including the human body, natural, and they move according to laws of motion which are natural to them. There is, consequently, a natural condition or state of bodies which follows from their mutual interactions and is the basis for any control or manipulation of them. This, in his view, is true not only of inanimate bodies, but also of man himself. There is a natural condition of mankind which illustrates the results which flow from his natural motions. This natural condition may be so controlled and regulated that a commonwealth is constituted. The State becomes thus the organized control of the natural motions—'the dispositions, affections and manners'—of men. It is a product of art utilizing Nature.

The other idea which markedly determines his reason is found in his conception of science itself.

'There are,' he writes in ch. ix. of the *Leviathan* and elsewhere, 'of knowledge two kinds; whereof one is knowledge of fact, and the other knowledge of the consequence of one affirmation to another. The former is nothing else but sense and memory, and is absolute knowledge. . . . The latter is called science and is conditional.'

This 'conditional' character of science does not, however, impair its usefulness. The ability of man to organize his observations in a connected discourse is responsible for all the benefits of civilization.

'The end of knowledge is power; and the use of theorems (which, among geometricians, serve for the finding out of properties) is for the construction of problems; and, lastly, the scope of all speculation is the performing of some action or thing to be done. . . . Now, the greatest commodities of mankind are the arts; namely, of measuring matter and motion; of moving ponderous bodies; of architecture; of navigation; of making instruments for all uses; of calculating the celestial motions, the aspects of the stars, and the parts of time; of geography, etc. By which sciences, how great benefits men receive is more easily understood than expressed' (*English Works*, i. 7).

The conditional character of science does, however, involve an important consequence for Hobbes's philosophy. Science is concerned with consequences, with results that follow from accepted premisses or initial truths. It is dependent on these premisses and truths, and is conditioned by them. So far as we have the chain of possible consequences in mind, there is no source of difference of opinion in science itself which industry, discipline, and method may not remove. 'The source of controversy is exterior to science itself, in the initial premisses from which the consequences are drawn. These take their beginning from experience, from that other kind of knowledge which is not science, but fact. If the similar experiences of men were free from variations, from prejudices, and from self-interest, science, so far as it rests on fact, would be free from dispute. But experiences are not uniform. It thus happens that men differ in their opinions, not because of differences in their reasoning, but because of differences in their experiences which reason cannot settle. Such differences can be settled only by mutual agreement, or by the intervention of a constituted authority which arbitrarily decides all points at issue. Hobbes does not blink the rigid consequences of this conception of science. While he would commend his own

philosophy because of its consonance with every man's experience and its conformity with facts accessible to all, he repeatedly asserts that in questions of fact individual differences may be so great that only authority can settle them.

In these two principal ideas—(1) the idea of a natural order through the control of which all advantages of civilization and all social institutions arise, and (2) the idea of science as a body of consequences drawn from premisses which are often so subject to variation that they must be standardized by authority—the essential things in Hobbes's philosophy are contained. Nature is inadequate for man's uses without science and art, and these are inadequate to this service without a constituted authority. The problem of authority would not, however, be a serious one if it did not involve men so seriously in their social and civil relations; if it did not, that is, involve the whole problem of man's peace and safety. The problem of society becomes the problem of authority. With Hobbes it is the great problem of philosophy and overshadows all his other interests.

Hobbes's contributions to the philosophy of bodies in general do not deserve particular notice. He is influenced throughout by Galileo, and sees everywhere motion and the laws of motion. It is his transference of these ideas to psychology that is first of all significant. Sense, imagination, the association of ideas, the passions, and the will are all conceived and expressed by him in terms of motion, or, more precisely, in terms of the reactions called forth in men by the stimuli which affect them. Thus, sense is defined as a 'phantasm made by the reaction and endeavour outwards in the organ of sense caused by an endeavour inwards from the object, remaining more or less' (*ib.* i. 391). Imagination is 'decaying sense' and illustrates the law that motion, once started, continues until opposed by contrary motion; referred to the past, it is memory. The association of ideas—Hobbes speaks of the 'train of imaginations' or the 'train of thoughts'—arises from the fact that motions which are simultaneous or successive in sense tend to recur as a whole when any one of them recurs. Passions are the 'interior beginnings of voluntary motions,' and will is defined as the 'last appetite in deliberation,' that is, as the last motion in a delayed or suspended series of motions.

These ideas Hobbes deliberately opposes to the traditional psychology of his day. They made comparatively little impression at the time, but we can see in them now the first important general statement of the basal positions of the physiological psychology of a much later day. It is the reacting organism on which Hobbes lays emphasis, an organism which, excited by external stimuli, reacts only after the excitations received have been internally assimilated and organized.

'There is no other act of man's mind, that I can remember, naturally planted in him, so as to need no other thing, to the exercise of it, but to be born a man, and live with the use of his five senses. Those other faculties, of which I shall speak by and by, and which seem proper to man only, are acquired and increased by study and industry; and of most men learned by instruction, and discipline; and proceed all from the invention of words, and speech. For besides sense, and thoughts, and the train of thoughts, the mind of man has no other motion; though by the help of speech, and method, the same faculties may be improved to such a height, as to distinguish men from all other living creatures' (*ib.* iii. 16).

Because life itself is but motion, man can never be without desire or fear, just as he cannot be without sense. Thus, according to Hobbes, felicity is 'continual success in obtaining those things which a man from time to time desireth' (*ib.* 51); it is not 'the repose of a mind satisfied.' Nor does a man desire to enjoy once only, but rather 'to assure forever the way of his future desire; and this he can do only by having the power to do it'

(ib. 85). This is one of Hobbes's most important generalizations in view of his theory of the State. He expresses it most emphatically in these words:

'In the first place, I put for a general inclination of all mankind, a perpetual and restless desire of power after power, that ceaseth only in death. And the cause of this is not always that a man hopes for a more intensive delight, than he has already attained to; or that he cannot be content with a moderate power: but because he cannot assure the power and means to live well, which he hath present, without the acquisition of more. And from hence it is, that kings, whose power is greatest, turn their endeavours to the assuring it at home by laws, or abroad by wars; and when that is done there succeedeth a new desire; in some, of fame from new conquest; in others, of ease and sensual pleasure; in others, of admiration, or being flattered for excellence in some art, or other ability of the mind' (ib. 85 f.).

Associated with this is a second generalization of similar importance:

'Nature hath made men so equal, in the faculties of the body, and mind; as that though there be found one man sometimes manifestly stronger in body, or of quicker mind than another; yet when all is reckoned together, the difference between man and man, is not so considerable, as that one man can thereupon claim to himself any benefit, to which another may not pretend, as well as he. For as to the strength of body, the weakest has strength enough to kill the strongest, either by secret machination, or by confederacy with others, that are in the same danger with himself' (ib. 110).

From this equality of ability men entertain equal hopes of securing the ends they desire.

'And therefore if any two men desire the same thing, which nevertheless they cannot both enjoy, they become enemies; and in the way to their end, which is principally their own conservation, and sometimes their delectation only, endeavour to destroy, or subdue one another. And from hence it comes to pass, that where an invader hath no more to fear, than another man's single power; if one plant, sow, build, or possess a convenient seat, others may probably be expected to come prepared with forces united, to dispossess, and deprive him, not only of the fruit of his labour, but also of his life, or liberty. And the invader again is in the like danger of another' (ib. 111).

Thus, in so far as men depend upon their natural powers, they are virtually in a state of war 'of every man against every man.' War is a man's natural condition, the results of which Hobbes thus eloquently describes:

'Whatsoever therefore is consequent to a time of war, where every man is enemy to every man; the same is consequent to the time, wherein men live without other security, than what their own strength, and their own invention shall furnish them withal. In such condition, there is no place for industry; because the fruit thereof is uncertain: and consequently no culture of the earth; no navigation, nor use of the commodities that may be imported by sea; no commodious building; no instruments of moving, and removing, such things as require much force; no knowledge of the face of the earth; no account of time; no arts; no letters; no society; and which is worst of all, continual fear, and danger of violent death; and the life of man, solitary, poor, nasty, brutish, and short' (ib. 113).

This 'natural condition of mankind' is not, as Hobbes expressly declares, the primitive condition in which men once lived. It was never universal. The nearest approach to it is, he thinks, represented in the 'savage people in many places in America.' Yet it is man's natural condition if we consider how his propensities express themselves in the absence of a restraining and superior power, and that the function of government is restraint and control, and observe that the police and the systematic guarding of property are evident indications of the suspicion men naturally have of one another. In other words, man is not naturally what the Greeks called a 'political animal.' Naturally he is an impulsive animal seeking the gratification of his desires, and the security of his life, and finding that this seeking brings him into competition with his fellows. As such his rights are measured and determined solely by his power to secure what he desires. He knows nothing of right and wrong, of justice and injustice, as over against his fellows.

'Where there is no common power, there is no law; where no law, no injustice. Force, and fraud, are in war the two cardinal virtues. Justice, and injustice, are none of the faculties neither of the body, nor mind. If they were, they might be in a man that were alone in the world, as well as his senses, and passions. They are qualities, that relate to men in society, not in solitude. It is consequent also to the same condition, that there be no propriety, no dominion, no mine and thine distinct; but only that to be every man's, that he can get;

and for so long, as he can keep it. And thus much for the ill condition, which man by mere nature is actually placed in; though with a possibility to come out of it, consisting partly in the passions, partly in the reasons' (ib. 115 f.).

It is upon such a foundation that Hobbes conceives the State, and, with the State, the moral laws, to be built. The fear of death, the necessity of a sure provision for the needs of life, the disastrous consequences of enmity and war, are tendencies which naturally incline men to peace. These tendencies are supplemented by reason, which leads men to agree or attempt to agree with one another and to set up certain rules of conduct which make for peace. These rules suggested by reason Hobbes calls 'laws of nature,' of which the two most fundamental are: (1) 'that every man ought to endeavour peace as far as he has hope of obtaining it, and, when he cannot attain it, that he may seek and use all helps and advantages of war'; and (2) 'that a man be willing, when others are so too, as far forth as for peace and defence of himself he shall think it necessary, to lay down this right to all things; and be contented with so much liberty against other men, as he would allow other men against himself' (ib. 117 f.). From these fundamental natural laws or dictates of reason Hobbes deduces others, all looking towards the establishment of peace through mutual agreements, concessions, and covenants.

He insists, however, that these laws are contrary to our natural passions, as they impose restrictions on our desires. They are obeyed only so long as obedience to them is necessary and profitable, if there is no established power to enforce them. 'Covenants without the sword are but words and of no strength to secure a man at all' (ib. 154). Consequently, mutual concessions and covenants are not sufficient. To live peaceably men must agree to transfer all their individual power to a single individual or a group of individuals, that is, to a sovereign. Only then is a State established. But the transfer of power must be absolute and thereby the sovereign becomes an absolute sovereign. To him belong ultimately all decisions of right and wrong, of justice, and of property. By him all disputes are settled. From his decisions there is no appeal, for the idea of appeal contradicts the idea of a sovereign power, and is, therefore, irrational.

'This is the generation of that great Leviathan, or rather, to speak more reverently, of that mortal God, to which we owe under the immortal God, our peace and defence. For by this authority, given him by every particular man in the commonwealth, he hath the use of so much power and strength conferred on him, that by terror thereof, he is enabled to perform the wills of them all, to peace at home, and mutual aid against their enemies abroad. And in him consisteth the essence of the commonwealth; which, to define it, is one person, of whose acts a great multitude, by mutual covenants one with another, have made themselves every one the author, to the end he may use the strength and means of them all, as he shall think expedient, for their peace and common defence' (ib. 158).

The sovereign power may be attained by voluntary agreement or by natural force.

It is thus clear that Hobbes regards the State as a product of man's attempt to control, through the use of his reason, his natural desires and propensities. No such control would be necessary if the desires of men did not conflict. The existence of the State implies, therefore, restriction, and consequently needs to be supported by force. In other words, men do not naturally consent to be governed. Government can exist, therefore, only so long as it is absolute. Any other condition is incipient war or revolution. It is to be noted, further, that Hobbes bases all morality on the decisions of the sovereign power. There is no natural right or wrong, justice or injustice. Virtue is not, like sense, the natural exercise of a natural faculty. It is a thing imposed on nature, and is practised only so long as there is interest or power

to enforce it. Hobbes is thus not properly classified as either an egoist or a hedonist. With him morality is wholly a political matter, and politics is wholly the work of reason.

Religion Hobbes defines as 'fear of power invisible, feigned by the mind or imagined from tales publicly allowed' (*ib.* 45). If the tales are not publicly allowed, the fear is superstition. It is thus clear that Hobbes makes religion also a political matter. Yet he recognizes also a 'kingdom of God.' That which is significant in his philosophy here is not its positive content, but the separation of the doctrine of God from all that concerns the doctrine of Nature.

'The Scripture was written to show unto men the kingdom of God and to prepare their minds to become his obedient subjects; leaving the world and the philosophy thereof to the disputations of men for the exercising of their natural reason' (*ib.* 68).

To enter the kingdom of God it is necessary to believe that Jesus is the Christ and to obey the laws of God. In a Christian commonwealth there can be no conflict between allegiance to God and to the State. It is only when the civil sovereign is an infidel that such a conflict may arise, for it is a law of God, found out by reason, that subjects should obey their sovereigns. Yet even here the conflict can arise, Hobbes thinks, only when an infidel sovereign commands a Christian subject to renounce Christ. Then the subject has no resource

but to 'go to Christ by Martyrdom.' Apart from what Hobbes regards as the essential tenet of the Christian faith—namely, that 'Jesus is the Christ, the son of the living God'—all the public regulation of religion rests with the sovereign. He is thus to the end of his doctrine the political philosopher who would have the State supreme in all those matters which affect the mutual relations of men. Yet his emphasis on absolute power does not fall in the interests of the rights of sovereigns, but in the interests of peace and public safety.

LITERATURE.—The principal ed. of Hobbes's works is that by W. Molesworth (London, 1839-45) in 16 volumes, 11 containing the works in English, 5 the works in Latin, an extensive index, and a number of plates. This ed. contains also the chief sources of his life, namely, his autobiography and the account of him by John Aubrey. The best ed. of the *Leviathan*, his most widely known work, is the Cambridge Press ed. of 1904. In addition the following may be mentioned: G. Croom Robertson, *Hobbes*, Edinburgh, 1886; F. Tönnies, *Hobbes Leben und Lehre*, Stuttgart, 1896; E. H. Sneath, *The Ethics of Hobbes*, Boston, 1898; F. J. E. Woodbridge, *The Philosophy of Hobbes*, in extracts and notes collated from his writings, Minneapolis, 1903; Leslie Stephen, *Hobbes*, London, 1904; Mary W. Calkins, *The Metaphysical System of Hobbes*, Chicago, 1905. FREDERICK J. E. WOODBRIDGE.

Roman (J. S. REID), p. 750.

Semitic (O. C. WHITEHOUSE), p. 751.

HOLINESS (General and Primitive).—1. Holiness is the great word in religion; it is even more essential than the notion of God. Real religion may exist without a definite conception of divinity, but there is no real religion without a distinction between holy and profane. The attaching of undue importance to the conception of divinity has often led to the exclusion from the realm of religion of (1) phenomena at the primitive stage, as being magic, although they are characteristically religious; and of (2) Buddhism and other higher forms of salvation and piety which do not involve a belief in God. The only sure test is holiness. From the first, holiness constitutes the most essential feature of the divine in a religious sense. The idea of God without the conception of the holy is not religion (F. Schleiermacher, *Reden über die Religion*, Berlin, 1799). Not the mere existence of the divinity, but its *mana*, its power, its holiness, is what religion involves. This is nowhere more obvious than in India, where the men of religion, through their art of acquiring holy power, became dangerous rivals of the gods, who, in order to maintain something of their religious authority, were obliged to adopt ascetic holiness themselves (*Sat. Brāhm.* ii. 2, 4, ix. 1, 6, 1 ff.). The definition of piety (subjective religion) runs thus: 'Religious is the man to whom something is holy.' The holy inspires awe (*religio*).

The original idea of holiness seems to have been somewhat indeterminate, and applied to individual things and beings. Then the great systems were evolved which are found (1) in barbaric societies, such as the Polynesian, West African, etc.; and (2) in nomistic religions such as the Avestan, and in Judaism, where everything is arranged under the categories of 'tabu' (holy) and ordinary (profane). The 'holy' is apart from ordinary life. Spiritual religion tries to abolish the outwardness of this distinction and to make it a purely personal one.

Hence it strives to bring the whole of life under the sway of holiness. The prophetic religion in Israel considered the whole people of Israel as holy (Lv 19² 20⁷ 24, Jer 2⁸, Is 62¹² 63¹⁸ etc.) by bringing the idea of 'the chosen people' into connexion with the idea of holiness. But the ideal of spiritual religion—that every person and every thing should be holy—is an absurdity to primitive tabu systems and to nomistic holiness, because something must be left free for use. In the same way ascetic schemes of salvation presuppose that some people are not holy, religious, in a strict sense. If every one were 'religious,' 'holy,' there would be no families, no future generations, nobody to till the ground, constitute society, and perform the daily labours.

2. Holiness is viewed as a mysterious power or entity connected with certain beings, things, events, or actions. Amongst the Melanesians everything that exceeds the ordinary capacity of man or the ordinary course of nature is called *mana*.¹ In some cases, as with this Melanesian *mana*, the power is expressly reserved for certain beings. Some souls, e.g., have no *mana*, and, therefore, are soon forgotten and receive no worship. In other cases, as with the Iroquoian *orenda*, 'this hypothetic magic is held to be the property of all things, all bodies,' etc. (J. N. B. Hewitt, 'Orenda and a Definition of Religion,' in *Amer. Anthropologist*, new ser., 1902, p. 33 ff.). But in any case only its concentrated appearance in some beings and things is of practical importance. Of the somewhat analogous conceptions and words

¹ From the classical work of R. H. Codrington, *Melanesians* (Oxford, 1891), this term has been adopted, through L. Marillier, R. H. Marett, etc., as the general term for positive holiness working as power, as distinguished from negative holiness involving the conception of danger, interdiction, prohibition, which in current terminology is now designated by the Polynesian word *tabu*.

which are to be found everywhere in primitive religions, we mention here a few examples:

The Australian *jota* (A. W. Howitt, *Native Tribes of South-East Australia*, London, 1904); the ancient Indian *brahman* (q.v.; cf. H. Oldenberg, in *Anzeiger für indogerm. Sprach- und Altertumskunde*, viii. [1897] 40; and N. Söderblom, *Gudströms uppkomst*, Stockholm, 1913); the *tendi* of the Bataks; the *sumangat*, 'life-stuff', and the *pemali*, 'extraordinary', 'mysterious', of the Malays (A. C. Krulj, *Het Animisme in den indischen Archipel*, The Hague, 1906; W. W. Skeat, *Malay Magic*, London, 1900; Skeat-Blagden, *Pagan Races of the Malay Peninsula*, do. 1906; J. Warneck, *Die Religion der Batak*, Leipzig, 1909); the *hasina* of the Malagasy (defined in the dictionaries as 'indwelling or supernatural power, which renders a thing good and effective; the power of a medicine; the truth of a word; the efficacy of amulets and incantations; the holiness of a thing,' etc.; cf. A. van Gennep, *Tabou et totémisme à Madagascar*, Paris, 1904); the *longo* of Congo languages (*longo* signifies 'medicine,' 'charm' [K. E. Laman, in his forthcoming *Dictionary*]); the *orunda* of the Mpongwe; the *eti* of the Fans (cf. A. Le Roy, *La Religion des primitifs*, Paris, 1909; and F. H. Trilles, *Le Totémisme chez les Fih*, Münster, 1912); the *deao* of the Ewe (D. Westermann, *Wörterbuch der Ewe-Sprache*, Berlin, 1906); the *oudah* of the Pygmies (L. H. Maret, *The Threshold of Religion*, London, 1909); the *wakanda* of the Siouan Indians (which was used 'indiscriminately as substantive and adjective, and with slight modification as verb and adverb,' which may be translated by 'mystical,' 'power,' 'sacred,' 'ancient,' 'grandeur,' 'animate,' 'immortal,' 'although' 'no English sentence of reasonable length can do justice to the aboriginal idea expressed by the term *wakanda*' [W. J. McGee, 'The Siouan Indians,' 15 *RBEW*, 1897, p. 182 ff.; J. O. Dorsey, 'Omaha Sociology,' 3 *RBEW*, 1884, p. 211 ff.]); the *orenda* of the Iroquoian Indians (denoting a mystic potency which is particularly great in the shaman, in the skillful hunter, in any man or animal who in fight, hunting, or play outmatches another; and which is 'regarded as related directly to singing and to anything used as a charm, amulet, or mascot, as well as to the ideas of hoping, praying, or submitting' [J. N. B. Hewitt, *loc. cit.* p. 38 ff.]); the old Norse *hamingja*, 'luck,' 'success,' 'protecting genius,' 'fate,' of individuals and of clans (W. Groenbech, *Lykkemand og Nidving*, Copenhagen, 1909, and *Soul or Mana*, do. 1913; cf. *Reports of the Intern. Congress of the History of Religion in Leyden*, 1912); the *makt*, 'might,' 'power,' of Swedish folk-lore (men and animals can be 'might-stolen' [*makt-stulna*], through evil influences; the old Norse said *hamstoli*, 'ham-stolen').

This mysterious holiness is to be found, in the first place, in the medicine-man, or priest-king, who is powerful and sacred (J. G. Frazer, *Lectures on the Early History of the Kingship*, London, 1905), and in the sacred formula which is used as a spell or a prayer. Further, it belongs to special objects which are connected in any way with the holy rites and the exercise of religion or magic, e.g. the *churinga* (*tyurunga*, Strehlow) of the central tribes of Eastern Australia (Spencer-Gillen*, 1899, 1904; C. Strehlow and M. F. von Leonhardi, *Die Aranda- und Loritja-Stämme in Zentralaustralien*, pt. iii., 'Die totem. Kulte,' Frankfurt, 1911), the bull-rovers, drums, rattle-staffs (the Mexican rattle-staff was called *chicauaztli*, 'that through which one makes strong, powerful' [E. Seler, in *Veröff. aus dem Kön. Museum für Völkerkunde*, vi. [Berlin, 1899] 89]), and other things used in the mysteries; the West African *minkisi*, 'fetishes' (M. H. Kingsley, *West Afr. Studies*, London, 1899; R. E. Dennett, *At the Back of the Black Man's Mind*, do. 1906; Laman and other missionaries, in *Nordenskiöld, Etnografiska bidrag af svenska missionärer*, Stockholm, 1907). It also belongs to relics, amulets, divinities, their images, and everything connected with them. In a wider sense the mysterious power of holiness is supposed to be the cause of everything which is out of the ordinary course, and which, therefore, demands special explanation. Primitive man not being as yet an individual, but only part of society (the real unity), holiness is not a thing to be used for individual, anti-social, or selfish purposes—in which case its use becomes the worst of abuses, namely, sorcery or black art—but constitutes the great treasure of the community, manifested in its sacred institutions, in manifold objects, and in its members, who derive their life, power, and happiness from the general holiness, and at the same time have to enhance and concentrate this common mysterious influence through their ritual celebrations and

manly actions. But the essential connexion between 'the sacred' and society does not imply that the notion of the 'sacred' is merely a kind of objectifying and idealizing of the community as a power mysteriously superior to the individual (E. Durkheim, *Les Formes élémentaires de la vie religieuse*, Paris, 1912).

We meet, of course, with somewhat different lines of evolution in proceeding from the most primitive stages onwards, and a supposed uniformity must not be allowed to obscure the peculiar features of holiness in particular societies at the lower stages of civilization. But, as far as we can see, the psychological origin of the conception of holiness seems to have been the mental reaction against what is startling, astonishing, new, terrifying. This reaction may have expressed itself in a cry or an exclamation. Individual experiences influenced the collective mind, which by degrees created forms of language which gave more durable expression to the mental reaction in face both of what was really new and of certain often recurring phenomena which never cease to startle and awaken a vivid emotion. A motley series of beings, things, events, and actions are named by such words as 'the great one,' 'the powerful,' 'very old,' 'dangerous,' 'successful,' 'divine,' etc.; and—what is still more significant—those things are surrounded, by a natural reaction, with a fence of precautions and interdictions. The first point is that these startling things are not to be treated lightly. It is evident that the idea of the extraordinary (this seems also to be the original meaning of the Semitic *qds*; cf. below, p. 751^b), as distinguished from the ordinary, already exhibits a tendency towards the conception of the supernatural. Primitive man is unable, indeed, to conceive anything beyond Nature or higher than Nature; yet the term 'supernatural' may perhaps supply the best conception of what 'the holy' means to him.

'Holiness' so conceived is the most valuable source of health, strength, food, success, influence; at the same time, it involves a constant danger. Hence the rites to which the conception gives rise have either a positive or a negative character.

3. The positive rites have as their object the acquiring, concentrating, and utilizing of holiness. (1) *Augmenting rites* are to the greatest extent employed in order (a) to produce or augment the supply of food—e.g. Australian *intichiuma* and ceremonies analogous to the agricultural rites in which the holy power may be concentrated in the last sheaf, a cake, an image, an animal, a tree, or a man. Phallic or sexual religion is also chiefly concerned with the well-being of the herds and of the field. In order to secure fertility, the art of producing rain and sunshine was exercised; and fishermen needed a suitable wind. Everything is accomplished through the power of holiness, natural or acquired; at the same time a certain technique is elaborated, with impersonal rules and laws. (b) The power may also be acquired in other ways than those connected with the procuring of ordinary food. One may receive it through blood, which is either drunk or smeared over the body. It may be communicated by saliva or breath. Parts of beasts or men imbued with the mysterious thing may be eaten; or men, perhaps one's own sons, may be killed in order to add to one's capital of life. Sacrifice served as a means of endowing with holy power, before it was brought into connexion with a divinity, in the way of communion or by being considered as a gift. The sacrifice exercises an immediate effect. This is obvious, e.g., in the foundation- or building-sacrifice, where the life that is sacrificed communicates *mana*, strength, to the foundations and to the house. Even when a sacrifice is presented to a divinity, the original

conception may prevail. The sacrifice communicates holiness or power. Therefore the images of the gods are smeared with blood, the precious fluid which contains the *mana*. In the religion of blood *par excellence*—that of ancient Mexico—the men pour out their blood from tongue or members in order to strengthen the gods, and the divinities are portrayed as catching in their mouth the jet of blood from the victim. Blood appears with grim frequency in the Mexican sacred rites; it enabled the divinities to pursue their beneficent tasks in Nature (G. E. Seler, *Gesammelte Abhandlungen zur amer. Sprach und Altertumskunde*, ii. [Berlin, 1904] 704 ff. and *passim*; *Codez Borjia*, i. [Berlin, 1904] 174 ff.). The scalps which are seen hanging in the clubhouses of the Pacific islanders are not mere decorations; they are mainly sources of power to the community. To this group may also be assigned the ceremonies intended to secure help against sickness, and success in hunting, love, or war. To the category of augmenting rites belongs also the art of injuring or killing enemies, because this increases the vitality of the community. But *corruptio optimi pessima*. When used against members of one's own blood or one's own community, such practices become the blackest sin.

(2) *Revealing rites* have the object either of (a) revealing the future—oracles, prophecy; or of (b) indicating the guilty—ordinals, which originally operated directly without any divine intervention.

(3) In the *initiatorial rites* to (a) manhood, (b) secret societies, or (c) the priesthood, the positive element, i.e. the acquiring of holiness, is still more closely bound up with the negative element of danger and prohibition.

(4) In the *interdicts and observances imposed on holy persons* it is impossible to determine in every case whether the value or the danger of holiness is the predominant motive. As we have seen, value and danger are blended together in 'the holy.' The holy man exposes himself to personal danger in performing acts which are forbidden or tabu. At the same time such precautions are intended to preserve the precious power in him which guarantees the welfare of the community. They may be said to have also a positive purpose. Holy persons are subjected to more severe restrictions than ordinary people, because they stand in a more important relation to holiness and religion (just as orthodoxy is more rigidly required of clerics than of laymen).

4. The negative or prohibitory rites are designated in current language by the word *tabu* (the leading collection of tabu rites is that made by J. G. Frazer, *Taboo and the Perils of the Soul*, London, 1911). The word belongs in this form to the Tonga dialect in the Friendship Islands, and is a compound of *ta*, 'marked,' and *pu*, an adverb with an intensive force, hence = 'marked thoroughly' (Frazer, in *EBR*, s.v. 'Taboo'). It is used in many regions of the Pacific in the sense of 'sacred,' 'holy,' 'prohibited,' 'forbidden' (besides other words, such as *rahui*, which is more common in Easter Island [W. Lehmann, *Anthropos*, ii. [1907] 258]). C. E. Meinicke (*Die Südseevölker und das Christentum*, Prenzlau, 1844) called attention to its signification as a divine power, manifesting itself in such a way that everything to which it is applied is withdrawn from the use of ordinary people. Everything was divided into two classes: *moa*, that which was withdrawn from ordinary use; and *noa*, the usual, the common, the profane. Thus the tabu is closely connected with the idea of *mana*.

Takao tapu means 'a secret word,' *vahi tapu*, 'a prohibited place,' 'a place regarded as holy'; *kiri tapu*, 'a sacred skin, one not to be touched or approached.' Verbal forms are *tabui*, 'to abstain from'; *tapui*, 'to make sacred'; *akatai*, 'to make holy'; 'to consecrate' (E. Tregear, *Maori-L'olym. Comp.*

Dict., Wellington, 1891, s.v.). The forbidden is in Malagasy *fady*; *mifady* means 'to abstain from.' Among the Ba-Ronga (H. A. Junod, *Les Ba-Ronga*, Neuchâtel, 1898) *yila* corresponds to *tabu*. The Zulu says *zila* (*ila* with reflexive *zi*), 'to abstain from.' In the Bonda language *zila* means 'detest'; Congo dialects have *kizila* with the meaning of 'sacred object,' 'fetish.' A more special word is the Zulu *hlonipa* (*inhloni*, 'shame,' 'respect,' and *pa*, 'give'), 'to give respect,' 'to show special reverence,' in observing several rules of ritual. The wife has to *hlonipa* her husband and his parents by not using their proper names or words that resemble their proper names, by not touching their milk-vessels, etc. Mother-in-law and son-in-law must *hlonipa* each other by avoiding each other. Everybody must *hlonipa* the king and dangerous animals by not using their right names, etc. The Malays give their children *pantang* (= *tabu*) rules.

The close connexion of the tabu with the mysterious power is found in the common idea of extraordinariness. Tabu is thus what is new, e.g. the foreigner, the new-born child, the firstfruit, the new metal (iron); certain phenomena which constantly recur, but always seem to be extraordinary, e.g. sexual life, death, war, hunting; and animals and men endowed with special prudence, power, or success.

5. Later the tabu is often connected with the soul—a fact which admits of different explanations. The relation to the soul is sometimes secondary or imaginary; e.g., the reason alleged by the Bataks of Sumatra for not cutting all the hair of the child is connected not with *begru*, the soul (especially after death), but with *temdi*, the impersonal life-stuff, or *mana*. But sometimes the interdict refers to the soul or to other considerations equally foreign to holiness proper, although the general features are very similar. The distinction may be difficult or impossible to draw in every single case. Nevertheless, it is required by the essence of the tabu-holiness. Thus, a sacred being is subjected to a multitude of awkward rules and interdicts. He must not behold the sea or a lake, the sun must not shine on him, he must not touch the ground, not even his own head, nor eat with others, etc. Why? Because his soul is exposed to danger and may be injured or taken away? It is not so much a case of personal danger for the soul as of precautions against dissipating the precious holiness concentrated in the chief. Therefore he is himself dangerous to others who cannot bear contact with his *mana*. In death-rites the necessity of distinguishing the two motives—concern for the soul and for holiness—is more evident. (a) A dead body, either of man or of beast, is dangerous. A Kaffir who has killed a python is purified in water. A Laplander becomes tabu for three days after having killed a bear. At the ritual murder of the bear among the Ainus, in Siberia, and in Lapland, or of the bull at the *Bouphonia* in Athens, the killed animal is wept over and the killer undergoes a sham punishment. This may have something to do with fear of the ghost. But it may also depend upon the holiness of the animal or its kinship with man. The case is clearer with the widower in British New Guinea, who must hide himself like a wild beast and go about armed with a tomahawk against the dangerous soul of his dead wife. (b) Love, not fear, may also lead to special precautions. Pointed objects and knives must not be used after death, lest they may harm the dead. The Chinese even avoid using their eating-sticks during a certain time. Those rules do not belong to the tabu. (c) But it is impossible to explain the tabu of hunters and warriors, and mourning prohibitions in general, by fear or love of the dead person. The killing of a man or a beast shows the possession of a *mana* which makes it necessary for others to avoid him and his weapons and snares, and for him to submit himself occasionally to precautions analogous to those always observed by the sacred priest-king. The corpse also suggests uncanniness. Hence its im-

purity, and the withdrawal of the mourners from ordinary life. In Polynesia they must not carry food to the mouth with their own hands for ten months. The chief is always subjected to this rule, because of the holiness of his hand. In this instance concern for the soul is excluded as an explanation. The tabu of the Laplander and the Kafir and its purification mentioned above may both depend on their being charged with 'holiness,' *mana*. Or take the interdiction as to preserving severed hair and nails or remains of meals. The reason is lest some one may take them and harm or kill their original owner by means of sympathetic magic, according to which the whole can be influenced through a part of it. This has nothing to do with tabu or holiness. But the case has another side. If the person to whom the hair and nails or the meal belonged is holy, it is tabu to touch them, because they are charged with holiness. The holy man in question must also take precautions against losing any of his precious power. Knots are often forbidden because they suggest complication and difficulty. Sympathetic magic uses them in order to cause hindrance and harm. The prohibition can acquire a secondary relation to holiness. The *flamen Dialis* in Rome, e.g., was forbidden to have any knots on his clothes, because they might be a hindrance to the beneficent action of his holiness.

6. It is, in fact, the essence of the tabu-interdiction that it is not merely the avoiding of a definite danger by avoiding its cause (this may be a soul, sympathetic magic, the interest of society, or anything else); rather it amounts to an unconditioned and unreasoning 'you shall not.' The imperative character of duty, which Kant called the 'categorical imperative' and which he admired as the divine in man, is characteristic of primitive tabu, in spite of the differences as to the content of the prohibition or commandment. There is something mysterious, dreadful, about the danger of breaking a tabu (Maret, *op. cit.*). The aborigines cannot always tell the reason why a tabu is forbidden or why a thing or a being is holy. It is a fact, and a most important one. Of course, the tabu originates to a certain extent in natural observations. The rules can sometimes be traced back to a real practical interest and use. At a later rationalistic stage of religion, Jews, Parsis, and Hindus, with the help of Western scholars, have tried to trace in their tabus great improvements and discoveries in hygiene, breeding, and agriculture. Moses, Zarathustra, and Manu, to whom the tabu systems were erroneously ascribed, have been praised as early discoverers of the conditions of health. This is not completely devoid of truth, but it misses the characteristic of tabu, which foreshadowed the idea of the supernatural rather than of the rational. The common custom of isolating the woman in child-bed in a miserable birth-hut, and handing her food on long poles, or of subjecting boys, and sometimes also girls, to barbarous tortures at initiation, is not a matter of hygiene. It is the danger due to holiness that demands such practices.

7. The unreasoning awe of tabu appears in the consequences of breaking it. (a) Death or sickness immediately follows. An Australian died when he heard that he had lain upon his wife's blanket. A Hova youth in Madagascar fell into convulsions when he learnt that the meat he had eaten belonged to an animal holy to his kin. How would the reader of the present article feel if he were told that he had been feeding on dog outlets or human kidneys? The origin of death and sickness is often explained by the breaking of a tabu. The Ningpo in Bengal, we are told, were immortal until some one entered a pool which was tabu.

Pandora's box was not to be opened; when it was opened, diseases came out. The effect may be a direct one, just as fire burns or poison kills, without the intervention of a divinity, which constitutes a secondary explanation. With the development of worship, tabu-rules come to be regarded as divine commandments. In other cases society sanctions the tabu through punishments inflicted upon the guilty, for holiness is the very source of life and strength to society. Such was the cause of the massacre of Marion and his crew in the Pacific in 1772. They had tried to catch fish in a holy place. In 1899 the men of the ship *Boyd* were murdered in New Zealand, because the captain had treated the son of a chief, i.e. a tabu person, in an ignominious way. Animals as well as men are killed if they defile holy ground by entering it or in any other way. In 1 S 5¹² 6¹⁰, 2 S 6⁹, 1 Ch 13⁷, Jos 6¹⁸, death or plague follows directly (in Jos 3¹⁸ the holy object exercises its power otherwise). In Lv 10 God punishes the breaking of a tabu. Even where a divine punishment is referred to, the original meaning sometimes seems to have implied an immediate consequence of touching the holy, as Nero's illness after his sacrilegious bath in holy water (Tac. *Ann.* xiv. 22). In Jos 7²⁵ the punishment is inflicted by the community, as the Ewe used to burn alive a man who had killed the holy python. Such punishments occupy a large portion of sacred law everywhere (cf. E. Krueger, *De Romanorum legibus sacris*, Königsberg, 1912). Sometimes, as in Ex 19¹², Lv 19⁸, Nu 1⁵¹, we do not exactly know whether the penalty of death is referred to the inherent holiness of the thing, to God's vengeance, or to judicial punishment.

(b) There are also milder consequences, punishments, which at the same time effect a purification; or the immediate harmful consequence or punishment has its place taken by ceremonies for removing the contagion. There is anxiety to get rid of the dangerous stuff, whether it is considered as too strong a dose of holiness or as entirely bad. If a man had happened to touch a Tonga chief, he dared not put his food into his mouth with that hand before he had returned the mysterious power to the chief by rubbing the front and the back of his hand against the sole of the chief's foot and afterwards cleansing his hand with water. To such averting rites belong all kinds of purifications and atonement after murder, sexual intercourse, child-birth, etc. A scapegoat may be made to bear the impurity. Tabu food may be vomited up. Likewise the heart is disburdened of its sin by confession. (1) The medicine-man gives 'a pretended emetic' to one whose breaking of some tabu is manifested by pains, sickness, misfortune. Confession itself effects a deliverance; sin and its evil consequences are lessened by confession. The modern idea of sin as sickness is, in fact, the primitive one. (2) At a later stage, sin is considered as an offence against God or man, and confession is addressed to Him, and is not merely a kind of physical deliverance. But the immediate comfort of confession is not forgotten (Ps 32). Adversities show that God is angry. Why? Because of sin, of which the guilty one himself is perhaps unaware. He confesses his sins, known and unknown, in order to remove the cause of his misfortune. (3) Sin has two consequences: physical, material disaster; and the sense of guilt. At a higher stage the latter consequence is more feared than the former. Confession is intended to obtain pardon and to remove the guilt rather than the material results of the sin.

(c) In many cases the breaking of a tabu cannot be avoided. It is impossible entirely to avoid touching 'the holy.' The new-born child must be cared for. The woman in child-bed cannot be left

completely alone. The corpse requires to be moved and attended to in some way. One cannot help seeing and meeting foreigners. The firstfruit is full of mysterious power, but it constitutes the very sustenance of men. How is the precious power to be appropriated without incurring risk? By taking an antidote or a homœopathic preventive, or by rendering oneself immune in some other way against the danger of holiness. Such precautions form the kernel of a set of primitive rites which, later on, assume another meaning. The most important are: (1) 'poluteness' ceremonies *vis-à-vis* strangers, in which, no doubt, natural kindness accounts for much, and is closely connected with the tabu fear (E. Westermarck, *MT*, London, 1906, i. 585 ff.); (2) funeral rites (see DEATH AND DISPOSAL OF THE DEAD); (3) puberty rites and wedding ceremonies, which are intended at once to indemnify against the danger of sexual holiness-tabu and to secure its efficacy in the matter of fecundity; (4) firstfruit rites at the birth of children and animals and before the eating of the first crops in the spring (see FIRSTFRUITS). In these ceremonies as well as in sacrifice (H. Hubert and M. Mauss, *Mélanges d'histoire des religions*, Paris, 1909; cf. *Satapatha Brāhmaṇa* [SBE xii. etc.]) and other rites mentioned above, we can sometimes distinguish introductory rites designed to prepare for intercourse with the holy in order to avoid its dangers; and averting rites, which are intended to remove the holiness before resuming ordinary life.

8. The value of primitive holiness or tabu lies (a) in the strength and coherence it gives to society, for 'the holy' supplies a perpetual centre of gravity, manifested in holy things, beings, places, and actions. In his doings and feelings the individual more or less approaches 'the holy,' but he is never completely out of touch with it. To us the tabu rules and the objects charged with holiness seem to be pure nonsense. But to the primitive mind they constitute the precious treasures of the community, from which strength, success, and confidence are derived. How strict and elaborate the systems of holiness are, e.g., in West Africa, has been told by M. H. Kingsley, Dennett, Ellis, Nassau, Spieth, Laman, Hammar, and others. Certain widely diffused festivals, in which the usual bonds and rules of society are relaxed, seem to have been designed for the purpose of renewing the quickening and strengthening essence of holiness in the tribe or people.

The social assurance afforded by the tabu systems appears in the superiority felt over tribes that have less numerous or less severe tabus. The tabu is regarded as a mark of distinction. The Zulu boy, in refusing to eat fish among the Thonga, the northern neighbours of the Zulus, boasts of belonging to a race superior to those wretched Ba-Thonga who eat fish (H. A. Junod, *The Life of a South African Tribe*, ii., Neuchâtel, 1913, p. 67).

(b) The tabu imposes upon primitive man numberless intolerable, cruel, and harassing observances, which make his life a bondage. Freedom does not lie at the bottom, but is found perhaps at the top, of the scale of human development. At the same time the superstitious sanction of the rules of holiness has had an inestimable influence on civilization and the improvement of society. Animal desires were restrained; in the hard school of tabu man was taught self-control. Through abstinence and self-restraint man acquires strength and power not only over himself but also over others. It is not impossible that such an experience underlies the institution of tabu (Marett, at the Summer School of Theology, Oxford, 1912). At any rate such was its effect. J. G. Frazer has shown in his treatise entitled *Psyche's Task, a Discourse concerning the Influence of Superstition on*

the Growth of Institutions (London, 1909), what the system of holiness meant for the establishment and stability of government, for the security of private property against theft and destruction, for the sanctity of marriage, and, above all, for the respect for and protection of human life. Civilization and progress are inconceivable without the profoundly unreasoning sanction afforded by holiness. The tabu

'is inspired by strange, unscientific physiological ideas regarding defilement and contagion which will disappear when scientific knowledge has spread amongst them. But let these ideas be somewhat amended, let the natives understand that what is taboo is not physical uncleanness but moral evil, and their strong aversion to the act tabooed may become a powerful moral impulse for good' (Junod, *op. cit.* i. 9; cf. the Edinburgh Conf. on Missions, 1910, *Rep. of Com.* iv. 11).

Rational insight has gradually superseded barbarous rites and dispelled superstitious awe. As to the main principle of holiness—its unconditional imperative character and 'supernatural' sanction—the question is whether humanity can dispense with it in the future, and be guided by merely rational motives without religious guarantee and enforcement. This question has both a practical and a theoretical side. The practical problem is whether the self-restraint and effort necessary to civilization can be maintained without the unreasoned element inherent in the conception of holiness and developing its intrinsic value throughout the history of civilization. The theoretical problem lies deeper: Has the imperative and absolute form of duty any metaphysical grounds, or is it based on an initial error, by which humanity has been misled throughout its whole existence?

9. In order to apprehend the chief kinds of holiness, we make the following divisions:

(1) Original tabu may be *continuous* or *intermittent*. (a) Certain men, animals, things, and actions are always charged with holiness, and are therefore tabu. Such are shamans, priest-kings, and others. A chief in New Zealand was charged with holiness to such a degree that no one was allowed to touch him, even if he were in mortal danger. If he breathed on a fire, it could not be used for cooking. The vessels from which the Mikado used to eat were, as a rule, afterwards destroyed. If another man ate food from them, his mouth and throat would swell. Sometimes an animal is tabu for a whole people, as the pig in Syria, and the cow in Iran and India. Sometimes the tabu extends only to a clan or a kindred. Words are tabu, such as names of higher human or divine beings, holy or dangerous animals. Occasionally we find a whole tabu language, which is learnt at initiation, and used on special occasions, as in the mysteries, in the chase, in fishing, in reaping, and in war. Objects and places belonging to the sacred rites, to gods, or to holy men or secret societies are tabu. The holy man or animal is divine, and is worshipped in proportion as real worship is instituted and the notion of divinity evolved. They may be worshipped even during life, but especially after death, when the general awe of ghosts enhances the conception of their *mana*. Sometimes the holy power of a man is detected only after his death, through actions attributed to his soul. Such a *tindalo* receives worship amongst the Melanesians (Codrington, 125 ff.); other dead people are forgotten. So also the Veddas in Ceylon are concerned to know whether a dead man's spirit is a *yaku*, i.e. a powerful or holy one whom reverence and prudence bid them worship (C. G. and B. Z. Seligmann, *The Veddas*, Cambridge, 1911). The same idea underlies the system of relics and the worship of saints in higher religions. Their holy, wonder-working power is utilized and duly revered. Certain days are full of danger. Work, pleasure, and undertakings which are carefully specified

must be omitted on these days. The institution of sacred or tabu days is known to several 'primitive' peoples in modern times, and was familiar to ancient peoples in different forms, e.g. the Egyptians, the Babylonians, and the Romans (*dies nefasti*). Such was probably the origin of the Sabbath (q.v.) in the OT. The genius of Mosaism gave to the tabu-day a new positive character of rest after work (otherwise R. Kittel, *Gesch. des Volkes Israels*², i. [Leipzig, 1912] 623); but in later Judaism the day recovered something of its gloomy tabu-character (cf. J. Hehn, *Siebenzahl und Sabbat bei den Babyloniern und im Alten Testament*, Leipzig, 1907; H. Webster, *Rest Days*, Lincoln, Nebraska, 1911).

Our abstract and conventional conception of time and space as measure is foreign to primitive man. To him time is, or rather times are, real and concrete. Some days and occasions contrast as extraordinary or tabu with the ordinary days. Such holy times, e.g. festivals and dangerous days, mark epochs in the general flux of existence, and give rise to the religious calendar. Thus the primitive apprehension of time originates in the conception of the holy. In a similar way tabu places awake a distinctive emotional notion of space.

(b) After death and on special occasions during life every one is tabu. The sexual life is accompanied by strange entrancing feelings and uncanny phenomena. In hunting and warfare even the ordinary man experiences the mysterious power, and must submit himself to restrictions and observances that are not required in his everyday life, but which are often identical with what shamans, priests, and kings are bound to observe always. We often encounter the notion that women dying in child-bed, fishermen drowned, or hunters killed during the performance of their perilous work, and warriors slain in battle (the *valr* of the Norse Val-hall) obtain a better lot after death than other mortals. If two realms of the dead are recognized, these men and women come to the place reserved for 'better people,' i.e. for the *mana*-endowed, hence mighty and rich and noble in life, whereas the common man retains his dull and inferior condition also after death. It is tempting to adopt the explanation of this which attributes a higher moral value to the chief female and male vocations in life. But the reason, no doubt, lies in the holiness, or *mana*. The mysterious power that confers good fortune and superiority works also after death. Some men possess it always, ordinary mortals only in child-birth, war, hunting, and on certain other occasions.

(c) Some tabus affect every one, others only certain people. Mother-in-law and son-in-law are tabu to each other, also men and women in general to a certain extent (A. E. Crawley, *The Mystic Rose*, London, 1902, *passim*). A man may not marry a woman of his own clan, or even of any other clan indifferently. In Australia the totem (see TOTEMISM) as a rule is tabu to the members of its clan; in North America this is not so.

(2) *Artificial holiness* is acquired through ascetic exertions, such as fasting, abstinence from sexual life, mortifications, etc. (see ASCETICISM). The ascetic *brāmyuti*, 'exerts himself.' Indian literature abounds in accounts of the superhuman powers acquired by devoted ascetics, making them superior to the gods and arousing their admiring envy. Such a state of artificial holiness is designated in several religions and languages as 'heat' (Skr. *tapas*). At Saa in Malanta in Melanesia, men and objects who have *mana* in themselves are said to be 'hot' (*saka*; Codrington, 191). In the Ewe language (D. Westermann, *Wörterbuch der Ewe-Sprache*) the magic power is called *dzo*, 'heat.'

(3) Holiness and impurity are contagious, as we have already seen (e.g. Ex 19¹⁷, Nu 16⁴⁷, Ezk 44¹⁹ 46¹⁹, Ha 2¹²). Therefore every one in whose house a death has taken place or who has taken part in a funeral must submit himself to special observances before returning to ordinary life. In the Avesta, e.g., the degree of tabu is strictly defined for each relative of the deceased, and it is stated through how many people the contagion is able to penetrate.

(4) Besides this involuntary communication of holiness, a holy man or a body of men has the power of imposing tabu. This has been largely used by individuals and by societies for selfish purposes, in order to augment their property and influence (H. Webster, *Primitive Secret Societies*, New York, 1908, p. 95 ff.). In Melanesia, nobody dares to touch fruits on a piece of ground where *solo*i (tabu-marks) have been put. Holiness throughout its history has seldom proved a bar to the acquirement of wealth. The ruling class in Polynesia, the *areoi*, have a special reputation for skill in utilizing their tabu. In Madagascar, European settlers have complained of the administrative use of *fady* in order to prevent improvements. But it must be added that the tabu has also often been deliberately applied in cases where the public interest required a prohibition. The Hawaiian government tabued the cattle even as late as 1846, because the diminution of the stock had aroused legitimate anxiety. Gluttony during the great festivals in Tonga and Hawaii made it necessary to tabu pigs, coco-nuts, and other food for several months. Sometimes language indicates the difference between natural or acquired holiness and imposed holiness. On the Banks Islands the former is called *rongo*, the latter *tapu* or *tambu*. In the New Hebrides the former is called *sapuga*, the latter *gogona*, etc.

10. A more important division of holiness is recognized in some primitive languages, which have special names for the good and for the bad varieties of holiness. Thus, in addition to ordinary magical processes, the Central Australian Arunta (Strehlow, *Arunta*) have a bad, noxious 'power,' *arungquiltha*, which is used to injure enemies. Tregear speaks of 'unclean tabu.' Amongst the Huron Indians the *orenda* gradually fell into disuse, giving place to the *otkon*, the bad species of mystery or power. Besides the 'evil eye' there is the wholesome influence of the 'good eye'—e.g. the Iranian *sag-did* (FRE iv. 503; cf. S. Seligmann, *Der böse Blick*, Berlin, 1910). This distinction must not be confounded with the differentiation of tabu into holiness and impurity.

11. *Holy and unclean*.—In primitive religion one cannot tell whether tabu is holy or unclean. It simply means, 'Thou shalt not'—interdiction and danger. Later on, the tabu becomes either holy or unclean. Primitive man does not realize this difference. The original meaning of tabu as including both survives in language. The Latin *sacer* (French *sacré*) means 'holy' as well as 'cursed.' 'Holy' and 'impure' are combined in the Greek *ἅγιος*, which is then differentiated etymologically: *ἅγιος* means 'holy,' 'initiated' (in a secondary sense also 'pure,' 'clean,' 'immaculate,' 'permitted'); *εὐαγής* means 'accursed,' 'guilty.' The pig was unclean among the Jews. But, according to Plutarch, the Greeks did not know whether the Jews abhorred it or worshipped it. The mysteries alluded to in Is 65⁴ 66¹⁷ seem to imply the holiness of the swine (or only its cleanness). In Crete, pigs were holy, according to Athenæus (ix. 18 [p. 375 f.]), and must not be eaten. To both Jews and Cretans the pig was tabu, as in the great temple at Hierapolis. According to Lucian, *de Dea Syria*, 54, pigs were not sacrificed or eaten, the swine was de-

tested by the Syrians, but 'some believed that . . . they are not accursed (*evaytas*), but holy (*ipohs*). Among the Minas, south-east of Ajmer, the boar was holy. They identified this belief with the abhorrence of the Muhammadans for the unclean beast, and half adopted Islamism, but called the boar 'father Adam.' Then Siva-worshipping Brahmins taught them to identify father Adam with Siva, and worship the cow as well as the boar (A. C. Lyall, in *Great Religions of the World*, London and New York, 1901, p. 97 f.). How near akin holiness is to impurity is shown by the Talmudic pronouncement that the Holy Scriptures defile the hands (see below, 'Semitic' section, p. 759*), whereas the Gospels, the books of the *Minim* (heretics), and the books of later authors do not (Tos. *Jadain*, ii. 13). In the OT, despite the strongly monotheistic differentiation of holiness from impurity, there are still some cases where it cannot be decided whether the tabu-interdict implies holiness or impurity: Lv 19¹⁹, cf. Dt 22¹¹⁻¹²; Lv 19^{28a} (cf. 17⁷). To an outsider, holy things and beings appear rather as something evil and maleficent through the mysterious dread that they inspire. European settlers or travellers often call the whole sacrificial system of the natives 'devil-devil.' In the Congo the first missionaries translated 'devil' by *Nzambi* ('the great maker,' also 'the one that causes death'). Now *Nzambi* is universally used as the term for 'God.' As we have seen, something of the same ambiguity belongs to the primitive conception of holiness. There is no doubt whatever, at this stage, as to whether a being or a thing inspires awe or not, whether it is 'supernatural' or ordinary, whether it belongs to the proper sphere of religion and mystery or not; but the distinction between good and bad in this 'holiness' is far from being conscious; it is scarcely adumbrated. Higher religion, in its ethical varieties, has a tendency to accentuate the difference between good and bad in a way which sometimes comes very near to obliterating the distinction essential to religion—that between holy and profane.

It is not possible in every case to discover why a tabu becomes holy or unclean. Tabu connected with death and with sexual life becomes unclean. Association with a divinity renders the tabu holy, e.g. the animals, which were kept in the temples and temple-precincts in Egypt, Syria, Greece, etc. In Israel the idea of God was such as to exclude the divinity, i.e. holiness, of animals—a notion highly developed in the religions of Egypt and India. Where the differentiation is complete, the holy and the unclean retain the character of tabu (forbidden), in opposition to the profane (common) and the clean, both of which may be freely used. Originally 'profane' (*noa*, ח, *koubis*, *gemein*, 'common') had not a bad meaning at all. The old correlation finds its classical expression in Lv 10¹⁰, Ezk 22³⁰ 44²⁸: on the one side, holy and unclean; on the other, profane and clean. The important thing in religion is to know and observe the distinctions—

holy unclean
profane clean

Three principal factors have a tendency to modify or reverse that order, namely, the evolution of language, morals, and other practical aims and demands of culture, and the conception of divinity. This process consists in bringing together 'common' and 'unclean' on the one hand, 'clean' and 'holy' on the other hand. The question is whether 'clean' or 'holy' will become the chief word. Where practical and utilitarian purposes prevail, as in the Avesta, 'clean' eclipses 'holy.' Where the idea of the Godhead prevails, as in the OT, 'holy' keeps the foremost place.

(a) The 'common' becomes despised and bad. Language operates in this direction—that which is

much 'used' becomes 'use-worn.' Thus 'profane' has a tendency to approach towards 'unclean.' This is seen in the evolution of the words for 'profane.' The verb *hly*, 'to give out for use,' assumes more and more the sense of 'to profane,' 'to unhallow,' and approaches the meaning 'to defile.' Even an author so deeply versed in sacred and clerical language as Ezekiel sometimes identifies 'profane' with 'defile' (43⁷, cf. v. 8; 23³⁸, cf. v. 39), although, as a rule, 'to profane' is used in connexion with the holy, the Sabbath (20¹⁵, 16, 24 22²⁵, 26 23³⁸, cf. 44²⁸ etc.), the Temple (7²² 23³⁰ 28¹⁸ [of the sanctuaries of Tyre], etc., but see 5¹¹ 9⁷ 23³⁸), the sacrifice (20³⁰), the holy things (22³²), God's holy name (20^{30a}, 36^{30a}, 39⁷, etc., but see 43^{7a}); 'defile' is mostly used of idolatry (5¹¹ 14¹¹ 20⁷, 18 36^{17a}; cf. 20¹⁵, 16 *hly* of the Sabbath, and 20³⁰ of the holy name, etc.), or of the dead (4^{13a}, 39^{14a}, 43^{7a}, etc.). Likewise in Ex. and Lev., instead of being opposed to each other, 'profane' and 'unclean' become either occasionally identical or related as indicating a wider circle of objects and a narrower circle within it (e.g. Lv 6¹¹, 16¹⁹ 20⁹ 21⁴, Ezk 23³⁸). Something of the same evolution may be traced in *koubis*, which in LXX and the NT acquires the sense of 'unclean' or 'forbidden' (see below, 'Greek' section); in *gemein* in the secondary meaning of 'vile,' 'mean'; and in 'common' in a bad sense. The sacred fruit in Paradise was 'profaned first by the Serpent, by him first made common and unhallowed' (*Paradise Lost*, ix. 930). But the adjective *h* still retains its indifferent sense in modern Judaism. At the same time, 'unclean' is brought into opposition to 'holy,' which comes (e.g. Lv 6¹¹, cf. v. 18) to be considered as a stronger variety of pure, clean, its one-time contrast.

(b) In this evolution, morals play a part. Morally, 'pure' cannot be separated from 'holy' (Is 1¹⁶). This is true of every language, because in ethics the 'holy' cannot mean the forbidden, but the thing that is commanded (see below, § 14). Not only ethics, but practical considerations of human life and civilization in general, draw 'holy' and 'clean' more closely together and set them in opposition to 'unclean,' as we shall see in the next paragraph. Their correlation approaches the form:

holy clean
profane unclean

But this process cannot be completed without ritualizing religion so as to leave mere rules and forms devoid of mystery and indwelling power, or without a certain secularizing of religion. 'Holy' must lose most of its tabu-character, i.e. its awe-inspiring mystery; and 'pure' or 'clean' becomes the chief word in religion instead of 'holy.' All the dangerous element in religion is included in the unclean, all the valuable element in the clean. At the same time, 'pure' or 'clean' expresses a stronger idea and receives a wider signification, as we shall see. Holy-profane vanishes from religion to a certain extent. All existence is divided into clean and unclean, where the clean includes also the tabus that have advanced to the divine, valuable side of existence. Such a process is positively favoured in Avestan religion by the practical purposes of culture that prevail. The Avestan dualism is a conflict between clean and unclean. This contrast prevails over the religious difference between holy and common. In India the same process was negatively favoured by the dethroning of the gods in favour of the sacrifice, the sacrificers, the ascetics, and the teacher of salvation. The gods were only invisible beings, the priests visible deities (*Sat. Brāhm.* ii. 2. 2. 6 f.), who sustained the world and by whose favour the gods resided in heaven (*Inst. of Vignu*, xix. 20 ff.). The divine lost its strong tabu-character, and was not capable of enhancing holiness. In Semitic religions, and, to a certain

extent, in Roman heathenism, 'holy,' instead of yielding place to 'clean,' became the chief term, because the awe and dread remained in or were introduced into the feeling towards the divine.

(c) Especially in Semitic cult and piety the Godhead appeared as an overwhelming power. This is nowhere felt so strongly as in Mosaism (with its descendants). Notwithstanding the emphasis laid upon morality in the prophets from Moses onwards, 'holy' was never displaced by 'clean' or identified with it. The moral feeling contributed to widen the gulf between holy and unclean. The supernatural and active power in the Godhead worked still more in this direction. Here the divinity became 'holy' in an emphatic sense. Between the holy and the unclean an intermediate realm was left of indifferent and permitted, i.e. 'profane' (or 'common') and 'clean' things, with a tendency in 'common' to decline to 'unclean,' and holy

in 'clean' to rise towards 'holy':

clean	common	unclean.
-------	--------	----------

But even in those passages in the OT where this process has advanced furthest, it never identifies 'holy' and 'clean.' 'Holy' is too mysterious, powerful, and divine; God's holiness, being His own essence, not primarily His relation to men (cf. Ezk 36²⁹), implies danger; there is nothing so much to be feared as the divine. Here not every danger inherent in the tabu has been banished to the unclean. The being not to be treated lightly in OT religion is, above all, Jahweh (Ex 19, Is 5¹⁶ 6², Jer 2⁵, Ezk 20⁴¹ 38^{12a}, and *passim*). Tabu-holiness has made its most important contribution to the history of religion by finding room for the awe-inspiring, supernatural, and yet active character of God characteristic of Mosaism. A reciprocal action was exercised by the idea of holiness and by the Mosaic-prophetic conception of God.

12. Pure.—In the Avesta, as well as to a great extent in India, the chief concern, as regards tabu, is not to pollute the clean by the unclean. The tabu 'holy' has lost its inherent superhuman awfulness and power. There is no instance of a man being visited with immediate destruction, without interference of man or society, through coming into too close contact with the holy-tabu. The words that come nearest to the idea of personal holiness (Skr. *ritavan*, Avest. *asavan*) do not suggest any tabu or supernaturalness. 'Pure,' not 'holy,' has become the characteristic word of religion. In such Indian languages as have not borrowed the word and the conception from the Arabs, Christian missionaries are at a loss to express 'holy' in its proper sense. The Skr. word *buddha*, *paribuddha* (and its later forms), 'pure,' 'clean,' as a translation of 'holy' in 'Holy Ghost,' the threefold 'Holy, holy, holy' (Is 6³ etc.), transfers the idea from the sphere of Biblical to that of Indian religion. The same term, 'pure,' is used in India for 'saint,' e.g. in the names St. Matthew and St. Paul. Man has more to say, the divine-tabu less. We may compare the Talmudic 'Holy Scriptures defile the hands' with the anxiety of Parsi *mobeds* lest the glance of an infidel should defile their holy Scriptures. The holy-clean must be protected rather than the holy-dreaded. The mysterious awfulness of Jahweh has no analogy in the Avesta, where everything was divided between the Good One and the Evil Terrible One. Even Brāhmanism retained more of the mystery of tabu than Avestism. To both, cattle are tabu-holy, i.e. they must not be killed; they are unclean after death, and thus may not be eaten. In India, only Pariahs eat the dead cow (which is often given as wages for work). Among both peoples the cow is revered.

'Scratching the back of a cow destroys all guilt, and giving her to eat procures exaltation in heaven. In the urine of cows dwells the Ganges, prosperity dwells in the dust (rising from their couch), good fortune in cow-dung, and virtue in saluting them' (*Inst. of Vîṣṇu*, xxii. 60 f. [*SBE* vii. 105 f.]).

But the holy bulls and cows (of Śiva, a secondary connexion), feeding in the temple-precincts or strolling in streets and market-places and allowed to do as they please, are unknown to the Parsi system. This irrational residue of the tabu-holiness has its counterpart in the Avesta, in an enhanced cleanness of cows. Thus tabu, apprehended as danger, becomes either holy or unclean, if it does not keep its undifferentiated character. Tabu, apprehended as valuable power, becomes, as we have seen, e.g., in the OT, 'holy.' But it can also take another direction. The valuable thing or being may get rid of its mysterious danger and become directly clean—not clean in the sense of allowed (*noa*, *hōl*), but clean in an accentuated, concentrated sense. This is typical of holy-clean in the *Vendidad*, our second main witness (besides the OT) to the evolution of tabu. We have already mentioned the twofold cause: the strict theological division of all existence into the Good (clean) and the Evil (unclean), and the practical aims—care of cattle and pastures and an ordered life—which inspired the prophet of this religion. Almost the only instance of anything like original tabu-holiness is furnished by the *haoma* (q.v.), which, when prepared, i.e. fully sanctified and powerful, cannot be defiled by a corpse (*Vend.* vi. 43). Here the difference comes out between the clean, which must be guarded against pollution, and the *mana*-charged holy, which is affected by nothing.

Beings and things exalted above the ordinary through their cleanness, but devoid of the awe of holiness, are: (1) the cow (*Ys.* xlviii. 6; *Vend.* iii. 2 ff.), the dog extolled above man (*Vend.* xiii.; cf. iv. 40, vi. 1, xv. 45, etc.), the hedgehog, the otter (*Vend.* xiv.), and in a lesser degree other animals (*Vend.* xvii. 9, xviii. 15 ff.); (2) the elements: the earth, fire, water, the purity-holiness of which explains the exposure of corpses to be eaten by animals, a practice which involved a special impurity to the Greek mind (*Soph. Antig.* 1017); (3) plants; (4) the objects belonging to the holy service: the *barsom* (q.v.), the bowls, the mortar, and the sacred formula.

All these things must be guarded against pollution. At the same time they possess an intrinsic power to purify and to restore purity, but less effective than that of the *haoma*. The urine of the cow is used, as in India, as a means of purification (*Vend.* xix. 21 ff.). If a cow has eaten of a corpse, she becomes pure of herself after a year (vii. 76 f.), whereas a man in the same case must be put to death without any possibility of purification (vii. 23 f.). As to the dog, the purifying look, the *sag-did* (see DEATH [Parsi]), seems also to be an attribute of the corpse-devouring birds (*Vend.* vii. 29 ff., viii. 16 ff.). Sometimes the eating (viii. 99 ff.), sometimes the look (*ib.* 16), appears to be the means by which these animals lessen the impurity of corpses. Since all animals belong either to Ahura Mazda or to Anra Mainyu, there are many that take part in the fight against the devils; all the animals of Ahura Mazda are clean; but we can still trace something of an original tabu in the extra cleanness and purifying power of some of them. The same clean power resides in the elements. Clothes infected by a dead body are rubbed with earth to be cleansed (*Vend.* vii. 15). The cleansing capacity of fire is universal. A corpse that has been exposed to the light of the sun during one year can work no more harm (vii. 45 f.; cf. v. 13). Water is used against uncleanness everywhere. It has the power of purifying itself when it has rained on a dead body (v. 19). 10

India, purification is effected by water, earth, air, sun, etc. (*Inst. of Vîṣṇu*, xxii. 88, 91). There also earth has a special cleansing power (*Manu*, v. 136). Hot water mixed with sulphur and gold-dust has the power of revealing guilt (*Vend.* iv. 46, 54), and so has the well-known ordeal by melted metal. The tests by water and by fire occupy an important place among the ordeals prescribed by Indian law ('Quotations from Nārada,' vi. [SBE xxxiii. 247 ff.]). The holy formula, which purifies with water and fire (*Vend.* viii. 72, > ii. 2), is necessary against destruction (*Vend.* xix. 8 f.; cf. xviii. 8 f.). The position and practical character of the clean-holy in the Avesta are seen perhaps most clearly in a fifth group of things and actions, which work against impurity, the weapon of the devils. Something of the same practical sense is occasionally found in the agricultural Indian lay society:

'Among all modes of purification, purity in (the acquisition of) wealth is declared to be the best; for he is pure who gains wealth with clean hands, not he who purifies himself with earth and water' (*Laws of Manu*, v. 106 [SBE xxv. 187]). 'Of all pure things, pure food is pronounced the most excellent.' The learned is also purified by forgiveness of injuries, by liberality, etc. (*Inst. of Vîṣṇu*, xxii. 89 f.; *Manu*, v. 107). But austerities, the renouncing of the world (*Inst. of Vîṣṇu*, xxii. 91), and abstinence (*Manu*, v. 159) belong to a higher state of purity and religion.

In the Avesta the point of view is more consciously conceived and more consistently carried out. A house with priest, cattle, woman, children (*Vend.* iii. 2, iv. 47), the cultivating of corn, grass, fruit-trees, irrigating and draining (*Vend.* iii. 4, 23 ff., 30 ff.), good appetite (iii. 33, iv. 48), the giving of food (xiv. 17) and other gifts (iii. 34 f.), the filling up of the burrows of Anra Mainyu's animals (iii. 22), the building of bridges (iv. 16), etc., are co-ordinated as purifying means with, e.g., the holy power of the cow and the dog. Likewise the unclean is assimilated to acts injurious to industry and culture.

There is a stock of tabus common to Brāhmanism and Avestism (see, e.g., the *Laws of Manu*, v., and the *Institutes of Vîṣṇu*, xxii. ff.); but the difference becomes obvious (a) in that more consistent utilitarian tendency of Avestan purity which, of course, is not carried out, but permits many barbarous tabu-rites, e.g. at child-birth, to remain; (b) in the high appreciation of purity, cleansing, *yaozhdao*, which is considered already in the *Gāthās* (Ys. xlviii. 5) as the greatest thing next to birth (*Vend.* v. 21, x. 18); the law of purity is the foremost word (v. 24 ff.); the devils tremble before the man that smells of purity after death (xix. 33); and (c) in the dualistic systematizing of clean and unclean. Something of the same process occurs in the OT. The gloomy character of the tabu-day gives place to the rest (Ex 20⁹, Dt 5¹³⁻¹⁴) and the delight (Neh 8^{9ff.}) of the Sabbath.

13. Exceptions to tabu-rules are due, in most cases, to practical considerations. The claims of real life prevail to a certain extent over the rule of infection by tabu-holy (Hag 2¹⁹) or tabu-unclean (Lv 11^{20ff.}, but see Hag 2¹⁵). According to *Vend.* v. 3 f., a bird that has eaten of a corpse does not defile the tree on which it perches; v. 6 f., infection of the dead brought by wolf or fox does not spoil the irrigated field; viii. 34, a dried corpse does no harm; vii. 71, a woman may drink pure water although she has brought forth a still-born child. The motive is assigned in *Vend.* v. 4: otherwise the whole of the created world would become polluted, because innumerable creatures die. In the case of the cow becoming clean of herself in one year (*Vend.* vii. 76 f.), we cannot decide whether this is due to her own dynamic purity or is an exception for practical reasons. To the same category belongs the universal rule that the corpse of a clean animal does not defile (cf. Lv 5³ 11³¹). According to Indian

law, the hand of an artisan, things exposed for sale in a shop, food given to a Brāhman (if not by a Śūdra), or food obtained by begging, which a student holds in his hand, the mouth of a woman in the process of kissing, a bird in pecking fruit, a dog when catching a deer, and flesh of animals killed by a dog, etc., are always pure notwithstanding the logic of tabu-infection (*Manu*, v. 129 ff., *Inst. of Vîṣṇu*, xxii. 48 ff.). Carpenters and other workmen are not to be hindered in their work by defilement. To the group of practical exceptions belongs also the rule that impurity does not arise when the whole country is afflicted with a calamity, or in times of great public distress, such as an epidemic or a famine (*Inst. of Vîṣṇu*, xxii. 51, 54 f.). In these instances the pendency of laws of cleanness is temporarily abrogated by the hard necessities of life. Quite different are the exceptions noted in the Avesta which are due to the logic of dualism. The corpse of the *adavan* (holy, pious man) is unclean, because his death means a defeat to life and holiness. On the other hand, the wicked becomes pure after death: his death is an advantage; the infection of a dead body diminishes with the holiness of the man during his life until it disappears in the case of the ungodly (*Vend.* v. 35 ff., xii. 1 ff.). For that reason a dead dog is impure (vi. 1). On the contrary, there is the clerical exception in Brāhmanism of the priest Brāhman being so holy as to remain clean also after death. The indwelling holy power overcomes impurity in different degrees according to its strength. The impurity lasts ten days for a Brāhman; it lasts twelve for a Kṣatriya, fifteen for a Vaiśya, and a month for a Śūdra (*Manu*, v. 83). On several occasions the indwelling power is exempt from any defilement. The taint of impurity does not fall on kings, at least while engaged in the discharge of their duties; on devotees performing a vow; or on a man engaged in a sacrificial ceremony (*Manu*, v. 94; *Inst. of Vîṣṇu*, xxii. 48 ff.). When the ceremonies connected with the installation of the monument of a deity or marriage rites have begun, impurity is powerless—it cannot arise (*Inst. of Vîṣṇu*, xxii. 53). The explanation of the fact that no impurity attaches to the king—viz. because he incarnates the eight guardian-deities of the world, who cause and remove purity and impurity of mortals (*Manu*, v. 96 f.)—is evidently of a secondary character; the real reason is found in his own power of holiness or in the claims of practical life.

14. Holiness and morals. — In the tabu-interdicts, what we call moral rules and ritual or 'superstitious' commandments are intermingled without any attempt at differentiation. In the Congo the laws belonging to the fetish Mbuzi contain such prescriptions as not to eat newly slaughtered meat, not to steal, not to lie, not to stand upright when stirring the contents of a pot, not to whistle in the twilight, not to drink palm-wine without having a cap on the head (E. Nordenskiöld, pp. 123, 146). Amongst the rules prescribed for a *snātaka*, a young Brāhman who has just completed his studentship, are, e.g., not to carry water and fire at the same time, not to drink out of his joined hands, not to step over a rope to which a calf is tied, always to speak the truth, to conduct himself as an Aryan, to take pleasure in the Veda, never to hurt any being, to restrain his senses, etc. (*Gautama*, ix. [SBE ii. 218 ff.]; cf. *Apastamba*, i. 11. 30 [SBE ii. 92 ff.]). In ch. 125 of the Egyp. Book of the Dead the departed protests his purity: 'I have not oppressed the feeble one . . . I have not degraded anybody . . . I have not let any one hunger . . . I am not a murderer . . . not an adulterer . . . The ritual of the Great Purification, *O-harai*, in Shinto ceremonial, counts

among 'heavenly sins': to destroy the divisions between the rice-fields, to put sticks in the rice-fields, to flay living animals backwards; and among 'earthly sins': leprosy, incest, snake-bite, killing the cattle of another, sorcery (H. Weipert, 'Das Shintogebet der grossen Reinigung,' in *Mitteil. der deutschen Ges. für Natur- und Völkerkunde Ostasiens*, 1901, Suppl.; E. Satow and K. Florenz, 'Ancient Japanese Rituals,' in *TASJ* vii. ix. xxvii. 1). Similarly, the Law of Holiness in Lv 19 includes fear of mother and father, prohibition of theft, of deceit, of lying, as well as prohibitions against eating anything with the blood or rounding the corners of the head.

The tabu imperative covers a very wide area in primitive and barbarous culture. In higher civilization a process of reduction takes place. At the same time the idea of obligation is deepened. The separation of ethics from ritualistic rules belongs to a higher moral appreciation of holy and unclean, represented in Greece and Rome by thinkers and poets from Heraclitus (frag. 5, in H. Diels, *Fragmente der Vorsokratiker*², Berlin, 1912, i. 78), e.g. Diogenes of Sinope (cleansing water cannot take away a moral fault any more than a grammatical blunder; will an initiated thief have a better lot in Hades than Epaminondas? [Diog. Laert. vi. 2. 42]; Cicero, *de Leg.* ii. 10. 24: 'animi labes nec diuturnitate evanescere nec omnibus ullis elui potest,' etc.). These protests probably referred to the cathartics of the Mysteries (q.v.) and of Orphism (q.v.). Orphism started as a special, higher 'holiness,' *dyvela*. Primitive tabu-rules on food, clothing, sexual life, etc., were revised and united into an ascetic and pedantic 'orphic life,' destined to secure a happy life after death. This was the theory of the great Pythagoras also, with whom a higher morality prevailed. In opposing the later purifying Orphic charlatans, and in taking cleanness in a purely moral sense (= righteousness [Rep. 364]), Plato enhanced the ascetic tendency of the Apollonian, Orphic, and Pythagorean cathartics (the soul must be delivered from the body even in this life through spiritual occupation, 'philosophy,' and completely after death [*Phaedo*, 86 ff.]), and the religious character of ethics as a means of salvation and happiness in the life to come (*Phaedo*, 86 ff.; a more positive appreciation of morals prevails in the *Rep.* and other dialogues). The moralization of holiness and cleanness is urged in the OT by Amos and other prophets, and distinctly stated by Christ (Mk 7^{18a}). The general principle of Lv 19, etc., 'Ye shall be holy: for I the Lord your God am holy,' is repeated in 1 P 1¹⁶, but applied to moral behaviour (*ἀναστροφή*, v. 1⁸), and the quotation 'holy people' in 1 P 2⁹ has no ritual meaning. The paradoxical claim laid on the whole people to be holy (see above, § 1) receives a new and higher significance in this way, and can be fulfilled without any limiting or clericalizing: life.

In India, Buddha opposed an outward and non-moral conception of purity. At the end of the *Dhammapadam*, a set of verses explain what it means to be a true Brāhman:

'A man does not become a Brāhman by his platted hair, by his family, or by birth; in whom there is truth and righteousness, he is blessed, he is a Brāhman. What is the use of platted hair, O fool! what of the raiment of goat-skins? Within thee there is ravening, but the outside thou makest clean.' (*Dhammap.* xxvi. 293 ff. [SBE x. 2 pt. i. p. 91]).

According to the *Sutta-Nipāta*, Kassapa explained the sin of eating raw flesh (*āmagandha*) in this way:

'Destroying living beings, killing, cutting, binding, stealing, speaking falsehood, fraud and deception, worthless reading, intercourse with another's wife, this is *āmagandha*, but not the eating of flesh.' 'Neither the flesh of fish, nor fasting, nor nakedness, nor tonsure . . . purify a mortal who has not conquered his doubt' (*Sutta-Nip.* ii. 2. 4 [241], ii. 2. 11 [248], in SBE x. 2 pt. ii. p. 29 ff.).

In Buddhist polemics against Brāhmanism the question of purifications always played a part: if water could cleanse from sins, frogs and tortoises, water-snakes and dolphins, would get to heaven and be happy. The title of the Pāli work, the *Visuddhi-magga* of Buddhaghosa, 'The Way of Purity,' has nothing to do with ritualistic purifications (H. C. Warren, *Buddhism in Translations*, Cambridge, Mass. 1900, *passim*; M. Winternitz, *Gesch. der ind. Lit.* ii. i. [Leipzig, 1913], p. 164 ff.). The momentous step in the evolution of holiness and purity consists in this, that holiness becomes a personal quality of the deity and of man, instead of being a substance in things as well as in wills. This evolution is favoured by autonomous moral refinement, as in Greece, India, and China, and also by the preponderating conception of the deity as an ethical will, as in Mosaism. The later process has had the greater importance for the internal history of religion. As to man, 'holiness' retained its aspect of something supernatural and divine in the NT, notwithstanding its being moralized and personalized. In its essence, holiness does not depend on man, but is a divine influence. But the making holy of man by God obliges man to strive for perfection. Holy means 'good,' 'perfect' in an ethical sense in so far as religion implies ethics. It is used of God (Jn 17¹¹), His name (Lk 1⁴⁹), the city (Mt 4⁵), and temple (1 Co 3¹⁷) connected with His service; of Christ (Mk 1²⁴); the angels (8²⁰); of the prophets (Lk 1⁷⁰), the men (Mt 27⁵³) and women (1 P 3⁹) of old; of John the Baptist (Mk 6²⁰); and of Christians as God's sacred property and servants (Ro 1⁷, 1 Co 1², 1 P 2⁹), bound, therefore, to purity in life (Eph 1⁴, 1 Co 6¹¹). The language is ritualistic (Ro 12¹ 11¹⁶ [firstfruit, see above, § 7 (c)], Jn 10³ 17¹⁹); the sense is personal and moral, but it is entirely kept under the sway of religious sacredness.

15. In the Church 'holy' never became a merely ethical word, but chiefly suggests divine, supernatural power. The original meaning of *sancire* and *sancitus* in the heathen Roman language recalls *tabu*, 'well defined,' 'particularly marked,' as far as *sancitus*, *sancitus* meant *definitus*, *destinatus*, *determinatus* (G. Link, *De vocis 'sancitus' usu pagano*, Königsberg, 1910, p. 9). It was used of things, places, and men, withdrawn from the common and ordinary (see below, 'Roman' section). In early Christianity all the faithful were called 'sainte,' because they had been selected and separated by God from the worldly life and common humanity—which meant also essentially a moral change and a severe moral obligation. But the word *sancitus* was used especially of the departed brethren and of the martyrs, over whose remains altars were erected as centres of divine holy power as well as of pious commemoration. Later on, *sancitus* indicated the religious dignity of the *religiosi*, monks and priests. In the 5th and 6th centuries this honourable title was usually reserved for the bishops, until the word 'saint' finally received the sense it has kept in the Roman Catholic Church—that of one who receives and also deserves the general veneration of the religious community. The recognition of a dead believer as a saint depended upon the verified fact that he had had a festival of his own for a long time past, that his tomb had been held in special honour, etc. (H. Delehaye, 'Sanctus,' in *Analecta Bollandiana*, Brussels, 1909, xxviii. 145 ff.; cf. *Les Origines du culte des martyrs*, do. 1912). When the Church became more scrupulous about the dignity of saint and began to submit the claims to it made by local heroes of piety or of some religious genius to a regular Roman commission, primary importance was, and is still, attributed to miracles performed by the alleged holy person before or after his death.

Here we encounter, in a higher sphere, the same test as is applied by primitive peoples—to learn whether the departed possesses the power of holiness or not (cf. above, § 9 (1) (a)), whether his bones, when touched, or his soul, when invoked in prayer, are capable of healing sick people, revealing guilt, and accomplishing other wonders. The chief question about holiness is not: Did he or she attain to moral perfection? but, in fidelity to the essence and tradition of religion, Was there something divine or supernatural about the man? (cf. P. Chauvin, *Qu'est-ce qu'un saint?* Paris, 1910). We may refer to the important rôle played in the process of canonization of Joan of Arc (introduced in 1889, ended by the decree of Pius X. on 11th April 1909) by certain healing miracles performed by her on nuns who implored her help, even at the end of last century. The underlying thought is that holiness means revelation of divine power. Only religion might recognize that supernatural manifestation, not in cases of auto-suggestion or the like, but in creative genius, high personal idealism, and ready obedience to the mysteries of divine guidance and to vocation. Joan of Arc could well stand that more severe test. See, further, HOLINESS (NT and Christian).

16. Holiness has had its most notable history in Western civilization with its antecedents. There it has become the greatest word in religion, the last word of piety so far, as well as the first. Western observers, who form their conception of religion from Biblical or Islâmic examples of piety, have often been struck by the relative absence of awe in Eastern religions. In the West (using this term in a wide sense, to include Persia; cf. Wassiliëff-Conrady-Stübe, *Die Erschliessung Chinas*, Leipzig, 1909, § 51) the unweakened sense of the 'holy' has accompanied religion all through its history and has gained strength on the heights of religious experience. But at the same time magical practice and 'superstitious' feelings, which still survive in modified forms in the lower strata of civilization and in highly cultured and delicately organized minds, still draw their nourishment from a primitive conception of the holy.

17. The imperative and unconditioned character of the holy, being anterior to any definite idea of divine commandments (cf. K. T. Preuss, 'Der Ursprung der Religion und Kunst,' in *Globus*, lxxvi, [1904] 321 ff., 355 ff., 375 ff.), cannot be derived from it. Nor has it originated in precautions for the soul (§ 5), nor in calculations of negative magic (§§ 6 and 7) or of hygiene. To say that the categorical tabu is an initial mistake of humanity (§ 8) gives no explanation, only an appreciation. The time-honoured sociological theory recognizes the momentous importance of society to religion. But, as far as lower culture is concerned, the derivation of the holy institutions and beings from a mysterious apprehension of society seems to be artificial. In the higher culture, holiness and mysticism most consciously put their ideals beyond society. According to the history of religion itself, the conception of the tabu results, as we have seen, in the idea of the supernatural.

LITERATURE.—This is indicated in the article. See also T. Wächter, *Reinheitsvorschriften im griech. Kult.* Giessen, 1910; E. Fehrle, *Die kultische Keuschheit im Altertum*, do. 1910.

NATHAN SÖDERBLOM.

HOLINESS (Greek).—In its ordinary use 'holiness' is a word both of religious and of high ethical significance. But, while it is always a religious word, it has often little or no ethical content. Thus, in primitive religion, holiness is often conceived as *physical*, though doubtless with an implicit sense of something deeper. It is an essentially physical quality inherent in persons or things reckoned divine, or, on the negative side,

it is freedom from bad spirits, which are conceived as physical, and against which physical precautions are taken (W. R. Smith, *Rel. Sem.*, London, 1894, p. 161; J. E. Harrison, *Proleg. to the Study of Gr. Rel.*, Cambridge, 1908, pp. 39, 165, etc.). Sometimes, again, 'holiness' indicates what is merely *formal*, as the relation in which a particular place stands to a divine being, or a restriction upon human freedom to enter within it (W. R. Smith, 118, 150). It would be easy to illustrate these non-ethical conceptions, as well as the tabu customs founded upon them (cf. Söderblom's art. HOLINESS above), from the history of Greek, especially primitive Greek, religion. But in the present article we shall deal only with the higher conception of holiness, meaning thereby, on the one hand, the moral perfection of God, and, on the other, human goodness viewed in relation to God. How and how far did the idea of holiness, as thus defined, enter into Greek religious thought?

1. **Greek national religion.**—From at least as early as the Homeric age two contrasted types of worship prevailed in Greece. The one was directed to the sunny deities of Olympus, the other to the gloomy chthonian, or under-world, powers (cf. W. M. Ramsay, in *HDB* v. 143). The latter is usually regarded as the earlier of the two, and, though it never became a part of the national religion, was preserved in local cults throughout the historic period (cf. Harrison, p. 11, and *passim*; L. R. Farnell, *CGS*, Oxford, 1896-1909). In spite of serious defects, it contained much of ethical value, which, as we shall see, entered into later Greek religious thought. Meantime our concern is with the religion which centred in the Olympian gods and goddesses. Canonized by Homer and Hesiod, these became the objects of national, or pan-Hellenic, as distinct from merely local, worship.

For our present purpose we may consider this national religion, first in its popular, and then in its literary, aspect.

(1) **Popular religion.**—The Greek religion was one of easy trust in the gods, of simple and serene piety. It was satisfied to acknowledge the blessings of the gods by the payment of traditional observance. Such a religion was prone to become 'the art of giving something in order to get more in return, a species of higgling in the celestial market' (F. B. Jevons, *Intro. to Hist. of Rel.*, London, 1896, p. 224), and this is in fact the account given by Socrates in the *Euthyphro* (Plato, *Euth.* 14 E) of the current conception of holiness (*seibnns*). Plato may have rated the popular religion too low (cf. F. B. Jevons, *Intro. to The Makers of Hellas*, by E. E. G., London, 1903, p. xxiv). Its sacrifices must often have expressed real gratitude. But it is certainly true that the idea of moral purity, as a matter vitally affecting man's relations to the gods, was foreign to the spirit of Greek religion. That spirit was essentially one with the spirit of Greek art, which derived its inspiration not from the supernatural, but from the visible, world. Hence the Greek gods were but magnified men, superior, as G. L. Dickinson points out, in external gifts such as strength, beauty, and immortality, but not in spiritual or even moral attributes. This being so, the average Greek did not trouble about his spiritual relation to the gods. 'To the Puritan, the inward relation of the soul to God is everything; to the average Greek, one may say broadly, it was nothing' (Dickinson, *The Greek View of Life*, London, 1896, p. 18). Greek ethics no less than Greek religion was dominated by the artistic spirit. And hence human goodness meant to the Greek, not indeed a relation to the gods, but an inward harmony. 'The good man was the man who was beautiful—beautiful in Soul' (*ib.* 134).

(2) **Literary ideals.**—Here we shall consider

chiefly the moral aspect in which the gods are presented to us in Greek literature. In Homer and Hesiod, from whom popular religion drew its chief inspiration, we can hardly be said to find any idea of divine holiness. It is true that Homer often presents the gods, especially Zeus, in a noble and even sublime moral aspect. He and Hesiod habitually regard them as the champions of Justice, whom the latter even describes as the daughter of Zeus (*Opp.* 254). Yet their conduct, as reflected in the myths, is often an outrage upon morality. And the reason is that moral perfection was not felt or seen to be an essential part of the divine nature. 'Never,' says Nägelsbach, speaking of Homer, 'is an epithet applied to the Godhead, indicating a consciousness similar to that with which the Bible speaks of the holiness of the true God' (*Homer. Theologie*², Nuremberg, 1861, p. 31). But as time goes on we meet with deeper conceptions of the divine nature. Not only is polytheism gradually purged of its grosser elements, not only is there an approach to monotheism in the more assured supremacy of Zeus over the other gods (J. Adam, *Relig. Teachers of Greece*, Edinburgh, 1908, p. 83; J. P. Mahaffy, *Social Life in Greece*, London, 1875, p. 94), but Zeus is himself regarded in a more spiritual aspect. This is particularly true of Aeschylus and Sophocles. In Aeschylus 'we find an ideal of divine righteousness which is strikingly parallel to that of Hebrew prophecy' (L. Campbell, *Relig. in Gr. Lit.*, London, 1896, p. 380). Sophocles, on the other hand, comes nearer the Christian standpoint in the more gracious aspect under which he views the divine justice. 'Zeus is no longer solely the awful dispenser of doom, but "he hath Mercy for the partner of his throne"' (A. M. Adam, in *Early Ideas of Righteousness*, Edinburgh, 1910; *Soph. Ed. Col.* 1298; cf. *Phil.* 196). The idea of divine purity, however, was especially associated with Apollo (L. R. Farnell, in *HDB* v. 145). And the growing conception of the divine nature is measured by the purity which Apollo demanded of his worshippers. At first it was freedom from homicidal guilt, and such as could be attained by ritual; later it was viewed as inward, and as extending to all the relations of life (*ib.* 145, 147; E. E. G., *Makers of Hellas*, p. 335 ff.; cf. esp. the story of Glaucus, in Herod. vi. 86).

2. *Mystical conceptions of holiness.*—From the ideas of holiness proper to the national religion we pass to others, different in kind, and likewise more profound, which flourished during the period of its decadence. Before considering them, however, in detail, we have to ask how the phase of thought from which they sprang entered as a powerful, though not, as we shall see, a wholly new, factor into the religious life of Greece.

In the 6th cent. B.C. the Greek colonies of Asia Minor were profoundly stirred by a new spirit of religious mysticism, which probably came to them from the Semitic peoples (cf. W. R. Smith, 358), and also by a new spirit of philosophic inquiry. These influences were widely diffused by various teachers, and by the end of the 5th cent. had revolutionized the religious thought of Greece. It was, says Campbell, 'one of those epochs in the history of our race which mark a wide-spread access of spiritual vitality' (p. 127). Greek philosophy was undermining traditional belief in the more thoughtful minds. And side by side with the intellectual awakening there was a 'deepening sense of guilt requiring atonement, of pollution crying for purgation' (*ib.* 128), which many sought to satisfy, partly by an ascetic discipline, and partly by mystical rites, including a sacramental meal, which was regarded as an act of union with the divine. Such, as far as we need describe it here, was the character of the Orphic movement,

which powerfully affected Greek religious life from the 6th cent. onwards. Although it probably owed much to foreign influence—including its chief mystery, the sacramental feast—yet Orphism appealed to a religious instinct already potent in the old chthonian religion, previously mentioned, namely, to its profound sense of evil, seen in the conception of the Erinyes (q.v.; cf. Harrison, 6, 29, 213), and in rites of purification (*ib.* 24-29, 162). It should be added that philosophy and mysticism were to a large extent but two aspects of a single movement. Orphism had its speculative side, while philosophers like Pythagoras and, at a later time, Plato were steeped in mysticism. There can be no doubt that speculation and mysticism had much to do with the growing spirituality of the national religion (cf. *HDB* v. 147), but they were both foreign to its spirit. We have now to examine conceptions of holiness which were essentially mystical, though they were to some extent reflected in Greek philosophy.

In doing this we are directly and chiefly concerned with the human aspect of holiness. It is true that Greek philosophy sometimes lays stress on the goodness of God. Thus we find in Plato (*Rep.* ii. 379 A) that the fundamental duty prescribed for teachers of the young is to represent God as He really is, and that the first article of their teaching must be that God is good. But there is nothing in such teaching that might not have been applied to the Zeus of the national religion. It is true also that a deepened conception of the divine nature is involved in Orphism; but as this, like all mystical religion, is primarily concerned with inner experience, we shall discuss it rather in connexion with the human aspect of holiness.

(1) *Holiness as likeness to God.*—Humanly regarded, holiness is more than goodness. It always involves a relation to God. But the relation, and with it the *nuance* of the idea of holiness, varies. Perhaps its most familiar implicate is that of likeness to God. The conception became prominent in Greek religious thought chiefly through the teaching of Pythagoras and of Plato. Probably Pythagoras owed it to the influence of the mysteries, as it is closely related to the essential kinship of the human and divine natures, which is a cardinal doctrine of Orphism. 'The Pythagorean ethical doctrine . . . has a thoroughly religious character: to follow God and to become like Him is its highest principle' (Zeller, *Pre-Socratic Phil.*, London, 1881, i. 491; cf. also E. E. G., 335, W. H. S. Jones, *Greek Morality in relation to Institutions*, London, 1906, p. 7, and authorities cited by these two writers). The same doctrine, which is hinted at by Socrates, occupies a prominent position in the teaching of Plato, whose 'conception of the ethical end . . . is "assimilation to God"—*ὁμοιωσις τῷ θεῷ*' (J. Adam, 401; cf. also p. 18, and Jones, 155; for Plato, cf. *Theat.* 176 B, *Lysis*, 716 C, *Tim.* 29-30). We cannot here attempt to trace fully the influence of this idea in Greek literature, but we may add that it is reflected in the cardinal doctrine of the Stoics, that man should live according to Nature—which, in their view, was only another name of God.

(2) *Holiness as communion with God.*—But, again, the relation to God implied in holiness is often thought of as communion. This aspect of holiness is represented in the mystic union with his god which the Orphic regarded as the goal and crown of the spiritual life. The god in question was Dionysos Zagreus, who was born again after his dismemberment by the Titans. And it is significant that Dionysos, though admitted to the Olympic pantheon in his character as a wine-god—an aspect foreign to Orphism—belonged essentially, as he does in this his Orphic aspect, to the class of

chthonian powers. Like the worshipper in that old religion, the Orphic sought deliverance from evil, but his conception of evil was more ethical. And, while to the former purity meant freedom from divine anger, to the latter it meant union with the divine life. Holiness in this high Orphic sense is *διδρύς*. The words *δύος* and *ισός* also refer to holiness, the holiness that comes of consecration—in the former case, to the powers of the lower world, in the latter, to those of Olympus. But in both the consecration is thought of chiefly in its negative aspect, as prohibitor or tabu; it is the devotion to unseen powers, in which the idea of the blessing readily passes into that of the curse. On the other hand, *δύος* and *διδρύς* are words of positive content. Their prevailing sense is that of freedom, which to the Orphic meant freedom from the bonds of the flesh, or moral purity (Harrison, 57 ff., 505 f.). 'Consecration (*διδρύς*), perfect purity issuing in divinity, is . . . the keynote of Orphic faith, the goal of Orphic ritual' (ib. 478).

We have been dealing with what may be called the mystical aspect of holiness. But in this sense especially holiness may be said to involve the element of love, which is itself an aspect of goodness. It is just here, however, that we see the limitations of the Greek idea of holiness. Even the Orphic, though steeped in the mysticism of love, did not perceive that holiness and love are really inseparable ideas. Accordingly, in actual religion he turned to Dionysos, in mystical dogma to Eros, or Love. Eros is to the Orphic the Creator of all things; especially he is thought of as the source of life, and of life's ecstasy (cf. Harrison, ch. xii.). But he is not a god of holiness; he is a poetical as much as a religious conception. Yet the Orphic did unconsciously associate holiness with love, since he showed that the pathway to both lay through a mystical union with the divine.

Orphic views had a deep influence on Greek literature. Of this, so far as concerns our subject, two illustrations may be given:

(a) *Euripides*.—Euripides is certainly not to be described as an exponent of Orphism. On the other hand, the *Bacchæ*, whatever may be its central motive, is full of Orphic mysticism.

'No other ancient poem shows so rapturous a feeling of the kinship between man and nature. The very hills are "thrilled with ecstasy" in sympathy with the frenzied votaries of the god (*Bacch.* 726). We feel that Dionysus has become a power pulsating throughout the whole of nature, both inorganic and organic, making the universe into a living, breathing whole; and we are stirred with a new sense of unification with the mystery that surrounds us' (J. Adam, 317).

Again, we have the Orphic longing for spiritual freedom, seen in lines like the following:

'Happy he, on the weary sea,
Who hath fled the tempest and won the haven.
Happy whoso hath risen, free,
Above his striving'.

(*Bacch.* 901 ff., Murray's tr.).

Finally, Holiness is personified in the chorus beginning 'Ὁσία νόττα θεῶν' (*Bacch.* 370). It will be seen that she is addressed by her Orphic name, and J. E. Harrison refers to her as 'Hosia, the real Heavenly Justice, she who is Right and Sanctity and Freedom and Purity all in one' (op. cit. p. 507). Nor is her aspect less lofty in Murray's exquisite free rendering of the opening lines of the chorus:

'Thou immaculate on high;
Thou Recording Purity;
Thou that stoopest, Golden Wing,
Earthward, manward, pitying,
Hearest thou this angry King!'

That an idea of holiness as high as it is mystical is reflected in the *Bacchæ* may be safely gathered from these citations. At the same time, it is important to remember that what we have before us is not a monotheistic, still less a Christian, conception of divine Holiness. The ground note of religious feeling in the *Bacchæ*, here as elsewhere,

is pantheistic. Holiness is, indeed, personified by the poet, and, so regarded, is one among many divine beings. But in its religious and ethical significance it is simply an aspect, profoundly realized, of the divine running through the whole of Nature.

(b) *Plato*.—But the Orphic view of holiness is most fully reflected in Plato, although to some extent modified, chiefly by being rationalized. We have seen that Plato described the ethical end as assimilation to God. But he also taught that perfection consists in communion with or participation in the divine, of which, indeed, as J. Adam has pointed out (p. 438), 'the theory of likeness is only a kind of explanatory gloss' (cf. Plato, *Parm.* 132 D). It is in the *Phædo* that the theory of participation in the divine nature (*κοινωνία, μέθεξις*, etc.) is most fully developed. In the *Symposium*, on the other hand, Plato describes human perfection under the imagery of love. It is the soul's marriage with her ideal, or it is the beatific vision of the realities of an eternal world. It must, indeed, be observed that in Plato the soul does not enter into direct relation with the Supreme Being, 'the Good' (cf. esp. *Rep.* vi. 508 E, 509 B, with *Tim.* 28 C), but only with the Ideas, to which, however, he also attributes a real transcendental existence (*Rep.* v. 476 A ff., *Tim.* 57 D ff.; and Aristotle's account of Plato in *Met.* A 8, 987^a 29–987^b 10). Again, the relation is predominantly intellectual. Even the love described in the *Symposium* is primarily an *amor intellectualis*. But, on the other hand, the Ideas 'are in very truth the Platonic equivalent of Gods' (J. Adam, 431); while to Plato true knowledge, that which grasps the real and abiding, and which is man's highest good, is an act, primarily, indeed, of the intellect, yet affecting also every part of the soul. Lastly, Plato marks an advance on Orphism in that it is one and the same divine being whose perfection the soul shares, and after which its love aspires.

In Orphism and in Platonic speculation we reach the highest Greek conception of holiness. It does not lie within the scope of this article to discuss its obvious limitations. It must suffice to say that the loftier Christian conception depends upon a nobler and more satisfying conception of God, as a supreme Father, who enters into direct personal relations with His children, and whose goodness is at once perfect holiness and perfect love.

LITERATURE.—This is sufficiently indicated in the article.

I. F. BURNS.

HOLINESS (NT and Christian).—I. **NEW TESTAMENT DOCTRINE.**—The NT continues and completes the most spiritual teaching of the OT prophets and psalmists with respect to holiness (cf. 'Semitic' art.). The background to Christian doctrine, however, is still priestly and legalistic, and many instances of the ceremonial conception of holiness appear in the NT writings. Inanimate things or places, such as Jerusalem, the Temple, the inner sanctuary, the Scriptures, the Mount of Transfiguration, are spoken of as 'holy' by virtue of their special association with God. Indeed, the whole NT terminology on the subject is directly borrowed from ceremonial sources, in respect of altars, sprinkling, oblations, putting away sin, and the like. But this ritual phraseology is now given an inward spiritual signification, its former use having been sanctioned only 'until a time of reformation' (He 9^a 10). Christians themselves must now be veritable temples, priests, vessels, and altar gifts, sanctified for the offering of purely spiritual sacrifices (Ro 12^a, 1 Co 3¹⁶, 1 P 2^a, 2 Ti 2²¹). Thus the emphasis in the conception of holiness becomes increasingly ethical, having advanced from the outward to the inward, from the

negative to the positive, from the merely ceremonial act to the moral and spiritual motive.

An interesting illustration of the passing of the word *ἅγιος* from its ceremonial to its ethical use is seen in 1 Co 7:14, where the unbelieving husband is spoken of as being 'sanctified' in the believing wife. 'Paul wishes to prove that the holiness of a Christian transmits itself forthwith to those who are closely allied to him' (J. Weiss, *Der erste Korintherbrief*², Göttingen, 1910, p. 182; see also Ro 11:16, 1 Ti 4:4-5). For a study of the Greek terms used in the NT to designate holiness and kindred ideas, see *HDB*, s.v. 'Holiness' and 'Sanctification'; for the extension of the conception of holiness to things and places, see artt. CONSECRATION and HOLINESS (General and Primitive); and for a discussion of ritual purification as a means of holiness, see L. R. Farnell, *The Evolution of Religion*, London, 1905, pp. 152-162.

Partly, perhaps, because of these ritual associations, Jesus makes very little use of the technical vocabulary of holiness. He prefers the prophetic form of expression, 'Be ye perfect, as your Father in heaven is perfect' (Mt 5:48; cf. Dt 18:13), to the more priestly formula, 'Be ye holy, for I am holy' (Lv 11:4).

Jesus avoided almost entirely the usual OT designation of God as the 'Holy One' of Israel, except in the phrase 'Holy Spirit.' The reason appears to be that Jesus regarded the Levitical 'holiness'—which many of His countrymen thought to be real holiness—as negative and temporary. True 'holiness' is to be applied to spiritual things, and is to be positive, not negative. It is to consist in imitating the Holy One, not in washings, nor in abstaining from meats, but in being, as He is, 'perfect'—that is, perfectly good in will and deed, benevolent and beneficent to all' (E. A. Abbott, *The Son of Man*, Cambridge, 1910, p. 582 f.; see also C. G. Montefiore, *The Synoptic Gospels*, London, 1909, ii. 522-527).

It is, then, in moral likeness to God that man's perfection or holiness consists. The NT has no hesitation in applying the same term to both God and man, and in bidding us be 'holy as he is holy.' God is holy, because, as the absolute moral Reality of the world, separate from all evil and infinite in every excellence, He is pledged by His own nature to secure a perfect and loving righteousness everywhere, even at the cost of redemption. Man is holy when he is brought by grace into that relationship to God by which the Divine righteousness may be honoured and conserved. The progressive ethicizing of this idea constitutes the Biblical revelation, and Christ's advance on the OT teaching in this respect consists in His own unique conception and manifestation of God. God is the 'Holy Father,' a Being who freely loves and saves His guilty children, not only without any sacrifice of His Divine sanctity, but even by its supreme exercise. This combination of holiness and love in God constitutes His excelling glory. The holiness humbles us and forbids an unethical presuming on His kindness. The Fatherhood attracts us and forbids a despairing dread of His commandments. And the acknowledging of this essential glory of the Father, by a reverent hallowing of His name in life and service, must ever be bound up with the coming of His kingdom and the doing of His will on earth as it is done in heaven.

This characteristic NT association of the *holiness* of God with the Divine *Fatherhood* recurs in an important passage, Heb. 12:10, where God is spoken of, in the language of the home, as a Father chastening His children 'that they may be partakers of His holiness.' Here, too, we have a breaking away from the more negative OT view of the Divine holiness. God disciplines us through suffering, that we may enter into that filial relationship of obedient and trustful love (*pietas*) in which true holiness consists. On the meaning of God's holiness and its relation to holiness in man, see *PRE*, s.v. 'Heiligkeit Gottes im AT'; Sanday-Headlam on Ro 17, and Hort on 1 P 1:15.

Man's holiness thus consists in a perfect moral sonship, the consecration of all his powers and opportunities to the worship of God, and the realization of His gracious purposes in history. Of such a perfect holiness Jesus Christ Himself is the unique example. For this very purpose the Holy Father consecrated Him and sent Him into the world, so that He was holy from the beginning (Lk 1:3, Jn 10:36). To the same purpose Jesus steadfastly consecrated Himself to the end (Jn 17:19).

18⁷). Through an eternal Spirit He offered Himself without blemish to God (He 9:14). The result was something more than mere sinlessness. It was the full presentation, in the first instance to God Himself, of the moral glory of the Father's own holiness, through the pouring of the Spirit without measure upon Him, and His own perfect obedience to the Father's will—a holiness manifesting itself not in withdrawal from the world, but in a life of perfect love and action among men, and finding its inevitable consummation and ratification in the power of the Resurrection (Ro 1:4). It is in keeping with all this that Christ is referred to throughout the NT as pre-eminently 'holy,' by the announcing angel (Lk 1:35), the disciples (Jn 6:69), and the believing Church (Ac 2:27, He 7:26, 1 Jn 2:20, Rev 3:7).

The supreme test and manifestation of this perfect sanctity of Christ was the death upon the cross. By this crowning act our Lord honoured, secured, and satisfied the Divine holiness as well as perfected His own, on a world scale and at history's moral centre, in a supreme judgment upon and victory over sin, through the sacrifice of an active and complete obedience. By this perfect purification of human guilt (He 1:3) Christ both fulfilled and abolished the whole sacrificial system (9:23, 10:26), and became unto men 'sanctification' (1 Co 1:30), the objective ground or warrant of the believer's new standing of holiness before God. Through the one offering of His body on the cross He 'perfected for ever them that are being sanctified' (*ἀγιαζομένους*), i.e. He effected in principle the complete sanctification of His followers in the eternal future, rendering them independent of every other sacrifice (He 10:14).

Further, the holiness of Christ, which conditions that of the Christian, also guarantees it. 'Both he that sanctifieth and they that are sanctified are all of one' (He 2:11). Being separated unto God in baptism, believers find themselves washed, sanctified, justified in the name of the Lord Jesus (1 Co 6:11), and, entering into all the privileges of the old covenant on a new plane, they know themselves to be 'an elect race, a royal priesthood, a holy nation, a people for God's own possession' (1 P 2:9, Dn 7:18). Such believers are already called 'saints,' not because of their attainments, but because of their new standing as regenerated or 'sanctified in Christ Jesus' (1 Co 1:2), who is the encompassing sphere, as it were, in which the whole process is begun, continued, and ended. Having Him as *ἀγιασμός*, they themselves are *ἁγία*, earmarked, destined, and set apart from everything profane, as belonging to God and His kingdom, although as yet they may be no more than babes in Christ, or even carnal.

It still remains, however, that this preliminary implicit hallowing of the inmost personality shall become explicit in a holy character and manifest itself in every sphere of daily conduct (cf. Hort on 1 P 1:15). The Christian must work out in practice what he already is in principle, since deliverance from the guilt of sin through justification involves deliverance from its power through sanctification. There is thus a growth in holiness rather than into it (1 Ti 2:15). The NT is explicit in emphasizing the ethical nature of true holiness, its contrast to all licence and uncleanness (Ro 6:19-22, 1 Th 4:5-7). Christians must consecrate body as well as spirit; and all sins against the body, which is God's temple, are tantamount to sacrilege (Ro 12:1, 1 Co 6:19-20). Stress is also laid on the importance of our co-operating effort and initiative in sanctification (2 Co 7:1, Ja 4:8, 1 P 1:22, 1 Jn 3:3). Yet the whole process is spoken of as wrought by the Holy Spirit in our hearts (Ro 15:14, 1 Co 12:11, Eph 3:3) in conjunction with our faith (Ac 16:26-28, Gal 3:14).

Indeed, the two agencies are regarded as complementary and inseparable (Eph 1²⁻¹⁴, Ph 2¹²⁻¹³, 2 Th 2¹³). To the extent that we consecrate, the Spirit sanctifies. Nor is NT holiness a merely negative or self-regarding sinlessness, an ascetic purity or abstention from known sin. It implies the constant activity and positive exercise of all goodness in the realm of daily life. As such, Christian holiness is necessarily a social grace, and it ripens many gifts and adjusts many idiosyncrasies of character. So impossible is the perfecting of holiness in isolation that the NT never contemplates a single 'saint,' but speaks constantly of 'the saints' or a 'holy people.' The root of Christian holiness is faith, and its flower is love; and the sphere for the cultivation of this holy love in Christ is His Body, the society of the Christian Church (1 Co 12¹²⁻²⁷, Eph 1²² 4¹⁰, Col 2¹⁹).

The final goal of the Christian life is complete holiness, the deliverance of the soul from the guilt, power, and even presence, not of sin only but of sins also, through its perfecting in holy love (1 Jn 1⁹ 2¹⁻⁶ 3⁴⁻⁷). It is the teaching of John that this follows inevitably from the believer's dwelling in Him who is the negation of all sin and its destroyer, and who came not only to impute but also to impart righteousness, even as He is righteous. Where the Divine 'seed' of the Holy Spirit abides in the child of God, the kinship to Satan is necessarily annulled, and the Christian need not, must not, does not, and cannot sin, since it is impossible that Christ and sin should dwell together in the same breast. Whether John is here speaking of an actual attained experience (G. G. Findlay, *Fellowship in the Life Eternal*, London, 1909, pp. 114, 253-269), or is merely affirming the moral implications of an ideal faith (P. T. Forsyth, *Christian Perfection*², London, 1910, pp. 1-49), is a matter of dispute. Strictly speaking, only the eternal Son was fully perfect. Even in regenerate Christians, allowance has still to be made for occasional lapsing into transgression through ignorance, surprise, or hostile circumstance (2¹). Such sin, however, does not *reign*, as it does in the unregenerate. It is not unto death, and can plead the Advocate with the Father. The Christian perfection taught in the NT is not faultlessness but blamelessness and loyalty, the staying of the heart in the obedience and love of God through faith, however the feet may be betrayed by the deceitfulness of sin into hidden snares. It is (a) *relative* to our creaturely experience and earthly limitations; (b) *derived* from God's grace in Christ, not based on any merits of our own; (c) *progressive*, or capable of indefinite improvement; (d) *alienable* or forfeitable, not guaranteed to perpetuity, but (e) *conditional* on faith, our striving against sin, and steadfast abiding in the love of God. It will also be characterized by humility, contrition, and self-disparagement. Such earthly or relative perfection, which *consists* in faith, is necessarily different from that full and final perfecting which *crowns* our faith, and which awaits the consummation of Christ's atoning work (Ro 8^{28, 30}, 2 Co 3¹⁸, Ph 1⁶, Col 1^{22, 28}, 1 Jn 3³).

We may now attempt to gather into a few propositions the teaching of the NT on this subject, without losing sight of the warning reminder of Lord Morley, that holiness is the 'deepest of all the words that defy definition' (*Voltair*², London, 1878, p. 175).—(1) Holiness is the sovereignly moral or self-preserving element in perfect love—that element in it which, to secure the ends of righteousness, exerts a reaction of wrath or self-defence against all that would impair its purity and intensity. 'It is the holy that makes love divine, makes it racial, eternal, sure, changeless, and invincible' (P. T. Forsyth, *The Principle of Authority*, London,

1912, p. 211).—(2) Christian holiness results from the imparting to man of God's own holiness, as it is mediated through Christ in a new creation.—(3) In one aspect, it is the fruit of sanctifying grace in us, the effect of the Holy Spirit working in our faith, to separate us from sin, perfect us in goodness, and enable us to do the will of God.—(4) In another aspect, it is the result of our own moral effort and aspiration of faith—an effort engaging the entire personality, body as well as soul, in the life of righteousness and love.—(5) Such holiness implies the existence of the Christian community, as the necessary soil and atmosphere in which it lives, and (6) it is a continuous and progressive spiritual discipline.—(7) Finally, while the NT distinguishes holiness as something larger than morality, it yet knows of no divorce between holiness and virtue. 'Holiness is virtue rooted in the religious relation. . . . The distinction between holiness and virtue is qualitative, not quantitative' (W. R. Inge, *Faith and its Psychology*, London, 1909, p. 240).

II. HISTORICAL DEVELOPMENT.—The materials presented in the NT were very variously utilized in the history of the Church. Now one aspect, and now another, of the full-orbed Christian doctrine was singled out and emphasized, and the conception of holiness changed with every changing view of the nature of the evil to be shunned and the goal of ideal perfection to be attained.

1. Gnosticism introduced into the Christianity of the early Church a crude Oriental dualism and a fantastic Greek system of speculation, which tended to substitute a metaphysical or semi-physical cosmology of redemption, with an allegorizing of history, for the NT gospel of the Incarnation. Evil was identified with matter, and salvation consisted in the exaltation of the soul from unhallowed immersion in the material world of sense to its true spiritual home in the Divine *pleroma*, by means of ascetic purifications, mystical rites, and the illumination of a special *gnosis* granted to the pneumatic or truly spiritual Christian, and superior to the historic *pistis* which sufficed for the ordinary believer, or merely psychic Christian. Insight was elevated above faith. The result was a kind of *esoteric holiness*, more theosophic and speculative than ethical and spiritual.

2. On the other hand, Montanism, or *prophetic holiness*, was a protest against the rapid 'secularization' of the Church as it spread through the Roman Empire in the 2nd century. It sought, by a more ascetic discipline and the cultivation of the spirit of ecstatic 'prophecy' among the laity, to distinguish the congregation of the 'holy' not only from the world outside the Church, but also from the worldly elements within it, in view of the expected advent of the Lord in Phrygia. Montanism went beyond the NT conception of holiness in affirming a new dispensation of the Spirit. 'The Paraclete has revealed greater things through Montanus than Christ revealed through the Gospel' (pseudo-Tertullian, 52).² Yet it was a serious attempt to realize the ideal of the 'holy Church' by insisting that a pristine purity of communion must necessarily accompany established purity of doctrine. Montanism was the first of many efforts made within Christianity to restrict the membership of the Church to those actually holy or spiritually elect. Negatively, it forced the Church

¹ 'No holy person is not good, but not every good person is holy. The distinguishing feature of holiness would seem to reside in something which lies beyond goodness, or at any rate is an addition to it. . . . There lies a touch of excess in holiness. It is not a matter of rule and policy . . . of more or less, but of nothing and all. Holiness needs fervour' (O. G. Montefiore, *Truth in Religion*, London, 1906, pp. 89, 95). 'For holiness is wanted a harmony of will, a perfect self-devotion, death to self and absolute submission' (Amiel's *Journal*, Eng. tr., London, 1892, p. 207).

² Migne, *PL* II. 91.

gradually to take up the position, especially after the Novatian and Donatist controversies of the 3rd and 4th centuries, that its holiness consists not necessarily in the spiritual purity of all its members, but in the official and inalienable connexion of its orders with the Holy Spirit, the true doctrine it teaches, the eminent saints it can produce—in fact, in its possession of the means of all grace and holiness in the deposit of faith and in the sacraments. 'The Church . . . was legitimised by the possession of the apostolic tradition instead of by the realising of that tradition in heart and life' (A. Harnack, *History of Dogma*³, Eng. tr., London, 1894-99, ii. 83).

3. The recognition thus openly given to higher and lower planes of sanctity within the Church led, first of all, to a duality of practice, still under ordinary social conditions, reflected in a theory of the 'Two Lives' (cf. C. Bigg, *Christian Platonists of Alexandria*, Oxford, 1886, p. 83 ff.; E. Hatch, *Influence of Greek Ideas*, London, 1890, p. 164 ff.), and finally to Monasticism as a fresh type of *ascetic holiness*. Early monasticism may be regarded as a continuation of the aims of Montanistic 'Puritanism,' without its anti-ecclesiastical elements, and welcomed by the Church itself. Despairing of making the majority even of its own members holy, the Church sought to counteract the prevailing laxity by approving, side by side with ordinary Christianity and in loose attachment even to the sacraments, the pursuit of holiness by particularly religious persons, released from ordinary social obligations. Thus, whereas Jesus bade *all* His followers be 'perfect,' and the NT ἀγιοι and τέλειοι were sanctified or mature Christians in the ordinary walks of life; and whereas even Clement regarded the ideal 'Gnostic' as one who took his place in the daily round, 'acting the drama of life which God has given him to play' (*Strom.* vii. 11), monasticism confined 'the religious' to a professional class, who should make the cultivation of holiness a distinct calling by fleeing from the world. Based thus on a religious egoism and an essentially dualistic view of the world, both of them alien to Christ's spirit, monasticism cultivated a negative or retired type of holiness. It attached a unique sanctity, not to inner renunciation or detachment from the world, with an exemplary practice of the ordinary Christian virtues, but to an external abnegation of all property and marriage, and to the practice of artificially selected virtues such as poverty, chastity, and ecclesiastical obedience. In monasticism, too, the holy man tended to identify himself with the sufferings and death of Christ rather than with His glorious risen life and quickening Spirit. Holiness was to be attained and peace won by refinements of mortification, a severe penitence, and the rigours of self-disciplinary effort, rather than by the free gift of God's sanctifying Spirit acting on the soul through faith.

³The Ascetic theory has always rested in the contest between the human spirit and the flesh: too often forgetting that the Divine Spirit is not merely the umpire and witness, but the Almighty Agent also in the destruction of sin' (W. B. Pope, *Compendium of Christian Theology*², London, 1880, iii. 68).

There was, no doubt, gain as well as loss in the ideals of monasticism. It kept the light of religion burning in dark ages, and rebuked all diletante forms of holiness by the example of a heroic and thoroughgoing renunciation. But its defect was that it made asceticism an end in itself rather than a means, withdrew the practice of holiness from its proper sphere in the ordinary life of the community, depressed and falsified the standard of holiness to be attained by the average man, and left to itself the world which it should have leavened. The degree of individualism marking monasticism varied in different countries and at different epochs, often becoming, especially in the

West, social and co-operative within the narrow circle of the monastery, as well as devoted to works of general utility. But still its holiness remained at heart a 'sublime individualism,' in marked contrast to the ideals of the NT.

4. A new conception emerged in Pelagianism, which may perhaps be described as a kind of *natural holiness* or Christian Stoicism. Pelagius claimed that, by means of the freedom of the will and the help afforded by God's grace in revelation, man is capable of perfect conformity to the will of God, who prescribes nothing impossible. In so far as man is *not* capable of conforming to the Divine ideal, he cannot be charged with sin for failing to do so, since there is no sin prior to the actual choice of evil by the free will.

⁴Quaerendum est, utrumne debeat homo sine peccato esse. Procul dubio debet. Si debet, potest; si non potest, ergo nec debet; et si non debet homo esse sine peccato, debet ergo cum peccato esse; et jam peccatum non erit, si illud debere constiterit. Aut si hoc etiam dici absurdum est, confiteri necesse est debere hominem sine peccato esse, et constare eum non aliud debere quam potest' (Pelag. apud Aug. de Perf. Just. 8).

This essentially rationalistic system of belief in the inherent capacity of man to achieve all the righteousness required of him appears in history in various forms, such as Socinianism and modern Naturalism. But it belittles the Divine demand, lays stress on sympathetic goodness rather than on the holiness that is mediated through faith, rejects both atonement and regeneration, and conflicts with the normal Christian consciousness of sin and grace. 'Grace is needed to make a man into a saint, and if any man doubt this he knows not what is a saint nor what is a man' (Pascal, *Thoughts*, Eng. tr., London, 1889, p. 296).

5. This truth was brought out by Augustine, who made the keystone of his entire system the utter dependence of the believer, for the beginning, middle, and end of Christian holiness, on the free, indispensable, supernatural, preventent, and irresistible grace of God. Two other aspects of Christian holiness received prominence in Augustine: (a) its personal, emotional aspect, as a cleaving to the Lord God, the living individual relationship of faith, humility, and love, which appropriates the Divine Spirit and leads at last to life's blissful goal of perfect knowledge, vision, righteousness, fruition, and eternal rest; and (b) its social aspect, as a grace mediated to us only by means of and within the Christian Church, which is the *civitas dei*, the Kingdom of God on earth, and the sole sphere of salvation. Augustine may thus be said to have attached equal importance to the inward experience of grace and to its outward ecclesiastical attestation; but the emphasis which he laid on the moral effect of the infused love of God, as conditioning our holiness, rather than on the soul's new religious standing through forgiveness and regenerating faith, gave a direction to the Church's doctrine on this subject which was not to receive a corrective until the Reformation.

6. From Augustine sprang the mediæval conception of *sacramental holiness*, which was developed in systematic detail by the schoolmen, and reached its final form in the Catholicism of the Council of Trent. The characteristic features of this type are the objective provision for man's holiness in the supernatural grace of the sacraments, and the place assigned to merit in the process of sanctification. The one perfect treasury of all holiness and righteousness is Jesus Christ. We become members of His body, and share in the fruits of His Incarnation and Passion, when we receive the sanctifying grace of His Holy Spirit. This preventent grace is a supernatural power or quality infused into the soul by means of the Divinely appointed sacraments or through prayer. It imparts the impulse towards righteousness and God, obliter-

ates sin both original and mortal,¹ and produces, on the condition of our co-operating trust, that inner sanctification or disposition of assenting faith and justifying love which warrants the Divine forgiveness, inaugurates a state of supernatural sonship or infused habit of holiness, and enables the soul to acquire those merits which are requisite for salvation.²

'By a justifying faith the [Catholic] Church understands qualitatively the theoretical faith in the truths of Revelation, and demands over and above this faith other acts of preparation for justification': namely, fear, hope, charity, penance, and almsgiving (*The Catholic Encyclopedia*, vi. [1908] 701 f.; cf. *Council of Trent*, vi. 7, 9).

These good works, however, are themselves the fruit of co-operating grace,³ which incites and stirs into activity the latent goodness of man, and enables him, by a refined synergism, to fulfil the law of Christ, to receive justification, and to merit, *ex condigno*, or in strict justice, increase of grace, eternal glory, the *fruitio dei*, and participation in the Divine nature, which are the rewards of holiness.⁴ In Catholicism, justification is not simply a formal declaration of the forgiveness and remission of sins, with an external imputation of the holiness of Christ through faith; it is the actual result of the sacramental renewal of the inner man, by means of the acquisition of a new *qualitas* within the soul, as it is appropriated through incorporation in the Holy Catholic Church. As such, justification is necessarily gradual and not instantaneous. It admits of increase and decrease or even loss, according to each man's co-operating disposition to receive it,⁵ the plain precepts of the gospel sufficing for ordinary Christians of the second order, while higher counsels of perfection remain additional and optional for such as 'in a better and quicker way' would attain to eternal life by totally abandoning the good things of this world.⁶ These not only attain to a religious level 'quæstatum perfectionis proficitur,' but they may even so excel in holiness beyond what is strictly required of them ('bonum superexcedens' [*Summa*, II. i. qu. 109, art. 2]) as to accumulate a treasury of merit or works of supererogation, which are available for less mature Christians in the form of indulgences (q.v.), by a kind of transferred holiness, yet always on the basis of the mystic union of believers in the One Head.⁷ The absence of any assurance of salvation in this system⁸ constrains the believer to supplement his faith by making diligent use of the Church's means of grace and by applying himself eagerly to salutary acts of virtue, in order to acquire, 'by many repeated efforts after obedience,' that holiness which is necessary for future blessedness (see J. H. Newman, *Parochial and Plain Sermons*, London, 1844, i. 1-16).

7. Side by side with this sacramental type of holiness, and partly in protest against its spirit, there was fostered within the Church the piety of Mysticism, or immediate *subjective holiness*. Mysticism has assumed many forms in the history of the Church, but its characteristic ethical feature is the desire for inward purity as a neces-

sary condition of beholding and being united to God, through purgation, illumination, the renunciation of all creatures, and the elevation of the soul above the distractions and multiplicities of the world of time and sense. In its extreme forms, mysticism tends to dispense with everything external and intermediary, and to wander into vague regions that are non-Christian, non-historical, and even pantheistic, thus making a fatal sacrifice of the Divine holiness. Christian mysticism frequently tends to depart from NT holiness by seeking to approach God otherwise than through the Incarnate Word, the means of grace, and the sole relationship of faith, as well as in its whole manner of laying emphasis on finitude rather than sinfulness, immanence rather than transcendence, communion rather than forgiveness, feeling and imagination rather than will and conscience, the bliss of personal absorption in the life of God rather than a life of filial obedience to His will. Yet mysticism has ever served piety by insisting on inward experience and spiritual passion in religion; and in a St. Bernard it exhibited intense personal love of the suffering and lowly Jesus, the Bridegroom of the soul, as an all-important element in Christian holiness.

8. In the Mendicant Orders we find a still further reaction against the clerical ideal of sanctity, in the emphasis laid upon *lay holiness*. St. Francis and the friars brought back holiness from monasteries, churches, and the technicalities of hierarchical religion to the homes and haunts of ordinary men and the service of one's neighbour, by the preaching of penitence, humility, love, and a joyous imitation of the poverty of Jesus.¹

9. The chief corrective, however, to the sacramental conception of holiness was to come not from mysticism within the mediæval Church, but from Protestantism outside it. The Reformers contended for a *fiduciary holiness*, based on the religious experience of faith.

'Augustine and Catholicism attached great weight to sin; but behind sin stood *concupiscentia*, virtually a physical conception: and behind righteousness the hyper-physical *infusio dilectionis*, etc. Hence Catholicism culminates in ascetic morality and mysticism. For Luther there stands behind sin in the ethical sense sin in the religious sense, i.e. unbelief, and behind the being righteous the fundamental religious virtue, i.e. faith. . . . Luther attained that which Augustine, owing to his Neo-Platonism, was not fortunate enough to reach, notwithstanding numerous approaches to it; he made Christianity again a religion' (F. Looft, *Leitfaden*, Halle, 1906, p. 737 f.).

(a) To the mystical doctrine of holiness through spiritual absorption in God in a love that replaces faith, Luther opposed the evangelical doctrine—itsself essentially mystical—of the soul's present justification and holiness through the forgiveness of sins and a personal acceptance with the Father, for Christ's sake, by means of a sincerely penitent and trustful faith which neither need be nor can ever be outgrown. To the semi-Pelagian Catholic doctrine of holiness, with its mysterious stream of forces in the sacraments, its infused and almost quantitative grace, its merely assenting faith, its elaborate penitential apparatus for the removal of sin, its toil and uncertainty, its emphasis on co-operating merit as imparting to the believer an objective and inherent righteousness before God—to all this Luther opposed the more religious conception of a joyous present certainty of individual salvation as a result of the direct personal relationship of childlike faith in the Father who has opened His loving heart to us in Christ Jesus, and won our unswerving trust by the free forgiveness of our sins. In such a system, sanctification, so far from being a stage in the process of justification, issues from justification as its necessary obverse; for there is no other or further holiness possible

Official Catholicism, however, does not require withdrawal from the world as a condition of complete holiness.

⁷ For the canonization of a servant of God it is sufficient that there be proof that he has practised those virtues which occasion demanded, in an eminent and heroic degree, according to his condition in life, rank, and circumstances' (Benedict XIV., *de Servorum Dei Beatific. et Beatorum Canoniz.*, Padua, 1745, III. 21).

to the Christian than that of faith, which is simply the continual daily appropriation, not of forgiveness only, but of God Himself in Christ, as the source of the believer's peace, power, righteousness, and good works. In the teaching of Luther, Christ Himself assumed the central place which in Scholasticism was occupied by infused grace; and the holiness of monasticism, with its ascetic morality and withdrawal from the world, was rejected to make way for a holiness of faith which could nowhere be better exemplified than in one's ordinary calling as ordained by God.

'Perfectio Christiana est serio timere Deum, et rursus concipere magnam fidem, et confidere propter Christum, quod habeamus Deum placatum, petere a Deo, et certo expectare auxilium in omnibus rebus gerendis, juxta vocationem; interim foris diligenter facere bona opera, et servare vocationem. In his rebus est vera perfectio et verus cultus Dei' (*Augsburg Confession*, 1530, II. 27).

(b) The teaching of Calvin on this subject was governed by his doctrine of Divine predestination, electing grace, and the sovereign will of God. His aim was to cultivate an *intensive holiness* which should consist not simply, as Luther so breezily taught, in that free and loving service of all men which results from the joyous experience of the Divine forgiveness, but rather in reverent obedience to God's commandments and the observance of 'such legitimate worship as is prescribed by the law' of God (*Inst.* I. ii. 3). True holiness is possible only to such as are elect by the decree of God (III. xxii. 2), and it follows by a Divine inner necessity from justification, yet only within the sphere of the Christian Church, because of its possession of the Word and sacraments (IV. i. 4, 16). Not that all the members of the Church are equally holy,

'only that with their whole heart they aspire after holiness and perfect purity; and hence, that purity which they have not yet fully attained is, by the kindness of God, attributed to them.' 'The Church is sanctified by Christ, but here the commencement only of her sanctification is seen: the end and entire completion will be effected when Christ, the Holy of holy ones, shall truly and completely fill her with His own holiness' (IV. i. 17, viii. 12).

Hence the importance attached by Calvin to a strict ecclesiastical discipline as a means to holiness (IV. xii.).

'According to Luther the primary purpose of the Church was to proclaim the Gospel of God's forgiving love in Christ; according to Calvin it was to train the elect in holiness. . . . The notion of the Church as a communion of holy people, pure both in doctrine and in conduct, because wholly governed by the will of God, increasingly overshadowed the idea of it as an agency for the proclamation of God's forgiving love' (A. C. McGiffert, in *Essays in Modern Theology and Related Subjects*, New York, 1911, p. 218 f.).

These characteristics profoundly influenced modern Europe and gave birth to the *austere holiness* of Scottish Presbyterianism and English Puritanism, with their occasional excesses of harsh casuistry, Sabbatarian gloom, and iconoclastic zeal, but with compensating glories of spiritual grandeur and imaginative power. These types aimed at recovering the full ethical content of holiness, as well as the due emphasis on the holiness of God, and, by a new asceticism, they were all the more mighty in outwardly dominating the world because they had in inwardly and spiritually renounced it (see E. Troeltsch, *Protestantism and Progress*, Eng. tr., London, 1912, pp. 79-85, 136-141).

xo. The ferment caused by the Reformation gave rise to several attempts, mostly non-ecclesiastical, to establish a more *experimental holiness*, the various forms of which may be studied in the Anabaptists, Seekers, Quakers, and other sects, in Pascal and the Port-Royalists, and in Molinos, Fénelon, Madame Guyon, and the Quietists. In Germany in the 18th cent. the movement took the form of Pietism, a reaction against the stiff scholastic dogmatism of the Lutheran Church and current rationalism. Spener, Francke, and Gottfried Arnold were the leaders of a school which sought to transfer

the emphasis in religion from belief in an orthodox creed, and reliance upon institutions and means of grace, to the more emotional and personal appropriation of saving truth and the exemplification of it in holy conduct. The experience of conversion and regeneration was insisted on as an indispensable preliminary to the true knowledge of God or the fruitful study of theology. 'Awakened' Christians were encouraged to meet together for free prayer, and an attitude of aloofness or antagonism was taken up towards worldly amusements and secular culture. The movement gave rise to both philanthropic and fanatical developments, and in passing over into Moravianism it revealed strong separatist as well as missionary tendencies.

xi. Moravianism in its turn did much to inspire Methodism, with its characteristic doctrine of *perfect holiness*. Already in his undergraduate days at Oxford, John Wesley had been known as the founder and leader of the 'Holy Club.' When he was about twenty-two, the reading of Thomas à Kempis led him to see that

'true religion was seated in the heart, and that God's law extended to all our thoughts as well as words and actions. . . . I set apart an hour or two a day for religious retirement. I communicated every week. I watched against all sin, whether in word or deed. I began to aim at, and pray for, inward holiness' (*The Journal of John Wesley*, ed. N. Curnock, London, 1909, I. 466 f.).

These and subsequent experiences, rather than any abstract theorizing on the subject, led Wesley to become the life-long champion of doctrines which he afterwards unfolded in 'A Plain Account of Christian Perfection, as believed and taught by the Rev. Mr. John Wesley, from the year 1725 to the year 1777' (*Works*, London, 1830, xi. 386-446).¹ Wesley 'believed and preached that the Divine Spirit was as mighty in administering redemption as the Divine Son in accomplishing it' (*A New History of Methodism*, ed. W. J. Townsend, etc., London, 1909, I. 214). In opposition to the Catholic doctrine of meritorious perfection, the mystical conception of perfection through isolated communion with and absorption in deity, and the general view of perfection as something to be attained only in a future life, Wesley maintained the doctrine of a present evangelical or Christian perfection in the entire sanctification of perfect love. Such perfection is not to be confused with absolute or angelic or 'Adamic' righteousness, and is consistent with a thousand defects arising from our ignorance, infirmity, and creaturely limitations, being relative to the helps and opportunities of every moment. 'It is the perfection of which man is capable while dwelling in a corruptible body; it is loving the Lord his God with all his heart and with all his soul and with all his mind.' The sin from which it is free is 'the voluntary transgression of any known law,' and it implies constant self-renunciation and even fasting, the careful observance of Divine ordinances, a humble, steadfast reliance on God's forgiving grace in the Atonement, a pure intention to regard God's glory in all things, and an increasing exercise of the love which itself fulfils the whole law and is the end of the commandments.

'The perfection which I have taught these forty years cannot be a delusion, unless the Bible be a delusion too; I mean, loving God with all our heart, and our neighbour as ourselves. I pin down all its opposers to this definition of it. No evasion! No shifting the question! Where is the delusion of this?' (*Journal*, 27th Aug. 1768).

This doctrine of full sanctification was 'the grand depositum which God has lodged with the people called Methodists; and for the sake of propagating

¹ Wesley's doctrine of perfection may be studied further in the *Journal*, 24th July 1782, 14th May 1786, 27th Aug. 1788, 28th June 1789; *Sermons*, nos. xliii., lxxvii., cxx.; and the *Letters* dated 5th Apr. 1768, 7th July 1761, 16th Sept. 1762, 12th May 1763, 21st Feb. 1771. See also *Minutes of Conversations*, June 1744 and Aug. 1745, and the *Methodist Hymn Book*, section 'For Believers Seeking Full Redemption.'

this chiefly, He seems to have raised them up.' Wesley even doubted whether any who preached against it could continue in the Society (*Letters*, 15th Sept., 26th Nov. 1790).

12. The influence of these doctrines has been far-reaching. In the various branches of Methodism to-day the emphasis is everywhere laid . . . on the calling to the life of entire sanctification which is brought about by the reign of perfect love in the heart' (*A New History of Methodism*, ii. 421). This is especially prominent in the most recent offshoot of Methodism, the Salvation Army. 'Even among our worst enemies it has been admitted that the strength of the Salvation Army lay in its Holiness teaching' (*Holiness Readings* . . . reprinted from the *War Cry*, London, 1883, p. v; see also *S.A. Orders and Regulations for Field Officers*, London, 1886).

13. The rise of modern Holiness Movements in Europe and America, where the work of Pres. C. G. Finney of Oberlin helped to prepare the soil, may be traced largely to the revival of religion through the work of Moody and Sankey in 1875. But it had already begun several years before, first in America and then in England, its pioneer with both word and pen being W. E. Boardman,¹ who together with R. Pearsall Smith held a long series of special meetings for ministers and others in 1873 and 1874. A striking issue of these was a conference held at Broadlands Park, Romsey, in 1874, on the invitation of Lord Mount-Temple, for the purpose of considering 'the Scriptural possibilities of faith in the life of the Christian in the daily walk (a) as to maintained communion with God; and (b) as to victory over all known sin' (C. F. Harford, *The Keswick Convention*, London, 1907, p. 26). In the same year a larger conference, under the leadership of Smith and Boardman, met at Oxford 'for the promotion of Scriptural holiness'; and in 1875, by invitation of Canon Harford-Battersby, the first 'Convention for the Promotion of Practical Holiness' was held at Keswick. Among the chief leaders of the convention have been included Théodore Monod, Andrew Murray, A. T. Pierson, F. B. Meyer, and H. C. G. Moule. 'The Keswick Convention has set up no new school of theology, it has instituted no new sect, it has not even formed a society, but exists for the sole purpose of helping men to be holy' (Harford, *op. cit.* 4).

In 1875, Smith visited Berlin and inaugurated what came to be known as the modern German *Gemeinschaftsbewegung*. His work was earnestly taken up by Schlömbach, Christlieb, Paul, and others, and led to the formation of the *Deutscher Evangelisationsverein* (1884), the *Gnadauer Pfingstkonferenz* (1888), the *Blankenburger Allianzkonferenz* (1905), and similar associations. In some cases these broke away from the Established Church, but for the most part their aim was to cultivate a deeper holiness by means of special organizations in touch with it. The best theological exponents of this school were Jellinghaus and Lepsius, whose views, however, have been regarded as unduly moderate by the more advanced sections. In German Switzerland, O. Stockmayer is its chief representative. In America, apart from more special organizations like A. B. Simpson's 'Christian Alliance,' the *Northfield Convention*, established near Moody's own home in Massachusetts in 1880, has proved most influential. Out of it has sprung the *Student Christian Movement*,

and other similar associations for the deepening of the spiritual life.

Modern Holiness Movements have advocated the privilege and possibility of our attaining, here and now, to the peace, power, and purity of full sanctification, through the surrender in faith.

Keswick sets before men 'a life of faith and victory, of peace and rest as the rightful heritage of the child of God, into which he may step not by the laborious ascent of some "Scala Sancta," not by long prayers and laborious effort, but by a deliberate and decisive act of faith' (Harford, *op. cit.* 51.). 'In the blood and death of Jesus there is to be had not only forgiveness but also a direct and immediate breaking of the power of sin, cleansing from sin, and continual victory over sin, in the surrender of faith' (Th. Jellinghaus, *Das völlige gegenwärtige Heil durch Christus*², Basel, 1903, pp. 20, 440).

In more popular statement, a 'higher life' or 'second blessing' of 'full salvation' may be experienced through a single act of perfect consecration to God, who in response completely neutralizes or eradicates the sinful nature so as to grant a present deliverance from the power of sin, on the sole condition of 'abiding' in an attitude of dependent life-union with the exalted Christ. The degree to which this last condition, which involves exercise of the personal will of the believer, is explicitly dwelt on accounts largely for the different types of Holiness teaching. How far some forms of it can go may be judged by the affirmation of pastor Paul, 'I have for a long time now seen nothing of my old nature' (*Gnadau Conference Report*, 1904, p. 298). Such a claim to perfect holiness, however, is to be interpreted in a religious rather than in a moral sense. It admits of moral progress through growing 'light' in the conscience—and this the more rapidly because a new and normal attitude of obedience to God's will as known has been consciously and once for all accepted by faith. 'In reality we are not yet fully holy' (H. Benser, *Das moderne Gemeinschaftschristentum*, Tübingen, 1910, p. 36).

Generally speaking, the modern Holiness Movement seeks to conserve a neglected truth, and in an age of materialism and busy externalism in religion it has incalculably deepened the spiritual life of the Church. Yet its actual forms, apart from the extravagances of human frailty and error, have frequently suffered from narrowness of theological outlook and a lack of both psychological and ethical insight into the deep implications of the gospel. It is plainly unscriptural to suggest that any 'second blessing' can confer on certain Christians a higher kind of sanctification than the holiness that flows essentially from justifying faith, or bestow a new grace of spiritual infilling and deliverance from sin 'distinct from and additional to' the gift of the Holy Ghost granted in conversion and regeneration. 'It is a fatal mistake to think of holiness as a possession which we have distinct from our faith and conferred upon it. That is a Catholic idea, still saturating Protestant pietism' (P. T. Forsyth, *Christian Perfection*³, 1910, p. 7). Further weaknesses may be seen in the tendency to identify holiness with quietistic self-abnegation, even to the loss of personality, and with the 'rest of faith,' disavowed from inspired moral effort; to frown on all 'secular' culture and brand as essentially sinful habits and pursuits which are in themselves indifferent; to overstimulate feeling and to confine the grace of God to stereotyped forms of conversion; and to claim with overweening confidence the special sealing of the Holy Spirit and direct inspiration in the details of thought and action. In these respects the modern Holiness Movement is not an advance upon but rather a retrogression from Reformation standards (see P. Gennrich, *Die Lehre von der Wiedergeburt*, Leipzig, 1907, pp. 204-215; and C. R. Erdman, 'Modern Spiritual Movements,' in *Biblical and Theological*

¹ Boardman's *Higher Christian Life*, written before 1860, ran through many editions on both sides of the Atlantic, and quietly prepared many minds for the movement when it began to take more overt form in 1870 in Union Holiness Conventions under his leadership. It is still perhaps the most valuable introduction to the study of the modern Holiness Movement. See his *Life* (London, 1886).

Studies, by members of the Faculty of Princeton Seminary, New York, 1912, pp. 359-392).

There is noticeable at the present day a certain avoidance and dislike of the special advocacy of holiness, even within the Christian Church. This may be due to (a) the trend of modern thought, so far as it seems to have weakened the transcendental claims of theology, and consequently of Christian ethics; (b) absorption in social and economic problems, from which Holiness Movements have too frequently and ostentatiously withdrawn themselves; (c) a reaction against the unscientific and narrowly pietistic interpretation of the Bible; (d) a mistaken identification of holiness with asceticism, morbid introspection, other-worldliness, or professional religion. Hence we have such statements as the following:

'The idea of a holy working man is even grotesque. The virtues which the working classes at their best have recognized have been rather those of integrity, generosity, sincerity, good comradeship, than those of meekness, purity, piety, self-abnegation, and the like' (E. Belfort Bax, *The Ethics of Socialism*, London, 1889, p. 17).

The remedy would seem to lie in a recovered sense of the personality, transcendence, and holy character of God as the ground of all Christian holiness; in a fuller recognition of the social obligations of a holy life; and in a return to the harmonious NT ideal of holiness, with all its comprehensive religious and ethical implications.

'I do feel that holiness consists in hearing Christ and following Him step by step in the minutest part of the minutest duty, and in acknowledging an ordinance of Christ in all the natural and social relations' (T. Erskine of Linlathen, *Letters*, London, 1878, p. 152).

R. H. COATS.

HOLINESS (Roman).—A definition of 'holiness' in relation to the Roman spirit is not easy to frame. Perhaps 'purity under divine sanction' may be taken as a rough explanation for the present purpose. In the earliest religion of the Roman State, ceremonial obligations were minute and exacting, and their relation to conduct is obscure, but the idea that character was in some way dependent on a power unseen and superhuman was not entirely wanting. The conception that moral perfection is pleasing to heaven is embodied in some of the oldest forms of cult—that, for instance, which the Vestal Virgins served. On not a few critical occasions the anger of the gods, bursting upon the community, was traced to their displeasure against an erring Vestal. As time went on, moral abstractions, treated as divinities, were publicly revered—chastity, for instance (*Pudicitia*); and these forms go back to an age when in religious matters Rome had as yet not been very deeply affected by Greece. Indeed, reverence for such abstract powers was always more characteristic of Italy and the West than of Greece and the East. We must ask and, if possible, answer the difficult question, What effect upon the individual life had the belief that morality is under the protection of Heaven? If we regard only the utterances of the Latin satirists who paint the manners of a small clique in the capital as though they were representative of the whole world, or the equally indiscriminate denunciations of Paganism by early Christian writers, we may be tempted to answer 'None.' But a great amount of evidence exists which tells a different tale.

Thus, the vast mass of private memorials unearthed in the Western world by excavation bears testimony to a family life far different from that which is almost exclusively presented in the literature of the Empire. The fact that Vesta was the presiding deity of the family circle, as well as of the State conceived as a larger family, is a sign of a general belief that the ultimate sanction of morality is found in a supernal world, and that moral cleanliness among those of this world is a precept which issues from the other. This idea finds general expression in language, particularly in the use of the words *castus*, *purus*, *sanctus*, *pius*. Of course, these terms sometimes have a hard and somewhat lowly significance. They may be employed in a limited sense, not in reference to character taken as a whole, but to abstinence from some particular class of immoral acts. It is not easy to trace the moral life of a people or an empire. But it is not too bold to say that the history of these words in the Latin language shows a steady elevation of the ideal of morality.

The conviction that, in spite of the many horrible misrepresentations which a long line of pagan poets and philosophers denounced, the gods favour personal purity is exhibited in much Roman ritual besides that connected with Vesta. Priests and priestesses were often subject to severe restrictions. Boys and girls, being innocent, were employed in divine service, as we see in the *Carmen Sæculare* of Horace. This famous hymn may be said to have done homage to the efforts of Augustus, who strove to cure the sickness of the world by the union of moral and religious reform. His policy made an epoch in the social history of the Western Empire. The great Greek tide which had swept the educated classes into scepticism began to turn, and a belief in the divine govern-

ment of the world was renewed and penetrated society. An increased yearning after moral purity manifested itself in many ways. New forms of religion and new applications of philosophy alike show the influence, although then, as after, religion and philosophy were not always on the side of morality. There were Stoic and Cynic antinomians as there have been Christian. And the new divinities, Isis and Mithra and others, who were so ardently accepted, could debase their worshippers. But, on the whole, these new cults were popular, at least in part, because they satisfied to some extent the desire to find a way of escape from the corruption of unregenerate human nature—a way not opened by the older civic faiths. The seeds of Christianity could hardly have thriven as they did in the field of the Roman world if it had been still, morally, the world of the ancient Cato.

Not unnaturally we find purity as a cult more prevalent among women than among men. On the principle of 'corruptio optimi pessima,' satirists specially loved to depict the degradation of women. But an attentive reader, say, of Mayor's notes on Juvenal, will see something of the other side of the shield. And a perusal of the very numerous gravestones of women will leave an impression that there was, even at the worst time of the Empire, a wide range of sound family life, resting on the purity of the matron and mother. The commendations of the untainted lives of mothers of households are, in a multitude of cases, far from being hypocritical or merely conventional. The celebrated eulogy by a consul, Lucretius, on his wife Turia, in the Augustan age, praises her for chastity and religiousness without superstition. It was just this hope of stainlessness, combined with worship cleansed from superstition, that drew women, and in a less degree men, not only to Christianity, but to the cosmopolitan pagan divinities. A common type of inscription praises a wife for her 'old-time sanctity and modesty.' In spite of loose views of the marriage tie, we hear much of marriages which endured through long lifetimes, and the title *univira*, 'wife of one husband,' was prized. This turning away from the superstitious exaggerations of the ancient cults, combined with a recoil from impurity, is well seen in that strange apology for Christians rather than for Christianity, the *Octavius* of Minucius Felix, written in the latter half of the 2nd cent. A.D.

Until the rise of the Neo-Platonic philosophy, which was not a great force until the last Imperial centuries, the tendency of the later philosophers, both in the East and in the West, was to eschew theory and enforce morality. This was characteristic of all the schools alike, by whatever name they were called. It is impossible to mistake the trend in educated circles in the West during the first three centuries of the Empire towards an elevation of morality, whose moving force was a higher view of the relation of the individual to God. There is an ever strengthening vein of puritanism in the later philosophy, which reached its full development in the Neo-Platonic scheme. This vein is especially traceable in Stoicism. The dry logic of earlier Stoicism was softened, so that the moral lessons of the school might reach a large circle of Roman disciples. Every attempt was made to bridge over the gulf between the philosopher and the vulgar. The philosophic missionaries, who wandered about the world preaching to the multitude, though accused, like other teachers, of criminality, found a hearing from the crowd just because of the vague yearning after a better life. There was a gradual approximation to the Christian idea of sin, and the necessity was realized of a divine deliverance from the burden of the flesh,

with its impulse to immorality. Virtue was explained as attainable only by the will of God, and by imitation of the divine; duty, as the outcome of the divine law. 'No man is good without God,' said Seneca. The philosophic teacher was more and more presented as the curer of sick souls. The wide difference between doctrine and practice among the followers of this teaching was the theme of satirists, but there is much reason to doubt whether they were more open to this kind of reproach than the adherents of other religious and moral systems in the past and in the present.

LITERATURE.—Information on the subject is scattered about in works on Roman religion and Philosophy and Social Life. Especially may be mentioned: G. Wissowa, *Religion und Kultus der Römer* (in Müller's *Handbuch der klassischen Altertumswissenschaft*), Munich, 1912; L. Friedländer, *Darstellungen aus der Sittengeschichte Roms in der Zeit von August bis zum Ausgang der Antonine*, Leipzig, 1881; E. Zeller, *Philosophie der Griechen*, 2. ed. 1898, iii. J. S. REID.

HOLINESS (Semitic).—The conception of holiness when traced to its historic origins among Semitic peoples is stripped of all the ethical qualities with which our Christian modern consciousness has invested it. The ethical elements which have become absorbed into its content entered at a much later stage in the evolution of ideas which became attached to the term. This change of connotation will be duly noted in its proper place.

I. **HOLINESS AT THE EARLIER STAGE.**—1. The original meaning of the Semitic word for 'holy,' 'holiness,' *ḥ-d-š* (s).—The use of the Assyrian *ḥuddušu*, 'to purify,' and of the corresponding adjective *ḥuddušu* in the sense of 'pure,' 'bright' (to which the syllabaries give us the synonyms *ellu* and *ebbu*, 'clear' or 'bright'), might tempt us to assume that the original connotation of the term was 'brightness,' especially when the Arab. *ḥadasa* and its derivatives might seem to lend some support to this view. But it would be precarious to build upon the infrequent use in Assyrian of derived forms, and in Arabic of what may be a derived meaning. Our only safe course is to generalize from the use of *ḥ-d-š* both as verb and as substantive in the earliest documentary sources, and of other words, such as *ḥ-r-m*, found in all the Semitic languages possessing a similar meaning. We are thereby led to the conclusion that the term *ḥ-d-š* expresses the separation or reservation of a thing or a person for Divine use or a Divine cult, and the state of an object or person so reserved and brought into close relation with Deity as inaccessible or hardly accessible, and invested with a quasi-Divine character and power.

We are here touching upon the common ground of primitive custom where Semitic and non-Semitic traditions blend. The saying of Statius, quoted with approval by E. Renan (*Hist. d'Israël*, Paris, 1887-94, i. 29), 'Primus in orbe deos fecit timor,' here finds its application. The element of fear, which invests the relations of primitive man (see the 'General' art. above) with the occult personal or quasi-personal agencies with which he appeared to be surrounded, is expressed in the Heb. phrase for religion, *יִרְאָה*. This feeling of awe was extended to all objects which stood in more immediate contact with the gods whom the Semite worshipped.¹

¹ Robertson Smith is dominated by his conception of sacrifice as expressing communion between God and the worshipper. Therefore, when he says (*Rel. Sem.* 64f.), 'It is not with a vague fear of unknown powers, but with a loving reverence for known gods who are knit to their worshippers by strong bonds of kinship, that religion in the only true sense of the word begins,' he is expressing only a partial truth. S. I. Curtiss, who travelled among the inhabitants of the Hinterland of Syria and Palestine, is probably right in asserting that the worship of the modern primitive Semite is simply the product of fear. The answer of his Arab guide Hamdān to the question what made the Arabs religious might almost as well be given by the primitive

Analogies to the primitive conceptions of holy things may be found in Hebrew religion. The mountain Sinai, Jahweh's abode, was holy and could not be touched without peril to life (Ex 19¹²⁻¹³, 21-24). Similarly Uzzah's temerity in touching the ark of God (2 S 6⁶) led to his death. We have an instructive example of the survival of such magical conceptions regarding holy objects in the ceremony of trial by ordeal of a woman suspected of adultery (Nu 5¹¹⁻²⁸ [P]).

The passage is difficult because it shows, if Baentsch's analysis be correct, that the text has been worked over at different times. After various ceremonies we read in v. 17¹²: 'And the priest shall take holy water in an earthenware vessel; and of the dust which is on the floor of the tabernacle shall the priest take and put it into the water.' After further ritual, as unloosing the woman's hair,² the officiating priest takes in his hand the 'baleful water that brings a curse' and makes the woman swear a solemn oath (vv. 18-22). After reciting the words at its close, 'And this water that brings a curse shall enter thy bowels to cause thy womb to swell and thy thigh to fall,' to which the woman replies, 'Amen, Amen,' the priest writes the words of the curse in a book and immediately dissolves the writing³ completely in the baleful curse-bringing water, and, after waving a meal offering before Jahweh and burning it, he causes the suspected woman to drink the 'holy' baleful water.

Robertson Smith holds that the water is here called 'holy' because it is derived from some sacred spring. 'En-Mishpat at Kadesh, as well as 'En-Meribbah, he would explain as sacred springs whose waters were used in decisions based upon ordeals of this kind. On the other hand, Baudissin, with at least equal probability, explains the 'holiness' of the water as due to the fact that it was kept in a vessel belonging to the sanctuary (Ex 30¹⁸). The example we have cited is instructive as showing that *kodesh* includes a positive as well as a negative element, viz. the positive element of Divine power which may break forth with destructive effect. Baudissin's statement, that 'holy' does not properly designate a quality but a relation as God's property, is scarcely adequate (*Studien zur sem. Religionsgesch.* ii. 45). Moreover, this writer's view, that the materialization of holiness in Ezekiel is late (*ib.* 141), is certainly contrary to fact.

Further illustrative examples will make this clearer. In Is 65⁵ we have primitive conceptions of holiness in respect of persons as a mysterious potency which can pass from one individual to another with whom he comes in contact. The latter is therefore warned: 'Stand apart, for I make thee holy.'⁴ This expression occurs in a passage crowded with obscure references to the cults of Palestine into which the resident Hebrew population in the middle of the 5th cent. had

Semite: 'Every misfortune comes from God. Nothing comes except from Him. We fear God and the Wells. We take our vows in order to guard against injury. God receives our vow like a baksheesh. When all goes well, I offer a *fedu* that no misfortune may overtake us' (*Ursem. Rel. im Volksleben des heut. Orients*, Leipzig, 1903, pp. 293, 641.).

¹ Some doubt exists as to the validity of the reading of our text קִיּוֹם קִיּוֹם, for the LXX have ὁσὸν καθάπερ ὁσόν. This has induced Dillmann, Nowack, and others to substitute for the somewhat unusual קִיּוֹם קִיּוֹם the words חַיִּים חַיִּים only. On the other hand, Robertson Smith (*Rel. Sem.* 2, 181) contends for the validity of the reading 'holy water' as an 'isolated survival of an obsolete expression' in post-Exilic Judaism derived from the old language of Hebrew ritual. In this case 'pure water' and 'living water' would be the later interpretative glosses which came to be substituted in the texts employed by the Greek translator.

² See ICC, *ad loc.* Cf. on unloosing the hair, Wellhausen, *Reste*, 196.

³ Gray (ICC, 'Numbers,' *ib.*) cites the custom practised in Egypt of writing passages from the Qur'an on the inner surface of a bowl and using the water that had dissolved the writing for medicinal purposes.

⁴ Here reading, of course, the Pi'el instead of the impossible Kal of the Heb. text; so Geiger and other recent scholars. Another interpretation than that given above has been suggested to the present writer by Haddon, viz. that the initiated person is anxious not to lose his sacred potency by contact with another. Similarly in Mk 5³⁰ Jesus is well aware (εὐγινώσκεις) that a potency (δύναμις) had passed out of Him when touched by the diseased woman.

lapsed. One who had passed through a ceremony of consecration warns another to keep at a distance, because contact with his own consecrated person might infect that other with holiness, and thereby surround him with a circle of tabus or restrictions which would disqualify him from discharging the ordinary duties of life. This becomes evident from a comparison with Ezk 44¹⁹. There special instructions are given to the Zadokite priesthood that, when they pass from the inner to the outer court of the sanctuary, they are to put off their official vestments wherewith they have ministered before Jahweh in the inner court (cf. v. 12¹) and place them in special holy chambers, lest by their contact the people whom they meet are made holy. Other ordinary garments must be substituted by the priesthood in the outer court in order to prevent this contagion of holiness. The same principle of contagious holiness applies to the utensils employed in sacred rites. Since special holiness was ascribed to the sin-offering, it could be eaten only in a holy place, i.e. the court of the tent of meeting (Lv 6¹⁵⁻²³). Contact with the flesh of this most holy sacrifice creates holiness, and every garment on which the blood is sprinkled must be washed in a holy place. In other words, a circle of tabus of a stringent character is set up. Hence the earthenware vessel in which the sacrificial flesh is boiled must be broken, and, if the vessel be bronze, it must be carefully scoured and rinsed. Holiness is treated in every respect as something material (vv. 21-23). We should also compare Lv 11²²⁻²³ 15¹². These last passages deal with cases in which something unclean has come into contact with an earthenware vessel. Thus, if a weasel, mouse, or other unclean animal (Lv 11²⁹⁻³⁰) fall into an earthenware vessel, or if that vessel be touched by a person who is unclean by reason of a discharge, it shall be broken. Here we see that there is a close analogy between uncleanness and holiness. The effect on the vessel is the same; it has to be broken whether it has contained sacrificial flesh or that of an unclean animal. This close point of contact has been investigated by writers on Semitic religion, e.g. Robertson Smith and Lagrange. The common factor in both impure and holy objects is that a certain element of danger, owing to the action of a superhuman agency, invests the object in both cases (*Rel. Sem.* 2 153, 447-452), and serves to debar it from human use and contact. For contact in both cases involves contagion, and in certain cases uncleanness.¹ Thus in Heb. שָׁוַי the familiar root meaning 'approach' is used in Arabic in the sense 'be impure.' At the same time, the distinction between holy and unclean is a real one, though both are blended in various forms of tabu in savage custom (see the 'General' art.).

Primitive life deals with concrete conceptions. Thus in primitive Semitic religion, holiness might be regarded as the nimbus or outflow of Deity which attached itself to everything that mediates in worship, whether persons or things, between the god and his worshipper. So closely is holiness attached to the Divine personality that Jahweh swears by it (Am 4³) just as He does by His life (Nu 14²¹⁻²⁸, Dt 32⁴⁰, Jer 48¹⁸; cf. 1 S 14²⁶⁻²⁸, 2 S 27¹, etc.), or just as the Divine name became associated with Himself and men swore by it (Lv 19¹², 1 S 20⁴, Zec 5⁴; cf. Jer 44²⁶ etc.). Thus we find 'holy gods' in the inscription of Eshmun'azar (line 9).

The ideas of withdrawal, restriction, and reservation expressed in Heb. by *k-d-l*, applied to objects connected with worship, are in Arabic exhibited by other terms. Chief among them is the

¹ See the reference to the Holy Scriptures 'defiling the hands,' at the close of the present article.

word *ḥaram*, of which the root frequently appears in Canaanite Hebrew, Aramaic, and occasionally in Assyrian. In this case etymology enables us more easily than in that of *ḥ-d-š(s)* to arrive at a definite connotation. Its meaning is 'to seclude,' 'debar,' or 'render inaccessible.' What is sacred and also legally prohibited is called *ḥarām*, and any object or woman who may not be approached is designated *ḥarim*. Thus *ḥarām*, a substantive, is specially used by a Muslim of the sacred enclosure of the Ka'ba at Mecca. With the Hebrew-Canaanite *ḥērem*, or 'Lan,' which was specially connected with war, we shall deal later. The noun-form *ḥaram* also meets us in Aramaic Nabataean inscriptions.¹ In these, *ḥaram* means something inviolable. Thus in an inscription on a tomb in el-Hejra the deities Dūsharā (properly 'owner of Sharā'), Manūthi, and Kaishah are invoked to bring a curse on any one who shall dispose of the tomb in any way or alter the inscription, 'for the sepulchre and its inscription are an inviolable object' (*ḥaram*). The same word is used to express what is sacred and inviolable in the inscription of Petra (CIS ii. 350), where the sepulchre and surrounding gardens and purlieus are called 'the consecrated and inviolable possession (רמ חרם) of Dūsharā, the god of our lord.'² Here *ḥaram* approximates the use of the same word in Arabic.

Another Arabic term of closely similar meaning is *ḥimā*, designating something forbidden or reserved, or, more properly, guarded or protected from intrusion.³ Thus we read of the *ḥimā* of Wajj attached to the sanctuary of Al-Lāt at Tāif, which was under stringent rules like the Polynesian tabu. 'If a woodcutter intruded on the *ḥimā* of Wajj, . . . he forfeited his hatchet and his clothes; if a man unlawfully grazed his cattle on the *ḥimā* of Jorash, the cattle were forfeit' (Rel. Sem.⁴ 146). We find also that dress which was employed in ordinary life is distinct from dress worn in sacred functions. Accordingly, shoes or sandals soiled by travel were put off when the sacred enclosure, such as a mosque, was entered (cf. Ex 3⁸, Jos 5¹⁵). Clothes were either washed (in case of poor worshippers) or changed (Gn 35², Ex 19¹⁰). Even cattle which had strayed from outside into the *ḥimā* could not be reclaimed.

The opposed term to *ḥōdesh* in Heb. is *ḥōl*,⁴ properly that which is free or set loose for ordinary human use, in other words, not subject to the restrictions involved in holiness. In Lv 10¹⁰ the distinction is sharply drawn, and priests are exhorted to observe it as they would that between clean and unclean (cf. Ezk 22²⁶ 42²⁰ 44²²). This stringency of distinction became specially emphasized in the days of the Exile (Is 52¹¹), and still more in the days of Ezra, when laxity of usage required stern correction combined with strict rule. Without this the result would not improbably have been 'the final extinction of Israel' (Travers Herford, *Pharisaism*, London, 1912, p. 10).

But this was only to accentuate a tradition that

¹ Respecting חרם in Aramaic inscriptions, both as verb and as substantive, see Lidzbarski, *Nord.-sem. Epigraph.*, Berlin, 1898, p. 290. The verb simply means 'to be holy'; the Aphel is used for 'consecrate.'

² See G. A. Cooke, *North Semit. Insc.*, Oxford, 1903, nos. 79 (lines 5-8), 94 (line 3); cf. Lagrange, 183.

³ حامي, Heb. חָמֵה (root of חָקַה, 'wall'), meaning 'protect,' 'guard,' 'hinder.' Perhaps the fundamental meaning is 'to be hot with anger' (in defence of rights); cf. حَم, حָמ, חָמ (Lidzbarski).

⁴ Root חָל, Arabic حَل: the latter, being 'applied to the discharge (lit. the untying) of a vow, is the same which is regularly used of emergence from a state of taboo (the ḥarām . . .) into ordinary life' (Rel. Sem.³, 482).

VOL. VI.—48

had its roots in the past. Theory and prescription, however, have to give way under the presence of practical necessities, and in the pre-Exilic period of Israel's life such cases must have frequently arisen. Originally the right of asylum (*q.v.*), even for stray or stolen cattle that passed within some *ḥimā*, or sacred enclosure, was pretty strictly enforced in primitive usage, as the story told by Wellhausen (*Reste*², 52, taken from the narratives of Ibn al-Kalbi) respecting Saifi, the priest of the deity al-Fals, who had stolen a milch-camel and detained it under the deity's protection, clearly shows. But this right was modified by the Hebrews. Justice could overtake a murderer, even though he took refuge in a sacred enclosure. Such asylum availed only in the case of accidental manslaughter (Ex 21¹⁷), and even in this case the asylum came to be limited to only a few selected spots (Dt 4⁴¹⁻⁴² 19²⁻¹⁰, Jos 24⁹⁻⁹, Nu 35¹¹⁻¹⁵). Probably, as Robertson Smith suggests, the community of interest which subsisted between the people and its deity tended to mitigate rules which might otherwise have pressed with excessive severity on his worshippers. Thus the money stored in the sacred precincts of the temple of Ba'al-berith was even employed by Abimelech to hire a company of desperadoes (Jg 9⁴). In the textually difficult passage 1 S 21⁴⁻⁷ (see Driver and Budde, *ad loc.*), we read that in the lack of ordinary unconsecrated bread (לֶחֶם קֹדֶשׁ) the holy bread that stood on the table before the Divine presence (לֶחֶם הַפָּנִים in v.³ = לֶחֶם ה' in v.⁷) was distributed among David's starving followers by the priest. The fact that the distinction between *ḥōdesh* and *ḥōl* is here expressed, and that the priest endeavours to exact conditions of purity, points to the conclusion that we have a departure from ancient and normal custom (cf. Mk 2²³).

The distinction between *ḥōdesh* and *ḥōl* above indicated is obviously different from that between Divine property and human property, for it is the distinction between objects in the use of which there are severe restrictions, and objects which are free for ordinary human use. This idea of sacredness, involving restriction of use and danger accruing from its violation, was far more primitive than the conception and usage of property, though it may be admitted that the latter came afterwards to supervene.

It is not possible within the compass of this article to deal with all the ramifications into which the ancient conception of holiness extended among the Semites. It must suffice to classify their varied departments concisely under the following heads.

2. Holy things.—(a) *Places* which are invested with holiness are those in which the supernatural power and presence are supposed to be manifested. These elements of power and presence were often expressed in Semitic by the word *name* (see below under (k)). Hence a sanctuary was said in Hebrew parlance to be a spot (*par excellence* Jerusalem) in which God had 'put his name' (Ex 20²⁴, Dt 12¹⁶ 15¹⁵ 26², 1 K 8²⁶). Such a place would in Heb.-Canaanite be called *ḥōdesh* and be invested with the qualities of holiness and its restrictions. In the primitive life of the Arabian desert, from which it is generally held that the Semitic peoples emerged, the main physical characteristics associated with holy spots would be fertility, the spring arising from the soil and creating a verdant oasis of shading trees in the bare desert. These manifestations of a full vitality were ascribed to the presence of a supernatural Power who took up His abode there; and some portion, or even the whole, would be regarded as His sanctuary, and invested with the restrictions of holiness. Canaan abounded in such holy places. But there were other causes besides fertility which might invest a spot with special

sanctity as manifesting a Divine power and presence. Thus the sacred stone Eben-ezer was erected by Samuel at the place where Jahweh manifested His power in the defeat of the Philistines (1 S 7¹³). In the spot where God appeared in a dream to Jacob, the stone marked the spot, and oil was poured upon it (Gn 28¹¹⁻¹²), and the sanctuary was named Bêthêl.

Heaven is properly the abode of Jahweh, though He dwells with Israel in certain spots, especially on mountains. Hence the 'holy mountain' of Zion (Is 1¹, Ps 15¹ 24³, Wis 9⁸). But from earliest times Jahweh was regarded as the atmospheric deity, and thus in later literature heaven, being His place of abode, is designated holy (Ps 20⁵, Wis 9¹⁰), and even came to be used as a substitute for the Divine name.

(b) As just indicated, any sacred spot separated off and surrounded by restrictions as to access and ordinary use (Ex 3²) would be marked by a stone, which served for an altar, on which the blood of the offered animal was sprinkled or smeared, and at the same time also as a symbol for the Divine presence. There can be no doubt that the *numen* of the deity was thought somehow to reside in the stone.¹ Hence the primitive objection to hewing the stone or in any way violating it by the application of a tool (Ex 20²⁵). Moreover, the smearing of the blood, which in the primitive form of worship was shed over the upright stone (Heb. *mašēbhah*, Arab. *naṣb*), or over the heap of stones or cairn (such as the *gal'êdh* of Gn 31⁴⁶),² contains in itself a very clear indication that the sacred stone embodied the Divine presence, which was thereby made participator of the sacred meal or offering. Such a conception of sacrifice persisted into post-Exilic times and survives in its legislation (Lv 21⁸⁻¹⁷; cf. Mal 1⁷).

(c) The sacred spring was a frequent accompaniment of the sacred place. In fact, as Wellhausen remarks (*Reste*², 104), wherever human beings settled down by a sanctuary there must of necessity be water. Moreover, the fertile spot marked by the stone symbol would naturally possess a flowing spring arising from the mysterious water-depth (*ḥayyā*).

¹Of all inanimate things, that which has the best marked supernatural associations among the Semites is flowing (or, as the Hebrew says, "living") water. In one of the oldest fragments of Hebrew poetry (Nu 21¹⁷) the fountain is addressed as a living being' (*Rel. Sem.*² 135).

Such a manifestation of life around which verdure spread and which was endowed with properties of cleansing, and in many cases with medicinal or healing virtues, sometimes regarded by the Arabs as inhabited by serpent *jinn*, obviously possessed a sacred character (cf. 2 K 5¹⁰⁻¹⁴). An interesting text of Anubanini, King of Lulubi, published by V. Scheil (*Textes élamites-sémitiques* [=vol. ii. of J. de Morgan's *Mémoires de la délégation en Perse*, Paris, 1901 ff.], 1st ser., p. 67, cited by Lagrange, 160), shows how seas and streams were endowed with personality and invoked:

'May the upper and lower sea of the abyss destroy his parents and his offspring.' Here the sea is invoked to work out a curse. In another case the waters of a river have the power to absolve or condemn: 'May the rivers Tigris and Euphrates, the canals Mekkalai, and the canals Ši-kut and Arahut, dear to Marduk, deliver and absolve thee.' That such streams were regarded as 'holy' is clear from the third tablet of the *Surpu* series published by Zimmern. To drink their water in an impure cup (col. i. 21), or to spit into or otherwise pollute the sacred stream (col. ii. 59 f.), was a crime from which priestly absolution through Marduk was needed.

The presence of the sacred spring in many of the holy places of ancient Israel is attested by such names as Be'er-Sheba', 'En-Mishpāt, and the holy stream issuing from the sanctuary in Ezekiel's

¹So Robertson Smith and also Baudissin, in *ZDMG* lvi. [1893] 829; Lagrange, 194; and *HDB* iii. 879ⁿ, footnote.

²On the occasion of the covenant-sacrifice between Jacob and Laban, cf. Jos 24²⁷.

vision (47¹⁻¹²). Also somewhere in the Negebh we may picture Hagar's Be'er-lahai-rōi (Gn 21¹⁴⁻¹⁵).

(d) Another accompaniment of the sacred place was the sacred tree. That trees were endowed with supernatural life may be illustrated by numerous examples of primitive belief. This supernatural life would be suggested by the vitality of the tree itself and its fruit-producing capacity, whereby mankind is supported, or by its medicinal leafage (as in the case of the trees that grow on the banks of the sacred stream flowing from the sanctuary in Ezekiel's vision [47¹²]). In primitive Arab. religion certain trees were believed to be demon-haunted (Wellhausen, *Reste*², 105). The deity 'Uzzā was considered to dwell in one of three Samura trees at al-Nahla, and on the track between Mecca and Medina there were many Samura and other sacred trees. With the worship of the date-palm at Najrān (*ib.* 104) we may compare the palm-tree of Deborah (Jg 4⁵). This subject is very extensive, and the reader may be referred to the treatment in Barton's *Semitic Origins*, 75-82. The special sanctity ascribed to the palm in Arabia is to be connected with its importance to man as furnishing sustenance both for himself and for his cattle. The traditional sanctity of trees passed into Islām, and Muḥammad was held to have rested and prayed beneath the sacred trees between Mecca and Medina, just as Elijah rested and slept beneath the *rōthem* (Arab. *ratam*) tree and there received an angel visitant (1 K 19⁹). In Arabia and in Palestine such trees become *dhāt anwāt* wherever festivals are celebrated; and the boughs are laden with dedicatory offerings of clothes, weapons, or ostrich eggs. Among the ancient Hebrews, sacredness chiefly belonged to the terebith. It frequently appears in the Abraham-narratives (Gn 13¹⁸ 14¹³ 18¹). By a terebith tree the angel of Jahweh appeared to Gideon (Jg 6¹¹). We find several allusions to the fact that Divine communications were made in close connexion with terebinths. Thus we have the terebith of the soothsayer (סִימָה) in Gn 12⁸ (cf. Jg 9⁷, Dt 11³⁰); and in the syncretic worship of the high places incense was burned under its shade (Hos 4¹³), as well as under oaks and poplars.¹

(e) Out of the sacred tree arose the sacred symbol of the stem or pole standing near the altar, regarded as the symbol of the deity *Ashērah*, goddess of fertility and prosperity. The existence of this goddess was formerly doubted by Wellhausen, Robertson Smith, and others, who maintained that *Ashērah* designated only the sacred pole. But Assyriology has clearly demonstrated the existence of this goddess in the proper names Abd-Ašratum, Abd-Ašrati, and Abd-Aširti (A. Jeremias, *Das AT im Lichte des alten Orients*², Leipzig, 1906, p. 322, n. 1; *KAT*³, 432 f.). We might regard its rude representation in the pole fixed in the ground as a kind of roughly modelled *ḫāvor*, or wooden image, of the goddess (Lagrange, 1708), analogous to the *mašēbhah* (perhaps an approximate representation of the human figure).

(f) Holiness was naturally ascribed to the apparatus of worship, such as altar-bowls, cups, and other vessels of the sanctuary (Nu 3¹, 1 K 8⁴ מִזְבֵּי וְכֵלֵי הַמִּזְבֵּי). It was also applied to materials with which consecration of persons was affected or with which it was accompanied, e.g. oil, water, the diadem, and, in general, the garments worn by the priest (Ex 28⁴⁻⁶),² as well as to the offerings presented by the people, which were hallowed (Ex 28³⁰, Lv 22¹⁴⁻¹⁵). Any act of ritual inadvertence was a sin of pro-

¹In ancient Egypt, on the other hand, the *ayomore* was regarded as sacred (see Maspero, *Histoire*, Paris, 1894-99, I. 121, and Gressmann, *Ägyptische Texte und Bilder*, Tübingen, 1909, II. 47).

²In Aramaic we find the word *ḫadāshā*, ear- or nose-ring, regarded as an amulet with sacred devices or names.

fanation, which had to be borne by the officiating priest. An inevitable condition of the holiness of persons and things was that they must be *pure* or *clean*. We shall afterwards observe purity and holiness taken up into the ethical realm (Ps 24⁴). Here all that it is necessary to note is that, though not identical, they come into close connexion.

Just as a woman unclean through child-birth could not enter the sanctuary (Lv 12⁴), so uncleanness in things was incompatible with their presence or employment in worship. According to the conceptions of the ancient Orient, demons and uncleanness, decay, disease, and dirt go together.¹ Over the preservation of the purity of holy things the sons of Levi had to watch (1 Ch 23²⁶). The sins of Israel were considered to affect the holy place and render it unclean. Consequently, on the great Day of Atonement, expiatory blood was sprinkled on the altar horns to cleanse the tent of meeting (Lv 16¹⁸⁻¹⁹). Similarly, in Ex 29³⁶ special sin-offerings of a slaughtered bullock were needed for 'cleansing' (properly 'unsinning', Heb. *ḥṭṭ*; see Driver, *ad loc.*) the altar. Cf. Lv 8¹⁵⁻¹⁶ (in ref. to a house contaminated with leprosy), Ezk 43^{20-22, 28-29} 45¹⁸. A high degree of sanctity belonged to holy vessels, so that any who touched one became affected by its magic circle of tabu, or, in the language of the original, 'became holy' (*ḥṭṭ*). According to Nu 4¹⁸, death might result from such contact. In this connexion we may note also that a special and necessary condition in the manufacture of sweet incense was that it should be pure (Baudissin, *Stud. zur sem. Rel.*, Leipzig, 1878, II. 46 f.; Ex 30³⁴⁻³⁵ 37²³).

(g) The sacredness of certain animals, such as the camel, ox, cow, horse, pig, mouse, etc., is an obscure subject discussed by Robertson Smith in *Rel. Sem.*², 271 ff. Probably not the same element, but varied elements, operated in various cases in determining the sacredness of an animal and the sacrosanct character of its flesh. It is just here that we come to one of those interesting meeting-points between the idea of uncleanness and the ideas of holiness and tabu. The *unclean* animal may not at ordinary times be sacrificed, because it is a *specialty sacred animal* (*Rel. Sem.*² 290). It is only on specially solemn occasions—annual public celebrations or special crises—that such a sacrifice can take place. This may partake of the character of a mystic piacular sacrament or ceremony. One operative cause that constitutes an animal sacred was held by Robertson Smith to be the fact that it was originally regarded as the totemic ancestor of the clan. Subsequent writers on this subject are disposed to abandon this view. Other reasons than totem ancestry are assigned by Benzinger.³ In the case of the pig it was holy as belonging to the Adonis-Tammuz legend, or it was sacred to Ninib (Zimmern, in *KAT*⁴, 409 f.). In other cases, as in that of the hare, magical or demonic powers were ascribed to it. The Arabs used the head and feet as charms (*Rel. Sem.*² 133). On the sacredness of the horse (cf. 2 K 23¹¹ in reference to sun-worship; *Rel. Sem.*² 293), the mouse (Is 66¹⁷), and the swine (65⁴ 66¹⁷), explanations will vary, since the motives are various. One operative element is suggested by Agatharchides (K. Müller, *Geographi graeci minores*, Paris, 1855, I. 153 f.) in his account of the troglodyte polyandrous nomads of E. Africa, who derived their whole sustenance from their flocks and herds. 'They gave the name of parent to no human being, but only to the ox and cow, the ram and ewe, from whom they had their nourishment.' We have already seen that the sacredness of the palm-tree is probably due to a like reason. 'The beasts are sacred and kindred beings, for they are the source of human life and subsistence. They are killed only in time of need, and the butchers are unclean, which implies that the slaughter was an

¹ Hence in Babylonian magic, fire and water are summoned to the magician's aid in expelling demons (see 'Magic,' in *HDB* III. 200).

² Heb. *Archdol.*³, Tübingen, 1907, p. 408 f. See the instructive note by Bertholet on Lv 11 (pp. 37-40), in which the varied motives and traditions of ancient and primitive races are set forth. While due weight is assigned to the theory of totemic ancestors as applied to Israel (p. 40), other causes, especially demonic and magic, are likewise admitted.

impious act' (*Rel. Sem.*² 296 f.). Owing to the polyandrous character of this nomadic people, the cow would be regarded as more sacred, since man is nourished by its milk, and kinship is also reckoned through woman.¹

(h) As certain portions of space were regarded as holy and subject to restrictions of human use, so also were *certain portions of time*. Certain holy seasons were regarded as belonging to or specially related to God, as were certain persons or things. Consequently human actions during these holy seasons were specially limited or conditioned.

Among the Babylonians, special importance belonged to the solemn festival held at the beginning of the year called *Zagmuku*, or in Assyrian *reš satti*, 'beginning of the year' (Heb. *ḥṭṭ ḥṭṭ*), which was synonymous with the feast of *Akitu*. It was a festival in which Marduk was carried in procession on a sacred barque, and Nabu proceeded from his temple in Borsippa to salute his father Marduk. On this sacred day—the Babylonian New Year's Day (i.e. 1st of Nisan)—the king performed the ceremony of 'taking hold of the hands of Bel (i.e. Marduk) and receiving from him royal authority.' In the light of this custom, it is highly significant that we read in the annals of Nabonidus that in the ninth year, one of national disaster, 'the king did not visit Babylon (Tintir-ki) in the month Nisan. Nabu went not to Babylon. Bel came not forth. The Akitu festival ceased' (*ba-ṭil*). See Schrader, *KIB* iii. 130.

Among the early Semites the moon was determinative of the sacred days of the calendar. In the lunar month of 29½ days the sacred days were, as we learn from the pre-Exilic Heb. prophets (Am 8², Hos 2² [AV v.¹¹], Is 1¹⁸; cf. 2 K 4²³), the New-Moon and the Sabbath. The appearance of the new moon signalized the commencement of the month (cf. Sir 43⁸⁻⁹). Conjoined with the New-Moon, mention is made of the Sabbath. A remarkable list, discovered by Pinches (*PSBA*, 1904, p. 51f.), places the significance of the Hebrew Sabbath in a somewhat new light. In Babylonian, *sapattu* is the name given to the 15th day of the moon, or beginning of the 3rd quarter, i.e. full moon. In the days of the Ptolemies, as we learn from an inscription at Narnaka (?), the days on which the sacrifices were offered in Phœnicia were new-moon and full-moon.² So also among the Hebrews the festivals of *Maṣṣôth* and *Sukkoth* began on 15th Nisan and Tishri respectively.

From these facts Meinhold has drawn a sweeping inference. He holds that in primitive Israel, down to the close of the Judean Kingdom, Sabbath meant only the full-moon celebration. He regards Ezekiel as the originator of the sanctity of the Sabbath as a seventh day celebration (Ezk 46¹; cf. 20¹² 12. 16. 30. 34 23²⁸). But, if this be the case, it is difficult to see on what ground Ezekiel is justified in reproaching Israel for the non-observance of a *recent innovation* without the binding force of old usage. On the other hand, a variety of OT passages conducts us to the inevitable conclusion that the *seventh-day* Sabbath of a seven-days' week was an ancient pre-Exilic institution. For in Israel the sanctity of the number seven was evidently fundamental. We have it in the Niphal form *שָׁבַע*, 'swear'; and in derivatives *שָׁבַע*, 'oath'; and in the name Be'er-sheba'. Moreover, the seventh day of rest was parallel to the seventh year of release in early legislation for the slave, and also for the field, which was to remain fallow (Ex 21² 23¹⁰; cf. 34²¹).

(i) Various theories have been advanced for

¹ Cf. the statement of Herodotus (IV. 186) that the Libyans would not touch cows' flesh, though they ate that of oxen. Here, as in so many other cases, utility consciously or unconsciously co-operated in enforcing this abstinence from the flesh of so valuable and necessary an animal as the cow to a primitive nomadic race. Respecting sacred animals in ancient Egypt, see art. EGYPTIAN RELIGION, vol. v. p. 244 f., and especially Wiedemann, *Der Tierkult der alten Ägypter*, Leipzig, 1912.

² Von Landau, *Beiträge zur Altertumskunde des Orients*, II. (Leipzig, 1899), 'Die phöniz. Inschriften,' no. 105, p. 46 f., cited in Benzinger, *Heb. Archdol.*³, 389. But the reading is doubtful.

³ Special sanctity belonged to the Ethiopian moon-god, who is called significantly *Maḥrem* (see Nielsen, in *ZDMG* lxxv. [1913]).

the sacredness of the number seven. Wellhausen (*Proleg.*², Berlin, 1883, p. 117) and others, who base the week or seven-day portions of the month merely on the moon phases, do not indicate a probable origin for the widely prevailing and firmly rooted tradition among the Semitic peoples (cf. *Rel. Sem.*³ 181 f.) of the sacredness of the number seven. Without committing ourselves to Winckler's astral theories, we may agree that Schrader, Winckler, Zimmern(?), A. Jeremias, and Benzinger are justified in holding that the sacredness of the number seven is based on the seven planetary deities, including moon and sun. The order of these planetary deities in ancient Babylonia varies. Zimmern (*KAT*⁴ 623) says that the original order was: Moon (*Sin*), Sun (*Samas*), Mercury (*Nabu*), Venus (*Ištar-Dilbat*), Mars (*Ninip*), Jupiter (*Marduk*), Saturn (*Kaimanu*). Probably the seven-branched golden candlestick in *Zec* 4²², with its seven lamps, which (v. 10) correspond to the seven eyes of Jahweh, is based on the seven planets of the celestial world.

The Hebrew Sabbath signified, according to its Hebrew etymology, that it was a sacred day, i.e. consecrated to Jahweh, in which ordinary human employments ceased (*Gn* 2²⁻³, *Ex* 20⁸⁻¹¹, etc.). In this sense the primitive Heb. Sabbath corresponded to the Bab. seventh day, which was more strictly beset with restrictions, like the Jewish post-Exilic Sabbath. The seventh day in Babylonia was sacred to *Kaim(u)anu*, or Saturn, the planet of evil fortune. This character attaches to the 7th, 14th, 21st, and 28th days of the Bab. month. We here cite the following from *iv. Rawl.* 32 respecting the 7th day of the month Elul. This 7th day was dedicated to Marduk and Sarpanitu⁵:

'Evil day. The shepherd (= ruler) of the great nations shall not eat flesh roasted on coal, food brought into contact with fire (?); shall not change his coat, shall not put on clean garments; shall not pour out a drink offering; the king shall not mount the chariot; shall not . . . shall not announce any decision; in the place of secrecy the soothsayer shall not deliver an oracle. The physician shall not lay his hand on the sick one. For the discharge of business (the day) is not suited.' Likewise on the day of full-moon Gudea (c. 3000 B.C.), in a tablet to which Winckler refers, makes the statement: 'The work of their (i.e. the workman's) hands ceased . . . no corpse was buried . . . no man who had a suit at law went to the place of the oath' (*Religionsgeschichtlicher und geschichtlicher Orient*, Leipzig, 1906, p. 61, cited by Benzinger in his *Heb. Archäol.*², 390).

In nomadic Arabia the *Hajj* corresponds to the sacred processions of the gods on their barques in the Bab. towns. The original *Hajj*, or pilgrimage to Mecca, was in the month Rajab, which corresponds to the Heb. Nisan. This, with traces of other early customs of Arabic heathendom, became adopted into those of Islām. But Ramaḍān became the most sacred month of the Muslim (Wellhausen, *Reste*², 79). The rule for the *hajj* is that he must entirely abstain from secular employments and devote himself wholly to his religious duties. Similarly a '*ṣarah*' in Hebrew is the time when man is under such restrictions' (Martí). Muḥammad's rule of conduct is stated in *Qur. v. 96*: 'O ye who believe, slay no game while ye are on a pilgrimage.' In fact, the restrictions as carried out by orthodox believers during this 'truce of God' are grotesque.¹ The thirty days' fast during Ramaḍān involves abstinence from food, drink, and intercourse with women, from sunrise to sunset. It 'kindles in Moslem spirits, even of the wild Aarab, a new solemnity of religion' (C. M. Doughty, *Arabia Deserta*, Cambridge, 1888, i. 509). For it was during this month that Muḥammad retired for medita-

tion to the cave of Hirā, and the Qur'ān was sent down from the Seventh Heaven. Just as Rajab corresponded in time to the month Nisan, so Ramaḍān corresponded to Tishri, the seventh month of the ecclesiastical Bab.-Heb. calendar. We can hardly doubt that Jewish traditions of the great Day of Atonement (the 10th of the month) influenced Muḥammad's institution of the Ramaḍān.

Respecting Muḥarram, or the first month of the Muḥammadan year, and the mourning celebrations of the Shi'ah sect who commemorate the deaths of 'Alī and his two sons, Hasan and Husain, see Sell, 306 f. For a graphic description of a Persian Tazi, see Arminius Vambéry, *Life and Adventures*, London, 1884, p. 68 f.

(j) Certain operations or processes were also invested with special sanctity. Among these may be mentioned the *sacrificial act*, of which the essential element is the shedding of blood. Without entering into the intricate problem as to the fundamental and primitive meaning of sacrifice (*q.v.*), which appears to have involved the conception of a blood-tie between the Deity and the worshipper,¹ there can be little question that the blood, which embodied life (*Gn* 9⁴, *Lv* 17¹¹⁻¹⁴, *Dt* 12²³), was held to possess a magic potency. Doughty (i. 499) points out that it is the custom of the Arabs to slaughter a young sheep and smear the blood on camels and cattle as a protection. The recent researches of Westermarck in Morocco reveal that the blood of the slaughtered victim was believed to visit a curse on the object for whom the sacrifice was offered.² It is hardly possible to doubt that in the original form of the rite described in Exodus the smearing of the blood on the lintel and doorposts had special reference to the plague-demon (נִמְרוֹד, *Ex* 12²³ [J]), over whom it possessed a magic power of arrest.³ Among the Greeks the solemn act of sacrifice was attended by the silence of the worshippers enjoined by the word *εὐφραίνει, favete linguis*. Iphigeneia, when led to sacrifice, is bound with the 'speechless might of gags' (*Æsch. Ag.* 239).

Respecting *vows*, special note should be taken of the נֶזֶק, of which we have a vivid example in *1 S* 14²⁴, where Saul binds his warriors under oaths involving self-imposed curses not to eat or drink until the enemy is wholly destroyed. Another example meets us in *Ac* 23¹²⁻¹⁵ (cf. *Ps* 132²⁴). The enactments concerning the vows of men and women were strict according to the late legislation in *Nu* 30, even in the case of rash vows (*Lv* 5^{4c}). The special and extraordinary vows involving abstinence of the Nazirite are codified in *Nu* 6 (see *ICC*).

War presents an interesting example of a sacred mode of activity, based on the conception of the patron-deity of a State who is its war-god. For war, like other State enterprises, was undertaken under the sanction and direction of the patron-deity. Thus Sennacherib begins his description of his fourth campaign in his Prism-inscription, col. iii. 42: 'In my fourth campaign Ašur inspired me with confidence; then I summoned my mighty forces.' Ašurbanipal (in the *Rassam* cyl.) recites the names not only of Ašur but also of Sin, Samas, Bel, Nabu, and Ištar of Nineveh and also of Arbela. Ištar was the Assyrian war-goddess. So also among Canaanites (acc. to Egyptian data) were Anat and Reshef. Similarly, on

¹ Robertson Smith, *Rel. Sem.*², 215 f.; Herod. iii. 2. 'The sacrifices eaten in fellowship in the desert . . . are as a calling of the Lord the Allgiver, in his guests, a mystical communion of their bread and salt with Him' (Doughty, i. 452).

² See his paper, 'The Influence of Magic on Social Relationships,' in *Sociological Papers*, ii. (London, 1906) 160.

³ Haddon suggests that the demon in the more primitive form of the rite was supposed to consume the blood, and was thereby arrested or placated or diverted from his quest.

⁴ See art. 'Gelübde,' in *PRE³*.

¹ See Sell, *Faith of Islam*², London, 1896, p. 291, and citation from *Ṣaḥīḥ al-Bukhārī*, i. 458. The pilgrims are girded with the *ḥiṣām*, or 'pilgrims' loin-cloth, which covers them to the knee; and a lap may be cast over the shoulder. They are henceforth bare-headed and half-naked; and in this guise must every soul enter the sacred precincts' (Doughty, *Ar. Des.* ii. 479).

the Stone of Mesha', it is the god of Moab, Chemosh, who says to Mesha: 'Go take Nebo against Israel' (line 14). Among the Hebrews, Jahweh Š'bhāōth, Jahweh of the celestial star-hosts as well as of Israel's armies (cf. Jg 5²⁰), goes before Israel in the ark carried into the battlefield (1 S 4⁸), and is consulted by the priest-soothsayer with the ephod before every military operation (1 S 14^{18, 19} 23³ 30^{7, 8}, 2 S 5²³). The Syrians had the same custom; for we read in the Annal-inscription of Ašurnasirpal (col. iii. 20) that in overcoming a hostile Syrian tribe the *barā*, or soothsayer-priest, who went at the head of their host (*alik pan ummanātisunu*), was captured. Like other Semites, the Hebrews inaugurated war by sacrifices. This was said to 'consecrate' war (שָׁקַץ, Mic 3⁵, Jer 6⁴, cf. Jos 3⁹); hence the burnt-offerings at the opening of a campaign (Jg 6^{20, 28} 20²⁶, 1 S 7⁹ 13¹⁰, cf. 1 S 11⁷). With this conception of holy war and consecrated warriors (Is 13³) we must connect the sexual abstinence which was maintained during military expeditions among Hebrews and Arabs (*Rel. Sem.* 455; cf. 1 S 21⁵, 2 S 11²⁷). With this we must also associate the gruesome custom of the 'ban' (בָּרָךְ), which surrounded all objects, animate and inanimate, captured in war, and forbade their appropriation to human uses. This meant the wholesale destruction of the 'devoted' objects expressed by the denominative Hiph'il of the same root *h-r-m* (see p. 753⁴); cf. Jos 6¹⁷ 8^{3, 27}, Jg 21¹², 1 S 15⁷⁻⁸, in which v. 15 is a close parallel to the Stone of Mesha', lines 14 f., 32. In the latter case Mesha' devotes to Aštar-kemōsh (line 17, הכהמת) the entire population of Nebo, both men and women.¹

(k) The sacred name of Deity had a special and awful potency, since in ancient Semitic conceptions it involved the actual presence and personal power of the Deity, which, when the name was uttered, were summoned into active exercise. Thus the tetragrammaton (יהוה) was too awful for pronunciation by ordinary human lips, according to the usage of post-Exilic Judaism. We know that in the 3rd cent. B.C. it was avoided in the public reading of the Hebrew Torah, יְהוָה, reproduced in the LXX by κύριος, being substituted for it. Even the combinations י and ך, though abbreviations of the sacred name, came to be avoided as numerical signs of 15, 16 (יח and יז being respectively substituted). On the use of the Divine names and those of the Hebrew patriarchs in exorcisms, and generally in magical formulæ, see art. 'Exorcism' and 'Sorcery,' in *HDB* i. 812, iv. 604; Conybeare, in *Trans. of the Third Internat. Congress for Hist. of Relig.*, Oxford, 1908, ii. 358 ff. The wide prevalence of the potency of sacred names in Bab. incantations needs only to be mentioned here.

3. Holy persons.—(i.) Chief among these were the priests. In Ex 29, Lv 8⁶, elaborate details of the rites of initiation are given whereby priests are installed in their office. In these rites we shall merely note (1) the washing of the person with water (Ex 29⁴; cf. washing the garments in Ex 19^{11, 14} at Sinai); (2) splashing bullocks' and rams' blood on the altar-horns and round about it (vv. 10^{2, 18}), the ram's blood being placed on the right ear, toe, and thumb of the Aaronids (v. 20); (3) special garments and 'holy crown' (v. 6); (4) anointing with oil (v. 7). The fundamental conception underlying these ceremonial cleansing operations (washing and blood-sprinkling) is to remove all contamination which would disqualify the priest for his sacred functions. These functions are defined in Nu 18²² as the keeping of the tent of meeting, the handling of the holy vessels, and the approach to the altar. In the later Heb. legislation, which has just been

quoted, these functions belonged to the sons of Aaron. It is, however, fully recognized that the substance of P's ceremonial legislation is very ancient; and, if we possessed fuller documentary material from ancient Babylonia, we should probably be able to show a larger number of close parallels between the ceremonies of initiation for the Babylonian priesthood and those contained in P than have yet come to light. Several interesting and important analogies may nevertheless be noted.

(a) The king (*g.v.*), like the priest, was anointed with oil (שָׁחַץ). Anointing (*g.v.*) doubtless arose from the ancient magical custom of smearing or pouring unguent on the body to endow the subject with certain qualities. Thus the Arabs of E. Africa believe that lion's fat inspires a man with boldness, so that a wild beast flees from him (see *GB* ii. 364 f.). From the Tell el-Amarna tablets we learn that the custom of anointing kings prevailed in Western Asia in the 15th cent. B.C. In a letter from Adad-nirāri, king of Nuḫāssi in N. Syria, addressed to the king of Egypt (Schrader, *KIB* v. no. 37), it is stated that a previous Egyptian king had poured oil on the head of the writer's grandfather and established him as king. Frazer's *GB* i. 137-156, and his *Lectures on the Early History of the Kingship* (London, 1905), have familiarized us with the supernatural endowments attributed to the early king, who was regarded as a deity or quasi-deity. Israel similarly stood in awe of the 'Lord's anointed,' whose person, like that of a priest, was sacrosanct (1 S 24^{6, 10}, 2 S 14⁴). The Assyrian king called himself the offspring or favourite of a god (*binutu Ašur, naram Šin*). Moreover, the king assumed priestly functions. This we know to have been done by David (2 S 6¹⁷) and Solomon (1 K 8²⁶). This was also the tradition in Assyria. Tiglath-Pileser i. (1100 B.C.) calls himself *išippu*, or priest, of the god Šamaš. Sargon calls himself the *saknu*, or vicegerent of Bēl, and the *iššakku*, or chief priest, of Ašur.

(b) Physical defects were disqualifications for a Hebrew priest and also for a Bab. soothsayer (cf. Lv 21¹⁷⁻²³). Among the Babylonians, squinting (*saktu enā*), lack of teeth (*hepu šinnā*), and a maimed finger (*nakpi ubani*) were accounted disqualifications (H. Zimmern, *Beiträge*, Leipzig, 1896-1901, p. 87).

(c) As the Aaronic priesthood was hereditary, similarly the Bab. *barā*, or office of soothsayer, belonged to a sacred hereditary caste whose functions involved special mysteries of knowledge (e.g. inspection of the liver). This tradition can easily be traced back as far as the time of Hammurabi (c. 2100 B.C.; see Zimmern, 82 f., 87).

(d) In the ritual tablets of the *asipu*, or priest-magician, who dealt in conjurations (*šiptu*) whereby diseases were removed, or in expiations whereby sins were atoned, we read (Zimmern, no. 26, col. iii. 19 f.) that the *mašmašu* (who held an office closely allied to that of the *asipu*) (Zimmern, p. 93) is to pass forth to the gateway, sacrifice a sheep in the palace-portal, and smear the threshold and posts of the gateway right and left with its blood (cf. Ex 12⁷ [P]). Respecting these incantation-rituals and the multiplicity of the sacred offices, see Zimmern, *Beiträge*, and the art. 'Priest,' in *EB* 11. Israel also in pre-Exilic days had the *rō'eh*, *kōšēm*, *m'ōnēm*, *yidd'ōnā*, and *b'āl'ōh*. Others are obscurely mentioned in Dt 18^{10, 11}.

In early times the priest in Israel was essentially soothsayer, who declared the Divine will by ūrim and Tummin, rods, arrows, or other forms of the sacred lot. Carrying the ephod, he gave the answers needed on any expedition. In early Arabia the *kāhin* (Heb. כֹּהֵן) was the soothsayer who employed the divining rods or arrows, denounced by Muḥammad as an abominable work of

¹ A further treatment will be found in art. 'War,' in *EB* i. 2, and F. Schwally, *Sem. Kriegsallertümer*, Leipzig, 1901.

Satan (Qur. v. 92; cf. Mic 5¹³, Jer 27⁹). Cf. art. 'Soothsayer,' in *HBD* iv. 598.

In later times the priestly function in Israel became chiefly ceremonial and sacrificial, while the function of soothsayer (*kōsem*, etc.) was separate and specialized. Out of the priest-seer of early times, called *rō'eh*, emerged the prophet (*nābhī'*), whose person as 'man of God' was also sacred, whose rod possessed magical power (2 K 4²⁹⁻³¹) as well as his garment (2 K 2¹⁴; cf. Mk 5²⁷⁻³¹), on whom God's spirit rested, and to whom 'the word of the Lord' came. See art. 'Prophet,' in *EB* 11.

One of the most primitive and significant as well as non-ethical among 'holy' persons of the Semitic peoples was the *kādēsh* (sodomite priest attendant) and the *kādēshāh*, or priestess-prostitute, who infested the Canaanite-Hebrew sanctuaries like the corresponding *kādīstu* and *harimtu* of Babylonia. The wide prevalence of this phase of ancient Semitic life is attested by Gn 38²⁴, 1 K 14²⁴ 15¹³ 22⁴⁶, 2 K 23⁷, Am 2⁷, Hos 4¹⁴, Dt 23¹⁷ [Heb. 18], and is especially connected with the *Istar* cult (G. A. Barton, *Sem. Origins*, London, 1902, p. 83; N. Nilsson, *Études sur le culte d'Istar*, Leipzig, Paris, and St. Petersburg, 1911; see, further, *HIERODOULOI* [Sem. and Egypt]).

(ii.) We have represented in Israel the conception of a *holy people*. Of this the *locus classicus* is Ex 19⁶ (JÉ), in which the privilege is made conditional on obedience to the terms of the Sinai-covenant. Israel is called a Divine possession above all the peoples of the world. But this was in reality the re-assertion of a long recognized fact. Israel was Jahweh's people, just as the Moabites were 'people of Chemosh' (cf. Jg 5¹¹, Ex 15¹⁶). Israelites as individuals were just as truly sons and daughters of Jahweh. Similarly Palestine, the land occupied by Jahweh's people, was holy also (cf. Wis 12⁹), and is called Jahweh's house (Hos 9¹ 9¹⁵, cf. 9³ and Harper in *ICC*). All sacrifices outside Jahweh's land are, therefore, unclean. The corollary to this conception of Israel as a holy people is found in the prohibition of marriage with foreign races prescribed by later legislation (Dt 7¹). This became rigorously applied in the days of Ezra, who sternly repressed such connexions, whereby the 'holy seed' became 'mingled' and thus contaminated (Ezr 9²).

II. THE CONCEPTION OF HOLINESS RAISED TO AN ETHICAL LEVEL.—We have hitherto traced, though only in outline, the far-reaching dominion of the conception of holiness in its earlier stage, over a wide extent of persons, material objects, and modes of human activity. In all of these holiness appears as a positive quality derived from close contact with a Deity or supernatural power which becomes deterrent and restrictive, circumscribing human activities which are free as to ordinary or non-holy objects. Holiness in primitive religion, like much else, is concrete and quasi-physical, and, moreover, is bound up with magical elements of tabu. We have now to investigate how in its more advanced stage it became gradually and partially emancipated from the material and magical characteristics of primitive religion as it became ethicized.

Holiness, as we have seen, is closely associated with the personality of Deity. That which is brought most closely into contact with Him is most holy of all. Thus the hindmost recess of the Temple (רִצְוֹן, *raḥōn*), where His presence dwelt and where only the high priest on the most sacred day of the post-Exilic calendar (the Day of Atonement) could enter, was called the Sanctuary *par excellence*, the most holy place (קֹדֶשׁ קֹדֶשׁ). Accordingly, sanctity, with all its associated elements of restriction and reserve, admitted of degrees until at length we come to the Deity Himself, who in His exalted and inaccessible loneliness and power is called by the thrice repeated and so emphasized

'Holy' in Isaiah 6³. The same principle that applied to things would *a fortiori* apply to God Himself. If eating the remainder of the *sh'lamim* (rendered 'peace-offerings'), which should be burnt on the third day, was an act of profanation because it was God's 'holy thing' (Lv 19⁸), it was a far more terrible thing to behold God Himself. No man can behold God and live (Ex 33⁹; cf. Jg 13²², Is 6³). The quality in the Deity which avenged with terrible penalties all violations of His presence, dignity, name, or belongings was called 'jealousy,' and He was accordingly designated 'a jealous God' (אֱלֹהֵינוּ, Ex 20⁵ 34¹⁴).

God's position of inviolable supremacy and power was designated by this term קָדַשׁ, and He Himself was קָדוֹשׁ, 'holy.' But in His external self-manifestation He was invested with 'glory' (כְּבוֹד). These two characteristics of Divine personality—'glory' and 'holiness'—are closely combined; but with this distinction, that, while 'holiness' marks out His inaccessible exaltation and power, which are restrictive on human activities, His 'glory' exhibits Him in His earthly and visible self-manifestation (Is 6³; Baudissin, *Stud. sur sem. Religionsgesch.* ii. 82, 104-107).

The prophets, who were the great teachers of Israel, did not in any degree diminish, but rather exalted, these conceptions of Jahweh's unapproachable and terrible power and His manifested grandeur. The universality of His sovereignty and power is emphasized by Amos, by Isaiah, and above all by Deutero-Isaiah (Am 9⁷, Is 6³ 40¹³⁻²⁶). But the teaching of the 8th cent. Judæan prophets did not end here. The stress which Amos and Isaiah placed on the righteousness of Jahweh and His ethical requirements (Am 5¹¹⁻¹² 31-37, Is 110-17, 31-32 56-57) shifted the centre of gravity in religion from ceremonial to conduct. Ceremonial tabus and sacrificial forms count for little. In Jeremiah's teaching the externalities of Israel's formal religion have disappeared with the destruction of the State and the Temple. Jahweh has established a 'new covenant' with His people independent of external ordinances and enactments, for it is internal, spiritual, and personal: 'I will put my law within them, and in their heart will I write it' (Jer 31³¹⁻³³).

The effect of all this was far-reaching, and it gradually brought about an 'Umwertung aller Werte'—a transmutation of all values, which affected the conception of the Divine Holiness and all related thereto. Since God's character and demands were essentially expressed in righteousness, this permeated also the essence of holiness whether in God or man. The fast wherewith a man is to afflict his soul is to set the oppressed free and bestow bread on the hungry (Is 58⁶). 'Rend your heart, and not your garments' (Jl 2¹³). This affected the language, not only of prophecy, but of legislation. Circumcision was to be of the heart (mind), and not of the flesh only (Dt 10¹⁰ 30⁶). It entered even into the priestly legislation of the guilt-offering (Lv 5¹⁻⁷), and in the 'Code of Holiness' finds its due place (25¹⁰⁻³⁰). This was doubtless a reinforcement of ethical elements which belonged to Israel's old religion, since all religion involves social relations and a social order, and therefore these elements found a place in the older codes of legislation. But prophetic teaching gave them a new and primary importance, and they came to displace the externalities of ceremonial religion. This is manifest in some of the Psalms, e.g. 50⁸⁻¹³, where sacrifices are repudiated as irrational; 51¹⁶⁻¹⁸, where the true sacrifices are a broken and contrite heart. Perhaps the most notable expression is to be found in Ps 15 (which reflects the spirit of Mic 6⁷⁻⁸): 'Who shall dwell in thy holy hill? He that walketh uprightly, and worketh righteousness, and is faithful in his thoughts [and not merely in

external acts). The following verses expound this fundamental conception. Cf. Ps 24²⁴, Sir 35²⁻⁸ 12-17.*

We have entered here into a higher realm and atmosphere, and these new conceptions would be fostered by the new conditions of post-Exilic Judaism, when there was a vast Diaspora, and the Synagogue with its worship took the place of the national Temple with its sacrificial ceremonial. Consequently prayer (which in some form accompanied sacrifice) now took the place of sacrificial ceremonial (which was legitimate only in the central Jerusalem sanctuary).

Moreover, we now find a tendency to shift 'holy,' which was ethical, from non-ethical things to personal objects, to which it can more properly apply. God in Deutero-Isaiah is 'Israel's Holy one' *par excellence*. Purity is closely associated with holiness, and has moral values. In Hab 1^{12, 13} 'holy' is applied to Jahweh in His ethical purity, which is so great that He cannot behold evil—an echo of Is 6³⁻⁷. From these ethical conceptions of God's holiness it is but a step to the conception of God's 'Holy Spirit' (Is 63¹⁰, Ps 51¹³, Wis 9¹⁷). Those who form God's retinue, the angels, are called 'holy ones,' since they are the 'sons of God' (Job 5¹ 15¹, cf. Ps 89⁶⁻⁹).

Nevertheless, the old and primitive non-ethical ideas of holiness still held sway and persisted in post-Exilic Judaism. They permeated Ezekiel's ideal scheme (chs. 40-48) of Israel's restored commonwealth, and the subsequent Levitical legislation. We even find them in the Mishna (*Yad*. iii. 2. 4 f., iv. 5. 6; cf. *Eduyyôth* v. 3), where it is stated that the canonical Holy Scriptures 'defile the hands,' according to the teaching of the schools of both Hillel and Shammai. In other words, this holiness thereby becomes contagious (Weber, *Jüd. Theol.*², Leipzig, 1897, § 21. 1). Texts from these inspired Holy Scriptures are still employed by Jews as magical charms and prophylactics, just as verses from the Qur'ân are used among Muslims. See artt. 'Demon,' 'Magic,' 'Sorcery,' in *HDB*. In fact, the Arabic language of the Qur'ân is sacred, and any translation into another tongue is a violation of that sanctity (Sell, *Faith of Islam*², 265, 301-305). Among peasants in the inland regions of Syria, both Christianity and Islâm are but a thin veneer over forms which are essentially those of ancient Canaan. Ethical monotheism is not the dominant religious influence, but a belief in the local *nabi* (whose tomb is sacred), or the local *wali* and *jinn*, who are merely substitutes for the former gods and demons.

What, however, unites the most primitive ideas of holiness to the later and modern conceptions, which are ethical, is the fundamental principle of close union and association with the Divine. This is common to the present and the hoary past. Whatever is deemed incompatible with such association is necessarily excluded. Holiness, therefore, will always be restrictive, and jealously close its doors to all forms of human action which are held not to be in harmony with this fundamental principle. And with holiness so restrictive and secluded there is also involved a positive element of Divine power.

LITERATURE.—The dissertation on 'Holiness' by W. W. Baudissin, in his *Studien zur sem. Religionsgesch.*, pt. II., Leipzig, 1878, still remains a very valuable treatment, especially from the standpoint of OT usage. A useful list of earlier literature is given on p. 31. Valuable material respecting Arabic heathendom may be gathered from J. Wellhausen, *Reste arab. Heidentums*, Berlin, 1887 (21897). W. Robertson Smith's *Religion of the Semites*² (London and Edinb. 1894) is still the best contribution to the subject, especially owing to its

full presentations of Arabic illustrative materials as well as those derived from the wider field of the comparative study of religion. M. J. Lagrange's *Études sur les religions sémitiques*², Paris, 1906, esp. chs. iv.-viii., contains a mine of well-sifted material in which the results of Assyriology find their due place. In addition to these, J. Skinner's art. 'Holiness,' in *HDB*, and R. Kittel's 'Heiligkeit Gottes im AT,' in *PRE*², should be consulted. Among commentaries, see G. Buchanan Gray, 'Numbers' (*ICC*, Edinburgh, 1903), and A. Bertholet, 'Leviticus' (*Kurzer Handkommentar*, Tübingen, 1901) (see esp. on ch. 11); K. Marti, *Geschichte der israelitischen Religion*⁴, Straßburg, 1903, §§ 9-11; B. Stade, *Biblische Theologie des AT*, Tübingen, 1905, I. §§ 46-70. Cf. also the other works cited in the course of the article. OWEN C. WHITEHOUSE.

HOME.—The word (see *OED*, s.v.) signifies 'a dwelling-place,' regarded from the moral and the social point of view as the *fixed residence* of a family, providing for its members a place of refuge from the labour and turmoil of active life, and cherished as the abode of those to whom a man is bound by the closest and most intimate ties of relationship. The ideas which the word suggests are, accordingly, those of *permanence*, *security*, *familiarity*. To be 'at home' implies that a man has reached, at least for a time, the end of his wanderings (cf. Pr 27⁹); that he is beyond the reach of the perils of wayfaring; that he is no longer a stranger and foreigner, but a member of a household, surrounded by those who understand him and sympathize with him. When, for example, St. Paul speaks of the Gentiles as *οἰκίαι τοῦ θεοῦ* (Eph 2¹⁹), he is contrasting their former outcast and alienated condition with the privileges of membership in God's family or household. Under all the aspects mentioned above, death is sometimes spoken of as 'going home' (cf. Ec 12⁵ 'long home,' with Plumptre's note), and the disembodied state is described by St. Paul as the being 'at home with the Lord' (2 Co 5⁸).

There were, doubtless, numerous instances of beautiful domestic life among the Hebrews. The narratives (J and E) of the 9th and 8th centuries B.C. throw much incidental light on the family life of ancient Israel. There was apparently a tendency (except in the case of the monarch) towards monogamy; and, though paternal authority was absolute, and extended to the *jus necis*, we do not find instances of harsh or unjust treatment. The same remark applies to slaves. They were the private property of their masters, but despotic rights do not seem to have been as a rule abused. The duties of hospitality were held in honour, and guests were welcomed with kindness and liberality. The Book of Proverbs illustrates the high esteem in which family life and family duties were held in ancient Israel. As regards the later Judaism it has been said that 'there were no homes like those in Israel,' and two familiar Talmudical sayings are probably the fruit of common experience: 'Marriages are made in heaven,' and 'God dwells in a pure and loving home' (see A. Edersheim, *Life and Times of Jesus the Messiah*, London, 1883, bk. ii. ch. 9, and *JE*, s.v. 'Family and Family Life'). To a smaller extent the feeling for 'home' may be traced in classical antiquity (see, for instance, Hom. *Od.*, *passim*; Soph. *Ajax*, 850-860, *Phil.* 492-496; Ovid, *Trist.* iii. 4. 53 ff.; Virg. *Ecl.* i.; Tib. *Eleg.* i. 1; Plin. *Epp.*, etc.; cf. S. Dill, *Roman Society from Nero to M. Aurelius*, London,

* In the face of Bertholet's extreme statement that *kôdeah* and *kaddah* are nowhere to be found in the Psalter in the special sense of moral holiness (*Bibl. Theol. des AT*, Tübingen, 1912, II. 249, footnote), it is at least obvious from Ps 15 and 51¹³ that an ethical as well as ceremonial connotation is implied.

1904, p. 188 f.; and, for the witness of Latin inscriptions, etc., see hints in C. Bigg, *The Church's Task under the Roman Empire*, Oxford, 1905, Lect. 4), and also in India (cf. the statement of the *Pañchatantra*, v. 49, that even heaven is not so precious as one's birthplace, however humble it may be; see, further, Böhrling, *Ind. Sprüche*², Leipzig, 1870-73, nos. 1013, 1943, 6048, 6939); but it has been said with truth that

'home is specially Teutonic, word and thing. . . . The life of home has become the great possession, the great delight, the great social achievement of our race; its refuge from the storms and darkness without, an ample compensation to us for so much that we want of the social brilliancy and enjoyment of our Latin brethren. Reverence for the household and for household life, a high sense of its duties, a keen relish for its pleasures, this has been a strength to German society amid much to unsettle it' (R. W. Church, *The Gifts of Civilisation*, new ed., London, 1880, p. 336 ff.).

In England the new conception of life which Puritanism introduced tended powerfully to raise the standard of family life.

'Home, as we conceive it now, was the creation of the Puritan. . . . The sense of spiritual fellowship gave a new tenderness and refinement to the common family affections' (J. R. Green, *Hist. of the English People*, London, 1880, lii. 19).

So Emerson, writing in 1847, testifies that 'domesticity is the taproot which enables the [English] nation to branch wide and high. The motive and end of their trade and empire is to guard the independence and privacy of their homes' (*English Traits*, London, 1856, ch. vi.).

The special development, then, of the home-forming tendency seems to be characteristic of the Teutonic race; but it is a common human instinct, and, as such, finds its peculiar consecration in the gospel. Naturally, the spread of Christianity in the pagan world was responsible for many tragedies of domestic life. Christ's own words foreshadow the strain upon affection and conscience which would inevitably follow conversion (Mt 10²¹⁻²⁷), and such a passage as 1 Co 7^{10*} indicates one class of problems that was bound to arise. In early Christian documents we read of wives embracing Christianity and refusing to live with their husbands (e.g., *Just. Apol.* ii. 2; cf. *Eus. HE* iv. 17); in the persecutions, frequent instances are recorded of parents pleading with their children, and children with their parents; of sons disowned by their fathers, and slaves by their masters; of wives divorced, and children disinherited (see Harnack, *Expansion of Christianity*, Eng. tr., London, 1904, bk iii. ch. 2, for references). But, where the gospel had free course, it issued in the consecration and elevation of family life—a fact of which the Apologists supply ample evidence.

The fundamental weakness of family life in Roman society was the exaggerated idea of the *patria potestas*. Domestic duty, it has been well said, was summed up in a single article—that of absolute submission to the head of the household. It was only by a very gradual process that the wife rose from being the chattel and slave to be the equal of her husband. Filial affection was the rarest of virtues under a system which placed the son at the absolute disposal, and under the despotic control, of his father. In the early centuries of the Empire, various reforms tended to mitigate this state of things. Not only the sons, but the slaves, of the Roman householder found their position improved by a series of legislative reforms (see Lecky, *Hist. of Europ. Morals*, London, 1869, i. 297 ff.). But, as has been pointed out, the moral consecration of family life was the special task of Christianity.

This consecration may be said to begin with our Lord's subjection to the discipline of home life at Nazareth (Lk 2⁵¹) and with His readiness to hallow family life by His presence and blessing (see Jn 2^{12-11*}, Lk 10^{42*}). In His letters to the churches of Asia (Eph., Col., Philem.), St. Paul deals with the leading principles of home life in some detail, possibly because 'in the social traditions of "Asia" a certain prominence appears to have attached to

the family idea' (H. C. G. Moule, *Colossian Studies*, London, 1898, p. 231 f.). Each natural relationship—that of husband and wife, that of parent and child, that of master and servant—is exhibited in the light of the Christian ideal. The teaching of 1 P 2¹⁸⁻³⁷ is similar in its tone, and is addressed to readers of the same race. Perhaps the leading idea of St. Peter is that the gospel confirms and sanctifies the element of order and subordination which lies at the root of stable social life. Both to wives and to servants he preaches the duty of 'subjection.' St. Paul's precepts (Eph. 1.c.) seem also to apply, in the region of family life, the general duty of mutual submission (Eph 5²¹); but he lays more stress on the principle of active love which subordinates self to the service of others. Both teachers appear to regard the family or home as the appointed sphere of moral discipline and probation for the great majority of mankind, and St. Paul derives its sanctity from the fact that it reflects the mysterious relationships which subsist within the very being of Deity itself (cf. Eph 3¹⁵ 5^{22*}). It should also be remembered that to the mind of our Lord Himself the family presents the closest analogy to the new social order which it was His mission to reveal. God is the Father of a family; mankind are His children, and all are 'brethren' (Mt 23⁸⁻¹⁰; cf. the use of ἀδελφοί, ἀδελφότης in the Epp., and see Harnack, *op. cit.* bk. iii. ch. 3). In such early documents as Clem. *ad Cor.* 1, Polyc. *ad Phil.* 4, we find echoes of this line of teaching and proofs of its actual influence.

It does not fall within the scope of a short article to deal with the social and economic tendencies, or the moral and scientific theories, which threaten the Christian home. It may suffice to point out that the purity and sanctity of Jewish homes was mainly due to the prevailing regard for the chastity of woman, and that, where there is any lowering of standard in this particular, the institution of home is threatened. In Rome the growth of moral corruption, avarice, the love of ease, and extravagance led directly to the aversion for marriage, the perilous consequences of which Augustus strove to avoid by direct and drastic legislation (see Marquardt, *Das Privatleben der Römer*, Leipzig, 1879, p. 71 ff.). The rise of monachism and the passion for cenobite and solitary life became the occasion of vehement and one-sided disparagement of family duties and the frequent rupture of family ties (see Lecky, *op. cit.* ii. 125). Nor can it be denied that the institution of family life is threatened in modern times by a spirit of individualistic selfishness which prefers the comparative freedom and ease of a celibate life to the duties and responsibilities involved in marriage. But, apart from considerations of this kind, we may observe that the possibility of home life, as contemplated by the NT writers, depends to some extent upon conditions which can no longer be taken for granted. The problem of the family is closely connected with the modern problem presented by the aggregation of masses of people in large cities; and it is certain that deep-seated industrial causes are tending to undermine and break up family life. To a large proportion of the working classes in Europe and America, anything like home life in its highest form is virtually prohibited by the conditions amid which they pass their lives. A further danger which threatens home life is involved in defective and unspiritual ideas of what constitutes true human well-being. It is the obvious duty of the Christian Church to encourage any corrective tendencies, any social endeavours, which make for the integrity and purity of family life. What has been called 'the battle with the slum' is a real contribution to the family problem; and all Christians are bound to take an interest in any scheme for the better

housing of the poor, multiplication of suburban homes, improved sanitation, etc. (on this subject, see F. G. Peabody, *Jesus Christ and the Social Question*, London, 1901, ch. iii.). Further, family life is threatened by certain socialistic theories, which find in the family an insuperable obstacle to their cherished ideal of a corporate life in which personal interests are to be sacrificed to the welfare of the community. Such theories regard marriage and the family as a stronghold of individualism, hindering the citizen from 'complete devotion to the socialist ideal' (Peabody, *op. cit.* p. 140 ff.). On the other hand, the tendency of anthropological speculation seems to be in the direction of vindicating against socialistic attacks the permanent function of the family, regarded as the highest result of the historic process of social evolution. And, again, if it is true that the individual finds his true self-development in subordination to or co-operation with his fellows, if corporate life is in reality the great instrument for training character, it is obvious that the family has higher social significance than was once perceived. Home life is the fundamental form which life in common can assume. It involves precisely that training in social affections, that discipline in self-sacrifice and mutual service, which corresponds most closely to the Christian conception of worthy human life.

'The family exhibits in the simplest and most unquestionable types the laws of dependence and trust, of authority and obedience, of obligation and helpfulness by which every form of true activity is regulated. . . . In the family we learn to set aside the conception of right and to place in its stead the conception of duty, which alone can give stable peace to peoples or to men' (B. F. Westcott, *Social Aspects of Christianity*, London, 1887, Lect. II.).

The gospel, then, gives a complete and final sanction to the institution of home. In the home, —'Charity begins at home'—Christianity finds the needful conditions for training men in the highest and most Christ-like of all graces (1 Co 13). In the home, character is trained and ripened for the wider service of man that lies beyond and outside its range. By a round of common duties and mutual services, men and women are educated for the larger ministries of citizenship and churchmanship. Thus the gospel transfigures the home by treating it as the ultimate type of the new society which Christ came to establish on earth. God is a heavenly Father; men are His children, linked to each other by ties of brotherhood; the Church is His household (1 Ti 3¹⁰), in which all have their mutual duties and peculiar calling, and all alike are dependent on the Father's gifts of grace (Mt 23³⁴, 1 Co 12³¹, Eph 4 and 5). So St. Paul enjoins Timothy to treat those committed to his pastoral charge as relatives of the corresponding age—the aged men as fathers, the elder women as mothers, the young men and women as brothers and sisters (1 Ti 5¹⁻⁴). Again, it is noticeable that the gospel does not multiply directions in regard to the Christian's conduct in the larger spheres of human life—the world of business, of politics, of professional life. It confines itself to regulating family life with special minuteness and care; nor does it attempt so much to safeguard the rights of individuals as to enforce their duties. Thus, in Eph. and Col., St. Paul gives a summary of the simple but far-reaching rules which should control home life. He addresses in turn husbands, wives, children, and servants—that is, all members of the typical household. Each in his turn is exhorted to bear in mind his or her duties and the rightful claims of others, and thus there emerge the great principles that give to home life its sacredness and importance.

(i.) There must be before all else *the fear of God*, the root and ground of Christian life with all its manifold relationships; the fear of God regulating

the desire for wedded life and controlling the choice of a partner (cf. 1 Co 7³⁹); inspiring the 'nurture and admonition' of children and lending a sanction to their obedience (Eph 6¹⁻⁴); imparting dignity to the necessary tasks of the household and even to the fulfilment of menial duties (Eph 6², Col 3²). All is to be planned and fulfilled 'in the Lord,' in union with His mind and under the leading of His Spirit; all duties are to be discharged 'as to the Lord and not unto men,' in the consciousness of His continual presence and in single-hearted desire to serve Him.

(ii.) The home is to exhibit in its perfect beauty the working of *the law of love*. Love is the duty commended to the husband in particular. Men are to love their wives with reverent, tender regard; with them resides the element of authority, but the rightful exercise of authority is not to be allowed to become a 'root of bitterness' or cause of irritation. And love is to be kept true and pure by habitual recollection both of the entire dependence of the wife on her husband, and of the sacred mystery which wedded love symbolizes—the self-sacrificing love of Christ for the Church (Eph 5²⁵). The mutual love of those who are brothers by birth (*φιλadelphία*) is a type and earnest of that larger love of those who are brethren in the family of Christ, the family in the strict sense being an image of the Divine Kingdom, or, as it has been described, 'a State and a Church in little,' in which the binding and inspiring power of affection may be first realized.

(iii.) St. Paul and St. Peter alike lay stress on the law of *dutifulness*. While the gospel recognizes woman's spiritual equality with man, it also guards the rightful responsibility and leadership of the man; on the other hand, nothing is said to favour the assertion of leadership on the part of the husband. On the children is impressed the duty of obedience; nothing is said to them of possible pretexts for resisting parental authority; on the other hand, the parent is warned against the misuse of authority over either children or servants (Eph 6¹⁻⁹). Finally, servants are exhorted to show diligence and faithfulness; nothing is said to them of 'rights' or 'liberties' or of the 'indignity' of a dependent position. The master, for his part, is urged to keep alive in himself the sense of responsibility towards those who are his equals in the sight of the heavenly King and Judge (Eph 6⁹; see Moule, *Ephesian Studies*, London, 1900, chs. xv., xvi., *Colossian Studies*, ch. xi.).

(iv.) Another principle implied, though not expressly indicated, in the NT treatment of the Christian home is the law of *social service*. Home love is in germ the love which is to fulfil its obligations in every relationship of life. It includes

'Loves filial, loves fraternal, neighbour loves And civic.'

The home, in fact, lays the foundations of social morality in the wider sense. It is a school of humanity and Christ-like service. It has to be guarded from narrowness and exclusiveness by free intercourse with others, and especially by the fulfilment of the duties of hospitality—a virtue on which great stress is laid in the NT (cf. Ro 12¹³ 16¹, 1 P 4⁹, He 6¹⁰ 13², 3 Jn 15¹). In the earliest period of the Church's life, circumstances made this duty very urgent. It was the most direct and useful way in which members of the Christian brotherhood could aid the advance of the gospel (Harnack, *Expansion of Christianity*, i. 219). It is implied also in certain sayings of St. Paul that social intercourse is a duty and may minister to mutual edification (Eph 4²⁹). Family life is, in short, intended to be a school of brotherly love in its widest sense, not developing a mere *egoisme* d

plusieurs, but training men in large-hearted sympathy and wide social affection.

'The closer and warmer the home affection, the larger and stronger should become those social instincts which make life inconceivable except in a community; . . . And if they stop short at the domestic limits, and refuse to open out to their wider office, they sin against the home as much as against the State' (H. S. Holland, in *Lombard Street in Lent*, London, 1884, p. 134 f.; see also J. B. Mackenzie, *Introd. to Social Philosophy*, Glasgow, 1890, p. 215 ff.).

Home life, in a word, fails of its divinely ordained purpose, if it does not educate and fortify the spirit of social service, if it does not awaken compassion, and deepen insight into the social needs of mankind.

In this article we have been concerned with the ideals presented by the NT. But it should not be forgotten that, while the home is an institution which has been evolved by the needs of the race—an institution to which the Christian spirit has added new grace, lustre, and stability—modern conditions have brought us to what may be a period of re-construction, when it will be the task of Christianity to define anew the essential principles of 'family ethics.' Industrial conditions, new phases of religious thought, the movement for the higher education of women and their free admission to independent professions and occupations—these and such-like changes have materially affected the normal features of home life. 'Our democracy is making inroads upon the family, and a claim is being advanced which in a certain sense is larger than the family claim' (J. Addams, *Democracy and Social Ethics*, London, 1902, p. 77).

The position of boys and girls earning an independence at a comparatively early age, the modern revolt against domestic service, the new ideals of social usefulness which have been inspired by a wider outlook and an improved education—these things have raised personal problems in family life, the solution of which depends upon submission to the progressive guidance of the Christian spirit. It must suffice to indicate the circumstances which, apart from the conditions which directly tend towards the decay of home life, render the fulfilment of home duty a less easy task than it was in the first age of Christianity (on this subject the work by J. Addams quoted above is interesting and suggestive). It remains true that the first of Christian social duties is 'to show piety at home' (1 Ti 5), and that home must always continue to be the school of those graces and virtues which men need for effectual service, whether in the State or in the Church.

LITERATURE.—Besides the various books mentioned in the body of the article, see the works of Harless, Dörner, Martensen, and Newman Smyth on *Christian Ethics*; C. Gore, *The Epistle to the Ephesians: a Practical Exposition*, London, 1898, pp. 211-236; *HDB*, art. 'Family,' i. 846.

R. L. OTTLEY.

HOMER.—The religion and ethics of Homer—whether they belong to an actual evanescent 'Achæan' period in the history of Greece, or are the result of a combination of older and newer elements effected as part of a general process of evolution and harmonization extending over many centuries—have at least a superficial aspect of consistency. This is, no doubt, partly due to the peculiar quality of Homeric art, its unexampled lucidity and clearness of outline; to the Homeric spirit with its hatred of vagueness and mysticism. But this temper and art are themselves so characteristically Hellenic that we cannot look to them for an explanation of the startling divergence between the religion of the *Iliad* and *Odyssey* and that of historical Greece. For the beliefs of Homer are as distinctive as they are definite, and are now admitted by every one to be the product of historical causes. What those causes were is becoming every day more and more obviously the real

problem at the heart of the 'Homeric question.' Till they have been discovered, we must be content with a statement of the facts really within our knowledge, although it must be admitted that the whole significance of these is altered according as one does, or does not, regard them as representing an actual stage (to which the Homeric poems themselves are our only witnesses) in the development of Greek religious thought.

It will be understood that 'Homer' is used throughout this article as a synonym for the *Iliad* and *Odyssey*, without reference to the question of their authorship. The books of the *Iliad* are quoted according to the capital letters of the Greek alphabet, the books of the *Odyssey* by the ordinary letters.

I. RELIGION.—1. The gods.—These are, of course, anthropomorphic, as all Greek gods were or tended to become. They are, indeed, taller and more beautiful, wiser and more powerful, than men, and are exempt from old age and death; but otherwise they are scarcely thought of as physically different. They are said to have 'houses on Olympus,' either as actually dwelling upon the Thessalian mountain—and this is certainly the original meaning of the phrase—or, as in the *Odyssey*, inhabiting a kind of heaven which has nothing of Olympus but the name (§ 42 ff.). They form a somewhat insubordinate family-group under the government of Zeus, Olympian society being organized upon the same loosely patriarchal principles as society among Homeric men. They intervene constantly in human affairs, generally in human form, but sometimes in the semblance of birds. They are the sources of good and ill to men; although it is only some special skill or excellence that is regarded as the gift of a particular god, as skill in archery comes from Apollo (B 827; cf. E 51, 61, § 233). They are, theoretically, omnipotent and omniscient; or, at least, Zeus is so. They are subject to human passions and actuated by human motives. All this is quite in accordance with Greek religion in its classical form, although the wealth and vivacity of detail in which the anthropomorphic aspect of the gods is realized are peculiarly Homeric. What is really most important and characteristic in the religion of Homer is the clear perception of a fundamental distinction between the human and the divine. Whatever may have happened in the remote past, as when Ino was made immortal (ε 334 f.), in Homer's world no man is a god or can become a god. This is the poet's special contribution to Greek religion, and, historically considered, it is one of the most important ever made; for the conception of the Divine King was one that died hard in the *Ægean* world (G. Murray, *Rise of the Greek Epic*, 158 f.).

Andrew Lang makes a distinction between what he calls the ethical religion of Homer and his attitude to mythology (*World of Homer*, 120). So far as they are religious beings, Homer's gods are very grand and imposing figures, worthy of all respect and reverence. They are usually just, kindly, and placable, although their goodwill is often purchased and their wrath appeased, merely, it seems, by sufficient sacrifice. They are bound by their oaths, which they make by the water of Styx (O 38, ε 186). Their relation to Fate (*Moiræ*, *Aiḗs*) is apparently not consistently stated, no doubt because it has not been clearly thought out. Sometimes the poet uses the language of fatalism (X 5; cf. Z 487 f.); but, speaking generally, *Moiræ* coincides with, or is, the will of the gods, more especially the will of Zeus. It is, in fact, in a quite literal way to begin with, his 'portion' (*Διὸς αἰῶρα*)—the division of the tribe which belongs to him. This conception of *Moiræ* invests Zeus with a very real moral grandeur when he subdues his own feelings of love and pity in voluntary obedience to it, as when he allows his son Sarpedon to fall by the hand of Patroklos (II 431 ff.), and is moved by the

tragedy of the war (T21). It is to Zeus that the poor woman at the millstone prays in the palace in Ithaca, when she calls down his thunder upon her oppressors (ν 115 ff.). He is the protector of suppliants and strangers (γ 165; cf. 181, ε 270) and beggars (ε 57). He punishes those who give crooked judgments in the assembly and drive out Dikē, the Right Way of things, disregarding the anger of the gods (II 387 ff.), who elsewhere are said to wander disguised over the earth observing the lawlessness and righteousness of men (ρ 485 f.). 'Evil deeds do not prosper' (θ 329), for 'the blessed gods love not heartless actions' (ε 83). The helplessness of man, which is so much in the mind of Homer, makes him dependent upon divine aid: 'All men feel the need of gods' (γ 48).

Such are the gods of Homer when he thinks of them religiously. Even so, they are apt to be vengeful and capricious, while from another point of view they are decidedly unsympathetic, being lifted so far above human needs and weaknesses. But they do move us to a half-unwilling respect and awe. One can understand the emotion evoked by the great statue of Zeus at Olympia which was inspired by a famous passage in the *Iliad*; for, as Lang has remarked (*op. cit.* 117), the Olympians of Homer are the Olympians of Pheidias. But, when the poet comes to deal with the gods of mythology, he adopts a very different tone. In his hands they cease to be moral. The charge of Xenophanes, that Homer attributes to the gods all that is accounted a shame and a reproach among men— theft and adultery and deceiving of one another (fr. 11, Diels)—can be literally justified (e.g. τ 396, the 'Lay of Demodokos' in θ, the Deceiving of Zeus in ε; cf. the 'Battle of the Gods' in φ 385 f.—an episode on the verge of burlesque). Yet perhaps the protest of Xenophanes—admirable and tonic at the time it was made—is somewhat beside the mark. Homer is not preaching irreligion; he is trying to solve a very difficult artistic problem. He could not avoid the mythology of his subject, but the gods as actors in that mythology he could not respect. A naive faith can jest at what it holds most sacred, but the religion of which we have quoted some instances was anything rather than naive. Homer simply took the gods of mythology as he found them, much lower in the moral scale than any of his own heroic men and women, and treated them, as it were, decoratively (see Murray, *op. cit.* 280 f.). The truth is that Homer does not sympathize with, scarcely seems to understand, the old folk-religion of Greece which existed so long before and after him. Its leading divinities, Dionysos and the Mother and Maid, Demeter and Persephone, he barely mentions; the various Mysteries, which were so important a feature in it, he does not mention at all. Neither do we find in Homer any certain reference to the belief in heroes in the technical sense of the term, 'the divine race who are called half-gods,' as Hesiod describes them (*Erga*, 159), whose innumerable cults sufficiently prove how ancient and influential their worship was in Greece; for the lines describing the divine honours paid to Erechtheus in Athens occur in the Catalogue of the Ships (B 546 ff.), and even there are perhaps an Athenian interpolation. Herakles, the typical 'hero,' is for Homer 'the man Herakles' (φ 26).

Certain important aspects of the gods who appear in the *Iliad* and *Odyssey*—and these the aspects which counted for most in the popular faith—are completely ignored. Homer will have nothing to do with the gods of the people, and makes light of the 'sacred stories' of which Greek literature is so full from Hesiod to Pausanias and Plutarch. Indeed, it is obvious that a religion like that which we find in the Homeric poems—a

religion of which we are tempted to complain that it makes too much rather than too little of reason and sanity—involves the criticism and ultimate destruction of the simple faith which could accept the myths as a decent account of the life and behaviour of the gods. That this is not due to the personal predilections of a single poet with an eclectic creed follows from the very nature of the Epos. Homer had to deal with the saga or heroic tradition; he had to retell an old tale. The fact that the story involves the prominence of certain gods and beliefs and the exclusion of certain others is ground for concluding that the former must have been prominent and the latter absent at all periods in the life of the saga. Without Zeus and Apollo, for instance, there could be no *Iliad*; without Poseidon and Athena, no *Odyssey*. These, then, were in the saga from the beginning; that is to say, they were gods of the people whose beliefs were enshrined in it. If we apply this criterion to the Homeric poems, it leads to important historical conclusions. For it seems reasonable to hold that the divinities whose action is most vital in the organic structure of the poems were the 'Achæan' gods, while those whom Homer dislikes or disregards were non-Achæan. This conclusion is strengthened by a good deal of evidence from the history of Greek religion. We know now the general spirit and character of the old Cretan and Mycenaean religions—the worship of the Bull-god, the prevalent cult of the Earth-goddess, the careful tendance of the dead; and it is certain that, at a date which can only be conjecturally fixed, the ancient faith was overlaid and, for a time, evidently eclipsed by the worship of certain deities clearly of Northern origin, especially the Father-god Zeus. That this worship was introduced by the tribes who, in the times of the Migrations, pushed down from the North into Greece is the obvious and accepted hypothesis. The Homeric poems clearly reflect a period of Northern ('Achæan') predominance, which implies and includes the predominance of the Northern religion over the native 'Ægean' worship of ghosts and goddesses. That the divinities of the Homeric pantheon are all gods of the invaders is not true; there has demonstrably been some fusion with, and affiliation to, certain divinities of the native peoples. But Homer does preserve more clearly than anything else in Greek literature the memory of a religion more distinctly Northern in character than that of pre-Homeric or classical Greece, and with an observable bias in it against the indigenous agricultural and chthonian cults. This is the historical basis of his 'Olympianism,' the root from which it has grown, although we must not assume that the flower represents the creed of any actual age or people. It grew out of popular religion, but, as it appears full-blown in our *Iliad* and *Odyssey*, it is not itself popular religion. It is too selective for that, too systematic. 'It was Homer and Hesiod,' says Herodotus, 'who composed a "theogony" for the Greeks, and who first gave the gods distinctive titles, and defined their forms and functions' (ii. 53). (For a description of the process by which the Olympian ideal was evolved by gradual differentiation from popular notions of divinity, see J. E. Harrison, *Themis*, ch. x. p. 445 ff.)

Of the Homeric gods, the most prominent in the *Iliad* are (besides Zeus) Apollo, Poseidon, and Ares; Hera, Athena, and Aphrodite; in the *Odyssey* (besides Zeus), Athena, Poseidon, Helios, and Hermes.

(1) Zeus is the supreme god, the 'father of gods and men' (A 544), and, among men, in a special sense of kings, who often have the epithet 'Zeus-born.' He is clearly the deity of a people with patriarchal institutions, and exercises a kind of

patria potestas among the other Olympians. His authority is effective, although not unchallenged, especially by *Hera*, his wife, the ancient goddess of Argos, whose rebelliousness towards him may possibly reflect some earlier conflict between their worshippers. Whether Zeus was a specifically Achæan god from the first is not at all certain. There is evidence which indicates that he was worshipped at Dodona long before the coming of Achæans there. But it is certain that he became the chief god of the people whom Homer calls Achæans, and his characteristics in Homer are nearly all 'Northern.' Nor is his earliest home in the far north-west forgotten, for Achilles prays to him as 'Zeus the Lord, God of Dodona, Pelasgian' (II 233). But normally he dwells upon Mount Olympus; he is, indeed, pre-eminently 'the Olympian' (A 508, 583, 589). This also without doubt has its historical justification, taking us back to a time when his worshippers dwelt in North Thessaly, as tradition always maintained. Originally, then, 'the Olympian' meant 'he who dwells on Olympus' in Thessaly, although, as many mountains in Greece were named Olympus, and at least one famous seat of Zeus-worship was called Olympia, the epithet 'Olympian' gradually extended its connotation. Homer, indeed, speaks of the gods generally as 'the Olympians.' What is certain is that Zeus dwells by preference on the summit of a mountain (e.g. Θ 3). He watches the fortunes of the war from Gargaros, a peak of Mount Ida in the Troad, where he has a precinct and altar (Θ 47 f.; cf. X 171, Γ 276, Ω 308). This explains why Zeus seems all through the *Iliad* to favour the Trojans. He is the god of both sides, and the god of Ida is opposed to the god of Olympus (Murray, *op. cit.* 90). He is said to dwell in the upper air (B 412). This is natural in a divinity who is primarily a Sky-god, lord of the elements, above all of the thunderstorm, from which he derives many epithets (*τρυικέφανος, ἐργιδουρος*, etc.; cf. A 580, II 298). He is armed with the thunderbolt and the ægis, and is himself a great war-god (*ταμής πολέμοιο*, Δ 84). The Homeric Zeus is, in fact, an excellent illustration of the way in which certain primitive traits of a divinity may persist side by side with others which obviously belong to a totally different stage of religious thought. He never loses his original character of a Sky- and Thunder-god, but he is gradually moralized into the Zeus of certain great passages already quoted.

(2) The same process has been at work in the case of *Apollo*; but it has gone much further, and eliminated almost every trace of his original nature. The probability is that he was, to begin with, a Sun-god; but no one could infer that from Homer. He appears in the *Iliad* as a great warrior, strong upon the side of the Trojans and Lycians. Apollo, as his cults testify and Homer well knows (A 37 f.), was the great divinity of the Troad; and his favour towards the Lycians would also be explained if we could accept as proved Wilamowitz's hypothesis of his Lycian origin, and translate his epithet *λυκηνγενής* (A 101) by 'Lycian-born.' Outside Troy and the Troad, 'rocky Pytho' is already sacred to him (I 405), and he has a consecrated grove at Ismaros in Thrace (ι 200) and in Ithaca (ν 278). But it is strange to find that one of the greatest of Greek gods in the estimation of Homer himself has so little connexion in the Epos with Greece proper. He is armed with the bow (A 45 f.)—an archaic touch. Hence his commonest epithet is 'the Far-Darter' (*ἐκπρόβολος*, etc., A 14, 75, 385, 479, etc.). References to other aspects afterwards prominent in the Apolline religion are neither numerous nor important. But the ideal figure of Apollo in Homer, rising at times to sublimity, exercised an

incalculable influence upon Greek art, and, through Greek art, upon modern notions of what is implied in Hellenism.

(3) Conjoined with Zeus and Apollo in the recurring formula of appeal to the gods (B 371, Δ 288, etc.) is *Athena* (*Ἀθήνη*). The association is evidently significant, for it reappears in Athenian religion (see Harrison, *Themis*, 501 f.). Of all the gods, these are the three most highly honoured, Zeus, of course, in the highest degree (cf. Θ 540). Athena is his daughter and favourite child, although reference is nowhere made to the legend of her birth from his head—not the kind of story likely to appeal to Homer. She carries the ægis, like her father the Thunder-god (B 447, E 738); and the explanation of this seems to be found in her development, as Pallas, from the *palladion* (two round shields placed so as to touch at the rim and form the figure 8), which was regarded as a 'thunder-shield.' Hence she is a great war-goddess—indeed, the chief Achæan divinity of war, and more than a match for Ares. Her other name, 'Athene,' connects her with Attica. Whether Homer thought of her as a specially Athenian goddess is not clear from the poems themselves, although the epithet 'Athenaïa' is evidence enough of her historical association with Athens. Another of her epithets, 'Glaukopis,' points in the same direction; for, although in Homer it evidently means no more than 'grey-eyed' or 'bright-eyed,' it must be derived from *γλαυξ*, and the owl, as every one remembers, was the sacred bird of the Athenian goddess. So with the title 'Boöpis' applied to Hera, the ancient Cow-goddess of Argos (A 551). But these traces of primitive religion are not consciously realized, or are deliberately suppressed, in Homer, who imagines Athena in the form of a woman 'fair and tall and skilled in gleaming crafts' (ν 289)—wise, also, and mighty in war. It is the Athena of Pheidias.

(4) The same idealizing tendency has been at work upon *Poseidon*; and it has been remarked that Apollo, Athena, and Poseidon, who are never made to appear mean or ridiculous like most of the other Olympians on occasion, were the chief deities of the Ionian race. Whatever inference may be drawn from that, the Poseidon of Homer is certainly an impressive creation, with something about him of the turbulence and splendour of the sea. For it is as god of the sea that he is consistently presented in both the *Iliad* and the *Odyssey*; although the *Iliad* seems not unaware of his function as the god of horses (Ψ 307, 584). The epithet 'Earth-shaker' (*ἐννοσίγαιος, ἐνοσίχθων*) does not help us, for it is at least as applicable to his power of making earthquakes as to his shaking the land with his waves; while the title *γαιήχορος* is of uncertain meaning. For the most part Poseidon is a vehement partisan of the Achæans. But he is wroth with them for building a wall that is like to eclipse the glory of that built for Troy by Apollo and himself when they toiled for Laomedon (H 448 ff.); and Zeus gives him permission to destroy the Greek fortifications after the war. To this there is doubtless some background of fact, and we become sure of it when the god rescues Æneas from Achilles, that the descendants of the Trojan hero may reign in Troyland (T 302 ff.). The persecution of Odysseus by Poseidon finds its poetical motive in the blinding of Polyphemos, the uncouth son of the god. But it, too, perhaps rests on some ground of actuality, since the injunctions of Teiresias seem to point to the foundation of some known cult of Poseidon among a people ignorant of the sea (λ 121 f.).

(5) *Ares* and *Aphrodite* are associated in both the *Iliad* (E 359 ff., Φ 416) and the *Odyssey* (θ 266 f.). They are treated unsympathetically by Homer,

especially Ares. The explanation seems to be that both are 'Thracian' divinities, and the Homeric Thracians are enemies of the Achæans. Ares at least is a Thracian in Homer (N 301, θ 361); while there is ground for thinking that Aphrodite was originally his wife; although in the fabliau-like Lay of Demodokos she is represented as the wife of Hephaistos. On the other hand, the wife of Hephaistos in the *Iliad* is Charis (Σ 382). Aphrodite is called the daughter of Zeus and Dione (E 348, 370). She is named the 'Cyprian' (E 330, etc.), and has a sanctuary at Paphos (θ 363). This recalls her undoubted kinship with the Oriental Love-goddess whom the Greeks called Astarte (*q.v.*); for Cyprus early received a large Semitic element in its population. She is also named the 'Cytherean' (θ 288, σ 193). She intervenes to save her son Aeneas from the lance of Diomedes (E 311 ff.)—a reminiscence, perhaps, in the tradition of her original nature as a war-goddess. Homer, however, regards her as simply the goddess of Love, peculiarly unfitted, in fact, for the strife of battle (E 429). She serves for the standard of beauty, the 'golden' Aphrodite, and is already essentially the type embodied in the statue of Praxiteles. Ares, on the other hand, typifies the rage of battle, the war-spirit as a mere explosion of animal ferocity; while Athena represents the same spirit controlled and directed by reason.

(6) *Hermes* and *Iris* are messengers of the gods, more strictly perhaps of Zeus. Hermes provides us with a vivid illustration of the contrast between Homeric and popular Greek religion. There is a whole world of difference between the ithyphallic idol worshipped by the Arcadians and Athenians and the god of Homer 'like a young man in the most gracious season of youth' (κ 278). There is, however, one aspect of the Homeric god which accords with the popular conception of him, namely that in which he is *Psychopompos*, Conductor of the Dead to the under world; for in the cults Hermes has important chthonian functions (*ω ad init.*; the passage, however, is late). His magic golden wand (ε 47) belongs to him in this capacity. The epithets he bears (*ἐπὶ οὐμῶν, ἀδάκρυτα, δακρυόεις, ἀργεῖφάρος*) are all unexplained. It is one of the distinctions between the *Iliad* and the *Odyssey* that in the former it is Iris who is normally the messenger of Zeus, while in the latter it is Hermes.

(7) Of the Olympians, *Hephaistos* is most definitely connected with a special locality—Lemnos (A 593, θ 283 f.). As Fire-god he appears sometimes to be almost identified with the element he controls (*e.g.* φ 342 ff.). His skill as a craftsman is much celebrated (A 608, θ 195, etc., esp. Σ 478 ff.); but for the most part he is treated in a vein of good-natured comedy.

(8) *Helios* (μ 376 ff.) is even more elemental in his nature, being simply the personified Sun, one of the ancient Nature-gods dwelling in the background of Homeric religion. To this background also belong not only Dionysos and Demeter with certain minor divinities such as Aiolos, Kirke, Proteus, Leukothea, but the great company of nymphs, river-gods, and the like, who have in all ages been very real to the imagination of the Greek people (see J. C. Lawson, *Modern Greek Folklore*, etc., Cambridge, 1910, p. 130 ff.). The essential nature of Dionysos and Demeter as spirits of the changing seasons prevented their becoming Olympians, for these do not suffer age or death, whereas the central fact in the ritual of Dionysos and Demeter was a drama of the death and re-birth of the god.

2. The world of the dead.—The Homeric conception of the soul and its destiny differs as much

from that which seems to have been at all times current in Greece as his Olympians differ from the gods of the people. Yet it is a logical accompaniment, either as cause or effect, of the Homeric practice of cremation, and it can be paralleled from history. In Homer the dead man is habitually burned, and a mound heaped over his ashes. Only in this way can his soul (*ψυχή*) be set free to enter the realm of Hades, from which the ghost of the unburned and unburied is excluded by the dead already there (Ψ 71 f.). It is impossible for a race which burns its dead, consuming flesh and sinews (λ 219) until only the charred bones are left, to have the materialistic conception of the soul natural to a primitive people accustomed to bury its dead entire. So Homer imagines the soul as little more than a vapour exhaled from the pyre, and thereafter leading an apathetic life in the under world, a mere shadow (*σκιά*) now. The essential thing about the Homeric ghost is its futility. It is the sense of this, and not any positive suffering, that calls forth the lament of Achilles, that it is better to be a poor labouring man on earth than king over all the dead (λ 488 ff.). Life has lost colour and intensity for the dead, and their existence is a mere reflexion or parody of their earthly lives. This is most clearly brought out in the latter part of the eleventh book of the *Odyssey* (568 ff.)—a passage which is believed to show the influence of Orphic ideas, and at any rate contains other ideas than the rest of the *Nekyia* (λ). Here we find Minos dealing judgments among the dead as he judged his people once in Knossos, and the phantasm of Herakles with his bow as in life, and Orion hunting the wild creatures as he hunted them on earth. This conception of the life after death was perhaps the normal Greek one (cf. Pind. fr. 129), and does not seem inconsistent with the Homeric doctrine of the soul. But in the 'Orphic interpolation' we also find certain great criminals—Tityos, Tantalos, Sisyphos—evidently being punished for their sins. There is probably some misunderstanding here of the original meaning of the myths of Sisyphos and the rest; and there is no mention elsewhere in the *Nekyia* of a separate abode or destiny for the good and the wicked; there is no Heaven and no Hell.

Archæologists have found no evidence of any period in historic or pre-historic Greece when inhumation was not the usual mode of disposing of the dead. We can only infer that, while cremation may have been universal among the Achæans when they entered the Hellenic lands, they quickly learned to bury their dead from the earlier inhabitants, who certainly buried theirs. The Homeric doctrine of the soul, which we may assume to have been the Achæan doctrine, since it goes with cremation, likewise speedily disappeared before the native belief in the effective powers of dead men. And, in fact, the language of Homer is not perfectly consistent (see Rohde, *Psyche*, i. 1-67). Odysseus digs a trench and pours into it the blood of a black ram sacrificed to Teiresias (λ 23 ff.; cf. Paus. ix. 39. 6). The shade of the prophet drinks of the blood before he speaks. This feeding of the dead was a ritual act performed by the Greeks throughout antiquity. But it has no meaning unless the dead man is there to be fed, that is, unless he is buried and not burned; for the feeding was literal enough, the blood being sometimes conveyed to the corpse through a hole in the tomb. As a matter of fact, Teiresias had a pre-historic tomb in Boeotia, where he was regarded as a prophet still capable of delivering his oracles. The sacrifice, which was properly offered at this tomb, is made in Homer to his shade at the limits of the earth. Again, the descriptions of funerals sometimes surprise us by details which look like survi-

vals from an age of embalming and inhumation (e.g. use of *ταφύειν* [Q 413, ω 65]). The exact weight to be assigned to these indications is not easy to judge. They may qualify a little, but they do not alter, the fact that in Homer the dead are always burned, and that their souls exist in separation from their bodies in a world reached at the verge of Oceanus in the extreme West; whereas the normal Greek practice was to inhume the dead, and the normal Greek belief was that the soul after death somehow maintained its connexion with the body, and that the realm of Hades was under the earth—as at least one passage in the *Iliad* implies (T 61)—to be reached by certain known caverns or clefts in the ground. The contradiction is radical. Ghost-worship, hero-worship—the whole of that chthonian religion which meant so much to the Greeks of history—are steadily ignored in Homer; Hades and Persephone are mere names.

3. Ritual and priests.—The gods are approached by men with prayer and burnt-offering. The two things naturally go together; and, when prayer is made to a god without sacrifice, it usually contains a reminder of sacrifices offered on previous occasions (cf. A 40). That is because the attitude of the worshipper is not unfairly expressed as *do ut des*. For the same reason a prayer usually includes a vow to make an offering to the god, if the request be granted. Doubtless there is in Homer some lingering feeling that the sacrifice is more than a mere business transaction, that the god of one's own tribe will be more disposed to accept it than an alien deity, perhaps even that the relation thus established between worshipped and worshipper has a certain mystical force. But he does not think of sacrifice as a sacrament. The ritual is elaborately described for us, most fully in the third book of the *Odyssey*, when Nestor sacrifices an ox or cow to Athena (431 ff.). The victim had to be appropriate, as a bull to Poseidon (A 728, γ 6), a white male lamb to Helios (I 103), and so on. The victim was expected to be unblemished, and the sacrificers must be ceremonially clean. Sacrifice offered in confirmation of an oath is exceptional in admitting a mimetic or at least symbolical element: 'whichever side breaks the oath first, may their brains be spilt on the ground like this wine!' (I 300); and the flesh of the victim was not eaten (310). Since we have to do in Homer with burnt sacrifice to the heavenly gods, the altars he speaks of are the high *bōmos*. The low *eschara*, which served as altar in hero-worship, means in the Homeric poems simply a hearth (η 153). Temples are rarely mentioned, and then in passages whose evidential value is questioned (see Caer, *Grundfragen*², Leipzig, 1909, p. 297 f.). There are certainly many reminiscences of a time when temples did not as yet exist, and the altar of the god stood in the open air, in a grove or sacred enclosure (*réuevos*), or by running water (B 305, 506, I 404, ε 291, etc.). Only one statue is mentioned—that of Athena in her temple at Troy, which must have represented the goddess as seated (cf. Z 303), although the earliest images of the gods were standing. As to priests, they are always attached to some special sacred place and the service of some special divinity. There is no priestly caste in Homer any more than in historical Greece. Sometimes we meet with a priest of a very primitive type, like Maron who 'dwelt in the grove of Apollo' (ι 200), like Chryseas, who is called an *ἀγρῆς*, or cursing-man (A 11), like the Selloi at Dodona, who had unwashed feet and slept on the ground (II 235). These last were perhaps prophets rather than priests; and prophets, as we must expect in every saga, play a considerable part in both the *Iliad* and the *Odyssey*, especially Kalchas in the

former and Teiresias in the latter. Theoklymenos had the gift of second sight (ν 351 ff.).

There were also oracles to consult. Homer mentions two: that of Zeus at Dodona (ξ 327), and that of Apollo at Pytho (Delphi [θ 80]). We hear a great deal of omens, drawn mainly from signs of the weather and the flight of birds, but sometimes also from such things as a chance word (*φήμη*, *ἀλεθδών* [β 35, σ 117]) or a sneeze (ρ 541). There is no instance, however,—and this can hardly be accidental—of augury from the inspection of entrails or from the behaviour of the sacrifice as the fire consumed it. On the other hand, a dream comes from Zeus (A 63); and we hear of an interpreter of dreams (E 149), which may be false or true (τ 562 f.). Of magic, except in the fairyland of Odysseus' wanderings, where incredible things may allowably happen, there is practically no mention (see, however, E 845, τ 457). Curses were addressed to Hades, Persephone, and the Erinyes (I 454, 569); to make them hear, the mother of Meleagros beat with her hands upon the earth.

II. *ETHICS*.—The morality of Homer has an appearance of even greater uniformity and consistency than his religion. It is, on the whole, that characteristic of a feudal society. The cardinal virtue is, no doubt, Courage. Next to Courage comes Wisdom, the capacity for thought and speech. The praise of Achilles and Agamemnon is that they are the first of the Danaoi in council and in battle (A 258); and again Achilles was taught to be 'a speaker of words and a doer of deeds' (I 443). But it is in Odysseus that both virtues are most justly combined; and that example helps us to remember—what no Greek was likely to forget—that the mere possession of wisdom was not enough without the eloquence necessary to recommend it.

Besides these special qualities, and, as it were, beneath them, we have to take account of a more comprehensive feeling, which, although scarcely conscious enough of itself to be in the full sense ethical, is the basis of nearly all the moral virtues in Homer. The classical Greek writers spoke of it as a feeling for the exact 'limit' or 'measure' to be observed in the quality of a man's actions. But in Homer it is still in what may be called its instinctive stage, and one detects behind it a greater reinforcement of emotion than goes with the Aristotelian doctrine of the Mean. It has both a positive and a negative side. That is to say, the feeling is positive enough, but it tends to take the form of a protest against excess. The positive emotion is called by Homer 'Aidōs'; Aidōs is what impels us to avoid the excess. The emotion stirred in us by the lack of Aidōs he calls 'Nemesis.' Thus Nemesis comes to be, as it were, the sanction of Aidōs. But the good man may feel Aidōs in a case where he need not fear the condemnation of gods or men. Then there enters something like the sentiment of chivalry. Achilles would not despoil the dead Eetion of his armour (Z 417 ff.); chieftains must not be laggards in the fight like a mean man (N 114 f.)—*noblesse oblige*. But Aidōs and Nemesis together include more than the mediæval ideal, although they have not all its heroic quality. They are applicable to pretty nearly all the relations in which human beings can stand to one another, but especially to that relation which forms the standing moral problem in a society in dissolution or frankly based upon physical force—the relation of the stronger to the weaker. Aidōs and Nemesis step between conquered and conqueror, preventing the latter from abusing his advantage, from overstepping a certain limit and so becoming guilty of 'Hybris,' which is the violation of Aidōs and the object of Nemesis. In practice, the limit is roughly defined by what is usual—custom

('Dikē'), to which time has brought the moral authority of Law. To observe Dikē is to be just (*dikaos*). For Dikē, the Right Way, we may generally substitute 'Themis,' which is specialized to a slightly more ethical sense. It is the nearest word in Greek to what we mean by the Moral Law, but its roots lie in mere ancient use and wont; the plural *themistes* means pronouncements of what is customary, and therefore right and just, in particular cases. In this way a body of precedents may arise, capable in time of being systematized into a legal code. But in Homer we have not yet reached that stage. Even on a point of tribal law there is room for diversity of private opinion—that judgment is best which obtains the applause of the assembled tribesmen (Σ 503 f.). Here public opinion counts for something. But it is only in an ordered society that public opinion can be brought to bear effectively upon individual conduct. Now, Homeric society is not highly organized; and so in it Aïdōs and Nemesis have a supreme value and importance, because, in the absence of an effective administration of justice, it is to them alone in the last resort that the helpless can appeal with any hope of success. The entirely defenceless in this society consist of the dead, the aged, strangers, and suppliants, every one, in fact, who cannot assert his rights by force and has no one to assert them for him. Such people are *aidōia*; Aïdōs is due to them, even belongs to them, almost like an attribute. If a man violates Aïdōs in dealing with them, they become for the first time dangerous, endowed with some baneful power over his life even in their own death. Homer expresses this by saying that they embody the wrath of the gods (*θεῶν μέγιστα* [X 358, λ 73]), and often speaks of Zeus as the protector and avenger of the stranger and suppliant. But that is only a more theological way of expressing the more primitive notion that the helpless are charged with a quality which contains in itself some mystic power of punishing its violation. And not only the helpless have this quality, but kings and even, to some extent, old men, the former because of the divinity that hedges them and in primitive communities (not, of course, in Homeric society) guards them by a tabu, the latter because of the sanctity attaching to the male heads of families in a patrilinear tribe. Hence, in Homer, kings and old men are *aidōia*, the latter for a double reason. Aïdōs and Nemesis, indeed, are found to inspire nearly the whole of Homeric morality: truthfulness, for instance, and the faithful keeping of a pledge or oath (*δῆκος*).

This morality at its best is singularly pure and noble, humane and at times even tender, in spite of the atmosphere of passion and struggle in which the poems are involved. This may easily be illustrated by quotations, from the ringing 'Hateful to me as the gates of Death is the man who hides one thing in his heart and says another' of Achilles (I 312 f.) to the words of Odysseus towards the end of the *Odyssey*: 'It is an unholy thing to boast over the slain' (χ 412). But individual quotations scarcely show it so well as the general tone of both epics. Nay, the mere working out of their plots reveals a profound ethical sense. No one can follow the tragedy of Achilles to its conclusion in the last book of the *Iliad* without an enrichment of moral experience; and, when in the *Odyssey* the suitors at last meet their doom, we feel that this is more than 'poetic justice'; it is a kind of *theodicea*.

The morality of Homer, however, does not everywhere reach this high level. The declensions are rare, but their very rarity makes them instructive. They may be explained in two ways: as justified by the circumstances under which they occur, or as survivals of an earlier stage in the growth of the *Iliad* and *Odyssey*, these being regarded on this

hypothesis as traditional poems. If, for example we take the treatment of the dead, we find side by side with the thrilling humanity of the sentiment that it is an unholy thing to boast over the fallen, and with the implied condemnation of the mutilation of Hektor's body, instances of both kinds of brutality (A 146 f., N 202 ff., P 126 ff., Σ 177; boasting over the dead—N 374 ff., 414 ff., 445 ff., etc.). These things, it may be said, are done in hot blood; in his normal moments no warrior would be guilty of them. Perhaps it is because there was a certain deliberateness in the actions that Achilles' treatment of Hektor's body (X 395, ψ 24) and the sacrifice of twelve Trojan youths on the pyre of Patroklos (ψ 176) offend the poet. There is only one case of torture in Homer (X 474 ff.), which would be justifiable, if torture were ever justifiable. But it is certain that Homer dislikes and makes as little as possible of these inhumanities of warfare; and, if we do find them here and there, it is because they were inherent in the tradition; for they are not romantic horrors invented by the poet, but relics of barbarism, the battle-customs of the Achæans. It has, in fact, been argued that the Homeric poems contain traces of actual expurgation.

The Expurgation Theory is primarily Gilbert Murray's (*op. cit.* ch. v.). The evidence for this cannot be presented except in detail, since it is in minutiae only that expurgation is likely to be detected. It may be, for instance, that the incident of the dragging of Hektor behind the chariot of Achilles has been rehandled so as to make it clear that Hektor was already dead, and not, as another and evidently more primitive version insisted, still alive. There is a line in which it is said that Agamemnon 'drew on,' instead of 'drew off' or some equivalent word, the tunics of certain men whom he had slain; stripping the dead and tearing their tunics being regarded as permissible practices (A 100; cf. B 416, Π 841). There has perhaps been expurgation of some outrage to the corpse of Hektor at ψ 24 ff., where the language is not easily intelligible except on the supposition of an omission after line 25. Again, it is said in one passage that Odysseus obtained poison for his arrows (α 261). But this is repugnant to the general tone of the *Epos*. Accordingly it has been thought that the mention of poisoned arrows elsewhere has been suppressed, notably in one passage where Menelaos is wounded by a shaft and Machaon sucks the wound (Δ 218).

But expurgation (it is pointed out) is not always successful: witness the instances given of mutilation and cruelty. At the same time it should not be forgotten that Homer is describing a society disorganized by war and recent conquest—the kind of society in which strangers were asked 'whether they were merchants or pirates' (γ 73 f., ι 252 ff.; cf. Thuc. i. 5). In times like those the morality even of good men is put to a searching test, and the surprise comes to be that the Homeric standard is so high. Moreover, it is what is best in the ethics of Homer that is most characteristic; for, as we have seen, its defects are largely traditional or conventional. It is the same with what may be called the domestic morality of the poems. There is a wonderful tenderness in the relations of Hektor to Andromache, of Odysseus to Penelope, of Achilles to Thetis, of Alkinoos to Arête and Nausikaa. One must, of course, allow a little for deliberate idealization, but the nature of the ideal helps us to understand the atmosphere of the normal Homeric household. Sometimes we catch sight of uglier possibilities. Helen and Paris are scarcely a happy pair. There is the extremely painful and pathetic story of Phoinix related in the ninth book of the *Iliad* (447 ff.). Klytaimnestra figures prominently in the background of the *Odyssey*. Yet here again it is the more favourable picture that gives the truer view. The *Odyssey* might almost be called a celebration of the domestic virtues.

In essentials, Homeric morality is that of the great period of Athenian history, although there are things in Homer which shocked the moral sense, of philosophers at least, in Ionia and Athens, just as, on the other hand, there were certain

practices tolerated by public opinion in Classical Greece with which Homer will have nothing to do. It must be admitted that he has no moral philosophy, in the same way and for the same reason that he has no philosophy of religion. One has but to think of *Aeschylus* or even *Pindar* to realize how unspeculative he is. But that was inevitable. Apart from the fact that a poet is not a moralist, a poem like the *Iliad* must reflect the national point of view—at any rate the point of view of a dominant class in the nation—and not that of the individual artist. Hence the morality of the Homeric poems is popular morality, raised to a new power in virtue of the new splendour of expression given to it. For this reason they were for centuries regarded, in spite of an occasional protest like that of Plato, as a kind of handbook of ethics; as such they were taught in schools. It is impossible to exaggerate the positive influence of Homeric religion and morals in the ancient world and upon modern ideas concerning paganism. They do, in fact, constitute a great deal of what has hitherto been understood by that elusive word.

LITERATURE.—Since the religion and ethics of Homer form an important chapter in the history of Greek religion and morality as well as one of the central problems of the 'Homeric Question,' the literature is very large. Of the older books, C. F. Nägelsbach, *Homericæ Theologiæ*, Nürnberg, 1881; E. Buchholz, *Die homerischen Realien*, Leipzig, 1871-85 (ill. 'Die homer. Götterlehre,' etc.); and W. E. Gladstone's books on Homer have collected the facts. One may now use T. D. Seymour's *Life in the Homeric Age*, New York, 1907, in its relevant chs., and O. Gruppe's *Griech. Mythol. u. Religionsgesch.* (in Iwan Müller's *Handbuch d. klass. Altertumswissenschaft*), Munich, 1906. The evidence is discussed in L. R. Farnell, *Culte of the Greek States*, Oxford, 1896-1909; in J. E. Harrison, *Prolegomena to the Study of Greek Religion*, Camb. 1903, and *Themis*, do. 1912; in E. Rohde, *Psyche*, Tübingen, 1907; in Gilbert Murray, *Rise of the Greek Epic*, Oxford, 1911, and *Four Stages of Greek Religion*, London, 1912, ch. ii.; and in Andrew Lang, *World of Homer*, London, 1910.

The articles in Roscher and Pauly-Wissowa may also be consulted. Of the historians of Greece, perhaps E. Meyer has treated the subject most suggestively in his *Gesch. des Altertums*, ii., Stuttgart, 1893, p. 42 f.

HOMICIDE.—See **CRIMES AND PUNISHMENTS**.

HOMILETICS.—See **PREACHING**.

HOMIOUSIA, HOMOOUSIA.—See **ARIANISM**.

HONESTY.—Honesty, or the quality of being honest, is a virtue which belongs to the ethical genus justice. In common usage, it often approximates in meaning to honour (*q.v.*). As the original *honestas* is the character or repute attaching to the holder of an *honor*, or position of dignity, so honesty may be distinguished from honour as cause from effect, when the latter is used in its objective sense as the respect in which the individual is held by society. If we trace the usage of the word in English literature, we find that it has various shades of meaning, including *chastity*, or virtue in the limited sense (cf. the famous passage in Shakespeare, *Hamlet*, III. i. 107, and also *As You Like It*, III. iii. 30), *generosity*, *uprightness*, *truthfulness*, and *fidelity* in one's relationships with others. Inasmuch as the virtue of honesty involves regard both for moral rights and for rights of property, it may equally well be classified under benevolence and under justice; for Aristotle's definition of justice as the practice of entire virtue towards one's neighbour (*Eth. Nic.* v. 13) is in modern ethics widened out by the concept of benevolence (*q.v.*), which is the principle of seeking the good of the individual as man and not merely as a member of the same *polis*, or community (cf. J. H. Muirhead's classification of the forms of good in *Elements of Ethics*, London, 1910, p. 201). Breaches of the law of justice or benevolence, when these take the form of dishonesty, untruthfulness, or covetousness, are

commonly judged bad on the ground of the harm that they inflict on others. The essence of honesty as an other-regarding virtue consists in conduct based on the conviction that the interest of our neighbours is identical with our own. The Christian conception of 'the Kingdom of heaven' in its social aspect implies a standard of conduct in which the well-being of others is not distinguished from one's own well-being. Hence, in comparing the utilitarian formula, 'every one should count for one and no one for more than one,' with Kant's categorical imperative, T. H. Green (*Proleg. to Ethics*, Oxford, 1890, p. 224 f.) pronounces the latter superior as the rule on which the ideally just or honest man acts. Whether the *summum bonum* be defined as self-realization or 'the Kingdom of heaven' in the Christian scheme of life, humanity in the person of every one is always to be treated as an end and never merely as a means. 'Every one has a *sumum* which every one else is bound to render him' (*ib.* 231).

Cicero (*de Offic.* III. xxi. 83) identifies *honestum* (the Latin form of *τὸ καλόν*) with *utile*, after the manner of the Stoic ethics (cf. 'honestate dirigenda utilitas est, et quidem sic ut haec duo verbo inter se discrepare, re unum sonare videantur'—a dogma of ancient philosophy which is perpetuated in the maxim 'honesty is the best policy'). The identification of honesty with expediency belongs to an obsolete view of society.

It is to the duties of Justice and Benevolence taken together that we should ultimately refer the duty of Loyalty to existing social institutions and particularly to the State; the duty of Honesty, which means respect for the existing laws of property so long as they are not capable of immediate improvement by the individual's own action' (H. Rashdall, *Theory of Good and Evil*, Oxford, 1907, II. 278).

The scrupulous regard for the rights and possessions of others which honesty is commonly held to imply is capable of extension in various directions. There is, for example, the duty of producing (or trading with) nothing which is not what it professes to be. J. S. Mackenzie (*Manual of Ethics*, London, 1900, p. 221) refers to Ruskin's teaching on modes of artistic expression (see ch. 'The Lamp of Truth,' in the *Seven Lamps of Architecture*) and also to the knowledge of the 'crammer.' An 'honest day's work' means no shirking, just as an 'honest' piece of cloth means just length or breadth (see quotation from Bischoff, *Woollen Manuf.*, 1862, II. 95, in *OED*, s.v. 'Honesty'). There is also the duty of being honest with one's self, the courageous acknowledgment of failure or defect. Many problems of casuistry arise out of the *suppressio veri* or *suggestio falsi* adopted, e.g., by a legal advocate engaged in the attempt to save the guilty (see H. Sidgwick, *Methods of Ethics*, London, 1901, on 'Veracity'); or, again, out of the practice of subscribing to a formula or creed the terms of which can no longer be interpreted in their original sense; or out of the failure of individual members of a trade union to keep the obligation entered into by their leaders. Such cases are, in general, to be determined by the consideration of the effects of our action on the moral world of which we are members (cf. Mackenzie, *op. cit.*, on 'The Commandments,' xxi., with quotations in the footnote, p. 206). The honest life, which includes honesty of speech and deed and motive, is not to be regulated by any outward code of duties; for, if in ethical theory it is based on respect for the social order, from the religious standpoint it owes its sanctions to the Divine ideal of perfection expressed by the Psalmist in the words, 'Thou desirest *truth* in the inward parts' (Ps 51st).

LITERATURE.—See authorities mentioned under art. HONOUR.

R. MARTIN POPE.

HONEY.—1. Honey was highly valued among the ancients, both as a food and on account of the inherent properties which it was supposed to pos-

ness. The esteem in which it was held by the ancient Hebrews is indicated by the insistence upon the character of the Promised Land as a land flowing with milk and honey (Dt 6⁹ and often), while it is frequently used in simile or metaphor in the OT, especially in the Psalms—e.g. of the word of Jahweh, 'sweeter than honey and the honeycomb' (Ps 19¹⁰). The remembrance of a good man is 'sweet as honey in all mouths' (Sir 49¹). Three different kinds of honey are mentioned in the Bible. Of these, however, the term *debhash* (very frequent) covers not only the glutinous bee honey or vegetable honey, but a syrup of dates or dates themselves, and the syrup of grapes; the last, under the name of *didis*, is still common in Arabia, and looks like coarse honey; indeed, since the spread of Islām it has become the principal form in which the grape is used. The other forms of honey mentioned are *ya'ar* (Ca 5¹), the honey of bees only; and *nopheth* (Pr 5² 24¹³ 27¹, Ca 4¹¹), usually associated with the honeycomb. Josephus mentions bees' honey as a natural product of the Plain of Jericho (*BJ* iv. viii. 3), probably referring to the honey of wild bees found in the rocks. Although there is no reference in the OT to the domestication of bees, it was of great antiquity in Syria; it is first mentioned by Philo, who says that the Essenes were fond of honey. The Jews took honey by smoking out the bees, but two combs were left for the winter. It was eaten alone as a delicacy (cf. the use made by Samson of the honey taken from the lion [Jg 14⁹]), or as a relish with other articles, sometimes with curdled milk. It was also used to sweeten cakes (cf. Ex 16²¹, Ps 119¹⁰³). A drink resembling mead was composed of wine, honey, and pepper. Honey also formed an important staple of commerce, being exported in jars through Tyre. With butter and milk it is still one of the favourite foods of the Bedawin.

2. Throughout the whole Mediterranean area, honey was used for *sweetening purposes* until the introduction of sugar under the Roman Empire. The ancient Egyptians made a sweet beer from honey; the Homeric heroes drank a liquor of which honey was an ingredient (cf. *Il.* xi. 630 f.). In later times, honey was used largely by the Greeks in making the many varieties of cakes (*πλακοῦντες*, *πέμματα*) eaten as dessert, of which they were extremely fond, special varieties being made at Syracuse, Samos, Alexandria, and elsewhere (Athenaeus, xiv. 645 f.). The Pythagoreans are said to have lived on a diet of bread and honey (*ib.* ii. 47). The *metheglin* of the ancient Briton and the *mead* of the Teutonic races were compounded of honey; in the Chronicle of Saxo Grammaticus (tr. Elton-Powell, London, 1894, p. 393 ff.), Starkad includes the drinking of mead among the luxurious habits introduced into Scandinavia by the Teutons. A mead or honey ale is mentioned in the Rigveda. The Roman *multrum*, the Russian *lipetz*, and the *clary* and *bragget* of mediaeval England, are beverages in the composition of which honey was used.

3. At one period in Egypt and Assyria, honey was used for *embalming the dead*. The Muhammadan writer 'Abd al-Latif mentions the case of a child whose body was found in a sealed jar of honey. Anointing the dead with fat and honey for purposes of preservation is mentioned in Homer (*Il.* xix. 38, xxiii. 170). The body of Alexander the Great was preserved by this method; and Josephus (*Ant.* xiv. vii. 4) says that the body of king Aristobulus was kept in honey until Antony sent it to the royal cemetery in Judaea.

4. Honey forms an important element in the diet of many primitive peoples. In Australia, where food is frequently difficult to obtain, it is in great request.

When the honey has been ladled out with mops from the hollow tree in which the nest is usually situated, it is mixed with water in wooden troughs, and sometimes left to ferment. In a children's game imitating the taking of honey, the piled-up hands are removed one by one to represent the lopping of the boughs; if girls are playing, their arms are supposed to be lopped at the elbow, as women are allowed to touch only the honey from the lower limbs of the tree where the drippings are (N. W. Thomas, *The Natives of Australia*, London, 1906, pp. 111, 183). Honey is also obtained by digging out the nests of the honey ant (Spencer-Gillen, *Across Australia*, London, 1912, i. 122), or direct from flowers by sucking or soaking.

Honey-beer or honey-wine is commonly drunk by most of the tribes of South and East Africa. In Nigeria, honey and millet is a favourite drink (A. J. N. Tremearne, 'Notes on the Kagoro and other Nigerian Head-Hunters,' *JRAI* xlii. [1912] 177).

The honey of the wild black bee, which is used by the Bathonga for purposes of divination in magical horns, is obtained by digging out the nests, which are some two to three feet underground. Although any one may eat the honey, the nests can be found only by members of certain families (H. A. Junod, *The Life of a South African Tribe*, London and Neuchâtel, 1912, i. 393).

The Anyanja of Central Africa, whose only bread is a roll called *mkate* made of maize-flour, bananas, and honey, use honey from the nests of wild bees, found in hollow trees, but the river people hang cylindrical boxes on the trees in which the wild bees build. The cylindrical bee-box is in use as a hive for wild bees among most East African peoples. Rights of property in these boxes are recognized. Among the Atharaka, who cultivate honey in barrels similar to those in use among the Akamba, ownership is established by brands consisting of elaborate arrangements of dots and strokes. Honey is taken by smoking the bees, and is eaten or, more frequently, used for making beer (A. M. Champion, 'The Atharaka,' *JRAI* xlii. 81). Both the Akikuyu and the Akamba regard the theft of honey as a serious offence. The Akikuyu enforce strictly the equitable distribution of a dead man's property, of which honey forms an important part. After the death of a father, none of the sons may go into the woods to take honey from the father's hives until the paternal uncle has done so. Any who break the law become *makwa*, and can take honey only when the paternal uncle has provided a sheep to be sacrificed, after due observance of a ritual, by one of the elders.

It has been suggested that the custom has been devised to prevent appropriation of the honey before the estate has been regularly divided up (C. W. Hobley, 'Further Researches into Kikuyu and Kamba Religious Beliefs and Customs,' *JRAI* xli. [1911] 412).

The Rock Veddhas of Ceylon recognized the rights of a family group to collect honey over certain lands from which other families were barred. With them, honey was used not only as a staple of diet, but also as the chief article of barter. The importance attached to it is indicated by the elaborate ceremonial preceding the honey-getting to propitiate the spirits and secure a good crop. It is recorded that in olden days a hollow bough containing a wild bees' nest was frequently kept in the rock shelter. The nests are usually found in clefts in the cliffs, and the honey is taken by men who swing down by ladders. Boys are systematically taught to collect honey (C. G. and B. Z. Seligmann, *The Veddhas*, Cambridge, 1911, pp. 62, 91, 252 ff., 326 ff.).

Honey is also used as an article of barter among the Suk of East Africa, honey-wine being part of the price for which a stranger may hire land, the other part being two goats. The meat is eaten by the fighting men of the tribe, while the elders drink the wine (M. W. H. Beech, *The Suk*, Cambridge, 1911, p. 17). The Masai youth opens negotiations for his marriage by sending a pot of honey to the parents of his future bride (J. R. L. Macdonald, 'Tribes met with during the Juba Expedition of 1897-99,' *JAI* xxix. [1899] 233).

The custom of reserving the honey-wine for the elders also obtains among the Akikuyu, except at certain festivals, and the Masai. At the Masai circumcision ceremonies, the honey-beer, which forms an important part of the feast, may be drunk only

by the elders (S. Bagge, 'The Circumcision Ceremony among the Nalvasa Maasi, *JAI* xxiv. [1904] 167, 169).

5. Honey was largely used by the ancient Egyptians as an ingredient in medicine, and appears frequently in the formulae of the Ebers and other medical papyri. Pliny (*HN* xxii. 50) gives a long list of bodily disorders for which it was believed to be an efficacious remedy. The Greeks regarded a diet in which honey was the chief element as especially efficacious in securing longevity; and Democritus was said to have delayed his death some days by its smell or exhalation (*ἀναπόδι*) alone (Athenæus, ii. 47 f.). In Brand's *Popular Antiquities* (1870 ed., iii. 54), old honey is mentioned as a favourite cure for cough or bile, and is said to increase strength and virility.

Medicinal and health-giving properties are attributed to honey by primitive races as well as by the ancients. The Veddas regarded the good health they formerly enjoyed as due to the fact that at one time their diet consisted largely of honey (Seligmann, 326). The Aikuyu medicine-man mixed honey with the decoction of herbs which he administered in cases of illness (H. R. Tate, 'Further Notes on the Kikuyu Tribe of British East Africa,' *JAI* xxxiv. 262).

Possibly the same idea underlies the custom followed by the Wa-Sama of British East Africa which decrees that, after the birth of a child, the mother during the period of seclusion shall eat only honey mixed with hot water. Male children after circumcision, which takes place at the age of three or four years, for seven days eat nothing but honey mixed with a very little water (W. E. H. Barrett, 'Notes on the Customs and Beliefs, etc., of the Wa-Girama of British East Africa,' *JAI* xli. 26, 81). Nandi boys, after circumcision, must eat from honey-barrels, and not from their usual hide-platters (A. C. Hollis, *The Nandi*, Cambridge, 1909, p. 55). In Madagascar, before circumcision, a drop of honey is placed on the tongue (J. Sibree, *The Great African Island*, London, 1880, p. 814), while in India the Deccan Brāhman drops honey into the mouth of the newborn child; the higher-class Hindus, especially the Brāhmins, do the same, but use a gold spoon or a ring (J. M. Campbell, 'Notes on the Spirit Basis of Belief,' *IA* xxiv. [1895] 259). Honey is sometimes used among the Muhamadans of the Panjāb as the chief ingredient of the *ghuffi* given frequently for a period extending over some days to a new-born child by the most respected matron of the family, as a part of the birth ceremonies, in order that the child may absorb her virtues (H. A. Rose, 'Muhamadan Birth Observances in the Panjāb,' *JAI* xxvii. [1907] 342).

6. Honey was regarded by the ancients as a substance of great purity, not unnaturally, in view of the supernatural origin and powers attributed to bees in primitive belief. Milk and honey in the early Christian Church was held to suggest consecration, while a portion of milk and honey was placed in the mouth of the newly-baptized, in allusion to the name anciently given to Canaan (Augusti, *Christl. Archäol.*, Leipzig, 1836, ii. 446; cf. also Drews, *PRE* xii. [1903] 704). On the other hand, in some of the instances cited, honey was administered at critical seasons, namely, at initiation or soon after birth, when evil spirits might be expected to be specially potent. Honey and sweet things were believed to drive evil spirits away. In the ceremonies following birth among the Hindus of the Panjāb, sweetmeats play an important part, and at one stage are passed around the head of the child for the stated purpose of driving away evil spirits (H. A. Rose, 'Hindu Birth Observances in the Panjāb,' *JAI* xxxvii. 231). Marriage is another occasion on which the influence of malignant powers is specially to be feared, and we may attribute the use of honey in marriage ceremonies to its power over spirits, even though another explanation of the custom be offered by the people themselves—usually that it will secure harmony in married life. Among the Deccan Hindus, when the bridegroom comes to the bride's house, honey and curds are given him to sip. In Bengal the bride has certain parts of her body anointed with honey. The gypsies and other peoples of the Balkan Peninsula follow the same custom.

Among the gypsies in Serbia, in the course of the ceremonies which last for several days preceding the marriage, the bridegroom sends the bride skeins of yellow silk, and the next day these are stuck all over her face with honey and purple stain. She then leaves her father's house, and is driven to that of her father-in-law in a cart. On her arrival, there is handed to her by her mother-in-law a sieve of oats and some honey. She scatters the oats from the sieve and smears the honey on the door-posts.

In Croatia and Turkey a cup of honey is handed to the bride at the door. The Poles ornament the bride's lips with honey. At Vlach weddings, the bride is given honey and butter with which to anoint the door. It is also the custom among the Balkan peoples mentioned above for the bride and bridegroom to eat together, in the evening, a cake baked some days before, which is dipped in honey as it is eaten (E. O. Winstedt, 'Forns and Ceremonies,' *Journ. Gypsy Lore Soc.*, new ser., ii. [1909] 352 f.). Among the Bathonga, however, who regard honey as a 'mysterious thing,' a man visiting the relatives of his betrothed must avoid honey, and it must not be eaten in the presence of the bride in the first year of married life; if she perceived that her husband had eaten honey, she would return to her parents 'as honey flows' (Junod, *op. cit.* p. 239).

Among the Argives a cake made with honey was sent from the bride to the bridegroom (Athenæus, xiv. 645). In Modern Greece the priest, bride, and groom walk round the altar through the incense fumes while the guests pelt them with sweetmeats, and among the peasantry honey is smeared on the lintel of the young bride's door (R. Rodd, *Customs and Lore of Modern Greece*, London, 1892, pp. 81, 96). In connexion with the power of honey over evil spirits, significance attaches to the belief in its cleansing powers held by the Hindus, who use it to wash their household gods.

7. An explanation of the power of honey as a protection against evil spirits may be sought in its use in connexion with religious ritual. Reference has been made to the belief in its purity. By this quality it was peculiarly fitted to be the food of the gods. In the Rigveda, it was regarded as of divine origin; the Āsvinas carry it to the bees (cf., further, Macdonell, *Ved. Myth.* p. 49 f. [*GIAP* iii. i. A. (1897); Hillebrandt, *Ved. Myth.*, Bonn, 1891-1902, i. 239-241). It is held to be the food of the gods and of divine origin by the Hindus; and, when they take the honey from the hive, they hold in their hand a plant (*Ocymum nigrum*) sacred to Viṣṇu. Viṣṇu, it will be remembered, was represented as a bee on a lotus leaf, while Kṛṣṇa has a blue bee on his forehead. Honey-mixture was employed in greeting a king, Brāhman, or other guest of honour (Manu, iii. 119 f.; Hillebrandt, *Rit. Lit.* p. 79 [*GIAP* iii. ii. (1897)]), and it is also employed in the Vājapeya sacrifice (*Satapatha Brāhmaṇa*, v. i. 1. 6 ff.; *Kātyāyana* xiv. ii. 9, iv. 15-18; cf. on this Hillebrandt, 141-143). It is one of the substances given a new-born child in the Āyusya rite and at its first feeding with solid food at the age of six months, as well as, according to *Kaṭhika Sūtra*, xxiii. 1, at the first meal eaten in a new home; and it is also enjoined as part of the sacrificial food at the *Anvaṣṭakya* in honour of the manes (Hillebrandt, 45, 48, 82, 95; see also Hillebrandt, *Ved. Myth.* i. 238-244). In Finnish mythology the bee is implored to fly over the moon and sun into the dwelling of the creator and to carry health and honey to the good (de Gubernatis, *Zool. Mythology*, London, 1872, ii. 218). In Teutonic mythology, honey was the chief ingredient of the divine drink (Grimm, *Teut. Myth.*, tr. Stallybrass, London, 1882-88, ii. 695 f.), as was nectar among the Greeks. In the Edda a divine fall of honey trickled from the tree Yggdrasil. The Nandi believe that the Thunder-god takes honey from their barrels from time to time (Hollis, 135).

while the Veddas invoke the *yakina* (the female spirits who form one of the chief elements in their religious beliefs) in the ceremony which precedes the taking of honey; they are closely associated with the bees, because they live at the top of high rocks, and some of the honey is poured on the rocks for them when the nests are taken—an ancient custom called 'to charm the drawing of honey' (Seligmann, pp. 182, 252, 291).

Honey thus forms a peculiarly appropriate offering to the gods. It was, however, forbidden to the Jews to offer it on the altar (Lv 2¹¹), Maimonides says (J. Townley, *The Reasons of the Laws of Moses: from the 'More Nevochim' of Maimonides*, London, 1827, p. 275), because the heathen nations around offered honey to their gods; according to another suggestion, it was prohibited because it fermented and gave off an unpleasant smell when burnt (Aben Ezra), which was incompatible with a 'fire of sweet savour.' Firstfruits and honey, however, were offered for the support of the high priest (2 Ch 31⁴). A papyrus fragment found at Oxyrhynchus, dating from the 2nd cent. A.D., contains a bill for, among other things, '16 cakes, oil, honey, milk, and every spice except frankincense,' supplied to the Strategus of the nome for 'the sacrifice of the most sacred Nile.' The offering of a honey cake is of frequent occurrence in Greek ritual, especially in connexion with chthonian deities, apparently because bees were regarded as the souls of the dead (Gruppe, *Gr. Mythol. und Religionsgesch.*, Munich, 1906, p. 801; cf. 809 f.), and honey was also used in rain-charms (*ib.* 801, 819).

Athenaeus (xiv. 646) mentions cakes offered to Artemis when the sun was rising and the moon setting. Though no mention is made of honey in their composition, it may be recalled that a priestess of Artemis and Demeter was known as Melissa. At Lebadea, at the shrine of Trophonios, the suppliant went with an offering of a honey cake in each hand for the prophetic snake. A honey cake was put in a hole for the goddess Ge when a certain medicinal herb was gathered in Attica. Cakes of barley and honey were thrown down a chasma near the sanctuary of Ge in the *temenos* of Zeus Olympus at Athens every year (L. E. Farnell, *CGS III* (Oxford, 1907) 102.). Sosipater at Olympia had, like Trophonios and Erechtheus, the snake's service of the honey cake (see Pausanias, vi. xx. 3, 5). The cakes were brought for the serpent, the animal form of the god. Sosipater is apparently the fertility spirit (J. E. Harrison, *Themis*, Cambridge, 1912, p. 282), but the snake is usually associated with the chthonian aspect of Greek belief; and the other chthonian deities mentioned, though connected with fertility, were prominent in their connexion with the under world.

8. Honey was included in the offerings to the dead. The sweet beer of the Egyptians is mentioned in the Liturgy of Funerary Offerings as well as various kinds of sweetmeats. In view of the fact that the offerings as a whole were intended as food for the dead (*q.v.*), it would be unsafe to lay too much stress upon this custom as evidence for a peculiar connexion of honey with the spirits. There are, however, several customs followed in parts of Africa which suggest a course of development in which an offering, of which honey forms a part, becomes a protection. In Abyssinia, honey-beer is drunk before a solemn conference. Among the Suk, before drinking a fresh brew of honey-wine, the elder entrusted with the wine-jar fills a cup and pours the wine out on each side of the door, invoking the spirits of the dead to keep them in safety. The elders of the Kikuyu of East Africa, at a burial, pour some honey and cooked fat on the grave after it has been filled in, saying: 'We give you this to drink' (Hobley, *JRAI* xli. 419). Further, in the course of the ceremonial by which the *kirums*, or dying curse, is removed, the elders, or rather the members of the special class of elders competent to perform the ceremony, pour fat, milk, honey-beer, etc., into a hole in the ground. From other elements in the ceremony it appears that this is an offering to the spirit of the

departed, but in the underlying ideas propitiation and protection closely approximate. The identification of the two aspects appears to be complete in the folk-stories of the Ekoi of S. Nigeria, in which it frequently happens that the living who have penetrated to the land of ghosts are pursued on their return, and save themselves from further pursuit by spreading food across the entrance to their town (P. A. Talbot, *In the Shadow of the Bush*, London, 1912, p. 36).

LITERATURE.—See references given in the article. For beliefs and practices connected with honey, especially in India, see J. M. Campbell, 'Notes on the Spirit Basis of Belief and Custom,' in *JA* xxiv. (Bombay, 1896) 259. References for the use of honey in Ancient Palestine will be found in *EBI*, and in McClintock-Strong's *Cyclop. of Bibl. Literature*, New York, 1872, s.v.

E. N. FALLAIZE.

HONOUR.—1. Ethics.—Honour is high regard or esteem, whether felt, given, or received. It implies, like honesty (*q.v.*), a sense of what is due or right, and fidelity to one's obligations; like 'honesty,' it is used from Gower onwards (see *OED*, s.v.) of chastity or purity; and, finally, it takes on a concrete, objective meaning as equivalent to exalted rank or position (or in plur. of marks of regard, distinctions, decorations, and the like). The word has passed into colloquial speech in such phrases as 'on one's honour,' 'honour bright,' etc. (see *OED*). In the phrase 'code of honour,' the word implies 'a certain system of reciprocal rights and obligations . . . and also the individual's recognition of these' (see *DP&F*, s.v.), and in such phrases as 'the honour of an artist' or 'a soldier,' or 'the honour of the army' or 'the church' and other institutions, we have a personal or collective connotation implying recognition of self as a member of this or that community or class or profession. Sometimes the phrase amounts to little more than reputation, e.g. 'the honour of a husband,' when impaired by conjugal infidelity or the failure to observe personal obligations.

The 'code of honour' is a species of etiquette observed by particular classes, trades, professions, etc. It thus belongs to the department of 'minor morals' (see Mackenzie, *Manual of Ethics*, p. 7, who points out the ethical value of 'Mrs. Grundy' and other conventional laws as safeguards against wrong and injustice). Whether honour takes the form of high-mindedness in business or commercial transactions, or of politeness and good-breeding in society, or of loyalty to one's particular class or caste or denomination, it is to be placed among the virtues of a descendant of benevolence ('justice touched with emotion'; see Muirhead, *Elem. of Ethics*, p. 201). The duties imposed by the code of honour in graver matters, or the code of politeness or good-breeding in lighter matters, according to Sidgwick (*Methods of Ethics*, p. 31), are often undistinguished from moral duties by unreflective persons; e.g., there is the practice of duelling (*q.v.*)—a custom which is imposed by an unethical society and which an individual may reject on moral or religious grounds. His conduct would be classed by some as dishonourable, by others as a virtuous act. Thus 'honour' not infrequently involves a conflict with ethical right in certain stages of social development. No discrepancy is felt, e.g., in Hellenic civilization, where the idea of *καλοκάγαθία*, the code of honour, and the moral code are not differentiated as they are in mediaeval and modern times. See the valuable discussion in *DP&F* already quoted, where the distinction is described as 'a purely sociological distinction quite independent of ethical theory,' and where reference is made to subtle points of casuistry arising out of the distinction, as when a freemason betrays his country rather than a member of his own chapter (honour *versus* honour). We find a similar conflict of duty in the well-known

couplet of the Elizabethan song-writer, Sir Richard Lovelace,

'I could not love thee, dear, so much,
Loved I not honour more.'

where it is implied that the passion of love has to be subordinated to the higher morality.

In Christian ethics the idea of honour is associated with belief in a moral Judge. So v. Haering (*Ethics of the Christian Life*, Eng. tr., p. 256 ff.) remarks that 'in the idea of "honour" there is the implicate of the splendour of the Good as exhibited to a judge, whether this judge is the person himself or another; or, finally, God as the reader of all hearts, and the sole Judge of all.' The same writer proceeds to argue that to strive for recognition by a moral judgment is a task which the Christian cannot forgo, and quotes with approval Luther's saying at Worms: 'They have deprived me of fame and honour, but sufficient for me is my Saviour and Redeemer Jesus Christ.' The honour of man is always subordinated by NT writers to the honour to be hereafter accorded by a Righteous Judge (cf. Ro 27, 'seek for glory and honour and immortality'; and 1 P 1, 'found unto praise and glory and honour,' where the idea of a future life is prominent). But the honour of the Judge perpetuates the honour of this world. The Pauline distinction (2 Ti 2²⁰) of vessels 'unto honour' and 'unto dishonour' implies a destiny belonging to time, whatever may be the final issues; it is the destiny of unselfish service, in which the particular ability of the individual is consecrated to the uses of the Master of the 'great house.' The only scintilla of honour belonging to the sinner is, according to v. Haering, the fact of his eternal destiny—a statement which largely defines the assumption underlying Christ's teaching regarding man; for to Him humanity, even in its most degraded form, is endowed with immortality.

2. Psychology.—We may derive some hint as to the psychological value of honour in Paulsen's definition of honour, social or political, as 'ideal self-preservation' (*System of Ethics*, Eng. tr., ch. vi.); or in v. Haering's remark that 'shame is the guardian of honour' (*op. cit.* p. 257), which implies that there is a connexion between the moral concept involved in honour and an emotion which, according to Macdougall (*Social Psychology*, p. 145), is 'second to none in the extent of its influence upon social behaviour.' The conduct of the man of honour is undoubtedly regulated by social blame and praise. The very idea of 'honour' involves a reference to our social surroundings, the circle in which we move, or the larger world to which our influence inevitably extends. Psychologically, this is an advance on an earlier stage in the development of self-consciousness when natural impulse is regulated by the system of rewards and punishments imposed upon us by external authority, e.g. in the family or the school. It is a distinct advance when character and conduct are alike shaped by regard for the moral approval and disapproval of our fellows. Finally,

'this regard leads on sane men to the higher plane of conduct, conduct regulated by an ideal that may render them capable of acting in the way they believe to be right, regardless of the approval or disapproval of the social environment in which their lives are passed' (Macdougall, *op. cit.* p. 202).

The nobler sense of honour which we associate with the saint or with natures peculiarly sensitive and refined lifts such individuals far above the coarse consideration of the verdicts of the circle to which they belong. R. Browning's Rabbi ben Ezra, with his conviction,

'All I could never be,
All men ignored in me,
This, I was worth to God,'

expresses devotion to a spiritual ideal which is

unaffected by the praise or blame of men. At the same time, no ideal of conduct can be perfect unless it is a synthesis of the self-regarding and altruistic sentiments. The life of honour is one which we aim at realizing for all men, while we seek its perfection for ourselves.

Mackenzie, *Manual of Ethics*, do. 1900; F. Paulsen, *System of Ethics*, Eng. tr., do. 1898; T. v. Haering, *Ethics of the Christian Life*, Eng. tr., do. 1909; H. Rashdall, *The Theory of Good and Evil*, Oxford, 1907; W. Macdougall, *Intro. to Social Psychology*, London, 1912.

R. MARTIN POPE.

HOOKER. — 1. Life and works. — Richard Hooker, author of *Of the Laws of Ecclesiastical Polity*, was born at Heavitree, a suburb of Exeter, probably in March 1553–54. He was the son of Roger Hooker and his wife Joan. Roger and his elder brother John are described as the fifth in descent from Iago Vowell of Pembroke, who married the daughter and heir of Richard Hooker of Hurst Castle, Southampton. Vowell is, therefore, probably the Welsh surname. Roger's father and grandfather, with the name Hooker, filled the position of Mayor of Exeter in the years 1529 and 1490. His brother John, as a result perhaps of his genealogical researches, described himself in early years as Vowell *alias* Hooker, and later in life as Hooker *alias* Vowell. This uncle's influence upon Richard's career was of such importance, and his work as an antiquarian and historian in originality and thoroughness has so much in common with the more famous achievement of his nephew, that some account should be given of him in any description of Richard's life.

John Hooker's father died when he was about ten years old, and John was educated by Dr. Moreman, Vicar of Menheniot, in Cornwall. He proceeded to Oxford, to Corpus Christi or to Exeter College, where he engaged in legal studies, but took no degree. From Oxford he went to Germany, pursuing his legal studies at Cologne and also at Strasburg, where he lodged in the house of Peter Martyr, and acquired a sympathy with his religious position. Further travels on the Continent were stopped by war, and he returned to Exeter to devote himself to 'the reading of histories and seeking of antiquities and somewhat to armory.'¹ He was made first chamberlain of the city in 1555. He has left large collections regarding the history of Exeter; but his chief literary monument is his edition of Holinshed's *Chronicles* in 1586–87, and his own contributions to that compilation. He is the author of a graphic account of the rebellion in the West country in 1549, and of recent Irish history. He went to Ireland as the agent of Sir Peter Carew of Mohun's Ottery, near Exeter, who claimed estates in Ireland, and found John Hooker's skill in deciphering and interpreting old deeds and records very useful in promoting his claims. Hooker's first letter from Ireland, dated May 1568,² urges Sir Peter to come to Ireland, and advises him to engage as his steward, to manage his Irish household, Roger Hooker, the writer's brother and the father of Richard. Roger had been 'sometime servant and steward to Sir Thomas Challoner,' and 'now dwelleth with the old Lady Mountjoy.' It is clear, therefore, that Roger's education and social status were below his brother's. Sir Peter brought Roger to Ireland in 1568, and we find him writing as steward from Leighlin, County Carlow, to ask for protection against rebel raiders. He is stated to have died in 1591. John outlived his more famous nephew, dying in November 1601.

We can now turn to Isaac Walton's *Life of Richard Hooker*, which was undertaken at the request of Archbishop Sheldon, in consequence of the imperfections of the *Life* prefixed by J. Gauden to his edition of Hooker's *Works*, published in 1662. Walton's famous and beautiful biography appeared in 1665, and has become one of the classics of English literature. But in using it one ought to keep in mind that Walton was born in 1593, and was therefore only seven years old when Hooker died, and allowance must be made for the 17th century tone and atmosphere of the biography, which is conveyed with such exquisite literary art. The facts we have given above explain why we hear nothing of Hooker's father in Walton's *Life*;

¹ Harleian, 6827, p. 51, Brit. Mus. Lib.

² John Maclean, *Life and Times of Sir Peter Carew*, London, 1857, pp. 302, 322, 323.

they also give a reason why a special effort should have been made to send Richard to college in 1568—because both his father and his uncle were out of England. John Hooker had made the acquaintance of Jewel in 1559, when the Government appointed the latter a commissioner in the West, and it was natural that he should seek the Bishop's help in sending his promising nephew to college. Walton tells us that Richard's exceptional ability was discovered by the schoolmaster of Exeter Grammar School, who declared him a 'little wonder.' But it is Walton rather than the schoolmaster who gives the description:

'At his being a schoolboy he was an early questionist, quietly inquisitive why this was and that was not to be remembered; why this was granted and that denied! This being mixed with a remarkable modesty and a sweet, serene quietness of nature.'¹ Bishop Jewel's patronage obtained for the lad admission to Corpus Christi College, Oxford, probably at first as chorister, and afterwards as clerk; but on Jewel's death in 1571 his pension failed, and Richard's maintenance at college was difficult. His name occurs five times between 1570 and 1575 in the list of poor scholars helped by the London merchant, Robert Nowell.² In 1582 the 'Mayor and Chamber' of Exeter granted him a pension of £4. This last assistance was, no doubt, obtained by the influence of John Hooker, who was not the 'rich uncle' Walton supposes him to have been. But the President of the College, W. Cole, out of regard for Jewel and also from a perception of the unusual gifts of his pupil, befriended him steadily. The appointment of the choristers and the clerks was in Cole's hands. It was not till December 1573 that Hooker was admitted one of the twenty *discipuli*, or scholars, of the College. To help towards his maintenance, pupils were obtained for him. Jewel's friend Sandys, Bishop of London in 1571, interested himself in this matter. His son Edwin, at about the age of twelve, was put under Hooker's charge (the tutor being nineteen), as well as a younger lad, George Cranmer, a great-nephew of Archbishop Cranmer. To the list of those who befriended Hooker in his need we must, no doubt, add his tutor John Reynolds, who came from the village of Pinhoe, close to Exeter.

A full account of the history of Corpus Christi College during Hooker's residence, with a careful treatment of the question of his maintenance, has been written by T. Fowler, and it forms a valuable and important addition to the *Life* by Walton. The latter makes it clear that the chief influences upon the young student were those of the dominant school of evangelical reformers. His patron Jewel remained for Hooker 'the worthiest divine that Christendom hath bred for the space of some hundreds of years';³ while his tutor Reynolds, who became President of the College in 1598 and the leader of the 'doctrinal Puritans' at the end of the century, was Hooker's critic and confidant throughout the composition of the *Ecclesiastical Polity*. It is, therefore, of special interest to find in Fowler's *History* the point established that there existed in Corpus Christi College 'the leaven of secret Romanism . . . long after the Reformation was definitely settled, certainly through the reign of Elizabeth.' This fact may in part explain Hooker's enlightened use of Roman Catholic books and authorities. Among his fellow-collegians were men of ability and scholarship who sympathized with the old religion, but had yet learned of necessity to respect and tolerate the new. Hooker's natural passion for truth and tolerance would make him instinctively appreciate and assimilate this attitude of mind.

¹ Church and Paget, I. 7.

³ Church and Paget, I. 514.

There is extant a short Latin tract,¹ written probably between 1582 and 1585, by a certain Nicholas Morice, one of the Fellows of Corpus Christi College. It is an account of the yearly journey of the President and Fellows to collect the rents of their estates, and is written with amusing vivacity and humour. The writer sympathizes with the old religion: 'A good Papist I love; for an honest Protestant I can die the death; but an aged trimmer, as I live, I abominate.'² He gives us one glimpse of Hooker. A steward has made a foolish speech; 'If Reynolds had been listening,' says Morice, 'he would have averted his eyes at many parts; if Hooker, he would have smiled, with bent head.'³ Walton testifies in famous words to Hooker's bashfulness at the end of his life, when 'his poor parish clerk and he did never talk but with their hats both on or off at the same time'; but his biography does not take into account Hooker's humour which Morice's remark recognizes. William Nutt, for whom Morice wrote his dialogue, was another Fellow of Corpus, obviously of kindred tastes and sympathies. This party in the College was not without its influence on Hooker's development. It ought perhaps also to be remembered that Corpus Christi College was founded in the early part of the century by Bishop Foxe when the 'new learning' of Erasmus and Colet was influencing educational ideals. Foxe appointed a lecturer in Greek, and attempted in theology to replace mediæval schoolmen by the Greek and Latin Fathers of the early centuries. Hooker's rationalism may have been fostered by the traditions of his College and his study of Theodoret and Augustine.

Hooker graduated B.A. in 1574, M.A. in 1577, and was made a full Fellow of his College in 1579. His special work was to lecture in Logic; and from this, according to Wood, 'his fame grew.' His writings, both in their vocabulary and in general form, retain throughout signs of his early pre-occupation with logical terms and logical analysis. In 1579 the Regius Professor of Hebrew was ill from some obscure mental disease, and Hooker was appointed his deputy, and delivered the Hebrew lecture while he remained in Oxford. There is no record when he took orders; but it was before 1581, when he preached in London at St. Paul's Cross. It is probable that his reputation at Oxford was the reason of his being invited to preach this sermon, which was in a true sense the beginning of his career. It contained a distinction between God's 'antecedent' and 'consequent' will, which was supposed to contradict a pronouncement of Calvin (*Inst.* iii. 24, § 16), that 'nothing is less accordant with the nature of God than that He should have a double will.' Hooker was, therefore, branded as a man who refused to treat Calvin as infallible. He had probably no intention of opposing Calvin, but from the first the spirit of his preaching and teaching was free, and acknowledged no master but the truth.

The visit to London resulted also, according to Walton, in Hooker's unfortunate marriage to Joan Churchman. R. W. Church has shown reason for doubting the accuracy of Walton's picture of Hooker's married life. It was not till December 1584 that Hooker was presented to the vicarage of Drayton-Beauchamp in Buckinghamshire, and it seems probable that his decision to give up his Oxford life was come to when he was ordained, and was not forced upon him by Mrs. Churchman, as Walton would have us believe. If Hooker had acted with the ludicrous weakness of Walton's story, his friends could hardly have recommended him to Whitgift⁴ for the position of Master of the Temple. Hooker was not Whitgift's first choice. His candidate was a certain Dr. Bond, whom the Queen considered too old for the post. Lord Burghley supported Walter Travers, already the afternoon lecturer at the Temple. Hooker was ap-

⁴ Whitgift writes to the Queen about the Mastership that 'the living is not great, yet doth it require a learned, discreet, and wise man.'

pointed Master on 17th March 1584-85, perhaps by the support of Archbishop Sandys and Bishop Aymer; but all the circumstances indicate that he was a man whose ability, learning, and piety were well known, and from whom much might be expected. What immediately followed upon his appointment was a pulpit duel between himself and Walter Travers, the afternoon lecturer, which increased in intensity until, in about a year's time, Travers was inhibited by the Archbishop. Travers at once wrote a 'Supplication' to the Privy Council in defence of his conduct. Hooker replied in an 'Answer,' which he addressed to Whitgift. Besides these documents, there are extant certain sermons in Hooker's *Works* which contain those opinions of Hooker which Travers specially attacked. These are the sermon 'of the Certainty and Perpetuity of Faith in the Elect,'¹ and the 'Learned Discourse of Justification.'² They were printed by Jackson in 1612; and, while the first can be identified satisfactorily with a sermon objected to by Travers, the second is not a sermon, but an amalgamation of several sermons which cannot be quite certainly related to those mentioned by Hooker and Travers. From these documents it is clear that the first cause of difference between the two men was Hooker's refusal to be a party to Travers' attempts to introduce surreptitiously into the congregation his own Presbyterian methods and practices. Travers wished Hooker to submit to some ceremony of 'allowance' by the congregation, because he held that Hooker had been ordained 'by virtue only of a human creature'; he objected to Hooker praying before his sermon instead of after, to his mentioning bishops in his prayer, and to his kneeling at the reception of the Holy Communion. On these points the two rivals conferred together without coming to any result, so that, as Hooker says, quoting from Travers, it was natural enough that 'many of my sermons have tasted of some sour leaven or other.' Travers' complaints against Hooker's preaching deal with three occasions. He brought up again the sermon of 1581 already referred to; he objected to a position of Hooker, 'that the assurance of that we believe by the Word is not so certain as of that we perceive by sense'; but, thirdly, the matter which finally roused Travers to deliver 'three public invectives' against the Master's teaching was a remark about Roman Catholics. The 'mother-sentence whereof I little thought that so much trouble would have grown' was

'I doubt not but God was merciful to save thousands of our fathers living in popish superstitions, inasmuch as they sinned ignorantly.'

Travers understood Hooker to say 'the fathers,' but his outcry caused Hooker to attempt that summary of the good and bad in the Roman Church which is contained for us in the extant 'Discourse of Justification.' He was, no doubt, unaware of the strength of the fanaticism against which he was measuring himself. He was anxious to be fair to his Roman adversaries, and not to 'give them an occasion to say, as commonly they do, that, when we cannot refute their opinions, we propose such instead of theirs as we can refute.'

Hooker therefore outraged the prevailing Puritan views on two crucial points: he declined to accept Calvin's opinion as final, and he insisted on giving even Rome a fair hearing. His originality on these two points has not been justly appreciated. Even to-day his point of view is not fully accepted by controversialists. We must realize upon what broad grounds his practice was based. Travers complained³ that Hooker had said to him 'that his best author was his own reason'; Hooker replied indignantly:

'I alleged therefore [because Travers had objected to the quotation of authorities] that which might under no pretence in the world be disallowed, namely, reason; not meaning thereby mine own reason, as now it is reported, but true, sound, divine reason; reason whereby those conclusions might be out of St. Paul demonstrated, and not probably discoursed of only; reason proper to that science whereby the things of God are known; theological reason, which out of principles in Scripture that are plain, soundly deduceth more doubtful inferences, in such sort that being heard they neither can be denied, nor anything repugnant unto them received, but whatsoever was before otherwise by miscollecting gathered out of darker places, is thereby forced to yield itself, and the true consonant meaning of sentences not understood is brought to light. This is the reason which I intended.'

Passages like this and many others in the 'Discourse of Justification' reveal to us the ardent enthusiasm which burnt beneath the shy exterior of the lecturer in Logic. And to his passion for truth and for the search after truth a second characteristic has to be added which in all Hooker's writings is felt by the reader:

'I take no joy in striving, I have not been nuzzled or trained up in it. . . . There can come nothing of contention but the mutual waste of the parties contending, till a common enemy dance in the ashes of them both. . . . Things of small moment never disjoin them whom one God, one Lord, one Faith, one Spirit, one Baptism, bands of great force, have linked.'

These are the chief points of the dispute with Travers at the Temple. It is to be noted how important they were for the subsequent Church of England. Without the treatise 'Of the Laws of Ecclesiastical Polity' they might not have effected much; but, enlarged and expounded in the first five books of that work, they made the Church of England neither Rome nor Geneva, but a Church distinct from both. Hooker's treatise did for the Church of England what Calvin's *Institutes* had done for the Genevan Church; it gave it a voice and a character. It is tempting to dwell on the many anticipations of the *Polity* which are to be found in these early writings of Hooker, and it is necessary to insist upon their importance, both as historical documents and as revelations of Hooker's mind and disposition. But there is a difference between his point of view in the dispute with Travers and in the composition of the *Polity*. Hooker distrusted 'extemporal dexterity'; he believed time to be 'the only mother of sound judgment and discreet dealing'; and in this spirit he began to examine the questions that Travers had raised. But he found his position at the Temple incompatible with profound and concentrated study. He wrote to Whitgift that he was 'weary of the noise and oppositions of this place'; his contest with Travers had been

'the more unpleasant to me because I believe him to be a good man; and that belief hath occasioned me to examine mine own conscience concerning his opinions; and to satisfy that I have consulted the Scripture and other laws, both human and divine, whether the conscience of him and others of his judgment ought to be so far complied with as to alter our frame of Church-government, our manner of God's worship, our praising and praying to him, and our established ceremonies, as often as his and others' tender consciences shall require us: and in this examination I have not only satisfied myself, but have begun a Treatise, in which I intend a justification of the Laws of our Ecclesiastical Polity. . . . My meaning is not to provoke any, but rather to satisfy all tender consciences, and I shall never be able to do this, but where I may study, and pray for God's blessing upon my endeavours, and keep myself in peace and privacy and behold God's blessing spring out of my mother earth, and eat my own bread without oppositions.'

He asks Whitgift to appoint him to a country living. Another draft of this letter speaks of his desire 'not to provoke your adversary Mr. Cartwright, nor Mr. Travers, whom I take to be mine (but not mine enemy)'. When we read the *Polity*, we find, after the first book, that continually 'T. C.' is quoted as the recognized champion of those opinions for which Travers and his party at the Temple contended. Thomas Cartwright is Hooker's antagonist; Walter Travers is forgotten. This means that Hooker's book is a continuation and review of a controversy that had been going

on since the beginning of Elizabeth's reign. Cartwright returned from Geneva to England in November 1572, probably in time to assist in the writing of 'A Second Admonition to the Parliament'; the first had appeared earlier in the year. In these appeals to Parliament the writers frankly declare their hostility to the English Church as established, and demand a reformation; they insist that the controversy is not 'for a cap, a tippet, or a surplice, but for greater matters concerning a true ministry and regiment of the Church according to the Word.' The tracts made a great impression, and Whitgift, with Archbishop Parker's approval, was called upon to reply to the Admonitioners. Before the end of 1572 he published 'An Answer to a certain Libel entitled An Admonition to the Parliament'; a second edition, augmented, was ready in 1573. Whitgift had been Vice-Chancellor of Cambridge University when Cartwright was deprived of his professorship¹ and his fellowship. T. C. therefore came forward as the champion of the Admonitioners against Whitgift. By the middle of 1573 he issued 'A Reply to An Answer made of M. Doctor Whitgift against the Admonition to the Parliament.' It was a book so much more considerable than the Admonitions that Whitgift could not leave it unanswered. In a folio of 800 pages he went over the whole controversy again, producing the work in 1574 and calling it 'The Defence of the Answer to the Admonition against the Reply of T. C.' The length of the book is partly due to Whitgift's fairness in printing large portions of the arguments of his opponents. Next year (1575)² Cartwright was ready again with 'The Second Reply of Thomas Cartwright,' which he followed up in 1577 with 'The Rest of the Second Reply.' To the 'Second Reply' of Cartwright no answer was made by Whitgift or by any other representative of the Church as established. Whitgift's friends thought that he had written all that was necessary on the controversy, and his appointment in 1577 to the see of Worcester left him no time for literary controversy. He was made Archbishop of Canterbury in 1583, and in his primacy the attempt to introduce a disciplinarian or consistorial system into the English Church was resisted and defeated. It was, therefore, providential for Whitgift that such a champion as Hooker appeared, to remove the reproach that Cartwright's last book had not been answered, and to review the whole controversy with a mastery of logical analysis, a breadth of learning, and a dignity of style beyond the reach of any other disputant. Hooker's book was the last word in the long controversy between Cartwright and Whitgift, but when the first instalment of it appeared in 1594 it was in spirit something altogether new. The sober Hallam declares that Hooker 'mingled in these vulgar controversies like a knight of romance among catiff brawlers.'³ Because he was by temperament and conviction 'no mere champion,'⁴ he proved himself the judge and umpire of the lists.

Whitgift did not move Hooker from the Temple till 1591, when he appointed him to the parish of Boscombe, six miles from Salisbury, making him in the same year prebendary and sub-dean of Salisbury Cathedral. In 1595 he was presented to the Crown living of Bishopsbourne, near Canterbury, where he remained till his death. A chill 'taken in his passage by water betwixt London

¹ He was made Lady Margaret Professor in 1569.

² In the same year Walter Travers' celebrated treatise was published in both Latin and English, with a letter from Cartwright in its praise. It is called in English, 'A full and plain Declaration of Ecclesiastical Discipline out of the Word of God, and of the Declining of the Church of England from the same.'

³ *History of England*, London, 1850, t. iv. 214.

⁴ F. D. Maurice, *Moral and Metaphysical Philosophy*, London, 1873, II. 195.

and Gravesend' brought on his last illness. He made his will, 'though sick in body, yet sound in mind,' on 28th October 1600; it was proved on 3rd December. There is, therefore, no reason for doubting the Latin note in Archbishop Laud's copy of one of the books of the *Polity*, which states that Hooker died about 2 o'clock in the afternoon on 2nd Nov. 1600. His will made Joan Hooker, 'my well-beloved wife,' sole executrix, and 'my well-beloved father, Mr. John Churchman and my assured good friend,' Mr. Edwin Sandys, overseers. The inventory was £1092, 9s. 2d. It is probable, therefore, that Isaac Walton's account of Hooker's marriage is a distortion of the facts. That Hooker's faculties were unimpaired at the end of his life is clearly shown by the vigour, acuteness, and erudition of the notes he scribbled upon his copy of 'A Christian Letter,' an anonymous attack, published in 1599, upon bk. v. of the *Polity*.

2. The 'Ecclesiastical Polity.'—Only five books of the work entitled, 'Of the Laws of Ecclesiastical Polity, Eight Books,' were published in the author's lifetime. The Preface 'to them that seek, as they term it, the reformation of laws, and orders ecclesiastical in the Church of England,' and the first four books, without date, were published in 1594.¹ At the end of the Preface there was a short summary of the proposed eight books, indicating that in some form they were nearly complete at that date. It is probable that the defence of the Prayer-Book in bk. v., which is longer than all the others combined, became more elaborate than Hooker at first intended. The final description of the fifth book is different from that in the summary of 1594; Hooker finds he must resist the accusation that there is 'much superstition' in the Prayer-Book, and this necessitates a detailed examination of it. But for the effect which Hooker's book produced upon the public mind it was an advantage that it came out in instalments. The portion published in 1594 was in several respects so counter to popular tendencies, that, if there had been more of it, readers might have found it too much to assimilate. The Preface, just at the time when the infallibility of Geneva was becoming almost a dogma among the reformed Churches, reviewed Calvin's character and career impartially, recognizing him as 'incomparably the wisest man that ever the French Church did enjoy,' and praising 'his exceeding pains in composing the Institutions of Christian religion,' and 'his no less industrious travails for exposition of holy Scripture,' but insisting that 'wise men are men,' and that what Calvin did for the establishment of his discipline was 'more commendable than that which he taught for the countenancing of it established.' The Preface has not received the praise which it deserves as a piece of historical literature. If we compare it with the notes upon Calvin made in 1599 on the margins of the 'Christian Letter,' we shall realize that Hooker's account of Geneva affairs was founded upon a careful reading of Calvin's letters and other documents, and shall appreciate the restraint of its style. It is to be regretted that Hooker did not live to expand his note, 'Remember to make a comparison between Calvin and Beza. . . . For Beza was one whom no man would displease, Calvin one whom no man durst.'² But in the Preface the touch of irony and humour which Hooker allows himself is more effective than direct invective, and runs through his whole exposition of the claims and teaching of the disciplinarian party.

¹ They were entered in the Stationers' Register, 29th Jan 1592-93.

² Church and Paget, I. 134.

The most famous book of the *Polity* is the first. It deals with 'laws and their several kinds in general.' It shows that man is subject not to one law, but to many, and insists that the welfare of society depends upon the proper adjustment and correlation of these kinds of law. The inquiry is impressive in its scope and in the range of authorities upon which it is founded. There is a true imaginative grandeur in Hooker's vision of the whole universe of angels and men subordinated under God to the reign of law, which is in all its various forms essentially an expression of the Divine reason. Aristotle and the philosophy of Greece, the Greek and Latin Fathers, and, finally, St. Thomas and the schoolmen, are co-ordinated with the teaching of the Bible in support of an analysis which leads up to the position that 'to measure by any one kind of law all the actions of men were to confound the admirable order, wherein God hath disposed all laws, each as in nature, so in degree, distinct from other.' Hallam has pointed out that Suarez, writing on the Continent about the same time as Hooker, arrived at nearly identical conclusions.¹ Raleigh, in his *History of the World*, starts from Hooker, as an authority already recognized, and the famous passage on law is re-echoed on the stage² before 1611. In the latter half of the century, Locke's theories of civil government are founded upon quotations from 'the judicious Hooker.'

The second book resists the Puritan assertion 'that Scripture is the only rule of all things which in this life may be done by men.' Hooker, admitting that Scripture is an infallible guide, denies that it is the only guide by which men are led, and carries the war into the enemies' camp in the remarkable passage which describes the results which would follow from the extreme Puritan position:

'For in every action of common life to find out some sentence clearly and infallibly setting before our eyes what we ought to do (seem we in Scripture never so expert) would trouble us more than we are aware. In weak and tender minds we little know what misery this strict opinion would breed, besides the stops it would make in the whole course of all men's lives and actions.'

The third book deals with the view 'that in Scripture there must be of necessity contained a form of Church polity, the laws whereof may in nowise be altered.' Hooker does not insist that the polity of the Church he is defending is contained in Scripture; the special point and merit of his argument is that he refuses to allow Scripture to be made a code strangling growth and reasonable freedom. Although he believes episcopal government to be Scriptural, he does not refuse to the Scottish and the French Reformed communions the title of Churches. He argues from the controversy on re-baptism in the African Church, in the time of Cyprian, that 'heretics are not utterly cut off from the visible Church of Christ.' All visible Churches, being human, have their blemishes and failures.

The fourth book concludes the general argument by considering the allegation that the English Church 'is corrupted with Popish orders, rites, and ceremonies, banished out of certain reformed Churches.' It therefore treats generally what the fifth book considers in detail.

The fifth book was published in 1597. It contains 81 chapters. The question of the manner of the ordination of ministers is not reached till ch. 76. The first 75 chapters review public worship as it was regulated by the Elizabethan Book of Common Prayer. In the dedication of the book

¹ H. Hallam, *Literature of Europe*, London, 1837-50, III. iv. 20.

² In Lodowick Barry's *Ram Alley*, London, 1611; W. C. Hazlitt's *Dodley* 4, do. 1874-76, x. 233.

³ H. Hallam, *op. cit.* II. iv. 40.

to Whitgift, Hooker complains that the controversies concerning 'complements, rites, and ceremonies of church actions are in truth for the greatest part such silly things that very easiness doth make them hard to be disputed of in serious manner.' His treatise, therefore, at every point—whether he is discussing the use of the apocryphal books, or set prayers, or the use of the psalms, or the celebration of matrimony—strives to discover the first principles upon which practice is founded, and can never lose its interest while public worship is a part of religion. But the most important and masterly chapters are those in which he discusses sacraments and the Lord's Supper (chs. 50-57, and ch. 67). He rejects as discredited the extreme view that the bread and the wine are 'bare signs,' and claims that the 'Sacramentarian' or Reformed Churches have reached a 'general agreement concerning that which alone is material, namely, the real participation of Christ and of life in His body and blood by means of this sacrament.' The Lutherans and Papists also accept this 'general agreement'; and the only matter of dispute is 'about the subject where Christ is.' As to this, 'no side denieth but that the soul of man is the receptacle of Christ's presence.' Lutherans and Papists agree so far, but insist further that 'His body and blood be also externally in the very consecrated elements themselves,' either by consubstantiation or by transubstantiation. Hooker, therefore, makes the proposal, which is still too broad in its toleration to be accepted by the Churches: 'Let it be sufficient for me presenting myself at the Lord's table to know what there I receive from Him, without searching or enquiring of the manner how Christ performeth His promise.'

It can hardly be doubted that Hooker left the last three books of his treatise finished at his death, but the finished copies were lost or made away with, and the books as printed have not received final revision. The sixth book as we have it is not the examination of lay eldership promised in 1594, but a quite different treatise on penance. The genuine sixth book has disappeared. Books vii. and viii. are the rough copies of the promised discussions of episcopacy and the relations of Church and State. Books vi. and viii. were printed in 1648, book vii. in 1662.

LITERATURE.—The standard edition of Hooker's *Life and Works* is the revision by R. W. Church and F. Paget (7th ed., 3 vols., Oxford, 1888) of Keble's ed. of 1850, in 4 vols. Bk. I. of the *Polity* has been edited with notes and Introduction by R. W. Church, 2nd ed., Oxford, 1876; bk. v. by R. Bayne, with notes and prolegomena, including a life of Hooker, in the *English Theological Library*, London, 1902. F. Paget prepared for the Clarendon Press an introduction to bk. v. (Oxford, 1899). The first five books with two sermons are reprinted, with an introduction by R. Bayne, in *Everyman's Library* (London, 1907). A careful Bibliography of early editions, Lives, general criticism, and literature is given in the *Cambridge History of English Literature* (Cambridge, 1909), III. 547. Consult the *Life* in *DNB*, and the art. 'Richard Hooker,' in *EB* II. The latest criticism of Hooker's style is in G. Saintsbury, *History of English Prose Rhythm*, London, 1913, ch. v.

RONALD BAYNE.

HOOLIGANISM.—The word is derived from 'hooligan,' a street rough. Subjectively, it is a spirit or temper; objectively, an outbreak of lawlessness. It is usually applied to lads, sometimes to men and women, and always as a term of opprobrium for lawless behaviour.

1. **Origin of the name.**—Various origins have been suggested, some of them fanciful. (1) It is said to be due to the blunder of a policeman in describing a gang of young roughs as 'Hooly's gang'; (2) it is traced to a fictitious Irish character called 'Hooligan' (Irish for 'Hoolihan'), who figured weekly in a comic paper called *Nuggets* (*NQ*, ser. ix., vol. II. [1898] pp. 227, 316). His German counterpart appeared in the *Garland* as

'Schneider.' According to *NQ* (15th Oct. 1898), 'Hooligan' and 'Schneider' had then been familiar personages for about five years. (3) It has been derived from a popular music-hall song which (about 1890) described the doings of a family named Hooligan. A writer in the *Evening News* of 21st Nov. 1900 said he had often heard the song sung, and quoted the following:

'There's a family living near us—
The Hooligans!
Always in some terrible fuss
Are the Hooligans.
Never known to tell a lie,
They'd sneak yer teeth, and say "Goodbye,"
They could drink the Carlton Brew'ry dry,
Could the Hooligans.'

Hooliganism is an international phenomenon. Witness the 'hoodum' of California, the 'larrikin' of Australia, the 'khuligani' of St. Petersburg, the 'Hooligane' of Germany, and the 'Apaches' of France and Italy.

2. Characteristics.—Lack of self-control, love of malicious mischief, indifference to the comfort or suffering of others, idleness passing into dishonesty and crime, horseplay passing into violence—mark the hooligan. In one sense, hooliganism is no new thing. We read of it in the *Fortunes of Nigel*, and in the accounts of the street fights which took place between the apprentices for the 'crown o' the causey.' University students have always given themselves over periodically to a form of hooliganism—smashing lamps, breaking seats, and turning the Graduation ceremony into pandemonium. In Norman Macleod's day the Glasgow students were declared to be a 'disgrace to the High Street,' and yet a well-marked distinction is always drawn between them and, say, the Govan riveters who are out to 'paint the town red.'

3. Classification.—Modern hooliganism may be classified under various heads.

(1) *Mob hooliganism*, the conduct of the population on occasions of public rejoicing and national victory, as on 'Mafeking' nights. Then the people seem to lose their heads altogether and become disorderly and reckless. Viewed as a symptom of growing instability in the national character, such conduct is serious. Mob mind is a malady of our time (Ross, *The Foundations of Sociology*, New York, 1905, p. 113). Mob hooliganism varies with the density of the crowd. 'The way in which hooliganism asserts itself all depends upon the atmosphere in which the hooligan finds himself' (*Westminster Gazette*, 6th April 1900, p. 2).

(2) *Political hooliganism*, the glaring illustration of which is the conduct of the militant suffragettes. Smashing shop-windows, defacing monuments, setting fire to theatres, throwing hatchets, and assaulting Cabinet Ministers cannot be described as anything but hooliganism of a very bad type. There is manifest lack of self-control, love of malicious mischief, and callous indifference to the sufferings of others. It is only fair to say, however, that militants are in a minority in the Suffrage movement, and that their tactics are strongly disapproved by many as unworthy and unwise, and calculated to hinder rather than help their cause.

(3) *Industrial hooliganism*, seen during strikes in assaults upon fellow-workmen, over-zealous picketing, and the destruction of goods, rolling-stock, and property. The workers, as a whole, are not lacking in self-respect or self-control, and the vast majority condemn violence. They showed the most exemplary patience and self-control during the big strikes in Great Britain amongst the miners and dockers (1911-12). When workmen indulge in hooliganism, it is due either to a passionate sense of wrong or to the sinister influence

of the baser sort who mingle with the workers and exploit them for their own nefarious ends.

(4) *Literary hooliganism*, manifested in savage criticism of books, of policies, and of parties. The classic examples of the first are the *Quarterly's* attack on Tennyson, Macaulay's attack on Robert Montgomery, and *Blackwood's* attack on John Keats. The reviews in those days frequently led to duels, such as that between Jeffrey and Tom Moore. For sufficiently savage and hooliganesque attacks on policies and parties one has only to read the popular magazines and newspapers—especially religious—of the present day.

(5) *Criminal hooliganism*.—This is the most serious phase. In all great cities there are gangs of hooligans with sensational names, such as the 'Forty Thieves,' the 'Pontoons,' 'Velvet Caps,' 'Tim Malloys,' 'San Toys,' 'Crush Boys,' 'Plug Uglies,' 'Cop Beaters,' 'Tough Kids,' and 'Crook Gang.' Jacob Riis, writing of New York, says that 'a bare enunciation of the names of the best-known gangs would occupy the pages of this book' (*How the Other Half Lives*, 229). Every street-corner has its gang, with a programme of defiance of law and order. In the United Kingdom things are not quite so bad, and Charles Booth thinks that in London there is a decided improvement (*Life and Labour of the People in London*, final vol., London, 1902, p. 201).

4. Causes of hooliganism.—The great root-cause is the undisciplined life, revolt against all authority, human and Divine, which characterizes the lower orders to-day, Roman Catholic as well as Protestant. The present writer's experience as a Prison Chaplain enables him to say that, contrary to a prevailing impression, hooliganism is as rife in Roman Catholic circles as in Protestant. This undisciplined life, however, is itself an effect, the resultant of many causes, some of which may be here indicated.

(1) *Defective education*.—Street lads have, as a general rule, managed to slip through the meshes of our educational system with the minimum of instruction. Reading remains for them an irksome task. They find no pleasure in it, and so are cut off from one of the greatest helps to a good life, one of the strongest safeguards against temptation. But their education is defective on the moral side as well as on the literary. Character has not been developed and strengthened, the will has not been cultured, self-control has not been taught. They are children of impulse and passion, and ill fitted to stand amidst the complex conditions of modern civilization.

(2) *Wretched housing* is another potent cause of hooliganism. Growing lads and girls in the poorer parts of our big cities are shamefully overcrowded. They have literally no room to live a decent human life, no opportunity of self-realization, no home life to speak of, and so they are driven out to the streets. Home to them means simply a place to eat in and sleep in, and not a place for social recreation or happy fellowship, still less for mental or spiritual culture. The loss is infinite, and tragic in its results upon character.

(3) *Lack of playgrounds and open spaces for wholesome recreation*.—When the children are sent out of doors to make more room in the house, they are turned into the street or back-alley. The slum is their playground, and there is no finer breeding-place for young hooligans and criminals. Everything there, the whole environment, conspires to degrade and ruin the boy and girl. The process is sure, and the waste of young life and capacity is awful.

(4) *Misdirected energy* follows naturally. There is nothing wrong with the energy, any more than there is with steam or electricity. What it needs

is guidance into proper channels—not repression, but proper expression. It is easily misguided, misdirected; and the result is hooliganism.

(5) *Parental inefficiency* must also be named as a cause. The home is to blame as well as the school. Home training is at a discount. Obedience is a lost habit. The parental example is often bad. The parents themselves are largely the creatures of circumstances, the resultant of our social, educational, and industrial system. The children take after their parents, follow the only example they know, and so the vicious circle continues to be trod.

(6) *Mental and moral defect.*—A very moderate first-hand knowledge of hooligans will convince any one that many of them are mentally and morally weak. They are defectives; and experience shows that defectives soon become delinquents. Mental instability is frequently found associated with hooliganism and crime. As already hinted, hooliganism may fairly be described as a by-product of our civilization. Our social system is largely responsible for it. It is, therefore, a social problem. We must cease to manufacture hooligans.

5. *Cure of hooliganism.*—The first serious attempt to deal with it was made in 1788, when the Philanthropic Society was formed in England by Robert Young. In 1806 the Dalton Refuge was founded, and in 1815 the Prison Discipline Society. Parliament began to tackle the subject in 1793, when Pitt brought in a Bill which, however, proved abortive. In 1811 and again in 1819 Parliament condemned the imprisonment of children for lawless conduct. Royal Commissions dealt with the matter in 1834 and 1837. The *Edinburgh Review* for Oct. 1851 said:

'The young offender gains ground upon us, the plague of the policeman, the difficulty of the magistrate, a problem to the statesman, and a sorrow to the philanthropist.'

That same year a Committee of the House of Commons recommended the establishment of Reformatory Schools, and in 1857 the Industrial Schools Act was passed. Its results were remarkable. In 1856, no fewer than 13,981 children under seventeen years of age had been committed to prison. In 1897, thanks to Industrial Schools, the number had fallen to 1688. Up to 1901 (according to figures given by John Trevarthen, Secretary of Redhill Farm School, in an article in the *Nineteenth Century* for Jan. 1901), out of 3511 reported on by Reformatories, 2666 were in regular employment, 123 in casual employment, 541 had been convicted, and 181 were unknown. Of 8233 reported on by Industrial Schools, 6379 were in regular employment, 430 in casual employment, 460 had been convicted, and 964 were unknown; i.e. nearly 80 per cent were doing well, and only some 15 per cent had been convicted—a very satisfactory record. The charge, then, that 'Reformatories are hooligan manufactories,' is singularly unjust and ill-informed. Considering the material supplied, the proportion of failures is surprisingly small, and a good many of the failures are caught up and reclaimed by the Borstal system. One-third of our burglars are boys from 16 to 21, and 20 per cent of crimes against morals are committed by those under 21. In 1852, Dickens visited the Philanthropic Society's Farm School, Redhill, and wrote an interesting article about it in *Household Words*, ending as follows:

'The system must be devised, the administration must be reared, the preventable young criminals must be prevented, the State must put its Industrial and Farm Schools first, and its prisons last—and to this complexion you must come. You may put the time off a little, and destroy (not irresponsibly) a few old thousands of immortal souls in the meantime, but the change must come.'

These words were prophetic. The change has come. We are now putting our schools first, and our

prisons last, that is, educative methods are displacing punitive methods. Hence the new treatment of juvenile offenders, wise and firm, known as the 'Borstal.'

6. *Preventive measures.*—Reformatory and reclamationary treatment, however necessary and valuable, does not go to the root of the matter, and will not eradicate hooliganism. Therefore preventive measures must more and more be adopted. Generally, whatever makes for social amelioration makes for the extinction of hooliganism, and the production of a law-abiding, well-behaved, self-respecting population. The following reforms, however, have a special bearing upon the social phenomenon which we have been considering. Hooliganism will never disappear until we have—

(1) *An improved system of education which will aim deliberately at moral training, the disciplining of the will, the formation of character.*—To secure this we could well afford to drop much with which the curriculum is at present overloaded. Boys especially are ruled by ideals, and we must instil into them higher ideals than that of the robber knight and the pirate chief.

(2) *Industrial training.*—Much of our hooliganism is due to casual labour, blind-alley occupations, unemployment, and consequent street-loitering and larking. H. Dyer, a leading educational expert, truly says that

'one of the most important problems of the day is the deliberate and complete organization of the whole field of boy labour, as it is recognized that many of the most serious social problems have their origin in the degeneration which takes place in the years of adolescence' (*Education and National Life*, London, 1912, p. 77).

(3) *Better housing.*—The nation is waking up to the need for the better housing of the poorer classes. So long as the children of the poor are deprived of the advantages of a true home life and home comforts, so long will hooliganism be a blot upon our civilization. That is part of the price we must inevitably pay for our folly.

(4) *Sufficient playgrounds.*—Next in importance to a good home is a good playground. It is here that the modern city, in its shortsightedness and parsimony, has sinned most grievously against the child. All over the city, and especially in the poorer districts, there should be ample open spaces, well-lit at night, where the abounding energy of adolescence may find safe and legitimate outlet. Let us not forget that 'Waterloo was won on the playing fields of Eton.'

(5) *Helpful agencies.*—Boys' Brigades, Life Brigades, Boy Scouts, and Lads' Clubs, with their educative, social, and recreative departments, are invaluable for the suppression of hooliganism. They fill the empty life with wholesome interests, and provide centres of fellowship and intercourse, where pure and uplifting friendships are formed. They furnish stimulating ideals, and appeal to what is high and chivalrous, the best side of the boy's nature. They also satisfy the gregarious instinct of youth. It has been well said that we never see one boy, but always two or three. The gang spirit is deep and strong, and we must utilize it for the redemption of youth. Physical training is also of the utmost value, and many social reformers believe that universal military training would act as a powerful corrective to hooliganism. Finally, all efforts will stop short of the highest and best which do not bring our youth under the sway of religious faith. That is the work of the churches. It is for them to see that our growing boys and girls are won to the service of Christ, who is the supreme maker of manhood and womanhood.

DAVID WATSON.

HOPE (Christian).—Hope is the name of a grace which is characteristic of the religion of the Bible. St. Paul sums up the misery of the Gentile world in a single sentence, when he speaks of them as *ἀνὴρ μὴ ἔχοντες καὶ ἀθεοὶ ἐν τῷ κόσμῳ* (Eph 2¹²). The Bible, on the other hand, is the book of hope. One strange book (Ecclesiastes) reflects the deep melancholy which was a pervading note of ancient literature; but hope cherished in the darkest times, hope continually kept alive by the labours of the prophets, hope of a future never abandoned and ever shining out anew in spite of every conceivable discouragement—this is the dominant note of the OT. Whatever is written therein was 'written for our learning, that through patience and through comfort of the scriptures we might have hope' (Ro 15⁴). The God whom the OT presupposes is 'the God of hope'—the Author and Giver of hope (Ro 15¹³). The 'hope of Israel' (Ac 28²⁰; cf. 26⁶) might be understood in widely different senses. For St. Paul at least it included not only the complete fulfilment of the Messianic expectation in its widest sense, but the fulfilment of the true destiny of the individual in the glory of the resurrection life. To many modern Jews it may mean little more than the expectation of a brighter day for their oppressed and down-trodden nation—an expectation based on faith in God's justice and His unique relation to Israel. But in any case, hope—the boundless expectation of good—is the deepest note in the poetry and prophecy of the OT; in a transfigured form, corresponding to the light shed upon the purpose and character of God by the Gospel, it re-appears in the NT. (For the meaning and use of the word in the OT and NT it may suffice to refer to *HDB*, s.v.; and *JE*, s.v.).

Hope, like faith and love, is a Scriptural virtue. It cannot be said to have a place in heathen ethics. There are isolated passages in praise of hope. A fragment of Menander is quoted by Jeremy Taylor, *Life of Christ*, pt. 3, § 15:

ἀσπαστος ἀτυχῶν οὐδέ τις ἐλπίδος,

and Eurip. *Herc. Fur.* 105 may be compared:

οὐδὲν δ' ἀνὴρ ἀσπαστος, ὅστις ἐλπίδι
κρείσσειν θέλει, τὸ δ' ἀπορεῖν ἀνδρὸς καυθῶ.

But heathen hope was low or aimless. 'Thou dost not hope,' says Augustine to the Christian, 'as the Gentiles hope.' 'Sperant illi inania saeculi, speres tu aeternam vitam cum Christo' (*Serm.* xcvi. 2). In both Testaments, indeed, the duty of hope is based on the revealed character of God: (a) as omnipotent and therefore able to fulfil His purposes, even against human expectation (Ro 4¹⁹); (b) as specially pledged to be the Saviour and Sanctifier of His elect people (Jer 14⁷ 17¹⁵ 50⁷, Ps 46⁵, etc.); (c) as the righteous moral Governor and Judge of mankind, whose ways are destined to be finally vindicated in spite of all the enigmas which burden the just man with a sense of unfathomable mystery.

The exact objects of hope differ to some extent in the two Testaments. The Anglican article (VII.) expressly denies that 'the old fathers did look only for transitory promises.' The hopes of merely temporal good, which were characteristic of primitive men, were doubtless chastened and purified by the discipline of calamity, so that hope itself became spiritualized (cf. 1st 63¹³ 17¹⁵ etc.). On the other hand, the gospel is the religion of the 'better hope' (He 7¹⁹), because it is the religion 'through which men for the first time enter into intimate fellowship

with God' (see Bruce, *Ep. to the Hebrews*, Edinburgh, 1899, p. 271 f.). Thus the hope of the Christian is a 'good hope' (2 Th 2¹³), a 'blessed hope' (Tit 2¹⁴), a 'hope of glory' (Col 1⁵); a 'hope of righteousness' (Gal 5⁵), of 'salvation' (1 Th 5⁸), of 'eternal life' (Tit 3⁷). It is an expectation of spiritual blessings already realized and potentially conveyed to man in Christ. Nay, Christ Himself is 'our hope' (1 Ti 1¹), the living pledge that the divine promises of life, immortality, and glory will find their fulfilment for all who are lovingly united to Him. His resurrection is the ground of hope because it is an earnest of the fulfilment of man's destiny (1 P 1²¹). So Aug. (c. *Faust.* xi. 8) strikingly says that the Christian expectation of future bliss and immortality 'in Christo iam non spes sed res erat.' The believer, he adds, 'in Christo iam habet quod in se sperat.' The present article will deal with the function of hope in the moral life of the Christian.

1. The object of hope is, of course, some form of future good, the true blessedness of which man is capable. The object of hope is the highest good—'bonum futurum, arduum, possibile haberi' (Aquinas, *Sum.* ii. 2. xvii. resp.). This is described in various ways in the NT. In the Synoptic Gospels the *summum bonum* is the Kingdom of God or of Heaven; in the Fourth Gospel, eternal life; in St. Paul's Epistles, the righteousness of God; in Hebrews, access to God and unrestricted fellowship with Him. All these are simply different descriptions of one supreme blessing, viz. that spiritual state which results from the very presence of God in the human spirit. In a true sense, then, God Himself is the supreme object of hope; 'bonorum summa Deus nobis est' (Aug. *de mor. Eccl.* 13; cf. *de Trin.* viii. 4. 6). God, says T. H. Green, 'is all which the human spirit is capable of becoming' (*Proleg. to Ethics*, Oxford, 1883, § 187). The final 'beatitudo' for which we look is the reign of God in man, i.e. that perfection of our nature which results from His indwelling presence in man. 'Non aliud aliud a Domino Deo tuo speres, sed ipse Dominus tuus sit spes tua' (Aug. *Enarr.* in Ps. 39 [40⁷]). So Aquinas, *Sum.* ii. 2. qu. xvii. art. 2, says: 'Proprium ac principale spei objectum est ipsa aeterna beatitudo.'

2. We may next discuss the claim of hope to be a Christian virtue. We must remember that man's nature, being disordered by the Fall, can be restored only by an act of Divine power. The revelation of God in Christ, making known His character, purpose, and requirement, necessarily affects the normal springs of human action. Thus, for a Christian the primary springs of action—the affections, appetites, passions, sentiments—yield to certain higher principles directly resulting from man's changed relation to God. These are the 'theological virtues,' Faith, Hope, and Love, so called because they bring man into a right relation to God and are Divinely communicated to him.¹ The Gospel revelation of God is, in fact, a new inspiration; it develops in man a new attitude towards God, and, consequently, a new disposition or character. It sets before him a new end or aim of action, viz. union with God. Hence the necessity of faith, which appropriates the revealed facts—the good-will and Fatherly love of God, the Divine victory over sin, the possibility of blessedness; of love, which responds to the goodness of God, and embraces in union with God the Divine aim of creation—an end which is wider than any merely personal good, and includes the well-being of others: and, finally, of hope, which, in reliance on the revealed character of God, looks forward with confidence to the fulfilment of the Divine

¹ Aquinas, *Sum.* i. 2. qu. lxxii. art. 1 resp.

purpose; which waits for the 'coming' of the Kingdom, for the perfection of which man's nature is capable, and for the complete manifestation of God (Ro 5²).

These three principles are inseparably connected (see Aug. *Enchir.* 8, on this point), and hope not less than the other two is a principle of moral action, acting directly upon the will (Aquinas, *Sum.* ii. 2. qu. xⁱⁱⁱ. art. 1. concl. '[Spes] in voluntate est ut in suo proprio subiecto'). It inspires endurance and self-control, stability and firmness. It colours man's intellectual outlook upon life. It hits the due mean between shallow optimism and pessimism. It fortifies the will and nerves it for the task of self-conquest, and for that 'patience' which, according to NT conceptions, is itself a form of moral energy, demanding the output of strength (Col 1¹¹). It is the chief element in perseverance. 'Spes facit Deo adhaerere . . . in quantum scilicet per spem divino auxilio innititur ad beatitudinem obtinendam' (*Sum.* ii. 2. qu. xvii. art. 6).

Thus hope forms a great part of heroic virtue. It is related to faith 'as the energetic activity of life is related to life . . . Hope gives distinctness to the objects of faith' (Westcott on He 3⁹). Hence the heroes of faith in the Bible are also patterns of hope: Abraham (Ro 4¹⁸), the Psalmists, the Prophets, the Apostles, the martyrs and saints of the OT and NT (He 11; cf. Wis 3⁴, 2 Mac 7¹⁴, 2 Es 7²⁶, Bar 4²²). And, being a virtue, hope is accordingly a duty, and is a frequent topic of exhortation in both Testaments. (See esp. the First Epistle of St. Peter, 'the Apostle of hope,' and note the frequency of the word in the Pauline Epp. and Hebrews.)

3. The moral fruits of hope may be summarized as follows. (1) The joyous temper which St. Paul describes as 'joy and peace in believing' (Ro 15¹³), the confidence which springs from the assurance that God controls and overrules for good all that dismays or perplexes the soul, and that 'all things work together for good to them that love God' (Ro 8²⁸, 28²⁷, 12¹², 1 Th 5¹⁸, Ph 1²⁰ 4⁴, He 3⁶).—(2) Perseverance in prayer. 'Without hope it is impossible to pray; but hope makes our prayers reasonable, passionate, and religious; for it relies upon God's promise, or experience, or providence, and story. Prayer is always in proportion to our hope zealous and affectionate' (J. Taylor, *Holy Living*, ch. iv. § 2).—(3) Patience and endurance in the duties and trials of common life. 'Patience worketh experience, and experience hope' (Ro 5²⁴). The Bible is the book of hope, because it is a record of sufferings endured, surmounted, and overruled for good. The special value of the OT lies in the fact that throughout its pages the Hebrew mind is, as it were, being prepared for the appearance on the stage of human life of the Man of Sorrows. The Bible shows us the various methods by which man is disciplined for the service of God and humanity; it discloses in repeated instances 'the end of the Lord; that the Lord is very pitiful, and of tender mercy' (Ja 5¹¹). In all these, hope finds its unfailing encouragement and support.

4. It remains to say something of the chief vices opposed to hope. The excess of hope, ill-grounded or immoderate confidence, is presumption. The promises of God, which constitute the ground of hope, are not unconditional. He has not, for example, promised forgiveness to those who persevere in sin or who cease from well-doing. Presumption may spring from pride—inordinate trust in one's own powers or in the mercy of God, that is to say, from an exaggerated estimate of self, or from a defective sense of the difficulty of goodness, or from that self-ignorance which induces us to forsake without necessity the ordinary path of duty, and so involve ourselves in self-induced difficulties.

Such conduct is contrary to the spirit of the petition, 'Lead us not into temptation' (see W. H. Mill, *Five Sermons on the Temptation*, Cambridge, 1844, no. 5; Bernard, in *Ps. 'Qui habitat,'* Sermon. xiv.). The remedy against presumption is the spirit of humility and holy fear, and attention to the warning implied in 1 Co 9²⁶, 10¹², He 3¹²⁻⁴¹ 6⁴⁸, Jude⁹ (see Taylor, *Holy Dying*, ch. v. § 6; and Aquinas, *Sum.* ii. 2. qu. xxi.).

The defect of hope, on the other hand, is despair, which springs not necessarily from infidelity but from lack of confidence in God and servile fear. The Heb. verb for 'despair' (*shak*) is an uncommon one (Ec 2²⁰; see also 1 S 27¹, Job 6²⁶, Is 57¹⁰, Jer 2²⁰ 18¹⁴). The conception occurs in the NT only to be negated (2 Co 4⁸; the exception in 2 Co 1⁸ is, as the context shows, only apparent). Despair is, in fact, incompatible with the spirit of faith (2 Co 4¹³). It is, as Aquinas points out, a principle of sin (cf. Eph 4²⁹), and that for three reasons. (1) Just as hope is based on a true conception of God's character, so despair results from a false and unworthy one, by which God is robbed of His due honour. (2) Despair acts on the will and leads to recklessness of living. 'Sublata spe irrefrenate homines labuntur in vitia et a bonis laboribus retrahuntur.' (3) Further, despair implies that 'aversion from the unchangeable good' which is the very essence of sin. 'If sin is the death of the soul, despair is its descent into hell' (Isidore, quoted by Aquinas, *Sum.* ii. 2. qu. xx. art. 3; cf. Aug. *Enarr. in Ps.* 144¹¹).

The causes of despair are various. Moralists specially mention two sins: luxury and 'accidie' (*g.v.*)—that spiritual sloth which robs a man of hope and so casts him down that he thinks the good unattainable. To these may be added the lack of gratitude for God's benefits, impatience, and culpable 'weakness of spirit' (Taylor, *Holy Living*, ch. iv. § 2).

The remedies suggested for despair are at the same time means for sustaining or augmenting hope. Taylor advises (*loc. cit.*): (1) Soberness and moderation in our expectations, and consequent indifference to the changes and chances of human life. (2) Reflexion upon the character of God 'in whom there are all those glorious attributes and excellences which in the nature of things can possibly create or confirm hope'; the soul must contemplate the power of God and His fidelity to His promises. (3) Recollection of Christ's travail for our redemption, as witnessing to the infinite willingness of God to save and pardon. In this connexion Augustine (*in Joan. Evang. tract. xxxiii.* 8) refers to Ezk 18²⁷ as a text of comfort for the despairing. (4) Remembrance of the past mercies of God, and of His providential care for the soul. This is implied in St. Paul's words, 'experience worketh hope' (Ro 5⁴). To these may be added (5) the abiding and continuous spirit of penitence—contrition for sins already forgiven and often-repeated acts of repentance. 'Spes sua cuique est in conscientia propria, quemadmodum se sentit ad dilectionem Dei et proximi cognitionemque proficere' (Aug. *de Doct.* iii. 14).

LITERATURE.—Augustine, *Enchiridion*, 8, and *passim*; Bernard, in *Ps. 'Qui habitat,'* Sermon. vii.; Aquinas, *Summa*, i. 2. qu. lxi. § 1; ii. 2. qu. xvii. and xx.-xxii.; Jeremy Taylor, *Holy Living*, ch. iv. § 2 (*Works*, ed. C. P. Eden, London, 1856, vol. iii. p. 160 ff.); T. B. Strong, *Christian Ethics*, London, 1886, Lect. iii.; J. R. Illingworth, *Christian Character*, do. 1904, ch. iv.; R. W. Church, *Advent Sermons*, do. 1886, no. 4; B. F. Westcott, on He 9¹⁹ 10²⁰; I. A. Dorner, *Syst. of Chr. Ethics*, Eng. tr., Edinburgh, 1887, § 46.

R. L. OTTLEY.

HOPE (Greek and Roman).—The etymological association of *ἔλπις* with *voluptas*, 'pleasure,' 'will,' 'desire,' is perhaps illustrated by Pindar, *Pyth.* ii. 49; but the neutral meaning 'expectation,' whether of good or evil, common from Homer to

Herodotus, is still for Plato the normal one (*Laws*, 644 C [which Liddell and Scott, s.v. *ἄλτις*, II., misunderstand] and *Philebus*, 39 E). The verb throughout Homer seems to mean 'expect' or 'deem'; the noun occurs twice in the *Odyssey* (xvi. 101 and xix. 84), in a formula, in the sense of 'hope.' There is no personification of hope in Homer.

In the myth of Pandora (Hesiod, *Works and Days*, 96), Hope remains in the jar when other evils have flown forth and been dispersed among men. The natural and traditional interpretation of this is that hope stays with man as his sole consolation (Campbell, *Pleasures of Hope*, i. 30-40; Shelley, *Masque of Anarchy*, xxii.-xxiv.; Cowley, *The Mistress*). On this view the jar contained a mixture of good and evil, corresponding vaguely to the two jars in the Homeric apologue (*Il.* xxiv. 527-533). Further confirmation is found in a fable of Babrius (58), in which the jar contains only blessings, hope remaining when the others are dispersed and lost. But, if we may press the logic of a myth, it can be plausibly argued from the phrase 'other evils' that hope too is an evil.¹ It is the delusion which, in Cowper's words (*Hope*, 153), 'sets the stamp of vanity on all, That men have deemed substantial since the fall,' and there is abundant confirmation of this view in the many passages of the moralizing poets which warn the too easily elated Greek against the special danger of his temperament, 'the chase of a cheating prey with hopes that shall never be fulfilled' (Pind. *Pyth.* iii. 23). Another ingenious mediating interpretation makes the blessing to consist in the absence of hope in the sense of foreknowledge of fate. This would do for humanity what the Prometheus of Æschylus (*Prom. Vincit.* 250) boasts that he did by implanting in them 'blind hopes that they might hide with thin and rainbow wings the shape of death' (Shelley, *Prom.* II. iv. 62). (O. Gruppe [*Gr. Mythol. und Religionsgesch.*, Munich, 1906, p. 1025 n. 1] is inexact in saying that *ἄλτις* is an evil in Æschylus; and Walz's citation of *Perseæ*, 803, is equally irrelevant. So in Pindar, *Isth.* ii. 43, *φθόνη* . . . *ἄλτις*, which means merely the hopes of envious enemies, is misunderstood by Schmidt and many others.) The question has been much debated of late, but there is little prospect of agreement (see Paul Girard, 'Le Mythe de Pandore,' *REG* xxii. [1909] 217 ff., and Walz, 'A propos de l'Elpis hésiodique,' *ib.* xxiii. [1910] 49-57). There is no interpretation of the myth that will satisfy all requirements of a captious logic. Why, for example, should Zeus in the accomplishment of his revenge wish to console mankind? And how, on the other hand, can in the one case the escape from the jar and in the other the remaining behind in it consistently symbolize the presence with mankind of a blessing or a bane?

In post-Hesiodic literature we may distinguish, though we cannot keep apart, (1) the idea already glanced at that hope is an illusion and an evil; (2) the topic of the better hope of the initiated or the good; (3) the anticipation of such modern ideas as the duty of hopefulness; (4) the personification of hope.

(1) 'Creatures of a day,' says Simonides of Amorgos (i. 3-7),

'They live like cattle, knowing not how God
Shall bring each thing to its appointed end.
But Hope and sneaky confidence maintain
The agitation of their vain desires.'

(See on this Wilamowitz, *Sappho und Simonides*, Berlin, 1913, p. 272 ff.)

¹ By the Sanskrit poets hope was classed among the evils which the true sage must renounce to secure perfect tranquillity of mind (cf. Böhlingk, *Ind. Sprüche*, St. Petersburg, 1870-72, nos. 1046-52, 1477, 2448, 2600).

Solon re-echoes the thought (xii. (iv.) 33 ff.):

'We mortals think alike, the good and bad:
Anticipation maketh all men glad,
Till evil strikes, then we deplore our fate
Who gaped on airy hopes in vain elate.'

This general moral he applies to every trade and vocation in turn, in illustration of 'the ample proposition that hope makes in all designs begun on earth below' (Shakespeare, *Troilus and Cressida*, I. iii. 3). In similar vein, Theognis writes (637):

'Hazard and Hope, two cruel gods are they,
Who equally on all mankind do prey.
Men's fortunes prosper oft beyond their thought
And hope, and oft good counsel comes to naught.'

After Theognis, Pindar (*Nem.* xi. 46) and the dramatists (Soph. *Antig.* 616; Eurip. *Sup.* 479) take up the parable. Thucydides incorporates it in his cynical philosophy of human motives (see P. Shorey, *Transactions of Amer. Phil. Assoc.*, vol. xxiv. [1893] p. 71; F. M. Cornford, *Thucydides Mythistoricus*, London, 1907, p. 167 f.). 'Hope easily led astray' is one of the elements of which the mortal soul is compounded by the divinities that came to the making of man in Plato's *Timæus*, 69 D, and hope is a motive of crime in Antiphon (fr. 58, Diels) and Democritus (fr. 221).

This is the prevailing tone. But, of course, hope is also described as a blessing and a consolator, and there are parallels with most familiar quotations, from Pope's 'Hope springs eternal' (Theognis, 1135) to Gay's 'While there is life there is hope' (Theoc. iv. 42), and Prior's 'For Hope is but a dream of those that wake' (Pindar, *ap. Stob. Flor.* 111. 12). Æschylus 'Exiles feed on hope' (*Ag.* 1668) became a proverb. (For a collection of commonplaces, see Stob. *Flor.* 110 ff.; C. F. Nägelsbach, *Nachhomer. Theol.*, Nürnberg, 1857, p. 383 f.; L. Schmidt, *Ethik der alten Griechen*, Berlin, 1882, ii. 70-75.)

(2) The better or fairer hope is almost a technical term for the assurance of a blessed immortality which the mysteries brought to the initiated (see C. A. Lobeck, *Aglaophamus*, Königsberg, 1829, i. sect. 11, pp. 69-73; Pindar, in Plato, *Rep.* 331A, and Plato, *Phædo* 63 C, where Burnet comments, 'Elpis is Orphic for faith'). This better hope extends to worldly prosperity also, and is sometimes the reward of moral and not merely ceremonial purity (cf. Isocr. iv. 23 with viii. 34-35, i. 39, and xv. 322). In Antiphon, vi. 5, it is a sanction of the oath and of the righteous administration of justice.

(3) The friendly exhortation not to despair but to cling to hope (Soph. *Trach.* 125) passes by insensible transition into the affirmation of the duty of hopefulness (Pind. *Isth.* vii. [viii.] 16; Eur. *Herc. Fur.* 105; Horace, *Od.* II. x. 13). The transition and the blending of the idea with the better hope of the righteous appears in a notable passage of Plato's *Laws* (732 C). More simply Demosthenes (*de Cor.* 97), in an often imitated passage, declares to the Athenians:

'Good men should attempt all honourable things, casting before them good hope as a shield and bearing bravely what God gives.'

Similarly Menander (fr. 572, Kock):

'When thou dost well, thrust forth to cover thee
Good hope a shield, in confidence that God
To righteous boldness lends a helping hand.'

But there is a wide gap between these sayings and Emerson's optimistic Americanism: 'We judge of a man's wisdom by his hope.' To Epictetus (fr. cxlv., Didot) and Democritus (fr. 185, Diels) is attributed the saying that 'The hopes of the educated are better than the wealth of the ignorant.' The saying, 'The hopes of right-thinking men are attainable, those of the foolish not' (Democr. fr. 58, Diels), may be ultimately derived from Plato's *Philebus*, 40 A-B.

(4) Hope is freely personified in Greek poetry, and Clytemnestra's 'My hope shall never tread

the halls of fear' (*Æsch. Ag.* 1434) is as bold as Lady Macbeth's 'Was the hope drunk, wherein you dressed yourself?' Hope is represented on a marble vase in Rome and on coins, holding a branch in the left hand and a pomegranate flower in the thumb and first finger of the right, the symbolism of which is doubtful (see Roscher, *s.v.* 'Nemesis,' and Müller-Wieseler, *Denkmäler der alten Kunst*, Göttingen, 1835-81, ii. fig. 670). But there is no evidence of an actual cult in Greece. Theognis' admonition to pray to Hope first and last (1146) proves as little as the association, in *Anth. Pal.* ix. 146, of Elpis with Nemesis, or with Tyche in *Anth. Pal.* ix. 49 (cf. *Roman Sepulchral Inscriptions*, xi. 6433) and 134, or the plural Elpides in *Anth. Pal.* x. 70 and vii. 420. Any half-personified abstraction may be a 'god' in Greek poetical rhetoric from Euripides down.

It is otherwise with the Roman Spes, to whom a temple was erected in the *forum holitorium* in 258 B.C., and who perhaps had a still earlier worship indicated by the term *Spes Vetus*, referred to a district near the Porta Labicana. She first appears in literature in Plautus (*Cist.* 670, 'Spes sancta'; cf. *Bacch.* 893, *Pseud.* 709, *Merc.* 887, *Rud.* 231). The theory of Preller that she was originally a garden-goddess, the farmer's hope of harvest, is rejected by Wissowa and Axtell (*Deification of Abstract Ideas in Roman Literature*, Chicago, 1907, p. 18). Whether the more specific Bona Spes is an essential part of the conception, or a later development, or a mere literary epithet, is open to debate. She was worshipped at Ostia and Aricia by the Emperors, and appears once in the prayers of the Arval Brothers. The Romans made more of the cult of personified abstractions than the Greeks, but even in Latin literature the line is hard to draw. In Horace (*Odes*, i. xxxv. 21) and Tibullus (i. i. 9, and ii. vi. 20-28), there is little to choose between poetic personification and cult. The insistent repetition of the name at the beginning of the line in the Tibullus passage may be nothing more than a literary *motif* common in Latin elegy, and traceable as far back as the speech of Nestor in *Il.* xxiii. 315 f.

The relation between these Greek and Roman ideas and the Christian virtue of hope does not seem to have been adequately studied. It is sometimes stated that the symbolism of the anchor of hope is classic. But the anchor on Greek coins does not appear to be associated with hope, and the association in Greek poetry is rare. In Aristophanes, *Knights*, 1244, 'the frail hope on which we ride' is apparently a raft.

In *Æschylus, Ag.* 505, 'when many hopes are broken' or torn away, the scholiast says that the metaphor is from an anchor. Epictetus said (fr. xxx., Schenkl), 'We should not moor a ship from one anchor, or life from one hope.'

LITERATURE.—This is given in the article.

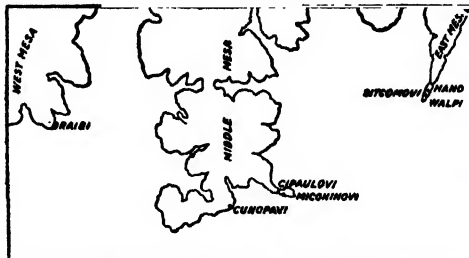

PAUL SHOREY.

HOPI.—A body of American Indians, numbering 2218 in 1912 (as compared with 1839 in 1896 and 1878 in 1904) and occupying, within a reservation of 2,472,320 acres in N.E. Arizona, the six pueblos of Walpi and Sichumovi on the 'East Mesa', Shongopovi, Mishongnovi, and Shipaulovi on the 'Middle Mesa', and Oraibi on the 'West Mesa,' to which must also be added the Tewan pueblo of Hano, a little N. of Sichumovi. Practically the sole map of the region is the one herewith reproduced from *JAEA*¹ iv.

The language of the Hopi belongs to the Shoshonean stock; yet in their ritual many Keresan words occur, and Zuni influence is potent, while

¹ Special abbreviations employed in this art.: *AmAn*=*American Anthropologist*; *FCMAS*=*Field Columbian Museum, Anthropological Series*; *JAEA*=*Journal of American Ethnology and Archaeology*.

there are marked analogues with Nahuatl culture. The composite character of the Hopi is also substantiated by their legendary history, which

represents different portions as coming from widely separated parts of the country.

The term 'Hopi,' which these people prefer, and which alone should be applied to them, is a contraction of *Hopitah*,¹ 'peaceful ones,' or *Hopitah-shinumah*, 'peaceful all people'; and the common appellation of *Mogus* (with many variant spellings), which means 'dead' in Hopi, is an offensive misnomer.

As a tribal name *Mogus* 'is seemingly of alien origin and of undetermined signification—perhaps from the Keresan language (Móscha in Laguna, Mo-ta in Acoma, Mótal in Sia, Cochiti, and San Felipe), whence Espejo's "Mohace" and "Mohoc" (1583) and Oñate's "Mohoqui" (1598) (Fewkes, *HAI* i. 560). They are known to the Apache also as Earke ('live high up on the mesas'), and the Zuni sometimes derisively call them Amukwikwe ('smallpox people') and Ilapeka ('excrement people'). The name for their country is Tusayan (Apache, 'place of isolated buttes'; for further synonyms, see Fewkes, *op. cit.* 567 f.).

1. History.—The districts from which the phratries came were, according to Fewkes (*19 RBEW*, 582): Tokonabi (S. Utah)—Chua, Ala; Palatkwabi² (S. Arizona) and the Little Colorado—Patung, Lengya (?), Patki, Kukuch, Piba, Tuwa, Tabo; the Mniobi (Rio Grande valley) and New Mexican pueblos (Zuñi, Acoma, Jemez, etc.)—Honau, Kokop, Pakab, Asa, Buli,³ Honani. The order in which these clans reached Tusayan is very uncertain (Fewkes, *19 RBEW*, 585 f.; for the native traditions, cf. the very full account by Stephen, *ap. Mindeleff*, *8 RBEW*, 18 ff.; also Voth, *FCMAS* viii. 22 ff.), but perhaps the most reliable summary is that of Fewkes (*AmAn*, new series, ii. 694 f.).

Of the existing Hopi pueblos, Walpi, Shongopovi, Mishongnovi, and Oraibi (the Oraibi colonized from Shongopovi) were established before 1629; Sichumovi (colonized from Walpi) and Shipaulovi (colonized from Walpi and Mishongnovi) were founded about 1750; and Hano was built early in the 18th cent. (Fewkes, *AmAn* vii. 414, and *19 RBEW*, 581 f.; see, further, *HAI* ii. 901, 553 f., i. 871, ii. 142 f., 564, 551, i. 531). The inhabited pueblos are elaborately described by Mindeleff (*8 RBEW*, 61-79), who also describes the ruins of Old Walpi, Old Mishongnovi, Shitsaimu, Awatobi, Kokopki (called by him 'Horn House'), Chackpahu (called by him 'Bat House'), Kawaika (called by him Mishiptonga), Moen-kapi, Kwaituki, Tebugkihu, Chukubi, and Payupki (*op. cit.* 45-60; for the tradition regarding Payupki, see Stephen, *ap. Mindeleff*, 40 f.).

These are only a few of the ruined sites, and to them may be added Chubkwichalobi, Honanki, Kachinba, Kiskobi, Kukuo-

¹ The spelling of Hopi names is by no means uniform; in the present art. the vowels have their Continental value; *u=u* in 'but'; *p* and *b*, and *t* and *d*, are indistinguishable; *to=ah* in 'chink'; *ñ=n* in 'finger'; *o=ah* in 'shall'; *q=German sh*.

² For the Hopi tradition of the destruction of Palatkwabi, see Voth, *FCMAS* viii. 48-68.

³ On this clan, traditionally said to be Tewan in origin, and to have migrated to Zuñi and thence to the Hopi, being one of the components of the population of Awatobi, see Fewkes, *AmAn*, new ser., xii. 576-594.

homo, Lengyanobi, Lululongturkwi, Tukinobi, Wukoki, and Wukopakabi; as well as the legendary sites of Etipekya and Hushkovi, and villages mentioned by the early Spanish writers, such as Cuaranabi and Qulana (cf. *HAI* i. 293, 565, 638, 703, 735, 764, 778, ii. 834, 976, i. 442, 591, 809, ii. 839, and the references there given). Mindeleff (19 *RBEW*, 644) doubts whether any of the ruins of Tusayan are more than 400 years old.

In 1774 or 1775 the Hopi population numbered, according to Fr. Escalante, 7494, of whom two-thirds were at Oraibi; in 1780 they had been reduced by famine to 798. In 1850, M'Call estimated their number at 2450 (Bancroft, *Hist.* 261, 266, 462, note 28). The first visit after the American occupation of Arizona was by Ives in 1858, and in 1869 an Indian Agency was established for the Hopi. See Fewkes, in *HAI* i. 560-562; Bancroft, *Hist.*, esp. 46 f., 87 f., 154, 173, 201, 221 f., 225-230, 234, 239, 246, 256, 349, 363-367, 391-398, 547 f.

2. Culture and organization.—The Hopi are essentially agricultural, and, at least in its present form, their religion centres in the need for rain and in ceremonies designed to promote the growth of the harvest. It is maintained by Fewkes (*AmAn* ix. 172) that, the further back they are traced, the closer is their resemblance to the general culture of the so-called cliff-dwellers (cf. *ERE* i. 685), and their history indeed suggests, in its stories of the moving of pueblos from low ground to the tops of the mesas (as after the massacre of the Spanish priests in 1680), the way in which the cliff-dwellings came to be constructed. The pueblos themselves (on which cf. *ERE*, loc. cit.) are, as Mindeleff points out (19 *RBEW*, 639 ff.), essentially a product of the plateau country into which the migrations of the Hopi led them. They learned the custom of storing grain to provide both against drought and against the forays of hostile tribes, such as the Apache and the Ute, and this forced the small villages to amalgamate, at first on the foothills, and later on the summits of the mesas. Yet the necessities of continued agriculture—or, rather, horticulture—obliged them to construct summer villages near their fields, a notable example being the present village of Moen-kapi, about 40 miles N.W. of Oraibi (see Mindeleff, 8 *RBEW*, 77-79).

Within the villages the Hopi are divided into 'clans,' or *wingwu*, these being descendants of sisters; and into groups of *wingwu* from the same female ancestor and possessed of a common totem, or *nyimnu* (Stephen, ap. Mindeleff, 8 *RBEW*, 16). The whole Hopi system is, as will be seen (below, § 4), matriarchal, and the form of the Hopi pueblo is materially affected by this fact. Accordingly, as Mindeleff notes (19 *RBEW*, 647),

'as the men who are adopted into it by marriage take up their quarters in the family home and children are born to them, more space is required. But additional rooms, which are still the family property, must be built in the family quarter, and by a long-established rule they must be built adjoining and connected with those already occupied. Therefore in each village there are constant changes in the plan; new rooms are added here, old rooms abandoned there. . . . It is not unusual to find in an inhabited village a number of rooms under construction, while within a few steps or perhaps in the same row there are rooms vacant and going to decay.' Since, moreover, care is taken, when first laying out the pueblo, to secure sunny exposures for entrances and terraces, as well as protection against cold and wind, the general growth of the pueblos has been N.W. or S.E. (Fewkes, *AmAn*, new series, viii. 83 f.).

In the building of the houses all the heaviest work is done by the men, but the women normally do the plastering and all else that their physical strength allows, both in the houses and in the kivas, or chambers for ceremonial gatherings and the general purposes of a club-house (Mindeleff, 8 *RBEW*, 100 ff., 111 ff., where the simple rites connected with building are also given).

An instrument peculiar to the Hopi among the American Indians is the *putshkoku*, or 'rabbit stick' (represented in the accompanying cut from a specimen in the collection of the U.S. Government), which

'is delivered in the same way as the Australian [boomerang], and its course after it strikes the ground often brings it to the right or left of the thrower and nearer to him than the farthest point reached in its flight. It makes one or more revolutions in its flight toward a rabbit, and if it does not strike the animal directly, its rapid gyration when it touches the

ground makes probable the hitting of any object within several feet. So far as is known this is the only aeroplane club used in America. The material is Gambell's oak (*Quercus gambellii*), and a branch of the proper curve is selected for its manufacture. One end is cut to form a handle, and the club is usually varnished with resin and painted with an invariable design in black, red, and green. Of late years a rabbit figure is frequently painted thereon. The weapon has a religious significance, probably arising from its use in ceremonial rabbit hunts' (Hough, *HAI* ii. 348). The *putshkoku* constitutes part of the equipment of the Makto and Tolikmatu kachinas' (Fewkes, 21 *RBEW*, 113, 116, plates xlix., li.).

3. Birth, naming, and initiation.—The parturient mother is usually attended by her mother (or, if her mother is dead, by her aunt or other female relative), who is not, however, generally present during actual parturition, except in a case of difficult labour or the like. The father likewise remains away under ordinary circumstances. After the child has been born, its head and the head of the mother are washed with amole suds, and the infant's body is rubbed with ashes, after which an ear of maize is placed in its cradle to guard it. The care of the new-born child devolves mainly upon the paternal grandmother (or, if she is dead, upon her sister or other female relative on the father's side), and until the 5th day the mother must not see the sun or receive any solar light. On the 5th day the washing is repeated, as well as on the 10th, 15th, and 20th. During this period the mother may eat no meat or salted food, and all sustenance must be prepared, at least in part, with a decoction of juniper leaves; and for these 20 days the mother is, furthermore, forbidden to be barefoot. Shortly after birth four horizontal lines are drawn upon the wall of the room, these being called the child's 'house,' and on each of the days of washing one of these lines is solemnly effaced—a ceremony whose real meaning is still unknown—and is offered to the rising sun with a prayer for old age.

The 20th day marks the purification of the mother, the naming of the child, and its presentation to the sun. On this day both mother and child are again solemnly washed, the former also being obliged to stand over a steaming vessel into which juniper is thrown, thus receiving the final purification. The bowl with its contents, together with sweepings and everything connected with the mother during her ritual impurity, is then thrown away without ceremony. The after-birth, which has been kept until this time, is sprinkled with sacred meal, a feather is added, and the whole is rolled together, waved over the mother's head, and carried away to be shaken out or buried by the paternal godmother. When the latter returns, she rubs the mother's arms, neck, and face, and the child's face (on the Middle Mesa she takes ears of maize and makes four passes over the front of the child, without touching it, from head to foot), and with prayer-meal and ears of maize she makes some such prayer as, 'May you live to be old, may you have good maize, may you keep well, and now I name you N.' All the other

¹ On kachinas see art. CALENDAR (American), vol. III. p. 67, and DRAMA (American), vol. IV. p. 371 f.

² It may be queried whether these lines do not represent the four 'houses,' or stages, of the Hopi creation legends. On the child's 'house,' see Voth, *FCMAS* vi. ii. 42.

women belonging to the father's clan do likewise, one of the many names thus given being finally selected to be borne until initiation into one of the fraternities. The child is now placed in its cradle, and, when the father (whose presence or absence during these ceremonies has been immaterial), announces sunrise, the infant is carried by the godmother, escorted by the mother, bearing prayer-meal. The face of the child is uncovered, and the godmother and mother pray over the meal and cast it towards the rising sun (on the Middle Mesa the godmother plants two *bahas* [on which see below, § 11]—one for the mother and one for the child).

Meanwhile, provision has been made for a feast, in which *nukkuibi* (stew of mutton and shelled maize) and *pikami* (sweet mush) are indispensable. The first morsel of each food is given in sacrifice to the sun, and the child then receives a small bit. After the feast, when the mother has returned a larger portion of maize meal than was given her for her child, the guests return to their own homes.

About the age of eight or ten, children undergo what may be the survival of an initiation rite. In the course of the Powam ceremony the children are led into the presence of the two Tufwupkachinas either by their mothers or by their godfathers (godmothers in the case of girls). The children, who carry ears of maize, a handful of prayer-meal, etc., are then flogged by the kachinas with yucca whips, the boys severely, the girls more gently. After them the godfathers (but not the godmothers) are whipped, and then men with various ailments. Previous to this whipping the children have believed that the kachinas are real; after it they know that they are in reality only personations (Fewkes, 15 *RBEW*, 283-285, 21 *RBEW*, 36, 69; Voth, *FCMAS* III. ii. 103 f.).

Children are initiated into the various fraternities at about the age of fifteen or eighteen, and they then receive the names by which they are permanently known (for the initiation rites of the Antelope fraternity, see Fewkes, Stephen, and Owens, *JAEA* iv. 62-65). 'All Hopi proper names have some reference to the name of the Name Giver, never, unless coincidentally, to the clan totem of the Bearer of the name' (Voth, *FCMAS* VI. iii. 68). The real meaning of these names varies according to the clans which give them; and, even when the meaning of the individual components of proper names is known, grammatical vagueness often renders precise determination of the meaning of the whole very doubtful.

4. Marriage.—The matriarchy of the Hopi comes strongly to the fore in their marriage customs. The choice of partner usually depends upon the youth and maiden concerned, but the actual proposal is generally broached by the girl or by her representatives. Gifts are exchanged, but there is no marriage by purchase. Marriage is rare in summer or late spring, but is common in autumn or winter, when agriculture is at a standstill. Escorted by her mother (or, if she is dead, by her aunt), the girl goes to her future husband's house, where she grinds maize for three days, during which time she is expected to talk as little as possible. On the morning of the fourth day the heads of the pair are washed by their respective future mothers-in-law,¹ after which they pray, casting the sacred meal towards the dawn. After a wedding breakfast a mixture of lime, black stuff, etc., is thrown

¹ At Oraibi, after this first washing separately, 'usually the hair of the young couple is then washed thoroughly together in each bowl, and this hair washing, and especially the washing of the two heads in the same bowl, is said to be the "crucial moment" in which the two are supposed to "become one" (Voth, *FCMAS* XI. ii. 148; in one instance observed by Voth the groom refused to have his head washed, this fact giving rise to jocular doubts whether he could be regarded as really married).

at one another by the older female relatives of the pair, especially of the bride, and by the father of the groom, this solitary representative of the sterner sex soon having the worst of the encounter. A few days later it is announced that the cotton for the bride's garments is to be spun. This work is performed by the men in the kivas, their food being cooked by the women in the bride's house. Her costume itself is made by the groom, assisted by his male relatives, especially the father. After it is completed—a task that may require several weeks—the bride, whose hair has meanwhile been dressed in the married women's style of two coils hanging down in front instead of the girls' side whorls in imitation of squash blossoms, returns to her mother's house, whither she is followed, during the day, by her husband. She is required to give his family a large compensation, usually in ground maize. The newly wedded pair live with the bride's mother until they can provide a home of their own. When sick, the groom returns to his mother's house, and he is even frequently regarded as an outsider in his wife's home. Among the Hopi pre-nuptial life is usually chaste, but, though unchastity is disapproved, it is condoned if marriage follows. If, however, illegitimate children are born, they enjoy the same legal status as others, in consequence of the matriarchal system in vogue among the Hopi.

The average Hopi family consists of 5.5 persons, and the population is gradually increasing; sterility is somewhat rare; cases of voluntary abortion are not unknown (A. Hrdlička, *Physiological and Medical Observations* [= *Bull.* 34 *BE*], Washington, 1908, pp. 42 f., 6, 52, 164). A remarkable pathological feature is the prevalence of albinism, which is restricted almost entirely to the Hopi and the Zuni, the proportion among the former being 5.5 per 1000, and no marked increase or decrease being perceptible. Although albinos are not despised, and may marry those of normal colour, they themselves are very sensitive. Their marriages are frequently barren or their families are unusually small (*ib.* 191 ff.); and it is believed that albinism may be a punishment for the mother's violation of some tabu (54). According to the report of Dr. Jacob Breid, dated 4th Feb. 1905 (reproduced by Hrdlička, Table 9), out of a Hopi population of 1878, there were then 5 cases of complete albinism for each sex (2 each of children and 3 each of adults), 4 of goitre (female adults), 2 of epilepsy (1 child of each sex), 4 of idiocy for each sex (3 each of children and 1 each of adults), 1 deaf and dumb female child, 5 cases of spinal curvature (3 males and 2 females), and 67 of tuberculosis—24 pulmonary (males: children 3, adults 9; females: children 4, adults 8); 26 of bones and joints (males: children 10, adults 5; females: children 8, adults 3); 17 glandular (males: children 4, adults 1; females: children 8, adults 4).

5. Burial.—The hair of the corpse is washed and dressed; the chin and the lower cheeks are painted black; the brow is bound with a cotton cord; the face is covered with a rain-cloud masque; the body is bent together, tied, and wrapped; and prayer-sticks are placed in the hand. There is crying and mourning after death, but no screaming or loud lamenting, although there is wailing during the washing of the body and on anniversaries of the death, professional mourners being not unknown (A. C. Fletcher, in *HAI* i. 952). The adult dead are buried at night or early morning in a sitting posture, facing the east, in graveyards on the slope of the mesas or of hills near them, or they may simply be laid in crevices in the rock; the former is the normal practice at Mishongvovi and Oraibi, the latter at Shongopovi. The soul is afforded communication with the outer world by a

stick touching the body and projecting above the ground; and dishes, often filled with food, as well as a few petty ornaments, are placed by the grave, which usually has some mark indicating to what fraternity its occupant belonged. The graveyards are utterly neglected. The faces of children dying before initiation into any of the fraternities are not painted, nor do their foreheads have the cotton cord. Their bodies are thrust into rock-crevices.

On the 3rd day after death the last food- and prayer-offerings are prepared for the dead. The latter consist of a double green *baho*, a single black *baho* (the *chochokpi*, or 'seat'), an eagle breath-feather (the *pihu*, or 'road'), and about six *nakvakvosi* (a sort of prayer-bearer). The 'read' the father, brother, or uncle of the deceased

* places on the ground west of the grave, the thin string pointing westward. From this road he sprinkles a meal line westward denoting the continuation of the road. According to a belief of the Hopi, the *hikvai* (breath or soul [on which see below, § 15], of the deceased ascends early the next morning from the grave, partakes of the *hikvai* of the food, mounts the *hikvai* of the seat, and then travels along the road to the *maski* (skeleton house), taking the *hikvai* of the double *baho* along as an offering. In the case of the death of a small child that has not yet been initiated into any societies, the road is made from the grave towards the home of the child, because it is believed that the soul of that child returns to the house of its parents and is reincarnated in the next child that is born in that family. Until that time the little soul is believed to hover over the house. It is said that when an unusual noise is heard in the house, for instance a crackling in the roof, they think the little soul is moving about, and the mother then often secretly deposits a pinch of food on the floor in some part of the house for her departed child. When I asked one time what became of that child-soul in case no further birth took place in the family, I was told that in such a case the soul remained near the house until its mother died, who then took the little soul with her to the other world' (Voth, *FCMAS* xi. 103).

6. Religion: general character; ancestor-worship.—Hopi religion is broadly characterized by Fewkes (*JAFI* xi. 180 ff., 19 *RBEW*, 625) as based on a composite totemism overlaid with rites for rain and corn, the two prime necessities of the arid environment. There is also some trace of a form of ancestor-worship in so far as the dead are apparently represented by the *gnelupki*, or crooks, placed about the altar of the Antelope fraternity—the shortest being for the oldest, since old age is most bowed—and the use of the *gnelupki* by the supervisor of snake-racers may have a similar implication (Fewkes, Stephen, and Owens, *JAEA* iv. 23, 75; Voth, *FCMAS* iii. iv. 311). Again, at the feast connected with the *Humiskachina* and *Nimamkachina* one of the *kachinas*, who are also connected with the ancestor-cult, collects from the bowls of food given by each woman a pinch of every sort, this being placed in a shrine in a rock-crevice 'as food for the "early dead"' (Fewkes, *JAEA* ii. 43); while during the building of a house the future owner takes some food and places it in a niche of the unfinished wall (Fewkes, *JAFI* x. 198 f.).

7. Sympathetic magic.—All Hopi ritual is permeated with the concept of sympathetic magic. Fewkes observes (*AMAn*, new series, iii. 211) that every Hopi clan owns sacred objects which 'are thought to possess magical powers by the use of which the priests can obtain sacred results, are almost universally totemic, and are intimately connected with the ancients, the worship of whom runs through all Hopi ritual.' He happily compares these objects—called *wimi*—with the Australian *churinga* (on which see *ERE* ii. 244b). When the clans combined, the *wimi* passed into the possession of priest fraternities, and are revered by several clans, although still owned by the descendants of the clans which introduced them.

Fewkes also suggests that in the dramatic attack upon the bearers of the sun-shield in the *Soyalufiya* rite there is a representation of an onslaught on the sun by hostile powers, and that the purpose of the dramatization is to draw back the luminary from its threatened disappearance (15 *RBEW*, VOL. VI.—50

271 f., *AMAn* xi. 102). In like manner the drenching with water and filth in the course of the *Wüwüchimi* ceremony is probably a rain-charm (Fewkes, *Proc. Boston Soc. of Nat. Hist.* xxvi. 436, 448). Again, smoking is

'a ceremonial religious custom; the pipe is the *O-mow-uh* (cloud-god), and the smoke the rain cloud.' 'The smoke carries the prayer from the chief; it transfers the wish of the smoker to the object; moreover, it is a cloud, and is symbolically efficacious in bringing that which clouds produce—rain' (Fewkes, *JAEA* ii. 124; *AMAn*, new series, iv. 604, note 2; cf. iii. 222, 445). Moreover, as Fewkes says (*AMAn* x. 144), 'the most prominent symbols and figurines on several Tusayan altars of widely different societies refer to the sun, rain-clouds, and the fertilization, growth, and maturity of corn. Masked performers represent supernaturals connected with the production of the latter. The ceremonial acts about the altars or in the public exhibitions have one intent, to affect the gods who control these necessities. In their complicated rites the priests believe they can do this by reproducing ancestral ceremonies, and are guided in their presentation by current legends. Personifications, masked or unmasked, are therefore introduced that the performance may be more realistic—a more accurate reproduction of the ancient.' The whole principle of the Hopi 'altar' is based upon this concept of sympathetic magic (see *ERE* i. 336). Women do not enter the *kivas* except to renovate them annually at the *Powamö*, and in the course of some of the other festivals when their presence is necessary (Midelet, 8 *RBEW*, 129, 134).

8. Mythology.—It is scarcely possible, in our present state of knowledge, to give any list of the worshipful beings of the Hopi. We have, for instance, *Cotokinüwö* ('Sky-heart'), this being also the Hopi name for the Christian God (Fewkes, *JAFI* xv. 24, note 2; on the possible influence of Christianity upon the concept of *Cotokinüwö*, see Fewkes, *Proc. Boston Soc. Nat. Hist.* xxvi. 445); *Müyinwö*, the god of growth; *Omowöth*, the rain-god of the cardinal points; *Palüüköfi*, the Plumed Serpent; the war-gods *Püüköhoysa* and *Paluñña-hoya*; *Masañ*, the god of the under world; *Kokyänwüqti*, the Spider-Woman; *Huzrüwüqti*, the 'Woman of Hard Substances'; *Nañaiwüqti*, the Old Woman, etc. Yet, as Fewkes declares (*AMAn*, new series, iii. 214),

'although apparently very complicated, Hopi mythology in reality is simple, as most of the names of the gods are attributive. Especially is this true of the Sky- and Earth-gods, the names of which are numerous and perplexing. It would, in fact, seem that every clan had its own name for these gods, and it is this multiplicity of names which makes a proper identification very difficult. Every clan had a great Sky-god and an Earth-god or -goddess, the former being the father, the latter the mother of all minor gods. Each clan also had its totemic ancestral members—the ancients, male and female—resembling each other in type but not in name. Three supernaturals, differing in name and personation, appear in connection with most Hopi altars. These three are (a) Sky-god, (b) Earth-god, and (c) *Cultus hero* or heroine. They are personated symbolically and may be represented by a human being, a graven image, or a picture, or by all these combined.'

An important feature of Hopi mythology is the pairing of divinities into male and female, so that Stephen (ap. Fewkes, *JAEA* ii. 153, note) could observe that

'there are numerous dual gods. These are not god and bad, but male and female, as expressing essential completeness. There is no male deity without a corresponding female counterpart, but there are one or two which would seem to indicate that the two male deities are associated, but each of these has also a corresponding female deity known by the termination *ma-na* ['maid']. *Dä-wä*, the sun, and his male relative, *Tä-o-wä*, divide the task of bearing the shining shield across the sky, each carrying it four days alternately.' Furthermore, Fewkes suggests (*AMAn* v. 17, note 3) that the Plumed Serpent (*Palüüköfi*) is the dualistic counterpart to the earth.

9. Totemism.—It has already been observed (above, § 6) that the basis of the Hopi religion is totemistic—a totemism which

'has become the worship of anthropomorphic parents, male and female, a reverence which amounts to worship of the souls of the dead; of beasts or animals as sharing in part a supernatural element possibly due to metempsychosis; and of the great elements foreign to simple totemism' (Fewkes, *JAFI* xi. 194).

The principle of totemism comes conspicuously to the fore in the famous snake ceremony, where, according to Fewkes (19 *RBEW*, 1008 f.), the presence of snakes

'is generally supposed to show that this rite is a form of snake worship. It is rather a worship of the ancestors of the Snake clans, which are anthropo-zoomorphic beings, called the Snake youth and the Snake maid; but neither of these represents the Great Snake, nor has their worship anything to do with that of this personage, who was introduced into Hopi mythology and ritual by the Rain-cloud clans.'

This totemism is also the keynote of the ceremonial washing of the snakes in the kivas before the public celebrations (on this see Fewkes, *AmAn* xi. 313-318).

10. Nature-worship.—Like Hopi mythology in general, and like their altars, their conception of the Sky-god is, at least in its present form, composite. The general system of 'Sky-God Personations in Hopi Worship' has been discussed in detail by Fewkes (*JAFI* xv. 14-32). The sun is his shield or masque, 'a visible symbol of the magic power of the Sky-god conceived of as an anthropomorphic being' (14). Ahüla, the Sun-god of the kachina clans, returns in the Powamü; and, when Eototo, the Germ-god and the ruler of the under world, leads these clan-ancestors in their westward departure at the Nimankachina, he can only be deemed the same deity under another aspect (19, 24). Indeed, the kachinas in general are connected with the solar cult. In the bird-men represented in the Soyalluñia we again see a personation of the Sky-god (26 f.); and, when feather designs are found on almost three-quarters of all ancient Hopi decorated ware, while over two-thirds of the animal pictographs on pottery represent avian forms, we are here to find yet another mode of representation of the same deity (Fewkes, *AmAn* xi. 1-14), and it is for this reason that turkeys and, next to them in importance, eagles (in ancient times probably parrots as well) are kept for their feathers, which are used in the preparation of *bahos* (on which see below, § 11) and in countless ceremonies (Fewkes, *AmAn*, new series, ii. 690-707).¹ The Plumed Snake (Palülükofü), which in the Palülükofüti religious ceremony emerges from sun-symbols and knocks over a symbolic field of maize, is a representation of the Sky-god wielding the lightning (Fewkes, *JAFI* xv. 29); and the Bird-Snake personation in the Soyalluñia at Walpi represents the return of the Sun-god (28), for

'the serpent represents the lightning, one attribute of the Sky-god, and the bird, another; combined we have the Bird-Serpent, the great Sky-god of those Hopi clans whose ancestors once lived in the "far south" (i.e. Palatkwabi)' (81).

An extremely interesting cult in this connexion is that of the Alosaka, the ancestors of the Aaltü ('Horn-Men'), who, in their personations—especially at Mishongnovi, where the cult was introduced by the Patüti, the founders of the pueblo—wear close-fitting wicker caps bearing large curved projections of buckskin, painted white, and resembling the horns of the mountain sheep, which the Aaltü imitate in some of their actions. In Walpi the cult survives in the ceremonies of the Leñkapi, Wüwüchimi, and Soyalluñia (see Fewkes, *AmAn*, new series, i. 524). Like the other horned gods—Ahüla, Calako, Tufiwup, and the Natackas—the Alosaka are intimately connected with the sun. At the same time, they represent the mountain sheep, and their cult is a highly modified form of animal totemism, while the purpose of the rites performed in this cult is the germination and growth of seeds—particularly maize—and the bringing of rain.

11. Sacrifice and prayer.—Reference has been made above (§ 6) to cases of sacrifice to the dead; but the most important form of Hopi sacrifice is that to the deities. At many feasts the first morsel is taken by the head priest and set on one

¹ All the full-grown eagles in the pueblos are killed, by choking only, on the day after the Nimankachina, and whistles of eagle bone are used in many ceremonies (Voth, *FCMAS* xi. ii. 108 f.).

side, probably as a sacrifice (Fewkes, *JAEA* ii. 29 f.; cf. above, §§ 3, 6). When departing from or returning to the pueblo, a stick or stone is thrown on a pile of such objects, especially at shrines of Masaut, the god of the under world (Fewkes, *JAFI* x. 195, *JAEA* iv. 41, note 1), for whom bits of food are placed in the rafters of the house, that he may not hasten the departure of any of the family to the under world (Mindeleff, *8 RBEW*, 102); the 'prayer-meal,' which is so important throughout Hopi ritual, is also to be considered a form of sacrifice, as is the *baho*, which is presently to be noted (Fewkes, *JAFI* x. 196-200). In 1892, Fewkes witnessed a dog sacrifice at Sichumovi; and certain details in the treatment of rabbits after their death in the ceremonial rabbit-hunts may point to a former system of animal sacrifice. At the present time such sacrifice is rare; and, if it does occur, its type is highly modified (*ib.* 189). It is also noteworthy that the Hopi have a tradition of human sacrifice in connexion with their deluge legend.

An interesting object, which seems to be the medium between sacrifice and prayer, is the *baho*, or 'prayer-stick,' which bears the prayers to the deities. These 'prayer-sticks' are not confined to the Hopi, but are found also among the Navaho and Apache, with analogues among many other stocks (Hough, *HAI* ii. 304; Solberg, *AA* xxxii. 73). These *bahos*, which range from a few cm. to $\frac{1}{2}$ m. in length, are ordinarily double, 'male' and 'female,' bound together, and are made of sprigs of various sorts of willow and cottonwood trees, being adorned with pine needles, eagle feathers, etc., and painted in various colours.¹ They are prepared with fasting and other purifications, but are seldom made for the personal advantage of their manufacturer, being rather for others (cf., for an example, above, § 3), the personal prayer-bearer, or *nakvakvosi*, being somewhat similar; after they have been used, their sanctity is at an end. The *bahos* are placed in clefts in the rocks, in sacred spots and shrines, etc., usually in honour of specific deities or by special societies, and on certain ceremonial occasions. While they are being made or set in place, prayers are murmured over them, and, in their symbolism of colour, components, etc., the Hopi see a medium between him who prays and his god, so that they are a strengthening of the verbal prayer and the bearer of the petition in permanent form (Solberg, 56-59).

Like the prayer-meal, the *bahos* are regarded by Fewkes (*16 RBEW*, 297; cf. *JAEA* ii. 30, note 3) as 'sacrifice by symbolic substitution'; and he continues:

'Offerings of corn or meal would be natural among an agricultural people like the Hopi. Substitutes for human sacrifice to the gods were sometimes made by the Aztecs in the form of dough images, so that the method of substitution, common in Europe, was not unknown in America (see, further, *ERE* iii. 60b). . . . In these days sacrifice has come to be a symbolic substitute of products of the field—corn, flour, or *pahos*—still retaining, however, the names "male" and "female," and with a human face painted on one end of the prayer-stick.' The snake-whips are also to be regarded, according to Fewkes (*loc. cit.*), as true *bahos*.

Yet another form of substitutional sacrifice is seen by Fewkes (*JAFI* x. 193) in the *tihus*, or dolls, which, carved especially at the Powamü, Palülükofüti, and Nimankachina, and presented to the little girls, are 'simulacra of the gods.'

¹ The pine needles are brought from the San Francisco Mountains; certain seeds from the region south of Holbrook, Arizona (100-110 miles from Walpi); ochre from Tefka (several days distant); and the colouring materials—red hematite and green malachite—often from the Havasupai (N.W. Arizona), etc. On the sites of Homolobi, Shakwabayaki, and Chubkwicholobi, Fewkes (*AmAn* ix. 850-867) found Pacific coast shells, such as *Petunulus gyanicus*, *Conus princeps*, *Haliotis fulgens*, *Oliva hiatalis*, and *O. biplicata*, which he believes to have been brought by the Hopi in their migrations from the south.

and are analogous to the dough images of the Aztecs.

As a single example of the many verbal Hopi prayers may be cited the following, used at the Snake and Flute ceremonies and recorded by Dorsey, *FCMAS* iii. 213:

'Now we joyfully and encouraged are going to perform a ceremony here. May these clouds from the four world quarters have pity on us! May the rain-water meander through our fields and our crops! And then the corn, quickly having seeds, our children will eat; and they being satisfied, we shall also eat and be satisfied. And then after that it shall mature and we shall gather it in and put it up in our houses, and after that we shall eat and live on it. Therefore we are happy, and being strong shall perform this ceremony.'

12. Purification.—Ritual purity is as necessary to the Hopi as to any other people. Before many ceremonies continence is obligatory. At the conclusion of some ceremonies, particularly the Snake ceremony, before there can be a return to the ordinary mode of life, it is requisite to remove all that has been associated with the individual during the sacred period, this being accomplished by the taking of a strong emetic. It must also be noted that exhortation forms a portion of a number of rites, apparently with a religious signification (Fewkes, *JAEA* ii. 78, 93, 98, 103).

13. Symbolism and sinistrism.—Symbolism, here a side of sympathetic magic (see above, § 7), runs through all Hopi ritual. The connexion of feathers with the sun has already been noted (above, § 10). Passing mention may be made of the representation of lightning by the snake (see above, § 10), as well as of the numerous rain-cloud symbols, such as the terraced forms found on many of the kachina masques, and the rich symbolism of the altars. To give a full account of Hopi symbolism would practically be synonymous with detailing the entire ceremonial system of this people (cf. Fewkes, *AmAn* v. 9-26).

As a single concrete example of Hopi symbolism we may cite that of the *sipapuh*, the representation, in the floor of the kiva, of the aperture through which mankind reached the surface of the earth.¹ According to Mindeleff (*S RBEW*, 135),

'The sipapuh, with its cavity beneath the floor, is certainly regarded as indicating the place of beginning, the lowest house under the earth, the abode of Myiungwa, the Creator; the main or lower floor represents the second stage; and the elevated section of the floor is made to denote the third stage, where animals were created. Mr. Stephen observed, at the New Year festivals, that animal fetiches were set in groups upon this platform. It is also to be noted that the ladder leading to the surface is invariably made of pine, and always rests upon the platform, never upon the lower floor, and in their traditional genesis it is stated that the people climbed up from the third house (stage) by a ladder of pine, and through such an opening as the kiva hatchway; only most of the stories indicate that the opening was round. The outer world is the fourth world, or that now occupied.'

Symbolism likewise attaches to the cardinal points, of which the Hopi recognize six: north, west, south, east (in the order named), above, and below. The north really lies between the true north and west, being determined at Tusayan

'by the notch on the horizon from which the sun sets in the summer solstice; the second (west) by its setting in the winter; the third by its rising in winter; the fourth by its rising in summer' (Fewkes, *JAF* vi. 270, note). Each of these cardinal points has its own symbolic colour: north, yellow; west, blue or green; south, red; east, white; above, all colour; below, black (*HAI* i. 325).

A remarkable feature of Hopi ceremonial is the fact that circumambulation (*q.v.*) is performed sinistrally—north, west, south, east. This extremely curious phenomenon has been studied by Fewkes (*JAF* v. 33-42), his conclusion being that the north forms the initial point because, according to Hopi tradition, the *sipapuh* of the creation legend is far away to the north, whence even those

¹ The *sipapuh* is associated, in the Indian mind, with the orifice through which individuals are born (Fewkes, *JAEA* ii. 26).

aces which, according to tradition, came from the south originally emerged.¹

If this be so, it may perhaps be suggested that the reason why the west was taken as the next point, instead of the customary east, was because the legends of the cult-heroes—notably the Snake—represent them as journeying toward the west, the region associated with the dead (*Voth, FCMAS* iii. iv. 311, note 5).

14. Fire, bull-roarer, games.—The ritual preparation of are among the Hopi, as at the Wüwü-chimti and Sumaikoli, is by the drill method, and, as in India, the sticks are 'male' and 'female' (Fewkes, *AmAn*, new series, iii. 445; cf. *ERE* vi. 26*, 29*).

The bull-roarer (*q.v.*) is an important feature of Hopi ceremonies. It is regarded

'as a prayer-stick of the thunder and its whizzing noise as representing the wind that accompanies thunderstorms.' The Hopi 'make the tablet portion from a piece of lightning-riven wood, and measure the length of the string from the heart to

the tip of the fingers of the outstretched hand' (Hough, in *HAI* i. 170.). As is shown by the accompanying cut of the bull-roarer from a Hopi painting of the Teolawitze kachina, the Hopi bull-roarer is, in many cases, markedly of the rain-charm type, having a terraced top to represent rain-clouds and bearing the lightning-snake (see Fewkes, *21 RBEW*, plates iii., xxx., xxxv., xlv., xlviii., lviii.).

The games of the Hopi have been fully considered by Culin, in his 'Games of the N. Amer. Indians' (= *24 RBEW* [1907]), among these games being archery (390), ball race (666, 678 f.), bean shooter (760), buzz (755), cat's cradle (774; said by the Zuni to have been taught by the Spider Woman to her children, the twin War Gods [761, 779]), dice (160-165), double ball (649), hidden ball (337-339, 357-364), hoop and pole (495-498), races (807), shinny (633-635), stilts (731), tops (743 f.). At least some of these games are regarded by Culin as possessing a religious connotation, as ball race (666), double ball (649), hidden ball (337-339), and hoop and pole (424-426; cf. also 34, 433, 441).

Among the Hopi games, mention should also be made of a children's dance, called *wahikwinema*, or 'we-go-throwing dance,' from the fact that pifion knots are tossed to the spectators at its close. It is a secular imitation of the kachina dance, and, when observed by Fewkes on 16 Jan. 1900 (*AmAn*, new series, iv. 509 f.; cf. *21 RBEW*, 30), was performed by about 15 boys and girls, wearing ceremonial kilts and blankets, with painted bodies and with feathers in their hair, but without masques. The little girls play with *thius*, or dolls, which are generally made by the participants in the Powamä, Palülüköfti, and Nimankachina, but which possess no religious significance of value (Fewkes, *AE* vii. 45-74).

15. Anthropology and eschatology.—The theological anthropology of the Hopi is thus described by Fewkes (*AmAn* ix. 161 f.):

'The modern Hopi recognize in man a double nature, corresponding to body and soul, and to the latter they are said to give the expressive name breath-body. This breath-body man shares with organic and inorganic nature, and it likewise forms an essential part of objects of human manufacture. The figures which are so constant and prominent on altars have breath-bodies, and it is this essence, not the idol, which is worshipped. The prayer-bearer, or paho, has likewise a breath-body, and this is the essential part of the offering taken from the shrine by the god to whom it is addressed. The material stick remains in the shrine; the supernatural is taken by the God.

It is the breath-body or shade of man which passes at death through the sipapuh, or gateway, to the under-world, the place of its genesis before it was embodied as well as the post-mortem home. In this future abode, in their cultus of the dead, these shades or spirits live, engaged in the same pursuits they followed on earth. Even the different religious sodalities perform there much the same rites as in the upper-world, but

¹ The place of emergence was the Grand Cañon of the Colorado, whence also came the white men, who went to the east (Fewkes, *AmAn*, new series, i. 535, note 3).

with more resplendent paraphernalia, the magnificence of which is correlated with the imagination of the priest who may tell you of them.'

The best summary of Hopi concepts of the future life is that of Voth (*FCMAS* xi. ii. 99):

'The belief in a future state and in a continued existence after death is well defined in the religious conception and in many rites and ceremonies of the Hopi. That part of man which they believe to be immortal they call *hikvai*. . . In its practical application the *hikvai* is to the Hopi what to us is the soul in its ethical sense. At death the *hikvai* leaves the body. When asked whether it is this *hikvai* or the deceased person that continues to live in the skeleton house, the average Hopi may get confused. He knows that the body of the dead decays, and believes that it is by virtue or through the part that escapes from the body through the mouth at death, that the dead continue their existence in the future world. The details, with regard to this fact, are more or less vague in the mind of the Hopi, and vary considerably in the different traditions, clans and villages. Ten Broeck (*sp. Schoolcraft, Ind. Tribes*, iv. [Philadelphia, 1854] 86) reports a belief of the Hopi that at death they would be changed into animals, plants, or things.

With regard to the under world (*masski*, or 'skeleton house'), it is believed by the Hopi that the seasons are reversed—when it is summer above, it is winter below. On asking why the five summer 'moons' are named like those of the winter 'moons,' Fewkes (*15 RBEW*, 258) received

'this interesting hint, dropped by one of the priests: "When we of the upper world," he said, "are celebrating the winter Pa moon the people of the under world are engaged in the observance of the Snake or Flute, and vice versa." The ceremonials in the two worlds are synchronous. "That is the reason," said my informant, "that we make the Snake or Flute pahos during the winter season, although the dance is not celebrated until the corresponding month of the following summer."

From their many stories of the under world I am led to believe that the Hopi consider it a counterpart of the earth's surface, and a region inhabited by sentient beings. In this under world the seasons alternate with those in the upper world, and when it is summer in the above it is winter in the world below, and vice versa. Moreover, ceremonies are said to be performed there as here, and frequent references are made to their character. It is believed that these ceremonies somewhat resemble each other and are complementary. In their cultus of the dead the under world is also regarded as the abode of the "breath-body" of the deceased, who enter it through a sipapit, often spoken of as a lake. I have not detected that they differentiate this world into two regions, the abode of the blessed and that of the damned.'

16. Sources of culture and religion.—As has been stated above, both the culture and the religion of the Hopi are composite. That the Hopi are ultimately connected with the peoples of Mexico is energetically maintained by Fewkes, who writes (*AmAn* vii. 51 f.):

'The pueblos are frontier towns of house-builders, not of nomads, and are peopled by the descendants of colonists from Mexico, mingled with other stocks, by which they have been more or less modified and changed: hence, while comparatively low in the stage of culture, there is still enough to indicate that there are relationships to Central America. It is not improbable that both Mexican and Pueblo cultures originated from a region in northern Mexico, developing, as environment permitted, in its northern and southern homes. The refugees to the province of Tusayan lived under adverse conditions to reach any high degree of culture. They have, no doubt, much in their religious ceremonials, their arts, and their language in common with the nomads; they have intermarried to a limited degree with those of a hostile stock, and symbolism similar to theirs, and stories of like import may be repeated in tribes of widely different modes of life. These were not only the agriculturists; the Indians of the north-west coast were likewise house-builders, but in a very different way; yet with all the similarities which may be pointed out, the Pueblos are still a distinct people among the aborigines of the United States, and their closest affinities are with the peoples of the Salado, those of Casas Grandes, and those of Central America, including Mexico. There is need of further observation to demonstrate the truth of this theory, for such only can it be considered at present; but it can hardly be doubted that new researches must lead to important discoveries in this direction.'

In this connexion it must be borne in mind that the Nahuatl languages are held by such Americanists as Brinton, Chamberlain, and Kroeber, following the researches of J. C. E. Buschmann ('Spuren der aztek. Sprache im nördl. Mexiko und amerikan. Norden,' in *ABAW*, 1859), to be cognate with the Shoshonean, to which Hopi belongs (cf. Henshaw, in *HAI* ii. 556; for a meagre account of the Hopi language, see *NR* iii. 671-674). Moreover, it is generally agreed that the Aztecs, in

their invasion of Mexico, moved southward, dislodging the Huastecans, and driving them to Guatemala and Yucatan (cf. Keane, *Man Past and Present*, Cambridge, 1900, p. 411; Selser, in *ES Bull. BE* [1904] 541 f.). It would seem, accordingly, that from some common point certain clans of Shoshones who, in virtue of their environment, or through some other cause, had attained a certain degree of civilization, migrated, the one part southward into Mexico, the other northward to Tusayan. Just as the Aztec branch showed their receptivity of Huastecan culture, the Hopi branch were affected by their new surroundings, and accepted Navaho, Apache, Tewan, Keresan, and Zufii elements of culture and religion.

LITERATURE.—The only general summaries of the Hopi of any value are the art. on them by J. W. Fewkes, in *HAI* i. [1907] 560-568, and by J. Mooney, in *Cath. Encyc.* vii. [1910] 468 f. Much older material is summarized in T. Waitz, *Anthropol. der Naturvölker*, iv. [Leipzig, 1864] 207-209, and H. H. Bancroft, *NR* i. 528-556 (on all the Puebloan peoples), 600 f., and especially *Hist. of Arizona and New Mexico* (San Francisco, 1889 = *Works*, xvii.). On the early Spanish references, besides Bancroft's *Hist.*, see especially A. F. A. Bandler, in *Papers of the Archaeol. Inst. of Am.*, Am. Series, iii. i. [1890] 114-117, 155, ii. [1892] 366 ff. Among the chief early sources accessible in edited form are Pedro de Castañeda de Nagera, *Relación del viaje de Cibola*, tr. H. Ternaux-Compans, *Voyages . . . pour servir à l'histoire de la découverte de l'Amérique*, i. ix. (Paris, 1838); Antonio de Espejo, *Viaje en el año de 1582*, ed. and tr. in Hakluyt, *Voyages*, London, 1589-80, ii. 383-394 (Glasgow reprint, ix. [1904] 189-204), and *Relación del viaje*, ed. in *Colección de doc. ind. rel. al descubrimiento . . . de las poses. españ. en América y Oceanía*, xv. [Madrid, 1871] 183-189; Juan de Oñate, *Memorial*, ed. in *Coloc.* xvi. [1871] 188-227; Francisco Garcés, *Diario*, ed. in *Doc. para la hist. de Méjico*, Mexico, 1853-57, ii. i. 309-387 (cf. E. Coues, *On the Trail of a Spanish Pioneer: The Diary and Itin. of F. G.*, 2 vols., New York, 1900). See also 'Moqui Pueblo Indians of Arizona and Pueblo Indians of New Mexico,' *Extra Census Bulletin*, Washington, 1898, and P. G. S. Ten Broeck, in H. R. Schoolcraft, *Ind. Tribes*, iv. [Philadelphia, 1854] 81-82.

The first modern study of the Hopi is by J. G. Bourke, *Snake-Dance of the Moquis* (New York, 1884). The most important literature is as follows: Nathalie Curtis, *The Indians' Book* (London, 1907), 473-532 (especially for Hopi songs, with music); J. W. Fewkes, 'A Few Tusayan Pictographs,' *AmAn* v. [1892] 9-26; J. W. Fewkes and J. G. Owens, 'The La-lá-kón-ta: A Tusayan Dance,' *ib.* 105-129; J. W. Fewkes and A. M. Stephen, 'The Mam-xru-ti: A Tusayan Ceremony,' *ib.* 217-245; J. W. Fewkes, 'A Central Amer. Ceremony which suggests the Snake Dance of the Tusayan Villagers,' *ib.* vi. [1893] 285-306, 'A-wa-to-hi: An Archaeol. Verification of a Tusayan Legend,' *ib.* 303-375, 'On Certain Personages who appear in a Tusayan Ceremony,' *ib.* vii. [1894] 32-52, 'The Kinship of a Tanoan-Speaking Community in Tusayan,' *ib.* 102-107, 'The Kinship of the Tusayan Villagers,' *ib.* 304-417, 'Prehistoric Culture of Tusayan,' *ib.* ix. [1896] 151-178, 'Pacific Coast Shells from Prehistoric Tusayan Pueblos,' *ib.* 359-387, 'Tusayan Totemic Signatures,' *ib.* x. [1897] 1-11, 'Morphology of Tusayan Altars,' *ib.* 123-145, 'The Feather Symbol in Ancient Hopi Designs,' *ib.* xi. [1898] 1-14, 'Winter Solstice Ceremony at Walpi,' *ib.* 65-87, 101-115, 'Hopi Snake Washing,' *ib.* 813-818, 'The Alóseka Cult of the Hopi Indians,' *ib.* new series, i. LOUIS H. GRAY.

HORACE.—In the lifetime of Horace (65-8 B.C.) a great change came over the Roman world. If he had been in Rome at the time—but he was at Athens—he might have listened to the *Philippics* of Cicero, as a young man of twenty-one or twenty-two. In his later years, it had become obvious that Augustus had not only secured his own monarchical power, but was determined to provide for the succession to what was virtually a throne. In Horace's boyhood, it is fairly clear that the prevailing creed of educated Romans was Epicureanism. Lucretius had expounded with force and fervour the theory which denied all intervention of the gods in human affairs, and construed the universe as an aggregate of material atoms acting under mechanical laws; and, long before, a speaker in a tragedy of Ennius had put it in an epigrammatic form: 'That the gods exist I hold and shall continue to hold, but I deny that they are concerned with the doings of men; if they were, it would go well with the good, ill with the wicked,—but it is not so in the world I know' (*Telamo*, frag. 1, Ribbeck). In a time of disintegration and civil conflict, when the Republic seemed to be drifting to utter shipwreck, it was natural for men to think that the gods were careless of the welfare of Rome; just as, in a later day, the mob of the city is said to have stoned their temples when the news came of the death of Germanicus (*Suet. Calig.* 5). When Augustus restored peace and prosperity, it was possible to believe in Providence once more, and the new government made a deliberate attempt to revive the old religion of Rome; temples were rebuilt, and old ceremonies revived with unheard of splendour. According to Dio Cassius (lii. 36), Maecenas advised Augustus to practise and encourage religion, but to set his face against foreign superstition. The advice is characteristic of Horace's friend and patron, and of the strange contrasts in his nature. An indolent voluptuary at most times, he could on occasion display the greatest energy and tact; somewhat eccentric in his own literary tastes, he made no error in selecting for encouragement the really great writers of the time; interested in astrology, and perhaps ascribing his recovery from an illness to the benign influence of the planet Jupiter (*Hor. Odes*, ii. xvii. 22 f.), he

dissuaded Augustus from showing any favour to the Oriental creeds and rites which had already made considerable inroads at Rome. The revival of the old religion was undoubtedly a sound policy. The new government had to seek stability in continuity with the past, and political institutions at Rome were closely bound up with ancient rites and ceremonies. Maecenas made no slight contribution to the success of the design when he conciliated the ablest of the rising poets; and he must have been specially gratified by the accession of Horace, who had fought at Philippi under Brutus and Cassius. Horace was a later and more reluctant convert than Virgil.

Epicureanism still had its disciples, though it was no longer, perhaps, professed quite so openly. It has been remarked that the Augustan poets show a reluctance to name Lucretius or extol him directly. Virgil, exalting the knowledge of nature and the defiance of death that it brings, uses a phrase which shows us that he is thinking of Lucretius (*Georg.* ii. 492, 'strepitumque Acherontis avari'—Lucretius had spoken of the 'metus Acheruntis'). Horace, on his journey to Brundisium with Maecenas, is asked to believe that incense takes fire spontaneously on the threshold of a shrine; he refuses to do so, and uses words that belong to Lucretius, 'deos didici securum agere ævum' (*Sat.* i. v. 101). In saying 'didici,' Horace almost professes himself a disciple of the earlier poet; and it can hardly be doubted that Epicureanism was his prevailing belief, though he interested himself at times in other views. Probably Maecenas and he were as free from superstition as any two men of their time. Their ideal of life was progress towards the tranquillity and quiet good sense of Epicurus. 'You are free from avarice, you say. Well, but have all the other vices taken their departure too? Meaningless ambition? The fear of death? Anger? Dreams, the terrors of magic, miracles, witches, ghosts by night, and Thessalian portents,—have you a smile for them all? Do you count up your birthdays with a grateful heart? Are you forgiving to your friends? Do you grow kinder and better with advancing years?' (*Epp.* ii. ii. 205 ff.). Horace had dealt scathingly with the sorceries of Canidia in the *Epodes* (v. and xvii.) and in an early *Satire* (i. viii.). Spiritual or unseen powers seem to have little place in his creed. He is a man of the world, who has arrived at some measure of mental tranquillity by the help of Epicurus.

In the *Satires* and *Epistles*, Horace speaks in a familiar tone, as to a friend or friends. He does so, too, in many of the *Odes*; but some of the latter are much more public and formal in character. He is addressing his countrymen generally, as the lyric poet of Rome (*Odes*, iv. iii. 23); and here we find him lending his support to the revival of the old religion. It was neglect of the gods that brought trouble upon Italy (*Odes*, iii. vi.), and only the restoration of the temples would avert its continuance. He goes far in the direction of deifying Augustus,—he imagines him seated among the gods and 'quaffing the cup of nectar with glowing lips' (*Odes*, iii. iii. 11 f.),—further, perhaps, than Augustus himself would quite approve; for, as far as Rome itself was concerned, he does not appear to have consented to more than the association of his *genius* with the twin *Lares* of the crossroads. In the *Carmen Saeculare*, Horace is the official poet of the State; that he was definitely commissioned to write a choric hymn has been confirmed by the record of the celebration found on stone: CARMEN COMPOSITUM HORATIVI FLACCUS. Here in carefully chosen phrase he exalts the deities of the festival and the deities in whom Augustus professed a special interest. Apollo was

his chosen guardian, who appears with his bow in Virgil's picture of the battle of Actium (*Æn.* viii. 704 f.), and to whom the Palatine temple with its libraries had been dedicated ten years before. Diana is, of course, associated with Apollo. Diana as Ilithyia, the Parcae (l. 25), and Tellus (l. 29) had received special homage during one of the nights of the festival. Venus *genetrix*, the ancestress of the Julian house, is not forgotten (l. 50), and Jupiter Capitolinus appears as sovereign of the gods in the closing stanza (l. 73). It seems a curious anticipation of the future that special honour is paid to the sun (l. 9 f.), when we recall the importance which the worship of Mithra was to assume in the third century of the Empire. Poetry was not the only art enlisted in the service of the new government. The ideas of the *Carmen Saeculare* are found also expressed in stone: on the breastplate of the great statue of Augustus, found on the site of Livia's Villa, we again meet with Apollo and Artemis, the rising sun climbing the sky in his chariot and the recumbent figure of the fruitful earth.

There is, no doubt, a considerable difference between the familiar writings of Horace and his more formal lyric compositions. In the former we have seen him deny the activity of the gods; in one of the latter he professes to have been converted from this 'insaniens sapientia' when he heard the thunder roll and saw the lightning flash in a cloudless sky (*Odes*, l. xxxiv.). Some such declaration may have been expected from the lyric poet of the new age. But, as far as the old religion of Rome is concerned, we must beware of charging Horace with gross inconsistency or hypocrisy; to do so is to some extent to misunderstand the nature of that religion. The religion of Numa was not dogmatic: it made but small claim upon the belief or faith of its votary; it asked for no deep spiritual change in his life. It was largely a system of ceremonies intended to propitiate certain unseen powers, whatever their precise nature might be. If they existed, they might influence the fortunes of Rome for good or evil; to continue their rites was at least prudent, and it was prompted by patriotism and veneration for ancient institutions. Such a religion probably had not lost its hold upon Italy to the extent we are apt to suppose; to revive it was not so very artificial and unreal an effort, nor did it involve any great mental or spiritual change in those who promoted the revival or acquiesced in it. See art. ROMAN RELIGION (Fourth Period).

LITERATURE.—W. Warde Fowler, *Rel. Esper. of the Rom. People*, London, 1911, Lect. xix.; W. Y. Sellar, *Horace and the Elegiac Poets*, Oxford, 1892, chs. iii., vi.; J. Wight Duff, *Lit. Hist. of Rome*, London, 1909, pp. 503 f., 513 f.; E. S. Shuckburgh, *Augustus*, do. 1908, pp. 222 f., 285 f. For references to dissertations on Horace's religious and philosophical views see M. Schanz, *Gesch. der röm. Lit.*, ii. 1. (Munich, 1901) § 283.

W. R. HARDIE.

HORÆ ('Ἠραί, 'seasons').—In the development of Greek religion man's interests and emotions were focused first upon the earth as the source of his food, and then upon the heavenly bodies as the controllers of earth's fertility and seasonal changes. 'In analysing a god we must look for traits from earth, from "weather," from moon, from sun' (J. E. Harrison, *Themis*, p. 392). So the Horæ as weather-deities were preceded by a form or aspect in which they were the seasons of earth's fertility. In the decay and mutual shiftings of these primitive ideas and types, partly also from the very nature of religious conceptions, over-emphasis and over-precision are hard to avoid, and the analysis here made for the sake of clearness must not be mistaken for a historical evolution.

1. The Horæ as Nature-deities.—Primarily the Horæ were Nature-powers, controlling earth's fer-

tility through the weather¹—'warders of the gates of Olympus, whether to throw open the thick cloud, or set it to' (*Il.* v. 749 ff.), i.e. they send or withhold rain and dew—at first doubtless as autonomous powers, but later doing the will of Zeus, so that they tend to sink to the position of menial adjuncts of Olympian state.²

In Attica (a dry land with few streams) the dew was a precious thing (see Neumann-Partzsch, *Physikal. Geog.* v. *Griech.*, Breslau, 1885, p. 30 f.), and the Horæ were there worshipped along with Pandrosos (Dew-maiden).³ Philochoros (in Athenæus, xiv. 656a) says that the Athenians offered boiled, not roast, meat to the Horæ, praying them to avert drought and excessive heat, and to send kindly warmth and timely rains—'an interesting example of the admixture of religion with sorcery, of sacrifice with magic' (J. G. Frazer, 'The Magic Art' [= *GB*], pt. i., 1912, i. 310). The wreaths of mist and cloud which they spin are their own raiment, and in art their long flowing garb distinguishes them from the Graces (Charites [q.v.]), who finally put off all clothing (Paus. ix. 35. 6). The Horæ are always draped, and even partially veiled (see the beautiful Sosias cylix, Berlin, no. 2278, reproduced in J. E. Harrison's *Mythol. and Mon. of Anc. Athens*, London, 1890, p. 384).

Flowers and fruit were the gift of the Horæ; this was symbolized in art by their basket⁴ or laden bosom, and expressed in the local Athenian cult by their names—Thallo (Sprouting) and Karpo (Fruit). It was natural to associate them especially with the season of Nature's awakening, the spring-time (*Anth. Pal.* v. 70: *ελαυνὼν Ἠρῶν*; and cf. Meleagros, *ib.* ix. 363; in Hesiod [*Works and Days*, 75] they crown Pandora with flowers of spring, while the Charites bedeck her with jewellery). Thus identified with youthful grace and beauty in Nature,⁵ the Horæ appear in art as fair maidens, and there is hardly any attempt to differentiate the figures by means of attributes before Græco-Roman times (see P. Herrmann, *De Horarum apud veteres figuris*, Berlin, 1887). On the other hand, they were also closely connected with the gifts of harvest-tide, as is shown by the Procession of the Eiresione (εἰρεσιώρη) at the Thargelia and Pyanopsia festivals (about May and October respectively), in honour of Helios (Apollo) and the Horæ; branches twined with figs and other fruits (τὰ ὠραία πάντα) were carried in procession, and finally set up before the house-door.⁶ Their noblest gift was the grape (*Od.* xxiv. 343 f.: *ἐνθα δ' ἀνὰ σταφυλὰν παρτοῖαι ἔσσιν*, | *ὅσπρε δὲ διὸς ὠραὶ ἐπιβλέσκειαν ἑρπεθρῶν*—where ed. should write 'ὠραι'; Athen. ii. 38c: *αὗται γὰρ τὸν τῆς ἀμπελῶος καρπὸν ἐκτρέφουσι*).

The naturalistic significance of the Horæ explains their association with other deities, e.g. Hera (Paus. v. 17. 1 and ii. 17. 4), Aphrodite (Paus. v. 15. 3), Dionysos (Athen. ii. 38c), Demeter (*Homer. Hym. Dem.* 54), Apollo ('*Pind. Pæan*,' in *Oxyrh. Pap.* v. p. 25: 'Ὁραὶ τε Θεμίσιοι φιλοπτορ δασυ Θήβας ἐπὶ ἡδον Ἀπόδλωσι δαῖτα φιλοστέφανον ἄγοντες), Pan (*Orph. Hym.* x. 10: *σύνθερος Ὁραῖς*).

2. The Horæ as seasons of the year.—The regular recurrence of the gifts of the Horæ is the primary mark of the recurring seasons, and so the Horæ

¹ The word ὠρα seems at first to have been almost equivalent to 'weather' (O. Gruppe, *Gr. Myth.*, Munich, 1906, II. 1068, note 8).

² Paus. v. 11. 7: *καθέσπερ νύκας φύλακας βασιλῶν αὐλήν*. Cf. *Il.* viii. 483, where they tend the horses and chariot of Hera.

³ Paus. ix. 35. 2: *τῇ δὲ ἑτέρῃ τὸν Ὁρῶν ἡμερῶν ἀπὸ τῇ Πανδρόσῃ τιμὰς οἱ Ἀθηναῖοι Θέλλαν τὴν θεοῦ ἐνέμελλοντες*.

⁴ *μετὰ δὲ αὐτὸν ὠραῖον ἰκεταῖν τὰ φύμνα*.

⁵ Euseb. *Præp. Evang.* iii. 11. 83: *καλὰ δὲ ἔχουσιν, τὸν μὲν τὸν ἐπὶ αὐτὸν συμβολὸν τοῦ ἱεροῦ, τὸν δὲ τὸν ἐπὶ αὐτὸν τοῦ ἱεροῦ*.

⁶ *Pind. Nem.* viii. 1. 2: *ὠρα πάντα, ἀμύει Ἀφροδίτης . . . ἀνὰ πρυμνίους αὐτῶν τὴν ἐπίφρασαν γὰρ ἀμύει*.

⁷ Schol. in Aristoph. *Knights*, 729: 'Ἠραὶ καὶ Ὁραῖς ἐπιδρέσκουσιν οἱ Ἀθηναῖοι. φέρονται δὲ οἱ καλὸς τοὺς τε θελοῦντας ἐπίου περιελαίμηνους. See A. Mommsen, *Feste d. Stadt Athen*, Leipzig, 1896, p. 279, and J. E. Harrison, *Prolegomena*, p. 79.

come to be identified with periods of time in the abstract; but they 'are not abstractions, divisions of time; they are the substance, the content of time' (J. E. Harrison, *Themis*, p. 185). The original dual¹ Horæ (mother and maid)² brought to men the gifts of Spring and early Summer (the flowers), and those of late Summer and Autumn (the fruits). Their number thus coincided with the obvious division of the year into the fruitful and unfruitful seasons (*thépos* and *χειμών*); but it is not to this bi-partition that the duality of the Horæ must be traced, for Winter is no true Hora. Later came the distinction of *three* seasons,³ perhaps connected with the observation of the lunar phases (cf. Servius on Verg. *Æn.* iii. 284: 'magnum sol circumvolvitur annum. Magnum, ne putemus lunarem esse . . . antiqui . . . dixerunt primo lunarem annum triginta dierum').

'The Moon is the true mother of the triple Horæ, who are themselves Moiræ; and the Moiræ, as Orpheus tells us, are but the three *moiræ* or divisions (*μέρη*) of the Moon herself, the three divisions of the old Year. And these three Moiræ or Horæ are also Charites' (*Themis*, p. 189 f.).

But the development of divine dualities into trinities is probably not to be explained by any single formula; and the heraldic groupings beloved by archaic art had some influence here (see J. E. Harrison, *Prolegomena*, p. 288).

In function, and originally perhaps in name also, Horæ and Charites are hardly to be distinguished; the popular consciousness, at any rate, was not quite clear on this point (Paus. ix. 35. 2: *τιμωὶς γὰρ ἐκ παλαιού Ἀθηναῖοι Χάριτας Ἀφύας καὶ Ἠγεμόνην, τὸ γὰρ τῆς Καρπυῖος ἐστὶν οὐ τοῦ Χάρitos ἀλλὰ ὅρας ὄνομα*). Two Charites and two Horæ supported the front and the back of Apollo's throne at Amyklai (ib. iii. 18. 10); three of each surmounted that of Zeus at Olympia (v. 11. 7); Horæ and Charites together decorated Hera's crown at the Herakion (ii. 17. 4). The Borghese Altar (Louvre), an archaistic work freely reproducing types of the 6th cent. B.C., shows three groups of Moiræ, Charites, and Horæ (see Friederichs-Wolters, *Gipsabgüsse*, Berlin, 1885, no. 422).

The earliest representation of the triple Horæ is that on the François vase (in Florence; *Mon. d. Inst.* iv. 54-57, early 6th cent. B.C.); in literature Hesiod first makes Horæ (as well as Moiræ) three, and names them (*Theog.* 902). Homer has no definite number for either Horæ, Moiræ, or Charites. The notion of *four* Horæ is, however, attained very early, for it occurs in Alkman⁴ (7th cent. B.C.)—'three Seasons set he, summer and winter, and autumn third, and fourth the spring, when trees burgeon, but man may not (yet) eat his fill.' Athenæus preserves a fragment of Kallixenos describing a pageant at Alexandria (time of Ptolemy II. Philadelphos [285-246 B.C.]), in which walked four Horæ dressed in character, each carrying her own fruits.⁵ In Roman art the type of the Horæ was modified as four allegorical figures with conventional emblems (for description, see Nonnos, xi. 488-519; the order of the figures and the interpretation of attributes are not always easy). The extension of their functions to embrace the hours as divisions of the day, and the consequent increase of their number to twelve, is a late and frigid conceit, of no religious or artistic significance (cf. Ovid, *Mét.* ii. 26).

3. The Horæ as deities of Fate.—The Moiræ in Hesiod are sisters of the Horæ, and both are children of Zeus and Themis (Hes. *Theog.* 901 ff.: *Θέμει, ἥ τέκεν Ὀρας, . . . αἶψ' ἔργ' ὀρεόουσι καταθηγοῖσι βροτοῖσι, Μοῖρας τε*). Themis is Social Order. Both

¹ Two Horæ at Megalopolis (Paus. viii. 31. 8); cf. Amyklai, iii. 18. 10. At Athens they are grouped with Pandrosos to form a triad, just as the Charites are grouped with Hegemone (Artemis). Two Moiræ at Delphi (Paus. x. 24. 4).

² Cf. *Homer, Hymn. Dem.* 398 f.: *οἰκίστις ὥραν τρίτατον μέρος εἰς ἐνιαυτὸν | τὰς δὲ δύο παρ' ἐμοὶ τε καὶ ἄλλοις ἀθανάτοισιν*; and Aristoph. *Birds*, 708.

³ Fr. 76, Bergk:

Ὀρας δ' ὅσσην τρεῖς, θέρος
καὶ χειμὼν κῶπῳραν τρίταν,
καὶ τέτρατον τὸ ἦρ, ὅκα
σάλλει μὲν, ὁσίων δ' ἄδαν
οὐκ ἐστίν.

⁴ Athen. v. 198 b: Ὀρας τέσσαρες διασκευασμένας καὶ ἐκδύσας φέροντας τοὺς ἰδίους καρπούς.

Horæ and Moiræ are agents of the will of Zeus¹ (Paus. i. 40. 4: *ὑπὲρ δὲ τῆς κεφαλῆς τοῦ Διὸς εἰσιν Ὀραι καὶ Μοῖραι· δῆλα δὲ πᾶσι τὴν Περικρωμένην μόνωι πελθεσθαι, καὶ τὰς ὥρας τὸν θεὸν τοῦτον νέμειν ἐς τὸ δέον*—which illustrates the way in which the sense of personality had gradually faded out of these figures). Cf. Theocritus (*Id.* xv. 104 f.: *βαρδύσσαι μακάρων Ὀραι φίλαι, ἀλλὰ ποθεῖναι | ἐρχονται πάντεςσι βροτοῖς αἰεὶ τι φορεῖσαι*)—'Nor is there any God so slow as they; Yet longing eyes to them all mortals lift, For each Hour brings a gift' (J. W. Mackail, in *CLR* xxvi. [1912] 36). This aspect perhaps grew out of the perception of the recurrence of the seasons ever coming round with unvarying content (cf. *Od.* xi. 295: *ἀψ' περιτελλομένου ἔτους καὶ ἐπ' ἡλυθὸν ὥραι*, and x. 469: *ἄλλ' ὅτε δὴ β' ἐνιαυτὸς ἔτη, περὶ δ' ἔτραπον ὥραι*).²

4. The Horæ as ethical powers.—Closely akin to the foregoing is the conception of the Horæ as guardians of the moral order. To this idea Hesiod gave first and final expression, and named the triad Eunomia,³ Dike, Eirene—Order, Justice, Peace (*Theog.* 902). In Pindar the two conceptions of the Horæ, as Nature-deities, and as invested with moral attributes, find their noblest expression, e.g. *Ol.* xiii. 6 ff.: 'Therein [in Corinth] dwell Order and her sisters, sure foundations of cities, even Justice and like-minded Peace, dispensers of wealth to men, golden daughters of wise Themis.' Bacchylides has the same sentiment (xii. 186)—'Eunomia, who keeps the cities of righteous men in peace.' 'As in the natural sphere the Horæ represent a fixed order, so as ethical powers they are Loyalty, Justice, and Peace' (Jebb).⁴

In this connexion we must refer to the Hymn of the Kouretes found (1904) at Palaikastro in Crete (R. C. Bosanquet, in *BSA* xv. [1908-09] 339 ff.; and J. E. Harrison, *Themis*, p. 1 ff.). One of its verses⁵ describes 'the blessings which flowed from the rule of Zeus,—order in the universe, the regular succession of the seasons, the beginnings of justice and peace on earth' (Bosanquet, *loc. cit.*)—'And the Horæ began to teem with blessings year by year (?), and Justice to possess mankind, and all wild living things were held about by wealth-loving Peace.' The date of this Hymn is perhaps about 300 B.C. (but the actual inscription belongs to about A.D. 200; we have to do with a 'revival').

LITERATURE.—W. Rapp, in Roscher, collects most of the literary references, and gives the monuments, which hardly concern us here; published in 1890, his article is somewhat obsolete in method. J. E. Harrison's *Proleg.* to the *Study of Gr. Rel.* 3, Cambridge, 1908, is now supplemented and often corrected by her *Themis: a Study of the Social Origins of Greek Religion*, do. 1912; both of these are important.

W. J. WOODHOUSE.

HORNS.—Horns play an important part both in religious symbolism and cult and in magic, and this for reasons which go back to a comparatively primitive stage of thought, as well as to early observations made by man regarding the use of horns

¹ Hence figures of both were seen together at Amyklai (Paus. iii. 19. 4), and above the head of Zeus at Megara (i. 40. 4).

² Here must be mentioned the erroneous idea that there was a festival called Ὀραία, explained by Hesych. as = νεκρία, a festival for the dead. The word here is a mere epithet meaning 'what is seasonable,' ec. for the sacrifice (see Dittenberger, *Syll. inscr. Gr.* 3, Leipzig, 1900, no. 630: *ἐπαύριμα ὦν αἱ ὥραι φέρονται*; and 618. 38: *ζῆνός ἐνιαυτῶν Ὀραία*); it has nothing whatever to do with the cult of the Horæ (see Stengel, *Opfergebr. d. Gr.*, Leipzig and Berlin, 1910, p. 168).

³ The name Eunomia was used in several Cretan towns as a collective title for the college of magistrates (Xanthoudides, in *Eph. Arch.*, 1908, p. 208).

⁴ Iepón of the Horæ in Corinth (Paus. ii. 20. 5).

⁵ Cf. Diodorus, v. 73: Ὀραν ἐκδύσας δοθῆναι τὴν ἐπαύριμα τὰς τε καὶ τοὺς βίον διακόμεναι, alluding to the names given by Hesiod.

⁶ Text restored by G. Murray (*BSA* xv. 357)—

Ὀραι δὲ βρότον κατήγε
καὶ βροτοῖς δίκαια κατήγε
πάντα τ' ἀγροὶ ἔμπετα ζῷ
ἃ φιλοῦσθε ἔβριμναι.

by animals possessing them. These reasons will appear more clearly after certain facts regarding the place which horns hold in representations of divinities have been reviewed.

1. **Divinities with horns.**—In many religions, especially in those of antiquity, divinities are frequently represented in statue or image or picture wearing the horns of an animal on the head, or this characteristic is referred to in myths. In Babylonia the higher gods and genii often wear a head-dress with a double pair of horns surrounding the sides and front. Nin-tu, a form of the goddess Mah, is depicted with a horn on her head. Ramman is represented with four horns (see CROWN, vol. iv. p. 341).¹ Hittite deities also wore caps ornamented with several pairs of horns, probably those of a bull, as in the sculptures found at Ibriz, Carchemish, and elsewhere. Melkarth of Tyre was represented as an almost bestial god with two short horns on his head, and the Syrian Hadad has similar horns.² Phœnician goddesses usually have the horns of a cow, like Ashtaroth-Qarnaim, 'of the two horns,' but these may be borrowed from the Egyptian Hathor, identified with 'Ashtart.' Hathor, with whom the cow was identified, is depicted with a cow's head and horns, or merely with horns. Isis was assimilated to her, and cows were sacred to this goddess. Her usual ornament was a pair of horns with the solar or lunar disk between, but sometimes, as the female counterpart of the Ram of Mendes, she wore ram's horns. Ra has sometimes the disk with ram's horns, Osiris sometimes a crown with horns, and Nephthys has also the horns and disk. Kneph has a ram's head with horns, curving or long and projecting. The goddess Seti wears the crown of Upper Egypt, and from it project the horns of a cow.³ In Greece, Dionysos, one of whose forms was that of the bull, was called the 'horned,' or 'bull-horned'; and myth told how Persephone bore him as Zagreus, a horned infant.⁴ Pan and the satyrs showed traces of their goat origin in the goat horns with which they were depicted. Rivers were personified by divinities with horns or a bull's head, e.g. Achelous (q.v.) and others on coins. Ocean also had a bull's head.⁵ Some horned divinities may have been represented with horns through Egyptian influence, e.g. Io (equated with Isis), whom myth declared to have been changed into a cow by Hera, and with whom Hera was sometimes identified. Both goddesses had horns.⁶ The Gauls had a god of the under world with horns, called Cernunnos (perhaps = 'the horned,' from *cerna*, 'horn'); and a group of nameless gods, some with stags' horns, have affinities with him. Some goddesses also have horns.⁷ In India the sharp horns of Brāhmanaspati are referred to in a hymn, and the horns of Agni, who is sometimes characterized as a bull, are also mentioned.⁸ Yama, in Buddhist mythology, has horns. Northern Buddhism (Tibet) has also images of horned divinities in temples, and Mañjuśrī (= Yama) wears a pair of horns.⁹ In the lower culture, gods sometimes have horns. A carving from a temple in Fiji shows such a god.

and many examples are also found among the American Indians.¹

In many of these instances there can be no doubt that the horns worn by the gods are the relic of their earlier animal forms. Earlier worshipful animals became anthropomorphic; or, again, a worshipful animal was blended with a god. Myth and art retained for the god some part of the animal—head, or pelt, or hoofs, or limbs, or, in this case, the horns. But these last were also a symbol of power, naturally retained for the powerful god. In other cases, however, such symbols of strength may have been given to a god who had no animal past. One of the most obvious things about horned animals noted by man was the use made of their horns as instruments of destructive force. Animals butted with their horns, or tossed men or other animals with them, or ripped open their bodies. There was also a period in man's history when he made use of horns as weapons or tools. During the Stone Age, and also surviving into the Bronze Age, weapons and tools—harpoons, picks, wedges, chisels, punches, hammers, etc.—were made of reindeer's or stag's horn, and the same material sometimes served as hafts or sockets for axes.² The Columbia Indians of N. America still use axes, etc., of horn.³ This use of horns by man was transferred to the gods; e.g. in Teutonic mythology, Freyr, for want of a sword, slew Beli with a buck's horn.⁴

Thus the horn or the horned animal became a natural symbol of strength. Early religious poetry, art, and myth frequently compare gods or heroes to powerful horned animals. Balaam describes God as having towering horns like a wild ox.⁵ The tribe of Joseph is said to have horns like those of the unicorn, with which he will push the peoples.⁶ Early Egyptian monuments depict a huge bull destroying the walls of town or fortress, or piercing enemies with his horn; he represents the animal-god, or a god, or the king his descendant.⁷ In *Iliad*, ii. 480 f., Agamemnon is compared to a bull, the most conspicuous animal in the herd. Celtic heroes and kings bear such titles as *Brogi-taros* or *tarb in choicid*, 'bull of the province'; or they are called 'bull-phantom,' 'prince bull of combat'; or their personal names—Donnotaurus, Deiotaros—show that they were named after the Divine bull.⁸ The Vedic god Indra is likened to a horned bull which will repel all peoples, and Soma and other divinities are described in the same way.⁹ Mythical animal-gods are also said to destroy demoniac enemies by means of their horns.¹⁰ Hence the word 'horn' is sometimes used figuratively as the equivalent of power or strength. So, in Hebrew usage, raising the horn of a people or an individual signifies victory or pride, 'breaking' it signifies defeat;¹¹ and God is called 'horn of salvation,' or He raises up for His people 'a horn of salvation.'¹² The Latin usage is similar, *cornu* being used metaphorically for strength and courage.¹³ In Dn 7.²⁴ and Rev 17.¹³ horns signify

kings and their power, and in En. 90²² a lamb with horns signifies Judas Maccabæus, and other horned lambs the Maccabees.

It is thus obvious that the addition of horns to the image or representation of a god might symbolize his divine power apart from his being related to any earlier animal-god. This is analogous to the addition of a third horn to the pair already possessed by horned animal-gods—the triple-horned divine bull or boar of the Celts, or the three-antlered stag of a Fionn story,¹ or the giving of a horn to an animal which naturally does not possess it, e.g. the serpent, as in the case of a horned serpent on a Gaulish altar, the Thracian horned snake Zagreus, and a similar horned snake in American Indian legend.²

Some moon divinities were represented with a crescent moon on their heads or were symbolized by it. This crescent bears a certain resemblance to a pair of horns, the likeness being occasionally emphasized, and there was a tendency to confuse the crescent moon on the divinity's head with horns. This is seen, e.g., in the case of the Bab. moon-god Sin, the Greek Io, and the Egyptian Isis. But there is no clear reason for supposing that the crescent moon is the origin of all horns as applied to divinities.³

2. Semi-divine and demoniac beings with horns. —Nothing is more usual than to find various beings of a semi-divine, but more usually of a demoniac, character invested with horns. The fauns and satyrs of Greek mythology are an example of this, and more or less corresponding to these are the Russian wood-spirits, or *lesyy*, with goat-horns. These may be regarded as later anthropomorphic forms of earlier woodland spirits conceived as goats. Bab. demonology attributed to many of its monstrous demoniac beings animal heads or horns, e.g. a sea-monster with the ears of a basilisk and horns twisted into three curls, while the demon of the S.W. wind had the horns of a goat. It should be noted that Ea-bani has goat-horns as well as other animal features.⁴ In ancient Persia the conglomerate animal representations of evil powers were often horned, though here the figure of a good genius is also horned.⁵ Hebrew and later Jewish demonology had similar creatures—in some instances, perhaps, the semi-divine beings of the surrounding paganism transformed into demons, e.g. the *š'irim* of Lv 17, 2 Ch 11¹³, Is 13¹ 34¹, probably horned beings akin to the Greek satyrs and, like them, of goat origin. There was a demon called Keteb Merip with the head of a calf and a revolving horn; and an ox-like demon dwelling in desolate places.⁶ Hindu and Buddhist mythology and belief also know horned demons; and the Japanese *oni* are frequently seen in human form but with bulls' horns.⁷ Demons in later Slav belief often have horns; but this is a conception which is common to Christian demonology in general, as a glance at mediæval and later pictures of hell or of demoniac or witch orgies will show.⁸ Invariably also the devil presented himself to popular imagination with horns, goat-like face, hoofs, and tail. In both cases we have here a reminiscence of horned demi-gods—Pan, the satyrs and fauns, the Celtic *dusi*⁹—to all of whom, as far

as they existed in folk-memory, a demoniac form was given. Grimm, however, connects the goat-like form of the devil with the goat which was the sacred animal of Donar, 'whom the modern notions of the Devil so often have in the background.'¹ Thus, while, in some instances, horned spirits or demons derive from earlier animal-gods or are earlier anthropomorphic horned gods transformed to demoniac shape through the influence of a new religion, in others, horns seem to have been deliberately assigned them along with other bizarre attributes, in order to intensify their monstrous and awe-inspiring aspect.

3. Horned men.—Horned head-dresses were frequently worn by certain persons. Kings sometimes wore such head-dresses, probably because they were regarded as incarnations or representatives of horned gods, or simply as an emblem of their power. Part of the head-dress of an Egyptian king consisted of horns, like those attributed to Osiris.² Bab. and Assyr. kings wore rounded caps with parallel horns encircling them from behind, and curving upwards towards the front without meeting. These resembled the head-dresses of the gods.

Ovid relates a curious story which shows how horns were regarded as a symbol of kingship. Cipus the prætor, looking at his reflexion in water, saw that horns were on his forehead and then found that they were actually there. Anxious to know what this portent meant, he offered sacrifice, and the augur, after inspecting the entrails and seeing the horns, addressed him as future king. Rather than consent to be king, he desired sentence of banishment; but, though this was agreed to, his head with the horns attached to it was engraved on the posts of the gate (*Metam.* xv. 565 ff.). This is not unlike the legend of Alexander the Great, who is referred to in the Qur'an (xviii. 82) as horned. The origin of this is probably to be found in the fact that he identified himself with the god Ammon, and was represented on some of his coins with ram's horns, like the god himself.

In painting and statuary, Moses was often represented with horns. This is usually referred to the text of Ex 34²⁹, where it is said 'the skin of his face shone,' lit. 'sent forth horns.' 'Horns' is here taken to mean 'beams of light,' but not improbably there is a textual error (see *EBI*, s.v. 'Horn'). Aquila and the Vulgate translated the text 'quod cornuta esset facies sua,' and thus the legend grew. But it may have been influenced by that of Alexander as well as by the Bab. and Egypt. representations of horned gods.³

Among some savage peoples, horns occasionally form part of the insignia of chiefs. This custom is found among the American Indians, the horns being sometimes still attached to the animal's skin, which covers the head, or they may be made of metal.⁴ Priests and medicine-men sometimes wear horns—either as identifying them with some horned god, or because of some magical power attributed to the horns, or as a symbol of office. This is found among savage tribes, and it was also customary with the priests of Babylonia.⁵ Again, the horn decoration may be worn by the men of a tribe or by its warriors, as among the Alundi, where the men wear horns as part of their headgear.⁶

The wearing of horned helmets may have been derived from an earlier custom of wearing a head-dress composed of the skin of the head with the horns of an animal, but the horns on the helmet were probably also intended to have some apotropaic force in face of danger. The Sardinians are represented on Egyptian monuments wearing horned casques.⁷ Such helmets were also in use among the Etruscans, Romans, and Greeks, as is

shown by examples which have been discovered as well as by designs on coins. They were also worn by Celtic warriors, and some specimens which have been found have large curving horns elaborately ornamented.¹ Similar horned helmets are figured on the Gundestrup vase, and some Anglo-Saxon helmets were horned.

Mimetic dances, usually for the purpose of securing luck in hunting, are found among savages, e.g. the American Indians; men disguise themselves with the skin and horns of the animal to be hunted.² In Germany and in Gaul, during the Kalends of January, riotous processions of men masquerading in a similar manner took place, and, continuing in Christian times, were vigorously combated by the Church. These had probably some connexion with the earlier animal-cults of Celts and Germans.³ In different parts of England, e.g. in Staffordshire, and sporadically elsewhere, masquerade dances of men wearing deer-horns, etc., occur periodically. Thus at Bromley six men carry reindeer-horns, and dance through the town. The horns are kept in the church tower. Whether these are connected with the older practice just referred to, or whether, as is alleged, they represent a custom connected with an ancient privilege of the *custodes silvarum*, is uncertain.⁴ In Bulgaria at carnival time the actors in a masquerade wear masks combining, e.g., a man's head and an animal's horns.⁵ Elsewhere—in Hungary, Bohemia, Sweden—the human representative of the corn-spirit in animal form wears a goat's or cow's horns;⁶ and the grotesque masks worn by savages on ceremonial occasions often have horns attached to them.

The expression, used of a husband whose wife has been unfaithful to him, 'to give horns to' or 'to graft or plant horns on' (Fr. *porter les cornes*, *cornifier*; Germ. *einem Hórner aufsetzen*; Ital. *portar la corna*), occurs with great frequency in popular literature from at least the 15th cent. onwards.⁷ Caricature also commonly represented the husband wearing horns. But the phrase is of much earlier occurrence and was known to the Greeks, as Artemidorus cites it, *κίραρα αὐτοῦ κομίζεσθαι*.⁸ With this is also connected the gesture of reproach, either reproach generally or for this particular misfortune, which consists of pointing with the index and little fingers outstretched like horns—'to make or point horns at' (Fr. *faire les cornes à*; Ital. *far le corna a*). It was an old custom, when a wife was wrongfully accused, for the husband to be dragged in procession wearing antlers, or for the wife to carry his horned effigy. Brand⁹ cites many suggested explanations of the phrase 'to give horns to,' none of them satisfactory. Dunder¹⁰ finds the origin in the old practice of engraving the spurs of a castrated cock on the root of the excised comb, which caused them to grow like horns, and adds that Germ. *Hahnrei*, *Hahnreh*, 'cuckold,' was originally 'capon.' If, however, the gesture of contempt (originating in the similar gesture against persons suspected of the evil eye, who would therefore be held in contempt), the *mano cornuta*,¹¹ was made commonly to wronged husbands, who have been the subject of popular jest in all ages, it might easily give rise to the other phrase 'to give horns to.' Jorio¹² speaks of the gesture as being used by the ancient Greeks. It should be noticed also that in Spain it is an insult to put up horns against a neighbour's house.

4. **Magical aspects of horns.**—Any part of a sacred or sacrificial animal tends to be regarded as containing the virtues of the whole. This is especially true of the horns, a comparatively indestructible part; and, as they are an adjunct of the skull or head, which is peculiarly regarded as possessing virtue, the spirit of the animal acting through it,¹³

the power attributed to them is thus intensified. Hence the horns of any animal, whether sacred or not, are thought to have special virtues.

(a) **Horns on houses.**—As the heads of horned animals are sometimes placed over doors as protectives, so occasionally the horns, alone or attached to the frontal part of the skull, are thus used. The Greek and Roman custom of placing the head of the sacrificial ox over the door of a house to ward off evils—*βουκράτιον*, *bucranium*—is a case in point.¹ Cows' horns were hung up on the temple of Diana on the Aventine, and deer-horns on other temples of Diana, while horns were a common adjunct of shrines and altars.² Cows' horns are frequently placed over doorways of dwellings, stables, or cowhouses in Italy and Germany; and in Asia Minor, India, Persia, and Afghanistan the horns of stags, oxen, wild goats, or rams are often seen in a similar position.³ The custom is not unknown in England, but at Horn Church, Essex, the horns fastened over the east part of the church are of lead.⁴ Horns of oxen are placed on gables of houses in Sumatra; and in Tibet a ram's skull and horns protect doorways.⁵ Horns may have been similarly used in pre-historic times.⁶

(b) **Horns of the altar.**—Hebrew altars had projections at each corner called 'horns of the altar,' and upon these the blood of sacrifices at the consecration of priests and at the sin-offering was sprinkled. The altar being a sanctuary for the criminal, it was customary for him to take hold of the horns.⁷ The Cretan and Mycenaean 'horns of consecration,' found as models, or depicted in cult scenes, consist of a base from which rise two horn-like uprights, curving outwards. They are found on shrines, altars, etc., and in some cases the sacred pillar or the double axe rises out of them. These 'horns' are now generally recognized to be conventional representations of an earlier *βουκράτιον*: a vase-painting actually shows the two forms together, and from both rises the double axe.⁸ The *βουκράτιον* may have been affixed to the altar as a protective or as representing the animal-god, and would tend to become more and more conventional or symbolic. Similar horns have been found crowning models of shrines, and in connexion with pillars, at the sanctuary of Aphrodite at Paphos,⁹ and they have also been discovered in Malta.¹⁰ On Greek and on Arabian altars, heads of oxen are depicted—a surrogate for the actual *βουκράτιον*.¹¹ Although various theories have been proposed for the origin of the horns of the altar in Hebrew usage, this probably explains their presence, as W. R. Smith suggested.¹² The same usage of affixing wild sheep's horns to altars is found in Tibet.¹³ In Greece, altars made of horns, as at Delos, were not unknown.¹⁴

(c) **Horns as amulets.**—It has been seen that horns are used as protectives for houses, etc. Actual or artificial horns are also worn as a defence against the evil eye, and this custom is one of great antiquity, as Jorio has shown.¹⁵ Artificial horns are made of the precious metals, coral, amber, etc.,

and they are carried on the person or attached to the harness of horses, and the like. Such amulets have been found in Crete, in Etruscan graves, etc., and their use is wide-spread in the southern lands of Europe—Spain, Portugal, Italy.¹ The *mano cornuta*, or horned hand—a gesture in which the index and little finger are pointed outwards, the others being folded under the thumb—is extensively used, and is found also in early Roman, early Christian, and Hindu art, while it was formerly known in Great Britain. It is sometimes enough to utter the word *cornu* to repel an evil influence.² Artificial amulets representing horns or horned heads were used in ancient Egypt.³ In India the horns of gazelle, antelope, etc., either in whole or in part, repel sicknesses, and horned amulets are in use against demonic influences, while pieces of horn are still effective as ghost-scarers.⁴ Horn amulets are also much used in Further India, China, and Japan.⁵ Among the lower races similar uses of horns are found. In Africa and among the American Indians they are worn as amulets, either in the hair or suspended from the neck, as protectives against sickness or witchcraft.⁶ In Sierra Leone they are attached to a fetish.⁷

Horns are placed on graves to protect the dead from evil influences, e.g. in ancient Peru, in Flores, and among the Nuba of the Upper Nile.⁸ Among the Bari, on the occasion of a death, ox-horns are suspended from a pole above the spot.⁹

Horns ground to powder form an occasional folk-medicine. Among the Wajjaga, warriors drink a potion of horn-shavings and rhinoceros-hide in order to obtain the animal's strength.¹⁰ In Egypt an antidote for poison is to drink out of a rhinoceros' horn and to rub in the draught a piece of the horn.¹¹ In Spain, horn-shavings are drunk as a panacea against the evil eye.¹²

In Cyprus, Cos, etc., a so-called snake's horn (perhaps that of the *cerastes cornutus*) is used for medico-magical purposes. It must be obtained when two snakes are coupling. Something is thrown over them, whereupon one of them gives up the horn.¹³

(d) *The cornucopia*, 'horn of plenty,' a horn filled to overflowing with fruits, etc., was an emblem of gods of plenty. Thus it was associated with the goddess Fortuna ('Fortuna cum cornu, pomis, ficis, aut frugibus autumnalibus pleno';¹⁴ 'mundanam cornucopiam Fortuna gestans').¹⁵ and with Copia ('aurea fruges Italiae pleno diffudit Copia cornu').¹⁶ But it was also given to the Tria Fata, to Diana, and to the Lares. The Earth-goddess emerging from the earth on Greek vase-paintings has a horn of plenty, from which sometimes rises a child.¹⁷ The *cornucopia*, as the symbol of fruitfulness, could be associated with any god or personage who aided fertility, e.g. Herakles (whose *cornucopia* sometimes contains φάλλος), or any form of the Agathos Dæmon, e.g. the hero, in the representations of whose ritual feasts it appears, and also the person who represented the Year in processions, the *Eniautos*. Thus, in the Dionysos procession arranged by Ptolemy Philadelphos, Eniautos is

said to carry 'the gold horn of Amaltheia.'¹ The *cornucopia* was, in fact, connected (1) with Amaltheia, the goat from whose horn fruits were presented to the infant Zeus, or the nymph possessed of a bull's horn which provided food and drink; and (2) with Achelous, from whose head Herakles had broken it off. Later mythology combined these two myths.² Probably a horn became symbolic of fruitfulness because it belonged to an animal associated with fertility—bull or goat—and perhaps also because it was a drinking vessel not only among primitive but among civilized peoples.³ Gods are mythically represented as drinking from horns, or they or other supernatural beings offer their guests drink from a horn.⁴ But other things besides drink are carried in such horns, e.g. anointing oil,⁵ medicine or fetish stuff (a general practice in Africa, and found in India in Vedic times),⁶ articles used in charms, incantations, etc.⁷ Saxo Grammaticus⁸ relates that the image of the god Svantovit in Rügen held a horn; and from the diminution or non-diminution of wine poured into it by the priest an augury was drawn regarding the scantiness or abundance of the crops. Medicine or healing water is often efficacious only when drunk out of a horn, especially one taken from a living animal.⁹

For all these reasons it was easy for the horn to become a magical property, owned by gods, fairies, etc., which it was desirable for men to obtain. Hence many tales of robberies of drinking-horns from fairyland, which attach themselves to various celebrated horns, e.g. that of Oldenburg. These horns may at one time have been used as archaic vessels in pagan rites, in preference to more recent vessels; and a supernatural origin would later tend to be given to them. The stolen horn is sometimes a source of luck, a veritable *cornucopia*.¹⁰ The *cornucopia* itself, represented on gem amulets, is said to have magic potency.¹¹ But, in whatever ways such rich productive power was assigned to horns, this primarily depended on the fact that such power was first attributed to the animals possessing them, the power often working, however, through their horns. This conception was sometimes mythically represented, as in the case of the stag Eikþyrnir, from whose horns water continually trickles down to feed the rivers of the under world,¹² and the Iranian primal ox Gayōmar, from whose horns spring fruits.

A parallel to the horn of Amaltheia is found in a Kafir tale, in which a boy has a wonderful ox which produces food from its right horn when that is struck. The ox tells him to remove its horns for safety, but this power still continues. Horned cattle are cherished possessions of the Kafirs.¹³ In many Cinderella tales the dead mother, transformed to an animal, produces riches or food from her horn.¹⁴ Cf. an American Indian tale in which a sorcerer produces marvels with the aid of a reindeer horn.¹⁵

(e) *Horns as musical instruments*.—The horn was widely used as a wind instrument among primitive as well as more advanced peoples, and from it the trumpet, often shaped like a horn, had its origin.¹⁶ Such horns are blown not only for

ordinary but for ritual purposes. But, partly from the powers ascribed to horns in general, partly from the custom of scaring noxious beings by noise, the blowing of horns became a common method of driving off demons, or of producing magical results. It is a common method of frightening away evil spirits in British Guiana.¹ In cases of sickness the Garo blow horns to drive out the demon which is causing it.² Blowing of horns, as well as other forms of noise, is used among many peoples as a method of driving off the monster who is supposed to swallow sun or moon at an eclipse. Among the Jews it is thought that the blowing of the *shôphâr* is effective in scaring evil spirits or Satan.³ It was also through the blowing of rams' horns (*keren*) that the walls of Jericho are said to have fallen down.⁴

Gods are sometimes said to possess horns, e.g. Triton who blows 'his wreathed horn'; and Heimdall, warder of the gods, who possesses a powerful horn, *Gjallarhorn*, kept under a sacred tree, and who blows it at the approach of Surtr.⁵

5. Horns in sacrificial and other rites.—Horns are sometimes presented as sacrificial offerings. In Baluchistan ibex or mouflon horns are placed on the shrines of saints as offerings, or to do honour to the saints.⁶ In Ladakh rams' horns are fixed on fruit trees at an eclipse, as a propitiatory offering. Such trees are very fruitful.⁷ Horns of stags were also sometimes offered to Diana, and votive horns were hung on trees.⁸ Where oxen, etc., were sacrificed, their horns were often gilded, and their necks were garlanded. This was the case in Roman sacrifices, and notices in the Edda and other mythical or legendary sources show that it was usual in Teutonic sacrifices.⁹ In later survivals on festal occasions the horns of oxen are gilded, or adorned with gilded apples or with ribbons and flowers; and on the 'cattle-days' of the Pongol festival in India the animals are led about with painted horns.¹⁰

HOROSCOPE.—See DIVINATION, STARS.

HORROR.—Although, both in its subjective aspect and in its external expression, horror is usually regarded as an extreme form of fear (*q.v.*), there are certain features which almost amount to a difference of kind. It has two forms, which may be called the acute and the diffuse. The latter is felt mainly in regard to the sufferings or disasters of others rather than one's own. The report of an earthquake with great loss of life, a famine, the sinking of a great ship such as the *Titanic* (1912) with so many of its passengers and crew, any sudden, unforeseen disaster causing wide-spread havoc, excite in the hearers an emotion which is usually called horror. The actual hearing of the cries of pain, the sight of the sufferings or tortures of another, especially of a child, the sight of a mutilation or cruel death, whether by the hands of man or by the resistless forces of Nature, cause a more intense form of the same feeling. Horror is therefore pre-eminently a social emotion; to the individual it is a shock, followed, almost as in cases of physical shock, by prolonged depression and to a certain extent a lowering of the mental and physical tone. It is most marked where the cause of the disaster or suffering is human cruelty, greed, ambition, or even carelessness

and thoughtlessness, as the Congo and Putumayo (1912) atrocities, cruelty to children, the 'horrors' of modern war, etc. In these cases there is not only sympathy with the actual sufferers, but also a feeling of outrage done to the human ideal in the sin of the agent. The same feeling stands out strongly in another set of cases, the so-called 'unnatural' crimes—matricide and parricide, incest, sexual perversity, cannibalism; the feeling is that of violence done to the human type, the ideal of humanity which each of us, consciously or unconsciously, carries about with him. Probably the same sort of feeling was at the root of the horror, once universally felt, towards the insane, towards witches and sorcerers, etc. When the ideal of humanity includes saintliness amongst its elements, the same attitude is taken towards atheism, blasphemy, and, to a less extent, towards heresy. A lower form is the instinctive repulsion felt among the uneducated towards human deformities—hunchback, club-foot, dumbness, etc. Thus the diffuse form of horror may be characterized as a humanist emotion, its object being mainly actions, features, traits which outrage or violate the ideal of humanity so far as it is developed in the mind of the individual.

The acute form of horror is more intense, more egoistic, and concerns situations of imminent danger to oneself. The rush of a wild beast of prey, the sudden fall of a support upon which one is standing at a great height, the outbreak of fire from which there is no escape—in these cases the danger, or it may be the certainty, of death is the exciting motive of the emotion; but there must also be the element of suddenness, of surprise; where the issue has been foreseen, emotion follows quite a different course. A special cause of horror of this type is being suddenly brought into the presence of the supernatural. *Horripilatio*, the hair standing on end, has from time immemorial been associated with the sight of the risen dead, the hearing of a supernatural voice, the believed presence of a god, especially an evil god, a devil, demon, hobgoblin, or a human being who has acquired some of their powers, and takes some unnatural shape. Common to all these cases is the real or supposed powerlessness of the individual, whether because of the suddenness of the onset, the conditions of the situation, or the immensity of the force which he has to face—the invulnerability and unlimited power, for example, and unlimited desire to injure, on the part of the evil spirits. The sense of sin, and of the imminence or vastness of the corresponding penalty, or, in more refined natures, the sense of isolation from man or from God which the consciousness of sin brings with it, has, as is well known, stirred up in many souls a sense of horror which has been the motive to religious conversion in some cases, to self-destruction in others. This instance suggests another distinction from fear proper; fear is a shrinking, a relaxing of energy; while horror, as Bell has said (*Anatomy of Expression*¹, p. 169), 'is full of energy; the body is in the utmost tension, not unnerved (as) by fear.' In fact the expression of horror looks like a spasm of action, an effort so supreme as to throw the mechanism out of gear; sometimes the effort recovers itself, and strenuous resistance to the danger is made; at other times the paralysis extends to a merciful loss of consciousness. In animals, Verworn¹ has shown that the so-called hypnosis or cataleptic state into which frogs, snakes, birds, guinea-pigs, rabbits, and other animals fall, when held down in an unusual position, is mainly a spasm of the muscles, arising from the excessive initial

effort they exert to recover their upright position, and which they are prevented from renewing by fear and excitement. The 'shamming dead,' which many animals adopt in situations of imminent danger, is probably due to the same cause, and is the analogue in animals of the paralysis of horror in man.

In the expression of horror (cf. art. FEAR), the phenomena may be classified partly as those of shock, and partly as those of fear proper. As Hack Tuke points out (i. 222), in slight fear there is a rapid muscular action preparatory to flight, while other parts of the body are fixed and contracted in what Darwin regarded as the instinctive effort to conceal or diminish their size; but, when fear is more extreme, amounting to terror (and still more to horror), instead of flight there is spasm both of the movement muscles and of those of the breathing; the voice is husky and the general facial expression is that of one struggling for breath. The high shriek, or even squeal, of horror may be referred in the same way to the spasm of muscles under a great effort. The cold sweat, the rising hair, the arrest of the secretions—dryness of mouth, etc.—and the failure of control over many reflex actions may be set down, as in Darwin's second explanation, to the action of shock, with its immediate lowering of the nervous and therefore of the muscular tone; the extreme pallor of the skin—'grey with horror'—may be due in the same way to the paralysis of the dilator muscles of the small blood-vessels. A prolonged period of horror may—there are quite well authenticated cases (see Tuke, ii. 79)—blanch the hair even of a young man in a few hours. The trembling of the body and the perspiration are probably directly due to the same intense and violent effort, so violent as to defeat itself; animals show the same feature in intense fear.

A traveller in India, while sleeping on the verandah of a bungalow, with his European dog beside him, was awakened by the sound of some large animal moving about in the neighbourhood; his dog was making no sign, but, on putting his hand down to touch it, he found it was shivering, and bathed in perspiration; a tiger was found to have visited the village in the night.

The characteristic staring eyes, with widely dilated pupils, and the rapid but shallow breathing—'panting with horror'—have probably a similar origin. Spencer, Bain, Féré, and others regard these phenomena as the result of an association, formed between the expression of actual pain on the one hand and the conditions or accompaniments of pain on the other; but a more likely explanation

is that both pain and the intense emotion of horror involve a violent struggle of the whole system, of which these so-called expressions are secondary results. In neither case can the expression be explained as a useful adaptation to the situation, or as inherited action, ancestrally useful, if now no longer so.

In horror the mental powers are affected similarly with the bodily; the senses are confused or defective, and among others the sensibility to pain seems mercifully lowered, as it is in animals also: a S. American fox, when surprised and 'shamming dead,' will endure without moving the severest blows of the whip, without a sign of life, yet will start up and run the moment its persecutor is out of reach. In the same way, in great disasters, as earthquakes, etc., human beings are unconscious of injuries which normally would cause the most intense pain; in the earthquake of Messina (1908) a woman walked many miles with one eye torn out, of which she was unaware; and in the burning of the Juno several of the men climbed up some iron plates without noticing that the skin of their hands was being flayed off. Here, again, it is probably the concentration of psychic energy on the horrible situation that inhibits impressions, however intense in themselves, from reaching consciousness. There is a spasm of the mind as well as of the muscles: horror blunts the perceptions, paralyzes the judgment and critical faculty, while the will, as Féré has said (p. 197), is blocked as a door is jammed in a too violent effort to open it.

Like physical shock, horror may cause death, when too extreme; and in predisposed natures it may cause insanity, whether of the obsessional or of the depressive, melancholic type. Burton collected a number of instances from the earlier literature; naturally such cases were more familiar in the Middle Ages, when superstition was more wide-spread.

Probably the sympathetic form of horror is more frequent to-day than the egoistic; it certainly is aroused by sights and sounds which a century ago would have left men unmoved; what excites horror in a people might well be taken as a criterion of its degree of civilization.

HOSPITALITY (Arabian).—The notion suggested by 'hospitality' with the Arabs, as indeed with all other nations (Pindar, *Pyth.* iv. 30), is the bestowal of food; to 'entertain' and to 'give food' are used in the Qur'ān (xviii. 76) as synonyms. The usual word for 'hospitality' (*diyāfah*) seems to be connected etymologically with a word *dūfāf*, 'crowd of persons sharing a meal'; one that is slightly less common (*qirā*) is thought to be connected with *qaryah*, 'village,' and perhaps is to be explained from the Heb. *qārā*, 'to meet.' Partaking of food makes the guest a temporary member

of the family, and so confers certain rights and duties: when Abraham, immediately on the arrival of the Divine guests, offered them a boiled calf, but found that their hands did not reach to it, he became terrified (Qur'ān xi. 73). The partaking of food, therefore, proves that the intentions of the guest are not hostile, while it also lays on the host the duty of protecting the guest as though he were a member of his own family; ordinarily this relationship is established by the partaking of bread and salt (Doughty, *Arabia Deserta*, Cambridge, 1888, i. 228). In the case of an ordinary guest the

relationship so established lasts two days and the intervening night, called by the Arabs three days (*ib.*), supposed to be the period during which the food remains in the body.

The entertainment of guests is thought to have been started by Abraham (Tha'ālibī, *Laṭā'if al-Ma'ārif*, 1887, p. 4). Both ancient and modern descriptions of Arabia usually dwell on the hospitality of the Bedawīn. In early or ostensibly early Arabic poetry the subject is a commonplace; a good collection of verses dealing with it is to be found in the *Ḥamāsa* (pp. 685-722). The bards boast that in the dead of night their fires attract wayfarers; their dogs welcome these arrivals; without inquiring who they are, or even when the stranger is known to be an enemy, they immediately slaughter a camel and bid the womankind cook it for the stranger's benefit. They clothe him and talk him to sleep; however gentle they may be, they are ferocious in defence of a guest; however ferocious, they will endure anything from one who is partaking of their hospitality. The entertainment of a stranger is a prize which each owner of a tent hurries to secure before the others. Sometimes he is admitted to the family circle, at other times a special tent is erected for him.

The temporary truce which this hospitality involves seems to be an institution which has survived in the desert from remote antiquity, and has helped to render life there possible. Nevertheless, the poets quoted would not boast so loudly of their exercising it, were it exercised by every one; and indeed, where the hospitality involves the harbouring of a hunted man, it is clear that the serious consequences attaching to the act would render many unwilling to perform it. In the Qur'ān (xi. 80), Lot appeals to the people of Sodom not to disgrace him in the matter of his guests; he is apparently ready, if compelled, to yield to *force majeure*. In the biography of the Prophet we find more than one occasion on which such harbouring is refused, or at any rate made dependent on the pleasure of the chieftain.

In spite, therefore, of the fame of Arab hospitality, and the sanctity which is supposed to attach to it, an invitation to a meal would seem to have been a mode of entrapping an enemy common in Arabia as in other Eastern countries. In the legends which explain how the Jews of Medina became clients, this expedient is twice employed (D. S. Margoliouth, *Mohammed and the Rise of Islam*, London, 1907, p. 187). It became a recognized principle of Islāmic statecraft, and as late as 1st March 1811 was employed by Muhammad Ali in dealing with the Mamluks: 'all the principal men of Cairo flocked to the citadel; coffee was then served,' and immediately afterwards a massacre took place (A. A. Paton, *Hist. of the Egypt. Revolution*, London, 1863, ii. 30). Hospitality offered by one chieftain to another is, therefore, apt to be suspected. The Arabic romances not infrequently depict violations of hospitality of another sort. In the *Maqāma* of Ḥariri the hero invites a number of guests to a mock wedding, where he treats them to sweetmeats containing a narcotic; when they are unconscious he strips them of everything and makes off. In the *Maqāmas* of Hamadhānī (Beirut, 1889, p. 190) the travellers ask for food at a village; they are refused bread except for a price, but are given milk, which, however, they afterwards discover to have been polluted. The use of poison for disposing of enemies was also common at many periods of the Khalifate. Sometimes the outrage proceeded from the guests: Osman, founder of the Ottoman empire, according to his biographers, got possession of some important fortresses by accepting an

invitation to a wedding-feast, and bringing armed men dressed up as women.

The definition of hospitality in the Qur'ān appears to be 'feeding on a hungry day [i.e. a day of famine] an orphan who is also a kinsman, or a poor man who is in need' (xc. 14). The latter act is assigned so high a value that, where the code admits expiation, feeding a certain number of mendicants serves this purpose; the food is to be normal, and the amount specified as a *mudd*.

The value set in the Qur'ān on hospitality has naturally been exaggerated by the Muslim theologians, and in homiletic works some remarkable views are formulated. 'An account will be demanded on the Day of Judgment of all expenditure except of that on the entertainment of guests: God will be ashamed to demand any account thereof' (*Qūt al-Qulūb*, 1310, ii. 182, after Ḥasan al-Baṣrī, † 110 A.H.); 'to refuse an invitation is to disobey God' (*ib.* 187); provided that the place where the hospitality is offered fulfils certain conditions, e.g. is not adorned with silk or satin, gold or silver vessels, etc. (*ib.* 190). Sayings attributed to the Prophet are: 'Hospitality is a right'; 'Hospitality for a night may be claimed'; 'Any area or village wherein a Muslim is allowed to pass a night hungry is out of the pale of Islām'; 'Hospitality is three [days]; all above that is charity' (probably meaning 'cannot be demanded as a right,' but ingeniously interpreted by some Sūfis as charity bestowed on the entertainer, who thereby earns heavenly reward [*ib.* 206 f.]).

In spite of such exhortations, the desire to entertain was by no means universal among Muslims, and a whole literature exists in illustration of stinginess; the classical treatise is that by Jāhiz of Basra († 255 A.H.; ed. van Vloten, 1900).

The formulæ wherewith guests are greeted, *aḥlan wa-saḥlan, wa-marhaban*, probably go back to remote antiquity: the last of these words is the 'wide room' of the Psalms (18⁹ 31⁸ etc.). The first is said to mean 'you are among your family'; the second is probably a jingle matching the first, but means 'easy.' In modern times the phrases *ānastanā*, 'you have rendered us at home,' and *auḥashtanā*, 'you have rendered us lonely,' are often heard besides. We sometimes hear of gifts given to guests in connexion with the word *nuzl*; but the practice does not appear to have been widespread.

LITERATURE.—To the authorities cited in the article add G. Jacob, *Altarabische Beduinenleben*, Berlin, 1897, pp. 85-88.

D. S. MARGOLIOUTH.

HOSPITALITY (Buddhist).—This may best be considered under three heads: (1) hospitality of laymen one to the other, (2) hospitality of the laity to members of the religious Orders, and (3) hospitality of the latter to each other.

i. **Hospitality among laymen.**—In passages in the canonical books dealing with the lower morality and addressed to unconverted laymen we find references to this subject. So in the *Digha* (iii. 190) the ideal wife is said to be hospitable to her husband's family; in *ib.* i. 117 it is stated to be the duty of a good citizen to treat guests with honour and respect; in *Jātaka*, iv. 32 (in the canonical verses), one of the heroes of the tale boasts of the friendly and hospitable reception he always accorded to guests; and in *ib.* v. 388 (again in the canonical verses) it is laid down that his sacrifice is vain who leaves a guest there seated unfed. These injunctions, or expressions of opinion, are not represented as exclusively Buddhist. In the first passage they are put into the mouth of the Buddha, in the others into the mouths of good men not belonging to the Buddhist community. It is evident that the Buddhists adopted current views on the subject, omitting only any reference

to superstitious customs, connected with conceptions of tabu or animistic views.

2. Hospitality of the laity to the religious Orders.—When Buddhism arose, there were quite a number of wandering teachers (*pabbajitā*, 'wanderers') who propagated doctrines as varied as those of the Greek sophists. They belonged to all social grades, though most of them were men of noble birth. It was considered a virtue and a privilege to provide these unorthodox teachers with the few simple necessities of their wandering life—especially lodging, food, and clothing. Many of the 'wanderers' were organized into communities, with such rules as seemed suitable to their founders for the regulation of such bodies of co-religionists. The people supported all alike, though they had their special favourites. The Buddhists adopted this system, and those among the laity who followed them carried out very willingly the current views as to such hospitality to the 'wanderers.' It was enjoined upon them to give to all. Thus, when Siha, a nobleman who had hitherto followed the Jain doctrine, became a Buddhist, it is specially mentioned that the Buddha urged him to continue, as before, his hospitalities to the members of the Jain Order.¹ So in the Edicts of the Buddhist emperor Asoka frequent mention is made of the duty of hospitality to teachers of all the different sects (not only one's own).

3. Hospitality within the Order.—The Buddhist 'wanderers' were accustomed on their journeyings to stay with one another, and a set of rules was drawn up for their guidance when guests of this kind arrived, prescribing the etiquette to be observed both by the incoming *bhikkhus* (the *āgātukā*) and by their hosts. These regulations are of a simple character, such as might be drawn up now under similar circumstances. They are too long to quote, but have been translated in full by the present writer and Oldenberg in vol. iii. of the *Vinaya Texts* (*SBE* xx. [1885]) 273-282.

It should be pointed out that all this is considered to belong to the lower morality of the unconverted; it is taken for granted, and never even referred to in those passages of the books in which the essential doctrines of Buddhism are expounded to the converted. It is really Indian (see HOSPITALITY [Hindu]) rather than Buddhist; though a detailed comparison of the Buddhist doctrine of hospitality with that of other Indian sects would, no doubt, show that the Buddhists laid more stress than the others did on certain details, e.g. on the importance, in such matters, of disregarding, or paying but little attention to, any difference of sectarian opinion.

LITERATURE.—The authorities are quoted in the article.

T. W. RHYS DAVIDS.

HOSPITALITY (Celtic).—I. Gauls.—It has already been noted in art. ETHICS AND MORALITY (Celtic), vol. v. p. 455, that the Gauls manifested a great desire for knowledge of the habits and customs of foreign peoples, and it is in this eagerness for information that we find the source of the hospitality for which they are so often praised. They welcomed the bards not only because they loved to hear them sing of the deeds of heroes, but also because they delighted in the stories of distant nations related by these travellers. They never refused hospitality to a stranger; and, after having done him the honour of their table, they pressed him with endless questions regarding their neighbours; as Caesar says (*de Bell. Gall.* iv. 5):

'Est enim hoc Gallicae consuetudinis, uti et viatores etiam invitos consistere cogant et, quid quisque eorum de quoque res audierit aut cognoverit, quaerant, et mercatores in oppidis vulgus circumstiat quibusque ex regionibus veniant quasque ibi res cognoverint, pronuntiare cogant.'

Every traveller found a cordial welcome among

¹ *Vinaya Texts*, II. (*SBE* xvii. [1882]) 115.

the Celto-Iberians, because they considered those who were in the company of strangers as beloved by the gods (G. Dottin, *Manuel pour servir à l'étude de l'antiquité celtique*, Paris, 1906, p. 117). It is needless to observe, therefore, that the statement of Diodorus (iv. 19, v. 24), that the Celts were accustomed to put strangers to death, is merely a fiction.

2. Irish.—The Irish terminology for the relations of hospitality is as follows:

díge, gen. *díged*, 'guest'; *oíged-chaire*, 'guest-friendship'; 'hospitality' (Windisch, *Die altir. Heldenwage*, Tain Bó Cúach, Leipzig, 1906, line 1887); *taíge díged*, 'guest-house' (ib. p. liii); *brúiden*, 'guest-house, a palace with seven doors' (ib. line 3625), cognate with Goth. *baurs*, 'board' (*Adalámh na Sencrach*, ed. Windisch, *Irish Texts*, iv. 1, Leipzig, 1900, p. 59, line 1878; p. 77, line 2731); *dígedechta*, 'guesting', 'hospitality' (ib. p. 1, line 12); *brúaid*, 'host' (Windisch, l. [1880] 406); *enech* or *ainech-rúice*, 'face-blush' (Stokes and O'Donovan, *Cormac's Glossary*, Calcutta, 1888, p. 66); *brúighfer* (lit. 'land-man'), 'public hospitalier', etc.

In Ireland, hospitality was not only practised as a virtue, but enjoined by law from the earliest times, and references to this subject are equally numerous in religious and in secular literature. In the account of the second battle of Moyrath, we find the following statement concerning Ireland in the reign of King Domhnall: 'Her habitations were hospitable, spacious, and open for company and entertainment, to remove the hunger and gloom of guests' (J. O'Donovan, 'The Battle of Magh Rath,' *Irish Archaeol. Soc.*, Dublin, 1842, p. 105). Bede (*HE* iii. 27), in writing of the plague of 664, states that many English, both of the nobility and of the lower ranks, had repaired to Ireland at that time either for the sake of study or of continence. The Irish, continues the historian, 'willingly received them all, and took care to supply them with food, as also to furnish them with books to read, and their teaching, all without any charge.'

From what is contained in the *Ancient Laws of Ireland* (London, 1869-73, iv. 237) as well as in the saga, we may conclude that from the very earliest times a king or a chieftain was obliged to entertain any passing stranger or any other person who might seek his hospitality without asking any questions regarding himself or the purpose of his visit. One who neglected to discharge these duties incurred without fail the hostility of his people. For example, in the account of the second battle of Moytura, the people, we are told, complained bitterly of the poor hospitality of King Bres:

'The knives of his people were not greased at his table, nor did their breath smell of ale at the banquet. Neither their poets, nor their bards, nor their satirists, nor their harpers, nor their pipers, nor their trumpeters, nor their jugglers, nor their buffoons, were ever seen engaged in amusing them in the assembly at his court' (P. W. Joyce, *Soc. Hist. of Anc. Ireland*, London, 1903, i. 58).

The poet Coirpre, son of Etan, once presented himself at the castle of this king seeking hospitality. 'He was shown into a small, dark, sombre house where there was neither fire nor furniture nor bed. He was given three small dry rolls of bread on a little plate. Arising the next morning, he was not grateful.' Then Coirpre pronounced against Bres the first magic malediction ever composed in Ireland, and the outcome of all this was that Bres was driven from the throne (H. d'Arbois de Jubainville, *Cours de littérature celtique*, Paris, 1888-1902, v. 414).

Probably the most unique account of hospitality among the Celts is that of Gúaire, king of Connaught, in the 7th cent., who was so constantly giving away that his right hand grew longer than his left.

When Senchán Torpeist became chief of the *file* in Ireland, after the death of Eochaid Dallan Forgaill in 658, he sought hospitality of Gúaire, accompanied by a retinue of 150 *file*, or poets, 'as many pupils, as many valets, as many women,' and others besides. Though Gúaire had a building purposely constructed for the reception of Senchán and his companions, he was not prepared for such a multitude. The women especially were most exacting in their demands; 'at first the widow and the daughter of Eochaid Dallan, then the wife of Senchán, and, finally, Senchán himself exceeded all the bounds of hospitality.'

The first maintained that she would die unless she obtained a bowl of beer made with milk, and in addition to this she demanded the marrow from the ankle of a wild boar. Between Christmas and Epiphany, she wished to have beside her, on a yew tree, a small freshly hatched cuckoo. As a belt it was necessary to supply her with a strip of bacon taken from a perfectly white pig. The only kind of mount with which she could be satisfied was a horse with purple mane and white legs. Her dress must be a spider's web of many colours. Marbán, the brother and swineherd of Gúaire, was able to secure for her all that she had asked, and to satisfy the equally exacting requests of the two other women.

But Senchán was a still more embarrassing guest than they. He declared that he would die unless Gúaire could regale him and his retinue, and also the nobility of Connaught, with an ample repast, consisting of the bacon of pigs not born of sows and of beer produced from a single grain of barley. In case of refusal Gúaire was threatened with an incantation. Marbán again came to his rescue. He possessed nine pigs from a sow which was killed by a wolf before they were born; and eleven years previous to this date, he had sown a grain of barley which gave him an ear the following year. The grains of this ear produced seventeen ears the next year, and so on until the end of the eleventh year, when he reaped seven large piles of barley, all coming from the original grain. Consequently Gúaire was able to satisfy the demands of Senchán.

The latter, however, not expecting to be gratified, was displeased, and refused to eat. Gúaire, though irritated by the behaviour of his guest, sent a servant to Senchán bearing a goose prepared expressly for him. Senchán refused to accept the gift, and addressed the servant as follows: 'I knew your grandfather, who had round and ill-kempt nails. Consequently, I will receive nothing from your hands.' A young girl was then dispatched by Gúaire to prepare, in the presence of Senchán, a mixture of flour and salmon eggs, which was then offered to the poet. But he again refused, saying to her: 'I knew your grandmother. One day, from the top of a rock, she showed the way to some passing lepers. Consequently, I can receive nothing from your hands.'

Gúaire lodged and fed these incommensurate guests for a year, a season, and a month, but finally he lost his patience. Marbán recalled to his brother that, though Senchán and his companions had the right to be lodged and fed, they were obliged in return to make music and relate stories. He therefore asked of Gúaire permission to order them to recite the *Táin*, or the *Cattle Raid of Cooley*, from beginning to end. Senchán was unable to comply with his command and asked his companions for help, but of this vast epic they only knew *blogs*, or selections. Then Marbán, by an incantation, forbade them from passing two nights in succession in the same house as long as they had not found the complete text of this famous story. They were obliged then to set forth in search of the epic (*Book of Leinster*, 245; *Transactions of the Ossianic Society*, Dublin, 1864-61, v. 102-108; d'Arbois de Jubainville, vi. 140-143).

Further instances of the hospitality of the early Irish are the following:

First, in the *Féast of Bríuri* it is stated that Conchobar, king of Ulster, established the law that each chieftain should feast the Ulstermen one night in the year. The wife of the hero who did the entertaining was obliged to furnish the wives of the Ulstermen with seven oxen, seven pigs, seven casks, seven barrels, seven mugs, seven pots, seven cups, and seven glasses of beer, seven services of fish, birds, and vegetables (d'Arbois de Jubainville, v. 160). While the three heroes, Conall, Logaire, and Cúchulainn, are making their long expedition, they are received on all sides with marked attention. In one place a repast sufficient for one hundred persons is served to them, and they are permitted to have their choice of the daughters of the king (ib. 161). When they reach the house of Curoi, they learn that his wife has received orders from her absent husband to grant them the hospitality of his home. Hence, she prepares for them a bath, intoxicating drinks, and superb beds (ib. 136).

In the story of the *Birth and Reign of Conchobar*, we are told that each Ulsterman gave him hospitality for one night, and allowed him to pass it with his wife—a right that this despotic king pretended to exercise ever afterwards (ib. 7 f.). In the *Murder of Conchobar*, it is stated that the kings of Munster, Leinster, etc., permitted the poet Aitherns to pass the night with their wives during his sojourn in their countries, for fear of the protection of the Ulstermen which had been granted to him (ib. 808 f.).

The regular period for which a guest could claim hospitality was three days and three nights, after which the host could refuse to continue to entertain his guest, if he so wished (cf. *Acallamh na Senórach*, in Windisch, iv. 1, lines 436, 1601, 1823, 2797, 3531, 7352, 7652; *RCel* ix. [1888] 495, note 3). Mael Duin and his fellow-pilgrims are received everywhere with the greatest cordiality, but, at the end of three nights and three days, their host or hostess usually vanishes (d'Arbois de Jubainville, v. 474, 479 f.). The attentions shown them in the 'Island of the Queen and her seventeen daughters' rival those of Gúaire given above (ib. 486 ff.). If the lord thought his reception unworthy of his guests

because of his being taken unawares, he usually attempted to atone for his inhospitality during the course of the following days. When Mac Dáthó was surprised by the heroes of Ulster and of Connaught and their retinues, he killed his immense hog, the wonder of his kingdom, in honour of his guests. Fearing that they might still be displeased with their reception, he apologized for his lack of preparations, saying: 'If anything is lacking to-day, I will kill it to-morrow' ('*Scél mucci Mic Dáthó*,' in Windisch, i. 98).

In historical times we find the same esteem for hospitality as in the more legendary periods. Of Owen O'Madden, a Connaught chief, it is stated in the *Tribes and Customs of Hy-many* (ed. O'Donovan, *Irish Archaeol. Soc.* v. [1843] 141) that 'he does not refuse any one gold or horses, food or kine, and he is the wealthiest of the race of Gaedhal for bestowing them'; while St. Patrick, in blessing the district of Moy Rein, is reported to have said: 'I leave prosperity to the place so that it shall provide for all [requiring help] even though every cleric should be poor,' which is interpreted by Hennessy to mean that, if the clergy were too poor, the laity should be rich enough to provide for all (Hennessy and Kelly, *The Book of Fenagh*, Dublin, 1875, p. 273).

Among the different classes of society, we find first that the king was expected to keep his house always open to visitors.

'A prince,' says Cormac Mac Art, 'should light his lamps on Samhain Day [the celebration of the beginning of winter on 1 Nov.] and welcome his guests with clapping of hands and comfortable seats, and the cup-bearers should be active in distributing meat and drink' (Joyce, i. 58).

Once a guest had partaken of food in a house, whether of king or of subject, the host was not allowed thereafter to offer him violence or even to show him disrespect.

In A.D. 593, Branduff, king of Leinster, offended at the licentious conduct of Prince Cummasach, set fire to the building in which the latter and his suite were feasting. Glasdam, the prince's jester, who had been entertained a few days before as a guest by the king, exclaimed: 'Lo! I have eaten thy meat! Let not this deed of shame be now wrought on me!' To this Branduff answered: 'By no means shall this be done! Climb up to the ridge-pole and leap out over the flames to the ground. We will let thee pass, and thus shalt thou escape!' But the jester refused to be saved without his master, and gave his mantle and cap to the prince, who escaped from the burning building (S. H. O'Grady, *Silva Gadelica*, London, 1892, ii. xxviii; Joyce, ii. 483).

During the time that the guest was under the roof of his host, the latter was bound by law to protect him. A gloss on the *Ancient Laws* explains the words *t'aurgaire*, 'thy defence,' by the statement that no one—not even an officer of the law—should be allowed to enter one's house and lay hold of his guest (i.e. for debts or crime) before the end of the third night. In such an event the host could lay claim to damages against those who had violated the privacy of his home (d'Arbois de Jubainville, 'Introduction et commentaire du Senchus-Mór,' in *Cours de litt. celt.* viii. 145).

When the king or his subject found himself unable to discharge the duties of a host, he suffered the 'blush of honourable shame' or 'face-blush' (*enech-ruice*). In order to 'break or prevent the face-blush' of a king, the *Ancient Laws* (iv. 311) say that the *bruihtrig*, or 'public hospitaller,' had the 'snout of a rooting hog'—in other words, he had plenty. If, however, the king or his subject should lack the necessary provisions at the arrival of his guests, through default of another, the defaulter was obliged to pay him the compensation known as the 'blush-fine' (*Ancient Laws of Ireland*, i. 123. 11; 129, note 1; iv. 345, 347, 13; *Cormac's Glossary*, 103, s.v. 'Leos').

Though, according to the *Ancient Laws* (iv. 237), chieftains were held 'bound to entertain without asking any questions,' the *féine*, or farmers, it seems, were given permission to make suitable

inquiries of their guests, in order, without doubt, to afford them better protection in case of necessity (Joyce, ii. 168). As the *Ancient Laws* (iv. 337) specify cases wherein a king might be excused for deficiency of provisions if the number of guests should exceed expectation, it is obvious that a subject was not expected to exceed the limits of his means in order to provide for a number of guests.

As stated above, there was a 'public hospitaller' (*bruighfer, brugaid, briuga*), who had, as a gift from the king, to assist him in fulfilling the functions of his charge, appanage lands of various kinds. He seems to have had, for example, the temporary usufruct of escheated lands, and of such lands as fell into the public domain through failure of heirs, or pending the decision of the courts as to the rightful succession to them. In return for these immunities and lands, he was bound to maintain his establishment in a proper condition. His was a position of high honour, and all who laid claim to his hospitality were bound to show him due respect. Though his revenues came principally from the land, he had other allowances. The extent of his house and premises, the character of the furniture, and the amount of supplies of provisions he was bound to have always in store, are minutely given in the *Crith Gablach*, a MS published by E. O'Curry (*Manners and Customs of the Anc. Irish*, London, 1873, ii., App. p. 485). He was specially protected by law from trespass and from wanton or malicious damage to his furniture or premises. In the tract mentioned above, the fines for such trespasses and damages are set down with great minuteness. These fines were heavy, and were evidently intended to restrain within the limits of order and decorum those who were entitled to hospitality (O'Curry, i. p. ccclix). Among the privileges extended to the *brugaid* or *bruighfer* was that of brewing, for his house should never be found lacking the ale necessary for the refreshment of a king, bishop, poet, judge, or other person, and their respective suites entitled to such entertainment (*ib.* p. cccxxvi). He was also the only man under the rank of a *flaith* ('ruler, prince') entitled to the privilege of having his house over a spring of water.

There were two classes of *bruguids*. According to Stokes (*RCel* xv. [1894] 431), the inferior and more common grade was that of the *brugaid cedach*, or 'hundred hospitaller,' who was required to have one hundred of each kind of cattle, one hundred labourers, and corresponding provision for feeding and lodging guests. The higher and more exceptional grade was that of the *brugaid lethech*, or 'hospitaller of the kneading trough' (*lethech* = 'kneading trough'), who was not only obliged to have two hundred of each kind of cattle, but who had to supply his house with all the necessary furniture and utensils, including one hundred beds for guests. The *Ancient Laws* (i. 47) deny the *brugaid* the right to borrow, stating, on the contrary (iv. 311), that he is 'a man of three snouts, the snout of a live hog rooting in the fields to break the blouses of his face, the snout of a dead hog cooking on the hooks, and the pointed snout of a plough'; i.e., he should have plenty of live animals, meat cooked and uncooked—usually of three kinds—and a plough, with all other tilling appliances. He is also called the man of three sacks; i.e., his house was always to be provided with a sack of malt for brewing ale, a sack of salt for curing cattle-joints, and a sack of *guail*, or charcoal, 'for forging the irons,' in case of accident to the horses or vehicles of travellers (O'Curry, i. p. cccxlii). The *Ancient Laws* (iv. 310 f.) prescribe, further, that his kitchen fire should never be permitted to go out, and that his cauldron should always remain on the fire, full

of joints boiling for any guest who might chance to arrive.

In addition to the foregoing, the *Brehon Laws* (v. 17, 7, 79, 22) provide that a number of open roads should lead to the *brugaid's* hostel, so that it might be within access of all; and a man should be stationed at each road to allow no traveller to pass without seeking the hospitality of the *brugaid*. From the account of the destruction of Da Derga's hostel, we are able to ascertain that at night a light was kept burning on the lawn (*faithche*), to serve as a guide to travellers. In fact, Da Derga never closed any of the doors of his house, day or night, with the exception of those to the windward side (Stokes, 'Togail Bruden Da Derga,' in *RCel* xxii. [1901]).

According to Keating (*History of Ireland*, tr. O'Mahony, London, 1886; see Joyce, ii. 170), there were 90 *bruguids* in Connaught, 90 in Ulster, 93 in Leinster, and 130 in Munster. Though these figures are far from being accurate, they indicate how very numerous these houses of hospitality were.

There were a few *bruguids* of a still higher class than those already mentioned, who, it seems, entertained kings, chiefs, and their retinues, and were on very intimate terms with them. With the exception of this fact, their duties were in every way similar to those of the other two classes.

With the creation of the position of *brugaid* arose the necessity of public hostels of which he might be placed in charge. These hostels were called *brudin* or *bruden*—meaning houses of public or State-endowed hospitality. According to the Story of the Pig of Mac Dáthó ('*Seol mucci Mic Dáthó*,' in Windisch, i. 96), there were in the Red Branch period, about the beginning of the Christian era, six of these royal hostels in Ireland: 'the hostel of Da Derga in the province of Cualann, and the hostel of Forgail Manach [father-in-law of Cúchulainn] which was located at Lusca [now Lusk, to the north of Dublin], and the hostel of Mic Dáreo in Brefney, and the hostel of Da Choca in West Meath, and the hostel of Blai the farmer (*bruga*) in Ulster,' as well as that of Mac Dáthó, who was king of Leinster. In regard to the hostel of Mac Dáthó, it is said that 'there were seven doors in the hostel, and seven ways through it, and seven hearths in it, and seven cauldrons, and an ox and a salted pig in each cauldron. The man who came into the house thrust his fork into the cauldron, and what he obtained at the first thrust, that he ate. If, however, he did not obtain anything at the first thrust, he did not make another' (cf. also Stokes, 'Togail Bruden Da Choca, the Destruction of the Hostel of Da Choca,' in *RCel* xxi. [1900] 397).

The *bruden* of Da Derga was the most important of these hostels. The account of the destruction (*togail*) of it was published by Stokes in *RCel* xxii. [1901], and it relates how Conari I., king of Ireland, and his retinue, who were staying there at the time, were destroyed by a band of Irish and British marauders in the 1st cent. A.D. This hostel was situated on the river Dodder, where excavations were made and remains were discovered by Frazer (*Proc. Roy. Ir. Acad.*, 1879-86, p. 29). The *bruden* of Da Choca, in the destruction of which Cormac Conlinges, son of Conchobar, king of Ulster, perished, was the next in importance, and was, as stated above, situated in West Meath, a few miles from Athlone. The account of its destruction contains the statement also that 'every *bruden* is an asylum of the red hand,' i.e. for all criminals guilty of murder (*RCel* xxi. 315).

There was still another kind of public hospitaller, called the *biatach* or *biadhach*, though the difference between him and the *brugaid* is not very clear. The Book of the Dun Cow (*Leabhar na hUidhre*, p. 123, line 4 f. from bottom) mentions them together, apparently making no distinction whatever between them. The *biatach* was obliged

to entertain travellers and the chief's soldiers whenever they sought his hospitality. In order to enable him to discharge his functions, he was granted a tract of arable land called the *baile-biadhthaigh*, which was equivalent to about 1000 English acres. Besides this, he was entitled to a much larger amount of waste land.

According to Cormac's *Glossary* (p. 130), there were several female *bruguids* during the time of Finn who entertained chieftains and warriors on their hunting expeditions.

In addition to these, we find in Christian times that every monastery contained a *teoh-aiged*, or guest-house, for the reception of travellers. These houses, which were constructed at some distance from the monks' cells, dated from the time of St. Patrick (Joyce, i. 330). According to the *Lives of the Saints* (Stokes, *Lives of the Saints from the Book of Lismore*, Oxford, 1890), it was enjoined upon some of the inmates to receive the stranger, take off his shoes, wash his feet in warm water, and prepare supper and bed for him. This was done in accordance with the *Ancient Laws* (v. 121. 27), which state that 'hospitality is incumbent on every servant of the Church.'

An old Irish sermon on Doomsday contains the following: 'The Lord will say to the just, "I was in need of a guest-house (*teoh-aiged*), and ye gave me hospitality"' (Stokes, 'Tidings of Doomsday: a Sermon on Doomsday from the Leabar na hUldhre, in *RCel* iv. (1879-80). Once, when St. Columba expected a guest at Iona, he told the brethren to prepare the *hospitium*, or guest-house, and to have water ready to wash the stranger's feet (Reeves, *Adamnan's Life of St. Columba*, Dublin, 1857, p. 27). When St. Claran of Clonmacnoise arrived at Salgir (now Selkieran in King's County), to visit the other Claran, abbot of Salgir, the latter, learning that the fire had unexpectedly gone out, said to him with a tone of apology: 'The first thing that ye [the saint and his followers] need is water to wash your feet, but just now we have no means of heating water for you' (Stokes, *Lives of the Saints*, 277). Mac Conglinne, displeased at the poor reception accorded him in the monastery at Cork, complains that on his arrival no one came to the guest-house to wash his feet, so that he was obliged to wash them himself (Meyer and Hennessey, *The Vision of Mac Conglinne*, London, 1892, p. 10). As in secular life, so in monastic life there was no obligation to entertain guests after the third day.

Guest-houses with men-servants (*timthirig*) in charge were also established in the most important nunneries of the country. In the *Féilire*, or Calendar, of Oengus the Culdee (*Trans. Roy. Ir. Acad.*, 1880, p. 72f.), it is related that a chief named Coirfre or Carbery arrived at St. Brigit's Convent in Kildare with a child in his arms, and was conducted to the guest-house. Guest-houses are also found attached to the houses of chiefs and even of persons not so high in the social scale who might be able to bear the expense. They consisted usually of one large apartment, which was always kept prepared for the reception of travellers, and which was in charge of a handmaid who washed the guests' feet (*ib.* 48).

If a monastery was situated on the banks of a river where there was no bridge, the monks usually had a *cunragh* ready to ferry any traveller across free of charge (Healy, *Insula Sanctorum et Doctorum: Ireland's Ancient Schools and Scholars*, Dublin, 1890, p. 427). Irish missionaries on the Continent established *hospitalia* for the use of pilgrims on the way to Rome, some of which were in Germany, although they were mostly in France (cf. *Cambrensis Eversus*, ed. for the Celtic Society by M. Kelly, Dublin, 1860, ii. 244 f.).

The public hostels began to diminish in number at the time of the Anglo-Norman invasion, and finally they disappeared altogether. After this the monasteries and some of the wealthier chiefs continued to keep up the custom for some time, but Henry VIII. finally ordered the suppression of all monasteries, and the last vestige of this custom disappeared with them. In 1530, Lord Leonard Gray, the Irish lord deputy, and the Dublin council petitioned the king in vain to exempt six

monasteries from the order, and among their reasons they cite the following:

'For in those houses commonly, and other such like, in default of comen innes, which are not in this land, the King's Deputie, and all other his Grace's Counsaill and Officers, also Irishmen, and others resorting to the King's Deputie in their quarters, is and hath bene most comenlie lodged at the coostes of the said houses. . . . Also at every hosting, rode, and journey, the said houses in ther [own] propre coostes fyndethe [entertainment for] as many men of warr, as they are apoynted by the King's Deputie and Counsaill for the same' (*State Papers, Henry VIII.*, Ireland, iii. 180; see also *Register of All Hallows*, xxv., and Joyce, i. 333).

3. *Welsh*.—Among the Welsh the same admiration for hospitality and liberality was shown as among the Irish. The house of the Cymro was always open to the traveller. When he came within a district and presented himself at a house, he first delivered up his arms, which signified that he placed himself under the *naud* (peace) of the *pentulu* (head of the household). If he expressed the desire of seeking a lodging, for the first two nights he was treated as a guest of the householder with whom he stayed, but on the third night he was deemed an *agenhine*, or member of the man's household, for whom such man was answerable (Hubert Lewis, *The Ancient Laws of Wales*, ed. J. E. Lloyd, London, 1889, p. 281). The guest's way of manifesting his intention of staying overnight was to allow his feet to be washed. But, if he refused the proffered service, it was apparent that he desired only morning refreshments, and not lodging for the night.

'The young men,' says Giraldus Cambrensis (*Opera*, ed. J. F. Dimock, London, 1861-61, i. 10, p. 182f.), 'move about in troops and families under the direction of a chosen leader. Attached only to arms and ease, and ever ready to stand forth in defence of their country, they have free admittance into every house as if it were their own.'

As each house had its young women and its harps allotted to the purpose of entertaining visitors, those who arrived early in the day were entertained either with conversation or music until evening, when the principal meal of the day was served. Though, as Giraldus says (*Descrip. Cambriae*, i. 10, p. 182f.; cf. *ETHICS AND MORALITY* [Celtic], vol. v. p. 463), this varied according to the number and dignity of the persons assembled and the degrees of wealth of different households, it was almost always a simple repast, for 'the kitchen does not supply many dishes nor high-seasoned incitements to eating.'

The houses of the Welsh were not furnished with tables, cloths, or napkins. The guests were seated in messes of three, instead of couples as elsewhere. All the dishes were at once set before them in large platters on rushes or grass spread on the floor (*ib.*), and the food consisted of milk, cheese, butter, and plainly-cooked meat (Rhys and Brynmor-Jones, *The Welsh People*, London, 1900, p. 250 f.). The bread that they served was a thin and broad cake fresh baked every day, which, Giraldus says (*loc. cit.*), was called *laguna* in the old writings, but which was probably very much the same as the 'griddle-bread' or 'bake-stone bread'—*bara llech* or *bara plano*—of modern times (Rhys and Brynmor-Jones, *loc. cit.*; T. Wright, *The Hist. Works of Giraldus Cambrensis*, London, 1863, p. 493, note 2). To this was usually added broth with chopped-up meat. 'Such a repast,' adds Giraldus, 'was formerly used by the noble youth from whom this nation boasts its descent, and whose manners it still partly imitates.' The family waited on the guests, the host and hostess standing up and taking no food until the needs of their visitors were satisfied. The evening was then passed by the guests in listening to the songs or recitations of the bard of the household, or of minstrels who in their wandering had joined the company. Often all united in choral singing (Rhys and Brynmor-Jones, *loc. cit.*). A bed made of rushes, and covered with a coarse

kind of cloth manufactured in the country, called *brychan*, was then placed along the side of the hall, and the family and guests lay down to sleep in common (Giraldus, *loc. cit.*). The fire on the hearth in the centre of this hall continued to burn all night, and the people were so arranged that it was at their feet.

'But when the under side begins to be tired with the hardness of the bed,' adds Giraldus (*loc. cit.*), 'or the upper one to suffer from the cold, they immediately leap up and go to the fire, which soon relieves them from both inconveniences; and then, returning to their couch, they alternately expose their sides to the cold and to the hardness of the bed.'

Until the end of the third night the host and the people of the house were responsible for the safety of the guest. According to the *Ancient Laws of Wales*, one of the cases where guardians are appropriate is to guard lawful guests (*Dimetian Code*, III. v. p. 300; *Gwentian Code*, II. xxxviii. p. 377; *Anomalous Welsh Laws*, xiv. p. 714, in Aneurin Owen, *Ancient Laws and Institutes of Wales*, London, 1841). If during the period of his visit recognized by law—i.e. before the end of three days—the guest was accused of theft, the testimony of his host could clear him only of theft committed by night (*Anomalous Laws*, xiv. p. 739, § 2); and, if the host failed to clear his guest, he himself was obliged to pay three pounds to his lord and to surrender his property to the complainant, i.e. sufficient, no doubt, to relieve his guest of the punishment he might suffer (*ib.*; also ch. xii. p. 705; and ch. xv. p. 709).

'There are three privileged progressive visits,' say the *Triads of Dyfnwal Moelmud* (W. Probert, *The Ancient Laws of Cambria*, London, 1823, p. 6, no. 24), 'guaranteed by the honour of the tribe of the Cambrians, and no person must presume to hinder them: the visit of an ambassador from a bordering kingdom; the visit of bards from the bordering kingdom in the convention, according to the privilege and institute of the bards of the Isle of Britain; and the visit of foreigners in the peace and protection of God and His tranquility.'

To illustrate further the attitude of the Welsh towards hospitality, it is stated elsewhere in the same work (§ 12) that 'there are three progressions that, wherever they go, are entitled to their support and maintenance: those who have the privilege of distinction; those who have the privilege of bards; and those who have the privilege of orphans.' Among the 'three progressions that require assistance' are 'bards in their circuit of minstrelsy and foreigners under the protection of the tribe of Cambrians.' Finally, the 'three renowned progressions' are the chief of the tribe and his retinue, bards and their disciples, and a judge with the retainers of his court. 'Wherever they are,' continue the *Triads*, 'they are entitled to their liberty and free maintenance' (*ib.* § 30).

This goes to show how greatly a violation of the laws of hospitality was condemned among the Welsh; and we are not surprised, therefore, to discover that severe punishments were meted out to the guilty. If it happened, for example, that a guest was seen to arrive and enter a house in good health, and in the morning was found dead, and the host and his family had raised no alarm and exhibited no marks of wounds received in his defence, the host and his family could not escape capital punishment, 'unless perhaps they were liberated *per patriam*, if the King's justices should deem that the truth could be ascertained *per patriam*' (Lewis, *op. cit.* 379). It was on this account that laws were made about receiving and parting with guests by daylight. If, on the contrary, the master of the house was found dead in the morning, and his servant or a stranger had passed the night in it, such stranger or servant could scarcely escape danger by the inquisition of the country because of the grave suspicion. 'But if the *patria* could not say the truth as to such secret deed, the man was sufficiently acquitted by their not finding him guilty' (*ib.*).

The *Ancient Laws* provide further (*Anomalous Laws*, iv. iv. 402, § 14, ed. Aneurin Owen) that, 'If a person come as an inmate to another person, having an animal or other property with him, when he departs, he is not to take with him the offspring, or dung, or crop, or any piece of furniture; nor anything but what he brought with him to the house, if it remain, unless an agreement assign it to him; as to which it is said: an agreement is stronger than justice.'

As in Ireland, no stranger was to remain beyond three days without 'commendation,' i.e. without being commended to some lord, who should take him under his protection, and answer for him, or without being admitted to some *berh*, or fellowship of mutual responsibility (*Leges Hen. I.*, cviii. in Lewis, 281). In Ireland this was called 'binding the lord's protection,' and was necessary to every stranger to safeguard him through a country (J. Strachan, *Stories from the Táin*, Dublin, 1908, p. 4). Cúchulainn not only accepts the protection of King Conchobhar of Ulster on his first visit to Emain Macha, but even requires the Ulstermen to accept protection from himself (*ib.*).

Of the king's guest the *Venedotian Code* (I. ix. 10, § 18, ed. Aneurin Owen) states that he is one of the six persons to be served with food and liquor by the royal steward. The other five who are the recipients of this honour are the king himself, his *henaw*, his *edeling*, his chief falconer, and his foot-holder. And, finally, one of the four persons for whom there is no protection against the king is 'a person to whom the king is a supper guest, who ought to supply him with food that night, and who does not supply him' (*Dimetian Code*, II. viii. p. 214, ed. Aneurin Owen).

LITERATURE.—This is sufficiently indicated in the article.

HOSPITALITY (Chinese).—The Chinese are a hospitable people; they enjoy social intercourse; they love to chat together. Notwithstanding the hard struggle for existence which many of them have to carry on, they enjoy life to the full, and extract well-nigh all the pleasure which can be got out of it. One of the first sentences in the Confucian *Analects*¹ runs thus: 'How pleasant it is to have friends come from a distance!' The commentators amplify the wording of this so that it reads: 'How pleasant to have friends come to you from a distance, attracted by your learning!' There is no doubt that the context gives them reason to paraphrase the passage in this way. At the same time, although the attractive power that draws the friends together is learning, it opens the way to hospitality. This is not the only instance in the Classics; others are even more to the point, and in them we find hospitality enjoined as a duty. Now, these Classics are the standard which the Chinese have applied to their conduct, and they contain, according to them, the principles which are to guide them in all affairs.

It might be thought that the etiquette of this Eastern people, with its stiff formality, like a coat-of-mail, would so hamper intercourse that it would act as a kill-joy on all attempts at the offering of hospitality; but under the rigid forms of outward ceremonial there beats a human heart warm with all the elements that foster the exhibition of it. A good corrective to formality of intercourse, lest it should dull the edge of hospitality, is found in a saying of the philosopher Tsang, one of the principal disciples of Confucius: 'I daily examine myself . . . whether in intercourse with friends I may not have been sincere.'² Another disciple of the Sage also gives utterance to much the same idea when he states it as one of the leading principles in the conduct of a man to whom the term 'learned' might be applied: 'If, in his intercourse with his friends, his words are sincere.'³ We thus see that these followers of the Master were carrying out the principles he laid down of 'Hold faithfulness and sincerity as first principles.'⁴

In the compilation of memorials known as 'The Book of History,' extending over about 1700 years from the most ancient times before the day of Confucius, we have, in the portion known as 'The

Great Plan' (2205-2198 B.C.), one of the oldest parts of this ancient work, 'the entertainment of guests'¹ laid down as one of the eight objects of government. This would seem to include in its purview 'all festive ceremonies, all the intercourses of society.' In an agreement entered into by an assembly of princes in 850 B.C., one of the injunctions was: 'Be not forgetful of strangers and travellers.'² This was taken to include officers from other countries. 'The Doctrine of the Mean'—one of the Chinese Classics—in a description of the duties of a ruler of a country, says that 'by indulgent treatment of men from a distance they are brought to resort to him from all quarters.'³ The commentators differ as to the meaning of 'men from a distance.' One thinks it includes 'guests or envoys and travellers, or travelling merchants.' The learned translator of the 'Chinese Classics' (J. Legge) doubts whether any others but travelling merchants are intended by it. Another commentator would apply it to 'the princes of surrounding kingdoms.'

Confucius considered that the study of 'The Book of Poetry' taught the art of sociability. This book is a collection of 305 pieces selected by Confucius from more than 3000. They may almost be described as folk-songs, thus collected thousands of years before the vogue for such things in the West. These short poems represent the life of the Chinese some 3000 years ago. Some of them were sung at festive gatherings. In one 'admirable guests' are spoken of.⁴ Merry gatherings they seem to have been, for in one we read: 'As we feast, we laugh and talk.'⁵ In another we have a general returning from all his toils and feasting happily with his friends on roast turtle and minced carp.⁶ Another is descriptive of a feast given by a king.⁷ The hospitality thus sung in these songs seems to have been appreciated to the full.⁸

The clan system brings in its train, among its good features, the development of hospitality on a far more liberal scale than might be expected. Should a European, in adopting a Chinese surname for his cognomen while among the inhabitants of the 'Middle Kingdom,' come across a Chinese gentlemen bearing the same name, he will find the most genuine interest taken in him by his newly-discovered clansman, and the utmost hospitality shown to him. The clansman in trouble or distress finds a refuge in his ancestral home in the heart of his clan in this land where poorhouses are unknown. Not only so, but a clansman, when out of work, can, and often does, go and live for days and weeks with one of the same clan as himself. Bed and board are given to him freely, and he is hospitably entertained until work again comes his way; and he, in his turn, is able to offer the same entertainment to a brother clansman in need.

The teapot in China is always ready to be produced on the advent of a stranger; nor is the Chinaman content with a single teapot, for often each cup serves for one, and each guest has a brew made specially for him, and replenished with boiling water as often as he likes. These cups are slowly sipped while the host does his best to entertain his visitor. Sweetmeats and pipes are also offered. A phrase in the Chinese language which is constantly heard is 'Come and sit down,' being an invitation to the house of those who utter it.

The low status of woman in China, her supposed inferior position in contrast to man, and the false prudery of the Chinese, have hitherto prevented the mingling of the sexes in entertainments, such as dinners, parties, and social gatherings.

Respectable women were excluded from participation in all such functions except when all present were of the same sex as themselves. But with the revolution in manners, customs, and education, as well as in government, which is now taking place in China, a different position is being taken by woman, and she has begun to share with her husband in both the dispensing and the receiving of hospitality.

HOSPITALITY (Christian).—The foundation of the first hospitals and hospices by the Christian Church shows the practical way in which the principle of hospitality was applied by Christian charity to invalids and weary travellers. Hospitality is proverbial in the East (cf. the story of Abraham, Gn 18¹⁻⁸). The guest was sacred and inviolable, even although discovered to be an enemy (Jg 19²). Before the time of caravanserais, which were unknown until the end of the 7th cent. B.C. (cf. Jer 9²), the stranger, when travelling, was dependent upon the hospitality of private individuals. Hospitality was practised among the Greeks and Romans also, but it was a private rather than a civic virtue. Christianity transformed it into a public virtue, by demanding as a formal duty from members of the Church, and especially bishops, a more merciful and beneficent spirit. In fact, the earliest Christians interpreted Christ's words, 'I was a stranger, and ye took me in' (Mt 25³⁵), in their broadest sense (Mt 10¹³, Lk 10⁸ 14¹³⁻¹⁴), and showed hospitality towards pagans as well as Christians.

St. Paul followed in Christ's footsteps: 'In love of the brethren be tenderly affectioned one to another; . . . communicating to the necessities of the saints; given to hospitality' (Ro 12¹³⁻¹⁴, cf. 1 Ti 5¹⁰). A 'saint,' i.e. a Christian, provided with a letter of recommendation from his church, could travel from one end of the Roman empire to the other without having any anxiety about a home. Wherever there was a Christian church he was sure of receiving food and shelter, and attention in case of illness. The Christians showed hospitality towards all poor travellers.

1. Hospitality in the East.—Naturally it was travellers attacked by illness that called forth the greatest pity and anxiety. This was the origin of hospitals (*εὐνοβία*, *hospitia*), the first of which was founded in the last quarter of the 4th cent. A.D., on account of a famine which had caused a deadly epidemic.

The historian Sozomen (*HE*, iii. 16) relates the foundation in A.D. 370 of the hospital of Edessa in Syria thus: 'The town of Edessa, being afflicted by famine, the hermit Ephraim came forth from his seclusion to upbraid the rich with their hard-heartedness in allowing the poor to die instead of devoting a part of their superfluous wealth to their relief. "That wealth which you are so carefully amassing," he said to them, "will only serve to condemn you, while you are losing your own souls, which are worth more than all the treasures on earth!" Persuaded by these words, the rich people of Edessa informed him of their inability to decide upon the person to be entrusted with the distribution of their wealth, as the people of their acquaintance were all covetous and might put it to a wrong use. "And," Ephraim asked them, "what is your opinion of me?" "You are an honest man," they replied, "and we shall gladly give you charge of the distribution of our alms." He thereupon received large sums of money from them, and immediately ordered about three hundred beds to be fitted up in the public porches, and there attention was devoted to all those suffering from the effects of the famine—strangers and inhabitants alike.'

Basil, bishop of Caesarea (in Cappadocia), had also opened a hospital in 375, not far from this town, consisting of several separate houses (see Greg. Naz. *Orat.* xlii. 'In laudem Basilii Magni,' 38).

If Osrhoene and Cappadocia can boast of having had the first hospitals, it was Constantinople that first specified the different classes of those requiring relief. Between A.D. 400 and 403 Chrysostom built several hospitals with the surplus of his income from the archbishopric. Each of these he placed under the charge of two faithful priests, to assist whom he engaged physicians, cooks, and capable workmen (Palladius, *Dial. de vita S. Joan. Chrysos.*, p. 19, ed. Montfaucon [PG xlvii. 20]). There were seven different hospitals: (1) the *Xenodochium*, inn for stranger travellers; (2) the *Nosocomium*, home for the treatment of acute complaints; (3) the *Lobotrophium*, shelter for cripples and chronic invalids; (4) the *Orphanotrophium*, home for the reception of orphans; (5) the *Gerontotrophium*, home for old people; (6) the *Platichotrophium*, home for the reception of the poor; and (7) the *Pandochium*, a refuge for all kinds of destitutes.

Jerome is reputed to have founded the first orphanage in Bethlehem; and John the almoner, who was elected patriarch of Alexandria in 608, organized assistance to the poor and sick of that town.

The Council of Chalcedon (451) recommended the *parabolani*, i.e. 'clerks' employed in the hospitals, to remain in the service of the bishop. Widows were placed at the head of the list of those maintained at the expense of the Church, and in return they and the deaconesses attended to the sick women. Among the qualifications required from a widow in order to receive the Church's bounty St. Paul mentions: 'if she hath used hospitality to strangers, if she hath washed the saints' feet, if she hath relieved the afflicted' (1 Ti 5¹⁰).

2. Hospitality in the West.—Christian hospitality in the West gave rise to two kinds of institutions: (1) *hospitals*, intended for invalids, lepers, and other sufferers, and generally placed under the control of the bishops; and (2) *hospices* or almshouses, adjoining most of the monasteries, situated along the chief roads and in dangerous mountain passes; these extended a welcome to travellers overcome by fatigue or benumbed with cold.

Hospitality was the chief virtue enjoined upon the bishop. 'The bishop,' says St. Paul, 'must be given to hospitality' (1 Ti 3², Tit 1⁸), and the Apostolic precept was confirmed by the most famous Fathers of the Church. Jerome in his *Ep. lii.* ('To Nepotian'), and Chrysostom in his *Second Sermon on Genesis*, advise bishops to keep their houses open to strangers and sufferers in the cause of truth, and their table at the service of the poor, for, in doing so, they are sure to be entertaining Christ in disguise. St. Augustine had started a hospital in his own house, and often sat down at the same table with his guests. The Councils adopted this principle, and entrusted the bishops with the assistance of the poor and the sick (Council of Chalcedon, can. viii.).

In the decrees of the Councils of the Gallican Church are found the earliest regulations concerning the relief of the poor and the sick. The First Council, held at Orleans under Childebert in 511, devoted two canons to them. The fifth decreed that 'of the proceeds of offerings or lands granted to the Church by the king two-thirds shall be employed in the maintenance of the clergy and the poor and one-third in the redemption of prisoners.' The sixteenth adds: 'The bishop shall provide food and clothing, so far as his means will allow, to the poor and the sick who on account of their infirmities are unable to work for themselves.' The Fifth Council of Orleans (549) is quite as formal. After forbidding the unlawful use of any part of the alms bequeathed to the hospitals,

it enjoins upon the bishops (can. xxi.) the care particularly of lepers, and the duty of supplying them to the best of their ability with food and clothing, 'so that Christian mercy might not fail even in the case of victims of that most loathsome disease.' The fifteenth canon mentions the earliest hospital as being in France, and founded at Lyons in 542 by King Childebert and his wife Ultrogotha at the instigation of the bishop. Paris does not seem to have had one until the middle of the 7th cent., when Bishop Landry established (650) a home for invalids and poor travellers near his church—whence the name *Hôtel-Dieu*. It is to Lanfranc, its archbishop, that Canterbury owes its hospital (1070), and the first London hospital was called St. Bartholomew's (1102). In these semi-barbarian ages hospitals were often dedicated to the Holy Spirit, whose emblem, a dove, is found on the frontal of several, e.g. the hospital built by Pope Symmachus in Rome (498).

At first the bishops had the management of the hospitals, but gradually, as the duties increased, they were passed over to the chapters, who delegated this work to a few priests called *provisores* or *praefecti nosocomii*. The *Capitularies* of Charlemagne decreed that the secular and regular clergy should, as one of their first duties, relieve the sick; and, to guard against neglect of duty, they placed the *xenodochia* under the control of royal authority (*Capit.* 183). The Council of Meaux (845) refers to the *Hospitia Scotorum*, complaining that these had been diverted from their original purpose of hospitality, and imploring their reinstatement as almshouses for travellers and invalids.

3. Hospices of the monasteries in the Middle Ages.—While the bishops were the first to establish hospitals for the care of the sick, it was the monks who created a special form of Christian hospitality—the almshouse, or so-called *xenodochium*. Its foundation is generally attributed to St. Benedict of Nursia; this, however, is not correct, as it can be traced back as far as the very beginnings of Eastern monasticism.

The custom of washing the feet of the guests which was in vogue in the Irish convents of the 6th cent. came from the East. Johannes Cassianus, founder of the monastery of St. Victor near Marseilles (410), in his *Collationes* (chayer xvi. 'Magister hospitium'), describes the ceremony performed at the reception of a guest. After the customary salutations the traveller was introduced into the *hospitium*, a wing of the building apart from the rest of the cloister, and taken to his room. After having been shown into the dining-room (*coenaculum*), he had his feet washed by one of the monks. The whole company then shared in the joy caused by the arrival of a guest, breaking their fast and eating cooked food.

When Columban, at the end of the 6th cent., brought Christian principles, along with the elements of civilization, into Gaul, which had been laid waste by the barbarians, he founded monasteries at Anegray, Luxeuil, Fontaine, Bobbio, etc., and urged upon his monks the duty of hospitality towards strangers and poor pilgrims. His disciples, St. Owen, St. Faron, St. Gall, etc., practised this virtue to such an extent that in the 9th cent. the fame of Scottish hospitality was wide-spread. These are the hospitable monasteries referred to by Charlemagne in his *Capitularies*, by the members of the Council of Meaux (845), and the Council of Quierzy (858), when they speak of the decline of the *hospitia peregrinorum*. The bishops assembled at the first of these Councils implored the Emperor Louis le Débonnaire to restore these *hospitia*, help them by endowments, and place them under their control.

'It is our duty,' they said (can. 40), 'to inform your Majesty concerning the homes established and equipped in the time of your predecessors, and to-day almost annihilated. The Scottish *hospitia* especially, which the kindly people of that nation had built there, and endowed from their wealth acquired because of their goodness, have been completely diverted from their real purpose. Not only are those who ask for hospitality refused

admittance, but even those who, bound by the tie of religion, have served the Lord from their childhood, are being driven from them, and compelled to go begging from door to door.*

Besides Johannes Cassianus and Columban, who imitated the practices of the Eastern Church, Benedict of Nursia also imposed the duty of hospitality upon the monks of the West. The 53rd chapter of his *Regula* is entitled 'de Hospitibus suscipiendis,' and reads as follows: 'Let all visitors who chance to arrive be welcomed as if it were Christ Himself, who will one day say to us, "I was a stranger, and ye took me in." Let due honour be shown to all, especially to servants of the faith and pilgrims' (*PL* lxxvi. 750; cf. E. Martène, *Commentarius in regulam Sancti Benedicti*, Paris, 1690).

There was practically no monastery in the Middle Ages without its *xenodochium*, and many had a *nosocomium* as well. These hospices rendered valuable service at a time when the roads were infested by robbers, or exposed to frost and snow, e.g. those leading through the passes of high mountains, and subject to thick fogs or snowstorms. Such were the hospices adjoining the cloisters on the three chief Alpine passes leading from Switzerland to Italy and France. The hospice of St. Gothard has been almost abandoned since the completion of the railway from Lucerne to Lugano (1832). That of Simplon is greatly affected by the new road leading from Brieg to Domo d'Ossola. The hospice of the Great St. Bernard still exists, and is prepared to render service to travellers on the road from Martigny to Aosta. The monks living there belong to the Augustinian Order, and their lay brothers are called 'Maroniers.' The adventures of those brave men and their famous dogs are well known. They have rescued from certain death thousands of travellers lost in the snow and almost frozen. For this purpose the monastery of the Great St. Bernard received an annual grant from the kings of France (1760). The grant was confirmed and increased by Napoleon Bonaparte, after the famous crossing of his army through this pass (15th to 21st May 1800).

4. **Orders of Hospitaliers.**—The epidemics which frequently raged among the pilgrims travelling from the West to the Holy Land, and among the soldiers of the Crusades, led to the foundation of hospitals and Orders of Hospitaliers in Palestine. The first hospitals were founded at the end of the 6th cent. by Pope Gregory I., and afterwards restored by Charlemagne, who took a great interest in the Christians of the East. The hospice of St. John, established at Jerusalem before the first Crusade by a few Amalfi citizens, gave rise to the first Order of Hospitaliers called 'Hospitaliers of St. John of Jerusalem,' or 'Joannites,' whose rules were drawn up by Brother Gerard (or Gerhard) (d. 1120). This Order, composed of three classes, priests, knights, and attendants, was of a semi-charitable, semi-military nature. As a consequence of the services it rendered, it spread throughout the whole of Europe, and was divided into eight provinces or 'languages.' After the conquest of Palestine by the Turks, the Joannites transferred the seat of their Order to Rhodes and subsequently to Malta, whence the names 'Knights of Rhodes' and 'Knights of Malta,' by which they are also known. The French branch disappeared at the Revolution of 1789. The German branch was restored by Frederick William IV., king of Prussia, about 1850, and still exists under the name of 'Johanniter-Orden.' The English branch, which was abolished and had its wealth confiscated by Henry VIII., was reorganized in 1823. Its special work is the supervision of convalescent homes and small country hospitals, and the training of sick nurses for the poor. The English Joannites were of invaluable service to the wounded in the Trans-

vaal war. In imitation of the Joannites the 'Hospitaliers of the Holy Spirit,' the 'Hospitaliers of St. Lazarus' to tend lepers, the 'Hospitaliers of St. John of God,' an Order founded in Granada (Spain) by a Portuguese of that name (d. 1550), etc., were formed.

In the Christian Church the care of the sick has never been confined solely to men, but both in the primitive Church and during the Middle Ages was largely participated in by women; so that the number of Orders of Hospital Sisters exceeds that of the Brethren. Among the oldest and most famous, mention is due to the society of 'Hospital Sisters of the Hôtel-Dieu' (of Paris), known as 'Augustine Sisters' (beginning of the 13th cent.), the 'Handriettes,' the 'Ladies of the Hôtel-Dieu' of Beaume, the 'Filles-Dieu' of Orleans, the 'Sisters of St. Thomas' of Villeneuve, and especially the 'Sisters of Charity,' organized by St. Vincent de Paul to assist the 'Dames de Charité' in the nursing of the sick, and obliged to remain free from monastic fetters.

Hospices and almshouses were also established near the famous pilgrimage places, to afford shelter to the numerous pilgrims visiting them, e.g. at St. Jacques de Compostella in Spain, Our Lady of Loretto in Italy, and Our Lady of the Hermits in Switzerland (Einsiedeln).

The 'Maladreries,' 'Mozelleries,' or 'Hospitals of St. Lazarus,' special homes for lepers, constituting a branch apart from hospitals, do not demand attention here.

5. **Hospitality in modern times.**—It may be said that individual hospitality has decreased practically in direct proportion to the advances achieved in the means of transport and the number of hotels.¹ It is, however, still practised to a considerable extent in Eastern countries and in the north of Europe, e.g. Scotland. But, if private hospitality has diminished as a result of civilization, public hospitality, on the other hand, has advanced with rapid strides not only by developing existing charitable institutions, but by creating new and very ingenious methods of relieving the sick and destitute.

This leads us to subdivide the remaining discussion into two parts: (1) the development of ancient institutions; and (2) the formation of new methods of relief.

(1) The ancient *xenodochium* has been transformed into various kinds of night refuges. As early as the 12th cent. the Hospital Sisters of St. Augustine in Paris were in a position to provide three hundred vagrants with three nights' lodging in their convent of 'Blanc-Manteaux.'² Destitute women were received in St. Catherine's Home in Lombard Street. In 1872 Massabo founded the first night refuge at Marseilles, and his example was followed by Lamaze and the Philanthropic Society, who opened large night shelters for men and others for women in Paris (1878). The municipal board of Paris, the municipalities of London, and most of the European capitals, following in their train, opened various night shelters. The Salvation Army has distinguished itself in this respect.

As a result of the reforms started in England by John Howard and Florence Nightingale, and in France by La Rochefoucauld-Liancourt, Tenon, etc., the ancient *nosocomium* has developed into the modern hospital with all its hygienic improvements. Before these reforms the best organized hospitals were military or *lazaretto* hospitals. At the end of the 18th cent. the public hospitals in

¹ The Swiss hold the first rank in the management of hotels. At Ouchy, near Lausanne, they have built a normal school for hotel managers, which is admirably organized, and is attended by young people from all countries.

² There is still a street of 'Blanc-Manteaux' in the Temple quarter of Paris.

France had reached such a depth of decay that they were dreaded by the poor, and deservedly called forth the censure of philanthropists and the complaints of medical men.

'You have in Paris,' wrote Voltaire to Paulet on 22nd April 1768, 'a hospital (Hôtel-Dieu) where perpetual contagion reigns, where poor invalids huddled closely together infect their neighbours with the plague and death.' Michelet, the distinguished historian of ancient France, is equally bitter. 'Ancient hospitals,' he says, 'were exactly like reformatories. The sick poor and prisoners confined in them were generally regarded as culprits struck by the hand of God, whose first duty was to atone for their sins, and they were subjected to cruel treatment. Charity of such a dreadful kind arouses our horror. An attempt was made to dispel the terrors of the hospitals by adorning them with enticing names, such as "Hôtel-Dieu," "La Charité," "La Pitié," "Le bon Pasteur," but that did not succeed in imposing upon poor invalids who hid themselves to die at home, so terrified were they at the thought of being forcibly dragged into these places.'

At that time the insane were chained in their cells, and such was the terror inspired by these victims of insanity that they were believed to be 'possessed by the devil.' Dr. Finaud showed great courage in breaking the chains (1792-94).

In England John Howard (d. 1790), who is well known on account of his remarkable zeal, took the initiative towards reforming hospitals, and in France that step was taken by the Academy of Sciences. The fire which took place in the Hôtel-Dieu in 1784, and burned to death several hundreds of the inmates, roused a wide-spread feeling of pity and indignation.¹ £80,000, a large sum at that time, was collected by public subscription for the reconstruction and improved sanitary arrangements of this hospital. The committee appointed by the Academy of Sciences for the reform of public hospitals numbered in its ranks such philanthropists as Bailly, the Duke of La Rochefoucauld-Liancourt, Tenon, etc. The memoir written by Tenon (1787) is a master-piece of technical knowledge and courage, denouncing the horrors referred to by Voltaire. The 'Convention' appointed a committee to carry out the proposed reforms, but the Revolution and the wars of the Empire prevented the realization of Tenon's scheme. Nothing more was achieved until Louis Philippe's reign. Then the Count of Rambuteau, prefect of the Seine department, ordered preparatory investigations concerning the rebuilding of the Hôtel-Dieu, which, however, was not actually achieved until the reign of Napoleon III. (about 1866-68). We would call special attention to the most recent improvements, especially in the maternity and surgical wards of hospitals, resulting from Pasteur's discoveries and Lister's antiseptic method.

Institutions for the maintenance of widows and orphans are as old as the Church. Wherever there was a Christian community it regarded the assistance of those unfortunates as its first duty. But there are several ingenious modern methods of this kind of aid, which we shall merely mention. Having noticed the disadvantages of a widow having to live alone while her children were sent to an orphanage, some philanthropists gave her pecuniary assistance, enabling her thereby to keep her children at home,² and to preserve the family tie intact—a state of affairs beneficial to both mother and children. It was this idea that gave rise to the 'Œuvre des petites Familles' founded in Paris in 1891. Its aim is to bring together orphans of both sexes and all ages in a house where they are under the care of a Christian matron, who treats them as if they were her own children. Here they receive manual instruction, one of the regulations being that every orphanage must have a workshop connected with it.

¹ The Hôtel-Dieu in Paris had become a sort of *caravansérail*, open to all poverty-stricken, aged, disabled, and vagrants of both sexes, whether they were ill or not. No fewer than 6000 people took refuge there, and it was quite an ordinary occurrence to have three or even four invalids lying in one bed.

² Cf. the 'Œuvre des Veuves' founded by Ed. Vaucher in Paris, 1893.

Ever since the Middle Ages the monasteries have hospitably opened their doors to such fallen women as have repented, and, endeavouring to hide their shame, are making a fresh start. Robert d'Arbrissel, the celebrated preacher of repentance, founded the Order of Pontevault. One of the convents of this order, St. Magdalene's, was specially set apart for fallen women. In more recent times this admirable work of hospitality and moral aid has been carried on by the Roman Catholic 'Good Shepherd's Nuns,' the Anglican and Protestant deaconesses of Kaiserswerth, and the female officers of the Salvation Army; and to-day it is being done by the rescue-work of the 'Home of Fantine,' founded by Madame d'Avril de St. Croix, and by R. Béranger's 'League for the Suppression of the Trade in White Women.'

The aged also, afflicted by poverty and infirmities, have at all times aroused the compassion of the faithful. At one time they were received in certain of the monasteries; nowadays there is no town of any size which does not possess its home for the aged. A new feature introduced into these homes in the 19th cent. was the keeping together of old couples, and the association of widows and widowers with young children, so that the melancholy of their old age might be brightened by the happiness of youth. We may mention as examples of the former kind the 'Asile des petits Ménages' at Issy, near Paris, built on the site of the ancient 'Hospital for Lepers' of St. Germain (founded in 1100) and the 'Home of Sainte Péline' in Paris, and as a type of the latter the 'Asile protestant de Nanterre' for old women and little girls.

(2) Among modern forms of hospitality the most noteworthy is what is known as the workhouse—a combination of refuge and workshop. The idea, however, is not quite new, for, even before the French Revolution, workshops had been opened in times of poverty to enable the poor to earn a livelihood.

'But,' says Louis Rivière (*L'Assistance par le travail à Paris*, 1896), 'the characteristic feature of our time consists of a new element, the effort to impart a systematic organization to this method of relief, so that the poor man may obtain something more than pecuniary assistance. All these institutions have a common aim: in the case of an able-bodied pauper, instead of alms, which are degrading and encourage idleness, they substitute ennobling work—provisionally, however; for, although sufficiently remunerative to ensure a livelihood, it also stimulates the desire to obtain something better. The work is compensated either by food and lodgings or by wages.'

This method of aid, hospitality in return for work, has been applied on a very large scale by F. von Bodelschwingh in his admirable settlement near Bielefeld in Westphalia and by J. Rostand at Marseilles; and in Paris large workhouses for women have been founded by Mesdames Suchard de Pressensé³ and Kislér⁴ and Léon Lefebvre, and for men by A. Robin and the Earl and Countess of Laubépin.⁵

Connected with these institutions there are homes for convalescents and for worn-out working men. To the former class belong the 'Villa Helvetia' at Mentone and the National Shelters at Vincennes and Vésinet founded by Napoleon III., and, in the second, mention is due to the Sailors' Homes established in Great Britain and other countries, and maintained in order to provide a home for homeless sailors returning from long and perilous voyages. There, under the care of a matron, they find comfort for body and soul.

The care of children is a characteristic feature of our times, especially of the French nation, which has shown its ingenuity in inventing, in addition to orphanages, other new methods of hospitality to children. In the first rank stands the institution of 'Crèches' (infant asylums), founded

¹ 'Œuvre du Travail,' as it is called, in the Rue de Berlin, 1856.

² 'Asile temporaire pour des Femmes' (1883).

³ 'Œuvre de l'Hospitalité par le travail à Belleville et à Passy.

in Paris in 1844 by Firmin Marbeau, and now extending their privileges to the children of more than two hundred European towns. Their aim is to nurse and feed young infants whose mothers have to go out to work. To this class belong the 'Crèche Furtado-Heine' and the 'Asile Léo Delibes' in Paris, the 'Pouponnière' in Versailles, etc. The children's shelters established at St. Maur-les-Fossés (near Vincennes) differ from infant asylums in receiving children from two to seven years of age, and not only by the day, but for several years, as long as their parents are unable to attend to them.

The services done by the 'Colonies de Vacances,' started by L. Bion at Zürich and imitated in Paris, Berlin, etc., and by the 'Enfants à la Montagne' organized by Louis Comte, a St. Etienne clergyman, which aim at enabling the delicate and weakly children of large manufacturing towns to get the benefit of country air and good food, are also worthy of the greatest praise. But still more to be pitied than the children of the working-class poor are those wretched little ones whom Jules Simon called 'orphans whose parents are still alive.' Homes for such children were founded in London by Dr. Barnardo, in Liverpool by James Nugent, and at Ashley Down, near Bristol, by George Müller; and in Paris Mesdames A. de Barrau and Kergomard established homes and proffered hospitality and education to the poor creatures who were the victims of unnatural parents.¹ Thousands of these children have by this means been prevented from becoming thieves and criminals.

Children whose defective instincts or undisciplined nature resisted both physical and mental instruction used to be sent to 'Reformatories,' where they often became more corrupted than before by bad company. Attempts have been made to improve this state of affairs by founding agricultural schools at Mettray (at the junction of the Indre and the Loire) and at La Force (on the Dordogne), where military discipline and agricultural work have succeeded in taming the most ungovernable natures.

But more important than all these ways in which modern hospitality has displayed its excellent spirit is its solicitude for young women and girls in search of employment. Many associations, differing in name but having in common this spirit of charity, vie with each other in the enthusiasm with which they not only provide homes for lonely girls, servants, or governesses in search of work in Paris, but also give them valuable advice and secure situations for them in shops and good families. Such are the 'Union internationale des Amies de la jeune Fille,' which has branches in all the European capitals as well as in Paris, the 'Amicitia' club, the 'Adelphi,' and the 'Restaurant pour Dames seules.'

And, lastly, it is an almost incredible fact that charity has not given up hopes of curing what was thought to be an absolutely incurable vice, drunkenness. Establishments have been opened in Switzerland, France, England, Sweden, etc. for the cure of inebriates, and in spite of great difficulties they are beginning to obtain encouraging results.

HOSPITALITY (Greek and Roman).—Hospitality is the name of a relation and of a quality. In Greek the relation is expressed by *ξενία*, the quality by *φιλοξενία*; in Latin the corresponding words are *hospitium* and *hospitalitas*. It is with hospitality as a relation that we shall first be concerned. In both Greece and Rome the relation was one between members of different States, and it held between families rather than individuals, or, it might be, between a family or individual and a State. This gives us a division of hospitality into private and public. In relation to private persons a man was called in Greek *ξένος*, in relation to a State *πρόξενος*; and the like distinction held between *ξενία* and *προξενία*.¹ In Latin the one word *hospitium*, with its concrete *hospes*, was used for both private and public hospitality. There are some relations, like that between father and son, in which, the relation not being the same on both sides, a different word is required to express each of the terms. But, as the relation of hospitality was reciprocal, he who was host becoming guest in his turn, the Greeks and Romans were content with one word (*ξένος*, *hospes*) to cover both sides of the relation, like our words 'brother,' 'cousin.' We, however, have differentiated the two words, 'host' and 'guest,' which come ultimately from the same root, in order to distinguish the two sides of a relation which is not with us so necessarily convertible as it was with the ancients. When the Greeks found it convenient to distinguish, they expressed the entertainer by the word *ξενόδοκος*, leaving *ξένος* for the person entertained.²

The word *ξένος*, dialectic forms of which are *ξείνος*, *ξέννος*, is probably connected etymologically with Lat. *hostis*, being for **gzhenvos*, **ghs-en-uos*;³ and, like *hostis*, it means originally an outsider or foreigner of some sort. Herodotus twice notices the Lacedæmonian use of the word in this its primary sense, as equivalent to *βάρβαρος*. When Amompharetus plumped down a big stone before the feet of Pausanias, he exclaimed: 'With this pebble I give my vote not to run away from the foreigners' (*τοῖς ξείνοισι*).⁴

Cicero tells us⁵ that the word *hostis* meant originally nothing more than *peregrinus*, quoting the Twelve Tables in support of his assertion, which philology sanctions by connecting the Latin *hostis* with the German *Gast*. Cicero draws a conclusion as to the mildness of the early Romans, who called their enemies nothing worse than 'strangers,' though they might have called them *perduelles*. Others, however, might argue from the same philological fact that the Romans failed to distinguish between strangers and enemies.

Hospit-, the stem of *hospes*, is regarded by philologists as a contraction for *hosti-pet*; but as

¹ Athen. xiii. 81, p. 603 f.: *Ἐμπροσθεν δὲ ξένους τοῖς ἑστέροις Ἀθηναίων*.

² The feminine of *ξένος* was *ξένη*, of *hospes*, *hospita* (Plato, *Laos*, xii. 958 D: *ὑποδέσθαι τὴν καὶ ξένους ξένους τε καὶ ξένας ἐξ ἄλλης χώρας*; Cic. *Verr.* II. II. 24: 'femina primaria Servilla veteris Dionis hospita').

³ Od. viii. 542 f.: *τὸ δὲ καὶ ὑπερθεσθὲν πόντος ξενόδοκος καὶ ξένους*. Cf. II. III. 354; Od. viii. 210, xv. 54 f. In Homer *ξένος* and its derivatives always appear in the Ionic forms *ξείνος*, etc.

⁴ E. Brugmann, *Gr. Gram.* 4, Munich, 1913, p. 112.

⁵ Herod. ix. 55: *ξείνους ἄνους τοῖς βαρβάροις*. Cf. ix. 11: *ξείνους γὰρ ἰσχυροὺς τοῖς βαρβάροις*. Cf. Plut. *Arctides*, 10.

⁶ De *Off.* I. 57.

¹ Special mention is due to the 'French Union for the Rescue of Children,' under the direction of C. Gayte, and the 'Patronage of young Protestant boys in moral danger,' founded by A. Robin and managed by Etienne Matter, which provide homes for children in the country, where they are taught various trades.

to the meaning of the latter element there is a difference of opinion. According to some, it is from *pa-*, the root of *pasco*; according to others, it is connected with *pot-*, as seen in the Latin *potens*. On the former assumption the word would mean 'feeder of guests or strangers,' on the latter 'guest-master,' i.e. master of the house in which guests are entertained (see below, p. 818 f.). In early society, when there was not an Imperial Hotel in every big town, hospitality was one of the most important of the relations of life.¹

The first point to notice about this relation is that it was extra-political. It carried a man beyond the bounds of his own State, and so was the beginning of the brotherhood of man. While all around was hostility or indifference, it was something to feel that there was one foreign city where one's warmest welcome would not be at an inn.

Secondly, the relation was reciprocal, which led one to do as he would be done by. If one were host to-day, he would be guest to-morrow, or, let us say, next year, and dependent for his comfort and well-being on the man whom he was now entertaining. 'And I myself,' says Admetus, 'find in him a most excellent host, whenever I come to the thirsty land of Argos.'² Odysseus in the *Odyssey* is made to utter a shrewd remark about the stupidity of contending in games with one's host.³

Thirdly, the relation was hereditary, descending from father to son. When Glaucus in the *Iliad* had declared his pedigree, Diomedes recognized that the tie of hospitality had been contracted between his own grandfather, Ceneus, and Bellerophon, the grandfather of Glaucus.⁴ 'Why, you are my old hereditary guest-friend!' he exclaims; and so, amid the war of nations, the two heroes conclude a private peace, agreeing to avoid each other's weapons. The beautiful episode of Glaucus and Diomedes, while from the poet's point of view it serves the purpose of filling up the time until Hector returns to the field, having discharged his mission to Troy, has from our point of view the recommendation of throwing a vivid light on the early importance of the tie of which we are speaking. Again, in the *Odyssey* when Athene, under the guise of Mentès, wishes to gain the confidence of Telemachus, she tells him that they are hereditary guest-friends, adding that he can go and ask his grandfather Laertes about the matter.⁵ As a matter of fact, this assertion is untrue, as is that in *Od.* xvii. 522, where Odysseus, disguised as a beggar, claims to be an hereditary guest-friend to himself, but it is illustrative of the fact without which it would lose its meaning. In *Od.* xv. 195-198 we see how the consciousness of hereditary affection makes the hearts of the young Telemachus and of Nestor's son Pisistratus warm to one another.

A fourth point to notice about the relation of hospitality is that it was inaugurated and accompanied by an interchange of gifts. On the discovery that they are guest-friends, Glaucus and Diomedes exchange armour on the field of battle, which gives occasion to the canny saying of Homer:

*Then Glaucus of his judgment Jove deprived,
His armour interchanging, gold for brass,
A hundred oxen's worth for that of nine.⁶

¹ In Greco-Roman times the accommodation for travellers does not seem to have been very good—partly perhaps on account of the very system of *feria*, or *hospitium*, of which we are speaking. The various words in Greek and Latin for a place of entertainment do not connote more than our word 'inn'—*πανδοχείον* (Aristoph. *Ran.* 550), *καταγώνιον* (Thuc. iii. 68), *κατάλυμα* (Herod. v. 52), *κατάλυμα* (NT); *hospitium*, *deuoratorium* (Cic. *Cat. Mai.* 84), *caupona* (Hor. *Epist.* i. xl. 12), *taberna* (Cic. *Inu.* ii. 14).

² Eurip. *Alc.* 550.

³ *Il.* vi. 215.

⁴ *Od.* viii. 210.

⁵ *Od.* i. 187.

⁶ Lord Derby's tr. of the *Iliad* (vi. 276 ff.).

In the *Odyssey* the first thought of Telemachus, on being told that Mentès is an hereditary guest-friend, is to press some keepsake upon his acceptance.¹

Fifthly, the parties to the relation secured themselves against impostors by the device of tickets, which were broken between them, one part being retained on either side. *σύμβολον* was the Greek word for a ticket of this kind, and we find Plautus speaking of it as *hospitalis tessera*.² Probably this custom grew up in post-Homeric times. If so, Euripides is guilty of an anachronism when he makes Jason offer such hospitality-tickets to Medea, for her to present to his guest-friends.³ Crito, the contemporary of the poet, might have adopted this method of securing the welfare of Socrates, had that philosopher availed himself of the means provided for his escape into Thessaly.⁴

Lastly, the relation of which we are speaking was no light expression of casual goodwill, but a solemn engagement which had the sanction of religion. The Supreme God in one of his aspects presided over it, so that we hear of *Ζεὺς ἑξίως* and *Jupiter hospitalis*.⁵ What made the offence of Paris so rank, in carrying off Helen, was that it was a violation of the rights of hospitality; and what added a darker horror to the crime of Agisthus was that he first gave a banquet to Agamemnon and then slew him as one slays an ox in the stall.⁶ It is worth noting that Herakles, who ended by being the greatest saint in the Stoic calendar, started on his career by being a bad man, who slew a guest in his own house.⁷

Besides indicating the special relation of which we have been speaking, the word *ἑξίως* signifies also any stranger or foreigner as opposed to *ἀσπός*, *πολίτης*, *ἐπιχώριος*. Hence the address *ὦ ἑξίως* was used like the American 'stranger.' Men did not travel much for pleasure in early times, for that was to cut themselves off from the social organism, of which they were part, and expose themselves to the mercy of strangers. If a man were found wandering about in another country, he had generally some very good reason for having left his own. Perhaps he had killed some one, whether by accident or design, or had in some way made himself obnoxious at home. At all events, he was helpless now, and to the credit of human nature be it said that the appeal to pity is seldom ineffectual. In early Greece, as among the Jews, there was a strong sentiment in favour of the protection of strangers. Any wanderer or refugee was regarded as being under the protection of *Ζεὺς ἑξίως*; nay more, the helper of the helpless, *Ζεὺς ἱκέσιος*, extended his care over him. This sentiment finds strong and frequent expression in the *Odyssey*.⁸ It is remarked, indeed, of the Phaeacians that they have no fondness for strangers,⁹ but even they treat their unknown visitor royally, when once they have accepted him as a suppliant. Had we not the authority of Athene for the statement, we might be surprised that the Phaeacians, of all people, should display an aversion from strangers, considering how fond they were of visiting foreign lands. The Cyclopes are a gruesome exception in the Homeric world to the general regard displayed for strangers, but then they are not men but monsters. The inhospitality of the Tauric Chersonese is beyond the ken of Homer. Human sentiment, when it lacks

⁴ *Il.* xlii. 625; *Cic.* *Fin.* iii. 66, *Deiot.* 18.

⁵ *Od.* iv. 635, xl. 411.

⁶ *Il.* vi. 207 f., xiv. 67 f., vii. 104 f., viii. 546 f., ix. 300 ff., xiii. 213, xiv. 233 f.

⁷ *Il.* vii. 32 f.

efficiency, clothes itself in a religious sanction, and appeals to the powers of heaven in favour of what is not, but ought to be. There are many stories which point the moral how the God of Hospitality and the God of Supplication (Zeus *Xénios* and Zeus *Íkxiastos*) cannot be flouted with impunity. Folklore also declared that the gods assumed the likeness of strangers, and went up and down in the world to keep watch upon the ways of men. The outrageousness of the offence committed by Antinous, when he hurled a stool at the wandering beggar who asked for alms, stands out in high relief when we find that even the unruly suitors were shocked at this conduct, and that it is one of them who expostulates with him thus:

'Antinous, thou hast not done well to hit the unhappy wayfarer, scourged man, if indeed there be a god in heaven! And gods in the likeness of strangers from other lands, taking all sorts of forms, roam about among the cities, keeping watch upon the violence or good behaviour of men.'¹

Thus, in the Hellenic as in the Hebrew world, one might in exercising hospitality be 'entertaining angels unawares' (He 13²). Even in St. Paul's time, in the cities of Lycaonia, there was vitality enough in the idea of 'gods coming down in the likeness of men' to lead to practical expression in the way of sacrifice (Ac 14¹¹). It was the same district which was the scene of the story of Baucis and Philemon, who entertained at table Jupiter and Mercury.³

That there is more about hospitality in the *Odyssey* than in the *Iliad* is probably due to the nature of the subject-matter—the one dealing with peace, and the other with war. When the envoys from Agamemnon come to Achilles in *Iliad*, bk. ix., the first thought of that hero is to call to Patroclus for a bigger bowl and a stronger mixture,⁴ together with a cup for each. Patroclus' own forethought supplies such trifling accessories to the feast as the chine of a sheep, a goat, and a fat hog. The carnivorousness of the Achaean heroes, we may note in passing, stands in strong contrast with the temperate, and almost vegetarian, diet of the Athenians. When Priam comes as a suppliant to Achilles, in bk. xxiv., he is met with the same prompt and sheep-slaying hospitality; but the hero, aware of the uncertainties of his own temper, has to warn the old man to avoid irritating him, lest he should forget, even in his own hut, that he is dealing with a suppliant, and might thereby transgress the commands of Zeus.⁵

The politeness of an Homeric host required that he should feed his guest before he asked who he was. This is an excellent rule. For, in the first place, it is a tax upon one who is tired and hungry to have to talk at all; secondly, the host makes it plain that his kindness has no respect of persons; and, thirdly, if it should be an enemy that he is entertaining, he will find it more difficult to hate him after doing so.⁶

Gifts, as has been said already, were usual between the parties who entered into a formal relation of hospitality. But, besides this, some dole or gift seems to have been regarded as the right of any stranger as such. The value would, of course, vary with the importance of the stranger and the disposition of the donor. Odysseus at first expects to get some such gift even out of the Cyclops.⁷ As a beggar he does get meat and drink from Nausicaa, with the remark on her part that 'all strangers and poor are from Zeus, and a gift, though small, is welcome';⁸ but, when his name and fame have become known to the Phaeacians, he receives

parting gifts from them which show their appreciation of his dignity. Menelaus also on his travels picked up much wealth from presents.⁹ In fact, we derive from the *Odyssey* the impression that in those days (but then, *when* were they?) travelling on the part of a distinguished man was a source of gain, instead of expenditure.

Among the Romans, as among the Greeks, the formal relation of hospitality was inaugurated by the interchange of gifts, either in person or by proxy. So Servius tells us;¹⁰ and the poet himself illustrates his commentator when he makes Evander ready to receive overtures of alliance from Aeneas, on the ground of the gifts which he had received as a lad from the hero's father, Anchises.¹¹ As among the Greeks, also, the relation was kept up from father to son, and might be contracted with the most distant potentates; for instance, we find that Pompey was on terms of hospitality with King Juba;¹² and Marcus Metius, an obscure person, with Ariovistus.¹³

The words of Ovid descriptive of the Iron Age—'non hospes ab hospite tntus'¹⁴—are eloquent of the sanctity which in Roman opinion attached to the tie. There is an interesting discussion in Aulus Gellius as to whether *hospitium* or *clientela* came next after one's obligations to parents and to wards. He cites Massurius Sabinus, a writer on civil law, as giving the preference to *hospitium* over *clientela*;¹⁵ and we find Cornificius, in his treatise addressed to Herennius, putting the duties of life in the same order.¹⁶ The generally accepted order of claimants, however, was this: parents, wards, clients, guest-friends, kinsmen, connexions. As the relation of hospitality was one which, from the nature of the case, came into operation only at intervals, it was naturally sometimes of a ceremonious character, not implying personal intimacy.¹⁷

Herodotus tells us that no States were ever so closely connected by ties of hospitality as Sybaris and Miletus;¹⁸ and some language of Plato in the *Laws*¹⁹ would lead us to think that there were sometimes formal relations of hospitality between State and State, so that the children of one were taught to look upon the other as their second country; but the public hospitality of which we hear most was an unequal relation—between a State or tyrant on the one side, and a family or individual on the other. A *πρόξενος* was a person who undertook to look after the interests of a foreign State in his own. He thus differed from the modern 'consul,' who, as a rule, is a person who looks after the interests of his own State in a foreign one. The *πρόξενος* was sometimes appointed by the State; sometimes he appointed himself, in which case he was an *ἐθελωπρόξενος*,²⁰ or honorary consul. At Athens the people appointed their *πρόξενος*;²¹ at Sparta the appointment was one of the privileges of the kings.²² Sometimes

there was a salary attached to the position, as we know from the Corycæan inscription,¹ which contains an account of lands purchased by the State for the use of its *πρόξενοι*. But in most cases the office seems to have been assumed voluntarily by men of wealth and station, the attraction of international importance being reward enough in itself for the honour-loving Greek. Thus we find Alcibiades resuming the hereditary *πρόξενα* with the Lacedæmonians which his grandfather had for some reason renounced.² As the *πρόξενοι* would naturally be a *persona grata* with the State whose interests he espoused, delicate negotiations were often conducted through him. Thus, when Mardonius wished to detach the Athenians from the cause of Hellas, it was Alexander of Macedon that he sent to them as being their *πρόξενος*.³ When, in the time of the Four Hundred, the Athenians were near coming to blows with one another while the foe was without the gates, it was mainly through the good offices of one of their *πρόξενοι*, Thucydides of Pharsalus, who happened to be present, that their rage was checked.⁴ But the action of *πρόξενοι* was not always advantageous to the State to which they belonged. Thus we learn from Thucydides⁵ that the revolt of Lesbos broke out prematurely owing to information being supplied to Athens by the *πρόξενοι* of what was going on in the island. The institution of *πρόξενοι* was a wide-spread and important feature of Greek life. Even the barbarous tribe of the Mossynœci had their *πρόξενοι* in Timasitheus of Trapezus, through whom they were approached when Xenophon wished to pass through their country.⁶ The connexion of this institution with hospitality in the modern sense lies in the fact that it was at the house of the *πρόξενοι* that foreign ambassadors would naturally be entertained.⁷

Among the Romans we find from the earliest times the same distinction as among the Greeks between public and private hospitality. Livy speaks of Servius Tullius as having linked himself in both ways with the leading men among the Latins.⁸ We read, too, how in the time of Camillus one Timasitheus persuaded his Liparensian countrymen, despite their piratical instincts, to let a Roman offering, which fell into their hands, get safely to Delphi; and how, in return for this service, hospitality was voted to him by decree of the Senate, and gifts were presented by the State.⁹ There is also a picturesque tale told by Livy, which reminds us of the episode of Glaucus and Diomedes. The moral is the same, though the treatment is different. In 212 B.C., at the siege of Capua, there was a Roman named Crispinus and a Capuan named Badius, who were connected by ties of hospitality, inasmuch that Badius had been nursed through an illness in the house of Crispinus. What, then, was the surprise of the worthy Roman to find himself challenged to single combat by his Capuan guest-friend! No taunts could make him fight, until Badius renounced the tie of hospitality. Then, by permission of his commanders, he took the field on horseback—to the shameful overthrow of his adversary.¹⁰

The year 173 B.C. is noted by Livy as marking a turning-point in the treatment of the allies in the matter of hospitality. One of the consuls of that year having previously had occasion as a private person to visit Præneste, in order to sacri-

fice in the temple of Fortune, had been mortified by receiving no marks of honour there, either in public or in private. So, when sent on a public mission with regard to the State-lands in Campania, he prefaced his coming by a letter to the Prænestines, ordering that the magistrates should come out to meet him, that quarters should be prepared for him at the public expense, and that baggage-animals should be ready for his departure. Up to this time, Livy tells us, the highest magistrates had been content with *privata hospitium* when they visited the allies, but this action served as a precedent for ever-growing demands of the same nature.¹

Turning now to hospitality as a good quality or virtue, it is obvious to remark that it is a form of good-will to men which finds most scope for its exercise, and is consequently most highly valued, in a comparatively rude state of society. The Homeric outlook upon the world makes this the criterion of praise or condemnation—

ἦ μιν δοσι χάλειποι τε καὶ ἄγριοι, οἷδ' εὖ δίκαιοι,
οἳ τε φιλόξενοι, καὶ σφιν νόος ἐστὶ θεοῦδε.²

In classical times it was the backward country of Thessaly that was most noted for hospitality. Xenophon³ speaks of Polydamas of Pharsalus as being 'magnificent in his hospitality after the Thessalian fashion.' Admetus, we may remember, whose virtues in other respects were not conspicuous, had this redeeming feature in his character. His house could be addressed as—

ὁ πολίφρονος καὶ ἐλευθεροῦ ἀνδρὸς ἀεὶ πόρ' ὄψεαι.⁴

When Crito, in Plato's dialogue of that name, wishes to get Socrates out of prison, and to send him to his friends in Thessaly, the philosopher is made to reply with some disparaging remarks about feasting in Thessaly,⁵ implying that he was of the same opinion as that afterwards expressed by the historian Theopompus, that the Thessalians were more anxious about a well-laid table than a well-ordered life.⁶ In other parts of Greece the practice of hospitality must have been rarer, if we may judge from the story of how Miltiades in the time of Pisistratus became tyrant of the Chersonese. Some Dolonkian envoys to Delphi had been instructed by the oracle to take as a new founder of their State the first man who offered them hospitality after they left the temple, and they traversed the whole of the Sacred Road through Phocis and Boeotia without receiving an invitation; it was not till they turned aside to Athens that Miltiades, seeing them as he sat in his doorway, shouted to them to come in; and, after he had entertained them, they communicated to him the oracle, and pressed their leadership upon his acceptance.⁷ The importance attached to hospitality in uncivilized communities is due to that instinctive perception of the needs of men which underlies ethics. In a more developed society it becomes a rich man's virtue, a kind of moral luxury, rather than a necessity. By Aristotle it is brought under the head of 'magnificence,' which displays itself, among other things, in the reception and dismissal of strangers.⁸ Magnificence is a civic virtue, and the entertainment of illustrious guests is a glory to the State, on which grounds Cicero remarks: 'recte etiam a Theophrasto est laudata hospitalitas.'⁹ In the *Economicus* of Xenophon, where the burdens upon the rich at Athens are being discussed, special mention is made of the social necessity of entertaining many foreign guests, and that too magnificently.¹⁰ The obligations of nobility in this respect were so well recognized at Athens that Solon includes a foreign guest among the

appanages of the rich and happy man, on a level with his children, horses, and hounds—

Ὁ ἄβιος, ὃ παῖδες τε φίλοι, καὶ μύσυχες ἵπποι
καὶ κύνες ἀγροῦνται, καὶ ἔρως ἀλλόδατος.¹

In the *Meno* of Plato also 'to know how to receive and dismiss fellow-countrymen and strangers in a manner worthy of a good man'² is reckoned among the accomplishments of an aspirant to public life. Callias, the son of Hipponicus, was celebrated at Athens for his princely hospitality; and at Sparta, Lichas, who was πρῶτος to the Argives, but extended his welcome to all strangers who were present in Sparta at the Gymnopaedia.³

LITERATURE.—In addition to the sources cited in the article, see the treatment of the subject in Smith's *Dict. of Gr. and Rom. Ant.*, by W. Wayte, L. Schmitz, and H. Hager; and in R. von Ihering's 'Gastfreundschaft im Altertum,' in *Deutsche Rundschau*, 1887. ST. GEORGE STOCK.

HOSPITALITY (Hindu).—Under the conditions of Hindu law and social usage the exercise of hospitality in the ordinary sense of the term, when the host shares with his guest a meal or provision which he has himself furnished, is necessarily precluded. A rigorous and minutely divisive law of caste has long forbidden in India that the stranger, or one not born within the inviolable and usually narrow limits of the caste (*jāti*, 'birth'), should be welcomed to a place at the family meal. In this aspect of the subject, eating in common is entirely repugnant to Hindu feeling and thought; it is inconceivable and impossible that members of different castes should partake together of the same food. And the rule or prejudice, together with that against intermarriage, will be among the last to yield to the solvent of European practice and example.

In all other respects the duty of hospitality is fully recognized, and, subject to this important limitation, adequately discharged by all Hindus. Probably in no country in the world may the passing wayfarer be so confident that his needs will be met in whatever village he may find himself, although the provision will not go beyond the minimum of his requirements. Consideration for a guest is enjoined in the sacred Law-Books of India as an important part of the duty of a householder. It is true that it is generally assumed that the guest will be a Brāhman. In practice, however, the interpretation which has been given by the people themselves to their obligation has not limited it to one caste or group of castes to the exclusion of all others. The Brāhman has always had the prior claim for the supply of his needs, whether in respect of food or of aught else; but the demands of hospitality are not repudiated by whomsoever they may be presented, though these others will be entertained with less satisfaction and with considerable abatement of ceremony.

A further condition which impedes the free intercourse and social communion which the dispensing of hospitality in the European sense of the term involves is that to the Hindu eating is a solemn and sacred religious act. Hence both the preparation and the partaking of food are hedged about with restrictions designed, in the first instance, to secure the ceremonial purity both of the food itself and of him for whom it is provided. To admit a stranger to a share in the meal, or even to allow the motions and acts of eating to be seen by another, would involve an almost certain risk of pollution. No strict Hindu will voluntarily and under ordinary circumstances eat otherwise than in private. A free and open hospitality, therefore, such as obtains in many countries, which invites the guest to an honoured place at the board, is, from this point of view, precluded by religious sentiment no less than by social custom.

³ 91 A.

Apart, therefore, from anniversaries and festivals, and from private occasions for rejoicing, as a wedding or the birth of a son and heir, the lavish entertainment of guests on the part of wealthy natives of India, and of others according to their means, is limited to the feasting of Brāhmins, and the making provision for the poor at an open meal at which all comers may receive a share without question asked. In the latter case the distribution frequently takes the form of a money dole in place of or in addition to the food prepared. All such acts and gifts secure for the donor religious merit, and are often thank-offerings for public or private good fortune or success. They are evidently also more of the nature of alms or charity, the recipients being in poverty and real need of the benefaction, than of true hospitality (see art. CHARITY [Hindu]). The most recent instance of such donations has been the generous gifts for the poor placed at the disposal of Lord Hardinge, the Viceroy of India, in token of thanksgiving for his recovery from the attempt made upon his life at the Delhi Durbar of 1912.

In the formal and elaborate feasting of Brāhmins also the relation of host and guest is of a different nature. The sacred character of the Brāhman places him on a level socially and religiously above that of his host; and the latter may not, and does not, eat until his guests have been satisfied; nor would it be in accordance with usage or social right that he should sit down with them to a common meal. Thus to provide for the wants of members of the higher caste is a sacred duty incumbent upon the Hindu householder which is repeatedly enjoined in the Law-books.¹ The obligation has often pressed hard upon the less wealthy members of Hindu society, and has been a not inappreciable or ineffective cause of the wide-spread indebtedness which has overtaken in the past so many classes of the Indian people. Usage and custom, fortified by religious sanction, has demanded an expenditure in the entertainment of guests at festivals or important events in the family life which has left the householder permanently and hopelessly impoverished; nor can real benefit be said to have accrued to any one from the practice, least of all to those members of the higher castes whom it has encouraged in a life of slothfulness and dependency. Nevertheless, the obligation has been generously recognized throughout the whole course of Indian life and history. And, if in part during recent years the responsibility has been somewhat less scrupulously interpreted and acted upon, the result is due to the general loosening of the bonds of a social system which is found to be out of harmony with European conceptions, and incompatible with the relations of a world-wide Empire.

LITERATURE.—There is no special or distinctive literature. See the works cited in art. ASCETICISM (Hindu), CHARITY (Hindu), HINDUISM. A. S. GEDEN.

HOSPITALITY (Iranian).—The obligation and the duties of hospitality appear to be taken for granted in the Avesta and Pahlavi writings, and no word for 'hospitality' is recorded.² At the

¹ Cf. Manu, III. 72: 'He who does not feed these five, the gods, his guests, those whom he is bound to maintain, the manes, and himself, lives not, though he breaketh'; ib. 99 f.: 'Let him offer, in accordance with the rule, to a guest who has come a seat and water, as well as food, garnished according to his ability. A Brāhmana who stays unhonoured (in the house) takes away all the spiritual merit (of the householder)'. The Brāhman guest was always to be held in higher esteem, and given precedence in the entertainment of a member of a lower caste; the latter also was to be fed, but in this case hospitality was not obligatory, although apparently it was always recognised to be meritorious, and an indication of the good-will and virtue of the giver. See Manu, III. 102-117 and iv. 82, on the duties of a householder.

² Kanga (*Eng.-Av. Dict.*, Bombay, 1906, col. 280) gives as equivalents of 'hospitality,' *vasat-iti* and *vasat-willi* (occurring

same time, it is indicated that, when one friend visited another, he brought a gift to his host (*Yasna* lxii. 8). The duty of giving not merely contentment, reward, and thanks (*āšnūti, areti, eyāda*), but also welcome (*paīti-santi*), to a righteous man is declared, in *Pursišnihā*, xxxix. (ed. J. Darmesteter, in *Zend-Avesta*, Paris, 1892-93, iii. 70), to be one of the three earthly things best for Ahura Mazda; and the duties of friendship—which is scarcely possible without some form of hospitality—are mentioned in the *Avesta* (*Yasna* xliiii. 14, xlv. 1, xlv. 2; *Vendidad*, iv. 44-45), with special reference to the obligation of friend to succour friend. In a like spirit, generosity (*frārti, rāti*) is lauded (*Yasna* lv. 3, lviii. 4, lx. 5; *Visparad*, xxi. 3; *Pursišnihā*, xxvi.), and is the greatest of good works (*Dinā-i Mainōg-i Xrat*, iv. 4, xxxvii. 4, tr. West, *SBE* xxiv. [1885] 26, 73), while illiberality is a sin (*Vendidad*, xviii. 34; cf. *Artā-i Virāf Nāmāh*, xciii., ed. and tr. Hang and West, Bombay, 1872). More than this, the spirit in which the gift is made is of the utmost moment. Accordingly, *Nirangistān*, lxxiv. (ed. Sanjana, Bombay, 1894, fol. 161, l. 10-fol. 162, l. 27; Darmesteter, *Zend-Avesta*, iii. 133 f.), declares:

'Woe to him, Spitama Zarathustra, who gives alms when his soul is not joyful over almsgiving; for in alms lies for all the corporeal world the decision for good thoughts and good words and good deeds' (tr. C. Bartholomae, *Altiran. Wörterb.*, Strassburg, 1904, cols. 1544, 785), adding that the best of all libations (*saothra*) is to the teacher of religious truth.

Of the actual forms of Zoroastrian hospitality we may have a glimpse in *Yast* xxiv. 62-64 (expanded in *Dinā-i Mainōg-i Xrat*, ii. 147-156), which states that, when the soul of the righteous man arrives in the heaven of Endless Light, it is met by the righteous dead (and by 'angels and archangels of every description'), who begin to ask it various questions, whereupon Ahura Mazda bids that it have food and repose after its journey, and a seat on a richly adorned throne. Even in hell the soul of the wicked receives food of filth before it is permitted to answer the questions of the older denizens (*Dinā-i Mainōg-i Xrat*, ii. 183-192). Similarly, *Artā-i Virāf* declares (iii. 16 f.):

'To give the hungry and thirsty food, is the first thing, and afterwards to make enquiry of him, and appoint his task.'

It was customary for the host to rise when greeting a guest (ib. xi. 1; *Vendidad*, xix. 31).

The Greek authors add practically nothing to our knowledge of hospitality in ancient Persia, although there are repeated indications that wine was drunk to excess at banquets, and even that courtesans were admitted to them (Herod. i. 133, v. 18; Xenophon, *Cyrop.* viii. viii. 10; Est 1st. 5th 7th n.; for abundant classical references to Persian banquets, see G. Rawlinson, *Fifth Orient. Monarchy*, London, 1862, ch. iii.; A. Rapp, *ZDMG* xx. [1866] 101 ff.; cf. also B. Brissot, *de regio Persarum principatu*, ed. Lederlin, Strassburg, 1710, pp. 104, 223, 311, 465 ff., 797 f.; B. W. Leist, *Alt-arische Jus civile*, Jena, 1892-96, i. 52).¹

By far the best source for the details of Iranian hospitality is the *Sāh-nāmāh* of Firdausi (tr. Mohl, Paris, 1876-78). The great majority of the instances describe, it is true, the scenes in royal circles and the receptions accorded to ambassadors, but there are also accounts which show that the hospitality of the humbler classes differed in degree rather than in kind.

In general, if the guest was in rank inferior to his host, he respectfully saluted him (i. 234, 237), whereas, if the two were of equal rank, the host respectively in *Yasna* liii. 9 and xli. 8; but both words mean simply 'going as one wishes,' 'freedom of motion.'

¹ The statement of Kohler (*ZVNW* v. [1884] 336, note 2), that the Massagetae, who were an Iranian people (J. Marquart, *Brānschahr*, Berlin, 1901, p. 156), showed hospitality by lending their wives to their guests, is based on an erroneous interpretation of Herod. i. 216 (cf. Strabo, p. 513), who says merely that these Iranians practised communal marriage.

went to meet his guest (ii. 12, 58). It was a disgrace for the guest of honour to be seated at the left of his host (iv. 492). The host drank first if he was older and wiser than his guest, but the latter had precedence if he was of higher rank (v. 358). Intoxication at banquets, to which reference has already been made, is repeatedly mentioned by Firdausi (e.g. ii. 60, iii. 249, iv. 505).

The mode of procedure in royal hospitality may be illustrated by Firdausi's description of Rustam's return to the court of Kai Xusrau (iii. 211-214; cf. also i. 234-237, 257-267, ii. 59-64, 282 f., 423-428, iii. 229-231, 323-326, iv. 474-480, vi. 50-54; and, for a description of the hospitality shown ambassadors from a foreign potentate, v. 291 f.).

When the king learns that Rustam is approaching, he leaves the palace, while the people prepare feasts, adorned by wine, music, and singers. The monarch, with a great retinue, proceeds, scattering largess to the populace, until he reaches Rustam, who dismounts and salutes him. Xusrau embraces him and causes him to remount, and they return, conversing, to the palace. There Rustam is seated beside the king, who converses with him and his companions. Next follows the banquet, with wine and music. For a month the festivities continue (in other cases hunting and games add to the enjoyment), and at the end of that time Rustam announces his wish to depart. Thereupon, Xusrau bestows rich presents upon him, and accompanies him a two days' journey, when Rustam again dismounts, and takes formal leave of the king, who returns to his palace.

Among the middle classes the usages were not dissimilar. Bahrām Gūr, in disguise, knocks at the door of a jeweller. He is at once admitted most hospitably, and is entertained at an impromptu feast, after which come wine and music, the cup-bearer and luteist being the host's beautiful daughter, whom the guest, whose identity is known only on the following day, promptly espouses (v. 506-511).

In the Persian stratum of *The Thousand Nights and One Night* (tr. Payne, London, 1882-84) are a number of descriptions of hospitality as exercised at Baghdad under the 'Abbāsid dynasty (e.g. i. 74-83, ix. 3 f., 47-49). These throw a welcome sidelight on the descriptions in the *Sāh-nāmāh*, and, though both works were composed in Muhammadan surroundings, it is probable that they contain in their accounts a considerable amount of genuine Iranian material.

The humblest classes were equally hospitable, as is illustrated by the adventure of Bahrām Gūr with Lanbak, the poor water-carrier, and the rich Jew, Baraham (*Sāh-nāmāh*, v. 450-459).

It was the habit of Lanbak to devote half the day to his calling, and then to seek a guest; and it was his principle to have nothing left over for the next day. Having discouraged the people from purchasing from Lanbak, the king rides in disguise to his house, where he is warmly welcomed, and, after a game of chess, is entertained at table, the meal being followed by wine. Bahrām passes the night as Lanbak's guest, and is besought to remain another day. Since Lanbak is still unable to sell water, he parts with some belongings and purchases food, which he himself prepares for his guest. The third day he urges Bahrām to remain, and pawns his water-bags for the meal which the two prepare; and it is with reluctance that he permits his unknown guest to depart on the fourth day, after having urged him to remain two weeks longer. Bahrām next tries the hospitality of the rich Jew, only to be received with nigardiness and indignity; and he therefore bestows on Lanbak the wealth of Baraham (for other instances, see v. 387-390, 488-493 [where the hospitality of the wife is contrasted with the inhospitality of the husband]), vii. 140 f.).

On the other hand, the vice of inhospitality also existed, not only among the poor (v. 489 f.), but also among the miserly rich (v. 519-23).

In Dailam (corresponding roughly to the modern Gilan), it was customary for all the household to withdraw excepting one, who, at a distance, waited upon the guest, who could thus assuage his hunger and thirst, the host scarcely venturing to appear even at the conclusion of the meal (*Qābūs-nāmāh* [11th cent.], xii., tr. Querry, Paris, 1886, p. 125 f.). To this al-Makdisi adds that it was not the usage in Dailam to sell bread, but that any stranger might enter a house and get what food he needed; while Ibn Fadlān records similar customs in Xvārizm, and in Arabic anthologies the Persian word for 'guest' is rendered as 'master of the whole house' (Inostrancev, *Sasaniidskiye Yetyudy*, St.

Petersburg, 1909, p. 132 f., and the references there given).

Modern Irān is so thoroughly Muḥammadanized that it is difficult to distinguish between Iranian and Islāmic elements. Nevertheless, the following account of hospitality as shown by a relatively primitive Iranian people—the Kurds—may be cited from Soane's *To Mesopotamia and Kurdistan in Disguise* (Boston, 1913, p. 40 ff.):

'They told me that the best room in the place was at my disposal. . . . They possessed little enough of the world's goods, but their best fowl was sacrificed to the occasion, eggs in numbers sufficient for ten men were produced. Every one of them except the headman, who sat by as host, busied himself about something. . . . Surplus eggs they hard-boiled and put up for my journey next day.' Somewhat disconcerted by the evident intention of a young tradesman and his wife to pass the night in the same room, Soane was informed that this was necessary since the whole village possessed but two rooms fit to sleep in; and since he passed for a Kurd 'and a guest, I must excuse their presumption in occupying the room, which was my exclusive property.' Early in the morning he was awakened by his host's wife, who 'herself carried out the small luggage to the carriage, and then two or three villagers turned out and loaded up the heavy things. Last of all, the headman appeared, and, as we drove away, the sound of his hearty, rough farewells rang in my ears.'

LITERATURE.—This has been cited in the course of the article. There seems to be no special treatise on the subject.

LOUIS H. GRAY.

HOSPITALITY (Japanese and Korean).—I. JAPAN.—1. Primitive and mythological period.—The Japanese are a very hospitable people. This spirit is already apparent in their mythology, which reflects the customs of primitive times. One of the earliest cosmogonic myths tells of the great hospitality offered by Uke-mochi-no-kami, the goddess of Food, to Tsuki-yomi-no-mikoto, the Moon-god (see art. COSMOGONY AND COSMOLOGY [Japanese], vol. iv, p. 165*).

It may be noticed in this story that the rice, fish, and game which the goddess 'prepared and set out on one hundred tables for his entertainment' had all come out of her own mouth. This may be a reminiscence of the early times when it was the custom among certain tribes which can claim some connexion with Japanese origins to chew the food of guests in order to soften it (cf. the Polynesian custom [A. Réville, *Religions des peuples non-civilisés*, Paris, 1883, ii. 106]—a hypothesis strongly supported by the existence, even in the 8th cent., of a body of *shi-kami*, or 'chewers of boiled rice,' mentioned in the *Nihongi* (i. 104, Aston's tr., London, 1890) among the various groups of women who looked after the little princes of the Imperial house).

The same spirit of unlimited hospitality appears in many passages of the most ancient sources. When Oho-yama-tsu-mi-no-kami, god of the Great Mountain, was visited by the divine prince Ninigi, the grandson of the gods, he offered him 'merchandise carried on tables holding an hundred' (*Kojiki*, tr. Chamberlain, new ed., Tokyo, 1906, p. 141); and, when the god of the Ocean, Oho-wata-tsu-mi-no-kami, saw Ho-wori-no-mikoto (His Augustness Fire-Subsidence) at his door, he immediately 'led him into the interior [of his submarine palace], and spreading eight layers of rugs of sea-asses' (*nichi*, perhaps the sea-lion, or a species of seal) skins, and spreading on the top other eight layers of silk rugs, and setting him on the top of them, arranged merchandise on tables holding an hundred, made an august banquet,' etc. (ib. 148).

In these two texts, the reception is preliminary to a marriage, and it has been thought that the presents thus offered were a sort of dowry given by the father; but we see from a variant of the first account, which says that the god of the Great Mountain 'sent his two daughters with one hundred tables of food and drink to offer them respectfully' (*Nihongi*, i. 84), that it was, in the first instance, a question of presents of welcome and the classical meal of hospitality.

Another legend, which is peculiarly significant, shows us Susa-no-wo, the Storm-god, after he has been expelled from heaven because of his crimes against the Sun-goddess, wandering about the earth under a huge hat and a cloak of green grass in search of a shelter for the night (cf. *Nihongi*, i. 50). In his distress he asks a rich miser, Kyotan Shorai, for hospitality, which he refuses; but the

miser's elder brother, Somin Shorai, though a poor man, makes a bed of millet-straw for the traveller and gives him some cooked millet to eat. The god goes away. Some years afterwards he reappears. 'Are your children at home?' he asks Somin. 'There are here,' he answered, 'myself, my daughter, and my wife.' The god replied: 'Encircle your loins with a belt of rushes.' And that very night the god exterminated all mankind except Somin Shorai and his family. Then he said to Somin: 'I am the god Susa-no-wo. If any infectious disease should break out, let your descendants tell their name and girdle their loins, and they will be spared.' Hence, it is said, the New Year custom of hanging a cord of straw (*shime*) over the doors of houses in order to prevent disease from crossing the threshold. This tradition, which is found in a very ancient work, the *Bingo Fudoki*, 'Topography of the province of Bingo' (see Florenz, *Nihongi, Zeitalter der Götter*, Tokyo, 1901, p. 302), and exists to this day in the locality (see Murray's *Handbook for Japan*, ed. 1884, p. 177), shows clearly to what an extent hospitality was considered a sacred duty.

2. Historical period.—Passing now from the primitive period and its legends to the historical period, we find the same hospitable customs in the dealings of the Japanese with strangers to their archipelago. No doubt, following a universal habit (Frazer, *GB* i. 150), they took certain steps to secure themselves from the demons, i.e. epidemics, which the strangers might bring with them; thus, two days before the arrival of foreign envoys in their capital, the Japanese performed a ceremony in honour of the Sahe-no-kami, 'preventive deities' of a phallic description, to ward off evil influences (*Engishiki* [10th cent.], *norito* 13). Nevertheless, the Japanese attitude towards strangers was by no means hostile; it was with a kindly curiosity that they saw strangers come among them, and they offered them a home. All ancient Japanese history is full of stories of how the court gladly welcomed the Koreans, who brought interesting innovations with them—to enumerate the instances would be to relate the whole development of Chinese civilization in Japan, from the introduction of writing (*Kojiki*, 313) down to the introduction of Buddhism itself (*Nihongi*, ii. 66 f.). Even the national gods exhibited a hospitality to foreign gods, and even before the introduction of Buddhism more than one Korean deity had been admitted to the Japanese pantheon (see *Kojiki*, 324; *Nihongi*, i. 169).

The same welcome was accorded the Europeans when they in their turn presented themselves to these distant islands. The Portuguese who landed in Japan, first at Jinguji-uri in 1541, then at Tanegashima in 1542, were received with kindness (see H. Nagaoka, *Histoire des relations du Japon avec l'Europe aux XVI^e et XVII^e siècles*, Paris, 1905, pp. 33, 36, etc.). St. Francis Xavier, who landed at Kagoshima in 1549, was very courteously received by the prince of Satsuma, even although he was the bearer of a foreign religion. At their very first interview, the prince gave him permission to preach the Christian faith in his territory, and, a few days later, sent out letters-patent in virtue of which all his subjects were at liberty to become Christians if they so desired. As a matter of fact, this local prince was not entirely disinterested: he was anxious to enter into relations with the Portuguese and to win over their vessels with a view to commerce, as was clearly shown by the fact that his attitude entirely changed when the saint wished to leave his territory. It cannot be denied, however, that the prince's first welcome was a really generous one—especially if we remember all the difficulties he might have had to

face with regard to the bonzes. The prince of Hirado afterwards received St. Francis Xavier 'with much affection and a good grace,' to use the saint's own words (Letter of 1551). Then at Yamaguchi, the prince made the saint come to him, questioned him graciously before his whole court, asked him where he came from and what he wanted, listened to his doctrine for a whole hour, and allowed him thereafter to preach the gospel with absolute freedom; a little later he presented the saint with a vacant monastery, and published it abroad throughout the town that he had authorized him to propagate his faith. Even in Kyōto, the capital, though St. Francis and his companions could not get an audience of the Emperor, the *shōgun*, or even the chief of the Buddhist Church, yet they were never molested. Finally, the prince of Bungo, the last of the federal princes that Francis had occasion to visit before leaving Japan, wrote letters to the saint saying such things as:

'I beseech you to come immediately, before the sun rises, and knock at the door of my palace where I shall await you with impatience. . . . Give me news of your health so that I may sleep well throughout the night, until the cocks awake me announcing your arrival' (D. Bouhours, *Vie de S. François-Xavier*, Paris, 1682, ii. 64).

In short, during the two and a half years which the first apostle of Christianity passed in Japan, he was treated with a tolerance and good-will which would have astounded Europe; and this explains the delusion which sprang up in his mind 'that a nation so polite and judicious would easily be won to Christianity' (Bouhours, ii. 58).

The persecutions which Christian missionaries had to suffer later do not prove anything against the hospitable spirit of the Japanese. In 1565 the Jesuit Fathers Froez and Vilela were received with honour by the *shōgun* Yoshiteru himself. In 1568, when Father Organtín arrived at Nagasaki, the powerful Nobunaga put a Buddhist temple at his disposal to stay in, and offered him banquets for three days. Why did this same Nobunaga afterwards regret giving this protection to the new religion? And why did Hideyoshi, his successor as dictator of Japan, after first taking the Christians under his protection at Osaka, finish by harshly proscribing Christianity? Because the missionaries made the mistake of involving themselves in the local politics of the feudal princes, causing trouble among the people as a consequence, and finally disturbing the central government. But, in the same edict of 1587 which ordered all the missionaries to leave Japan within twenty days, Hideyoshi decreed that the 'black ships' (i.e. the Portuguese) which came for purely commercial purposes might continue their traffic, and, in another edict of the following year, he recommended his subjects to continue to receive them well (see Suganuma, *Dai Nihon Shōgyō-shi, History of the Commerce of Japan*, pp. 324-326). Finally, Hideyoshi's successor, the great *shōgun* Iyeyasu, who had also begun by showing himself favourable to the Christians, was forced, by new intrigues of the Portuguese Jesuits and Spanish Franciscans and Dominicans, to withdraw his good-will and to decree, in a proclamation of 1614, that 'these must be instantly swept out, so that not an inch of soil remains to them in Japan on which to plant their feet' (see J. H. Gubbins, 'Review of the Introduction of Christianity into China and Japan,' in *TASJ* vi. pt. i. [1888] p. 48). These measures culminated finally when Iyemitsu, the third Tokugawa *shōgun*, by his notorious edicts of 1633 and 1636, laid Christianity under the ban.

Thus, if the religious politics of the Japanese seem to have been an exception to their proverbial hospitality, it was only so from the time when the Roman Catholic missionaries, forgetting discretion

in their zeal, abused this hospitality. The Japanese were willing to be converted; they would not be conquered. The necessity of defending themselves against this religious invasion had the additional effect of calling forth, in the above-mentioned edicts of Iyemitsu, a limitation of the commercial relations which seemed indispensable for the general tranquillity of the country and the solidity of its political system. But this limitation, inspired by legitimate considerations of public safety, did not prevent the Japanese from offering hospitable treatment to the foreigners who came for the single purpose of peaceable commerce; this explains why Holland had almost the monopoly of foreign commerce at Nagasaki till the Revolution of 1868.

3. Modern period.—In the modern period the same spirit may be observed. The Japanese Government employed every means of protection against dangers from America and Europe; it confined the residence and commerce of foreigners to certain open ports and required passports for journeying to the interior, in order both to keep a watch over their movements and to obtain from the foreign powers, in exchange for a more complete freedom for their subjects, the abnegation of the unjust treaties that had been imposed upon them since 1854. When this diplomatic end was attained, i.e. at the end of the year 1899, Japan was opened up anew to foreigners under ordinary conditions. As for the ancient prohibitions against Christianity, they had long fallen into desuetude, the Japanese continuing, as of old, to welcome all religious novelties, provided they do not cloak political schemes. The history of Japan, then, exhibits a remarkable spirit of hospitality among its inhabitants, in spite of the opposite impression made by a superficial observation of the anti-Christian persecutions; a knowledge of the causes of these persecutions reduces their significance to vanishing point, and shows the Japanese character in its true light.

To-day a foreigner travelling in the interior of the country may still find the ancient hospitality, which was never eclipsed except by the fault of those who were the first to profit by it. The present writer can bring his personal experience to witness. One night in 1896, when travelling in Yamato, he found himself lost in the open country. After waiting for a long time in the dark and in drenching rain in search of a village where he might find a means of transport, he arrived at a peasant's hut and knocked at the door. Imagine a Japanese travelling in the country in Europe and arriving at midnight at a peasant's house: there would be furious barking from the watch-dog, hostile suspicion of the unknown wanderer on the part of the master of the house, and, to put things at their best, a poor shelter offered at last, with no good grace, in some outhouse. The Japanese cottage, on the other hand, was opened immediately; the father and his family all got up to receive the stranger on their knees; they were very pressing in their offers of a bath and a friendly meal. After this came the classic questions in Homeric style: 'Honourable stranger, whence comest thou? Whither goest thou? What is thy country?' and so on. Finally, when the guest was ready to depart, the father sent two of his sons several miles distant to bring a *jirikisha* and runners to carry him to Kyōto. It is hardly necessary to add that these poor peasants would not take any remuneration, and the only way in which their guest was able to repay them at all was by discreetly making presents to the youngest members of the family.

II. KOREA.—Korea, on the other hand, is quite different. This country, so inaccessible to the foreigner, has been well named 'the hermit nation.' The accounts of missionaries, from the *Relation de*

l'établissement du christianisme dans le royaume de Corée, ed. by de Gouvea, bishop of Peking, in 1797 (in *Nouvelles lettres édifiantes*, v. [1820]), to the *Annales de la propagation de la foi* (from vol. vi. [1833] to the present day), speak of nothing but persecutions which, like those of 1839 and 1866, were accompanied by terrible massacres; and show us also how different their reception was from their first welcome in Japan, the missionaries having had all sorts of difficulties in getting into Korea and being forced to live a secluded life in order to escape being put to death. It is only in virtue of comparatively recent treaties that the diplomatic relations drawn up with the Koreans have led to the opening up of their country (1887). A Japanese traveller, who risked his life in Korea in 1875, gives a picturesque account of his journey. Though dressed in Korean mourning-costume, the broad hat of which covered his face, he had to take the greatest precautions in order to escape recognition as a stranger when going about the interior. In order to escape notice he had bravely to eat the most repugnant rancid food in inns, to sleep on a sort of stable litter in peasants' huts of the most filthy description, while the idea of having a bath was simply out of the question (see W. J. Kenny, 'Account of a Secret Trip in the Interior of Korea,' in *TASJ* xi. [1883] pt. ii.). It is only necessary to compare this account, of the end of the 19th cent., with those of the missionaries who visited Japan in the 16th, in order to measure the gulf which, from the point of view of hospitality, separates these two civilizations.

LITERATURE.—This is given throughout the article.

MICHEL REVON.

HOSPITALITY (Semitic).—Hospitality among the Semites and Eastern peoples in general rests upon religious sanctions (see *ERE* v. 725). 'To be inhospitable was not only to be despicable, it was also to be irreligious. Hospitality was a sacred duty' (Day, *Social Life of the Hebrews*, p. 170).

1. **IN BABYLONIA AND EGYPT.**—i. **Religious aspects.**—Hospitality was practised by the gods themselves. According to the myth of Adapa, food and water of life, garments, and oil were brought to the hero when he arrived before Anu. Acting on the advice of his father Ea, who feared that the food and water might tend to death instead of life, Adapa refused these, but accepted the garments and oil (R. W. Rogers, *Cuneiform Parallels to the OT*, New York, 1912, pp. 63, 74, 76). It was inculcated by that part of the ritual which was concerned with the offering of gifts to the gods, and by the cult of the dead, which at the outset required that hospitality should be rendered to the corpse in the form of decent burial, and was continued in the supply of food and drink to the deceased. According to the Book of the Dead, the heart which is righteous and sinless addresses the gods of the under world thus:

'I have given bread to the hungry man, and water to the thirsty man, and apparel to the naked man, and a boat to the [shipwrecked] mariner. I have made holy offerings to the gods, and sepulchral meals to the *khas*' (E. A. W. Budge, *Book of the Dead*, London, 1901, II. 372 f.).

A Bab. didactic poem enjoins:

'Give food to eat, give wine to drink. . . . With him who thus acts his god is pleased, he is pleasing to Shamash, he will requite him with good' (Rogers, p. 176 f.).

2. **Social aspects.**—Hospitality was practised by the community, among those who dwelt together within the walls of the same city. The Egyptians were a pleasure-loving people, and scenes of feasting and banqueting figure in their pictorial remains. The Babylonians and Assyrians, while more staid, also held festive assemblies. As early as the days of Hammurabi (c. 2000 B.C.) we read of laws for regulating wine-shops (Code, §§ 108-111), with evidence that conviviality might be carried to excess (§ 109). The penalty of exile from the city

(§ 154) implies that the fugitive was placed out with the laws of hospitality as well as the laws of the State (cf. Gn 41⁴). The curses attached to the *kudurru*, or boundary-stone inscriptions, reveal the same disability in one who has been guilty of violating such landmarks, even while he continues to live within the city:

'Like a dog (may he) pass the night in the streets of his city'; 'seeing angry faces and holding out his hand, without being fed, may he wander through the streets of his city' (W. J. Hinke, *A New Boundary Stone of Nebuchadrezzar I.*, Philadelphia, 1907, p. 60).

3. **International aspects.**—We are indebted to the Tell el-Amarna Letters for a life-like picture of international relations in the middle of the second millennium B.C., with numerous indications of hospitality, or rather its opposite.

(a) Kings did not themselves travel into the countries with which they held intercourse, but sent their *ambassadors*, and gave *hostages*, the hospitable reception and treatment of whom was essential to the maintenance of friendly relations. There is clear evidence that considerable strain was put upon the patience of one of the parties by detention of messengers, lack of information regarding those given in marriage, and especially shortcoming in the matter of presents. Burra-buriash, king of Babylon, apologizes to the king of Egypt for not having received his envoy at his own table, and given him food to eat and wine to drink, on the ground that his health was not good at the time. He further reproaches his brother, the king of Egypt, because he had not comforted him in sickness, nor sent an envoy to inquire after his condition (*Tell el-Amarna Letters*, Berlin, 7; cf. 2 K 20¹²). A striking accompaniment of national intercourse is the *transit of images* of the gods, that of the goddess Ishtar travelling into Egypt (*ib.*, London, 10), while some time later (13th cent.) that of the Egyptian god Khonsu travelled to the land of the Hittites to effect the cure of the king's daughter. It goes without saying that the images were to be honoured, and that those who attended them were to be hospitably treated. The image of the great Amen himself journeyed with Unamon to Phœnicia (c. 1100 B.C.), but in the decay of Egypt's power failed to win respect as aforetime and a favourable reception for the envoy. Probably the first *State visit* on the part of a king is that chronicled of Khattusil II., king of the Hittites, who journeyed to Egypt (c. 1266 B.C.) to attend the marriage of his daughter to Rameses II. (H. R. Hall, *The Ancient History of the Near East*, London, 1913, p. 371 f.).

(b) The *petty rulers* of Palestine and Syria represent their discharge of the obligations placed upon them by the king of Egypt as hospitality. Akizzi of Karna gave to the king's soldiers food, drink, oxen, sheep, honey, and oil (*Tell el-Amarna Letters*, London, 38). Aziru, the rebel son of Abd-Ashirta, professes to have treated Hani, the envoy of Egypt, with due respect, lending him horses and asses for his journey, while his brethren supplied him with cattle, sheep, fowls, food, and drink (*ib.*, London, 35). The faithful Rib-Addi of Byblos reports that upon returning from Berytus to his own house he found it barred against him (*ib.*, London, 16).

(c) To *traders* a measure of hospitality was extended. After the conquests of Thothmes III. there were good roads made throughout Syria, 'furnished with post-houses where food and lodging could be procured' (A. H. Sayce, *Patriarchal Palestine*, London, 1912, p. 180). Traders availed themselves of these routes, and travelled securely. Later, when the land became disturbed, caravans were plundered and merchants robbed and slain (*Tell el-Amarna Letters*, Berlin, 7 and 8).

(d) Akiya, a king's messenger, on the way to Egypt, bears a passport (*ib.*, London, 58; cf. Neb

27). A postscript to one of the cuneiform letters found at Tannach (dated 14th cent. B.C.) reads *maš-ru maš-ru*, 'Highway, Highway' (i.e. for the messenger) (Rogers, 283; cf. L. B. Paton, *Syria and Palestine*, London, 1902, p. 56 f.).

4. Hospitality towards tribes and peoples.—In the prologue to Hammurabi's Code of Laws the king claims to have sheltered the people of Malgi in misfortune (col. iv. 11–13). Such royal hospitality is seldom disinterested. Thus, Sennacherib exalts Padi, king of Ekron, over the townsfolk who had committed wickedness, but at the same time exacts tribute from him (Taylor Cylinder, iii. 4–11). The Cylinder of Cyrus represents this king as a benefactor to Babylon and its people (l. 25 f.).

5. Hospitality to nomads.—The desert tribes, who in later times afford the most evident instances of the virtue of hospitality, at this epoch appear rather as marauders, a scourge to settled communities and to traders (especially in the Tell el-Amarna Letters). Yet the Egyptian government was at times tolerant to them, as appears in the permission given to the *Mentiu*, or nomads, to settle in a prescribed district (reign of Horemheb, XVIIIth dyn.), and to the *Shasu*, or Bedawin, to pass within the eastern borders of the land of the Pharaoh, Meneptah II., 'to feed themselves and to feed their herds' (Sayce, *The Higher Criticism and the Monuments*, London, 1894, p. 240 f.).

6. Hospitality to exiles and emigrants.—The extent to which hospitality was shown to fugitives and emigrants may be judged from the letter addressed by Amenhotep IV. to Aziru (*Tell el-Amarna Letters*, London, 72), in which whole families are mentioned, and also from the terms of the Hittite-Egyptian Treaty (Hall, 350, 365 f.).

7. Hospitality to individuals.—Three outstanding instances of hospitality (with elements of inhospitality) accorded to travellers, real or fancied, are furnished by Egyptian tales.

(1) The most instructive instance is that of the noble Sanehat or Sinuhe (XIIth dyn.; c. 2000 B.C.). A fugitive from Egypt, he was preserved from death by the hospitality of a Bedawi, who gave to him water and boiled milk. For a time he sojourned with the nomads. Thereafter he was received by a prince of the Upper Tenu (perhaps Syria), Amnuanshi by name, who made him tutor to his children, and gave him his eldest daughter in marriage. He appointed him to rule over part of his territory, and made him commander of the army. He had daily rations of bread, wine, boiled meat, and roast goose, as well as the privilege of hunting game. This kindness reacted on his own practice:

'The messenger who came from the court or went thither stayed with me, I gave hospitality to every one, and I gave water to the thirsty'; 'I set on his journey the traveller who had been hindered from passing by' (A. Erman, *Life in Ancient Egypt*, tr. Tirard, London, 1894, p. 370 ff.; Sayce, *Patriarchal Palestine*, 178).

Towards the end of his life he was permitted to return to Egypt, and was graciously received at court.

'The coarse garments of the Beduin were exchanged for fine linen; his body was bathed with water and scented essences; he lay once more on a couch and enjoyed the luxurious cookery of the Egyptians. A house and pyramid were built for him; a garden was laid out for him with a lake and a kiosk, and a golden statue with a robe of electrum was set up in it' (Sayce, 179; cf. Hall, 167 f.).

(2) *The Travels of a Mohar* is a narrative relating to Syria and Palestine in the reign of Ramesses II. (XIXth dyn.; 13th cent. B.C.). Our interest is in the evidence of inhospitality (the hospitality being doubtful) disclosed by this supposed satire. At every stage Nature shows herself inhospitable; and terror, from wild beasts and from man, always seems to oppress the traveller. His clothing is stolen by thieves in the night, and his groom deserts him and joins the robbers. Some time

later, when he comes to Joppa, the maiden who keeps the garden provokes his undoing. Here his bow and sword are stolen, his quiver and armour destroyed.

'Prayer does not avail thee; even when thy mouth says, "Give food in addition to water, that I may reach my goal in safety," they are deaf and will not hear. They say not yes to thy words' (for a translation of the whole, see Sayce, 180 ff.; cf. Erman, 380 ff.).

(3) The adventures of Unamon belong to the close of the 12th cent. B.C., and relate to Palestine and Phœnicia. At Dor, near Mt. Carmel, Unamon landed to purchase timber, and was received by Prince Badiel, who sent him bread, wine, and beef. During the night he was robbed by a sailor, who deserted, of the money needed to effect the purchase of the timber. When he arrived at his destination, Gebal (or Byblos), he could accomplish nothing, and was ordered to depart by Zakarbaal, prince of Byblos. After serious delay, however, diplomacy gained the day, and the timber was cut and loaded. Then hostile ships lying outside the harbour hindered Unamon from sailing. The hero sat down upon the beach, and bewailed his fate even with tears. By way of consolation, the prince sent him two measures of wine, a ram, and an Egyptian singing-girl, saying, 'Sing to him that he may not grieve.' His troubles were not yet ended, for in Alashiya the natives would have killed him, but the queen Hatibi intervened. The conclusion is not known (Paton, 168 ff.; A. E. P. Weigall, *Treasury of Ancient Egypt*, London, 1911, p. 112 ff.). This tale is instructive, as showing that hospitality to strangers was largely dependent on the respect entertained for the authority of the land from which they hailed.

On a review of the whole literature, we receive the impression that hospitality had not, as a rule, risen to the level of the virtuous; it was enforced rather than voluntary.

8. Behaviour of guest.—Noteworthy among the precepts of Ptahhetep (Vth dyn.) is the rule for guests:

'If thou art among a company of men and women in the abode of a man who is greater than thyself, take whatsoever he giveth thee, making obeisance gratefully. Speak not oftener than he requireth, for one knoweth not what may displease him; speak when he speaketh to thee, and thy words shall be pleasing unto him' (Budge, *History of Egypt*, London, 1902, II. 149; cf. Pr 23¹⁰, Sir 31^{12a}, 1 Co 10²⁴).

II. BIBLICAL (OT).—So far as the externals of hospitality are concerned, the Biblical data fit in well with the record from other sources. It will be convenient to observe the distinction between *nokhrî* and *gêr*, the former the stranger who is merely passing by, the latter the stranger who acquires a settlement, with certain civil and religious rights, in the land of adoption. It is with the *nokhrî* rather than the *gêr* that we are here concerned. While all the categories named above might be repeated for the OT, the clearest examples of hospitality are afforded by private and individual instances. The hospitality of the tent and of the city are found in proximity to each other (Gn 18¹⁻⁴ 19¹⁻⁹). With the help of allied passages (Jg 19, 1 S 28²⁴, 2 S 12¹, 1 K 17²⁸, etc.) the various stages may be clearly realized. They include: reception (meeting and obeisance), offering of water for washing feet, invitation to rest and to tarry all night, provision of food and drink, and in certain circumstances a feast (an animal, e.g. a calf or a kid, being killed and dressed; bread, butter, milk, and wine also being set before the guests), feeding and housing of animals (asses and camels). Guests were kept inviolate, even at the sacrifice of the honour of daughters (Gn 19⁸, Jg 19²²⁻²⁴). No remuneration was taken, although, when a visit was of set purpose, presents were brought (Gn 24³⁰ 43¹, Job 42¹¹). Abraham even went with his guests to bring them on the way (Gn 18¹⁰).

While hospitality was accorded as a rule, there were departures from it (Jg 19¹⁹). Evidently the open space about the city gate was the only 'inn' available in the event of no private house being offered. It was against the laws of hospitality to leave the stranger in such case (Job 31²³), although there was probably little hardship entailed in having to pass the night in the open. Travellers took their own provisions and provender (Jg 19¹⁹), which were husbanded in the event of a host being found (v. 21). On the road to Egypt were halting-stages (inn or lodging place, Gn 42²⁷ 43²¹, Ex 4²⁴), where shelter, and perhaps water, but no food, were to be found (cf. Jer 9²). The instances in Nu 20¹⁹ and Dt 2²⁷ show that even water was paid for. This, however, is an extreme case.

Even among those who are blood-relations the ordinary procedure in respect of hospitality is observed, as, e.g., when Abraham's servant journeyed to the home of Rebekah (Gn 24¹²). The meeting is like that of strangers, the narrative working up to the disclosure of relationship, which, of course, produces a great change (vv. 31-33; cf. Gn 29¹²⁻¹⁴). Even in such circumstances hospitality is not accepted till the errand has been told (Gn 24²³).

A unique instance is the stated hospitality extended to the prophet Elisha by the great woman of Shunem (2 K 4^{8a}). As often as he passed by he turned in to eat bread, and in the end had a furnished chamber reserved for his use. This instance is further instructive for the lead taken by the hostess, which recalls the more public part played by women in early times as contrasted with later (Gn 18⁶ 24⁶ 29¹², Ex 2²⁰, Job 1⁴). The act of Jael (Jg 4^{17a}) is to be put by itself as a gross breach of hospitality, notwithstanding the fact that it is justified upon national grounds by the writer of the Song of Deborah and Barak (Jg 5^{24a}). In the eyes of the later Semites such a deed would have been reprobated, and such advantage would not have been taken even of an enemy, once the food-bond had been established (W. Robertson Smith, *Kinship and Marriage*², London, 1903, p. 176 f., *Rel. Sem.*³, do. 1894, p. 269 ff.). This instance may be set over against Rahab's kindness to the spies (Jos 2), who, in virtue of their hostile mission, could lay no claim to hospitality (cf. Gn 42^{20a}).

We are reminded of the tale of Sanhat in the experience of Moses (Ex 22²⁴), who, coming as a stranger, tarried with the priest of Midian as one of the family. Like Lot in Sodom, he represents the *gēr* at an undeveloped stage.

In the OT the instances of kindness to individual strangers completely overshadow the national and kingly aspects of hospitality. But examples of each are found. The sons of Jacob participated in the hospitality of the Egyptians, although national prejudice required that they should eat bread by themselves (Gn 43²³) and dwell by themselves (46³⁴). In the wilderness the Israelites were denied the minimum of hospitality by the kings of Edom (Nu 20^{17a}) and of the Amorites (21^{22a}). David, as an outlaw, was the recipient of kindness from Abigail (1 S 25), the king of Moab (22²⁶), and Achish, king of Gath (27²⁸); and, as a fugitive before Absalom, from certain prominent men dwelling on the east side of Jordan (2 S 17^{27a}). On the other hand, his envoys, sent with hospitable intent to the court of Hanun of Ammon, were shamefully treated (10⁴), which led to a dire revenge (12⁴). The visit of the queen of Sheba to Solomon (1 K 10¹⁻¹²) is an example of sovereigns standing towards each other as guest and host. A king's kindness to a refugee prince is seen in the Pharaoh's reception of Haddad (III.) of Edom (1 K 11¹⁷⁻²²)—a very close parallel to the story of Sanhat. Hezekiah's hospitable treatment of the envoys of

Merodach-Baladan is shorn of its glory by the prophetic censure following (2 K 20¹²⁻¹⁹).

Hospitality is but rarely marred by deceit in host (2 S 12⁴, 1 K 13¹², Pr 23¹²) or guest (Jos 9²³), or requited by ingratitude (Ps 41⁹; contrast 2 S 9, 19^{24a}). By rule, its tendency was elevating (Pr 9⁴⁻⁶), but there was the possibility of debasement (Pr 9^{12a}), especially when luxury was in fashion (Am 6⁴⁻⁶), and feasting was carried to excess (Pr 23²⁰, 29², Dn 5, Est 1).

Some code of hospitality necessarily underlies the political alliances during the monarchy, while trade and commerce imply toleration of, and fair dealing towards, foreigners, and perhaps some measure of kindness.

LITERATURE.—*HDB* II. 427 ff., v. 376b; *BBt*, col. 212b; I. Benzinger, *Heb. Archäol.*³, Tübingen, 1907, pp. 131-133; W. Nowack, *Heb. Archäol.*, Freiburg and Leipzig, 1894, p. 186 f.; A. Bertholet, *Die Stellung der Israeliten und der Juden zu den Fremden*, do. 1896; E. Day, *Social Life of the Hebrews*, London, 1901; R. A. S. Macalister, *Sidelights from the Mound of Gezer*, do. 1906, pp. 82-106. Most recent works of travel in the Near East contain references to hospitality, illustrated by modern usage; typical of such is H. Clay Trumbull, *Studies in Oriental Social Life*, Philadelphia, 1894, pp. 73-142.

WILLIAM CRUICKSHANK.

HOSPITALITY (Teutonic and Balto-Slavic).—

The ancient records furnish the clearest indications of a widely diffused practice of hospitality both among the Teutons and among the Slavs. As regards the Germans, Caesar (*de Bell. Gall.* vi. 23) writes:

'Hospitem violare fas non putant; qui quaque de causa ad eos venerint ab iniuria prohibent, sanctos habent, huiusque omnium domus patent victusque communicantur'; while Tacitus (*German.* 21) says:

'Convictibus et hospitibus non alia gens effusius indulget. Quemcumque mortalium arce tecto nefas habetur; pro fortuna quisque apparatus epulis excipit. Cum defecere, qui modo hospes fuerat, monastor hospitii et comes proximam domum non invitati adeunt. Nec interest: pari humanitate accipiuntur.'

Of the Slavs, Mauricius (*Strateg.* xi. 5) speaks as follows:

εἰς δὲ τοῖς ἐξενουμένοις αὐτοῖς ἥτις, καὶ φιλοφρονούμενοι αὐτοὺς διασώζουσι ἐν τόποις αὐτῶν, οὗ ἂν ἐκείνοι, ὡς εἴη δι' ἀμέλειαν τοῦ ποδοχρῶντος συμβῆναι τὸν ἐξόν βλαβήναι, πόλεμον κινεῖ κατ' αὐτὸν ὁ τοῦτον παραβέβηκεν, σέβας ἡγροῦμενος τῇ τοῦ ἐξόν ἐκδίκησιν.

The Letts had even a special god of hospitality, called Ceroklis ('ille hospitalitatis deus cui ex omnibus esculentis primas buccas, primos ex poculentis haustus stulta libabat plebes'; cf. H. Usener, *Götternamen*, Bonn, 1896, p. 106).

Teutons and Slavs have another point of contact in the fact that they have a common term for 'guest,' the Goth. *gasts*, *ġēros* (*gastigōds*, *philēgenos*; *gasti-gōdei*, *philōgenia*), corresponding exactly to the O. Slav. *gostĭ*, 'guest,' and both being etymologically equivalent to the Latin *hostis*, 'stranger,' 'enemy.' The Lithu-Letts use a different term: Lith. *wieszli*, 'to be one's guest,' *wieszne*, 'guest' (fem.), Lett. *wisis*, 'guest,' which are all connected with the Lith. *wiesz-* (cf. Gr. *oikos*, Lat. *vicius*). Should the question be asked how, as in the case of the Goth. *gasts*, O. Slav. *gostĭ*, a word meaning originally 'stranger' or 'enemy' (cf. Lat. *hostis*) should gradually acquire the sense of 'guest,' the answer will be found in the practice of *exchanging gifts*, met with everywhere (see ARYAN RELIGION, vol. II. p. 51; and GIFTS, vol. VI. p. 197), and, in particular, on Teutonic and Slavic soil, in the closest connexion with the practice of hospitality, and which, as the mutual gifts had to be in some degree commensurate with each other, has been aptly called 'trading by gift,' or 'interchange of presents.' Tacitus, in the chapter already cited, expressly says: 'Abeunti si quid poposcerit, concedere moris, et postcendi invicem eadem facilitas'; and the *Hávamál* puts it still more clearly:

'No one is so hospitable or ready to give
That he despises presents;
Nor so little mindful of gain
That he hates return-gifts.'

Here, too, we have the reason why in Old Russian *gosti* is quite commonly used for 'merchant' (*купечѣ*), while *gostiti* means 'to trade,' and *gostiba*, 'business.'

While the stranger thus literally found an open door because of the wares he carried, we are able to derive from the facts of language a still more precise idea of the way in which the relation between the visitor and his host attained its further development. In the Slavic languages the word *gospodŭ* (from **gosti-poti-s*)—corresponding exactly to the Lat. *hospes* (from **hosti-pets*)—is now for the most part used for 'God,' but originally meant, quite generally, 'master' or 'lord.' The second element of this primitive compound is the Aryan **poti-s* (Skr. *piti-*, Gr. *πόσις*, Goth. *-faps*), 'head of the house.' The Slav. *gospodŭ*, Lat. *hospes*, accordingly mean 'master of the stranger'; and this implies that the guest, during his stay in the house of his entertainer, enjoyed equal privileges with the members of the family. In order to enable us to realize what such friendly treatment meant for a traveller in those days of general insecurity, we quote here a statement regarding Albanian hospitality, taken from a work entitled *Eine Reise durch die Hochländergeue Oberalbanians (Zur Kunde der Balkanhalbinsel)*, ed. C. Patsch, pt. i., Vienna and Leipzig, 1904, by K. Steinmetz:

'Their hospitality, which is unrivalled, may be extolled as the finest characteristic of the North Albanian people,—the South Albanians do not have it in the same degree,—and is of itself sufficient to mitigate considerably the harsh opinions regarding the Albanians often expressed by other travellers. It is not confined to their universal practice of entertaining the stranger, and of regarding a payment as an insult; it goes much further than that. If I eat a morsel of bread in a house, drink a cup of coffee or even but a glass of wine, I at once become a friend (*mit*, i.e. Lat. *amicus*) of the house, and if on my further journey I am robbed or killed before I arrive at another house, the family as a whole will not rest till they have avenged the deed, i.e. shot the perpetrator. . . . If, as happens but seldom, a house does not assume responsibility for a person killed within its precinct, it becomes liable to the blood-revenge of the murdered man's family. This explains why I, though almost always accompanied by only one man, was able to pass through the rudest tribes without danger; for any possible assailant who might think of robbing or killing me knew that he would thereby be exposing himself to the most determined vengeance on the part of the household with which I had last sojourned.'

It thus appears that the family of the host, and especially, of course, the host himself, accept responsibility for the safety of the guest, and, further, that this responsibility is not limited to the time during which the stranger sojourns with the family, but lasts while he is on his way to other quarters. This is exactly what finds expression in the above-quoted references to the hospitality of the Slavs and Germans, as, e.g., when Mauricius, speaking of the former, says that the host is united to the guest by the laws of blood-revenge; when Cæsar states regarding the Germans that they consider themselves to be under obligation to protect the stranger, and look upon it as a crime to injure a guest; and when Tacitus, referring to the same people, asserts that, if provisions give out in the house of the host, the latter must act as the 'guide and companion' of his guest on the way to the hospitality of other houses.

In the Teutonic dialects, however, we do not actually find the form **gosti-faps* (Slav. *gospodŭ*, Lat. *hospes*) which we might have expected. In the oldest extant forms of the primitive Teutonic speech, its place had already been taken by the Goth. *waitrdrus*, O.H.G. *wirt*, O. Sax. *werd*, O. Fris. *hūswoerda*. The earliest occurrence of this stem is in Ulfilas, Ro 16^m, *goleip inwis Gaius, waitrdrus meins jah allaiwids aiskleijōns (dardŕerai wāis l'diōis | ó fteos mon kai dñis tñs ekklesiās)*. The Goth. *waitrdrus*, accordingly, has precisely the same meaning as the Lat. *hospes* (from **hosti-pets*, 'lord of the stranger') in its original sense, i.e. as applied to the host, not the guest. The words *ἑνός μου καὶ πάντος τῆς ἐκκλησίας*

may be taken to imply, as expositors (e.g. Jülicher, B. Weiss) think, that the Christian assembly met in the house of Gaius, or else that the latter had afforded willing hospitality to numerous visitors from the Corinthian community. This original sense of *waitrdrus* will then quite readily explain other meanings still traceable elsewhere, as, e.g., 'lord of the house' (*poterfamilias*), 'husband,' etc.

On the purely linguistic side, the present writer would trace this Teutonic form to a primitive Teutonic abstract noun, viz. **wer-tu*, which, as being cognate with O.H.G. *weren*, O. Fris. *weru*, M.L.G. *weren*, 'to give security,' originally meant 'security,' 'guarantee.' From the abstract **wer-tu*, again, by the common philological process of personification, was developed the sense in which it was applied to the person making himself responsible for another, i.e. the 'surety' or 'guarantor' himself, precisely as, e.g., the Goth. *hliftus* (Lat. *clepere*, 'to steal') meant originally 'theft,' and then came to mean 'thief.' That the legal idea of 'security' existed among the Teutons at a very early period is shown by the fact that the Romance forms—Ital. *guarento* and Fr. *garant*, 'guarantor,' 'surety' (Ital. *guarentire*, Fr. *garantir*, 'to guarantee')—are derived from the O.H.G. participle *werento* ('one acting as security,' Med. Lat. *warens*, *warantus*, etc.). Thus the Goth. *waitrdrus*, in complete conformity with the historical references quoted above, denotes the man who became security for the safety of his guest.

Mention should be made, finally, of a Lithuanian term for 'guest' which has not been referred to in the foregoing, viz. *svėčias*, i.e. **svetjas*, which is cognate with the Greek *ἑρως*, *ἑρως*, 'kinsman,' 'clansman.' This term expresses the idea that, as soon as the incomer, who is elsewhere designated as *gasts*, *gostŭ* (= Latin *hostis*), was granted the privilege of hospitality, he was looked upon as an inmate of the house (cf. the Lithu-Lettish stem *wiesz*, noted above). The head of the house, as we have seen, had to become security for the members of his household, as also for his guests, whenever it was necessary to protect them or to take vengeance on their account. But he was held responsible also when a member of his household or a guest committed an act of injustice. This finds emphatic expression in the Anglo-Saxon code:

'If any one shelters a guest (a merchant, or other person who has come across the boundary) for three nights in his own dwelling, and also feeds him with his own food, and he (the guest) does an injury to another person, let that head of the house bring the other to account at law, or in his stead discharge what is legally due' (cf. F. Liebermann, *Die Gesetze der Angelsachsen*, I. 1, Halle, 1898, p. 11).

From all this it is clear that the practice of hospitality—as a designation of which the Russ. *chlebŭ-solŭ*, 'bread-salt,' derived from the ceremonial presentation of these articles of food at the reception of a guest, ought to be referred to—was of immense significance for the development of intercourse, and, in particular, of commerce. It was likewise the starting-point of the entire hostelry system of Northern Europe, special quarters for travellers being provided in the larger houses much visited by strangers, and more especially in the monasteries; and, while this was done at first for hospitality's sake, it came in time to be done for payment. All the Teutonic languages have a term for 'guest-house': O.N. *gesta-hús*, O.H.G. *gast-hūs*, A.S. *gesthūs*; and there is also the O.N. *inni*, A.S. *inn*, a word of obscure origin. In the Slavic tongues we find O. Slav. *gospoda*, Czech *hospoda*, etc., 'lodging,' which are derived from **gosti-potŭ* (cf. *gospodŭ* above), and meant originally 'protection of and lordship over guests.'

On the traces of the practice of lending a wife to a guest, see art. CHASTITY (Teutonic and Balto-Slavic), vol. iii. p. 499^b.

LITERATURE.—This is given in the article. Cf. also O. Schrader, *Linguistisch-historische Forschungen zur Handels- gesch. und Wärenkunde*, I, Jena, 1886, ch. I., and *Reallexikon der indogerman. Altertumskunde*, Strassburg, 1901, s.v. 'Gastfreundschaft.' O. SCHRADER.

HOTTENTOTS.—1. Origin and migrations.—

At the time of the discovery of the Cape of Good Hope and its colonization by Europeans, the S.W. corner of the African continent was found to be in the occupation of two distinct peoples, known to us as the Bushmen and the Hottentots. Of these the Hottentots were the dominant race. They were almost everywhere engaged in desultory hostilities with the Bushmen, who were doubtless the aborigines of the country, and who were usually treated by the Hottentots as the savage inhabitants of a colony are too often treated by the white colonists: they were to be exterminated, or at least reduced to servitude. For the Hottentots were an intrusive people. Their origin has been the subject of considerable discussion. Their traditions point back to a time when they dwelt in 'a well-watered region somewhere in the centre of the continent, from which they were driven by a more powerful people, of a black colour, who came down from the north or north-east' (Theal, 59). An examination of their language by philologists has led to the discovery that it was a highly organized tongue, akin to the ancient Egyptian and other languages of the northern and north-eastern part of the continent. It was inflected and sex-denoting. Its roots were monosyllabic, each ending with a vowel; and the meaning of the word frequently depended upon the tone. The Bushman language was of a much more primitive type. It was not sex-denoting; it was hardly inflected at all; and it abounded in the uncouth sounds known to philologists as 'clicks.' Of these sounds, however, four—and those the most easily pronounced—were in use among the Hottentots; or five, if we reckon a guttural peculiar to a few dialects of the Hottentots and Bushmen. The discovery of these linguistic facts threw unexpected light on Hottentot origins; and it is now generally accepted that the Hottentots are of mixed descent, probably due to the intermarriage of men of North African—that is, Hamitic—lineage with women of Bushman race. This mixture may have begun in the N.E. of the continent. The suggestion has been made that the primitive ancestors of the Hottentots were a band of Egyptian soldiers said by Herodotus (ii. 30) to have deserted in the reign of Psammetichus, and to have taken service in Ethiopia, where the king gave them a tract of land in the occupation of his enemies, on condition that they conquered and settled it. They would necessarily, it is argued, have taken the women of the country, if they had none of their own. The hypothesis is, of course, no more than a guess, and a guess which gives rise to a number of difficulties; but to dismiss it leaves the main theory untouched. The mixed race, thus constituted, for some reason—possibly the irruption of Bantu on their ancestral seats—left those seats and fled to the south. As they were a pastoral people with flocks of long-haired sheep and herds of cattle, they were compelled to turn westwards, so far as to avoid the zone of the tsetse-fly. Continually journeying, impelled by causes which we do not know, but among which the pressure of Bantu on their rear may not have been the least, they came at length down the western side of the continent to the Cape. A series of straggling tribes, they kept continually in the zone of the best pasture between the sea and the mountains or deserts of the far interior. Finally they settled, since they could go no farther, in a wide territory from Great Namaqualand to the shores of the Southern Sea, from Walfish Bay

to the mouth of the Umtamvuna River, the present boundary between Natal and Cape Colony. Their immigration seems to have taken place at a period not long before the discovery of the Cape, and to have been contemporaneous with the advance of the Bantu down the Eastern side of the continent. It was the latter advance that stayed the progress of the Hottentots to the shores of the Indian Ocean.

The Hottentots of Cape Colony have, for the most part, been exterminated or driven northward by wars with the colonists and servile oppression; or they have suffered from the mingling of European blood, have learned to speak a European language, and adopted Christianity. Beyond the Orange River the Korana (who are emigrants from Cape Colony) and the Namaqua have been somewhat more successful in preserving their racial purity, such as it was, from white contamination. But they have not been able to resist the disastrous pressure of European culture any more than of European arms. They are a dwindling folk; and—more rapidly than themselves—their language, their traditions, and their ancient institutions are disappearing. Their language was investigated more than thirty years ago by Bleek; but their traditions and their institutions have never been the subject of any searching scientific inquiry on the spot. Hence the attempt to produce an intelligible outline of them is attended with some difficulty.

2. Characteristics, organization, and culture.—

The name 'Hottentot' is of doubtful origin; probably it was a contemptuous term bestowed by the Boers. The Hottentots proudly called themselves *Khoi-Khoi*, 'Men of men.' They were, like the Bushmen, of a dirty-yellowish colour, frequently described as olive, with crinkled hair growing in small tufts, and with pointed chins. The women were distinguished by an extraordinary deposit of fat on the haunches, known scientifically as 'steatopygy.' But the Hottentots were not, like the Bushmen, a diminutive race, though by no means tall as compared with Europeans. Their wealth, as already intimated, consisted in flocks and herds. Hence their settlements were never permanently attached to one spot, and they were separated from one another by the spaces necessary for pasturage. The huts were of hemispherical shape; they were made of rush mats on a light framework of wood, and were easily removed and transported from place to place. Of agriculture the Hottentots knew nothing, though they seem to have taken kindly to it under European masters (Theal, 173; Stow, 240; Kolben, 38; Fritsch, 320).

This nomadic mode of life was, of course, compatible with only a very loose organization. There were a number of independent tribes, the chiefs of which were assisted, or sometimes controlled, by the elders of the various families. Between these tribes, and indeed between the smaller social units of which the tribes were composed, there was little cohesion; frequent, if desultory, feuds were engaged in. Hence they easily fell a prey to the colonists. Our information as to the internal relations of the kindred is very incomplete. Neither the old travellers nor the modern writers on the people have understood them. Their reports, therefore, present contradictory features difficult to reconcile. The time for fruitful inquiry among the people themselves has now passed for ever; and any opinion about the family organization can be expressed only with much hesitation. That the rule was patriarchal and that inheritance was from father to son, or, failing sons, to the nearest male relative, to the exclusion of women, affords a presumption that the organization was by clans reckoning descent only in the male line. On the

other hand, in spite of polygamy, the women appear to have taken a high position. The wife was the ruler of the house, to such an extent that a man could not venture without her permission to take from the vat so much as a mouthful of sour milk produced by the family cows. His nearest female relatives, we are told, punished a violation of this rule by a fine of cows and sheep 'to be added to the stock of the wife.' Contrary to the Bantu rule, the eldest daughter milked the cows. A man's most sacred oath was by his eldest sister; 'and if he should abuse this name, the sister will walk into his flock and take his finest cows and sheep; and no law could prevent her from doing so.' Moreover, she might inflict punishment on him, though adult, for an infringement of the rules of courtesy and the code of etiquette. A woman might even become chief of the tribe, if of energetic character and the widow of a chief who left a son not yet of age. From these and other customs we infer that, if the organization was patrilineal, the opposite or matrilineal organization had left abundant traces on it (Hahn, *Tsunigoom*, 18-21).

When discovered, most of the Hottentots already possessed iron and copper weapons and tools. They had probably brought the knowledge of smelting from their original seats. Such weapons and tools, however, were valuable, and the Hottentots were not entirely emancipated from the Stone Age. They were a brave and independent people, as filthy and irresponsible as savages usually are, sensual, and easily provoked to anger, but kindly and hospitable.

3. Witchcraft and witch-doctors.—Like all peoples in the lower culture, the Hottentots were believers in witchcraft. To this cause they attributed sudden accidents or pain, and all serious sickness. Our authorities have left us no account of the process of bewitching. It was doubtless founded, as everywhere else, on sympathetic magic. For corpses were believed to be used for this purpose; and other practices point to the same order of ideas. Among them may be mentioned the ceremony, at crossing a rapid river, of first sprinkling some of the water over the body and daubing the forehead with a little of the mud, muttering the while a charm and dancing (a ceremony repeated on coming out of the water); and the requirement that a woman had to watch the fire carefully and keep it alive, or else sprinkle the ground with water without rest or cessation, so long as her husband was absent hunting. Old women especially, as in Europe, fell under the suspicion of witchcraft. What, if any, punishment was inflicted we do not know. Nor does our information extend to the practice, so common among the Bantu, of 'smelling out' a witch. Witch-doctors, however, as might be expected, were an institution. That their labours were not always beneficent we gather from the jealousy with which corpses were prevented by the relatives of the deceased from falling into their hands. Similar precautions were taken, for the same reason, at a birth, with respect to the placenta and the *kaross* (or skin-mantle) on which delivery had taken place. The witch-doctors were exorcists employed to lay troublesome ghosts. They were called in to treat the sick. For this purpose a sheep was flayed alive. If it moved away from the spot after the revolting operation, it was a sure prognostic that the patient would recover; if not, he would die. In the latter case no further trouble was taken concerning him. Otherwise the caul was minutely examined by the witch-doctor and sprinkled with *buchu*, the powder of a species of spiraea. He then, twisting it into a cord, hung it round the patient's neck as an amulet, there to remain until it rotted

off. The sheep was eaten by the men, women, or children of the kraal, according to the sex and age of the patient. If the treatment failed, the witch-doctor resorted to simples, of which these practitioners are said to have had a good knowledge. They were also skilful surgeons, performing the operation of blood-letting, curing snake-bites, and setting dislocations. It was they probably who shaved the heads of mourners and of persons suffering from headache, and on solemn occasions slew the animals described as sacrifices. It was they who at a wedding performed the extraordinary but well-attested rite of micturating over the bride and bridegroom; but they are not definitely identified by Kolben, our principal witness, with the old men who accomplished a similar ceremony at puberty rites, at funerals, and on receiving home a warrior who had encountered and slain single-handed a lion, an elephant, or some such formidable beast. They were the rain-makers; and as such their art was founded on the processes of sympathetic magic. Thus they formed an influential class closely corresponding to the witch-doctors or medicine-men of the south-eastern Bantu.

4. Future life and cult of the dead.—The Hottentots held that the individual, in some sense at any rate, survived death. As we have seen, they were at times haunted by spirits of the dead, who were deemed mischievous or malicious. Happily there was one way of preventing this. The spirit did not usually travel far from the place where the man had died. It seems that, as is widely believed in the lower culture, it was attached to the body and dwelt at or in the grave. Consequently, when a death occurred, the kraal was removed to a distance; care being taken, however, to abandon to the ghost the hut in which death had taken place, together with the apparel and implements of the deceased; otherwise removal would have been of no avail, for the ghost would follow them. We are not told that there was any organized ancestor-worship; nor does it appear that sacrifices were offered to ancestors as such. But it was the custom for a Hottentot, when in trouble, to go and pray at the graves of his ancestors (Hahn, 112); and, seeing that burials often took place in clefts and holes of the rocks, it is possible that the wild ceremonies described by an old writer as performed in caverns may have been invocations of the departed (Kolben, 96, quoting Vogel). Certain spots, moreover, were held sacred to famous men of the past. In going by them it was usual to stop, to muffle the head in the mantle, and offer prayers to the dead man for protection of the worshipper and his cattle, and sometimes to dance round the place with singing and clapping of hands. The legends of many of these heroes were known and told. From an anecdote related by Kolben, however, it would appear that the spot often became sacred from a vague belief, arising it may be from purely accidental coincidences, that there was something uncanny about it, such as led the ancient Greeks to hallow the shrine of a hero unknown, or the Indians of British Guiana to ascribe to rocks and other inanimate objects a powerful spirit who must be honoured and mollified. There is no trace of a belief in future retribution. Rebirth, not always in human form, and shape-shifting, or transformation during life, appear in the stories; for the Hottentots were in nowise different from other savage and barbarous peoples who recognized no impassable chasm between mankind and the lower animals.

5. Food prohibitions.—The Hottentots abstained from eating fish that have no scales. The Bantu also abstain from fish, alleging as the reason their similarity to snakes—a form in which their dead frequently show themselves to the survivors. It

may be that some such reason caused the Hottentots to abstain; but this is a mere conjecture. Swine's flesh was likewise forbidden to them—on what ground we do not know. Another food prohibited, at all events to the Namaqua, was the flesh of the hare. The reason usually assigned for this was the part taken by the hare in the saga of the origin of death (cf. *ERE*, vol. iv. p. 412*, and vol. v. p. 706*), common in one form or other to all the South African peoples.

There is, however, another and a deeper reason for abstention from hare's flesh. The Namaqua share with the rest of the uncivilized world the belief that he who eats the flesh of an animal absorbs that animal's qualities and becomes like it. To eat the flesh of the lion or to drink the blood of the leopard or the lion is to acquire the courage and strength of those beasts. In like manner to eat hare's flesh is to become as faint-hearted as a hare (Hahn, 106).

6. Moon and stars.—In connexion with the tale of the origin of death it may be observed that there is some ground for thinking that the moon was invoked by the Hottentots. At new moon and at full moon they spent the night in dancing, singing, and merrymaking. One old writer also speaks of their sitting at new moon on the banks of a river and throwing balls of clay into the water. It is by no means clear what was the exact meaning of these proceedings. It is possible that they were a rain-charm. The older writers may be roughly divided into two classes—those who denied that the Hottentots had any religion, and those who attributed to them an idea of God as lofty as their own. Both these representations may safely be discounted. The ceremonies at new and full moon, which, we are told, no inclemency of weather prevented, may be, as Kolben (p. 96) emphatically asserts, 'religious honours and invocations to the moon,' and yet his conclusion, that she was an 'inferior visible god, the subject and representative of the High and Invisible,' may be altogether beyond the mark. Since she was held to influence the weather, the rites were probably intended to induce or magically compel her aid. More than that cannot safely be said. Certain of the constellations also were known and named. At the first rising of the Pleiades after sunset a religious dance was held, with prayers to Tsuni-goab for rain. Stars were said to be the eyes or souls of the deceased—which points to a belief in the *post-mortem* transformation of the dead into stars, not unlike that entertained by some of the Australian tribes.

7. Omens.—Many animals were observed for omens. If a hare crossed the hunter's path, he would return home; on the contrary, if it ran in the same direction as he was going, it was a good sign. The korhaan (*otis kori*) brought luck if it did not fly far from the hunter and soon again sat down. A certain kind of chameleon creeping on a hunter or his weapons or belongings, while he rested on the road, prognosticated success. This, rather than any worship directed to the insect, is the probable explanation of the rites so graphically described by Kolben and in general terms confirmed by Hahn as performed when the mantis appeared. It was, for some reason unknown to us, regarded as a favourable omen of the highest significance. If it went so far as to alight on man or woman, the fattest ox belonging to the kraal was killed. The lucky person received the entrails and fat, and wore the caul twisted about his neck until it rotted off, or until some other person was honoured by the mantis in a similar way. The flesh of the ox was boiled, and the men or the women feasted on it according to the sex of the person on whom the mantis had alighted. The

mantis, of course, was never killed or injured, for to do this would turn the omen into disaster and destruction (Kolben, 98).

8. Mythology.—Hottentot mythology, so far as it has descended to us, is meagre. Setting aside stories relating to the lower animals (many of them, as might be anticipated, etiological), it is concentrated chiefly on the adventures of two mythical beings, who were the subjects of tradition and the object of worship—Tsuni-goab and Heitsi-eibib. The latter was a sort of culture-hero among the Namaqua and their neighbouring tribes. The traditions concerning him can only be summarized here. He was born, according to one tale, of a young girl who had chewed a kind of grass and swallowed the juice. The boy was as remarkable as his birth. He committed incest with his mother. He killed monsters. He fought and conquered great lions, and put enmity between the lion's seed and mankind. He cursed the lion and the vulture. To his commands are ascribed the habits of these creatures, as well as certain human observances. He died from eating the fruit of a raisin-tree, which is consequently prohibited; in fact, it causes dysentery. He returned to life. He was an adept in shape-shifting. Another legend represents him as being born again as a young bull from a cow pregnant from eating grass. He appears finally to have died, for his graves are found all over the country, usually in mountain passes. Natives who go by throw pieces of clothing or other articles of no value on them for luck—a common practice also among Bushmen and indeed at wayside shrines in all parts of the world. Sometimes more substantial offerings of honey or honey-beer are made. He is glad when men thus honour him. He still gives the Khoi-Khoi good advice, tells them how to kill the lion's children and other wild animals, and prevents danger from befalling them, if they honour him. These stories present few traits not common to those of mythical heroes elsewhere.

The other personage is more important. He seems to have been known to all the Hottentots. His name, Tsuni-goab, also written Tsüi-goab, and in other ways, is usually translated 'sore (or wounded) knee.' The story told by an aged witch-doctor in explanation to Moffat was 'that Tsui'kuap was a notable warrior of great physical strength, that in a desperate struggle with another chieftain he received a wound in the knee, but having vanquished his enemy his name was lost in the mighty combat which rendered his nation independent, for no one could conquer the Tsui'kuap (wounded knee)' (R. Moffat, *Missionary Labours . . . in S. Africa*, London, 1842, p. 258).

This derivation, however, is discredited by Hahn, who interprets it as 'the Red Dawn.' His reasons are chiefly philological, elaborated under the influence of the mythological theories current in the middle of last century. But he adduces two other considerations—that the Korana believe Tsüi-goab to live in the Red Heaven or Red Sky, and that another mythological personage whom he equates with him, called 'The man whose body has a brass-coloured backbone,' was addressed as 'Thou who paintest thyself with red ochre.' These reasons are obviously insufficient. Another account of Korana belief makes Tsuni-goab dwell beyond the blue sky, in a light sky. Red ochre is a substance commonly used by savages to paint themselves and the objects of their reverence; and it was so used by the Hottentots. When praying for rain at the rising of the Pleiades, some of the tribes, when Hahn wrote, still addressed Tsüi-goab in a traditional song as 'Father of the Fathers.' The question of his true character depends largely on the way in which we are to construe this phrase. A Korana tradition declares that he 'made two persons, a man, Kanima (Ostrich Feather) and a woman, Hau na Maos (Yellow Copper). He gave them cows

whose milk they should drink, a jackal-tail to wipe the perspiration off the brow, a staff with a club (*kiri*), a quiver with arrows, a bow, and a shield. From Tsuni-goab they expect all good things' (Hahn, 105).

Hahn, who found this statement among his notes, is uncertain of its source, but attributes it 'very likely' to a missionary, Wuras. The last sentence, it is to be noted, seems a summary of what the reporter understood to be the mental attitude of the Korana towards Tsuni-goab. It may mean no more than what we have already learned concerning the Namaqua and their hero. The general import of the tradition has been interpreted as affirming that Tsuni-goab was the Creator of mankind. A careful consideration, however, will hardly endorse this construction.

'The obvious and natural inference,' remarks A. Lang on the whole evidence, 'is that Hetai Eibib and Tsuni Goab were and are regarded by their worshippers as departed but still helpful ancestral warriors or medicine-men. We need not hold that they ever were actual living men; they may be merely idealised figures of Khoi-Khoi wisdom and valour. But that in the opinion of their worshippers they are but dead men, there seems no doubt at all' (*Myth, Ritual, and Religion*, London, 1887, II. 20; cf. 2nd ed., 1899, II. 44).

Statements by Kolben pointing to monotheism, or rather dualism, are now generally recognized as due to a misunderstanding usual in the age in which he wrote. Accurate investigation of savage beliefs was then hardly known. Investigators were obsessed by the desire to identify the objects of heathen worship with those known to them in Christianity. Such information as they obtained was dragged out of reluctant savages, who themselves had probably no definite ideas on the subject, and were, moreover, confused by the interrogations, or only too willing to mystify the inquisitive white man; and it was hastily misinterpreted in accordance with the inquirer's prejudices.

9. Bodily mutilations.—On the other hand, when Kolben speaks of his own knowledge as eye-witness, he is generally to be depended on. His account of the custom of excision of the left testicle from every youth at or before puberty (p. 112) has been rejected by other writers, notably by Fritsch, who argues that he was deceived, in spite of his minute description of the rite and repeated personal examination of the victims themselves (p. 335). But it has been accepted by Theal, who states that

'It is practised at the present day by people (probably the Berg-Damara) who are certainly not of Hottentot blood, but who must have derived their language and many of their customs from Hottentot conquerors in bygone times' (p. 87).

It is, in fact, one of many species of sexual mutilation, more or less cruel and senseless, practised in various parts of the world, of which it can only be said that, while they are probably due to some superstition, their exact origin and purpose are still unknown. Many Hottentot women were mutilated by the amputation of one or more of the joints of the little finger. Kolben asserts that the custom was confined to those who married more than once, a fresh joint being cut off before every fresh marriage (pp. 158, 306). It has been found, however, practised upon children of Bushmen, Berg-Damara, and Kafirs, as well as of Hottentots (Hahn, 87). Kolben's experiences were confined to the tribes of the Colony, and it seems probable that the custom and the motive varied. Such a sacrifice by a widow before a second marriage may have been to elude the vengeance or to mollify the ghost of her deceased husband. Inflicted on a child (usually a girl), it may have been intended to ward off some misfortune, feared perhaps from the action of ancestral spirits (Fritsch, 332). But our data are not sufficient to enable us to determine the motive with accuracy.

It may be added that many Hottentot beliefs and rites seem to have been shared with the Bushmen, or, at all events, to have been influenced

by them. Such (to take only a single example in addition to the mutilation of the fingers) is the reverence for the mantis, which among the Bushmen is connected in some way, to us obscure, with Cagn, their hero or divinity. At present, however, our knowledge of Bushman is as meagre as that of Hottentot institutions. This fact is sufficient to indicate the essentially provisional character of many of the conclusions expressed (not without diffidence) above.

LITERATURE.—Notices and accounts more or less fragmentary are to be found scattered through the writings of the older travellers and missionaries. The fullest and most accurate information is given in P. Kolben, *The Present State of the Cape of Good Hope*, tr. Medley, 2 vols., London, 1731 (vol. I. alone relates to the Hottentots and has been alone cited above); and of more recent works in G. Fritsch, *Die Eingeborenen Süd-Afrika's*, with an atlas of portraits, Breslau, 1872; W. H. I. Bleek, *Reynard the Fox in South Africa*, London, 1864 (a collection of Hottentot folk-tales chiefly from MSS in Sir George Grey's library at Cape Town); T. Hahn, *Tsuni-goab, The Supreme Being of the Khoi-Khoi*, London, 1881; G. W. Stow, *The Native Races of South Africa*, ed. Theal, London, 1905 (a painstaking but incomplete work, the author having died before half his task was finished); and G. McCall Theal, *The Yellow and Dark-skinned People of Africa south of the Zambezi*, London, 1910. E. SIDNEY HARTLAND.

HUGUENOTS.—French Protestantism was a native product of 1512-59. It had no roots in the past, for the Albigenes (*q.v.*) had been exterminated, the Waldenses (*q.v.*) had emigrated, the university of Paris was the centre of Scholasticism, and the reforms of Gerson contemplated no breach with mediæval theology. Except for the encouragement given by the sight of other successful revolts from Rome, it owed little to foreign influences. On the other hand, the system of doctrine thought out by Calvin, and the organization elaborated in Paris, have been adopted to some extent in every Protestant country except Scandinavia; while French Protestant exiles have enriched, not north Europe alone, but America and South Africa.

Jacques Lefèvre was the Erasmus of the French reform, laying billets he feared to kindle. By 1521, following the example of Colet, he published a new annotated Latin version of Paul's Epistles, recognizing his doctrine of justification. In 1523 he began to revise the classical French version of the Vulgate. But the group of Humanists, protected at Meaux by the bishop, did little more than reform that diocese and lighten it with evangelical preaching. The political situation was dominated by the fact that Francis I. in 1516 made a Concordat with Rome, whereby he recognized the Papal rights of canonical institution and of exacting annates, and secured for himself all valuable ecclesiastical patronage. With the clergy thus rendered subservient, no motive remained for the Crown to desire reform. The Council of Sens (1528-29) showed that the clergy were equally content, now that all French sees and abbeys were reserved for them. The nobility, however, found their feudal rights and their material resources rapidly diminishing, and were accessible to new ideas. And in the Third Estate, craftsmen and retailers suffered by the influx of precious metals, and they also provided a receptive soil.

The leader was John Calvin (1509-64), a Picard, trained in theology and law (see CALVINISM, vol. III. p. 146 ff.); but in 1534 he had to flee owing to his friend Nicolas Cop advocating evangelical views in his rectorial address at Paris. Finding that the movement was imperilled by the supposed anarchism of the Anabaptists and by some of their

tenets, he published in 1536 the *Institutes of the Christian Religion*, casting the purified metal into the old moulds, but adding two sections dealing with the current slanders, and dedicating the work to Francis. The book was the first valuable dogmatic treatise, and soon was enlarged and translated widely. A revision of Lefèvre's Bible version in 1535 by another Picard, Olivétan, and the appearance of Clément Marot's metrical version of the Psalms, were other treasured aids.

Some adherents were exasperated by the refusal of the clergy to reform, and their placarding of handbills attacking the old doctrines and usages irritated the Catholics. Francis had wavered for a time, but, when he found one of these broadsheets on his bedroom door, he adopted a policy of extermination, announced in 1535, and seldom abandoned during the century. An organized congregation discovered at Meaux in 1546 was stamped out, but the movement spread. Henry II. (1547-59) created a special committee of the Paris Parliament—the chief organ of justice—to systematize the prosecutions. They proved ineffective, and by 1555 a congregation was formed even in Paris, while four years later a synod of twelve congregations met and organized a National Evangelical Church. A confession was adopted, reflecting the influence of Calvin. His plan of governing each congregation by minister and elders was followed, and a system was begun of linking the congregations by synods of ministers and elders, much as the South German Anabaptists had arranged a generation earlier. As the movement extended, local synods grouped naturally by the civil provinces and the provincial synods were finally merged in one National Synod. The plan was rapidly adopted by Presbyterians everywhere.

The Synod of 1559 is a landmark, inaugurating a period of seventy years when the Reformed Church was an important political factor. Its appearance contributed to bring about peace with Spain, and an agreement between Henry and Philip to root out heresy. The discovery of this intention by William the Silent led to a certain interweaving of Netherland and French politics, and to the constant interest of the House of Orange in the French Protestants, for whom William's little Principality on the Rhone often served as a refuge.

With the accession of Francis II. a few weeks after the Synod, the family of the Guises came to power, and steadily opposed the new religion. But the illegal execution of Anne du Bourg and other sympathizers in the Parliament called attention to previous armed resistance by persecuted evangelicals, Zwinglians, Anabaptists, and Lutherans. By this time several nobles had declared themselves, including Admiral Coligny and two princes of the blood, the Dukes of Bourbon and Condé. The latter was charged by the Guises with plotting, but they dared not grant his demand for a trial, contenting themselves with massacres of the humbler conspirators. Henceforward the evangelicals met openly in armed conventicles, and the 'Hugonots' were suddenly recognized as a power in the land. The name, originally thus spelt, seems to have been bestowed first at Tours, where the favourite place of meeting was near the gate of St. Hugon.

With the accession of Charles IX. (1560-74), the queen-mother, Catherine de' Medici, brushed aside Bourbon, the first prince of the blood, and became regent. For a year there seemed a chance that she would belie Knox's fears as to 'the Monstrous Regiment of Women,' and imitate the revolution just carried through by Elizabeth in England. The second period of the Council of Trent had closed, but its decisions were not allowed

to be published officially in France. The States-General assembled in 1561 reflected the division of the nation: the clergy, of course, wanted no change; the nobles were unable to draft any unanimous requests, while many called for toleration; the Third Estate demanded religious liberty for all, and lay control over ecclesiastical matters. Coligny brought up a definite programme: biennial assemblies, free election of the higher clergy, nationalization of much property in ecclesiastical hands, and a national council under the king to settle religion. All that he gained was a suspension of persecution, and a religious conference.

The Huguenot spokesman at Poissy was Théodore de Bèze, a close friend of Calvin, but no Knox. He made, however, such a deep impression that the clergy saw it was politic to offer large funds for the public needs; and, by reserving the right to fix the quota themselves, they ensured the frequent convoking of their Estate, even if the States-General lapsed. Therefore the Edict that issued in 1562 conceded nothing more to the Reformed than the right to private worship within doors, or public worship outside walled cities. Hereupon both parties prepared for civil war.

For more than sixty years France was rent by the struggle, though it was suspended so often that nine successive wars are reckoned. The outbreak was at Vassy, where a congregation meeting publicly within a walled town, and therefore illegally, was massacred by the Guises without ceremony. In the intervals of fighting, it became clear that a Counter-Reformation had begun, and that the zeal of the preachers trained at Geneva was offset by the subtlety of the Jesuits. The movement was much transformed in 1572, when Catherine was hurried by Italian advisers into authorizing a general massacre of all Huguenots, beginning with the royal guests. The princes of the blood were saved by a forced conversion, but every other leader of note fell, with thousands of humbler adherents. The survivors perfected their organization on quite representative lines, till there appeared a State within the State, independent of the feudal nobility and of the Crown.

With the accession of Henry III. (1574-89), two other parties defined themselves: the League of thoroughgoing Catholics, who copied the Huguenot organization, and the Politicians, who aimed at internal peace and the exclusion of foreign influence, as of the Guises and Catherine. The States-General of 1576, packed by the League, declared for unity of religion. When Henry of Navarre, who had retracted his forced conversion, became heir-presumptive in 1584, the League was driven to a policy of exclusion. Four years later, the States-General declared against even toleration; but the arrogance of the Guises led to their assassination by order of the king, and, with the death of Catherine and the counter-assassination of the king, Navarre succeeded as Henry IV. (1589-1610).

The League was so strong that Henry found it politic to become a Catholic in 1593; he was able to banish the Jesuits next year, and in 1598 to grant the Edict of Nantes, destined to continue for 87 years, in great contrast to its many ephemeral predecessors. This declared Catholicism to be the established religion, maintaining the obligation of tithes and of the marriage laws; but it stopped persecution and recognized freedom of conscience, with the right of private worship anywhere. The 'so-called reformed' public worship was legalized in every place where it was then actually practised—about 200 towns, with five chief cities excepted; also in many thousand castles of the nobles, and in two places within every bailiwick. All synods were authorized to meet. On the civil side, not only were full civic rights guaranteed, and for

ministers such treatment as the clergy received, but committees of Parliament dealing with cases involving Protestants were to have Protestant members. As a temporary measure, about 200 towns were left in their military possession, the garrisons being paid by the State. Rapid development ensued; schools and 'temples' arose in numbers, with theological colleges at Nîmes, Saumur, Die, Sedan, Montauban, etc., while domestic piety was nurtured by the Genevan revision in 1588 of Olivétan's Bible.

With the assassination of Henry IV. and the accession of his son, Louis XIII. (1610-43), the tendency to absolute royal power increased, as was shown by no States-General being convoked after 1614. During the minority, the Jesuits quietly returned, and won many of the clergy to Ultramontane views. The rise of Richelieu in 1624 frightened the Huguenots into revolt, and, when La Rochelle fell after four years, their separate political existence ended, and their fortifications were demolished everywhere. The Peace of Alais in 1629 inaugurated a third period, when they were merely tolerated as inferiors, without any guarantee that the Edict of Nantes would be observed. Henceforth the nobles dropped off, as with the English Puritans after 1660, and the party became chiefly middle-class.

Richelieu and Mazarin, however, gave the Protestants fair play, so that in the troublous days of the Fronde they were loyal. Devoting themselves to manufacture and trade, and not being handicapped by cessation of work on saints' days, they gained nearly a monopoly of weaving wool, linen, and silk. Though they can hardly have mustered more than one million people out of fifteen millions, their importance was far greater. The Edict of Nantes was construed liberally, and public worship was actually maintained in 631 principal places, with 231 others subordinate. The synods met freely, though the National Synod needed special authorization, and a royal commissioner presided. Thought ripened apace under these conditions, and, while in Britain the doctrine of the Divine Right of Presbyterianism was hardening, the Huguenots preserved a more open mind. Daille's *Traité de l'emploi des saints pères*, written in 1632 and translated by 1651, did much to break down the authority of the Fathers and exalt the Bible. At Saumur also were sown the seeds which, transplanted to England, were to produce the Deists, though the later emigrants, such as Mauduit, Gailhard, de Luzancy, took the field against Socinianism.

At this time the Huguenots were important enough even to influence foreign affairs. The Synod of Charenton in 1644 condemned the Independents as a sect prejudicing the Church of God. On the execution of Charles I., Amyraut and Bochart published books on the Divine Right of Kings, two others translated at The Hague and at Orange the *Eikon Basilike*, while de Saumaise and Pierre du Moulin, rector of St. John in Chester, put forth royalist Latin pamphlets. William Dugard, Master of Merchant Taylors', translated de Saumaise into English and printed it on his own press. He was soon converted, rather forcibly, and not only did he publish Milton's response, but he became 'Printer to the Council of State' and actually issued from 1650-57 a weekly French paper in London, manifestly designed to win the Huguenots to sympathy with the new régime. Louis du Moulin, Pierre's brother, son of James's friend, accepted the chair of history at Oxford in 1648, and in 1680 published a work on the Conformity of the Discipline and Government of the Independents to that of the Ancient Primitive Christians. The libraries of Arundel, Sancroft, and Charles II. were

in charge of Huguenots, and the court of this king even had an official Huguenot ambassador.

These halcyon days ended soon after the collapse of the English Commonwealth withdrew the only possible external protector. When Mazarin died in 1661, Louis XIV. (1643-1715) assumed power, and declined to receive a deputation of pastors come to congratulate him. Local self-government and constitutional methods were rapidly vanishing. Nobles and gentry were invited to court and led into extravagance, or were ignored at home. Even the provincial governors were practically superseded by obscure lawyers (*intendants*) wielding powers as absolute and as illegal as Cromwell's Major-generals, like whom they were backed by an irresistible army. As the States-General never met, National Synods also ceased after 1660; provincial States and Parliaments declined in importance; and arbitrary Edicts became the only laws. When, therefore, an aggressive Company of the Holy Sacrament set itself against toleration, and the one survival of the old times was the Estate of the Clergy, often convoked to tax itself, the danger was obvious, and there was no constitutional protection.

Troubles began at Montauban when a quarrel between Protestant and Jesuit students served as a pretext to banish the college, to confiscate the premises, and to impose a garrison on the town. Commissioners now started to seek for buildings, etc., not authorized by the Edict of Nantes. Systematic repression began with the walling up of the temples in the Pays de Gex, a recent addition to the kingdom. In 1666, hundreds of local decisions were codified as a guide, but an emigration began, and on remonstrance from the Grand Elector the code was revoked. Foreign wars further distracted attention, and for a time the chief evils were displacement from civil and municipal office, or confiscation of corporate property.

After the peace of Nijmegen in 1678, the remaining steps were few and effective. Children of seven were declared capable of conversion, and inquiries were set on foot as to age; a bench had to be provided in every temple for opponents, who were at liberty to interrupt the services and argue; ministers were forbidden to remain more than three years in any place. At length dragoons were quartered on the Protestants, with no restraint on their behaviour, and with orders to arrest prominent men, to batter down the temples, to seize the pastors. Emigration revived in 1681, and there was a temporary check; but, when England received a Catholic king in James II., the last external protector seemed gone, and every imaginable wrong to person and property was now inflicted broadcast. Half the Protestants were thus coerced, and so large was the supposed number of New Converts, that on 17th October 1685 the Edict of Nantes was revoked as no longer necessary. All Reformed worship was to cease at once, and all pastors were to quit the realm in a fortnight. Within a few weeks 800 temples were demolished, and all corporate property was lost.

Emigration was forbidden, and all refugees caught were sent, men to the galleys, women to prison, their property being confiscated; but, though every frontier was patrolled, the exodus was general. Paris alone lost 1200 Huguenot families out of 1933; the *intendant* of Normandy soon reported 20,000 people missing from Rouen, 184,000 from his province; Nantes bewailed the loss of her workmen, Lyons had 14,000 looms silent and only 4000 working, Tours only 1200 instead of 80,000; woven goods were in future imported instead of being exported. The number of emigrants at this time alone seems to have exceeded 300,000, peasants, traders, manufacturers, nobles,

The ambassador in London sent word that 980,000 louis d'ors had been brought to the Mint for conversion into English coins; the total loss in mere gold was soon estimated at 20,000,000 livres. Marshal Vauban indeed trebled this figure, but was more in his element when saying that France had lost 8000 sailors, 10,000 soldiers, and 500 officers.

These exiles rallied round the prince of Orange, and for a generation cherished the hope of compelling some restoration and even of reforming the whole Gallican Church. New Huguenot regiments were soon embodied in Dutch pay. When William went to the rescue of England in 1688, his aides-de-camp were all French, the second in command was Marshal Schomberg, and the engineers and artillery were under other Huguenots. When the war was transferred to Ireland, every band of the exiles sent recruits; Schomberg fell fighting at the Boyne; Ruvigny saw the fall of Limerick, which ended the war. On the sea the exiled sailors had their share in the victories of La Hogue. But on the Continent, Louis was almost uniformly successful, and the peace of Rijswijk in 1697 depressed the hopes of the emigrants.

A second opportunity came with the war of the Spanish Succession. The prince of Orange was indeed dead, his principality was overrun by Louis and its Protestant population fled, but the Camisards (*q.v.*) made a serious diversion in the Cevennes while Louis was losing in Bavaria and the Netherlands. The Huguenot exiles this time fought in Portugal, and at Almanza in 1707 a new regiment of Camisards, commanded by Jean Cavalier, bayoneted a whole regiment that had figured in the Cevennes atrocities. The treaty of Utrecht in 1713 destroyed all hope of repatriation, and Louis could at last pretend to believe that Protestantism was extinct in France.

Huguenot influence was diverted in its flow from the main stream into many other channels. This began far back in its history; as early as 1536 some preferred England to France; thirty years later many silk-weavers set up their looms in the crypt of the metropolitan church of England, where Coligny's brother is buried and where their descendants worship to-day; Southampton has a 'God's House' whose records begin with 1567. Shakespeare lodged in London with Montjoy of Creçy, and his *Venus and Adonis* was printed by the successor of Vautrollier. James I. had two Huguenot doctors, Chamberlen and Mayerne, and invited to court Casaubon and du Moulin. When Germany had been ravaged by the Thirty Years' War, a French church arose in Berlin in 1661. And the outflow from 1680 onwards was so great that the bulk of the stream was drawn off from France to enrich other lands. This may be noted specially for Brandenburg, Holland, and England.

The Great Elector replied at once to the revocation of the Edict of Nantes by the Edict of Potsdam, offering free transport from Frankfort, Cologne, or Amsterdam, free farms or houses, new churches, freedom from taxes for ten years, State support for ministers, their own judges. Waste lands soon blossomed with unknown vegetables, hemp, flax, and tobacco. The site of Magdeburg, desolate for fifty years, became a home of weaving and trade; Halle rose to rival Leipzig; Berlin gained all manner of manufactures; metal-workers fashioned tin, iron, and copper; to the West Indies and West Africa sprang up a brisk maritime trade, which, however, passed to Holland in 1720. French doctors revolutionized medicine, the gentry remodelled the army, scholars popularized Cartesianism, a college arose in Berlin, and a university at Frankfort-on-Oder. Society was created at the capital by them; the second and third kings of Prussia were brought up by a refugee.

The immigration to Brandenburg down the Rhine left many settlers by the way. Geneva gained 3000 inhabitants and the watch-trade as some recompense for boundless hospitality; a score of colonies arose in Württemberg, where French synods met until 1822; Homburg still maintains a French service; a village in Fulda yet keeps up the speech and customs of its founders. But the ravaging of the Palatinate hastened the steps of most of the exiles on to the Mark or the Netherlands.

The Calvinists of Holland gave an abundant welcome to their brethren. Collections were organized and loans granted, with support for the pastors; the craftsmen were allowed to practise and even welcomed into the guilds; and taxes were not levied for a term of years. Soon a synod of 202 exiled ministers met in Rotterdam, which visitors declared to be well-nigh French. Richly did the Huguenots repay their hosts. Some went to the colonies; in 1684 other exiles occupied Staten Island; and a New Rochelle arose on the banks of the Hudson. Under another flag all received naturalization in 1703. In Guiana, Huguenots filed Paramaribo; to the Cape went out a large contingent; and, though by 1739 the French tongue was compulsorily displaced, so that La Perle became Paarl, yet the Jouberts and Villiers are no small asset in South Africa to-day.

In the Netherlands themselves, Bayle and Jurieu brought the traditions of Sedan to Rotterdam; Claude, rival of Bossuet, whose influence was so dreaded that he was escorted from France at a day's notice, wrote at William's request a story of the persecution so effective that James burned it publicly; Saurin, after fighting in Savoy, studying at Geneva, preaching in England, added to the lustre of The Hague for a quarter of a century; Martin at Utrecht devoted himself to revising the Genevan Bible, and by 1707 completed a work that is still standard. For a century fine literary magazines in French streamed into France, Britain, and Germany; some of the editors also founded the first English magazines in London. Friesland settled her wastes, Utrecht gained a new silk and velvet trade at the expense of Amiens, Amsterdam added to her maritime trade 13,000 makers of silk, wool, linen, paper, and books. And, when it became clear that there could be no return, a general act of naturalization in 1715 encouraged the immigrants to melt into the general stock of burghers.

It might have been expected that Scotland would have rivalled Holland in its welcome, but only a few cambric-workers settled in Edinburgh. England kept up its Tudor traditions; Charles II. granted letters of denization freely from 1681, and appointed the archbishop of Canterbury with the bishop of London to aid the immigrants. In fourteen years £125,000 was subscribed, and doubled by public grants, whose interest went one-fifth to the pastors and four-fifths to start the others in business. Ipswich began to produce linen and sails; Norwich renewed its weaving, adding cutlery and clocks; Kent and Hampshire saw paper mills, Sussex glass factories; Wandsworth replaced Rouen as the source for hats, supplying even cardinals.

London attracted most of the settlers, especially when William of Orange became king, and a proclamation trebled the inflow. In 1701, Defoe (*The True Born Englishman*, pt. i. line 361 ff.) could point to the new leaven:

'Your Houblons, Papillons, and Lethulliers
Pass now for true-born English knights and squires,
And make good senate-members, or lord-mayors.'

Papillon and Dubois, indeed, were the sheriffs on whom Shaftesbury relied in the agitation on the Exclusion Bill twenty years earlier. Separate

services were maintained at first; thirty new churches arose, especially in Spitalfields, where the silk industry soon increased 2000 per cent, and in the new quarter of Soho. Some of the pastors, however, threw themselves into English life; de l'Aigle from the great temple of Charenton entered the Established Church, du Veil passed through it to the Baptists, Capel of Saumur taught in an Independent academy.

A club arose at the Rainbow Coffee House in Fleet Street, under Daudé of the Exchequer. Here met Rapin Thoyras, Le Moivre, La Croze, Coste, friend and translator of Locke, and Bayle: such men of science and letters soon created a new public feeling which embittered the popular English mind against the France of Louis XIV. Bayle's *Dictionnaire* was translated in 1709 by La Roche and others, and had no small share in the Deist movement; against that may be set Jurieu's *Treatise of Devotion*, and Drelincourt on Death. A new political doctrine, the Social Contract, was opposed to the Divine Right of Kings, by Jurieu and Abbadié; and, though they may have inherited it from the English Commonwealth men, it was destined to be taken from the Club by Voltaire and to work wonders in France by the pen of Rousseau. Scores of less known pamphleteers were the mainstay of the Whig cause for a generation; and in the rebellion of 1745, when the London merchants addressed King George, 99 out of 542 names were Huguenot, showing how large a proportion of commerce had fallen to them. This devotion to the land of their adoption was of old standing; as early as 1685 a society was formed to further true religion in England, and, fired by the new spirit of Methodism, the Christian Community labours still in Bethnal Green. No attempt was made to train new pastors in England, and the descendants of the immigrants learned not only to speak but to worship in English. Before 1760 most of the French services were discontinued; fifty years later there remained only four congregations in London, with others at Norwich, Canterbury, Southampton, Plymouth, and Bristol; to-day there are two chapels in Soho, one using the English liturgy in French. The absorption was quickened by a grant of general naturalization in 1774, and the gain in all departments of national life is suggested by such names as Chamberlain, de la Rue, Dollond, Dumaesq, Gambier, Hanbury, Labouchere, Layard, Martineau, Portal, Pusey, Rapin, Romilly.

In Ireland the great family of Ruvigny earned a new title as Earls of Galway, and laid out a model town at Portlinton, whose school turned out such men as the Duke of Wellington; not till 1817 did its French service cease. Fontaine and Latrobe introduced manufactures at Cork; and, though these were ruined by English legislation, Crommelin was more fortunate with the thousand wheels and looms for linen and cambric wherewith he refounded Lisburn; the French church here lasted till 1798. Waterford received manufactures and a wine trade, while its abbey resounded with French eloquence till 1819.

Tillers of the soil passed on to America, some to Oxford in Massachusetts, thousands through New York to Pennsylvania, the home of liberty. The new and balmy Carolinas attracted most; French Santee was laid out with vines and olives, and began to weave silk and wool. For a while the settlers looked wistfully to Louisiana, but when repulsed they gladly accepted the privileges freely tendered in the English colonies, strengthening not only the Carolinas, but Virginia and Maryland.

The Huguenots of the Dispersion thus carried with them to many a Protestant land a wealth of

probity, industry, gallantry, history, scholarship, science. Calvinism had too often become unlovely by transplantation; now it was invigorated and sweetened by this crossing from the parent stock. But the France which thus impoverished itself paid dearly; it was hard to believe in priests who hounded on persecution, and by 1790 the typical ecclesiastic was no longer Fénelon, but Talleyrand. Through the insipid and putrescent 18th cent. the Huguenots of the home land not only existed, but proved the very salt of the earth.

For a generation after 1685 they had, indeed, been deprived of all public worship and of pastors. Those who ventured back by stealth were often kidnapped into secret prisons, and their sober work was ill replaced by the ministry of the Prophets. But, with the new situation created by failure in war, a new species of pastor arose to minister to the Church in the Desert, men able to inspire and to reorganize. Leading preachers were told off to conduct peripatetic schools, and synods began again whose minutes were recorded.

Even in March 1715 the aged Grand Monarch had to admit that there were many Frenchmen who on their death-beds declined the rites of Holy Church; and the revival dated from that very year. The whole reign of Louis xv. (1715-74) certainly saw the persecuting laws maintained, and often executed, and the declaration of 1724, in codifying them, even added the touch that no marriage was valid outside the Established Church. But it proved as vain to fine people for absence from service as when Elizabeth tried it; and James VII.'s plan of levying on every village where the Covenanters met broke down as badly in France. Antoine Court began a seminary at Lausanne to supply trained pastors. Paul Rabaut proved himself a true Apostle of the Desert. Such huge gatherings came to hear him and other leaders that in 1745 the Assembly of the clergy pressed for a rigid persecution, which for seven years sent a large stream of emigrants abroad. By 1755 the Protestants of Saintonge even dared to build Houses of Prayer. A national Synod next year showed that there were again 10 ecclesiastical provinces with 48 pastors; and seven years later another showed 14, with 26 pastors and 35 licentiates.

By this time Catholic fervour had died down, and the soldiery did not like to enforce the laws. A crisis came after the execution of a pastor merely for preaching, marrying, and giving the sacraments; an atrocious miscarriage of justice caught Voltaire's attention, and in 1763 he issued a treatise on Toleration. With the accession of Louis XVI. in 1774, there came to power Turgot, who even earlier had published on the same theme. When a circular letter was ordered to be sent to all bishops, he sent it also to all the Protestant pastors of the south, thus acknowledging their existence, their status, their weight. Protestant records of birth and baptism were admitted as evidence.

Lafayette returned from America with fresh ideas on freedom, and in 1787 induced the Assembly of Notables to petition for the removal of Protestant disabilities: despite clerical opposition, civil registration of birth, marriage, and death was made valid that year. With the gathering of the States-General in 1789, public worship was conducted with open doors in Paris. By March 1790 the National Assembly was presided over by a young pastor, Rabaut St. Étienne, and it decreed that all property in royal hands confiscated a century and more ago from Protestant emigrants should be restored to their heirs, who might return and take up citizenship.

During the Reign of Terror, the aged Rabaut was silenced, and his brilliant descendant was

guillotined,—fates shared by other pastors,—while all buildings for worship were closed. But, when Napoleon was settling affairs in 1802, he grasped at the request of the Paris Protestants for concurrent endowment, and secured in return a control over their Church. The State dictated the constitution, with the sessions of synods, the control of the seminary, and even the number of pastors; a veto on all appointments was reserved also. It proved that there were about 430,000 Protestants in 171 churches, with 121 pastors. There was no property except the places of worship and the seminary, which was in 1809 transferred to Montauban and annexed to the university as a faculty of theology.

When the hand of Napoleon was removed, and the Catholic Terror was over, the Church began to grow. First Scottish theology quickened native thinking, then German. Even under the Legitimists there arose a Bible Society, a Tract Society, a Foreign Mission, and an Education Society. Leave was withheld for a National Synod to assemble, but an informal meeting in 1848 resulted in a division. A minority seceded, regaining freedom, adopted an evangelical confession, and arranged for biennial synods. The moderates clung to State pay, but drafted a scheme of reorganization on the historic lines, which the State refused to sanction.

In 1872 a National Synod met, the first since 1660, and the division was perpetuated. The general law of 1905, which separated all Churches from the State and abolished all State pay, has given rise to a third section aiming at reconciliation. There are nearly 800,000 of the Reformed, meeting in 900 churches, ministered to by 1000 pastors, with good organization and equipment. The influence on the national life is so important that it is only too easy to raise an outcry against the domination of the Protestants. International reputations have been won by Janet, Sabatier, and Scherer in theology, by Cuvier and de Quatrefages in science, by Guizot and Waddington in politics. The religious strength may be gauged by the honourable share taken in evangelizing the world. A mission to the Cape in 1829 extended to the Basutos four years later, and has met with much success, while the Zambesi was occupied in 1834; within French possessions, the Tahitian and Malagasy work was taken over from the London Missionary Society soon after annexation; in north Africa there are missions at Senegal and the Gabon, to the Kabyles, and on the French Congo.

W. T. WHITLEY.

HUICHOLS.—This tribe, numbering to-day about 4000 souls, lives in a mountainous country, difficult of access, in the N.W. part of the Mexican State of Jalisco, on a spur of the great Sierra Madre. They are the eastern neighbours of the Coras, or Nayarits, to whom they are related by language, religion, and customs. Both tribes in the 18th cent. had been Christianized. The Coras still retain a priest and call themselves Christians, though their Christianity is to a large extent mixed up with pagan customs. But the Huichols, since the departure of the monks, have completely fallen back into their ancient religious practice, and represent a very curious survival of ancient Mexican religious faith and idolatry.

The principal god of the Huichols is *Tatevali*, 'our grandfather,' the fire-god. He is the god of life and health, and the particular god of the shamans, especially of those who heal and prophesy. He was the first who sat down on a chair, and is held to be more ancient even than the sun. Sometimes he is represented not by one, but by two images. One stands above ground, and the other in a cavity beneath it. The latter is invariably the smaller and the older of the two, and is regarded as closely associated with the sun after it has set, or the sun of the under world, while the upper image is supposed to be associated with the sun of the day-time, or of the upper world. There exists another form of the ancient fire-god, called *Tatotsi Mára Kwári*, 'our great grandfather deer-tail.' He is considered to be the spark produced by striking flint, and is the chief deer-god.

The sun is called by the Huichols *Tayaú* or *Taiú*, 'our father,' or *Tavérika*, 'our eagle.' It is related that the ancient shamans made Father Sun by throwing the young son of the Corn-Mother (or, according to others, the young son of young Mother-Eagle, the goddess of the Sky) into an oven, arrayed in full attire, with sandals, pouches, and tobacco gourds, and carrying his bow and arrows. From the oven the boy travelled underneath the ground, and rose as the sun in the East. The assistant of Father Sun is *Tayaú Sakaimoka*, an image of whom stands on the high mesa of the Nayarits, above the Cora pueblo of Sierra del Nayarit, where the Coras and Huichols deposit ceremonial arrows and other offerings in a cave. This god is considered to be the 'serpent-god,' represented by a zigzag line of blue colour, and was in former times 'the Sun's arrow.'

The great god of the Coras and Huichols is *Tabátzi* (Cora) or *Tamúts* (Huichol), 'our elder brother,' the god of the morning star. He is 'the messenger of the gods; and, when the shamans sing, he communicates their songs and whistles to the other gods. He himself is called *tomáani*, the 'singer,' by the Huichols. He is, at the same time, declared to be the god of wind or air. He is the shooting god, who made the first arrows for the gods, the god of the hunter, and is himself represented by a gigantic deer.

The growth of maize and other vegetables is ascribed to a goddess, called *Takótsi Nákawé*, 'our grandmother growth.' She is the mother of the gods, especially of Grandfather Fire. All the earth belongs to her, and she lives in the under world. People implore her for long life, because she is very old. The goddess called *Taté Tulirikita*, 'our mother, house of the little ones,' the goddess of conception and birth, and *Taté Ikú Oteyanáka*, 'our mother the Corn,' the special goddess of maize and other vegetables, seem to be other forms of the same mythological notion.

Taté Naalivámi, the red serpent, the red cloud, is mainly a water- and rain-serpent who brings rain from the East. She is the creator of squashes and of all flowers, and takes special care of children. Her complementary deities are *Taté Kyewimóka*, a white serpent whose dwelling is in the West, and who brings rain from the West; *Taté Rapariváma*, a blue serpent, living in the Laguna de la Magdalena, four days' journey south of the Huichol country, who brings rain from the South; and *Taté Haútsé Kupiri*, a yellow serpent, living in a lagoon to the north of the Huichol country, who brings rain from the North. Finally, the goddess of the heavens, *Taté Vélíka Uindli*, 'our mother, the maiden eagle,' is the mother of Father Sun; she holds the world in her talons, and guards everything from above, where she dwells. The stars are her dress. All these gods and goddesses are clearly recognizable counterparts of well-known Mexican divine types.

The cult of the Huichols consists in libations, in offerings of food and drink, and in preparing cakes of the ground seeds of *Amaranthus leucocarpus*, called *wave* by the Huichols (= Mex. *uauhtli*). Besides sacrifices of this kind, they offer to their gods remarkable symbolic objects. They are embodiments of prayers, or charms intended to produce the object of the prayer, and are mainly found in the god-houses and sacred caves. Ceremonial arrows (*ulu*), sometimes in great numbers, are stuck into the inner side of the thatched roofs of the god-houses, or into the seats of ceremonial chairs. A great many symbolic objects of various colours and shapes are attached to the arrows, and others hang from the roof, while on the altar may be seen rudely carved and decorated wooden images of the animals dedicated to the god.

Another kind of symbolic object is called *nealika*, 'face.' These are shields, round in shape, made by interweaving pieces of split bamboo with cotton cord, or variously coloured crewels, symbolic and mythological figures being represented in the weaving. They are mostly prepared for *Tayaú*, 'Father Sun,' and *Taté Naalivámi*, 'Mother East-water.' The central part, always defined by a ring, represents the hole through which the god sees. Compare the ancient Mexican ceremonial object, called *tlachieloni*, 'instrument for seeing,' the special outfit of the Mexican god of fire and of Tezcatlipoca. The objects called *nama*, 'mat,' of rectangular shape, seem to be representative of a cloth hanging over the back of the gods. Very curious ceremonial objects are those called *sikuli*, 'eye'—crosses of split bamboo, interwoven with crewel or yarn, and resembling in the most striking way objects that are met with in Peruvian graves stuck in the soil at the foot of the mummy packet. According to the interpretation given by the explorer Charles Lumholtz, the prayer expressed by this symbolic object is that the eye of the god may rest on the supplicant.

From May to August, there are frequent feasts for making rain. During the wet season, if it stops raining only for two or three days, the principal men gather in the temple and decide to sacrifice an ox or two for the propitiation of the gods. Two children called *akeli* (from Spanish *ángeles*) play an important part at these feasts. One of them belongs to *Tayaú*, 'Father Sun,' and the other to *Tatévali*, 'Grandfather Fire.' Toasted maize-cakes, made in the form of an S (symbols of the lightning, according to the symbolism of the ancient Mexicans), and others made in the form of 'eyes,' of feathered snakes, flowers, and dogs are tied to a twine of bark fibre and offered to the gods. They are called *kóka*, 'bead,' 'necklace,' as they are looked upon as the necklaces of the gods to whom they are dedicated. In October the feast of green squashes is held, called *wind kudri*, 'to beat the drum,' the squashes representing the gourd-rattle (*kaisa*)—the rattling noise which the dry seeds make inside the squash when shaken. The children are brought to the god-house, wearing on the head a *sikuli*, or 'eye' (which in this ceremony seems to represent the squash-flowers), and carrying rattles in their hands. For this feast is held in honour of *Taté Naalivámi*, the creator of squashes and all flowers, the special patroness of children. It is a great prayer for growth, health, luck, and plenty to eat.

All priests and shamans use tobacco, which the Huichols, like the ancient Mexican priests, carry about with them in a gourd hanging over the back, this tobacco-gourd being the essential and most necessary outfit of priests of every class. Besides tobacco, there is another intoxicating plant which plays a very important part in the life of the modern Huichols and other living tribes of the Mexicans, as it did, according to the chroniclers, with the Chichimeks, the nomadic tribes of the northern parts of Mexico in ancient pre-Hispanic times. This plant, called in the Mexican language *peyotl* (by the Huichols, Tarahumares, and other tribes of the Sierra, *hikuli*), is a small species of cactus (= *Anhalonium Lewinii*, Hennings), which grows abundantly in the central mesa, especially in a country which the Huichols call *Paliátsia*, not far from the mining town Real Catorce, in the State of San Luis Potosí. It is thought to be necessary to procure it every year, to ensure the country against drought; and, therefore, in October parties of from two to twelve start on a pilgrimage to *Paliátsia*; the journey, which is accompanied by much fasting and praying, requires 43 days. The leader of the party and the second in order

carry a *nealika* ('face,' front-shield) of *Tatévati*, 'Grandfather Fire,' while the rest carry those of other gods. The *peyoti*-seekers are supposed to be accompanied on this journey and guided by the grey squirrel. If one of them sees a *peyoti*, he shoots towards it, not quite hitting it, but lodging one arrow to the right, and one to the left over it. In this way every one shoots five *peyotis*. The plants are strung on long strings to dry. When the feast comes on, the dry plant is mixed with water and has invariably to be ground on the *metate*, or grinding-stone. A thick kind of drink, rather brown in colour, is produced from it, which is offered in small quantities, but at frequent intervals, to those present. This feast occurs in the month of January. It forms an integral part of the feast for eating roasted maize (*raki*), and is, accordingly, named *Harikira*. But it cannot take place until a certain number of deer have been killed, or until the field has been cleared and made ready for the harvest of the coming year.

The greatest feast of all is that for eating maize-cakes made from ground maize baked in an oven (*tamales de maíz crudo*). Like that of roasted maize, this feast can be held only after successful deer-hunts. The heaps of tamales are dedicated by the priest to all gods. When this occurs, some of the people are appointed to blow into sea-shells five times in the day-time and five times at night. Connected with this feast is a ceremonial race performed by young men and women in separate groups. The feast is held for the under world.

LITERATURE.—C. Lumholtz, 'Symbolism of the Hulcho Indians,' in *Mem. Amer. Mus. of Nat. Hist.*, New York, 1900, also *Unknown Mexico*, London, 1903. ED. SELER.

HUMANISM.—'Humanism' in philosophy is opposed to Naturalism and Absolutism (*q.v.*); it designates the philosophic attitude which regards the interpretation of human experience as the primary concern of all philosophizing, and asserts the adequacy of human knowledge for this purpose. By thus putting man into the centre of the intellectual universe and giving to all science and literature a reference to human life and its purposes, philosophic connects itself with literary Humanism (see following article). The literary Humanism of the Renaissance, which was essentially an attempt to emancipate thought and education from what it considered the narrow scholastic routine of the mediaeval Church by appealing to the civilizing mission of the 'humaner letters' (i.e. of classical, and more particularly Greek, literature), thus appears to be included in philosophic Humanism as one of its manifestations. The intellectual movement of the 5th cent. B.C. in Greece, which was initiated by the Sophists and continued by Socrates, is also to be cited as such an era of human revolt against the domination of pedantic, abstruse, and sterile speculation—in this case the systems of the metaphysical 'physiologers.' In fact, modern Humanism is so largely and avowedly a conscious revival of the critical relativism of Protagoras and appeals so explicitly to his maxim that 'man is the measure of all things' that it may without injustice be described as Neo-Protagoreanism. But, though Humanism is confessedly a relativism, and as such is a denial of the *transcendence* of the real and the true, and is opposed to every form of Absolutism (whether in metaphysics or in epistemology) which ignores or destroys their relation to man, it denies on behalf both of itself and of its forerunners that its relativism is to be identified with scepticism. It holds, on the contrary, that the truth and reality for man which are attainable by man are also sufficient for man, and that scepticism is the inevitable outcome of Absolutism so soon as it is

perceived that 'absolute' truth and reality can only be so defined as to be (in fact) unattainable by man. It thus differs from Positivism (*q.v.*) in being willing to assume the adequacy of human knowledge to human needs and in contenting itself with this, in being critical, rather than dogmatically disdainful, of metaphysics, and, above all, in admitting every hypothesis as worth trying which has a human interest and appeals to any side of human nature. It is this open-mindedness that may bring it into conflict with Naturalism, as it may reconcile it even with Absolutism, in so far as the latter can be exhibited as really containing an answer to genuine human demands. But at present it is in dispute whether any 'absolutist' doctrine of knowledge, truth, and reality can really establish any relation between its ideals and the human uses of these terms.

To Pragmatism (*q.v.*), Humanism is closely related. But Pragmatism, though it sends its roots down into a number of sciences, is intrinsically a theory of knowledge, while Humanism is a more general philosophic attitude. William James calls it 'a ferment that has come to stay,' and a 'shifting in the philosophic perspective, making things appear as from a new centre of interest' (*Meaning of Truth*, p. 121). It may be regarded as a natural and logical development of the Pragmatic method of testing knowledge by its human value, when it is extended beyond the problem of testing truths and applied to the other sciences. For the doctrine that all truths are useful implicitly requires that all truth should be related to human purposes, and that this reference should be traced explicitly throughout all the sciences. If truths are useful, they are valuable for man, and the specific character of this value in every science can be stated. Conversely, in proportion as a science can be viewed in its relation to man, it can be utilized for human purposes. Thus, the discovery of the usefulness of knowledge undermines the 'independence' of the sciences and humanizes them; their claim to absoluteness cannot survive the discovery of their man-made character and of the artificial and methodological nature of their principles, even when they seem most abstract and unhuman. Humanism, therefore, like Pragmatism, is primarily the name for a method, and not for a system of philosophy; it is more particularly a protest against the dehumanizing of logic which results from assuming that the personal antecedents, context, and purpose of judgments may be abstracted from in considering their cognitive purport. The humanist criticism of logic (see, e.g., the writer's *Formal Logic*, London, 1912) therefore aims at showing that the attempt to abstract from this human side of thinking reduces the traditional logic to mere verbiage. The humanist attitude implies also a critical method of estimating the value of the claims to truth put forward by the various systems of metaphysics. This necessarily renders it very destructive to what is called 'metaphysics.' For metaphysical systems have usually been put forward dogmatically, with claims resting on self-evident 'intuitions' or an alleged completeness, and with pretensions to absolute and exclusive truth. To their humanist critic, however, no claims are valid merely as such; all must be validated by the value of their consequences. The claim to an exclusive possession of absolute truth he takes to be sufficiently refuted by the existence of conflicting claims and by the historic impossibility of finding any two philosophers whose systems are really in agreement. Hence he infers that metaphysical systems are essentially individual creations and relative to the idiosyncrasies of their authors, and justifies this view by the fact that the materials for the construction are naturally individual, and

so to some extent different in each case. It follows that it is not so much the right to construct metaphysics that is called in question as the claim to infallibility and the coerciveness for others of any philosopher's personal system. Thus Humanism makes for toleration and abolishes the right to persecute which is implied in the belief in an absolute and immutable truth which is the same for all, but substitutes for this the notion of a common truth which rests upon social agreement and is being continuously elaborated and improved in the growth of human knowledge. The general effect of this, again, is to diminish the philosophic importance of dialectical subtleties which appeal only to a few, and of merely intellectual reasonings as such, and to enhance that of the common-sense notions which have long ago been evolved by man for the guidance of his actions.

LITERATURE.—Historically the philosophic usage of the word 'Humanism' is of very recent origin. It seems first to occur incidentally as a tentative descriptive term equivalent to 'anthropocentric' and opposed to 'naturalistic' in A. Seth Pringle-Pattison's *Man's Place in the Cosmos* (London, 1897, p. 61; also in *Mind*, new ser. ix. [1900] 436 (used by W. Caldwell of Eucken's 'ethicalism') and xi. [1902] 406. The present writer first proposed (in 1903) to appropriate it technically for the more extended form of Pragmatism, as held by William James and himself and expressed in James's *Will to Believe* (New York and London, 1896; cf. Preface). He defined it as above, in conscious opposition also to Absolutism. In the Preface to his *Humanism* (London, 1903); cf. his *Studies in Humanism* (do. 1907). This usage was sanctioned by William James in an article on 'The Essence of Humanism' (*Journal of Philosophy*, 1906, II. 5, reprinted in *The Meaning of Truth* (London, 1910)) and in his *Pragmatism* (do. 1907, Lectures vi. and vii.). Cf. also D. L. Murray's *Pragmatism*, London, 1912, p. 71: 'The word has been used, in a too vague sense, merely connoting "interest in man," by J. S. Mackenzie in his *Lectures on Humanism*, London, 1907 (cf. the review in *Mind*, xvi. 606). It is also used, in religious contexts, by secularists as the opposite of 'supernaturalism,' F. C. S. SCHILLER.

HUMANISTS.—I. GENERAL.—The transition from the mediæval to the modern world seems one of the most abrupt in the pages of history. Certainly it did not take place even in the same century in the different lands,—the harvest in Italy was over before the seed was sown in Scotland,—nor did the various fields of human life quicken to the new impulse with a simultaneous response, but the emergence of the new order followed hard on the thrill of expectation. The whole complex movement which wrought the transformation in the outlook of men we call the Renaissance (q.v.). Humanism was the intellectual centre of the movement: in the Humanists we find its conscious pioneers and promoters.

The name 'Humanist' itself indicates the nature of the movement. Just as in the Scottish Universities the term 'Humanity' is still used as a designation for the Latin language and literature, and as in wider circles classical studies in general are summed up as 'the Humanities'—*litteræ humanæ*, or *litteræ humaniores*,—so the Humanist is the student of humane letters, the languages and the literatures of Greece and Rome. The work of the Humanists was to disinter the buried classics, to restore a lost means of culture, to recapture an ancient charm of style, and a broader humanity of spirit.

But the change was not so sudden as it seemed. There were signs of the approaching dissolution of Mediævalism before the Renaissance proper began. From the 11th cent. there were traces of the dawn.

A. Bartoli (*I Precursori del rinascimento*, Florence, 1877, p. 19 f.) would date it from the reaction from terrorism which took place when the year 1000 passed and left the world undestroyed. But both the preceding darkness and the succeeding light have to be exaggerated to make this plausible. There was also a partial revival of learning in the 12th cent., due in great measure to the discovery of works of Aristotle of which all trace had been lost; but, since Aristotle as understood or misunderstood was one of the cramping forces from which Humanism set men free, it is vain to seek any real connexion. The 13th cent., however, certainly saw precursors of the Renaissance, and men whom we may call, with but little over-estimation of their significance,

'Humanists before Humanism.' In men like Robert Grosseteste (1175–1253), whose interest in the origins of Christianity led him to give to the world, through the help of others, Latin versions of Greek works then attributed to primitive times, and Roger Bacon (1214–94), who toiled so unweariedly at the 'original tongues,' and who felt so keenly the blanks in the extant writings of the Fathers, we see genuine, though isolated, foregleams of the coming revival. The 13th cent. saw also Universities founded in various countries of Western Europe, particularly in Italy, England, and Spain, bearing witness to a new and widespread zeal for education, a fresh kindling of enthusiasm for things intellectual. But these Universities soon fell into the hands of the dominant Scholasticism, and became strongholds of mediæval tradition.

The Humanist movement proper begins in Italy in the 14th cent., and its first great name is Petrarch. The contrast between the new era and the old is very clearly seen in two interesting passages from the works of Erasmus. In 1518, when the false news of the death of the greatest of the Humanists from the plague at Louvain spread throughout Europe, the monks of Cologne are said to have rejoiced that he died the death of a heretic 'sine lux, sine crux, sine Deus.' Here the narrow intensity of the spirit and the barbarity of the language testify to the double pit from which the Humanists sought to deliver Europe. In the preface to his edition of Jerome, Erasmus writes:

'We kiss the old shoes and dirty handkerchiefs of the saints, and we neglect their books, which are the more holy and valuable relics. We lock up their shirts and clothes in jewelled cabinets; but as to their writings on which they spent so much pains, and which are still extant for our benefit, we abandon them to mouldiness and vermin.'

The homage which had been lavished on the relics of saints ancient and modern was turned by the Humanists into a new channel. Men began to revere the works of the great minds of the ancient world, at times with all the old blind devotion. When Petrarch received the MSS of Homer and Plato from Nicolaus Sycerus of Constantinople, he kissed them, and sighed over them; and, though he had not Greek enough to read them, he declared that thus to look upon the Greeks was an inspiration.

The Humanists were one and all scholars, with a great love for learning, and a genuine appreciation of beauty of form and thought, 'with the generous belief,' to use the phrase of Pater (*The Renaissance*, popular ed., London, 1912, p. 37), 'that nothing which had ever interested the human mind could wholly lose its vitality'—scholars who, despite their manifold differences, were alike in this, that they rebelled against the barrenness and dogmatism of Mediævalism. Into a world where all thought was ordered by the Church, and all secular activity moulded by the Feudal system, there came through them a breath from the distant past, resulting in a re-discovery of the world and of man.

It is only the revolt from Mediævalism as an enclosed and final scheme of thought that concerns us here; the political, social, artistic, and scientific revivals belong to the wider term Renaissance, and the ecclesiastical and religious to the Reformation.

This revolt from Mediævalism was more complete in some circles than in others. The extent of it was the cause of a short but sharp disagreement between two of the most kindred spirits among the Humanists, John Colet and Erasmus. In a conversation on the Schoolmen and their limitations, Erasmus more than once tried to make an exception of Thomas Aquinas, on the ground that he had at least studied the Scriptures and some ancient literature; but Colet would have none of it:

'Why do you extol him to me? If he had not been exceedingly arrogant, he would not with such rashness and such pride have defined everything; and unless his spirit had been somewhat worldly, he would not so have contaminated the whole teaching of Christ with his profane philosophy' (Erasmus, *Opera*, Leyden, 1703–06, III. 458).

Further study of Aquinas brought Erasmus round to Colet's way of thinking. But the kind of disagreement which came to sharp expression in

this conversation was more fundamental and more permanent in other quarters.

The common characteristic of the Humanists is this escape, more or less thorough, from the fetters in which human thought had been confined—an escape into a wider, freer world where all facts were relevant, where all theories had to be tested by relating them to their discoveries, and all formulæ recast in accordance with their new-old light—an escape whose prime cause was the new enthusiasm for the poets, historians, and philosophers of Greece and Rome, the Fathers of the Church, and the Scriptures of the OT and NT in their original tongues, regarded no longer through the distorting medium of allegorical interpretation, but reverently, patiently, and critically studied.

It is when we attempt to find any common characteristic of the wider, freer world into which they escaped that anything like exact definition becomes impossible. To some minds, coming into direct contact for the first time with certain parts of that ancient literature, the most potent thrill was a sense of relief at entering a region where there seemed to be unqualified liberty and no restraining authority. They absorbed with avidity the vices as well as the virtues of Paganism. The *Facetiarum Liber* of Poggio—a Papal secretary—showed the length to which this tendency might go uncondemned by the Church. The *Hermaphroditus* of Beccadelli—the extreme example of this type—fortunately met with a different reception. Hailed with delight by many of the Humanists, it was unsparingly denounced by the better sort of Churchmen. To others, Humanism meant chiefly the escape from the arid desert of a fragmentary Aristotle to the fertile fields of Platonic speculation, and there arose an enthusiasm for Plato and the Neo-Platonists whose most prominent devotees were Marsiglio Ficino and Pico della Mirandola—an enthusiasm which spread from Florence throughout Europe. To still a third group, and it was the most permanently influential, the Fathers of the Church and the New Testament itself gave the first glimpse of religion in an older and purer form, and their energy was directed to a Renaissance or Reconstitution of Christianity. Erasmus, who declared that 'the highest object of the revival of philosophical studies will be to become acquainted with simple and pure Christianity in the Bible' (quoted in M. Dods, *Erasmus and other Essays*, London, 1892, p. 24), is the most prominent member of this group. So the Humanist movement, so positive in its discoveries, so enduring in its effects, can be defined only negatively. It was a revolt more or less complete with a new sense of freedom and individuality, a deliverance from bondage into a world of no restraints, but to many of new and high constraints. Every shade of free activity, from one end of the spectrum to the other, from the unblushing libertinism of the newly emancipated to the reforming zeal of those who had found the highest and final standard, is to be found within the ranks of the Humanists.

II. **HUMANISM IN THE VARIOUS COUNTRIES.**—Although Humanism had its distinguished representatives over most of Europe, and although the movement in one nation or group of nations naturally affected its neighbours, yet the history of the movement in each nation is so distinct that it will conduce to clearness to take them separately.

1. **Italy.**—It was natural that the revival of learning should take its rise in Italy, partly because of its proximity to the Eastern Empire, but mainly on account of its local and hereditary connexion with the glory of the past of Rome. A revival which was patriotic in spirit, antiquarian in its interests, but sporadic in its manifestations, prepared the way for Petrarch.

Francesco Petrarca (1304-74) has been rightly acclaimed as the first of the Humanists. His great predecessor, Dante (1265-1321), is a citizen of two worlds, mediæval and modern; Petrarch is the first true modern. It is noteworthy that the decisive impulse came to him from Cicero, in slavish imitation of whom the Humanism of Italy, almost two centuries later, first showed the fatal symptoms of decay. He loved Cicero from his school-days and read him eagerly, not with a view to advancement in his profession of the law, but because of his delight in his majestic swing and balanced periods. It was the style that fascinated him from the beginning. Another impulse came from the sight of Rome (1336) deserted by the Popes, yet full of monuments eloquent of past grandeur. Cicero and the other neglected Classics were to him the gateway into the understanding of this ruined splendour. So, despite many an early discouragement, he pursued his studies in the literature of Rome. In his correspondence and in most of his writings he used a Latin moulded on the Classics. He was prouder of his *Africa* and *de Viris Illustribus* than of the Italian *Rime* or *Canzoniere* on which his fame now rests. To seek out MSS, particularly of Cicero, was perhaps his most absorbing pursuit. His letters are full of the delight of discovery and the chagrin of loss. He made an attempt to master Greek. It failed because of the early departure of his teacher, and, he confesses, the strangeness of the foreign tongue. But he never ceased to exhort younger men to acquire it. Along these lines lay the activity of the first of the Humanists, and, as J. A. Symonds says (*Renaissance in Italy*, vol. on 'The Revival of Learning,' new ed., London, 1902, p. 54):

'In this susceptibility to the melodies of rhetorical prose, in this special cult of Cicero, in the passion for collecting manuscripts, and in the intuition that the future of scholarship depended upon the resuscitation of Greek studies, Petrarch initiated the four most important moments of the classical Renaissance.'

Petrarch's devotion to the Classics led to no breach with the Church. He criticized some of its abuses, though belonging himself to its priesthood, and conspicuously avoiding all ecclesiastical duties. His learning did not tend to Paganism; the ancient culture was to him a handmaid to Christianity. Of the law and philosophy of his day, however, he spoke with open scorn. It was mere empty sophistry, unprofitable mental gyrations. In these things, and in other less admirable respects—in his irritability under criticism, his prodigious appetite for flattery, his overweening desire for personal fame, and his inveterate habit of posing—he foreshadowed the activities and failings of his successors. His labours served to inspire others with similar ideals, and they created the atmosphere necessary for their development.

Giovanni Boccaccio (1313-75), a younger contemporary of Petrarch, was his most distinguished disciple. If Petrarch has the honour of being the first of the Humanists, to Boccaccio belongs that of being the first to acquire anything like a working knowledge of Greek. His teacher was the pretentious Leontius Pilatus, and the knowledge he acquired was not very profound, but still it was a beginning. Devoted to Petrarch, he followed his guidance. He had sound ideas about collating MSS, and a genuine reverence for every ancient writing, however unworthy. His main departure from the ideas of his contemporary and master was in his bitter hatred of the monks, as the opponents of learning, and hypocritical pretenders to sanctity. With Boccaccio, Florence becomes the headquarters of the Humanists. The brightest stars in its galaxy were Luigi Marsiglio (1342-94), the soul and leader of the Florentine club of Humanists, which was the true University of the

time; and Coluccio Salutati (1330-1406), the Chancellor of State, whose official letters were copied and treasured for their style. Gian Galeazzo Visconti of Milan declared that one letter of Salutati's could do him more harm by its style than a troop of paid mercenaries.

It was through the influence of Salutati and his circle, particularly Palla degli Strozzi, that the first competent teacher of Greek was brought to the West. This was Manuel Chrysoloras, who taught in Florence from 1397 to 1400, and until 1415 in other parts of Italy, and whose *Erotemata* was the earliest Greek grammar of the revival. 'Through seven hundred years,' wrote one of his earliest and most distinguished pupils, Leonardo Bruni (1399-1444), 'no one in all Italy has been master of Greek letters.' 'Chrysoloras of Byzantium . . . brought to us Greek learning.' Among his successors in the teaching of Greek in Italy were George of Trebizond, who taught in Venice and Rome as well as in Florence; Theodorus Gaza, teacher in Ferrara (1441-50) and afterwards in Rome, whose Greek grammar, fuller and more scientific than that of Chrysoloras, Erasmus used in his classes in England; John Argyropoulos, in Florence (1456-71), afterwards in Rome, the teacher of Lorenzo de' Medici, Politian, and Reuchlin; Demetrius Chalcondylas of Rome and Perugia; and John Lascaaris who, by his residence in Paris, left his mark on the Humanism of France. Greek learning was therefore not brought to Italy by scholars fleeing with their precious MSS from Constantinople at the fall of the Eastern Empire; it was during the half century which preceded its fall that, on the earnest request of the Italians themselves, the earliest Greek scholars settled in Italy. Vergerius, writing probably in 1404, in his *de Ingeniis Moribus*, expressed the mind of many: 'It is hard that no slight portion of the history of Rome is to be known only through the labours of one writing in the Greek language; it is still worse that this same noble tongue, once well nigh the daily speech of our race as familiar as the Latin language itself, is on the point of perishing even amongst its own sons, and to us Italians is already utterly lost, unless we except one or two who in our time are tardily endeavouring to rescue something—if it be only a mere echo of it—from oblivion.' The impetus to Greek study came not from the supply of teachers, but from the demand thus evidenced in the longing of Italian scholars, and their sense that the time might be short.

One other agent in the revival of Greek deserves to be named apart. This was Gemisthos Pletho (1355-1450), whose presence at the Council of Florence in 1438 turned many of the Humanists to the special study of Plato and the Neo-Platonists. Pletho's aim seems to have been to supersede the Christian Church and the religions of the world by a Neo-Platonic Mysticism. Cosimo de' Medici (1389-1464), carried away by his eloquence and his 'indiscriminate erudition,' founded the Florentine Academy and resolved to train up the youthful Marsiglio Ficino (1433-99) to be the expositor of Platonic philosophy to the West. In 1482 appeared Ficino's translation of Plato, and, four years later, that of Plotinus. But his spirit was far different from that of Pletho. There was no thought in his mind of superseding Christianity. Plato and Christ were colleagues rather than rivals. Whether the practice ascribed to him of keeping two candles burning in his room, one before a bust of Plato, and the other before an image of the Virgin, be true or not, it was certainly a fit symbol of the point of view of his circle. He preached Plato from the pulpit of the Duomo. He did much to revive the study of Plato, but it must be confessed that he was drawn more to his poetic excrescences than to the great fundamental ideas. He was profoundly moved by Savonarola, but it seems to have been only for a time. Savonarola saw too clearly the danger threatened by the whole movement to the uniqueness of revealed religion, and Ficino is recorded later to have lamented his temporary devotion to the 'hypocrite of Ferrara.' More even than Ficino, Giovanni Pico della Mirandola (1463-94) was the object of a hero-worship which extended far beyond the confines of Italy. His theses in favour of Platonism brought him under the ban of the Church, but he was the most profoundly religious of all the disciples of Plato. This, combined with the charm of manner, wealth, generosity and early death of this 'great lord of Italy,' gave him an extraordinary influence in Humanist circles throughout

Europe. And it was his *Heptaplus*, with its mistaken zeal for the Kabbala, that started Reuchlin on the study of Hebrew.

This Florentine Academy was only one of many institutions of the kind. Of the others, the most significant were those of Rome, founded by Julius Pomponius Laetus (1425-98) about 1490, antiquarian in its interests, openly pagan in its tone; Naples, founded by Jovianus Pontanus (1426-1508) from the remaining members of the Humanist protégés of Alfonso the Magnanimous, devoting itself mainly to the cultivation of style; and Venice, the latest of all, which centred in the Aldine Press and its founder, Aldus Manutius (1449-1516). Its discussions were conducted in Greek, and its main concerns were the choice of books to be published and the accuracy of their texts.

The great patrons of learning ought not to be passed over without remark. Mention has already been made of Cosimo de' Medici; but his grandson, Lorenzo the Magnificent (1449-92), was the Mæcenæ of an even more brilliant circle. His son again, Giovanni, as Pope Leo X. (from 1513 to 1521), conferred high ecclesiastical office on very unchurchly Humanists. He was not the only Roman Pontiff, however, to show them favour. Nicholas V. (elected 1447) was the first of them. A Humanist himself of the earlier type, he gathered round him a notable band of scholars. Under him Rome became a workshop of erudition. Pius II. (1458-64), who as Enea Sylvius had gained no mean reputation as a Humanist, grievously disappointed his expectant friends. Artists, not scholars, won his patronage.

During the whole of the 15th cent. the work of collection was zealously pursued by men like Niccolò Niccoli (1364-1437), who bequeathed 800 MSS to Florence, and Vespasiano da Bisticci (1421-98), multiplier of MSS, bookseller, and biographer of his patrons; libraries had been formed; and in the latter half of the century the Humanism of Italy reached its highest level in Angelo Ambrogini (Politian) (1454-94). Professor of Greek and Latin in Florence, he wrote poetry in three languages, showing an extraordinary fluency in Latin verse. His aim was independence, not imitation, and in his hands Latin had all the flexibility of a living language. His influence was extensive and profound. Somewhat before his time, and somewhat beneath his level of attainment, but with the same aims and ambitions was Francesco Filelfo (1398-1481). These two were the leading Humanist Professors in the high noon of Humanism.

A marked feature of the Humanist movement in Italy was the number and ferocity of its literary duels. The most truculent of these duellists was Poggio Bracciolini (1380-1469), the explorer of neglected libraries. His controversies with Filelfo over the standing of Florence, with Guarino da Verona (1370-1460) upon the comparative merits of Scipio and Julius Cæsar, and with Lorenzo Valla (1405-57), occasioned by some marginal annotations of one of Valla's pupils, and developing into an onslaught on each other's Latinity, were conducted with an unparalleled scurrility, venom, and foulness. Valla's contributions, though decidedly more temperate, were disfigured by the same kind of venomous invective. Some of Valla's other work was epoch-making, though the manner of it was far from his intention. His exposure of the 'Donation of Constantine,' and his *Collatio Novi Testamenti*, in which and in his *Anotationes* the discrepancies between the Vulgate and the Greek first came to the light, helped materially the cause of the Reformation.

By the end of the 15th cent. the Humanism of Italy had entered on its final stage. In Pietro Bembo (1470-1547) we see the old enthusiasm for letters, but, dominating everything, a conscious aping of the elegancies of Ciceronian diction. With the sack of Rome in 1527 and the compact between Emperor and Pope in 1530, the Italian revival of learning comes to an end. The age of Spanish tyranny succeeds, and the glowing fire burns low. By the middle of the 16th cent. Greek was disappearing. Even to the erudite Cæsar Baronius (1538-1607) it was an unknown tongue. But the flame which had been thus kindled and nourished in Italy had already spread to other lands.

2. France.—Though there are early signs of the passage of the New Learning into France, it was long kept in the background through the prestige of the University of Paris and its Sorbonne. Jean de Montreuil (1354-1418), disciple of Petrarch and correspondent of Salutati, probably deserves the

credit of having led the way. His friend, Nicholas de Clémanges (1367[?]-1437), through diligent reading of the Classics, attained a considerable repute for Ciceronian eloquence. He was influenced purely by the classic style, and not by the classic spirit. To the end he remained a true son of the mediæval Church. There are records of Greek in Paris from 1430; in 1458 came the first recognized teacher; but there can hardly be said to be a Humanist movement until 1494, when the expedition of Charles VIII. to Naples began the closer connexion between France and Italy. The French kings became patrons of learning. John Lascaris from 1495 taught Greek in the University of Paris, and Jerome Aleander (1480-1542) from 1508 added the study of Hebrew. Guillaume Budé (Budæus) (1467-1540), whose dream of the establishment of a great Humanist College in Paris by Francis I. took shape in 1530 in the Royal College, was, 'beyond question, the best Greek scholar of his day in Europe' (*Cambridge Modern History*, i. [1902] 576). Lefevre d'Étaples (Faber Stapulensis) (1455-1536), until 1507 earning distinction as a teacher of the Classics in Paris, then turned his attention to the exegesis and translation of the Bible. Condemned by the Sorbonne, he was protected by Briçonnet, bishop of Meaux (1470-1534). But the 'group of Meaux' belongs rather to the history of the Reformation. Guillaume Farel (1489-1565), his favourite pupil, connects him with Calvin. Estienne Dolet (1509-46), for six years in Italy during the last stages of Italian Humanism, was the champion of Ciceronianism against Erasmus, and became 'the martyr of the Renaissance,' being burned to death in Paris on a charge of heresy. Adrien Turnèbe (Turnebus) (1512-65), professor of Greek and king's printer, did much to advance Greek scholarship; and Julius Cæsar Scaliger (1484[?]-1558), erudite and irascible, rivalled Poggio in virulence of invective, in his attack on Erasmus. The Estiennes, Robert (1503-69) and his son Henri (1528-98), rendered most effective service to the Humanist cause by their numerous classical publications.

The Humanists of France, perhaps more through having felt the general stir of the Renaissance before their attention was turned to the Classics than through any natural predisposition, had little of the blind reverence for all things classical that we find in Italy. Their scholarship was thorough, but more detached and critical. In Joseph Justus Scaliger (1540-1609) and Isaac Casaubon (1559-1614) it reached its highest level.

3. Germany.—In 1514 there was issued from the press at Tübingen a volume entitled 'Clarorum Virorum Epistolæ, Latinæ, Græcæ et Hebraicæ variis temporibus missæ ad Joannem Reuchlin,' in support of Reuchlin in his fight for Hebrew learning. In the same year there appeared an apparent counterblast with the title 'Epistolæ obscurorum virorum ad venerabilem virum M. Ortuinum Gratium variis et locis et temporibus missæ ac demum in volumen coactæ.' Gratius was Professor in Cologne, the headquarters of Mediævalism, and in this book he and his class were put to ridicule in a wild parody of their own dog-Latin. Several of the Humanists are known to have had their share in it; and, though frowned on by Reuchlin for its coarseness, it did more than anything else to make Humanism a natural movement in Germany, as it had been in Italy, and as it never really became in any other country. Humanism found in Germany a second home.

It had made its appearance long before this. Its way had been prepared by the schools of the 'Brethren of the Common Life' (q.v.). Schools like Schlettstadt, where Reuchlin began his education, and Deventer, whose most famous master,

Alexander Hegius (1433-99), had Erasmus as a pupil, were far beyond anything in pre-Humanist Italy. It had its forerunners in men like Gregor von Heimburg (1410-72), who were half fascinated and half repelled by the Italian Humanists. Through German students like Peter Luder (1415-74), whom the national *Wanderlust* drove across the Alps, through the great Councils, where the Humanist secretaries of Italian prelates impressed their German brethren, and through the frequent commercial intercourse, the revival spread. Corresponding to the Academies of Italy were informal associations in the towns and cities. In Erasmus's account of his German journeys there is frequent reference to reception and escort by the *sodalitium* or *confraternitas*—the local group of scholars united in the comradeship of learning. The Humanist Universities were naturally centres of such fraternities. The circle in Erfurt was called 'the Mutianic host,' from Mutianus Rufus (1471-1526), one of the many who had come under the spell of Pico. The centre of the Heidelberg group was Rudolf Agricola (1443-85), 'the first,' Erasmus declared, 'to bring us out of Italy a breath of higher culture.' At Ingolstadt, Johann Eck (1486-1543), who became the opponent of Luther, and Urbanus Rhegius (1489-1541), who became a zealous supporter, were the dominant forces. At Basel, Glareanus (1488-1563) ruled, save during the residence of Erasmus.

But independently of the Universities, the Humanists had their groups in the great cities. At Nuremberg they gathered round Willibald Pirckheimer (1470-1528), who combined in his own person the versatility of the Italian Renaissance and the more earnest spirit of his own land; at Augsburg round Conrad Peutinger (1465-1547), keeper of the city archives, diplomatist, and antiquarian; at Strassburg, round Jacob Wimpfeling (1450-1528), 'the schoolmaster of Germany,' and Sebastian Brant (1457-1521), satirist and author of the *Narrenschiff*.

Three names stand out from all the others in importance and significance. Johann Reuchlin (1455-1522), with attainments in Greek which gave cause for astonishment to Argyropoulos, was the effective promoter of Hebrew studies. Though Conrad Pellicanus (1478-1556) had in 1504 published a creditable Hebrew Grammar, it was Reuchlin's *Rudimenta Hebraica* that became the foundation of Hebrew scholarship. Attacked as a traitor to the Church for opposing Pfefferkorn's proposed holocaust of Hebrew books, he was at first acquitted (1514 and 1516) and then condemned on appeal (1520). It was the stand which he made that united the forces of German Humanism. Ulrich von Hutten (1488-1523), the son of an impoverished Franconian noble, was designed for the Church, and sent at the age of 11 to the Monastery of Fulda. Fleeing thence, he studied at one Humanist University after another, crossed into Italy, and lived the life of the wandering scholar. In him we see the New Learning devoted to political and social ends. His great aim was 'a united Germany under a reformed Emperor.' He was drawn into passionate attachment to the Lutheran movement by its patriotic possibilities. Philip Melancthon (1497-1560), in virtue of his work on Virgil and Terence, was called at the age of 21 to the chair of Greek at Wittenberg. Amid all his multifarious labours on behalf of the Reformation, he found time and opportunity to foster education and to furnish it himself with indispensable aids to classical study.

Though there were a few, like Peter Luder and Conrad Celtes (1459-1509), who may be said to represent the Neo-paganism which was so prominent in Italy, and though most of the older Humanists

refused to join the Reformers when the actual breach came, it was their work that had prepared the way for it, and their pupils gathered round Luther and Zwingli. The main stream of German Humanism had from the beginning been flowing steadily towards Reformation in some shape or form.

4. **England.**—Through his kinship of spirit with Petrarch, Chaucer (1340[?]-1400) has been hailed as the morning star of the Renaissance. But his kinship is not with the distinctively Humanist side of Petrarch's activity. Humphry, Duke of Gloucester (1391-1447), patron of scholars, collector, and correspondent of Italian Humanists, did much to hasten the new era. But it is with two friends, Thomas Linacre (1460[?]-1524) and William Grocyn (1446[?]-1519), who had studied in Italy under Politian, and on their return taught Greek in Oxford, that Humanism began really to establish itself in England. John Colet (1467[?]-1519) gave the movement its strongest impulse and its direction. He returned from Italy, well equipped in scholarship, and with a thorough contempt both for the whole scholastic dialectic and for the Neopagan Humanism. In his lectures in Oxford on St. Paul's Epistles he broke fresh ground. 'He was the first to apply the critical methods of the New Learning to discover the exact meaning of the books of the Holy Scriptures' (T. M. Lindsay, *A History of the Reformation*, Edinburgh, 1906-07, i. 165). In 1510, Colet, now Dean of St. Paul's, devoted his patrimony to the founding of St. Paul's school, where 'children should be taught good literature, both Latin and Greek.' Its first master, William Lily (1466[?]-1522), gave his name to the Latin grammar prepared for the school, and subsequently widely used. In reality it was a composite production. The foundation was Colet's, but it was revised by Erasmus, Lily, and others. Colet's friend, Sir Thomas More (1478-1535), was a hero-worshipper of Pico della Mirandola, whose life, which he translated, showed him the possibility of combining the new culture with a fervent yet uncloistered Christianity. In his *Utopia* (1516) he gave evidence of his open-mindedness to all the better influences, not only of Humanism but of the whole Renaissance movement. Among other names worthy of mention are Sir Thomas Smith (1512-77) and Sir John Cheke (1514-57), through whom Greek studies were established in Cambridge; Roger Ascham (1515-68), Greek enthusiast and educational reformer; and William Tyndale (1484[?]-1536), who, from the preparatory school of Erasmus, passed into that of Luther. The Humanism of England produced no prodigies of erudition, but it did produce great popularizers—translators of the Classics whose translations themselves became classics. North's *Plutarch* and Chapman's *Homer* are conspicuous examples. Through such translations, Humanism profoundly influenced and helped Elizabethan literature. And it must ever be remembered that in its springtime the Humanism of England had its own definite ideals to which Erasmus owed more than a little. These ideals find fit expression in the statutes of Colet's school: 'My intent is by this school specially to increase knowledge, and worshipping of God and Our Lord Jesus Christ, and good Christian life and manners' (F. Seebohm, *The Oxford Reformers*, London, 1869, p. 208 f.).

5. **The other countries.**—The New Learning passed to Spain through scholars who had been to Italy. Of these the foremost, though not the first, was Antonio Lebrixa (1442[?]-1522), who, after ten years in Italy, taught in the Universities of Seville, Salamanca, and Alcalá. The University of Alcalá was the headquarters of Spanish Humanism; Cardinal Ximenes (1436-1517) was its

Mæcenas, the *Complutensian Polyglot* (1522) its outstanding product. The revival, short but brilliant, came to an end, like that of Italy, through the compact between Charles V. and Clement VII. in 1530.

To Scotland the New Learning came late. Passing over earlier students who came under its spell abroad, men like Patrick Hamilton (1504[?]-1528), who belong rather to the Reformation, the one outstanding name is that of George Buchanan (1506-82). Trained in France and a teacher there, he was one of the leaders in the ill-fated attempt to plant the New Learning in Portugal. His Latin Paraphrases of the Psalms and his other Latin poetry had a tremendous vogue. Joseph Justus Scaliger declared that Latin literature had reached its climax in Buchanan's verse. To Andrew Melville (1545-1622) belongs the credit of re-organizing Scottish University education on Humanist lines.

We have left to the last the greatest of the Humanists, Desiderius Erasmus. Born in Rotterdam in 1466 or 1467, he belongs by birth to 'the other countries.' In spirit he was a true cosmopolitan. He is to be found, first in France, then in England, France again, Italy, England again, and finally at Basel. And this list does not include the shorter visits of this born wanderer. He was the friend and correspondent of the contemporary leaders of Humanism in all the countries. He became almost a dictator of learning for Europe north of the Alps, without ever assuming the manner of the despot. In the field of classical studies his *Adagia*, *de Copia Verborum*, and *Apophthegmata* were much-prized aids to study. The second went through sixty editions in his lifetime. In Greek he was perhaps second to Budæus, but in Latin he had no real rival. Jealous Italians might call him 'Porrophagus' (in allusion to his fondness for the word *porro*), but, as his *Ciceronianus* showed, his ideals were not theirs, and his Latin, if not so imitative of Cicero, was a much more flexible and powerful instrument. Works like the *Encomium Moriae* and the *Colloquia* showed the world the necessity of reform. His aim throughout was a Christian Renaissance, the source of which was not to be found in Plato, but in a return to the New Testament and the older Fathers of the Church. His Greek Testament of 1516, his numerous editions of the Fathers, and indeed the great bulk of his very numerous works were designed to help in such a Christian Renaissance. In the midst of his labours the Reformation came. He died at Basel in 1536, committed to neither party, but amid an admiring circle of friends who were all on the Reformed side.

Though his attempted neutrality in the decisive struggle and certain obvious faults in his character have caused him to be looked upon as a petty-minded man, he did more than any other to extend the influence of Humanism, and that of the very highest type, thereby earning fairly the name of the greatest of the Humanists. Half-hearted Reformer he may have been, but he was neither half-hearted Humanist nor half-hearted Christian.

III. **RESULTS.**—In dealing with the general results of the Humanist movement thus sketched, the difficulty is to disentangle it from the Renaissance as a whole. We are apt to ascribe to it influences which, strictly speaking, do not belong to it at all. The defects of the movement are evident—(1) in its tendency to exalt erudition above true intellectual development, and to degenerate into mere pedantry; (2) in its open resuscitation of pagan vices; and (3) in the insincerity induced by a too exclusive devotion to style. Panegyric and abuse in some quarters became fine arts. The sale of eulogies by the Humanists has been fitly compared to the sale of Indulgences by the Church.

On the other hand, there were many distinct gains. (1) The buried Classics were disinterred and preserved; they were diffused by the printing-press; they were made available by Grammar and Lexicon. (2) Education was set free from narrow Scholastic limits and clerical monopoly. Culture was for the citizen as well as for the 'clerk.' (For men and methods, see EDUCATION, vol. v. p. 175.) (3) The contact thus established with the great minds of antiquity led to the general revival of thought. The reaction from the fragmentary Aristotle and his mediæval commentators led at first to uncritical enthusiasm for even the wildest vagaries that could be called Platonic or even Neo-Platonic, but later, through controversy and study, to a reasoned understanding of both, thus preparing the way for modern philosophy. (4) Art and literature received a fresh impulse through the abundance of new material of which it did not fail to make extensive use. (5) Acquaintance with the literatures of Greece and Rome led to a rapid evolution of literary forms in the national languages. Most of the Humanists looked with contempt on the unouthness of their vernaculars. Petrarch's preference for his Latin writings, his regret that Dante had not written in Latin, and Hutten's confession that he did not think the German language a fit instrument of literature till he had seen Luther's use of it, are outstanding examples. The futile experiments which almost every European literature witnessed of torturing the vernacular into classical moulds had yet their result in a new variety of form, and a new power over language. (6) The critical methods of the Humanists swept away such obscurities as the four-fold sense, and, applied by Northern scholars to the Fathers and the Scriptures, gave a great impetus to the Reformation. The broad result is summed up by Jebb:

'The historical importance of the Classical Revival in Italy depends ultimately on the fact that it broadened out into this diffusion of a general capacity for liberal culture, taking various forms under various local and national conditions. That capacity, once restored to the civilised world, became a part of the higher life of the race, an energy which, though it might be temporarily retarded here and there by reactionary forces, could not again be lost. Not in literature or in art alone, but in every form of intellectual activity, the Renaissance opened a new era for mankind' (*Cambridge Modern History*, I. 684).

LITERATURE.—In addition to the works cited and named in the text, see W. Roscoe, *Life of Lorenzo de' Medici*, Liverpool, 1795, also *Life and Pontificate of Leo X.*, do. 1805; C. de' Rosmini, *Vita di Francesco Filelfo da Tolentino*, Milan, 1808; G. Voigt, *Die Wiederbelebung des classischen Altertums*, Berlin, 1859; J. A. Maehly, *Angelus Politianus: ein Kulturbild aus der Renaissance*, Leipzig, 1864; D. F. Strauss, *Ulrich von Hutten*, do. 1871; L. Geiger, *Johann Reuchlin*, do. 1871; R. B. Drummond, *Erasmus, his Life and Character*, London, 1878; L. HUGH WATT.

HUMANITARIANISM. — Humanitarianism in the ethical sense—wholly distinct from the theological—is the deliberate and systematic study of humane principles, the attempt to show that humaneness is an integral part, if not the actual basis, of morals. In estimating the value of compassion as a moral force, it is not necessary to discuss the different theories as to its origin, propounded by the two schools of intuitive and of utili-

tarian ethics, as represented, on the one hand, by Butler, who holds (in his Sermon on 'Compassion,' [*Sermons*, ed. Bernard, London, 1900, p. 74]) that it is an 'original, distinct, particular affection in human nature,' and, on the other hand, by Hobbes, who maintains (*Human Nature*, ix. 10) that it is 'imagination, or fiction of future calamity to ourselves, proceeding from the sense of another man's calamity'; for, however this may be, it is evident that compassion is closely allied to that imaginative sympathy by which we identify ourselves with others. In the words of W. Wollaston (*Religion of Nature*, 1759), 'there is something in human nature, resulting from our very make and constitution, which renders us obnoxious to the pains of others, causes us to sympathise with them, and almost comprehends us in their case. It is grievous to see or hear, and almost to hear of, any man, or even any animal whatever, in torture.'

For example, when a man turns aside to avoid crushing an insect, why does he do so? Certainly not because of any reasoned conviction as to the sufferings of 'the poor beetle that we tread upon,' but for the simple fact that, consciously or unconsciously, he is humane; the sight of suffering, however slight, is distasteful to him as being human. Of all mistaken notions concerning humanitarianism, the most mistaken is that which regards it as some extraneous artificial cult, forced on human nature from without; whereas in truth it is founded on an instinctive conviction from within, a very part of human development. When we talk of a man 'becoming a humanitarian,' what we really mean is that he has recognized a fact that was already within his consciousness,—the kinship of all sentient life—of which humanitarianism is the avowed and definite proclamation.

But, if it be true that compassion is 'an undeniable fact of human consciousness,' residing 'in human nature itself' (Schopenhauer, *Basis of Mor.*, ch. vi.), it is also true that this compassionate instinct, before it can be put to practical service in a complex social state, must be tested by experience and reason. Unmistakable as are our humane promptings, they cannot in all cases be realized; for self-preservation, that other great natural impulse, has first to be consulted, and we are trammelled by a host of traditional customs and obligations which often render it difficult or impossible to give our humanity due effect. Here, again, it is the function of humanitarianism to reconcile the ideal with the actual, to unite compassion with judgment, and to discover not only how we feel, or ought to feel, towards our fellow-beings, but also to what extent and with what limitations we can, at the present time, and under present conditions, put those feelings into practice.

An attempt is sometimes made to disparage humanitarianism by setting it in contrast to humaneness: 'I would be humane,' some one will say, 'but not humanitarian.' But as a matter of fact there is no sort of contradiction between the two terms; for humanitarianism is nothing more than conscious and organized humaneness. There is a vast amount of compassionate sentiment that is at present scattered and isolated, and therefore to a great extent ineffective; it is the business of humanitarianism to collect and focus this feeling into an energetic whole.

It must be noted, at the outset, that humanitarianism in this sense, as a branch of ethical science, is a modern product, for it was not until the 18th cent.—the age of 'sensibility'—that there began to be any wide-spread recognition of humaneness as a force in civilized society. No doubt the duty of love and gentleness to sentient life had been inculcated, all down the ages, as part of the higher teaching—in the doctrines of Buddha, in

the system of Pythagoras, in the practice of the Essenes, in the pagan philosophy of Plutarch and Porphyry, and with less consistency, perhaps, so far as our duties towards the lower animals are concerned, in the Christian Scriptures. For, though the gospel of 'peace and goodwill' led its early followers to a belief in the sacredness of all human life and the natural equality of men, and this belief led in its turn to the abolition or curtailment of many cruel practices, such as the gladiatorial shows, there is also truth in the statement (A. Jameson, *Commonplace Book of Thoughts, Memories, and Fancies*, London, 1854, p. 209) that 'the primitive Christians, by laying so much stress upon a future life in contradistinction to this life, and placing the lower creatures out of the pale of hope, placed them at the same time out of the pale of sympathy, and thus laid the foundation for this utter disregard of animals in the light of our fellow creatures.'

It is certain that during the Middle Ages, when the Roman Catholic Church was dominant, there was, in this respect, little or no progress in humanitarian feeling, the indifference of Roman Catholicism to the claims of animals being broken only by the splendid example of St. Francis of Assisi, whose profound sense of brotherhood with beast and bird is the more remarkable owing to its contrast with the general callousness of his contemporaries. It was this lack of sympathy which, surviving in large measure even to modern times, caused Buddhists to speak of Christendom as 'the hell of animals.'

When we come to the Renaissance, however, we find, with the revival of learning, a revival also of the humanitarian spirit, many humane sentiments, for example, being observable in the writings of More and Erasmus, Montaigne, Shakespeare, and Bacon; and this renewed appeal to the instinct of compassion paved the way for that advanced 18th cent. sentiment which found its fullest expression in the saying of Voltaire, that 'without humanity, the virtue which comprehends all virtues, the name of philosopher would be little deserved.' Philosophers and poets vied with one another, through this era of awakening, in a recognition of the claims of common life on the heart of human-kind, and the post-revolutionary writers have continued to develop more and more the ethic of humaneness; it is sufficient to mention such names as those of Thomson, Pope, Goldsmith, Cowper, Burns, Shelley, and Wordsworth, to show how largely our modern poets have been concerned in this humanizing process. It is to the last hundred and fifty years, in fact, that Western humanitarianism, in the sense in which we use the word, owes its origin; and it is of Western humanitarianism only that we here propose to speak.

The first point which needs to be emphasized is this—that the principle of humaneness is based on the broad ground of universal sympathy, not with mankind only, but with all sentient beings, such sympathy being, of course, duly proportioned to the sensibility of its object. Humanitarianism is not to be confused with philanthropy—love of mankind—on the one side, or with zoophily—kindness to animals—on the other; [it includes and comprehends them both.

'It is abundantly evident,' says Lecky (*European Morals*², London, 1888, i. 278, 101), 'both from history and from present experience, that the instinctive shock, or natural feeling of disgust, caused by the sight of the sufferings of men is not generically different from that which is caused by the sight of the sufferings of animals. . . . At one time the benevolent affections embrace merely the family, soon the circle expanding includes first a class, then a nation, then a coalition of nations, then all humanity, and finally, its influence is felt in the dealings of man with the animal world.'

Humanitarianism, then, is the application of an evolutionary doctrine founded on the kinship of life, which unites the sentiment of East and West in the growing perception of fellowship and

brotherhood between all living creatures; and a humanitarian is he who has substituted this wider sympathy for the partial benevolence which is restricted to the narrower circle of one's own countrymen or kin. 'The time will come,' wrote Bentham (*Principles of Penal Law*, ch. 16), 'when humanity will extend its mantle over everything which breathes. We have begun by attending to the condition of slaves; we shall finish by softening that of all the animals which assist our labours or supply our wants.'

But, before we proceed further, it may be well to clear away certain common misapprehensions by a short statement not only of what humanitarianism is, but also of what it is *not*. For example, it is not Brāhmanism. What it condemns is not the taking of life, as such; but the unnecessary or wanton taking of life through callousness, ignorance, or force of habit; and there is no point whatever in applying to humanitarianism the trite story of the Hindu whose principles forbade him to drink water when the microscope had revealed to him the infinitesimal creatures that inhabit it.

Nor are humanitarian doctrines, as Nietzsche and his school would have us suppose, an offshoot of Christianity; for, as has already been shown, they go far beyond the Christian ethics in all that relates to the lower animals, and they number among their professors many well-known names that lie altogether outside the Christian sphere of thought. Nor, again, is humanitarianism altogether identical with 'altruism,' the due regard for the interests of others, for it is to satisfy his own needs and instincts—involved in those of the sufferer—that the humanitarian takes action; it is self-fulfilment rather than self-sacrifice that he desires.

Finally, humanitarianism is not, as is often assumed by its critics, a merely negative, prohibitive, and ascetic view of life by which we are constrained to desist from certain practices in which we might otherwise take pleasure; on the contrary, by discovering for us a freshness of relation towards vast numbers of our fellow-creatures, it opens out new fields of pleasurable friendship which have hitherto been neglected, and points the way to a fuller and better realization of what is beautiful and true. Contrast, for instance, the wholesale destruction of sea-fowl for their feathers, or for mere amusement, that disgraces many parts of our coast, with the scene that may be daily witnessed in winter time on the Thames Embankment—the feeding of scores of gulls by their human friends and protectors under terms of perfect amity and trustfulness. Can it be doubted which of these two attitudes towards animals brings the greater pleasure to mankind?

Dismissing, therefore, these false ideas of humanitarianism, we shall try to grasp its true purport and significance as part of the modern democratic movement; for there is no more essential mark of democracy than the fostering of kinship and understanding in place of division and distrust. In holding that the difference between human and sub-human is one of *degree* only, and not of kind, the humanitarian has the support not of sentiment alone, but of science. 'The trend of investigation,' says Wesley Mills in his work on *The Nature and Development of Animal Intelligence* (London, 1898, p. 21), 'thus far goes to show that at least the germ of every human faculty does exist in some species of animal. . . . Formerly the line was drawn at reason. It was said that the "brutes" cannot reason. Only persons who do not themselves reason about the subject with facts before them, can any longer occupy such a position.' In

like manner E. P. Evans points out, in his *Evolutional Ethics and Animal Psychology* (London, 1898, p. 99 f.) that 'man is as truly a part and product of nature as any other animal, and the attempt to set him up as an isolated point outside of it is philosophically false and morally pernicious.' Thus the old 'anthropocentric' position is being more and more abandoned, and it is no longer possible to draw an absolute line of demarcation between men, as 'persons' and 'ends,' and animals, as mere 'things,' such distinctions being a thoroughly unsound basis for any ethical structure, inasmuch as the more highly organized animals possess, though, of course, in a lower degree, the qualities of true personality. Even the expression 'man and the animals,' though unavoidable in common speech, is philosophically incorrect, for man is himself a part of the great animal kingdom, and cannot disown the relationship. We have from science itself the clearest assurance that man is an animal, and that the great gulf which was supposed to exist between human and non-human has existed only in imagination.

For this reason humanitarianism claims for animals, as for men, a measure of individuality and freedom, a space in which to lead their own lives—in a word, 'rights.' It is unnecessary here to enter into the wide field of discussion as to the fitness of this term; for, if objection be taken to it, it is possible to consider the question from the other, the correlative, side, and to arrive at the same conclusion by the use of the term 'duties.' The essential part of the humanitarian contention is that there is no absolute difference between mankind and 'the animals'; that, if man has reason, animals have the germ of reason; that, if man has 'rights,' animals have the same in due degree.

With regard to human rights, it is sometimes said that 'men can take care of themselves.' This, however, is not always the case; for (to refer to two classes only, the pauper and the criminal) it is evident that the unfortunate inmates of workhouse and prison are *not* able to take care of themselves, but are as helpless in the hands of others as any animals could be. The rights of men are admitted in theory, but often violated in practice. We speak of all men as brothers; but, when it comes to giving practical proof of our brotherhood with paupers and criminals, we too frequently show by our treatment of them that we really regard them as a wholly alien class. The same is true of the usage accorded to subject races, aborigines, and all who, in the aggrandizement of one nation at the expense of another, are liable to find themselves at the mercy of their brother man.

Again, when we turn to the protection of animals, we sometimes hear it said that we ought to help men first and animals afterwards. But, if the principle which prompts the humane treatment of men is the same essentially as that which prompts the humane treatment of animals, how can we successfully safeguard it in one direction while we violate it in another? By condoning cruelty to animals, we perpetuate the very spirit which condones cruelty to men. Humanitarians do not say that the lower forms of life must be treated in the same way as the higher forms, but that in both cases alike we must be careful to inflict no unnecessary, no avoidable, suffering. This is briefly expressed in the manifesto of the Humanitarian League, which enforces the principle that 'it is iniquitous to inflict avoidable suffering on any sentient being.'

Of the societies which work for humane purposes the only one which directly concerns itself with this fuller principle—the just treatment alike of the human and non-human races—is the Humanitarian League, which, while recognizing that there is need of concentration in efforts of this kind, and that it is desirable that special cruelties should be dealt with by special

organizations, is nevertheless designed to supplement these labours by showing that all such efforts, however divergent in practice, spring in reality from a common source and converge to a common end—the establishment of concord and fellowship where there is now misunderstanding and strife. How wide a scope there is for humanitarian propaganda, even in this 20th century, may be judged from the number of societies now in existence for the redress of some particular evil—*s.g.* (to mention but a few out of many) those that aim at a mitigation of the horrors of war, and the extension of the appeal to international arbitration; those that inculcate a more considerate treatment of subject races and aborigines; and those that plead for the humanizing of the Poor Law, and a less harsh administration of the criminal code and prison system. The societies for the prevention of human wrongs, and the promotion of human happiness, are legion; but it is, of course, impossible to determine precisely which of the many questions thus agitated are to be called 'humanitarian.' The term 'humanitarianism' is a wide one, and may be used to cover the whole field of benevolence; but, owing to the action of the Humanitarian League, it is more commonly associated in this country with the reformation of prison treatment and the protest against capital and corporal punishments. Of late years no humanitarian issue has been so largely discussed as the continuance or abandonment of flogging; which may be taken, perhaps, as a test question between humanitarians and their opponents.

Thus, to take a salient example, an attempt was made in the year 1900 to extend the use of the lash for a number of offences in the case of adult criminals, but the Bill was opposed by the Humanitarian League and defeated in the House of Commons by a large majority; and in like manner the League was instrumental in securing the withdrawal of the 'whipping clauses' from the Youthful Offenders' Bill, introduced in the same year. On the other hand, the power of judges to order flogging in the case of certain offences has recently been increased under the Criminal Law Amendment (White Slave Traffic) Act of 1912. The infliction in the Royal Navy of very severe scourgings on boys and young men up to the age of eighteen is another matter on which humanitarian opinion has of late been powerfully moved, with the result that the use of the birch has been discontinued.

Nor is the list of controversial subjects any shorter where the interests of the lower animals are at stake. In this connexion it is necessary to bear in mind the legal distinction between 'domestic' animals and those that are classified, however arbitrarily, as 'wild.' Since the passing of 'Martin's Act' in 1822, a modicum of legal protection has been secured for such animals as are recognized under the title 'domestic,' and to 'cruelly beat, ill-treat, over-drive, abuse, or torture' any such animal is an offence against the law; but there are, of course, innumerable cases which no law can reach, and the general treatment of domestic animals in Great Britain, though far better than that which obtains in some other countries, is still greatly below the standard to which a civilized nation should aspire. It must be admitted, too, that the protection afforded is but partial and incomplete, when we remember that the vivisector, by special licence, and the cattle-drover and slaughterman, by tolerated custom, are permitted to inflict very severe suffering on highly-organized domestic animals under English law.

In the case of the *feræ naturæ*—a term which includes even the semi-domesticated park-deer hunted by so-called sportsmen, and the bagged rabbit used in the horrible pastime of rabbit-coursing—not even these limited rights exist, the only protection being that given under the Wild Animals in Captivity Act (1900), which forbids the ill-usage of any 'wild' animal while in actual confinement, but does not take cognizance of any injury done in course of sport, or vivisection, or the destruction of animals for food—a limitation which almost entirely cripples the usefulness of the Act. A wild animal, while in a state of nominal freedom, has no rights. 'Everywhere,' it has been said, 'it is a capital crime to be an unowned creature.'

Taking the animal question as a whole, we find that the subjects of paramount humanitarian interest are (1) the protection of domestic animals, and (2) the protests raised against vivisection, blood-sports, the slaughter of animals for food, and the wholesale destruction of birds for purposes of millinery—in other words, the enforcement of the present Acts, and the demand for further legislation. The work of the Royal Society for the Prevention of Cruelty to Animals is mainly confined to prosecuting for breaches of the existing law; and it is left to the Anti-Vivisection Societies, the Vegetarian Societies, the Royal Society for the Protection of Birds, the Humanitarian League, and others, to agitate against the cruelties of the laboratory, the slaughter-house, the feather-fashion, and 'sport.' There is no organization which concerns itself especially with blood-sports, except the Sports Department of the Humanitarian League, which was successful in obtaining the abolition of the Royal Buckhounds, and has since promoted a Bill in Parliament for the prohibition of certain spurious sports, such as tame stag-hunting, rabbit-coursing, and the shooting of pigeons from traps. It is deserving of notice that there is no matter in which an enlightened public opinion has more signally outrun the letter of the law than that of blood-sports, where there has been no humane legislation since the abolition of bull and bear baiting more than half a century ago, the Bill which condemned pigeon-shooting, passed in the House of Commons in 1884, having been thrown out by the Lords.

All these cruelties, according to the humanitarian view, spring from a common origin—the lack of any real conception that the lower animals are intelligent and rational beings

Given a race of so-called 'brute-beasts' (and it is open to remark that the harshness of the common nomenclature reacts in its turn on the common treatment of animals), which are assumed to exist for the sole object of ministering to human convenience, it is inevitable that they should be used or ill-used in various ways according to the whims and inclinations of their masters. Thus, regarded from the several standpoints of the human temperament—the impulse of hunger, of recreation, of curiosity—an animal is something to eat, something to hunt, something to experiment on; and we are brought face to face with the questions of flesh-eating, sport, and vivisection.

It does not, however, fall within the scope of this article to do more than indicate the general aspects of humanitarianism, and we pass on to speak of some of the common objections that are urged against humanitarian principles. The first, and most prevalent of these arguments is that drawn from the poet's picture of 'Nature red in tooth and claw,' which represents humanitarianism as in conflict with the stern facts of existence. It is said that the animals themselves prey on one another, and that the law of nature is founded on internecine conflict and sacrifice. But this, though true in part, is not the whole truth: for, while appealing to the law of competition, it leaves out of sight the not less important law of 'mutual aid,' and evades the fact that, while some animals are mainly predacious, others are mainly social in their habits, and that there is no reason why mankind, whose instincts are of the social order, should violate its own nature in order to imitate the beasts of prey. Nor is it true that an analogy can be established between the suffering inflicted in nature and the artificial and unjustifiable, because unnecessary, cruelties of man; for the best naturalists are of opinion that

"Nature red in tooth and claw
With ravine"

is a picture the evil of which is read into it by our imaginations, the reality being made up of full and happy lives, usually terminated by the quickest and least painful of deaths' (A. R. Wallace, *Darwinism*, London, 1889, p. 40). All these conditions are wanting in the unnatural cruelties against which humanitarianism protests.

Then, again, we are confronted with the argument drawn from that much misapprehended term, 'consistency.' 'Where will you draw the line?' is a question frequently put to the humanitarian, who is reminded that, if he be 'consistent,' he will be precluded from defending his crops against the ravages of wild animals, and even from cultivating the ground, because of the injury done by the plough to earth-worms and to the lowliest forms of life. But here there is, of course, a complete perversion of the humanitarian doctrine, which, as has already been stated, asserts that rights are the same in kind but not in degree, and that we owe to all sentient creatures a universal, but not an absolute, justice. We are not bound to starve our own race by abstaining from agriculture on account of the injury done to earth-worms, but we may all remember what Cowper (*The Task*, bk. vi.) says of the man 'who needlessly sets foot upon a worm.' The true consistency is that which has regard to the *direction* of one's course; and, because the whole journey cannot be accomplished at once, it does not follow that no step should be taken.

Equally pointless is the cry that is raised against the 'sentimentality' of humanitarians, 'sentiment' being one of those vague, indefinite terms which are used as a substitute for argument. That there is much that is ultra-sentimental in the present age—as, for instance, in its spasmodic and partial benevolence and ill-adjusted 'charities'—will not be denied; nor are humanitarians more exempt than other persons from the danger of falling into excess in the advocacy of their views. But, though the charge of sentimentality may be fairly urged, e.g. against the anti-vivisectionist who,

while denouncing the cruel experiments of physiologists, is himself an advocate of vivisectioning convicts with the cat-o'-nine-tails, it cannot lie against the all-round humanitarian who pleads for the adoption of some rational and comprehensive principle. It is, in fact, not on mere sentimentality, but on a wider and more philosophic view of the subject, that humanitarianism relies. 'As long,' it has been said, 'as certain favoured aspects of humanness are exclusively insisted on, as long as pity is felt and expressed for this or that particular form of human suffering, while others of equal or greater importance are neglected or ridiculed; as long as the compassion which is claimed for men is denied to animals, or extended only to certain classes of animals—so long will it be difficult to appeal successfully from the narrow selfishness of personal interests to the higher and nobler sentiment of universal brotherhood.'

Perhaps no more effective proof can be produced of the inevitable further growth of humanitarian principles than a consideration of the alternative that must be faced by society if humanitarianism is to be disowned. Whether wisely or unwisely, we have now reached a certain transitional stage of humane development, both in our manners and in our laws, and those who would dissuade us from continued advance on the same lines are bound to frame some other policy for our guidance. If we are not to go forward, are we to turn back? Or are we to remain at the precise point to which we have now attained? It will hardly be argued that the present very confused state of English law and feeling on humanitarian subjects represents the golden mean which is incapable of further improvement; it follows, then, that, if progress is to be barred, we must henceforth return to that 'old brutality' which certain writers affect to regret that we have 'allowed to die out too much.' To state this alternative is sufficient to show that the future lies with humanitarianism. It is obvious that we shall continue to advance in the same direction as in the past, and that a gradually expanding sense of sympathy and kinship will bring with it a gradual but certain increase in the humanity of the treatment which we shall accord to every living creature.

Herein, then, lies the strength of the humanitarian position, that its principle is a consolidation of the countless humane impulses that spring up everywhere in the human heart, and that on an instinct so simple as to be intelligible to a child it builds a progressive ethical system that can satisfy the intellect of a philosopher. It is an amusing comment on the prevalent ignorance of humanitarianism that those who hold a faith which so profound a thinker as Schopenhauer cherished as 'the basis of morals' are often lightly dismissed with the remark that 'their hearts are better than their heads.' It is impossible, with strict regard to truth, to return this compliment by saying that the heads of such foolish jesters are better than their hearts, for head and heart alike must be in an evil case when the great duty of compassion does not make itself respected. We have advisedly spoken of this principle as a 'faith,' for it is indeed the ethical belief of the future—the faith of universal kinship—and no infidelity can be so grievous as that which hinders men from recognizing their own kindred, and makes them deny that *oneness* in life which wisdom sees everywhere, and to which folly is everywhere blind. 'Far as custom has carried man from man,' says Edward Carpenter (*Civilization*, London, 1889, p. 156), 'yet, when at last in the ever-branching series the complete human being is produced, it knows at once its kinship with all the other forms. More, it knows its kinship with the animals. It sees

that it is only habit, an illusion of difference, that divides; and it perceives after all that it is the same human creature that flies in the air, and swims in the sea, or walks biped upon the land.'

By no surer course can we attain to that 'natural piety' of which poets have sung than by the study and practice of this humane belief—which is humanitarianism.

LITERATURE.—The reader is referred to the following works for a fuller statement of some of the points touched on in the

foregoing article; but it should be noted that, while there are many books dealing with certain aspects of humanitarianism, there are very few that treat of the subject as a whole.

Jeremy Bentham, *Introduction to the Principles of Morals and Legislation*, London, 1789; W. E. H. Lecky, *History of European Morals*, do. 1888; Arthur Schopenhauer, *The Basis of Morality*, tr. A. B. Bullock, do. 1903; Howard Williams, *The Ethics of Diet*, do. 1907; E. Westermarck, *M*, ch. xlv.; *Publications of the Humanitarian League*, London, including J. Howard Moore, *The Universal Kinship*, 1906, and Henry S. Salt, *Animals' Rights considered in relation to Social Progress*, 1905.

HUMAN SACRIFICE (Introductory and Primitive).—There are few races and few religions which can show a history free from the stain of human sacrifice. But, when the practice is examined without prejudice (though few practices have caused greater moral detestation), it will be found that such phrases as 'stain' are metaphors not always deserved, and that technically the term 'sacrifice' itself is rarely appropriate. The practice, or custom, or rite has extensive adhesions and numerous applications; its meaning in any particular instance is not always easy to disclose; but its very seriousness makes an analysis of it deeply instructive for the study of social psychology.

The fascination which human sacrifice has exercised over various peoples at a relatively high stage of culture at once suggests that it must be a social reaction to some deep-seated social sentiment. The subject, as Westermarck's analysis shows, cannot be treated any longer as a mere antiquarian horror. On the contrary, it goes to the very heart of the permanent principles of social life and organization. Scientific ethics has to admit that the causes which produced human sacrifice still exist, and that they produce results identical in substance, though differing in name. Yet even here popular language preserves the ancient name in metaphor, when it speaks of one man being 'sacrificed' for others, or of a hero 'sacrificing' his life to save many. The modern consciousness reverts to the form of the primitive by omitting, as a rule, the 'middle age' metaphorical *terminus ad quem*, as expressed by the word 'to.' But it shows a true insight in affixing to the preposition various social emotions and prejudices which may have ultimately inspired the 'sacrifice,' such as fear, vanity, lust, or shame.

It is hardly necessary to examine, or to revise, the current theory of sacrifice (*q.v.*) in general, for human sacrifice is only incidentally a sacrifice proper; that is, its essence is not, as a rule, either a gift or a communion. The practice, again, however 'brutal,' is hardly developed among the lower races. It is only when a relatively high culture has been achieved, with its resulting sense of power, that the practice grows. As Westermarck says,

'the practice of human sacrifice cannot be regarded as a characteristic of savage races. On the contrary, it is found much more frequently among barbarians and semi-civilized peoples than among genuine savages, and at the lowest stages of culture known to us it is hardly heard of.'

For instance, it was known in ancient India,

¹ *M* I. 436 f.

Greece, and Italy, among the Celts, Teutons, and Slavs, the Semites and Egyptians, the early Japanese, many African tribes, South Sea Islanders, some American tribes, and particularly the Mayas and Aztecs. Further, it was rarer in Vedic than in Brāhmanic India.¹ Among the Africans it has been observed that 'the more powerful the nation the grander the sacrifice.'² The Aztecs themselves did not adopt the practice until the 14th cent., two hundred years before the conquest; the sacrifices 'rare at first, became more frequent with the wider extent of their empire; till, at length, almost every festival was closed with this cruel abomination.'

From the legal point of view every human sacrifice is a *ceremonial murder*. As such, cases which are technically sacrifices cannot be treated differently from those which are not. The tendency, not only in historical writing but in the thought and language of contemporary periods, is to class all ceremonial murder as sacrifice. Another qualification of human sacrifice is that, like the majority of all sacrificial acts, it is generally a collective undertaking; when an individual executes it, he is, as a rule, the representative of the community or at least of a class within it. This fact serves to throw into relief the close connexion that is maintained from the earliest to the latest instances between human sacrifice and the retributive functions of the community. Capital punishment in its simplest and most primitive form is a more or less unconscious act of social revenge. The essence of all punishment is the satisfaction of resentment. The principle of *talio* is the result of the organization of this fundamental moral impulse. But before it is organized, and even in civilization on occasions when the crowd is master, and justice yields to mob-law or lynch-law, the passion of resentment is rarely satisfied by any atonement save that of death. There is such a phenomenon as a collective lust for blood, and, sociologically speaking, we have a right to class together the behaviour of the Commune in the Revolution of 1789, and of the Aztecs in their systematized orgies of human sacrifice. Cases like these show moral resentment as a perversion, but there seems to be little distinction between them and the cases of primitive social revenge. Lastly, it was to be expected, and is

¹ *M* I. 435 f. quoting authorities.

² W. Winwood Reade, *Savage Africa*, London, 1863, p. 82. Westermarck enumerates the areas in which human sacrifice has been practised (*l.* 435 f.).

³ W. H. Prescott, *History of the Conquest of Mexico*, London, 1843, I. 66.

proved by the facts, that the history of society up to quite recent times is characterized by a special sense of collective responsibility. The belief that national or tribal distress or failure is due to national or tribal sin is very real. It is a question whether the source of this powerful idea is to be found in the sum of individual selfish or self-regarding impulses, the sum of individual desires to shirk individual responsibilities, or in the mutual imitation of elementary instincts of co-operation. However that may be, the whole history of human sacrifice is linked together by ideas of vicarious suffering, substitution, and representation, no less than by its form of collective murder. Throughout, we realize the extensive and normal application of the biologic-social law that the individual is inferior to the race, and, as against the race or community, has no rights; 'it is expedient that one man should die for the people' (Jn 11⁸⁰).

In that stage of culture when all social organization is religious, justice and worship are apt to be confused. Some cases, however, still show collective retribution. Von Kotszebue with great insight observes of the Sandwich Islanders that they 'sacrifice culprits to their gods, as we sacrifice them in Europe to justice.'¹ The ancient Romans are said to have put corn-thieves to death, as a sacrifice to Ceres. Among the Hebrews the ban, or *hêrem*, was placed upon malefactors as enemies of Jahveh. It was

'properly dedication to Jahveh. . . . The persons who were "dedicated," generally by a solemn vow, to Jahveh, were put to death, frequently by fire, whereby the resemblance to an ordinary burnt-offering was rendered still more apparent; their dwellings and property were also consumed by fire; their lands were left uncultivated for ever.' 'Such punishments were very common in the ancient world. But in Israel, as elsewhere, they were at the same time religious acts.'²

For the human sacrifices annually offered to Baal in Rhodes, criminals took the place of the innocent victims who were previously sacrificed. Here, no doubt, as Frazer notes,³ there is an actual substitution of individuals who are worthless, and therefore suitable for destruction. Such cases may thus be accidental revivals, as it were, of an original punishment of offenders, an organized cultus having intervened.

The Mexicans included among the victims for their systematized human sacrifices criminals 'who were condemned to expiate their crimes by the sacrifice of their lives.'⁴ In Tahiti the victims were 'either captives taken in war, or individuals who had rendered themselves obnoxious to the chiefs or the priests.'⁵ Conversely, the Mexicans seem to have given all capital punishment the form of a sacrifice to their gods. This at least is stated in connexion with the punishment of sorcerers whose practices were injurious to the community or individuals.⁶

Westermarck recognizes the persistence of penal sacrifice:

'There is one form of human sacrifice which has outlived all others, namely, the penal sacrifice of offenders. . . . This kind of human sacrifice is even found where the offering of animals or lifeless things has fallen out of use or become a mere symbol. For this is the only sacrifice which is intended to propitiate the deity by the mere death of the victim; and gods are believed to be capable of feeling anger and revenge long after they have ceased to have material needs. The last trace of human sacrifice has disappeared only when men no longer punish offenders capitally with a view to appeasing resentful gods.'⁷

This form of human sacrifice, it has already been

⁷ M I. 471 L.

suggested, is on the normal lines of the evolution of the custom, and is the final development of the original inception of the social habit. It is not sacrifice, except in a large metaphorical sense. One might urge that, even after the administration of justice has become altogether separated from religion, there is no break of continuity—that in effect a new religion shows itself in the interval, and that capital punishment, or any punishment, is still a sacrifice to justice. The difference is that no superstitious ideas cluster round the destruction of the criminal life, and that the justice thus satisfied is not a personalized power. Westermarck's statement lays stress on the death of the victim as propitiating the deity. The deity thus being the personification of the moral feelings of the community repeats the moral, retributive impulses of the community. He requires not a sacrifice, but a just penalty. Westermarck notes¹ that 'there can be no moral scruples in regard to a rite which involves a punishment regarded as just.' But it would be a mistake to accuse of moral scruples the early offerers of any form of human sacrifice. All religious acts, however horrible, are *ex hypothesi* sincere, and therefore untouched by moral scruple. Pity and tenderness may, of course, attempt to inhibit the impulse, but this, being identical with the feeling of duty, is self-sufficient, whether in the individual or in the community.

The penal aspect of human sacrifice has been emphasized by the fact that semi-civilized and even civilized societies have, for various reasons, been in the habit of practising 'a severity which far surpasses the rigour of the *lex talionis*.'² Till quite recent times the penalty of death was prescribed for the majority of offences in all civilized communities.³ There can be no doubt that the spectacle of capital punishment offered to the public in England, for example, till the last century, satisfied the same instincts as did the gladiatorial games of Rome and the sacrificial massacres of Mexico. This severity is connected with despotism or religion.⁴ In either case, acts which may arouse the anger of semi-divine or divine beings are punished with more severity, because the community fears that the divine wrath may be turned against itself.⁵ This has actually been made an argument for applying the death-penalty to all offences. Thus, the Peruvians held that 'a culprit was not punished for the delinquencies he had committed, but for having broken the commandment of the Ynca, who was respected as God,' and that, therefore, the slightest offence deserved death.⁶ Every crime, in Hebrew theory, involves a breach of God's law, and no punishment is too severe for the ungodly. 'These ideas were adopted by the Christian Church and by Christian governments.'⁷

A link between the conception of the god and his offended holiness and the penal aspect of human sacrifice may be found in the reason given for the sacrifice of criminals—that they are already hateful to the god.⁸ Any such convenient inferior persons may, again, almost suggest the principle of preventive sacrifice or penalty. On the Slave Coast

'the object of human sacrifice seems to be to gratify or satiate the malignity of the gods at the expense of chosen individuals, instead of leaving it to chance—the victims are, in fact, slain for the benefit of the community at large.'⁹

A considerable proportion of cases may be regarded as founded on a nervous collective 'sense of sin,' which should perhaps be explained as the sense of responsibility in the making. These form

the central feature in the panorama of human sacrifice, and therefore require illustration.

The Chippewas, suffering from an epidemic, regarded it as a divine punishment for their wickedness. The most beautiful girl of the tribe was set adrift in the river and allowed to drown, as a means of staying the plague.¹ Similarly the Boetians sacrificed a boy to stay a pestilence.² Referring to the Hebrews, Philo of Byblus says:

'It was the custom among the ancients, in cases of great danger, that the rulers of a city or a nation, in order to avert universal destruction, should give the dearest of their children to be killed as a ransom offered to avenging demons.'³

In the Niger country, a young woman is sacrificed to take away the iniquities of the land. As her body is dragged along 'in a merciless manner, as if the weight of all their wickedness were thus carried away,' the people cry, 'Wickedness! wickedness!' She is drowned in the river.⁴ Another account speaks of two sacrifices, one for the land, the other for the river.

'Thus two human beings were offered as sacrifices, to propitiate their heathen deities, thinking that they would thus atone for the individual sins of those who had broken God's laws during the past year. . . . Those who had fallen into gross sins during the past year—such as incendiaries, thefts, fornications, adulteries, witchcrafts, incests, slanders, etc.—were expected to pay in twenty-eight *ngugas*, or £2, 0s. 7½d., as a fine; and this money was taken into the interior, to purchase two wickily persons, to be offered as a sacrifice for all these abominable crimes.'⁵

The Chukchi in 1814 sacrificed a respected chief to stay an epidemic which was destroying both men and reindeer.⁶ The sacrifice of every living creature born in the following spring, which constituted the ancient Italian rite of the *Ver Sacrum*, was performed in times of peril or pestilence.⁷ Human sacrifice in cases of drought and famine is frequent.⁸ When unreasonable weather threatened the crops, the Peruvians sacrificed children.⁹ The people of Great Benin, in case of excessive rain, asked the king

'to make *jufu*, and sacrifice to stop the rain. Accordingly a woman was taken, a prayer made over her, and a message saluting the Rain God put in her mouth; then she was clubbed to death and put up in the execution tree so that the rain might see. In the same way, if there is too much sun, so that there is a danger of the crops spoiling, Overani [the king] can sacrifice to the Sun God.'¹⁰

This instance is instructive. It includes a plain connexion with the penal aspect of sacrifice, and also the later notion that the slain person acts as a messenger to the god. The possibility of using sacrifice, not merely as an expiation, but as an expiation in advance—in other words, as a preventive—is also suggested. How such rites may easily become positive is well shown by another case from Great Benin. Sir Richard Burton saw a young woman

'lashed to a scaffolding upon the summit of a tall blasted tree, and being devoured by the turkey-buzzards. The people declared it to be a "fetish," or charm for bringing rain.'¹¹

Such agricultural sacrifices are common enough;¹² they tend to become annual and seasonal. Westermarck shows good reason for supposing that the victim is by no means always regarded as a representative of the corn-spirit, as is argued in Frazer's hypothesis.¹³

Ancient Greeks, Gauls, Semites, and Hindus sacrificed human beings in war, either to guard against ill-success or to propitiate the divine being

who had brought it about.¹ How far the principle may be carried is illustrated by the Carthaginian sacrifice of two hundred children, when the city was in the last stage of siege.

The transition from the idea of securing the lives of the community by sacrificing the life of one man to the idea of propitiating a malignant supernatural power is naturally easy in such circumstances. The people of Jaipur propitiated their god of battle by human sacrifice.

'On the eve of a battle, or when a new fort or even an important village is to be built, or when danger of any kind is to be averted, this sanguinary being must be propitiated with human blood.'²

Sacrifice after victory may, when the ideas of sacrifice proper have fully coloured the rite, be regarded as a thank-offering. But revenge on the enemy, the fulfilment of a vow (itself connected with the impulse of resentment), or, further, propitiation, may in many cases inspire the custom.³

An important feature of this vicarious atonement, whether expiatory or preventive, is that the victim is not chosen at random. He may be a worthless person, a criminal or outcast, diseased, a slave, or a young child; he may also be the choicest of youth, or even the king of the people. The precise character of the person slain generally qualifies the meaning of the rite; a child, for instance, may be a substitute for his father; a king for his people; a criminal, similarly, represents the guilty soul of the community. Westermarck has rightly argued that the victim

'is a representative of the community which has incurred the anger of the god, and is accepted as a substitute on the principle of social solidarity.'⁴

The atonement of Christ is conceived of as a sacrifice, and His personality as fully representative.

'According to the Western Church, Christ discharged the punishment due to the sins of mankind, and propitiated the justice of his Father, in his capacity of a man, as a representative of the human race; whereas in the East, where it was maintained that the *deity* suffered (though he suffered through the human nature which he had made his own), the idea of substitution could hardly take root, since, as Harnack (*Hist. of Dogma*, III. 312 f.) remarks, "the dying God-man really represented no one." The Greek Church regarded the death of Christ as a ransom for mankind paid to the devil, and this doctrine was also accepted by the most important of the Western Fathers, although it fully contradicted their own theory of atonement.'⁵

'When men offer the lives of their fellow-men in sacrifice to their gods, they do so, as a rule, in the hopes of thereby saving their own. Human sacrifice is essentially a method of life-insurance—absurd, no doubt, according to our ideas, but not an act of wanton cruelty. When practised for the benefit of the community, or in a case of national distress, it is hardly more cruel than to advocate the infliction of capital punishment on the ground of social expediency, or to compel thousands of men to suffer death on the battle-field on behalf of their country. The custom of human sacrifice admits that the life of one is taken to save the lives of many, or that an inferior individual is put to death for the purpose of preventing the death of somebody who has a higher right to live. Sometimes the king or chief is sacrificed in times of scarcity or pestilence, but then he is probably held personally responsible for the calamity. Very frequently the victims are prisoners of war or other aliens, or slaves, or criminals, that is, persons whose lives are held in little regard. And in many cases these are the only victims allowed by custom.'⁶

The execution of heretics, as such, is a culmination of the social principle that the Godhead is deeply interested in the loyalty of the believing people. The *auto da fé* is a true human sacrifice of the penal species; it might readily take on the character of sacrifice proper, as it probably has done in the analogous cases of Hebrew extermination of the heathen and Muhammadan destruction of unbelievers, though in Europe this character has not been emphasized.

When the principle that the death of one may save the lives of the community has become part of

¹ Caesar, *de Bell. Gall.* vi. 16; Pausanias, ix. ix. 4 L, x. xvii. 1; 2 K 23; Herod. vii. 167; Diodor. xx. 14; N. Chavera, *Medical Jurisprudence for India*, Calcutta, 1870, p. 899.

⁵ *Ib.*

⁶ *Ib.* i. 466 f.

the popular creed, voluntary sacrifice may be undertaken. Ancient Rome owed victories in battle to the *devotio* of heroes, such as Decius Mus. This devotional suicide was a religious act, and had a prescribed ritual. The *harakiri* of the Japanese is certainly a sacrifice; when committed at the funeral of a Mikado or of any dead person it is of the nature of an offering to the soul of the dead, in that form which ensures that the dead shall have companions and attendants. The Chukchi and Samoyeds are curiously addicted to suicide; in fact, there is a suicidal belt across Northern Asia, including the Japanese. The Samoyed holds that the act is in itself 'pleasing to God, who looks upon it as a voluntary sacrifice, which deserves reward.' The Chukchi sacrifice their own lives in times of national danger or epidemic.¹ The *sati* of Hindu widows on the pyres of their dead husbands is repeated elsewhere, as in Uganda, the East Indies, Fiji, and the New Hebrides.² Such sacrifice is analogous to acts of asceticism, and, like these, is often connected with the desire for betterment in the world beyond the grave.

Human sacrifice was performed, also, to save the life of some particular individual. The Guatemalans resorted to it when all other means of curing a sick person failed.³ To-day in Morocco, if a child dies, the custom is to congratulate the parents—'Your child took away your misfortune.'⁴ The practice of sacrificing the first-born child seems to have been an article of ancient Semitic religion; the origin of the Passover is most probably to be traced to it.⁵ The practice is found, more or less systematized, in Australia, China, America, Africa, and Russia.⁶ Infanticide, at a stage of culture when all social custom is religious, naturally assumes the character of a 'sacrifice.' There may be various motives for the act, but only cases where there is a real substitution for the life of another person can be included under human sacrifice. Substitutional sacrifice for individual benefit occurs in Central America, Peru, Tonga, Tahiti, the Philippines, India, the Dayak countries, West Africa, and Scandinavia. It was frequent in ancient Italy, and both Nero and Hadrian were beneficiaries of the rite.⁷

There is a curious practice, connected with the doctrine of the soul, of sacrificing an individual, generally a child, to remove barrenness from women. As Westernmark explains it, the failure to bear children 'is attributed to some god keeping back the children which would otherwise be born in the due course of nature.' The victim is a substitute.⁸

Certain cases of child-sacrifice seem to suggest that the child, being in a sense a duplicate of the father, places the life of the father in danger.⁹

When the idea is arrived at that the person sacrificed is a gift to the deity, we are in the sphere of sacrifice proper. But this is clearly later than the penal conception and even the substitutional conception of the rite. The gods of the Gold Coast require attendants:

'The ghosts of the human victims sacrificed to them are believed to pass at once into a condition of ghostly servitude to them, just as those sacrificed at the funerals of chiefs are believed to pass into a ghostly attendance.'¹⁰

The belief is rare, but, as applied to the service

of the dead, is frequent. The type of it is the Hindu *sati*. Men require both wives and servants in the other world. India, probably even in Vedic times, and Central America are the chief areas of the practice of immolating wives and slaves or friends for the dead, but it is found all over the world.¹ Blood-revenge in many cases is really a human sacrifice to the spirit of the murdered man.² The completed revenge is frequently believed also to safeguard the avenger from the malignancy of the unavenged dead. Such ideas are merely superimposed upon a practice originally inspired by the impulse of resentment.

Other ideas, probably later than the institution of the rite, are the conception that the man sacrificed is a messenger to the gods; and that he becomes, when sacrificed at or in a new building, a protecting demon of the place. Probably the original intention was to protect the living from the risks incurred by occupying a site belonging to supernatural powers. This is seen in the case of sacrifices made at the building of bridges (*q.v.*). Human sacrifices to the powers of water, sea- or river-demons, are common enough, and folklore is full of stories of them.³

Cannibalism (*q.v.*) is probably not to be regarded, as Letourneau regards it, as the original sin of mankind.

'The cannibalism of modern savages,' Westernmark concludes, is not 'a survival from the first infancy of mankind, nor is it representative of 'a stage through which the whole human race has passed.'⁴

But there can be little doubt that primitive peoples, like barbarous and even civilized peoples on occasion, practised cannibalism as an infrequent habit. Now, according to one theory of sacrifice, the essence of this central act of worship is the provision of a common meal for the god and his worshippers. *A priori* there is every reason to expect that the idea of cannibalism should be found in many cases of human sacrifice. The Central Americans, especially the Mexicans, offered the blood and the heart of the victim to the god. The priest cut open the breast, and tore out the heart. This was 'waved' as an offering to the Sun; frequently it was placed with a golden spoon in the mouth of the image.⁵ The Iroquois, the Khonds and Oryahs of India, the Fijians, and peoples of the Gold Coast, had similar ritual and belief.⁶ Cannibal meals, which possess a magical or religious character, satisfy the above definition of sacrifice, if the victim is slain for the purpose. The most inveterate followers of the cult of human sacrifice, as it may truly be called in this case—the Mexicans—ate portions of the human victims slain on their altars. The Mayas, Nicaraguans, and Peruvians did the same. In Nigeria, human sacrifice offered to appease the gods, or to avert misfortune, is not 'considered to be complete unless either the priests or the people eat the bodies of the victims.' In some parts the flesh is distributed among the entire population.⁷ The practice is found in the Solomon Islands, Hawaii, and ancient India, always in connexion with a sacrifice. Two species of cannibalism are distinguished in Western Africa, the one a luxury, *gourmandise*, the other sacrificial, and in the latter the priests are the chief partakers.⁸

'The sacrificial form of cannibalism,' says Westermarck, obviously springs from the idea that a victim offered to a supernatural being participates in his sanctity and from the wish of the worshipper to transfer to himself something of its benign virtue. So also the divine qualities of a man-god are supposed to be assimilated by the person who eats his flesh or drinks his blood. This was the idea of the early Christians concerning the Eucharist.¹

Similarly, the eating of human flesh is in various cases supposed to have a magical and supernatural effect. The circle of these ideas is completed by the remarkable belief, found in the majority of races, that the flesh and blood of executed offenders have magical power. The mere fact of a violent death, when imposed on a victim by corporate action, is always impressive. It is possible that we have here the psychological explanation of the magical virtues with which such human sacrifices are credited. They are the sign and seal of the sacred force of the community in action.

Westermarck finds, in criticism of Frazer's hypothesis, 'no instance of an expiatory sacrifice being connected with a ceremony of sin-transference.'² The *meriah* sacrifice of the Khonds is a notable example of human sacrifice. Its meaning is interpreted by Frazer to be that the victim was a representative of the corn-spirit and was sacrificed in order to ensure good crops, on the principle chiefly of the resurrection of the spirit.³ The interpretation involves the assumption that the view of the *meriah* as a victim offered to deity, the Earth-goddess, Tari Pennu, is a late sophistication. Macpherson notes that the *meriah* was sacrificed

'upon the occurrence of an extraordinary number of deaths by disease; or should very many die in childbirth; or should the flocks or herds suffer largely from disease, or from wild beasts; or should the greater crops threaten to fail'; also whenever any calamity occurred to the chiefs or their families.⁴ From this and other evidence, Westermarck concludes that the theory of substitution accounts fully for the rite, and that the hypothesis of the identification with the corn-spirit is arbitrary.⁵ See, further, the 'Indian' article, § 4.

Magical efficacy is universally attributed to human blood, probably because it is human, that is, the blood of the lord of creation, who, as such, is not normally an article of food. Human sacrifice to the dead is sometimes for the purpose of supplying them with food.⁶ But this is obviously exceptional, just as the dead are themselves in an exceptional state. They are now supernatural, and supernatural (in the literal meaning) should be their sustenance. There is no relic of cannibalism in the *meriah* sacrifice, but the principles of religious cannibalism are latent in it.

Ancestor-worship, it is possible, may often have led to the idea that a supernatural source of magical power may be secured by slaying ceremonially a human, or indeed any living, victim. If the dead are divine, new additions to the list of the divine can be made by death. The murderer has an option on the spirit of him he slays. Blood-thirsty priests and despots may at times have worked their murderous wills according to some such principle. It is necessary to insist on this, as also on the satisfaction of the social lust for blood. The latter certainly is to be seen in the *meriah* sacrifice; both the latter and the former are as evident in the Mexican holocausts as they were in the *auto da fé*.

The gods of Mexico were enhaled with horror; but the human sacrifices almost daily consumed to glut their malignancy were appreciated by the congregation as intensely as the gladiatorial combats were by the populace of Rome. In some cases

the sacrifice was actually preceded by a combat, the victim having a chance of escape if he succeeded in slaying all comers who cared to fight him on the pavement of the altar.

'Scarcely any author pretends to estimate the yearly sacrifices throughout the empire at less than twenty thousand, and some carry the number as high as fifty thousand.'⁷

Both Mayas and Mexicans prosecuted endless wars, with the principal object of obtaining victims to serve as sacrifices to their gods.⁸ A typical picture of such a sacrifice is supplied by that in honour of Tezcatlipoca, though the figure of this deity is usually mild and venerable.

'The man chosen to represent him [Tezcatlipoca] and die in his stead was a young captive of handsome person and illustrious birth. During his captivity the youth thus doomed to play the fatal part of divinity was allowed to range the streets of Mexico freely, escorted by a distinguished train, who paid him as much respect as if he had been indeed the god himself instead of only his living image. Twenty days before the festival at which the tragic mockery was to end, that he might taste all the joys of this transient world to which he must soon bid farewell, he received in marriage four women, from whom he parted only when he took his place in the last solemn procession. Arrived at the foot of the sacred pyramid on the top of which he was to die, the sacrificers saluted him and led him up the long staircase. On the summit five of them seized him and held him down on his back upon the sacrificial stone, while the high priest, after bowing to the god he was about to kill, cut open his breast and tore out the throbbing heart with the accustomed rite. But, instead of being kicked down the staircase and sent rolling from step to step like the corpses of common victims, the body of the dead god was carried respectfully down, and his flesh, chopped up small, was distributed among the priests and nobles as a blessed food.'⁹

The details, however, are too numerous to add to the account. The problem chiefly considered hitherto has been that of the dying god. Certainly, in the case of the victims to Tezcatlipoca, Huizilopochtli, Huixtocihuatl, and Centeotl, there was representation of the deity. Whether Frazer's explanation can be accepted is, however, doubtful. It is noteworthy that of the Nicaraguan human victims it is stated that 'they were supposed to become deified after death, and to exercise great influence over the affairs of life.'¹⁰ The Mexicans, again, sacrificed men with white hair and white faces during eclipses of the sun; the Tlascaltecs sacrificed albinos during eclipses of the moon.¹¹ Bancroft conjectures, whatever the original significance of the human sacrifice, that finally the body, whose essence regaled the god, and whose accidents were participated in by priests and people, was regarded as the remains of a divine feast, and therefore sacred food; that religious anthropophagy degenerated into an unnatural appetite for human flesh.¹² He is desirous of explaining the extraordinary popularity of these sacrifices. They certainly may be regarded as including a recrudescence of cannibalism. More significance, however, is to be attached to the holiness acquired after death. Apart from the factor of substitution and penal sacrifice, this appears to be most important. Accordingly, the sacrifice may be said to have the character of a rite intended to make gods by slaying men. All men, animals, and things 'offered up' become *ipso facto* endowed with magic energy.¹³ But this character is itself not primary. Hindu theory speculated on the nature of the essence of sacrifice. Some of the conclusions throw light on the present subject.

According to the *Aitareya Brāhmaṇa*, the gods killed a man for sacrifice. But the part fit for an offering, the *medha*, passed into a horse, which thus became meet for sacrifice. The gods killed the horse, but the *medha* passed into an ox, and subsequently in the same way into a sheep, a goat, and the earth. The *medha* stayed longest in the goat. All those animals from which it passed are

unfit for sacrifice, and therefore their flesh is not to be eaten. When the *medha* entered the earth, the gods surrounded it to prevent its escape. There it turned into rice, and therefore rice is now sacrificed.¹

According to the *Kālikā Purāṇa*, slaying at a sacrifice, even of a man, is *ipso facto* no murder.²

The *Taittiriya* states that the institutor of the sacrifice, when slaying a man, immolates Virāj. Virāj was the first male created by Prajāpati, and was the father of mankind. From him is produced the male for every sacrifice.

¹ The form of a man is like that of Virāj, the type of the animated creation. By the immolation of the man is Virāj immolated. Now Virāj is food, and therefore through Virāj is food obtained.³

With regard to the difficult problem of 'representing' the god, a case in point is given by the *Taittiriya*. For the *puruṣamedha*, human sacrifice, the *Taittiriya* enjoins that to a deity of the Brāhman caste a Brāhmana must be sacrificed; to a deity of the Kṣatriya, a Kṣatriya.⁴ Possibly the clue to representation is in the practice of periodic god-making. A man, and a particular kind of man, being made by sacrifice into a deity, it is natural that his attributes should be repeated at the next sacrifice. Thus a particular god is re-created periodically. When, later, his incarnation is regarded as a victim, the victim retains the characters of the god. See, further, the 'Indian' article.

Often the choicest specimens of humanity are required for human sacrifice. 'The death of the righteous makes atonement';⁵ here moral worth is required. The *Kālikā Purāṇa* enjoins that the victim must be free from physical defects and unstained by crime; nor may it be a female.⁶ The case of slaves, malefactors, and diseased persons has already been noted.

Vicarious atonement becomes vicarious in a secondary sense, when another person is sacrificed instead of the original victim. In Eastern Africa, a freeman guilty of causing a conflagration close to the 'chosen abode of the deity' is liable to be offered as a sacrifice to the god who has been annoyed, but he may redeem his life by giving up one of his slaves to be offered in his stead.⁷ Animals, again, certainly have figured largely as substitutes for human victims.

⁴ According to the Israelite's notion, Jahveh in his clemency permits the soul of the animal sacrificed to take the place of that of the sacrificer. No transfer of guilt to the animal sacrificed takes place; the blood of the latter is clean, and remains so, as is evident from the very fact that this blood is put upon the altar; it is a token of mercy on Jahveh's part, that he accepts it. . . . Nor can it be asserted that the animal sacrificed undergoes the punishment in the place of the transgressor.⁸

Effigies, lastly, may take the place even of bread and fruits of the earth as substitutes for the human victim. In Malaysia, dough models of human beings, actually called 'the substitutes,' are offered to the spirits.⁹ Such substitutes occur in all parts of the world, and in the majority of its organized religions.

LITERATURE.—Ch. xix. in E. Westermarck's *Origin and Development of the Moral Ideas*, London, 1908-08 (l. 484-470), is the standard account of the subject. The art. mentions the chief sources of facts.

A. E. CRAWLEY.

HUMAN SACRIFICE (Chinese).—Unlike many nations of ancient or even modern times, such as the Aztecs, or Dahomans, the Chinese have had no regular system of human sacrifices, offered to the deity or forming a part of their idolatrous worship. Their altars have never reeked with the blood of

the brute creation, much less with that of their fellow-man. We have no record of holocausts of victims being offered up at the shrines of their deities. Flesh is no doubt offered in the rites of worship, but the animal or fowl is already slaughtered and dressed before being brought to the altar, and is offered as food might be to a man—it partakes of the character of an oblation, instead of that of a sacrifice. The type of deities, i.e. of deified human beings, is more that of mild or benevolent gods or goddesses. There is no equivalent of the Indian Kālī; there is nothing like the ponderous car of Jagannāth leaving mangled remains of crushed humanity in its course. The fierceness of the Chinese gods is developed in the direction of the destruction of demons; they do not thirst for human blood and do not require to be appeased by the offering of it.

Notwithstanding all this, there are indications to be found in Chinese history of a feeling in the Chinese mind that High Heaven may be propitiated by the shedding of human blood; for several instances occur of human sacrifice being suggested at least. One of the most noteworthy was in the time of T'ang (1766-1753 B.C.), the founder of the Shang dynasty. We are told by the great historian Ssu-ma Ch'ien and by others that, as in the land of Egypt in the time of Joseph, seven years of drought prevailed in the Empire, leading to a terrible famine. To such extremities did matters come that it was suggested that a human victim should be offered as a sacrifice to appease Heaven and bring down the showers of much-needed rain. The Emperor T'ang said: 'If a man must be a victim, I will be he,' and prepared himself for the sacrifice. Ere the prayer he offered was finished, the rain fell in heavy showers on the parched land for hundreds of miles.¹

The Scythian custom of slaying the wives and attendants of deceased chieftains and others high in rank or social position was in vogue in ancient China. A time-honoured custom of burying wealth and valuables—gold, silver, precious stones, silks and embroideries, etc.—with the deceased lasted long. Wives, concubines, and slaves were also looked upon as the property of their lords and masters, and shared the same fate as the other possessions thus interred; for, with the anthropological conceptions of the Chinese with regard to a future state of existence, the life beyond the grave was supposed to be almost a counterpart of this life; and, since such articles and persons were necessary for the happiness and comfort of the living, it was thought that they were equally necessary for the dead, and that those who had passed into another state of existence would suffer and harbour resentment unless freely supplied with them. The drain upon the resources of the people, owing to the enormous expenses entailed by the grand funerals, was such that a gradual process ensued of substituting less costly articles for the rich wares and precious things, so that articles of no real value took the place of the original offerings in most cases; and, in the same way, the substituting of imitation men and women has replaced the immolation of human beings at the obsequies of the great and wealthy.² We have in the Book of Mencius³ a passage which shows that wooden images, 'the semblances of men,' were used to bury with the dead. We are told that in ancient times bundles of straw imperfectly representing men were taken to the grave and interred with the deceased to serve in the next world as his attendants. Later on, after the advent of the Chow dynasty (1122-249 B.C.), wooden images were substituted for

them. These had springs which caused them to move, probably in imitation of the movements of men.¹ It is stated that later on came the practice of burying living persons with the dead. Confucius ascribed this to the invention of the wooden images; but it is more probable that the human sacrifice to the *manes* of the deceased was the original form, and the straw and wooden images were substituted for the more cruel custom, as was the case in Japan, where clay images were substituted about the time of the Christian era for the human victims.² Images are now made of a bamboo framework and covered with coloured paper to represent human beings, clothed in accordance with the station in life of those they are supposed to represent. These are carried, as in the case of the late Empress Dowager, in the funeral procession and burned. It is believed that they are thus transmitted to the spirit world and there wait upon their supposed lords and masters.

This practice of sacrificing living human beings to the *manes* of the departed who occupied high positions when alive was common, as may be gathered from the occasional references to it in Chinese literature. The silences concerning it have also been considered as corroborative of the practice; for, being common, it is supposed that reference was made to it only under exceptional circumstances.³ The custom appears to have been indigenous among the Chinese and not imported from Tatar sources, as Biot⁴ and even some Chinese have thought to be the case.

The Chinese Herodotus, Ssu-ma Ch'ien, mentions the first instance we have on record, when a ruler, Wu, of the Ts'in State made 66 people 'follow the dead [Duke Ch'ing] into the next world.'⁵ A nephew [Duke Muh] of this prince had 177 sacrificed at his death. Among these were three brothers put into the grave with the coffin of the Duke.⁶ Their fate is deplored in the songs of the State included in the ancient Chinese Classic, the *Shi King*, or 'Book of Poetry.' This was in 620 B.C.⁷ Hundreds perished at the royal funerals, and scores at those of officers and nobles, in antiquity. The philosopher Mencius, who lived about the 3rd cent. B.C., inveighing against extravagant funerals, informs us of this.⁸ At the death of the Great Ts'in Shi Hwang, the builder of the Great Wall and the destroyer of the books, all the women in his harem who had borne him no sons were shut up in his tomb (209 B.C.).⁹ 'There is some reason for believing that human sacrifices occurred at the construction of the Great Wall.'¹⁰

In the *Ch'un Ch'iu*, or 'Spring and Autumn Annals,' of Confucius and in the two Commentaries on them, the *Tao Chuan* and *Ku Liang*, mention is made of some cases. Two instances were in 639 and 529 B.C. respectively, and in neither case was it at funeral rites that the immolation took place. In the first the Viscount of Tsang was sacrificed instead of an animal¹¹ by the people of Chu, to awe some wild tribes in the east. The Minister of War inveighed against this sacrifice of a man, a ruler of a State, to 'an unlicensed and irregular spirit.' In the second case the heir of the State of Ts'ai, after the destruction of that State, was carried by the victors to their own State of Tso and sacrificed on a

mountain—one would suppose as a thank-offering for the victory gained¹²—again instead of an animal. In the *Tao Chuan* it is stated that living persons were interred with the dead ruler Duke Wan of Sung (587 B.C.).¹³ Another case is mentioned in the same work where, out of gratitude to a king for his clemency to his father, a son buried two daughters with the sovereign.¹⁴ Another, a servant, dreamed that he carried his ruler up to heaven and later in the day he lifted the dead body of this same ruler out of a privy and was buried with him (580 B.C.).¹⁵ Again, in 502 B.C. we read of five men being buried alive at the death of a feudal ruler of the State of Chu.¹⁶ It is stated in the 'Annals of Wu and Yueh'¹⁷ (ch. 2) that a crowd of men were, by a trick, pressed alive into the mausoleum of a princess in 510 B.C. In a number of cases these entombments were disapproved of by the people.

In another of the Chinese Classics, the *Li Ki*, or 'Book of Rites,' accounts are given of two proposals to bury the living with the dead. In one case the widow and steward of the deceased, a grandee of the State of Ts'ai, proposed that, to provide for the dead man when ill in the next world, some persons should be sent to minister to him. His younger brother, who was a disciple of Confucius, said that it was not proper to do so, but suggested that, if it must be done, the widow and steward should be the persons to be sent. This pronouncement settled the matter, and no one was sacrificed.¹⁸ The other case was that of a son who refused to carry out his father's injunctions to bury his two concubines with him in the same coffin.¹⁹ There is a similar case where directions were given by a dying man that a favourite concubine should be buried with him, though he had previously directed that she should be married again.²⁰ The son obeyed the earlier order. A Queen Dowager, who loved a minion, commanded that he should be buried with her; but, being reasoned with, yielded to persuasion and gave up the idea (309 B.C.).²¹ The Prince of Wu (514-496 B.C.) sacrificed a large number of men and women at the death of a favourite daughter in order that they might accompany her.²² In the Han dynasty (206 B.C.-A.D. 25), certain tombs of princes of the Wei State (334-286 B.C.) were opened. In one a hundred dead bodies were found—all women with one exception—probably intended for the deceased's harem in the spirit world.²³ In another grave two bodies were found. To come later down in history, we find that this practice was specially maintained by the Tatar Liao dynasty which ruled over Northern China (A.D. 927-1125).²⁴

It will thus be seen that throughout Chinese history there are indications of the prevalence of this custom. One instance was in A.D. 954, when the first Emperor of the After Chow dynasty (A.D. 951-960) gave orders for a simple funeral for himself, and on no account was any one to be injured in connexion with it.²⁵

We find notices also of sacrifices to the spirits of Nature, as, for instance, in A.D. 1130-31 at the siege of a city in the North of China when the Kin invaders tore out the hearts of twelve prisoners and offered them as a sacrifice for a change of

wind;¹ or, again, we read of a maiden being sacrificed to a river-god.²

In the Yuan dynasty (A.D. 1280-1367), women were buried with the Mongols who ruled the empire then.³ In the Ming dynasty (A.D. 1368-1644) the custom was extensively practised during the first hundred years, the first, third, fourth, and fifth Emperors being honoured in this way with 38, 16, 4, and 7 victims respectively. It was also the rule in the case of princes. This went on until the Emperor Ying Tsung († A.D. 1464) abolished it for his own funeral, though he sacrificed several women at his brother's death.⁴ The late Manchu dynasty (A.D. 1644-1911) at first also practised this, at all events during the reign of the first Emperor Shun Chi (A.D. 1644-61). There is no evidence to show whether the later sovereigns sanctioned it.⁵

It has been thought that the Chinese practice of placing figures of men in an avenue leading to the tomb, as at the Imperial tombs, had its origin in human sacrifice.⁶ Isolated cases occur in which the Chinese offer to the *manes* of a man killed or murdered the killer or the murderer or a portion of his body.⁷ 'Human sacrifices are said to have taken place in the building of a silk-filature at Soochow.'⁸ It was also and may still be the custom for new furnaces in potteries in the Kiang-si Province to be consecrated with the shedding of a child's blood. This sacrifice is done secretly, and it is supposed to prevent accidents or evil influences. One of the aboriginal tribes in China is said to offer one of their own number every year as a sacrifice to their dog-idol.⁹

Closely akin to the sacrifices of the living to the dead is a species of *sati* sometimes practised in China, when the widow publicly commits suicide to follow her dead husband to the grave.

Even in recent times, prisoners or slaves have been buried under bridges, city-gates, and public buildings. A case occurred in 1900, when one of the leading officials sacrificed a gaol-bird to his drum when starting for the wars.

LITERATURE.—This is cited in the footnotes.

J. DYER BALL.

HUMAN SACRIFICE (Greek).—It has often been observed that the Homeric poems contain hardly any allusions to human sacrifice. A remarkable exception occurs in *Il.* xxiii. 175, where, after sacrificing four horses and two dogs on the funeral pyre of Patroclus, Achilles crowns the ceremony by slaying twelve Trojans, doubtless to serve as the thralls of Patroclus in the world below, just as the horses and dogs were required to minister to other needs. The sacrifice in question is one of a class which is often represented in early civilizations (Tylor, *PC*¹ i. 458 ff.), and is best illustrated by the account in Herodotus (iv. 71) of the funeral of the Scythian kings, when cooks, grooma, butlers, and others of the royal household were strangled and buried in their master's tomb. The rite was, of course, based upon the belief that the dead continue in the world of spirits the same course of living as they have followed on earth; but, though the belief itself prevailed extensively

in the Homeric age, the proceeding of Achilles was such as to provoke from the poet the unusual comment, 'evil was the deed that he contrived.' Some critics have laid it down that the Homeric religion was succeeded by a period of joyless and gloomy superstition, in which peculiar offerings first became customary. Although there is some measure of truth in this view, it is equally important to observe that, so far as human sacrifices are concerned, the Homeric poems stand upon the same level as the rest of Greek literature, which is representative of an advanced stage of ethical development, and consequently condemns as unworthy of Hellenic enlightenment the offering up of human lives to appease the wrath of an offended deity. The sacrifice of human victims on stated occasions is regarded as a barbarian practice (Soph. fr. 122), evidenced by the cruel exposure of Andromeda and Hesione, who were rescued by Greek heroes, and the savage rites of the Tauric priesthood (Eur. *Iph. Taur.* 465). The Phœnician Molech, who was honoured by the sacrifice of children (Plut. *de Ser. num. vind.* 6, p. 552 A), was regularly identified with Cronos, whose primitive tyranny was overthrown by the milder dominion of Zeus (M. Mayer, in Roscher, ii. 1501 ff.). Æschylus (*Ag.* 156) calls the sacrifice of Iphigenia lawless; Pausanias (vii. 19. 8) records that the Delphic oracle referred to the recurring sacrifice of a youth and a maiden at the precinct of Artemis Triclaria in Achaia as strange or foreign; and Pelopidas (Plut. *Pelop.* 21), when ordered to sacrifice a maiden as a condition of success in battle, shrank from so horrible and barbarous an expedient.

Yet, although literary sentiment professes to repudiate human sacrifice as incompatible with the spread of Greek civilization, the prevalence of the custom in the pre-historic age is attested by the persistence of its appearance in the heroic legends which poetic tradition has preserved. These legends provide material which enables us to survey the conditions applicable to human sacrifices. It is generally admitted that many of them were peculiar in character; that is to say, they arose from a conviction that the anger of a divine power had been incurred by some act of impiety, that the well-being of the community was imperilled in consequence, and that the life of one of its members must be surrendered in expiation of the guilt. Recent investigations support the conclusion that no single formula is adequate to cover the varying circumstances in which recourse was had to human sacrifice. Thus, the rites connected with the periodical expulsion of evil, where the victim assumes the character of a scapegoat, have not yet been traced to a single source; and it must be recognized that in many cases it is impossible to discover precisely how the worshippers believed that their offering would be gratifying. Yet the desire to appease an enraged deity or to prevent his jealousy by timely precautions, when there may be a risk of infringing his prerogatives, is frequently indicated as an impelling motive.

It might happen that the wrath of heaven was declared by some special manifestation of displeasure, such as the occurrence of a drought or a pestilence, or the interposition of some unusual obstacle to the successful issue of an undertaking. Thus the sacrifice of Iphigenia was demanded because the detention of the Greek fleet at Aulis by contrary winds was a sign of divine anger (*Æsch. Ag.* 198 ff.). Similarly, the sacrifice of Polyxena on the tomb of Achilles was urged by Neoptolemus as a means of obtaining favourable winds for the return from Troy (Eur. *Hec.* 536 ff.).¹ Both of these incidents belonged to the tradition of the

¹ The developed story shows a conflation of two motives—the duty of offering a preliminary sacrifice to a sea-god (see art.

Epic Cycle, the sacrifice of Iphigenia being related in the *Cypria*, and that of Polyxena in the *Ilíupéris*; but authority is scarcely needed to convince us that these and similar legends are handed down from time immemorial, and testify to the primitive beliefs of the race. An echo of the legend of Aulis, possibly combined with an attempt to ascribe an Oriental character to the practice, is preserved in the story recorded by Herodotus (ii. 119), that Menelaus, when detained in Egypt by adverse weather-conditions, sacrificed two Egyptian boys as expiatory victims. Yet another illustration may be found in the story of Sinon (Verg. *Æn.* ii. 116 ff.), and an example taken from historical times shows how deeply-rooted was the superstition which required extraordinary sacrifices before a departure on an important voyage. Agesilaus, about to embark at Aulis on his expedition against Persia, dreamed that a human sacrifice was required from him; but, since such an act would have been abhorrent to the spirit of the times, he was content to offer up a hind in memory of Agamemnon's sacrifice (Plut. *Ages.* 8). When the subjects of Athamas were afflicted with a drought, the king received information that an oracle required him to sacrifice his children Phrixus and Helle; and he was about to comply with this command when the children were miraculously rescued by their immortal mother Nephele, and dispatched on their famous journey over the sea on the back of the ram with the golden fleece (Apollod. i. ix. 1). When attacked by famine and pestilence, the Athenians, in obedience to the command of an old oracle, slew the daughters of Hyacinthus on the tomb of Gerastus the Cyclops (ib. iii. xv. 8).

Usually, however, the danger which calls for so exceptional a remedy is an approaching conflict with a foreign foe. In the *Heracleidæ* of Euripides (404 ff.), Demophon, preparing to resist an Argive invasion, after he had refused to surrender the children of Heracles, was warned by the soothsayers that it was essential for him to sacrifice to Persephone a maiden of noble birth. Similarly, when Thebes was beleaguered by the army of Adrastus and Polynices, Tiresias demanded of Creon that he should sacrifice his son Menoecus in order to placate the hostility of Ares, which Cadmus had incurred by slaying the dragon (Eur. *Phæn.* 911 ff.). Other instances are taken from the legendary history of Athens. Erechtheus, when at war with Eleusis, was promised success, if he would sacrifice one of his daughters (Apollod. iii. xv. 4). A similar story was related concerning the three daughters of Leos (Ælian, *Var. Hist.* xii. 28), and the devotion of King Codrus saved Athens when he learnt that his death was a necessary condition of the defeat of the Lacedæmonian invaders (Lycurg. 84 ff.).

The general impression which we receive from Greek literature is that in historical times human sacrifice was obsolete, and it comes as a surprise to read in Plutarch that Themistocles, before the battle of Salamis, was driven by the pressure of public opinion to consent to the sacrifice of three Persian captives in honour of Dionysus Omestes (Plut. *Themist.* 13). Grote, it is true, dismisses the story as a fiction (iv. 479), and it is obviously of such a kind as a later age might have invented by way of scandalous embellishment for a famous chapter in the annals of the past. But, whether it is credible or not, we are at least entitled to draw from it the inference that there were not wanting in the classical age those who still cherished a belief in the efficacy of human sacrifice, and were prepared to advocate a resort to it in seasons of

AGONY before embarkation, and that of providing a deceased hero with the appropriate mortuary gifts.

supreme danger. The conclusion is in agreement with the other available evidence. Before the battle of Leuctra, Pelopidas dreamed that he was warned by a spirit in a vision to sacrifice a fair-haired maiden, if he wished for victory in the approaching battle (Plut. *Pelop.* 21). A serious contention ensued between the friends of enlightenment and those who would have him obey the warning. But a fortunate accident released the general from his dilemma; for a quick-witted seer, catching sight of a chestnut filly, which had separated from the herd and charged into the ranks of the army, cried out that here was the very victim which the infernal powers required. Equally characteristic is the account given by Pausanias (iv. 9. 3-10) of a similar incident in the First Messenian War, which makes it clear that even at that early date Greek sentiment, while fearing to disobey the express injunction of an oracle, was only too ready to take advantage of any pretext for declaring that the sacred command had been fulfilled.

But there is incontrovertible evidence that, under stress of calamity, religious fears were too strong to be held entirely in check by the growing hatred of superstitious barbarities. Thus we read that, in the course of his famous purification of Athens, Epimenides the Cretan caught one or two youths to be sacrificed (Athen. 602 C; Diog. Laert. i. 110). Moreover, several authorities state (e.g. schol. Aristoph. *Eq.* 1136) that certain outcasts were maintained by the Athenians at the public expense, in order that, if a plague or a famine attacked the city, some of them might be sacrificed as scapegoats (*καθάρματα, φαρμακοί*), and so the taint of pollution might be removed. Nor was the practice confined to occasions of extraordinary calamity, for there are other examples, which establish that in certain cults human victims were sacrificed annually or at regular intervals. It has been inferred with reason from a statement of Pausanias (viii. 38. 7) that a rite of this kind was celebrated in honour of Zeus Lyceus on the summit of Mt. Lyceus in Arcadia as late as the 2nd cent. A.D. (cf. Porphyry, *de Abst.* ii. 27; [Plat.] *Minos*, 315 C). At Halos in Thessaly, Xerxes was informed that the eldest son of the royal stock, which traced its origin to Athamas, was under a tabu to keep away from the town-hall, or, if he was caught attempting to enter it, he must be sacrificed at the altar, and that many had perished in this way (Herod. vii. 197). Every year in Rhodes, at the festival of Cronos, a condemned criminal, who had been kept back for this purpose, was led outside the gates of the city, and put to death; and something of the same kind took place at Salamis in Cyprus, in honour of Aglauros, the daughter of Cecrops (Porphyry, *de Abst.* ii. 54). At the temple of Apollo in Leucas, a criminal was thrown over the cliff into the sea every year as a scapegoat; but the severity of his fall was mitigated by attaching live birds or feathers to his body, and men waited in small boats for his descent so as to rescue him and convey him away from the island (Strabo, 453). The festival of the *Thargelia*, which was celebrated at Athens in the middle of the summer, was the occasion of the performance of a similar rite. Although the evidence is not altogether free from doubt, it seems that two victims, one representing the male citizens and the other the female, were led out of the city as scapegoats and stoned to death (Harpocration, s.v. *φάρμακοί*). The sacrifice of a scapegoat at the same festival is also attributed to the Ionians of Asia Minor (Hipponax, fr. 37).

The question of origins is too intricate and obscure to be discussed here, and cannot profitably be examined, much less solved, by the light of

the Greek evidence alone. Moreover, the Greek examples, whether ritual or mythical, have been contaminated and disturbed by successive accretions of advancing thought, and do not usually supply typical illustrations of primitive belief. While the extraordinary sacrifices show clear traces of the piacular motive, those which occurred at regular intervals are less clearly outlined, and can perhaps be satisfactorily explained only by being brought into comparison with the religious observances of the most backward races. Thus, it has been contended that the ceremony on Mt. Lyceus was originally the cannibal feast of a wolf-tribe, and that, whenever the human victim is a captive or a foreigner, the origin of the ritual may be looked for in the feast of a totem group (W. R. Smith, in *EB*⁹ xxi. 138).

It will have been observed that there is very scanty evidence for the continued existence of human sacrifice as an ordinary practice of the most civilized communities of ancient Greece. If we put aside the conservatism of remote and rural districts, and the influences likely to have been exerted by Oriental cults, the survival of these cruel rites was hardly tolerated by public opinion; and, where it was not entirely suppressed, it was mitigated by the selection of victims from the lowest class of criminals. Thus, humanitarian scruples were soothed with the reflexion that divine justice required the extinction of those who were no longer worthy to live. But, wherever it was found practicable, the rigour of primitive superstition was softened by the substitution of a symbolical blood-shedding or of a non-human victim. It may be that in some cases, as has recently been maintained (Farnell, *CGS* i. 93), human sacrifice was not the primitive fact, but a development from the sacrifice of the theanthropic animal, when the significance of the latter was misunderstood. Nevertheless, it is certain that the Greeks themselves believed in the substitution of an animal surrogate, and the evidence relating to the fact of such substitution is too strong to be neglected entirely.

The flagellation of Spartan boys at the altar of Artemis Orthia is declared by Pausanias (iii. 16. 10; see, however, Frazer, *in loc.*) to have been instituted by Lycurgus in place of the older custom of killing a man who was selected by lot. A curious passage in Euripides (*Iph. Taur.* 1458 ff.) proves that in the temple of Artemis Tauropolos at Halæ on the S.E. coast of Attica it was customary at the annual ceremony of the *Tauropolia* to lead a man in the guise of a victim to the altar, and to scratch his neck with a sword sufficiently to let the blood flow. The substitution of an animal for a human victim is familiar to every one from the legend of Iphigenia, and many analogous cases might be quoted (Plut. *Parallelæ* 35, p. 314 C; Pausan. ix. 8. 1, etc.). When the sacrifice of an Athenian maiden was required to stay a famine, a certain Embaros promised to give his daughter, but dressed up a goat in her place and sacrificed it at the altar (*Param.* i. 402). *Ælian* (*Nat. An.* xii. 34) records an extraordinary ceremony which took place at Tenedos in honour of Dionysus the Man-slayer. A cow which had recently calved was tended like a woman in child-bed, and her calf was shod in buskins (*κδόπροι*) and then struck down before the altar. But the man who had used the axe was publicly stoned and forced to make his escape to the sea, where presumably he was ceremonially cleansed. Some of the details recall the well-known rite of the *Bouphonia* (Frazer, *GB*³, pt. v. vol. ii. p. 4 ff.); but that the calf was the substitute for a human victim seems to be established by the statement of Porphyry (*de Abst.* ii. 55).

HUMAN SACRIFICE (Indian).—In this article the expression 'human sacrifice' is used to include not only propitiatory offerings to a god, but also all cases of the immolation of human beings, whether voluntary or otherwise, in furtherance of religious or superstitious objects.

1. References to the subject in Hindu religious books.—The *Aitareya Brāhmaṇa* to the *Rigveda* describes (vii. 13-18) how a certain king vowed that he would sacrifice his first-born to the water-god Varuna, if that deity would bless him with a son. One was born in due course, but the king hesitated to fulfil his vow—until the boy had grown up, when he ran away from home to escape the fate in store for him. The king was afflicted with dropsy as a punishment for not sacrificing him. At last a Brāhman was persuaded to sell his son as a substitute. This youth was tied to a stake, and was on the point of being immolated to appease Varuna when he recited certain sacred verses, whereupon some other deities intervened, and he was released.

It has been argued that, as the victim escaped, this story does not prove that the custom of offering human sacrifices actually existed, and that the rite was merely symbolical. But the whole story loses its point unless a real sacrifice had been intended. It is, moreover, in accordance with a custom which was put a stop to by the British Government only a century ago in Bengal, where Hindu women were in the habit of consigning their first-born babes to the Ganges in fulfilment of similar vows.

The above story is an instance of the sacrifice of children in the fulfilment of vows. Another form of human sacrifice was the *puruṣamedha*, which was celebrated for the attainment of supremacy over all created beings, and at which eleven human beings and eleven barren cows were offered up. The ceremony is described in the White *Yajur Veda*, of which the *Vājasaneyā Samhitā* opens with verses intended to serve as *mantras* (charms or incantations) for offering of human sacrifices. Various gods are enumerated, with the kind of victim suitable for each, such as a priest for Brahmā, a musician for the divinity of music, and a fisherman for the gods of rivers (i.-xii.). Further details are contained in the *Taittirīya* (iii. 4) and *Satapatha Brāhmaṇas* (xiii. 6),¹ as well as in the *Sāṅkhāyana* (xvi. 10-16) and *Vaiṣṇava Śrauta Sūtras* (xxxvii. f.).

In the *Satapatha Brāhmaṇa* it is stated that the victims are to be let loose after being consecrated; but this work is of a much later date. The earlier records clearly contemplate the actual slaughter of the victims; and the account of the rite given in the *Satapatha Brāhmaṇa* itself can be explained only on the hypothesis that it was a modification of a prior rite in which human beings were immolated.

The *āsvamedha*, or horse-sacrifice for the attainment of wealth, also required the immolation of a human being (*Satapatha Brāhmaṇa*, XIII. iii. 6, § 5, etc.; see Eggeeling, *SBE* xlv. p. xxxix f.); and human sacrifice, though reprobated, is mentioned in the *Mahābhārata* (e.g., ii. 626 ff., 861 ff.).

The *Purāṇas* and *Tantras*, which were compiled in very early mediæval times, contain frequent references to another rite requiring the immolation of a human victim. This was the *narabali*, or human sacrifice to the goddess Chāṇḍikā, a dark, fierce, sanguinary divinity, who is represented in the most awful forms, garlanded with a string of

¹ These passages are quoted at length by B. Mitra in his paper 'On Human Sacrifices in Ancient India,' *JASB* vol. xiv. [1876] pt. i. p. 76.

human skulls, besmeared with human blood, and holding a skull in one hand and an uplifted sabre in the other. In the *Kālikā Purāṇa*¹ it is said that 'by a human sacrifice attended by the rites laid down, Devi (the goddess, i.e. Chandi) remains gratified for a thousand years; and by the sacrifice of three men, one hundred thousand years. By human flesh the goddess Kanākhyā's consort Bhairava, who assumes his shape, remains pleased three thousand years. Blood consecrated immediately becomes ambrosia, and, since the head and flesh are gratifying, therefore should the head and flesh be offered at the worship of the goddess. The wise should add the flesh free from hair, among food offerings.' Minute details are added regarding the ways in which, the times when, and the places where, the rite should be celebrated.

Having placed the victim before the goddess, the worshipper should adore her by offering flowers, sandal paste, and bark, frequently repeating the *mantra* appropriate for sacrifice. Then, facing the north and placing the victim to face east, he should look backward and repeat this *mantra*: "O man, through my good fortune thou hast appeared as a victim; therefore I salute thee; thou multiform and of the form of a victim. Thou, by gratifying Chandi, destroyest all evil incidents to the giver. Thou, a victim, who appearest as a sacrifice meet for the Vaiṣṇavi, hast my salutations. Victims were created by the self-born himself for sacrificial rites; I shall slaughter thee to-day, and slaughter as a sacrifice is no murder." Thus meditating on that human-formed victim, a flower should be thrown on the top of its head with the *mantra*: "Om, Aih, Hrih, Srih." Then, thinking of one's own wishes, and referring to the goddess, water should be sprinkled on the victim. Thereafter the sword should be consecrated with the *mantra*: "O sword, thou art the tongue of Chandi and bestower of the region of the gods. Black and holding the trident, thou art like the last dreadful night of creation; born fierce, of bloody eyes and mouth, wearing a blood-red garland . . . salutations be to thee." The sword, having thus been consecrated, should be taken up while repeating the *mantra*: "Aḥ huḥ phat," and the excellent victim slaughtered with it. Thereafter, carefully sprinkling on the blood of the victim, water, rock-salt, honey, aromatics, and flowers, it should be placed before the goddess, and the skull also, with a lamp burning over it, should be placed before her with the *mantra*: "Om, Aih, Hrih, Srih, Kaudik, thou art gratified with the blood." Thus, having completed the sacrifice, the worshipper attains rich reward.²

In the fifth act of the *Mālatīmādhava*, by the dramatist Bhavabhūti (fl. c. A.D. 600), is a vivid description of the attempt of an Aghori (q.v.) to sacrifice the heroine to Chāmuṇḍā, a form of Kālī.

2. Former prevalence of sacrifices to Kālī.—These *tāntrik* sacrifices to Kālī or Chandi were formerly common. They were freely offered in the days of Marāṭhā rule; and in Western India there are many temples at which such sacrifices were common only a century ago. The victim was taken to the temple in the evening and shut up; and in the morning he was found dead, the dread goddess having 'shown her power by coming in the night and sucking his blood.'

The great Śaiva temple at Tanjore contains a shrine of Kālī where a human victim (a male child purchased for the purpose) was sacrificed every Friday evening, until the advent of British rule led to the substitution of a sheep. There are other temples in Southern India where similar sacrifices were formerly common. At the famous shrine of Dāntēsvārī in Bastar it is said that in A.D. 1830 upwards of twenty-five men were immolated by the Rājā on a single occasion. Sleeman, writing in 1844, says that a certain chief in the Central Provinces once a year sacrificed a Brāhman to the goddess.³ The Brāhmins of the Deccan used to sacrifice an old woman on the occasion of the Rājā of Sātāra's annual visit to the fort of Partābgarh. According to Sir John Malcolm, the Karāḍī Brāhmins annually sacrificed a young Brāhman at Poona. This class of Brāhmins long remained under the suspicion of being addicted to human sacrifices, using poison to effect their ends when an open sacrifice would have been too dangerous. In N. Chevers' Report on Medical Jurisprudence, written in 1854, it is said that

'there are strong reasons for believing that there is scarcely a district in India in which human sacrifice is not still practised occasionally as a religious rite.'

W. Ward, writing in the early part of the 19th

cent., mentions various places in Bengal at which human sacrifices were offered:

'The discovery of these murders in the name of religion is made by finding the bodies with the heads cut off near their images [of Kālī]; and, though no one acknowledges the act, yet the natives well know that these persons have been offered in sacrifice.'¹

In the north-east of India, human sacrifices to Kālī were very common. The Koch king, Nar Nārāyan, who ruled in the 16th cent., is said to have immolated 150 men on a single occasion; and some of his descendants carried on the practice until the early part of last century. It appears from the *Haft Iqlim* that in Koch Bihār persons, called *bhogis*, sometimes offered themselves as victims. From the time when they announced that the goddess had called them, they were treated as privileged persons. They were allowed to do whatever they liked, and every woman was at their command until the annual festival came round, when they were sacrificed to the goddess.² More frequently, however, the victim was either a person kidnapped from a distance, or a traveller, or some person found abroad after midnight.

In the Jaintia *parganas*, human sacrifices to Kālī were offered annually. As in Koch Bihār, persons frequently volunteered themselves as victims. If the would-be victim, or *bhoge khāora*, were deemed suitable, the Rājā would present him with a golden anklet and allow him to live as he chose, compensation for any damage done by him being paid from the royal treasury. But his enjoyment of these privileges was very short. On the *Navami* day of the *Durgā Pujā*, the victim, after bathing and purifying himself, was dressed in new attire, daubed with red sandalwood and vermilion, and bedecked with garlands. Thus arrayed, he sat on a raised dais in front of the goddess, and spent some time in meditation and the repetition of *mantras*. He then made a sign with his finger, whereupon the executioner, after uttering the prescribed sacrificial *mantras*, cut off his head, which was placed before the goddess on a golden plate. The lungs were cooked and eaten by such *Kāndrā Yogis* as were present, and the royal family partook of a small quantity of rice cooked in the blood. When voluntary victims were not forthcoming, persons were kidnapped from outside the State. In 1832 four persons were thus taken from British territory, one of whom escaped and gave information. As the Rājā refused to deliver up the culprits, and as this was not the first offence, his dominions were annexed.

In the *Tikka Kalpa*, a MS work found in the Manipur State library, it is said:

'Human sacrifices are to be made, after the royal consent has been obtained, on the occasion of public calamities such as war, or for the purpose of obtaining great wealth. . . . A Brāhman or a woman should never be sacrificed. Neither should one sacrifice his own body, as then he will be guilty of the sin of suicide. A brother, a father, a son, a wife's brother, a sister's son, a maternal uncle, none of these should be sacrificed; nor any one who is acquainted with the Vedas, or has renounced the world, or is a student, or belongs to the royal family. An enemy, a sick person, an eunuch, one who is infirm or has defects or scars should not be offered. The victim should be bathed and properly decorated, and then brought before the goddess. The person offering the sacrifice should turn his face towards the north, and the victim should face the east. Water should be sprinkled on the victim, and the following *mantra* uttered: "O goddess, living on the golden mountain, I offer this sacrifice to thee! He is good and stout and without blemish. I bind him to a post! I offer this sacrifice to remove my misfortune. O goddess, accept him! Although I kill him, I give him salvation!"'

This is clearly another version of the rite prescribed in the *Kālikā Purāṇa*.

In modern times the sacrifice of human beings has been replaced by that of animals—chiefly

¹ *History, Literature, and Religion of the Hindoos*, London, 1818, II. 261.

² Similar liberties were allowed to prospective victims in ancient Babylon and in Mexico (*GB*, pt. III. [London, 1911] p. 118 f., pt. v. [1912] vol. I. p. 258, vol. II. p. 93 f.).

³ A translation of the whole chapter on the subject was published by Eliquiers in *Asiatic Researches*, v. [1797] 871 f.

⁴ *Rembles and Recollections*, London, 1844, I. 61.

buffaloes and goats—but some families, whose ancestors offered human victims at the *Durgā* and *Kālī Pujās*, now sacrifice, in lieu of a living man, an effigy, about a foot long, made of dried milk (*khīra*).

3. Sacrifices by aboriginal tribes in north-east of India.—The gods whose favour it was desired to obtain in the rites ordained in the *Vedas* were genuine Aryan deities, and their worship, with the attendant sacrifices, was probably brought by the Aryans from their earlier settlements beyond the confines of India. The terrible goddess whose cult is described in the *Purāṇas* and *Tantras* is, however, a comparatively recent addition to the Hindu pantheon. It is believed that her worship and the bloody orgies with which it was attended were adopted from the religion of non-Aryan tribes, with whom the Hindus came into contact on the north-east frontier of India. It is, therefore, not surprising to find the immolation of human beings common in that locality, not only among Hinduized tribes like the Manipuris, Kochs, and Jaintiās, whose practices have already been described, but also amongst those that had only partially, if at all, come under its influence. The Kachāri kings offered annual sacrifices to their sacred sword, taking as victims Hindus of any caste but the Brāhman, who were kidnapped for the purpose from other parts. Brāhman officiated at the ceremony, and the heads of the victims were thrown down a masonry well. In the *Rājāmālā*, or chronicles of the kings of Tippera, it is related that a king who ruled in the first half of the 16th cent. offered up some slaves as a sacrifice to the 'fourteen gods,'¹ but the offering was not accepted, and the *chontai*, or high priest, announced that Mahādeb, or Siva, had ordered the immolation of the best commanders of the army. The king accordingly sacrificed eight of his chief captains. His successor, it is said, on two occasions defeated the Muhammadans, and sacrificed the prisoners to the 'fourteen gods.' Mention is also made of a king sacrificing three human victims to Siva, when praying for a son, and of another, when defeated by the Muhammadans, offering a Chandal boy to Bhabāchāri. Among the wild tribes of Hill Tippera and the Chittagong Hill Tracts, such sacrifices probably still occur, though it is naturally very difficult to obtain definite information regarding them.

The Chutiya were still more addicted to human sacrifices, the object of their worship being Kesāi Khāti, the eater of raw (human) flesh, whom they now identify with Kālī. The officiating priests, or *deoris*, were members of the tribe and not Brāhman. The sacrifices were offered on regular occasions, and also to avert special calamities, such as cholera, smallpox, and drought. After the subjugation of the Chutiya by the Ahoms, some four centuries ago, they were permitted to continue their ghastly rites. They were usually given for the purpose criminals who had been sentenced to capital punishment; but, when none such were available, a particular clan was expected to produce a victim, and in return certain privileges were granted to it. When a woman of this clan became pregnant, the astrologers were called on to ascertain the sex of the child. If they predicted that it would be a boy, the mother was carefully tended, and the child was anointed, as soon as it was born, with a paste made of turnerite and a kind of pulse. When necessity arose, a volunteer was called for, and (it is said) was usually forthcoming; if not, a victim was taken by force. For some time he was kept at the temple and fed sumptuously, until in sufficiently plump condition to suit the supposed

taste of the goddess. He was then shaved, anointed with the same paste as at birth and adorned with gold and silver ornaments, and was conducted before the image of the goddess. Here he prostrated himself and was promptly decapitated by the *bar deori*, or high priest. The head was added to a heap of skulls that were piled in view of the shrine. Victims were taken only from amongst the juvenile members of the clan. As in other cases, persons who were deformed, or bore any scar or blemish, were regarded as unfit to be victims.

The offering of human sacrifices to Kesāi Khāti was common also in Nowgong, where the victim was usually some stranger who had come for purposes of trade. He was kept in close custody for about a fortnight, and was then led out, decked with flowers and jewels, and decapitated. As soon as this had been done, the spectators fled headlong down the hill on which the shrine stood, to avoid being devoured by the hungry gods and goddesses. The sacrifice seems here to have been offered, not in order to obtain some imaginary benefit for the worshippers, but rather with a view to providing food for the sanguinary goddess and so escaping her unwelcome attentions themselves.

The same idea of gods requiring human blood is found among the Khāsīs, who believe in the existence of snake-gods called *thlen*. When a *thlen* takes up its abode in a family, there is no means of getting rid of it. So long as it is supplied at intervals with its favourite food, the family prospers and grows rich; but, when it feels the want of blood, sickness breaks out and misfortunes become frequent. Some human being is then murdered, and the hair, the tips of the fingers, and a little blood from the nostrils are taken and offered to the *thlen*. The belief is that the demon appears in the form of a snake and devours the body of the victim, which is materialized from the portions thus offered. Murders due to the prevalence of this superstition still occasionally come to light.

This idea of a family-spirit that needs human blood and afflicts the family with misfortune if its craving is not satisfied exists also in other parts of India, and is believed to have been the cause of a murder committed in the year 1908 in Chotā Nāgpur. The victim, a boy of 12, was found lying with his throat cut, and some grains of uncooked rice were seen in the wound, showing that he, like animals destined for sacrifice, had been made to swallow rice immediately before he was killed. The murder had apparently been committed at a shrine of Kālī, where the body was found. If so, the case may mark a transition stage between the entirely non-Aryan practice of the Khāsīs and the rites laid down in the *Kālikā Purāṇa*.

4. Sacrifices by Dravidian tribes.—Human sacrifices were once very common among the Dravidian tribes of the Chotā Nāgpur plateau. With the Khonds they were so frequent and notorious in the early days of British rule that officers were deputed by Government to investigate the facts with a view to preventive action, and we have in their reports a full account of the practice as it obtained among the members of this tribe. Human beings were offered up by them to Tari Pennu, the earth-goddess, to avert misfortune and disease, to obtain success in war, and especially to ensure good crops. The victim, or *meriah*, was acceptable to the goddess only if he had been purchased (usually from the Pāns, a weaving and criminal tribe, who procured children for the purpose from the plains), or was the son of a victim, or had been dedicated as a child by his father. Khonds in distress sometimes sold their children for victims, 'considering the beatification of their souls certain, and their death, for the beatification of mankind, the most honourable possible.' The victims were often kept for years before they were sacrificed. They were regarded as consecrated beings, and were treated with extreme affection and deference. They were commonly sacrificed about the time when the chief crop was sown. On

¹ Most of these gods are now identified with regular Hindu deities.

the day before the ceremony, the victim was dressed in a new garment and led with music and dancing to the sacred grove, where he was tied to a post, anointed with oil, *ghī* (clarified butter), and turmeric, and adorned with flowers. 'A species of reverence which it is not easy to distinguish from adoration' was paid to him throughout the day. The crowd danced round the post to music, and, addressing the earth, said: 'O goddess, we offer this sacrifice to you; give us good crops, seasons, and health.' The orgies were kept up till noon next day, when the victim was again anointed and taken in procession round the village. On this occasion, as on the previous day, there was a great struggle to get some relic from his person, such as a lock of his hair, a particle of the turmeric paste, or a drop of his spittle. He was then usually strangled in the cleft of a green branch, or tied to the trunk of a wooden elephant which was made to revolve. The officiating priest (a Khond) first wounded the victim slightly with an axe, and the crowd then rushed at him and cut the flesh from the bones, leaving the head and bowels untouched. The flesh was carried off to the different villages, where part was offered to the earth-goddess, buried, and a libation of water poured over it, and the rest was divided among the householders. Each man buried his piece in his favourite field. The remains (head, bowels, and bones) were burned next day, with a sheep, on a funeral pyre. The ashes were scattered over the fields, laid as paste on the houses and granaries, or mixed with the new corn to preserve it from insects.

Our authorities represent the *merials* as victims offered to propitiate the earth-goddess; but Frazer points out that the flesh and ashes of the victim were evidently thought to possess 'a direct or intrinsic power of making the crops to grow, quite independent of the indirect efficacy which it [the sacrifice] might have as an offering to secure the good-will of the deity.'¹

Practices very similar to those of the Khonds have been noticed by Davis and Needham among various Mongoloid tribes in the Nāgā Hills and on the Pātāl. Sometimes the flesh is buried in the fields to ensure good crops, and sometimes the victim is tied up and burnt to death in the jungle which is to be cleared for the next year's crops. The same tribes also regard a human sacrifice as very efficacious in warding off disease or ensuring victory in battle. The victim may be a slave, a prisoner of war, or some one purchased for the purpose. Both sexes are equally suitable. In the North of the Upper Chinthein district in Burma it was formerly the custom to sacrifice boys and girls at a big festival in August in order to get good rice crops. The victims, who were usually small children, were purchased from the unadministered territory. A rope having been placed round his neck, the victim was taken to the houses of all the relatives of the purchaser. At each house a finger joint was cut off, and all persons in the house were smeared with the blood. They also licked the joint and rubbed it on the cooking tripod. The victim was then tied to a post in the middle of the village and killed by repeated stabs of a spear, the blood from each stab being caught in a hollow bamboo, to be used afterwards for smearing on the bodies of the purchaser's relatives. The entrails were then taken out and the flesh removed from the bones, and the whole was put in a basket and set on a platform near by as an offering to the god. After the blood had been smeared on the purchaser and his relatives, who danced and wept meanwhile, the basket and its contents were thrown into the jungle.²

Among other Dravidian tribes who immolated human beings may be mentioned the Bhumij, who kidnapped children and sacrificed them at the shrine of their goddess Rankini. The Bhuiyās had a goddess named Thākūrāni Māi, to whom similar sacrifices were offered; in 1868 an obnoxious official was slain by them, and his head offered to this deity. During the rising of the Mundās in 1900 a constable was killed, and it is said that his head was cut off, and his brains offered as a sacrifice to the local demons. The Bhogtās of Bhānūrpahār formerly offered up a human being, at stated intervals, to the bees which infest the rocks there,

¹ *GB*, pt. v. vol. i. p. 250.

² G. E. R. Grant Brown, 'Human Sacrifices near the Upper Chinthein,' in *Journal of the Burma Research Society*, vol. I.

and to which supernatural powers are attributed. To this day the local aborigines will not pass the palace of a certain Rājā at night, owing to the survival of the belief that travellers are liable to be caught for sacrifice. The Banjāras, or pack bullock drivers, were once much addicted to human sacrifices. Before starting on a journey they used to bury a child in the ground up to the shoulders, and then drive their bullocks over it. Sometimes, in order to cure an illness or obtain some desired end, they decapitated a victim with one stroke of a sword and sprinkled its blood over an idol.

5. **Head-hunting.**—Like the Dayaks of Borneo, the Gāros and many tribes of Nāgas were formerly head-hunters; and they often made raids on each other solely in order to obtain heads, which were brought home in triumph to the village and hung up on a tree there. Among the Angāmi Nāgas a man was not allowed to put on the full insignia of a warrior until he had taken a life. It was not necessary for the victim to be a man killed in battle; a child or an old woman speared from an ambush served the purpose equally well. The practice has been put down in British territory, but it is still in vogue among the independent tribes on the frontier. Its origin is perhaps due to the belief that persons whose heads are taken become slaves of the captor in his future life.

The Ahoms often piled up in a heap the heads of enemies killed in or after a battle, or buried them under the steps of their king's palace. But in their case no religious motive appears to have been involved; it was merely a barbarous method of exulting over their defeated enemies.

6. **Sacrifices to earth- and river-demons, etc.**—

There is a superstition current throughout India that buried treasure becomes the property of demons, and that it is most hazardous to search for or remove it unless the demons have first been mollified with blood. In Southern India human sacrifices are deemed most suitable for this purpose, and the demons are believed to have a special partiality for the blood of a pregnant woman; but nowadays they have to be satisfied with that of a buffalo, a goat, or even a fowl. Rivers also are often thought to be inhabited by demons. It is commonly believed that a bridge over a big or fast-flowing river will not stand until the river-spirit has been appeased by the offering of human blood. Captain Clive, writing in 1828, says that the Rāna of Mewār, before crossing the Mahi river, invariably caused an individual from a particular tribe to be sacrificed, his throat being cut and his body thrown into the river. There is a wide-spread superstition that large buildings require the burial of human beings in the foundations to make them safe. When important public works are in progress, rumours are still frequently spread and widely believed that lives are needed for this purpose, and that persons found wandering abroad at night are in danger of being taken as victims. A few years ago a girl was killed under the orders of a local landholder, and buried under an embankment which had given way several times, in order to render it immune from further injury by gods or demons. About the year 1780, when the gates of the city of Tavoy in Burma were erected, a criminal was put into each post-hole, and the post was thrust down upon him, so that his blood gushed up at the sides. He was supposed to become a spirit that would hover about the place, inflicting evil on all who came near, thereby contributing to the defence of the town.

There is a very general belief in the efficacy of human blood to produce any desired result. In Sibsāgar in 1854 a man decapitated the young son of a neighbour and drank his blood, in order to effect the recovery of his own child, who was ill

with fever. A similar act was committed in Muzaffarnagar in 1870 by a childless woman, who hoped thereby to obtain a son. In the same year, at the instigation of a Hindu conjuror, a Musalman butcher, who had lost his child, killed a neighbour's child, and washed his wife in its blood, in order that her future children might be healthy. Three similar cases occurred in 1909, one in the United Provinces and two in the Nāsik district of Bombay.

7. Killing the king.—In *The Golden Bough* it is shown that primitive races in different parts of the world have a practice of killing their king. Among these races the king was believed by his subjects to be endowed with supernatural powers, and their welfare was dependent on his preserving these powers unimpaired. It was therefore the custom to kill him, or make him commit suicide, so that his soul might be transferred to a vigorous successor before he grew feeble from old age. A custom of this kind once existed in Calicut, where the *samorin*, or king, was formerly obliged to cut his throat in public at the end of a twelve years' reign. But by the 17th cent. the rule had been modified. At the end of the twelve years a great feast was given, at which any guest who was so minded was at liberty to endeavour to kill the king. If he succeeded, the crown would be his reward; but, as the king was surrounded by his guards, the chances of success were very small.¹ The old Ahom custom which required the king at his coronation to slay a man was possibly a survival of the same class of ideas, the victim being taken as a substitute for the previous monarch.

8. Religious suicide.—The idea of religious suicide, i.e. of sacrificing oneself, is by no means unknown to the Hindus. We have already seen how, in the north-east of India, people sometimes offered themselves as victims at the shrine of Kālī. There is an island in the Narbada river in the Central Provinces where annually, until 1824, devotees were induced to throw themselves from a height on to some rocks which were thought to be the abode of Kāl Bhairava, the consort of Kālī Devī, who fed on human flesh.² Expressions occur in various religious books which countenance the practice of suicide, and rules are laid down for the rite. It was still quite common in the early part of last century. It was resorted to mainly by persons who suffered from great poverty or painful and incurable disease. It was thought that, if a man drowned himself in a sacred river, such as the Ganges, especially at some peculiarly sacred spot, such as Allāhābād, Tribeni, or Sāgar Island, he would thereby acquire merit that would redound to his advantage in his next birth. The rite used to be performed with much ceremony. The man who was tired of life made the prescribed ablutions and repeated certain *mantras*, and then sprang from a boat, or waded out of his depth, with earthen vessels tied to his limbs, which dragged him down when they filled with water. It was considered auspicious if a crocodile carried him off before he died from drowning. Another favourite method of ending life was by throwing oneself beneath the wheels of the huge car on which the image Jagannāth at Puri is dragged once a year from the temple in which it is usually kept to a garden house about a mile away. Siok people, if the astrologer has predicted their death, are often taken to die on the banks of a sacred river. In former times, if death were long in coming, they frequently starved or drowned themselves; and, if at the last their resolution failed them, their relatives took care that they did not draw back.

9. Sati.—But the most common and best known form of religious suicide was that, commonly known as *sati*, of widows who allowed themselves to be burnt to death on the funeral pyres of their husbands. Such suicides were frequent among all the high castes, and were especially common in the families of Rājput chiefs. In many cases the act was entirely voluntary, but sometimes the unfortunate widow was subjected to a good deal of pressure before she could be induced to ascend the pyre. *Sati* was prohibited by law in British territory in the year 1829; and the example thus set was followed some years later by the rulers of the Native States. Isolated cases, however, still sometimes occur. In the year 1911 a Hindu lady, whose husband was on the point of death, soaked her clothes in kerosene oil and, setting light to them, burnt herself to death.³ Her act was applauded as that of a devoted wife by many Hindus, even among the educated classes. How this practice came into vogue it is difficult to say. There is no mention of it in the Vedas; but, from the belief that the wife who thus immolated herself accompanied her husband to the other world, it may have arisen from the same class of ideas which led the Ahoms to bury their slaves alive in the tombs of their kings and great nobles, and the Khongī Nāgās to decapitate a man and inter his head with that of a deceased chief. Certain Central India chiefs used to slay men at their predecessors' obsequies. In the southern kingdom of Vijayanagar, royal funerals were the occasion for wholesale holocausts of women.

10. Offering one's own blood.—In conclusion, mention may be made of the practice of offering one's own blood to Kālī. This is referred to in the *Kālikā Purāna* as an acceptable way of propitiating the goddess, and it is still common among Hindu women. When a husband or a son is dangerously ill, a vow is made that, on the recovery of the patient, the goddess will be propitiated with human blood. The vow is fulfilled either at the next *Durgā Pujā*, or at once in some temple of Kālī. The wife or mother, after performing certain ceremonies, draws a few drops of blood from her breast with a nail-cutter, and offers them to the goddess.

HUMAN SACRIFICE (Iranian).—1. Early Iranians and Avestan people.—The prevalence of the custom of sacrificing human beings to the gods is so fully and incontrovertibly attested among practically all the other Indo-European peoples, as it is in the case of most ancient nations, that we are naturally predisposed to look for clear and unmistakable indications of its existence among the Iranians. In point of fact, however, these indications are so few and inconclusive that the practice of human sacrifice has been confidently declared⁴ never to have been in vogue among the Persians. Whether the possession of earlier records would have exhibited the Iranians in line

¹ Several more similar cases have occurred since this article was written.

² The Persians were perhaps the only nation in ancient times who did not indulge in human sacrifices' (Rājendralāla Mitra, 'On Human Sacrifices in Ancient India,' *JASB* xiv. [Calcutta, 1876] 82).

¹ *A New Account of the East Indies*, by Captain Alex. Hamilton, who travelled in India from 1688 to 1723, reprinted in Pinkerton's *Voyages and Travels* (London, 1811), vii. 374.

with the other Indo-European races in this matter is a question that does not admit of a categorical answer. Schrader,¹ speaking of the Aryans (i.e. Indo-Europeans) generally, says:

'It, as is little likely to be doubted, offerings were made to heaven in the primitive period . . . then human sacrifice must have taken a prominent place amongst them.'

Others, with much historical justification, maintain that no general principle can be laid down as to the point of time and the order in which human and animal sacrifices occur in the religious development of nations (see art. *ANIMALS*, vol. I. p. 498 f.; also art. 'Sacrifice,' in *EBR*¹¹, by the same author). Moreover, among the Hindus, the nearest ethnological relations of the Iranians, the prevalence of human sacrifices is in inverse ratio to the antiquity of the period we may be considering. Of its vogue in the earliest Vedic times we possess only the indications contained in the *Sunah-sepa* hymns of the *Rig Samhitā* (i. 24-30), which, in all probability, are to be regarded as pointing to a real and not a merely symbolical sacrifice (see Rājendralāla Mitra, *op. cit.*). The Avesta, on the other hand—even its earliest portions—contains no suggestion of that custom as having been practised at any time. What little bearing on this subject the evidence of the Avesta possesses tends to confirm our surmise that human sacrifices were unknown to the Avestan and pre-Avestan people of Iran. The most usual victims in the human sacrifices of most nations were prisoners of war. But these, we have reason to believe, were treated with great clemency by the Avestan people.

As Geiger² says:

'Captives taken in war were kept by their conquerors as servants and slaves. As such, they formed, I believe, part of the household of the Mazdayasians, where they seem to have been treated kindly and humanely.' And again, 'Slaves were evidently regarded as members of the family, and their possession very highly valued.'

It should, perhaps, be remembered that the above is a description of the social life of the eastern Iranians in particular, whose practices as well as their creed may have differed somewhat from those of their more westerly kinsmen.

2. The Achemenians and the custom of human sacrifice. — Herodotus and some later writers attribute isolated instances of human sacrifice to at least three of the Achemenian kings. Each of these cases must be considered separately. In the first place, when Sardis, the capital of the kingdom of Lydia, fell (in 546 B.C.) into the hands of the Persians, Cyrus, according to the account of Herodotus,³ issued orders to erect a great pyre and to place Croesus, the captive king, with fourteen youths, on the pile to be burnt. Later, however, he relented, and a shower of rain extinguished the flames, and thus Croesus was spared. This version of the story had always presented two great difficulties to its acceptance. The first and more formidable was that of reconciling this incident with Cyrus's otherwise justly enjoyed fame for clemency to his prisoners in war, and no adequate reason seemed to have been present for any departure on this occasion from his usual attitude and practice. Further, there was the less formidable, perhaps, yet real objection that Cyrus, as a Zoroastrian or true Persian, could not have ordered the burning of Croesus. The light which recent researches have thrown upon Cyrus's religious attitude has tended to some extent to remove the latter difficulty. Nevertheless, the story as told by Herodotus did not easily commend itself to

the general acceptance. The recently discovered poems of Bacchylides (born 507 B.C.)⁴ yielded another version of the story of Croesus, earlier in date than that of the historian and also free from its objections. In the poem, instead of being condemned to die by his conqueror, Croesus elects to perish in the flames of a pyre of his own erection, rather than submit to the indignity of enslavement to a foreign foe. The version of Bacchylides receives striking corroboration from a red-figured Greek vase⁵ of the late 6th or early 5th cent. B.C. preserved in the Louvre. The vase shows Croesus enthroned and crowned, clad in his kingly robes, holding his sceptre with his left hand, and solemnly pouring a libation with his right. It is agreed by all that his attitude is in every way suggestive of the voluntariness of the act of self-immolation, and confirms Bacchylides' version of the story. It seems, therefore, that the charge of human sacrifice in the case of Cyrus must be waived. Nor does it seem possible to regard the instance given by Herodotus⁶ of the action of Cambyses as an example of human sacrifice.

'At another time,' says the historian, 'he took twelve of the noblest Persians, and, without bringing any charge worthy of death against them, buried them all up to the neck.' Even Herodotus himself adduces this incident as an example of the king's mad ferocity. The act is in no way religiously motivated.

Only two more instances are recorded by Herodotus, one of which is attributed to Xerxes, the other to his wife Amestris (vii. 114).

'When they learnt that the name of the place was "The Nine Ways," they took nine youths of the land and as many of their maidens and buried them alive on the spot. Burying alive is a Persian custom. I have heard that Amestris, the wife of Xerxes, in her old age buried alive seven pairs of Persian youths, sons of illustrious men, as a thank-offering to the god who is supposed to dwell underneath the earth.'

The latter statement does not easily fit into the scheme of Persian cosmogony, and probably, as Rawlinson (*ad loc.*) says, Herodotus here speaks as a Greek. Now, although the religious motive is not quite so remote in these two instances as in the case of Cambyses, it will probably still be felt that we have here but slender basis upon which to found our belief in the Persian custom of human sacrifice (see art. *ACHÆMENIANS*). Even granting that we are dealing with true history, it seems more probable that these older instances of 'tree-planting' were prompted by human vindictiveness rather than by a desire to observe a religious custom and propitiate a god; for the custom of burying alive remained to modern times in Persia as one of the most cruel forms of torture (see Niebuhr, *Vorträge*, Berlin, 1847, i. 155).

3. Human sacrifice as practised by the Scythians. — Although all the other branches of the Iranian race, so far as our records show, were singularly free from the habit of sacrificing human beings, the Scythians, who were perhaps only mainly Iranian, practised that custom in very extreme forms.

It was their custom to sacrifice one out of every hundred prisoners of war. The method of immolation, according to Herodotus,⁷ was as follows. A large platform made of brushwork was erected, upon the top of which was set a sword or scimitar, the image of Ares. Libations of wine were poured over the victims' heads, after which they were slaughtered over a vessel. Then the blood was taken to the top of the pile and poured upon the scimitar. While this was proceeding at the top of the platform, below, by its side, the right hands and arms of the slaughtered men were cut off and tossed up into the air, the whole being left to disintegrate and decay where they might chance to have fallen. Another

⁶ III. 86.

⁷ iv. 62.

instance, in which, perhaps, the religious motive is more remote, is the method by which false diviners were immolated. A waggon is loaded with brush-wood, and oxen are yoked to it. Then the sooth-sayers, with their feet tied together, their hands bound behind their backs, and their mouths gagged, are thrust into the midst of the brush-wood. Finally the wood is ignited and the oxen are made to rush off with their burning load until they themselves are caught in the conflagration and all are consumed together.¹

The only other instance that need be mentioned here bears more clearly the character of a religious sacrifice, namely, the ceremonies associated with a king's funeral. After the long march of the procession from tribe to tribe, as described by Herodotus,² and the arrival at the royal tombs, the body of the dead king, stretched on a mattress, is laid in the grave prepared for it. In the open space around the body of the king they bury one of his concubines, first killing her by strangling, and also his cupbearer, his cook, his groom, his lacquey, his messenger, as well as some horses and other possessions. When a year is gone, further ceremonies take place. Fifty of the best of the late king's attendants—all native Scythians—are taken and strangled. Then as many of the king's finest horses are slain. After a somewhat barbarous process of preparation, the strangled youths are mounted upon the slaughtered horses and arranged in a circle around the king's tomb. These are the most important instances of the forms of human sacrifice as practised by the Scythians.

LITERATURE.—The works dealing most fully and directly with the various parts of our subject have already been indicated. On the *Oraxis* story, see also J. G. Frazer, *Adonis, Attis, Osiris*, London, 1907, pp. 141 ff., 146 ff.; see also p. 402 f. on the custom of burying alive. E. EDWARDS.

HUMAN SACRIFICE (Japanese and Korean).

—1. Japanese.—The most ancient Japanese documents that have come down to us were written at a time (8th cent.) when the memory of human sacrifices was still green. One of the most important myths of the *Kojiki* is conceived as follows:

‘Having been expelled [from Heaven, after his crimes against the Sun-goddess], Susa-no-wo-no-mikoto [His-Swift-Impetuous-Male-Augustness, the god of the Ocean and the Storm, who appears here in the aspect of a human hero] descended to a place called Tori-kami at the head-waters of the River Hi in the land of Idzumo. At this time some chopsticks came floating down the stream. So His-Swift-Impetuous-Male-Augustness, thinking that there must be people at the head-waters of the river, went up it in quest of them, when he came upon an old man and an old woman,—two of them,—who had a young girl between them, and were weeping. Then he deigned to ask: “Who are ye?” So the old man replied, saying: “I am an Earthly Deity, child of Oho-yama-i-en-mi-no-kami [the Great-Mountain’s God]. I am called by the name of Ashi-nadzu-chi, my wife is called by the name of Te-nadzu-chi, and my daughter is called by the name of Kushi-nada-hime [hime, ‘princess’; nada, no doubt for Inada, a place-name meaning ‘rice-field’; kushi, in the sense of ‘omb’ here, as the story that follows shows].” Again he asked: “What is the cause of your crying?” The old man answered, saying: “I had originally eight young girls as daughters. But the eight-forked serpent of Koshi [a name of the north-west district occupied by the Ainu] has come every year and devoured one, and it is now its time to come, wherefore we weep.” Then he asked him: “What is its form like?” The old man answered, saying: “Its eyes are like *akakagachi* [the winter-cherry]; it has one body with eight heads and eight tails. Moreover, on its body grows moss, and also chamæcyparis and cryptomerias. Its length extends over eight valleys and eight hills, and if one looks at its belly, it is all constantly bloody and inflamed.” Then His-Swift-Impetuous-Male-Augustness said to the old man: “If this be thy daughter, wilt thou offer her to me?” He replied, saying: “With reverence, but I know not thine august name.” Then he replied, saying: “I am elder brother to the Heaven-Shining-Great-August-Deity. So I have now descended from Heaven.” Then the Deities Ashi-nadzu-chi and Te-nadzu-chi said: “If that be so, with reverence will we offer her to thee.” So His-Swift-Impetuous-Male-Augustness, at once taking and changing the young girl into a multitudinous and close-toothed comb which he stuck into his august hair-bunch, said to the Deities Ashi-nadzu-chi and Te-nadzu-chi: “Do you distil some eight-fold refined liquor [*sake*]. Also make a fence round about, in that

fence make eight gates, at each gate tie together eight platforms, on each platform put a liquor-vat, and into each vat pour the eight-fold refined liquor, and wait.” So, as they waited after having thus prepared everything in accordance with his bidding, the eight-forked serpent came truly as the old man had said, and immediately dipped a head into each vat, and drank the liquor. Thereupon it was intoxicated with drinking, and all the heads lay down and slept. Then His-Swift-Impetuous-Male-Augustness drew the ten-grasp sabre that was augustly girded on him, and cut the serpent in pieces, so that the River Hi flowed on changed into a river of blood. So when he cut the middle tail, the edge of his august sword broke. Then, thinking it strange, he thrust into and split the flesh with the point of his august sword and looked, and there was a great sword within. So he took this great sword, and, thinking it a strange thing, he respectfully informed the Heaven-Shining-Great-August-Deity. This is the Kusa-nagi-no-tachi [Herb-Quelling-Great-Sword] (*Kojiki*, tr. Chamberlain, 2nd ed., Tokyo, 1906, pp. 71-73; cf. *Nihongi*, tr. Aston, London, 1896, i. 52-55).

This is clearly analogous to the legend of Perseus rescuing Andromeda from a sea-monster who was about to devour her. It seems to have lost, at the time of its redaction, what was probably its original meaning, and, before becoming a simple epic narrative, to have been meant to recall the abolition of human sacrifices offered to theriomorphic deities, especially water-spirits conceived in animal form (see E. S. Hartland, *J.P.* iii. ch. xviii.; Marillier, in *RHR* xxxiv. [1896] 401 f.). The description of the monster of Koshi, in fact, seems, as already observed by Aston (*Shinto*, London, 1905, p. 105), to be really a poetical representation of the river itself, with its serpentine course, its numerous tributaries, its wooded banks, and its deep waters, devourers of human beings. Even to-day popular superstition believes in the existence of monsters called *kappa* which haunt the mouths of rivers by preference, and kill human beings, just as the inhabitants of the thick mountain-forests fear the *uwabami* (legendary boas believed to devour women and children). It was much more natural for such ideas to be prevalent among the primitive Japanese, who, like so many other peoples (see Waitz-Gerland, *Anthropologie der Naturvölker*, Leipzig, 1860-77, iii. 198; A. Réville, *Religions des peuples non-civilisés*, Paris, 1883, i. 175 f., 225, 247, etc.), endowed the spirit of the waters with serpent form, serpents often having aquatic habits, and attributed to its poisonous breath the deadly influences manifested in certain epidemics. Hence the conception of the *mizu-chi*, ‘water-elder,’ i.e. ‘water-god,’ of which the terrible dragon of Koshi is only a representation enlarged upon by the imagination of myth-makers.

Another story helps to confirm this interpretation by giving us a positive example of these sacrifices to the river-deities. It is telling of an event which happened, according to the *Nihongi*, in the year A.D. 323:

‘In order to prevent the overflowing of the Northern river, the Mamata embankment was constructed. At this time there were two parts of the construction which gave way and could not be stopped up. Then the Emperor had a dream, in which he was admonished by a God, saying: “There is a man of Musashi named Kōha-kubi, and a man of Kachi named Koromo-no-ko, the Muraji of Mamata. Let these two men be sacrificed to the River-God, and thou wilt surely be enabled to close the gaps.” So he sought for these two men, and, having found them, sacrificed them to the River-God. Hereupon Kōha-kubi wept and lamented, and, plunging into the water, died. So that embankment was completed. Koromo-no-ko, however, took two whole calabashes, and, standing over the water which could not be dammed, plunged the two calabashes into the mid-stream and prayed, saying: “O thou River-God, who hast sent the curse, to remove which I have now come hither as a sacrifice! If thou dost persist in thy desire to have me, sink these calabashes and let them not rise to the surface. Then shall I know that thou art a true God, and will enter the water of my own accord. But if thou canst not sink the calabashes, I shall, of course, know that thou art a false God, for whom why should I spend my life in vain?” Hereupon a whirlpool arose suddenly which drew with it the calabashes and tried to submerge them in the water. But the calabashes, dancing on the waves, would not sink, and floated far away over the wide waters. In this way that embankment was completed, although Koromo-no-ko did not die. Accordingly, Koromo-no-ko’s cleverness saved his life. Therefore the man of that time gave a name to these two places, calling them “Kōha-kubi’s Gap” and “Koromo-no-ko’s Gap” (*Nihongi*, i. 381 f.).

¹ Herod., iv. 69.

² iv. 71.

What is the significance of the calabashes employed here? Is it a simple test, cleverly based on the difficulty that the god would have in sinking the light floating gourds? Or may we have at the same time the idea of the magic virtue attributed to calabashes, which were used in ancient India as an antidote to serpent-bites? (see V. Henry, *La Magie dans l'Inde antique*, Paris, 1904, p. 203; and cf. the willow-tree gourds used as amulets in China (J. J. M. de Groot, *Les Fêtes annuelles à Emouï*, Paris, 1887, p. 328 f.)). Whatever may be the answer to these questions, we have in this story a case of human sacrifice, fully accomplished for one of the victims, and escaped by the other only through his personal ingenuity. With this story we may connect the following, given under A.D. 379 by the *Nihongi*:

'This year, at a fork of the River Khabashima, in the central division of the Province of Kibi, there was a great water-snake which harassed the people. Now when travellers were passing that place on their journey, they were surely affected by its poison, so that many died. Hereupon Agata-mori (District-warden), the ancestor of the Omi of Kasa, a man of fierce temper and of great bodily strength, stood over the pool of the river-fork and flung into the water three whole calabashes, saying: 'Thou art continually belching up poison and therewithal plaguing travellers. I will kill thee, thou water-snake. If thou canst sink these calabashes, then will I take myself away; but if thou canst not sink them, then will I cut up thy body.' Now the water-snake changed itself into a deer and tried to draw down the calabashes, but the calabashes would not sink. So with upraised sword he entered the water and slew the water-snake. He further sought out the water-snake's fellows. Now the tribe of all the water-snakes filled a cave in the bottom of the pool. He slew them every one, and the water of the river became changed to blood. Therefore that water was called "The pool of Agata-mori" (*Nihongi*, i. 298 f.).

These two stories, which the *Nihongi* places, rightly or wrongly, in the 4th cent., but which in any case are of a much later date than the myth of the serpent of Koshi, already display a certain scepticism in regard to the river-gods and the utility of appeasing them by the sacrifice of human life. They establish, nevertheless, the early existence of the custom of whose abolition the legend of the Japanese Perseus gives us a symbolical account—a custom probably replaced later by animal sacrifices and finally falling into complete disuse under the influence of Buddhism. A later text, referring to A.D. 642, when there was a great drought, says:

'The Ministers conversed with one another, saying: "In accordance with the teachings of the village *hafuri* ('sacrificers', priests of an inferior grade), there have been in some places horses and cattle killed as a sacrifice to the Gods of the various (Shintō) shrines. In others . . . prayers to the River-Gods. None of these practices have had hitherto any good result"; and consequently it is decided, on the motion of Soga no Oho-omi, to have recourse to nothing else than Buddhist prayers in order to get rain" (*Nihongi*, ii. 174 f.).

The substitution of animal victims for human victims is confirmed by a curious myth in a work of the beginning of the 13th cent., the *Uji Shui Monogatari* ('Tales forming a sequel to the Uji Collection,' a similar collection which appeared in the 11th century). Here we find a local survival, in the circuit of Sanyōdō (on the Inland Sea), of a serpent-god and a monkey-god to whom a maiden was sacrificed every year; then, thanks to the mythical intervention of a noble hero, 'the Knight of Azuma,' the suppression of this custom, and the decision made by the priests of the temple that in future they would sacrifice only boars and deer (see 'Some Tales from the Uji Shui Monogatari,' in *TASJ* xxviii. [1900] 41-45). Similar substitutions must be cited among other peoples, from the time of ancient Greece, where the annual immolation of a youth to Dionysos was replaced by the sacrifice of a goat at the request of the inhabitants of Potniæ (Pausanias, ix. 8. 1), to the 19th cent., when the British Government intervened to substitute a goat for the child immolated every year by the Khonds; cf. also the pretended, and very characteristic, immolation, in Sweden, of

a man clothed in boar's skin (see Goblet d'Alviella, 'Les Rites de la moisson,' in *RHE* xxxviii. [1898] 15). In Japan itself we see subsisting, on the one hand, the actual *hostias animales* (e.g. in the temple of Suwaymōjin, in Shinano, frequent offerings of about seventy-five boars and deer), and, on the other hand, the old human sacrifice kept up in the form of a ritual imitation (e.g. in the temple of Sakatomyōjin, in Kasusa, after drawing lots among the faithful, the chosen victim is placed on a large stall, and the priest, armed with a great chopping-knife, makes a pretence of cutting him up with three blows; see Katō Setsudō, in the *Chuō Kōron* [Japan Mail] for 4th July 1903).

In one of the stories from the *Nihongi* (i. 281) we have seen human sacrifice employed to expedite the construction of an embankment. Men were also sometimes buried alive in the foundations of a castle, a bridge, or an artificial island. They were called *hito-bashira* ('human pillars'). But the most interesting example of this order of customs is the burying alive of human beings in the graves of Emperors and princes—a custom which took its rise, according to the *Nihongi* (i. 213), at the funeral of prince Yamato-hiko, but which is certainly more ancient and becomes particularly connected with this funeral only, as Motoori very plausibly holds, by an unprecedented exaggeration of the number of victims which brought this abuse to a head, and led to its suppression at subsequent Imperial funerals. This important custom, its significance, and its abolition are treated in art. ANCESTOR-WORSHIP (Japanese). As far as we know at the present day, the *hanwa* (clay rings), circles of effigies of baked earth, which, according to the account of the *Nihongi* (i. 178 f.), took the place round the tomb of the row of men and horses originally buried alive, seem to have originated in Japan. The archaeological discoveries of recent years have revealed them also in China (cf. 'Chinese' art.), in tombs of the Han dynasty (E. Chavannes, *Mission archéologique dans la Chine septentrionale*, Paris, 1910), and, in a rougher form, in tombs in Manchuria and the neighbourhood of Port Arthur (see art. by Hamada Kosaku and Torii Ryuzō, in *Kokka*, Tokyo, 1910, 1911). It may be asked, then, Are the Japanese effigies not of continental origin, and has not the *Nihongi*, as often happens, borrowed its account from some Chinese work? On the other side, however, we must not lose sight of the fact that the account of the *Nihongi* agrees with a passage of the *Kojiki* which is certainly genuine and authentic, saying that 'in the time of the Great Empress Her Augustness Princess Hibasu [the same empress whose funeral, according to the *Nihongi*, put an end to human sacrifices] the *Ishi-ki-tsukuri* (Stone-Coffin-Makers) were established, and also the *Hanishi-be* (Earthenware-Masters' Clan) was established' (*Kojiki*, 247). The fact that human sacrifice, which had been suppressed, according to the *Nihongi*, in A.D. 3, must have been revived, according to a Chinese work (see *TASJ* xvi. [1888] pt. i. p. 59), at the death of the Empress Himako in A.D. 247, only exemplifies the well-known inaccuracy of the concocted chronology of the *Nihongi*, and does not prove that the reform was never accomplished—the redactors of the *Nihongi* simply placed it too early, as is the invariable custom of the Easterns, more concerned as they are with antiquity than with truth. Moreover, it is difficult to see from what Chinese work they could have drawn the account of a transformation which is exactly the opposite of the Chinese conception in this connexion, viz. that the offering of straw or wooden effigies at funerals led to the substitution of living victims (J. Legge, *Chinese Classics*, Hongkong, 1861-72, 'Mencius,' p. 9). On the other hand, the

account of the *Nihongi* is in entire agreement with all that we have noticed in Japan as regards the substitution of effigies for actual victims.

These substitutions appear in various forms. Sometimes, as we have seen above, animal victims take the place of human victims; sometimes, instead of the 'earth dolls' (*tsuchi-ningyō*) of the tombs, there are other effigies of human form, such as the *kane-hito-gata* ('metal-human-form'), often mentioned in the *Engishiki* (10th cent.) among the regular offerings of Shintoism, and specially offered to river-gods (*mikumari*, 'gods of water distribution')—a fact which goes to support a historical substitution of these effigies for actual victims, the occurrence of which is proved by a positive text of the *Nihongi* (i. 281). Similar human effigies, gilded or silvered, also took the place of offerings in the ceremony of the Great Purification (*Oho-harahi*). The hereditary Corporation of scholars of Yamato and Katsuchi, who pronounced an invocation before this ceremony (*norito* 11), offered a silver man and a sword of gold, or rather of gilded wood, to the gods, in order that all kinds of calamity might be warded off from the Emperor, and that he might enjoy a long reign. The gilded sword (called *harahi-tsu-tachi*, 'sword of purification') first received the breath of the Emperor; he blew over it in order to communicate his own uncleanness to it, since the uncleanness was bound to disappear along with the object to which it was thus attached. The silver man was also employed as an *aga-mono* ('ransom-thing'), i.e. as a means of expiating ritual uncleanness.

These human effigies substituted for victims persisted down to modern times. As witness of this there is a curious custom related by Aston (*Shinto*, 220) from the *Shinto Mōmoku* (1699):

'At the festival of Nawoya, held at the shrine of Kokubu in the province of Owari on the 11th day of the 1st month, the Shinto priests go out to the highway with banners and seize a passer-by. They wash and purify him, and make him put on pure clothing. He is then brought before the god. A block, a wooden butcher's knife, and chopsticks for eating flesh are provided. Separately a figure is made to represent the captive. It is placed on the block with the captured man beside it, and both are offered before the god. They are left there for one night. The next morning the priests come and remove the man and the effigy. Then they take clay, and, making it into the shape of a rice-cake, place it on the captive's back, hang a string of copper cash about his neck, and drive him away. As he runs off, he is sure to fall down in a faint. But he soon comes to his senses. A mound is erected at the place where he falls down, and the clay rice-cake deposited on it with ceremonies which are kept a profound mystery by the priestly house. Of late years, couriers have been caught and subjected to purification. This was put a stop to. The custom is celebrated yearly, so that nowadays everybody is aware of it, and there are no passers-by. Therefore the priests go to a neighbouring village and seize a man. If they catch nobody on the 11th, they bring in a man on the 12th.'

Aston (p. 221) thinks that 'there is some difficulty in applying the principle of substitution for an actual human sacrifice to a custom which was in force so recently.' But, if we have seen offerings of live animals, as substitutes for human victims, continuing even to our own day (as observed in 1903, and quoted above), why should offerings of dead effigies not have had, with the same evolution, the same permanence? This would be in complete accord with the profoundly traditionalistic spirit of the religious customs.

There is one other custom that deserves notice in the domain of human sacrifices, if we regard liberty as almost as precious as life, viz. the offerings of slaves (*kami-tsu-ko*) sometimes made formerly for service in the temples. Even in the mythological period we see the famous hero Yamato-dake, the Brave of Japan, handing over some Emishi (i.e. Ainu), whom he had taken captive, for service in a temple (*Nihongi*, i. 209). Many cases of the same kind could be quoted from the historical period, e.g. in the year 562 (*Nihongi*, ii. 82 f.).

Human sacrifice properly so called exists, even in our own day, under the form of voluntary death in order to follow a master or a husband into the other world. This voluntary sacrifice, which is in evidence even in the earliest documents (see *Kojiki*, 293, 384; *Nihongi*, i. 331, ii. 183, 234, 383), and which so many rulers vainly endeavoured to suppress, from the Emperor Kōtoku in 646 (*Nihongi*, ii. 220) to the great shōgun Iyeyasu in the 17th cent., has continued down to the 20th century. Cases might be cited during the Revolution of 1868, and again during the Chino-Japanese War, when, in 1895, the wife of an officer, Lieutenant Asada, hearing of her husband's death in China, made it her duty to cut her throat in cold blood before her husband's portrait, with a dagger which, in anticipation of some such situation as this, had been one of her wedding-presents. The modern Japanese admired this suicide, exactly as the ancient admired that of the Imperial Princess Yamanobe, who, in 686, when her young husband had been accused of treason and executed, 'hastened thither with her hair dishevelled and her feet bare, and joined him in death,' so that, adds the narrator, 'all who witnessed sighed and sobbed' (*Nihongi*, ii. 383).

A recent example shows the extent to which these ideas still survive—the suicide of General Count Nogi, the hero of Port Arthur, who, on 13th Sept. 1912, at the very time of the funeral of the Emperor Mutsu-Hito, put himself to death so that he might follow his sovereign to the other world. Countess Nogi also killed herself in order to accompany her husband; and thus we see united in a single example, the two chief kinds of voluntary suicide mentioned above. On this occasion Japanese opinion was by no means unanimous with regard to the social utility of this act, which, though putting a harmonious completion to the life of a warrior of the old school, deeply imbued with the ancient traditions of loyalty, deprived the Japanese nation of a man of experience on whose services it could have depended should new dangers arise from outside. The police of Tokyo, however, had to take measures to prevent this suicide being imitated by contagion; and even in the United States, in a house at Grand Junction, Colorado, two Japanese had to be arrested who had met to decide by drawing lots which of them should perform *harakiri*. Thus, just as General Nogi's will, offering his body to the Faculty of Medicine, with the reservation that his teeth, hair, and nails should be buried, shows the survival in him of a conception belonging to primitive magic (see M. Revon, *Le Shinntoisme*, Paris, 1907, pp. 30, 70, 256), similarly his dramatic suicide takes us back to the ancient belief in the virtue of human sacrifices made for a dead chief. The Japanese, indeed, make no distinction between forced and voluntary sacrifice, as is clearly indicated by the fact that the one word *jun-shi*, i.e. 'following in death,' is used to denote the two indifferently.

2. Korean.—In Korea we may observe an analogous evolution to that which occurred in Japan, to this extent that the custom of human sacrifice, forced or voluntary, died hard and only by the personal efforts of reasonable rulers. In Japan, a humane Emperor (Suinin, according to *Nihongi*, i. 178), already showing that progressive spirit which is so common to the Japanese, said to his ministers: 'Though it be an ancient custom, why follow it, if it is bad?' Similarly in Korea, when a king of the country of Kokuryō, famed for his virtues, died, his successor forbade his admirers to kill themselves on his tomb, saying that it was not a becoming custom; but still many persisted in following their master in death (*Tongkam*, iii. 20). In the same way, in 502, several men and women had

already been sacrificed at the tomb of a king of Silla when the custom of burying live victims was prohibited in this kingdom (*ib.* v. 5).

LITERATURE.—This is cited in the article.

MICHEL REVON.

HUMAN SACRIFICE (Roman).—Human sacrifice implies the killing of a human being in honour of a deity, as an act prescribed by religion and performed with due ceremonial. The religious requirement is based upon the idea that an enraged deity craves for human life. The anger of the deity, according to the beliefs of many peoples, is to be discerned in his sending war or pestilence involving great loss of life; thus the pestilence in the Greek camp before Troy was caused by the arrows of Apollo (*Il.* i. 51). In such cases the community in ancient times tried to save itself by sacrificing one or more human beings (*Verg. Æn.* v. 815: 'unum pro multis dabitur caput'), and thus propitiating the divine wrath (propitiatory sacrifice). In the case where a particular individual was known to have sinned against, and thus to have brought upon himself the resentment of, a deity, he was sacrificed as an atonement, so that the deity's wrath should not fall upon others (expiatory sacrifice); thus the plague in Thebes was stayed as soon as the murderer of Laius was banished (*Soph. Œd. Rex*, 96 ff.). At a later stage we meet with more merciful rites, usually spoken of as commutations of human sacrifice; the community, partly because it stands in need of men, and partly because it has become more humane in sentiment, endeavours to avoid the killing of men by changing either the mode or the victim of the oblation; it allows the victim to live, but exiles him (*Œdipus*), or, instead of making the offering originally demanded, it offers figures of men or animals; thus animals were sacrificed by the Greeks to Apollo (*Il.* i. 447 f.). When in the expiatory sacrifice the act of killing is still retained, it loses its religious character, and becomes capital punishment in the secular sense. Thus human sacrifice may at length entirely disappear from the practice of a religion, and, as we must not summarily assign to all religions the same course of development, the modern investigator is confronted with the question whether a religion from which human sacrifice is absent may formerly have had the practice or not.

This doubt affects also the Roman religion. G. Wissowa (*Religion u. Kultus d. Römer*², p. 420 f.) denies that the Roman religion ever required human sacrifice, while others (cited by Wissowa, *loc. cit.*) assert that it did. It is certainly true that in the State religion, so far as history attests it to have been officially Roman, there is no evidence of the practice. From Cicero, *pro Font.* 31, and Cæsar, *de Bell. Gall.* vi. 16, where human sacrifice is referred to as something repulsive or abnormal, we may infer that it did not exist in the 1st cent. B.C., and the words of Livy (xxii. 57. 6), 'hostiis humanis, minime Romano sacro,' point in the same direction. Livy's reference certainly seems to clash with the fact that, according to a number of Christian writers in the Imperial period (Tatian, *Or. ad Græcos*, 129; Minucius Felix, 30. 4; and others; cf. J. Marquardt, *Röm. Staatsverwaltung*, iii.³, Leipzig, 1885, p. 297. 4), a man ('bestiarius' [Tert. *Apol.* 9]) was sacrificed to Juppiter Latialis at the festival of the latter. W. Warde Fowler (*The Religious Experience of the Roman People*, London, 1911, p. 112. 31) is of opinion that this points to a practice of actual human sacrifice which had grown up under the influence of Oriental immolation and of the brutalizing slaughter in the arena. But, as this reference is an isolated one, it rather arouses suspicion, the more so because profane writers make no mention of the incident; J. Geffcken (*Zwei*

griech. Apologeten, Leipzig and Berlin, 1907, p. 66) and Wissowa (*op. cit.* 124) reject it as apocryphal. But it would be a mistake to regard it simply as a biased fabrication of Christian authors. The present writer is inclined rather to suppose that the celebrations of the Latialis festival included the baiting of animals; that some writer whose works are now lost ironically described the hardly avoidable deaths of *bestiarii* as sacrifices to Juppiter; and that then the Christian writers mentioned above not unwillingly accepted the statement as fact.

The alleged human sacrifice at the Latialis festival must, therefore, not be appealed to as proving the existence of the practice of human immolation in the Roman religion. But, on the other hand, the references of Cicero, Cæsar, and Livy, as cited above, furnish no evidence as to primitive times; and, in order to decide the question in relation to that earlier age, such rites and beliefs as may possibly be survivals of an ancient practice of human sacrifice (Wissowa, *op. cit.* 420) must be examined in detail.

The Compitalia are a theme of particularly vigorous discussion (Samter, in *ARW* x. [1907] 374 ff.; Wissowa, *op. cit.* 167); the present writer's own view will be given in what follows. It was the custom at that festival to hang up in the chapels of the Lares as many human figures and as many balls respectively as there were freemen and slaves present—'ut vivis parcerent [Lares]' (Paul.-Fest. 239). Even if we regard the purpose of the ceremony as being correctly indicated in that ancient phrase, yet it would not be pertinent to apply the term 'commuted human sacrifice' to the rite. For this would imply that originally the whole household were actually sacrificed—an idea that cannot be entertained. All that the custom in question has in common with human sacrifice is its basis, viz. the belief that the gods have a desire for human life. Men seek to satisfy that desire in the easiest possible way; they present the deity with objects of no great value, which nevertheless, on some ground or other, are regarded as equivalent to a man's life, as, e.g., his image (which primitive belief identified with the original; cf. O. Weinreich, *Antike Heilungswunder* [= *Religionsgeschichte*, *Versuche u. Vorarbeiten*, viii. 1], Giessen, 1909, p. 144), or a ball (a crude representation of the head, the seat of life). By a similar gift, viz. beans (on the relation of which to human life, cf. R. Wünsch, *Das Frühlingsfest der Insel Malta*, Leipzig, 1902, p. 31), the *paterfamilias*, at the festival of the Lemuria, purchased deliverance from the attacks of the spirits of the dead (Ovid, *Fasti*, v. 438: 'his redimo meque meosque fabis'). In the ceremony of the Compitalia, therefore, the essential element was the offering of a vicarious gift to the Lares—who need not, however, be regarded on that account as ancestral spirits; the suspending of the sacrificial objects is not a residuum of a primitive practice of sacrificing men, but simply an indication that the gift now belongs to the recipient. The votive images were, in fact, suspended in the chapels of the Lares for the same reason as the shepherd suspends his dedicated flute from the sacred tree. What is true of the Compitalia holds good with respect to other two customs which have also been interpreted as cases of commuted human sacrifice. At the Saturnalia, people might buy clay figures (*sigilla, sigillaria*; Wissowa, *op. cit.* 206), 'quæ homines pro se atque suis piaculum pro Dite Saturno facerent' (Macr. *Sat.* i. 11. 49); and at the Volcanalia the Romans observed the custom of throwing living fishes into the fire (Wissowa, 229), likewise 'pro se' (Varro, *de Ling. Lat.* vi. 20; Fest. 238; on the connexion of the fish with the belief in the soul, cf. F. Böhm, *de Symbolis*

Pythagoreis, Berlin, 1905, p. 19). These two were vicarious gifts, and do not imply an ancient practice of human sacrifice.

The custom of the Caterva, again, has been connected by H. Usener (*Kleine Schriften*, iv. [Leipzig and Berlin, 1913] 252) with commuted human sacrifice. 'Caterva' was the name given to regular encounters between two quarters of the city (Usener, 435), and the blood spilt in them is supposed by Usener to have been a surrogate for a primitive practice of immolating men. But here, too, another interpretation lies closer to our hands. The best-known instance of these conflicts is the annual battle between the Subura and the Via Sacra for possession of the skull of a horse that was sacrificed on the 15th of October (Festus, 178); the real purpose of the fight was to secure for a particular community a sacred object and the benefits associated with it. Other divisional battles, similarly, would be contests for possession of a sacred object; and here and there these conflicts were still kept up, even when a change in religious observance had deprived them of their proper motive.

On the other hand, it is probable that among the Romans the death penalty was originally an expiatory sacrifice performed with due ceremony. Plutarch (*Rom.* 22) makes mention of an old law enjoining *τὸν ἀποδύμενον γυναῖκα θύειν αἰ χθονίους θεοῖς*. The vestal virgin who had broken her vow of chastity was buried alive; the Pontifex Maximus accompanied her to the side of the grave, and uttered special prayers (Plut. *Numa*, 10); here we have a ritual sacrifice of the offender to the deity. The harvest-thief 'Cereri necatur' (Pliny, *HN* xviii. 12). In later times, again, the sentence upon the criminal involved also his deliverance to the offended deity (Festus, 318: 'homo sacer is est quem populus indicavit ob maleficium'; cf. also 'consecratio capitis' [Cic. *pro Balbo*, 33]; and the penal formula, 'sacer esto,' as, e.g., in Festus, 33, and Serv. *Æn.* vi. 609). Wissowa (*op. cit.* 338 f.) is of opinion that at first the State simply delivered this judgment, and left the transgressor to the vengeance of the deity, and that the law itself administered the actual penalty only in later times; in which case, of course, the penalty would have no connexion with human sacrifice. But it seems to the present writer—and it is also Mommsen's view (*Röm. Strafrecht*, Leipzig, 1899, p. 900 ff.)—more likely that the public execution of the death penalty is old, and implies a sacrifice. No one would venture to kill a creature which had become the property of a deity by *consecratio*, unless he thought that he was thereby conveying it to its possessor. But, if the State conveys a living creature to a god by killing it, it performs virtually an act of sacrifice. Wissowa's objection that the sacrificial object must be without blemish—as an offender, of course, could not be—applies not to the expiatory, but only to the propitiatory, sacrifice; nor, indeed, does it apply everywhere even to the latter, for we find that the Greeks offered criminals in propitiatory sacrifice (Samter, *loc. cit.* 375; A. Thomson, *ARW* ix. [1906] 400).

A survival of human sacrifice among the Romans has also been found, and in all probability rightly, in the *Ver sacrum*. Like other Italian peoples, as, e.g., the Sabines (Strabo, v. 250) and the Rutuli (Serv. *Æn.* vii. 796), in times of great distress, the Romans, when at war with Hannibal, sought to procure a happy deliverance from trouble by promising to a deity all the domestic animals born in a single spring (Livy, xxii. 9. 7 ff., xxxiii. 44. 1, xxxiv. 44. 1), and these were then duly sacrificed in fulfilment of the pledge. The form of the Italic *Ver sacrum* which, as we thus learn, obtained among the Romans was not the most ancient form.

Originally the dedication embraced also the human progeny; the children were allowed to grow up, and were then driven beyond the confines of their country (Strabo, *loc. cit.*; Festus, 321; Dion. Hal. *Ant. Rom.* i. 16). The ancients themselves interpreted this act of banishment as a mitigated form of the older practice of immolation (Paul.-Fest. 379)—a view rejected by Wissowa (p. 420. 5), who says: 'This expulsion or abandonment is rather the recognized method of performing the *consecratio* of living beings'; and he refers to Suet. *Cæs.* 81, where he finds an instance corroborative of his opinion. The passage in question, however, merely shows that the *consecratio* of the living likewise prevailed in later times; it was not the natural form, else the Romans would have availed themselves of it in the *Ver sacrum* as well (Samter, *loc. cit.* 378). We must rather assume that originally, as the vow was a unity, so its fulfilment was also uniform. Originally, that is to say, human beings and animals alike were either sacrificed or else expelled from the country. But, as in the ritual of blood-offerings the tendency is usually towards a mitigation rather than towards an intensification of their severity (E. Mogk, *ASG* xxvii. [1909] 605), we must regard the immolation of human beings (as of other creatures) as the primordial form; and it was, therefore, probably in this form that the Romans observed the general practice of Italic tribes in ancient times. We cannot, indeed, trace the observance of the Sacred Spring in Rome before 217 B.C.; nevertheless, it is possible that about that time the Romans adopted it from their neighbours as something out of the common (it was settled after consulting the *Sibylline Books* [Livy, xxii. 9. 8]), and at once modified it to suit their own circumstances.

In any case, it is attested by other data that the fundamental idea of propitiatory sacrifice—'unum pro multis dabitur caput'—prevailed among the Romans of the earlier age. The present writer would certainly not lay much stress upon the testimony of Livy, iv. 12. 11, according to which large numbers of people, with heads veiled, threw themselves into the Tiber during a time of famine; perhaps they did so without, as Stoll supposes (Roscher, i. 499), thinking of their act as a propitiation, and simply committed suicide in sheer despair. The case of M. Curtius (362 B.C.; cf. F. Münzer, art. 'Curtius,' no. 7, in Pauly-Wissowa), however, is a different one. When a chasm had opened in the Forum, and was to be filled up only by receiving the most precious treasure of Rome, Curtius presented himself on horseback and in full armour, and, having prayed ('manus . . . ad deos manes porrigentem se devovisse' [Livy, vii. 6. 4]), leaped into the abyss. This is unmistakably a propitiation, designed to avert the wrath of the gods, which had manifested itself in the *portentum* of the chasm, but it differs from human sacrifice in the fact of its having been a voluntary act. That in ancient times a human being was ever sacrificed to the gods by the Roman State on like grounds but *against his own will* is possible, but is incapable of proof.

Livy, in applying the word *devovisse* to the sacrificial death of Curtius, shows us that he construed it as a *devotio* (Wissowa, 384 f.; Bouché-Leclercq, in Daremberg-Saglio, ii. 113 ff.; and esp. L. Deubner, in *ARW* viii. [1905], Beiheft, 66 ff., 79). Now the Roman general, in the stress of battle, 'devoted' himself, or else—what seems to be a commutation—a legionary (Livy, viii. 10. 11), to the gods in order to induce them to destroy the enemy's army. Deubner recognizes that the essential implication of this act was the devoting of the hostile army to the deities of the under world, the act being rendered all the more effective by the

fact that the *devotio* involved the sacrifice of the general himself; by his prayer he linked the enemy with his own fate, so that, if he fell, the enemy would share his doom. But the general, in thus offering his own person, really proceeded upon the same motive as actuated M. Curtius. Hence the idea which gave rise to human sacrifice operates here too; even the religious form is not wanting—the rubric of the *devotio* is given by Livy (viii. 9. 4 ff.; on his sources, cf. E. Kornemann, *Der Priestercodez in der Regia*, Tübingen, 1912, p. 23 ff.). Nevertheless, the sacrifice in this case too is quite voluntary, and there is nothing to warrant the hypothesis that at an earlier period the general was actually sacrificed by priests. In the case where a legionary was devoted, and did not fall in battle, he was required to bury a figure in the earth (Livy, viii. 10. 11); and here again the image serves as a substitute for the living man (Deubner, *loc. cit.* 81). This substitution may have been allowed even when the custom of devoting a legionary was first introduced; certainly that custom seems to be of later origin than the *devotio* of the general (see above), so that it is not necessary to assume that originally the legionary was ever actually sacrificed at all.

Thus the *Ver sacrum* and the death-penalty seem to indicate that human sacrifice had a place in the primitive Roman religion, while the *devotio* shows that self-immolation was not unknown in it. But, apart from such national institutions, we find in Rome actual cases of human sacrifice—or of indubitable substitutes therefor—only in so far as they had been introduced under foreign influence. These cases, moreover, are so numerous that we can hardly help thinking that the practice could never have gained so firm a footing if it had been radically obnoxious to Roman sentiment.

The first people known to have exercised a vast influence upon the religious rites of the Romans were the Etruscans. It was that people who furnished the Romans with, *inter alia*, the art of divining by lightning in a highly developed form (C. O. Thulin, *Die etruskische Disciplin*, i. *Blitzlehre*, Göteborg. *Högs. Åarsk.* xi., 1906), esp. p. 99). Now, Plutarch (*Numa*, 15) speaks of a Roman propitiation of lightning, which was performed with onions, hair, and fishes, and which both he and Ovid (*Fasti*, iii. 333 ff.) interpret as a commuted human sacrifice. It is natural to suppose that this rite, together with other details of divination by lightning, was borrowed from the Etruscans. Then, again, in the triumphs of Roman generals, it was customary to put to death the captured commanders of the enemy (Cic. *Verr.* v. 77). This practice is regarded by G. Beseler (*Hermes*, xlv. [1909] 352) as originally a human sacrifice: the victorious general, on his return home, sacrifices the best thing among his spoils. Beseler also suggests that the triumph itself, as an institution, may possibly have been derived from the Etruscans (cf. Aust, in Roscher, ii. 633). From Etruria also, according to Nicolaus of Damascus (*Ath.* iv. 153 f., in *FHG* iii. 417), came the gladiatorial shows (Preller, *Röm. Mythologie*, ii.³, Berlin, 1883, p. 97), which Varro (*ap. Serv. Æn.* iii. 67; cf. Wissowa, *op. cit.* 466, n. 3) believed to be commutations of human sacrifice. Originally the departed were supposed to need attendance in the other world; hence Achilles slew twelve Trojan youths at the funeral pyre of Patroclus (*Il.* xxiii. 175). A later age substituted combat for slaughter, and thus at the same time did something to gratify the popular liking for funeral processions. Gladiatorial shows on a large scale were first celebrated in Rome in 264 B.C. (Val. Max. ii. 4. 7; Wissowa, *loc. cit.*).

But the Etruscan influence upon the Romans

was less profound than the influence of the Greeks. Plutarch (*Rom.* 21) states that at the festival of the Lupercalia it was the custom to streak the brows of two youths with blood-covered knives, and then to wipe them with wool, the youths being required thereupon to laugh. In this act of streaking the brow with blood many scholars have recognized a residuum of an ancient Roman practice of human sacrifice. But it will be better not to lay stress upon this. Deubner (*ARW* xiii. [1910] 502) recognizes here a cathartic custom of Greek origin. To a Greek source is certainly to be assigned the ceremony of the *Argei*, of which Wissowa, following Diels (*Sibyllinische Blätter*, Berlin, 1890, p. 43 f.), has given the right explanation (Pauly-Wissowa, ii. 697 f.). Every year, on the 14th of May (Ovid, *Fasti*, v. 621), twenty-seven human-like figures, constructed of bulrushes, were thrown into the Tiber from the *Pons sublicius* (Varro, *de Ling. Lat.* vii. 44) with religious ceremonies at which the Pontifices, the Vestal Virgins (Dion. Hal. i. 38), and the Flaminica Dialis (Gell. *Noct. Att.* x. 15. 30; Samter, 377) were present. *Argei*, the name given to these figures, is the Gr. *Ἀργεῖοι*. This term, which in Greek is found only in the epic poets, was certainly introduced into the Roman religion from Greek oracular verse. In the sore stress of war the oracle guaranteed relief on condition that twenty-seven of the enemy's people—the number has chthonic associations (Diels, 39 ff.)—were cast into the river. In the language of the oracle the Roman was designated 'Troianus'; the enemy, 'Argivus' (Diels, 44, note). Probably the condition laid down by the oracle was fulfilled on the first occasion by an actual immolation of human beings, but thereafter in the milder form of an offering of bulrush figures (Wissowa, in Pauly-Wissowa, ii. 700). On the assumption that the ceremony was derived from Greek ideas, the participation of the Roman priesthood certainly strikes us as strange. We may perhaps suppose that the guild of bridge-builders, the Pontifices, were in reality performing expiations for the observance of a foreign rite at the *Pons sublicius*, which was under their charge, and that in these they associated with themselves the Vestal Virgins and the Flaminica—unless, indeed, the ceremony was originally a Roman festival upon which the *Grævus ritus* was subsequently grafted (Deubner, *ARW* xiv. [1911] 306).

With the *Argei* sacrifice learned men of antiquity associated a Roman proverbial phrase, viz. *seagenarios de ponte*. Festus refers to this in a passage (p. 334), the lacuna of which are filled up with certainty: 'Sexagenarios [de ponte olim delectabant], culus causam Mani[us] hanc refert, quod Romam] qui incolerint [primi] Aborigines, aliquem hominem, sexaginta [annorum] qui esset, immolare] Diti Patri quot[annis] soliti fuerint!'; this sacrifice, he says, was subsequently changed by Hercules into that of throwing bulrush figures from the bridge (cf. also Ovid, *Fasti*, v. 623 f.; Otto, *Sprichwörter d. Römer*, Leipzig, 1890, p. 320 f.). Varro (*ap. Non. p. 842* [Lindsay]) gives a different explanation, asserting that the old men, who were no longer allowed to vote in public assemblies, were summoned by this old proverb to abandon the *pons* ('voting-bridge'). But this cannot be the true explanation, as it does not accord with what we know otherwise of voting among the Romans (Mommsen, *Röm. Staatsrecht*, Leipzig, 1899, ii. 408). We must therefore assume that the proverb points to an ancient custom of throwing people from the bridge. Nevertheless, this cannot be regarded as human sacrifice; it was in reality a secular act of doing away with burdensome old people whom the State would no longer maintain (B. Schmidt, 'Der Selbstmord d. Greise von Keos', in *Neus Jahrb. f. d. klass. Altert.* vi. [1908] 617 ff.). It is quite probable that the Romans of primitive times treated the aged in this harsh way; thus, on the advance of the Gauls, they left their old people behind them without means of self-defence—it was only in later writings that these old people were said to have remained behind of their own accord (Livy, v. 41. 1). Viewing the matter purely by itself, we might think that the Romans would be willing enough to sacrifice the aged as *Argei* by throwing them from the bridge. But the aged, after all, were Romans, not *Argei*; and W. Warde Fowler (*The Roman Festivals*, 116 f.) rightly says that the occasional killing of an individual could not well develop into the annual practice of putting considerable numbers to death. What we have in the case of the *Seagenarii* is there-

fore a secular act of dispatching them on grounds of public utility. We have an exactly similar case in the slaying of the *Rex Nemorensis*, and this likewise was not a human sacrifice. A run-away slave might save himself from his pursuers by killing the priest of Diana of Nemi. He assumed the position of priest, and held it till he met a like fate at the hands of another fugitive (Strabo, v. 289). This is an instance of a practice found among many peoples; they kill their king or priest before he becomes sick or feeble, believing that the welfare of the tribe is dependent upon his remaining strong. They appoint betimes a vigorous successor, who at once displays his strength by overthrowing the man whose place he takes (Fraser, *GB*, pt. III. 'Dying God', London, 1911, p. 141 ff.).

With the sacrifice of Argive enemies, however, it is probably correct to associate the rite of burying alive a man and a woman belonging to a hostile nation (Wissowa, 421). In 216 B.C.—the most trying period of the war with Hannibal—Livy (xxii. 57. 6) informs us that 'ex fatalibus libris sacrificia aliquot extraordinaria facta: inter quae Gallus et Galla, Graecus et Graeca in foro bovario sub terra vivi demissi sunt in locum saxo consaeptum, iam ante hostiis humanis . . . imbutum.' The *Sibylline Books* (Plut. *Marc.* 3, *Quest. Rom.* 83), that is to say, prescribed at that juncture special means of allaying the anger of the gods, among these means being the previously tried expedient of burying a man and a woman of the enemy's people. The strict rule was evidently that the two victims should belong to the nationality with which the Romans were actually at war at the time (Pliny, *HN* xxviii. 12: 'gentium cum quibus tum res esset'). Now the hostile peoples had at one time been the Greeks and the Gauls, and subjects of these nationalities, by an erroneous conservatism, were sacrificed also during the war with Carthage (Diels, 85 ff.). That this custom was suggested by Greek oracular writings is shown also by the fact that the prescribed prayers were uttered by the president of the *Quindecimviri* (Pliny, *loc. cit.*), whose principal function was to guard the *Libri Sibyllini*. The import of the rite was that of a sacrifice to the gods, who thus received the life of a man and a woman as *pars pro toto*; with the lives of the two victims the lives of all the men and women of the same tribe were magically bound up ('obligamentum magicum,' Orosius, iv. 13. 4); and, if the gods accepted the one pair, the rest of the nation would necessarily follow them. Pliny indicates that he had himself witnessed a sacrifice of this kind ('etiam nostra aetas vidit')—'in the vicarious ceremony,' says Wissowa (421); but the present writer is not certain as to the latter point, as the Emperor Aurelian (see *Vita Hist. Aug.* 20), when organizing the consultation of the *Sibylline Books*, ordered 'cuiuslibet gentis captos' to be reserved for sacrifice in case of need.

Finally, in the reign of Augustus, another foreign people, the Iberians, introduced into Rome a new type of human sacrifice, viz. a *devotio*. Dio Cassius (liii. 20) states that S. Pacuvius consecrated himself to Augustus in the manner of the Iberians (cf. Val. Max. ii. 6. 11). This clearly means that the tribune, invoking the gods, vowed that, if they demanded the life of the Emperor, they should take his instead. Vows of this kind are met with also in later times. When the Emperor Caligula was sick (Suet. *Cal.* 27; Dio Cass. lix. 8; Bouché-Leclercq, *loc. cit.* 119), two Romans pledged themselves to die that thereby the Emperor might recover; and the latter took them at their word. The *devotio* on the Emperor's behalf is mentioned also by Fronto, p. 6 (Naber).

These last-mentioned examples show that outside the official religion of Rome the idea of human sacrifice was very powerful in private circles. How far the persons concerned were influenced by conceptions inherited from ancient Roman life, or by foreign ideas, or were actuated by their own thoughts, is in most cases difficult to decide.

The most outstanding instances may be briefly indicated as follows (cf. v. Lasaulx, *Studien d. classischen Altertums*, Regensburg, 1854, p. 248 ff.). Those who took part in the conspiracy of Catiline are said to have drunk the blood of a slain man mixed with wine (Sall. *Cat.* 22), and to have bound themselves by dreadful oaths; this action was already classed among human sacrifices by Minucius Felix (30. 5). In 46 B.C., Caesar, as a penalty for mutiny, caused two soldiers to be sacrificed in the Campus Martius by the priest of Mars (Dio Cass. xliii. 24), evidently in the belief that that god, who had been roused to anger by the mutiny, would be propitiated by the oblation. S. Pompeius threw men into the sea, doubtless as an offering to Poseidon (*ib.* xlviii. 48). In 41 B.C., on the Ides of March (Suet. *Aug.* 15), Octavian is reported to have sacrificed three hundred men at the altar of the Divus Julius (*εὐθυνα*, Dio Cass. xlviii. 14), his intention being to propitiate the *manes* of the murdered dictator. Perhaps Vergil, when speaking of the captives 'quos mitteret umbris inferias' (*Æn.* xi. 81), had this sacrifice in his mind; in other passages he certainly creates ancient precedents for the religious acts of Augustus. In a time of threatened calamity, Nero consulted his astrologers, and received the response: 'solere reges talia ostenta caede aliqua illustri expiare' (Suet. *Nero*, 36). This was probably a notion of Eastern origin, and such an Oriental superstition explains also the self-immolation of Antinous on Hadrian's behalf (Dio Cass. lxi. 11; cf. art. HEROES AND HERO-GODS [Egyp.], p. 651^b). The Emperor Commodus put a man to death in the worship of Mithra (*Vita Hist. Aug.* 9); but the fact that this action is spoken of as an enormity shows that the records of habitual human sacrifices by the priests of Mithra are false (F. Cumont, *Textes et monuments relatifs aux mystères de Mithra*, Brussels, 1899, i. 69). Particularly in the practice of magic, which prevailed widely in the Imperial period—a period profoundly affected by Oriental superstition (Pliny *HN* xxx. 16)—human beings were frequently put to death, either because the bodily parts of men were believed to be peculiarly potent, or because—what specially concerns us here—the spirits of the under world would not give their aid unless they received a human being in sacrifice. It is not always easy to say which of these two motives prompted the killing of men in this connexion. The best-known source of information regarding the practice is Horace's poem *Canidia* (*Epod.* 5). Cicero (*in Vatini*, 14) charges Vatinius with the crime 'inferorum animas elicere, puerorum extis deos manes mactare.' Didius Julianus sacrificed children in order to learn the future (Dio Cass. lxxiii. 16), and Elagabalus 'slew children and practised magic' (*ib.* lxxix. 11).

These numerous instances of human sacrifice in the non-official religious sphere explain why the laws, the Senate, and the more humane Emperors frequently made a stand against the practice. Pliny (*HN* xxx. 12 f.) refers to a *senatusconsultum* of 97 B.C. directed against it, and to the injunction by which Tiberius prohibited the immolations of the Druids. Tiberius also forbade the sacrifice of human beings in the worship of Saturn in Africa (Tert. *Apol.* 9). Claudius re-enacted the decree against the Druids (Suet. *Claud.* 25), and Hadrian put an end to human sacrifice in the cult of the Cyprian Juppiter (Lact. *Inst.* i. 21. 1; Wissowa, 85). The jurist Paulus (v. 23. 16) writes: 'qui hominem immolaverint exve eius sanguine litaverint, fanum templumve polluerint, bestiis obiciuntur, vel, si honestiores sint, capite puniuntur' (cf. Mommsen, *Strafrecht*, 639 ff.).

We may sum up our investigation as follows. The primitive ideas which underlie the practice of

human sacrifice obtained also among the Romans, as appears, above all, from the *devotio*. In particular cases the Romans of an earlier age seem to have deduced from these ideas certain consequences affecting their religious ritual, as is indicated by the *Ver sacrum* and the religious formula of capital punishment. On practical grounds or from motives of humanity, however, human sacrifice was abolished from the official religion at an early stage. Under foreign influences, and especially under the influence of the *Sibylline Oracles*, it again gained a footing. It survived in sacrificial transactions outside the State religion till the close of the Imperial period, and legal measures did not succeed in entirely abolishing it.

LITERATURE.—See the authorities cited in the article. The older literature is given in J. Beckers, *De Hostiis humanis apud Graecos*, Münster, 1807, p. 2; W. Warne Fowler, *The Roman Festivals*, London, 1899, p. 116, note 3; and J. Toutain, 'Sacrificium,' in Daremberg-Saglio, *iv.* 2, 976. The most recent works are cited in G. Wissowa, *Religion u. Kultus d. Römer*, Munich, 1912, at the passages noted in the Index, p. 607, under 'Menschenopfer.' See also J. S. Reid, 'Human sacrifices at Rome,' *Journ. of Roman Studies*, *ii.* [1912] 34.

R. WÜNSCH.

HUMAN SACRIFICE (Semitic).—The discussion of this subject falls naturally into two parts: (1) a marshalling of the evidence for the existence of the rite, and (2) an attempt to deduce the purposes and ideas underlying it.

I. EVIDENCE FOR THE EXISTENCE OF SEMITIC HUMAN SACRIFICE.—1. *Egypt.*—That the Egyptians were an offshoot from the original Semitic stock, separated from the parent stem in early prehistoric times, is a favoured theory of their origin (see, e.g., G. A. Barton, *Semitic Origins*, London, 1902, where the theory is well worked out). They are, therefore, naturally to be included in an analysis of the evidence on the subject. But it should not be forgotten that in any case the cleavage of the Egyptians from the rest of the Semitic family must have taken place at a date so remote that the existence of the rite of human sacrifice among them in common with the Semites proper does not necessarily prove its existence in the primeval times before the Egyptian secession. It might have developed in Egypt independently, or under the influence of the ideas and practices of later surrounding tribes.

The existence of human sacrifices among the Egyptians has often been denied (E. Meyer, *Gesch. des alten Ägyptens*, Berlin, 1887, p. 42, denies the evidence from native documents, while admitting the possibility of the Classical testimony being founded on true traditions; see also Dillmann, *Handb. der AT Theol.*, Leipzig, 1895, p. 98). But the testimony of certain Greek and Latin authors, based apparently on tradition, and corroborated by obscure passages in certain Egyptian writings and by scenes represented in tomb wall-paintings, seems to indicate that this practice was observed, at least in a modified or symbolic form, down to late historic times.

Thus, Diodorus Siculus (i. 88) speaks of the king of Egypt as having formerly sacrificed men of red colour—the colour of Set or Typhon—at the grave of Osiris; and he adds the important detail that, as red men were rare in Egypt, the victims were always foreigners. Manetho (*ap.* Porphyrius, ed. Müller, *FHG* ii. 615, no. 83) speaks of human sacrifices to Hera in Heliopolis, and of the modification of the rite by Amosis, who substituted waxen images for the victims. From another fragment (*ib.* ii. 616, no. 84) it appears that in these or similar sacrifices the victims were 'Typhonic' (= red) men, and were burnt alive; that the sacrifices took place in the dog-days, and were therefore probably prophylactic against drought or pestilence; and that the ashes of the victims were collected and scattered

against the wind. Procopius (*de Bell. Pers.* i. 19) states that in the temple of Philæ the Blemmyes offered human victims to the sun. Ruffinus (*HE* ii. 24) relates, with horror, that in the holy place, or *adytum*, of the temple of Serapis at Alexandria there were preserved the heads of infants with the lips gilded. Seleucus is said by Athenæus to have written a book which treated of the subject (*επι τῆς τῶν Ἀλγυπτίων ἀνθρωποθυσίας*, Müller, iii. 500, footnote). On the other hand, Herodotus (ii. 45) denies the existence of the practice in Egyptian religion; but that intelligent tourist reports only what his 'dragomans' thought fit to tell him, and his evidence on a subject which necessarily belongs to the *arcana* of religion is therefore not conclusive. Besides these ritual sacrifices, there is evidence for foundation sacrifices, modified, after the primitive period, by the substitution of an animal victim (see Lefebvre, 'Rites égyptiens,' in *Publications de l'école des lettres d'Alger*, 1890, pp. 4, 19, 36), and, further, the special circumstances of Egypt, dependent for its life on the Nile inundations, demanded a Nile sacrifice, which the Arab historian Murtadhā describes as lasting down to the Muslim occupation of Egypt (A.D. 642)—a young girl being annually cast into the river to ensure a sufficient rise in the water (Eng. tr., 1672, p. 143). A survival of this custom is described by E. W. Lane (*Manners and Customs of the Modern Egyptians*, London, 1860, ch. xxvi.). A conical pillar of earth was erected in front of the dam at Cairo, and sown with millet. It was called '*arūsah*' ('bride'), and no doubt represented the human victim of the original rite.

It is not to be expected that the native Egyptian monuments themselves should necessarily corroborate these statements of the Classical writers, even if the latter be strictly trustworthy. For, in general, the native is not so likely to record facts and practices which for him are commonplace as is the foreigner to whom they are less familiar. But some passages in inscriptions and some pictured scenes have been collected, which appear to show that the statements quoted are at any rate approximately correct. Amon-Hotep II., returning from his expedition to Syria, clubbed seven of his chief captives before the god Amon (see E. Naville, *The Old Egypt. Faith*, Eng. tr., 1909, p. 299). In the inscription on the tomb of Seti I. (*ib.* p. 298) the tale is told of the attempt of men to revolt against the sovereignty of Rā; of the resolution in the assembly of the gods to destroy the human race; of the partial carrying out of this resolve by Hathor; of the appeasement of the wrath of Rā by a draught mixed with human blood; and of his resolve to substitute animal for human sacrifice in the future. Some such substitution is perhaps hinted at in the dark saying of the *Book of the Dead* (ch. xviii.):

'When the fiends of Set come and change themselves into beasts, the great sovereign princes, on the festival of the breaking and turning up of the earth in Taṭṭu [Busiris], slay them in the presence of the gods therein, and their blood floweth among them as they are smitten down.'

This seems to refer to a ploughing festival, wherein the 'Typhonic men' of the Classical writers were replaced by animals.

Among scenes on Egyptian monuments suggestive of human sacrifice, the memorial of Mentuherhepesef (Maspero, in *Mém. de la mission archéol. française au Caire*, v. [1893] 435) has an important place. One of the scenes in this tomb represents a person called a *tekennu*, dragged face downwards on a sledge; another shows the (fictitious) strangling of this person. A fictitious sacrifice, of course, implies an actual sacrifice in an earlier age.

2. Babylonia and Assyria.—If traces of human sacrifice are obscure and ambiguous in Egypt, they are yet more so in the remains of the civilization of Mesopotamia. This is surprising, for people

with a highly developed pantheon and a complex ritual system, and notoriously ferocious in warfare, might be expected to include human sacrifices among their regular religious practices. A bilingual text (IV. Rawl. 26, no. 6) directing that 'the father shall give the life of his child for the sins of his own life, the head of his child for his own head,' and so forth, would certainly be a proof of the existence of vicarious human sacrifice if the translation were sound; but, according to Zimmern (*KAT*³, 1903, p. 597) and Jeremias (*AT im Lichte des alt. Orients*², Leipzig, 1906, p. 368), the word rendered 'child' should properly be translated 'lamb.' Another obscure inscription (III. Rawl. 61) contains a passage which has been rendered 'the son is burnt on the high places' [when the crops fail], but it seems more probably to mean 'the grain [of a certain species] is burnt in the heat of the sun.'

Less questionable evidence, however, is not wanting. The first comes from that most important chapter 2 K 17, which describes the practices of the deported tribes which were substituted for the captive Israelites. There (v.³⁴) the Sepharvites (apparently the people of Sippar) are stated to have burnt their children in the fire to Adramelech and Anammelech, the gods of Sepharvaim [= *Adar-Malik* (cf. Adramelech, the name of Sennacherib's parricide son, 2 K 19³⁷) and *Anu-Malik*]. This rite obviously was carried by the Sepharvites from their old to their new home; and if, as seems to be most probable, these were really the men of Sippar, then such sacrifices must have taken place in the town of Sippar. The chief god of Sippar was Samaš, the sun, who was also called *Amna*; it is interesting that Cod. A of the LXX in this passage presents the form *Ἀμνημελέχ*. A human sacrifice seems to be actually figured in a seal published by Ball (*PSBA* xiv. [1892] 149, where the passages already quoted are discussed). In this scene the following figures are represented: (1) a priest standing, holding a sceptre in both hands, facing (2) a divinity, standing on the top of a *ziggurat*, and holding in his right hand a curved sword, in his left a sceptre. Flames burst from his shoulders; behind him is an altar, with vegetable offerings upon it. (3) Behind the divinity are two standing figures, clothed in leopard skins, with their right arms raised in the attitude of striking. Between them is (4) a kneeling man, wearing only a loin-cloth and a head-dress. Above him is a representation of flames, and flying towards him is a bird of prey. One of the standing skin-clad figures holds back his head, and the other pulls aside his beard, as though to expose his throat conveniently for the sacrificial blow.

Less certain evidence is the prescription that a son or a daughter shall be burnt on the altar of a divinity as a penalty for a breach of contract (Johns, *Assyr. Deeds*, Cambridge, 1898-1901, iii. 345), which may simply be a penal provision; and such passages as 'I burnt their boys and girls in the fire,' in Assurnasir-pal's triumphal inscriptions over conquered cities, which merely record a barbarity consonant with the rest of the acts of that abominable savage. There is, however, a magical text (quoted in Zimmern, *KAT*³, 599) which mentions the sacrifice of a slave along with an ox or a sheep.

3. Canaan.—Here we are on firmer ground. The practice of human sacrifice in the religion of the Semitic predecessors of the Hebrews is amply proved by certain OT passages (Dt 12³¹ 18¹⁰, and by inference in such prohibitions as Lv 18²¹), and has been corroborated by the results of recent excavations. In the High Place at Gezer, and in connexion with what appears to have been a rock-cut altar at Taanach, the skeletons of new-born infants have been found buried in jars. Similar discoveries

were made in the corners of houses, under or close by the foundation. Two burnt skeletons of children about six years of age were also found in the Gezer sanctuary, and near it was a cistern which had apparently been adapted as a receptacle for the refuse of sacrifices. Large numbers of animal bones, and many human bones of both sexes and all ages, were found in it. The excavator at Gezer was careful to get an expert medical opinion that some at least of the infants found buried had actually lived a separate existence, and that they were not merely still-born or untimely births thus disposed of (with or without the reconditio notions of inducing a re-birth and second chance of life, as suggested in Frazer, *Adonis, Attis, Osiris*², London, 1907, p. 83).¹ At Tell Mutesellim (Megiddo) a girl of about fifteen had been slaughtered at the foundation of a large building, and her skeleton was found built into the wall. In two cases at Gezer the skeletons of young persons (a youth about eighteen, and a girl a year or two younger) were found, which had evidently been sawn in two. There was nothing to indicate clearly the circumstances under which so exceptional a form of execution had been adopted.

4. Arab tribes, ancient and modern.—Under this head we include the various tribes of the trans-Jordanic provinces, the Sinaitic peninsula, and North Arabia—known as the Midianites, Ammonites, Moabites, etc.—as well as the Arabs before they adopted the teaching of Muhammad. These tribes were all so closely related that evidence of the practice under discussion among one or two will probably be sufficient proof of its prevalence among them all. Direct evidence is afforded by the incident of the sacrifice of Mesha², who immolated his heir to Chemōsh, when hard pressed by the Israelites (2 K 3²⁷)—an act which seems to have struck terror into the victors, who fled from the wrath of Chemōsh whose land they were invading. Wellhausen (*Reste arab. Heidentums*², Berlin, 1897, pp. 42, 43, 115) and other scholars have collected the indications of human sacrifice which remain among the Arabs, in spite of the efforts of post-Islamic authors and copyists to efface the traces of the rites and beliefs of the 'times of ignorance.' These show clearly that the Arabs offered prisoners of war to the stellar and other divinities, and also sacrificed boys to Dusares and al-'Uzzā, the morning star. The best-known example is that related by Nilus (*Narrat.* vi.) of his own son Theodulus, who narrowly escaped being a victim. He was stolen by the Saracens, c. A.D. 400, and was to have been sacrificed to the planet. The ritual time for the offering lay between the appearance of Venus above the horizon and her disappearance in the rays of the rising sun. In answer to the boy's prayer, his captors overslept, and the time had already passed when they awoke; he was therefore brought instead to the slave-market of Elusa, of which place he lived to become bishop.

5. Hebrews.—This member of the Semitic family was no less prone than the rest to human sacrifices, and required the special instruction of lawgivers and prophets to eradicate the practice. Their great ancestor was moved to offer his son Isaac (Gn 22). Jephthah offered his daughter (Jg 11^{30ff.}) under circumstances differing only in detail from the case of Mesha—in the one the vow preceded, and the act followed, the victory; in the other the act itself was prior to the issue of the battle. The underlying ideas, however, were identical, and, notwithstanding all attempts to

¹ It is said that in some parts of Egypt untimely births are buried in the corners of the houses of the *fellaḥin*, not in the graveyard of the village. This may conceivably be a survival of the practice of immolating a child or other person at the foundation of a house, and laying the corner-stone on the body

explain away or to modify the Hebrew instance, there can be no reasonable doubt that it involved the death of the victim. Samuel 'hewed Agag in pieces before the Lord' (1 S 15²⁸), but this is a doubtful case, in view of his deprecation of Saul's intent to sacrifice immediately before (v. 22⁵). It seems more probably to have been an act of judicial punishment (see Baethgen, *Beiträge*, Berlin, 1888, p. 221). Hiel re-built Jericho 'upon' two of his sons (1 K 16³⁴), i.e. sacrificed them at certain stages of the work, as we have seen to have been done at Megiddo and elsewhere. After the partition of the kingdom, the northern branch (2 K 17¹⁷) as well as the southern, especially under Ahaz (18³) and Manasseh (21¹), sacrificed children in fire; by the time of Jeremiah a special place, the *Gē Ben-Hinnōm*, had been set aside especially for this rite. On the other hand, Isaiah (57⁶), Micah (6⁷), Jeremiah (19⁵), and Ezekiel (20³¹) added their fulminations to the direct prohibitions of Leviticus (18²¹) and other passages in the law of the Pentateuch. It does not fall within the scope of this article to discuss the question to what deity these various sacrifices were offered, or to inquire into the relationship between Jahweh and Molech (see *ERE* i. 390). The legitimate cases quoted above are sufficient to prove the existence of human sacrifices among the Hebrews, without calling in more doubtful instances, such as the murder of Abel (Gn 4), the death of Uzzah (2 S 6⁷), the massacre of the priests of Baal (1 K 18⁴⁰), and other events, where critics have traced ritual acts with more or less improbability.

6. Phœnicians and Carthaginians.—Here, as in the case of the Egyptians, we have to trust very largely to the testimony of Classical writers. Of the Phœnicians, who loomed so largely in the works of the antiquarian charlatans of a hundred years ago, we really know next to nothing; and the banal inscriptions of Carthage are not illuminating. Three or four Numidian votive tablets have been supposed to state that A has offered his son B, but neither reading nor interpretation can be considered trustworthy (see Gesenius, *Scripturae linguaeque Phœn. monumenta*, Leipzig, 1837, pp. 446 ff., 453: these inscriptions are not yet [1913] included in *CIS*). Eusebius, however (*Præp. Evang.* iv. 16), following Sanchuniathon (*apud* Philo), speaks of the Phœnicians offering their dearest to Kronos; and other writers ascribe the same custom to the Phœnician colonies of Cyprus, Carthage, and Massilia.

For Cyprus, see Euseb. *loc. cit.*; for Carthage, Porphyrius (*de Abst.* ii. 56), Diodorus Siculus (xx. 14), and Pliny (*HN* xxxvi. v. 4); for Massilia, Servius (*in Æn.* iii. 57).

7. Southern Semites.—The Semitic-speaking people of Abyssinia appear to have been originally a colony from S. Arabia, and presumably carried with them from their former home all the rites of their religion, including that of which this article treats. No direct evidence, however, bearing on the subject is to be found in the unsatisfactory literature relating to that little known country.

II. THE PURPOSE OF HUMAN SACRIFICE.—Human sacrifice is the offering of a human individual to a divine power. It is generally understood to involve the slaughter of the victim, but that is not absolutely necessary; the life of a mediæval anchorite, walled up in a narrow cell, was sacrificed no less literally than was that of the son of Meshah. But in the Semitic world, with some exceptions and modifications presently to be noted, the victim was actually put to death. It is of the highest importance to distinguish true cases of sacrifice from the following acts, which are sometimes confused with them: (1) *murder* for political or criminal causes, such as the satisfaction of private grudge or greed; (2) *execution* of criminals and

prisoners of war; (3) *blood-revenge*; (4) *infanticide*, as organized among the Arab tribes; (5) *slaughter* for medical purposes, e.g. to procure the baths of children's blood supposed to cure leprosy (on which see Pliny, *HN* xxvi. i. 5). Biblical cases of the first three of these, all of which have been called 'sacrifices,' are the stories of Abel (Gn 4), Agag (1 S 15²⁸), and the sons of Saul (2 S 21). The last of these cannot have been a sacrifice in any case, as the victims were *hanged* (see Dt 21²²), and cf. the executions in Nu 25⁴, which have also been erroneously taken as a sacrifice). The fourth (on which see the gruesome 'Additional Note C' in W. R. Smith's *Kinship and Marriage*², London, 1903, p. 291 ff.) is merely a practical device to reduce the non-combatant members of a tribe.

In a true human sacrifice, the victim may be (a) a young infant, the first-born of the family; (b) a criminal or prisoner of war; or (c) a person of special importance in the eyes of the person or tribe offering the sacrifice. In the first case we have, in the majority of instances, a sacrifice of *primitiæ*, whereby the firstfruits of the field, of domestic animals, and of the human family were sacrificed to the deity. In the second case the victim has offended against the divine majesty, either by his crimes or by fighting against the people of the divinity; the god has triumphed over his enemies, and their blood is poured out before him in celebration of the triumph. The third case is rather different: the god has to be appeased by his own people; a calamity or plague has to be averted, or some such prize as victory in battle has to be obtained; the most valuable gift that the tribe can offer has, therefore, to be presented in payment for the boon; the king's eldest son must be offered as a burnt-offering that there may be 'great wrath' against his enemies (2 K 3²⁷).

By way of appendix to this article, two points must be considered briefly: (a) the modifications and substitutes offered for human sacrifices; and (b) the strange superstition, not yet wholly extinguished, that the mediæval Jews practised a form of ritual murder.

(a) *Modifications and substitutes for human sacrifice*.—Although, as the notorious case of the Aztecs shows, the practice of human sacrifice is not inconsistent with a high standard of culture, it is natural that the advance of civilization should develop a repugnance against the rite in its crudest form, and that various devices should be invented to satisfy the demands of the gods without actually taking life. There are four such devices that call for mention. (1) The *substitution of a model* of wax or straw, as we have already seen, was early introduced into Egypt. Small figures of men cut from laminae of bronze and silver were found under the foundation of a house at Gezer, evidently representing actual human victims. The occasional cases of the sacrifice of vile, worthless, or crippled members of the community may also in a sense be a substitution for lives more valuable. Although the dogmatic statements of folk-lorists on such a point cannot be accepted without reserve, it is possible that some children's games (see *ERE* ii. 852^a) are the pale reflexion of rites that once involved the immolation of human victims. (2) By *redemption* the eldest son of the Hebrew family was rescued from the doom that doubtless was literally carried out at first (Ex 13¹⁵). (3) Probably *mutilation* and similar irreparable injuries—especially those involving the loss of male virility or female chastity—were devices to preserve life while sacrificing its joy. (4) *Substitutionary acts* were also performed, in which all semblance of the victim disappeared. Thus, under the foundations of many houses in Palestinian excavations have been discovered groups of lamps and bowls (usually

the lamp inside one bowl, with another bowl inverted over it), one case of which was found at Gazer associated with a sacrificed infant. It is highly probable that these deposits were typical of an earlier rite in which there was the slaughter of a victim.

(b) *Medieval superstitions regarding the Jews.*—In the Middle Ages an extraordinary idea was prevalent that the Jews practised secret rites for which the blood of Christians, especially of Christian children, was essential. This wild notion was, and in some quarters has been in quite recent years, fostered by politically interested persons in order to inflame anti-Semitic passions. For the superstition there seems to be a certain basis of fact. The mutual hatred of Jew and Christian, and the oppressions of which the latter were guilty, would naturally lead to reprisals when opportunity offered for them; and we need not be surprised to find that such a reprisal should take the form of a grim parody of the Crucifixion, the event to which the Jews ascribed their misfortunes. Accordingly it appears that some drunken Jews at a feast—no doubt that of Purim—crucified a Christian child in the Syrian town Inmestar (Socrates, *HE* vii. 16) in A.D. 416. About 600 years later this seems to have been followed by the similar murder of St. William of Norwich. Other alleged cases followed thick and fast, especially in England and Germany; even so late as 1900 a mysterious murder in West Prussia was made the lever for an anti-Semitic demonstration.¹ All the recorded cases, from that of William of Norwich to the last mentioned, have been analyzed by H. L. Strack (*The Jew and Human Sacrifice*, Eng. tr., London, 1909 [cf. his art. *ANTI-SEMITISM*, in vol. i., esp. p. 597]), and the results of his investigation are: (1) as just mentioned, that there may have been individual cases of murder by Jews, but that these are a very small minority of the alleged examples recorded, and in any case were simply acts of revenge for personal or national wrongs; (2) that in no Jewish rite is human blood in any circumstance required or utilized; (3) that there may be a few cases of slaughter to procure blood for medicinal purposes, which, as we have already seen, must not be confused with sacrifice proper, but that there is no real evidence of this; (4) that in the vast majority of cases the Jews were simply made scapegoats for mysterious murders, or even sometimes for accidental deaths, the evidence being generally doubtful, and the so-called 'confessions' being extracted by torture.

LITERATURE.—In addition to the authorities cited in the body of this article, see D. Chwolson, *Die Sabeier und der Sabinismus*, Leipzig, 1856, vol. ii. (references in index, s.v. 'Menschenopfer'); W. R. Smith, *Rel. Sem.*², London, 1894; M. J. Lagrange, *Études sur les religions sémit.*³, Paris, 1905; G. F. Moore, 'Judges,' in ICC, 1895 (for the Jephthah incident); H. Vincent, *Canaan, d'après l'exploration récente*, Paris, 1907; C. Schumacher, *Tell el-Musiellim*, Leipzig, 1908; E. Sellin, *Tell Ta'annek*, Vienna, 1904; E. Mader, 'Die Menschenopfer der alten Hebräer u. der benachbarten Völker,' in *Bardenheuer's Bibl. Studien*, xiv., Freiburg, 1909 (very useful, but references, etc., require verification).

R. A. S. MACALISTER.

HUMAN SACRIFICE (Slavic).—The Baltic Slavs were fanatics and sacrificed Christians to their gods. Every year a Christian was chosen by lot and offered to the god Svantovit in his temple (Helmold, *Chronica Slavorum*, Frankfurt, 1581, *passim*). The head of Bishop John of Mecklenburg was fixed on a lance and offered to the god Radigast (*ib.*). In Russia the so-called *Chronicle of Nestor*, under the year 983, i.e. a

short time before Vladimir's conversion to Christianity, tells that this prince sacrificed human victims to the gods. The lot fell upon the son of a Christian Varegue, who refused to give him up. The Russians forced an entrance into his house and slaughtered him and all his family.

L. LEGER.

HUMAN SACRIFICE (Teutonic).—What Caesar says regarding human sacrifice among the Gauls (*de Bell. Gall.* vi. 16: 'homines immolant, . . . quod pro vita hominis nisi hominis vita reddatur, non posse aliter deorum immortalium numen placari arbitrantur, publiceque eiusdem generis habent instituta sacrificia') holds good also in the case of the Teutons. As late as the historical period, the latter people, when their own lives were imperilled, or when some threatened disaster was to be averted, offered human beings in sacrifice. They believed that the demons and gods who had a desire for human lives would be satisfied, or their anger appeased, by such immolations. The human victims of these rites were not as a rule fully privileged members of the particular community; they were prisoners of war, slaves, outlaws, or children under age. At times when the community had no such persons at its disposal, and, in particular, in military campaigns or expeditions by sea, the victims were selected by lot. Like all other sacrifices among the Teutons, human sacrifices were regulated by the principle *do ut des*. Either they were of a prophylactic character—and from this class sprang the periodic immolations of human lives—or they were performed in fulfilment of vows. They were offered to the demons who caused death, or to the man-stealing souls of the departed, or to the god of death and of the dead; sometimes, however, the sacrifice was paid to the god of war, as also to the deities of fruitfulness, who were to be thus induced to prevent failure of crops and consequent famine. In process of time human sacrifice was superseded by the sacrifice of animals, or of objects regarded as substitutes for human life.

According to Tacitus (*Germ.* 9), all the German tribes offered human sacrifices to Wodan-Mercury on certain days. These immolations, however, were accorded not to Wodan as the supreme god, but to Wodan as the god of death, and were designed to avert a wholesale loss of life. Thus from other references of Tacitus we learn that the Hermunduri, after their victory over the Chatti, offered human lives to the god of death and Mars-Tiu, the god of war (*Ann.* xiii. 57). This is confirmed by the Norse records. When King Aunn of Upsala was growing old, he sacrificed nine of his sons to Óðinn in order that his own life might be prolonged in return (*Heimskringla*, ed. F. Jónsson, Copenhagen, 1900, i. 45 f.). In the same way, according to the *Vikars Saga*, Óðinn bestowed upon his protégé, Starkad, a life of three human generations only on condition that Starkad should sacrifice King Vikar to him; and the god himself put into Starkad's hand the spear with which he was to slay the king (Saxo Grammaticus, i. 276). While these examples belong to the sphere of myth, yet they witness to the people's belief that Óðinn accepted life in exchange for life.

Death holds his harvest in time of war. Hence the Teutons immolated the lives of enemies, especially after a victory. The South Teutonic sources do not usually indicate to whom such sacrifices were offered. Thus, e.g., the women of the Cimbri, after a victory, sacrificed their captives (Strabo, vii. 2. 3); after the battle of Arausio (105 B.C.) the captured Romans were hanged upon trees (Orosius, *Hist.* v. 16); the Teutons of West Germany treated their prisoners in the same way after the battle in the Teutoburger Forest (Tac.

¹ At the moment of going to press the trial is proceeding at Kiev of a Jew, Mendel Beilis, on a charge of ritual murder.

Ann. i. 61); and similar sacrifices were performed by the Heruli (Procop. *de Bell. Got.* ii. 14), the army of Ariovistus (Cæs. *de Bell. Gall.* i. 53), and others. Sometimes we find that a vow of human sacrifice was made before a battle. Thus Radagaisus, the leader of the Teutons, on the occasion of his expedition into Italy, took a vow that, if he conquered, he would sacrifice the captured Christians (Orosius, vii. 37). In the Northern sources the vow and the oblation alike are paid to Óðinn, whose cult, as the god of war and of battles, had found its way into the Scandinavian region from N. Germany. Procopius (*de Bell. Got.* ii. 15) tells us that the Thulites had sacrificed human beings to 'Apsys'. When Jarl Einar of Orkney conquered Halfdan, the son of Harald, he devoted his adversaries to Óðinn in return for his victory (*Icelandic Sagas*, i. p. 8: 'gaf hann Óðni til sigrs sér'). When a Norse general came face to face with the enemy, he cried out: 'Óðinn á yör alla' ('Óðinn has you all').

But Óðinn was at the same time the leader, and thus also the god, of the dead, and his dominion was increased by the addition of fallen warriors (*valr*) to the company of the *Einkherjar*. Hence he not seldom selected his own victims. He sent forth his battle-maidens, the Valkyrs, to bring to his kingdom the heroes who fell in the field of battle. We sometimes even meet with the belief that Óðinn himself took part in the battle, and secured his destined victims. Thus, *e.g.*, he was present at the great battle of Bravalla, in which King Harald of Denmark fought against Hring of Sweden, and the god himself struck King Harald down (Saxo Gram. i. 390; *Fornaldarsögur*, i. 380 f.). Or he gives the adversary of his destined victim a spear with which to slay the latter (*Gautreks Saga*, ed. Ranisch, p. 18 ff.). Sometimes, again, men devoted their own lives to the gods. When Eiríkr the Victorious, King of Sweden, met his nephew Stjufbjörn in battle near Fyrisvellir, he dedicated his life to Óðinn, before the onset, promising that he would die ten years afterwards (*Fornmannasögur*, v. 250). But the Northern Teutons of ancient times, in order to gain a victory over their enemies, sometimes offered sacrifices also to their tutelary deities. When Jarl Hákon of Norway joined battle with the Jömsvikings in the bay of Hjörungun (988), and the victory inclined to the side of the latter, he sacrificed his youngest son, Erling, to his protective goddess Thorgerð Holgabruð, and so won the day (*Jömsvinginga Saga*, cod. A.M. 610, p. 79 f.).

Besides war, expeditions by sea were another great source of danger to life. In the sea there lived a man-stealing demon whom the North Teutons called Rán ('robber'). Rán, with her nine daughters—personifications of the waves—laid hold of her victims in storms at sea. Those who were drowned passed into her kingdom, and were there regaled with lobsters and fish. Hence dwellers by the North Sea, or the ocean, before setting out upon a voyage, offered a human sacrifice, hoping thereby to protect themselves against the rapacity of the sea-demon. The heathen Saxons, before taking ship for home after their marauding and predatory incursions, killed a tenth of all their captives upon the beach, in order that a safe voyage might be granted to them (C. von Richthofen, *Zur Lex Saxonum*, Berlin, 1868, p. 204). Likewise the Normans, when embarking upon their Viking raids by sea, sacrificed human beings to the sea-god (*Mém. de la société des antig. de la Normandie*, xxii. [1869] 129 f.). These sacrifices were performed upon the seashore with special frequency when the ships were unable to put forth because of storms or unfavourable winds. In such emergencies, and especially if other victims

were not available, the individuals to be sacrificed were often chosen by lot from among those who were about to take part in the voyage (Saxo Gram. i. 422). Here should be mentioned also the sacrifices offered by the Frisians to their supreme god Fosite. In Fosite's Land, an island in the North Sea, was situated, not far from a sacred spring, his sanctuary, violation of which was punished by the sacrifice of life after the god had announced by lot that he desired such an expiation (Alcuin, *Vita Willibrordi*, ch. 10; *Friesische Rechtsquellen*, ed. von Richthofen, Berlin, 1840, p. xliii). These immolations were performed upon the seashore; and as far down as Mediæval and Christian times it was a prevalent Frisian belief that the sea demanded the sacrifice of those who had been guilty of robbery (Adam of Bremen, *Hist. Eccl. Hamb.* iv. 3). Here, therefore, the sacrifice was originally offered to the sea-demon, and was transferred to Fosite, and brought into connexion with the violation of his sanctuary only after he had become the supreme object of worship.

But human sacrifices connected with seafaring were not so decidedly of a prophylactic character as those connected with failure of crops. Failure of crops meant famine, and famine meant great loss of life, and here we have the explanation of the human sacrifices performed in times of threatened scarcity. Thus, during a famine, King Heiðrekr, instead of offering up his own son, upon whom the lot had fallen, sacrificed King Hlarrald of Reidgotaland and his retinue (*Hervarar Saga*, ed. S. Bugge, Christiania, 1865, p. 227 f.). Like other races, the Teutons regarded the king as chiefly responsible for a bad harvest. It is recorded that the Swedes attributed both abundance and scarcity of crops to their kings (*Heimskr.* i. 75: 'Sviar eru vanir at kenna konungi bæði ár ok halleri'). Even as late as 1527, we find Gustavus Vasa, at the parliament of Westerås, complaining that the people blamed the king for the lack of rain or sunshine (E. G. Geijer, *Svenska Folkets Hist.*, Örebro, 1837, ii. 71). From heathen times comes the statement that the Swedes sacrificed King Domaldi 'pro fertilitate frugum deae Cereri' (*Mon. Hist. Nor.*, Christiania, 1880, p. 98), when neither the immolation of animals nor that of ordinary men had been able to arrest the blight (*Heimskr.* i. 30 f.). When the immolation of kings, which among the Teutons gradually disappeared within historic times, was at length finally abandoned, the king who was held accountable for famine was dethroned, or even expelled from the country, as was the practice, *e.g.*, among the Burgundians (Amm. Marcell. xxviii. 5. 14).

The practice of periodical human sacrifice, offered in spring to the deities of fertility, arose from the dread of possible dearth. Such a periodical rite was the sacrifice at the festival of Nerthus, which was celebrated every spring by seven tribes on the Baltic Sea (Tac. *Germ.* 40). At this festival the priest drove the car of Nerthus—the divine *Terra Mater*—through the various cantons of the confederacy, in order to secure the fertility of the whole country. Then, when the procession was over, the slaves who had accompanied the car were sacrificed to the goddess in her sacred lake. Another immolation on a large scale took place every ninth year in the ancient and highly venerated sanctuary of Lethra in Zealand, where the residence of the Danish kings was also situated. At this festival likewise the members of the confederation assembled for a joint-celebration in order that, along with their feast, they might perform the great immolation in which ninety-nine human beings, and an equal number of horses, dogs, and cocks, respectively, were sacrificed. This celebra-

tion took place in winter—the season in which elsewhere the ancient Teutonic festival of the dead was held—and was designed to benefit the souls of the under world (*inferos*) and to expiate the sins that they had committed, as the Christian chronicler (Thietmar of Merseburg, *Chronicle*, i. 9) puts it. A similar sacrifice was performed in ancient Upsala. The season of the year at which it took place is not noted in our sources, but was in all probability the early spring. The sacrifice was offered to the god of fertility, Frø or Frey, in whose honour, indeed, Saxo Grammaticus (i. 120), with his euhemeristic mode of explanation, says it was instituted. As in the festival of Nerthus, there was a procession here also, the image of Frey being borne through the district by a young priestess (*Flateyjarbók*, i. 337 ff.). Frey, too, received human sacrifices, at least in the later period of heathenism. These sacrifices, like the great immolation at Lethra, were performed every nine years, and were offered in the sacred grove at Upsala, their object being to propitiate the god, i.e. to secure his favour for the people, and fertility for the land. The victims here were not only human beings, but also horses and dogs, nine of each kind being sacrificed. The bodies of the human victims were hung upon trees in the sacred grove, and the informant of Adam of Bremen (iv. 26–27) says that he had seen seventy-two bodies suspended there.

The Teutons practised these immolations with a view to protecting human life and keeping malignant demons at bay. They had a similar purpose in the sacrifice associated with buildings—a practice met with among all races. It is true that the ancient sources supply no evidence of this observance among the Teutons, but the discovery of skeletons under ancient structures, and the still prevalent belief that great edifices can be made stable by means of sacrifice, indicate that this type of human immolation too existed among the Teutons of heathen times. In order to give stability to a building—to prevent its fall, and the calamity which this would involve—it was the practice to enclose a living person in the masonry under the main supports of the work. As a rule the victims in this case were children. In this particular sacrifice, however, the place of human beings was at an early date supplied by animals (especially cats), or by certain parts of animals (heads of horses, oxen, etc.), and at length by inanimate things (images, coins, etc.). The modern practice of putting in certain objects at the laying of foundation stones is a survival of the ancient rite. In the ancient sacrifices the victims were placed under the threshold of buildings, under the gateways of city walls, and under the pillars of bridges. Then the dikes upon the seacoast, as being specially exposed to the waves, were also protected by human sacrifices. In Oldenburg, children are said to have been thus inhumed as far down as the 17th cent., by way of making the dikes secure (L. Strackerjan, *Aberglaube aus dem Herzogtum Oldenburg*, Oldenburg, 1908, i. 127 ff.). And even at the present day we meet in many districts with the popular belief that certain structures of huge size could never have come into existence at all unless the builder had buried a human being under their supports. Cf. artt. BRIDGE; FOUNDATION.

HUME.—1. Life.—David Hume, best known for his philosophical writings, but a student of history and economics also, was born in Edinburgh on 26th April 1711. As he himself tells us in his autobiography, he came of a family of distinction but of small estate. He was the youngest of three children, who were early left fatherless, but had the care of a devoted mother. Little is known of his early education. He entered the University of Edinburgh in 1723. His philosophical and literary bent showed itself early in life and grew steadily, triumphing in the end over all other interests. He tried business, but found it unsuitable. In 1734 he went to Paris, and there wrote his *Treatise of Human Nature*, the first and second volumes of which were published in 1739, when he was only twenty-eight years old. He expected much from this his first work, but suffered a great disappointment. It 'fell dead-born from the press.' He was not discouraged, however, but proceeded to write in a more popular form. In 1741 the first volume of his *Essays* appeared, and gained for him almost immediately the notice he courted. A second volume of *Essays* followed the next year. In 1744 he had hopes of securing the chair of Moral Philosophy in the University of Edinburgh, but failed. He then secured the post of tutor to the Marquis of Annandale. In 1746 he became secretary to General St. Clair, with whom he remained, with a slight interruption, for two years, continuing his writing. After some time spent at Ninewells, in Berwickshire, he returned to Edinburgh in 1751, where he remained for twelve years. These were the years of his greatest literary activity, in which most of his political, economic, and religious studies were written, together with his *History of England*. In 1763, in company with Lord Hertford, he again visited Paris, and was received there with gratifying distinction. He was under-secretary to General Conway in 1767, and spent two years in London. He returned to Edinburgh in 1769, to remain for the rest of his life, enjoying a wide reputation and a substantial income. He died on 25th August 1776. His own description of himself as 'a man of mild dispositions, of command of temper, of an open, social, and cheerful humour, capable of attachment, but little susceptible of enmity, and of great moderation in all my passions,' is likewise the description of him given by those who knew him well. His friendship for Rousseau, which was poorly requited, was characteristic of him. There was in his disposition a mixture of cynicism and kindness, a scepticism, half serious and half playful, which prevented for a time a just estimate of his ability. But his reputation has grown with the years, and he ranks among the most acute and penetrating students of human nature.

2. Writings.—

- 1739–40, *Treatise of Human Nature*: 'Of the Understanding'; 'Of the Passions'; 'Of Morals,' Edinburgh.
- 1741–42, *Essays Moral and Political*, do.
- 1748, *An Enquiry concerning Human Understanding*, London.
- 1751, *An Enquiry concerning the Principles of Morals*, do.
- 1752, *Political Discourses*, Edinburgh.
- 1754–61, *Four Dissertations*: 'Of the Natural History of Religion'; 'Of the Passions'; 'Of Tragedy'; 'Of the Standard of Taste,' do.
- 1777, *My Own Life*, London.
- 1779, *Dialogues concerning Natural Religion*, do.

3. Philosophy.—Hume's philosophy is usually regarded as the culmination of the line of thought begun by Locke and continued by Berkeley. There is no doubt that he wrote with the ideas of these predecessors in mind, and fully conscious that he was carrying them forward to their ultimate issue. His philosophy, however, is much more than a development of this issue. The turn given to the result, the conception of human nature arising in the course of reaching it, and the consequent

method of conducting inquiry are the really significant things in the work of this Scotaman, who delighted in calling himself a sceptic. His scepticism is not only a suspicion of his predecessors' philosophy; it is also the recommendation of a positive attitude towards life.

In its logical relation to the philosophy of Locke and Berkeley, the philosophy of Hume appears to be the natural and inevitable conclusion of the position they defended in regard to the objects and method of knowledge. Locke (*q.v.*) had reduced his inquiry into the 'original, certainty, and extent of human knowledge' to three fundamental tenets which may be stated as follows: (1) the only immediate objects of knowledge are ideas; (2) all ideas are acquired; and (3) knowledge is a synthesis of ideas, 'the perception of the agreement or disagreement' of them as they are compared and related. Ideas, with Locke, were definitely distinguished from things, on the one hand, and from the mind, on the other hand; they constituted a series of intermediate existences between the mind and the things to which knowledge is supposed to refer. Berkeley (*q.v.*) had questioned the validity of the distinction between ideas and things, if Locke's fundamental theses are to be maintained. If, that is, knowledge is concerned immediately with ideas, their comparisons and relations; if in both object and method it never passes beyond them, then the distinction between ideas and things becomes unintelligible. Knowledge deals directly with its objects; and, if it is a perception of them and their relations, it is evident that objects are what they are in perception; their *esse* is *percipi*. Hume pushes this analysis of Locke's position still farther, attacking the distinction between ideas and the mind, just as Berkeley had attacked the distinction between ideas and things. Nothing is given in perception, he urges, except that which is perceived, namely, perceptions. A mind distinct from perceptions is not given; it is not a datum of experience, an object to be identified among the sum-total of objects perceived. At best it is a group or 'bundle of perceptions' which expands or contracts as perceptions are added or subtracted. In other words, Hume contends that, if we take Locke's fundamental positions rigorously, then we must admit that perceptions—that is, the content immediately given in perception—are our only objects, and knowledge can deal only with relations between perceptions. To pass beyond perceptions, either to the objects which they are supposed to represent or to a mind which is supposed to perceive them, is to take a step which experience does not warrant. Knowledge, as knowledge, is thus rigorously limited to the immediate data of experience, and that means, with Hume, to our perceptions.

These data of experience Hume divides into two classes—impressions and ideas—and rests the distinction between them squarely on experience. The clearest statement of the distinction is found in the second section of the *Enquiry concerning Human Understanding*, entitled, 'Of the Origin of Ideas':

'By the term *impression*, I mean all our more lively perceptions, when we hear, or see, or feel, or love, or hate, or desire, or will. And impressions are distinguished from ideas, which are the less lively perceptions, of which we are conscious, when we reflect on any of those sensations or movements above mentioned.'

Furthermore, all ideas are derived from impressions, but impressions are themselves originals without any discoverable derivation. Ideas are copies, faint reproductions of impressions; and this fact gives us a rule by which to test the soundness of our ideas:

'When we entertain any suspicion that a philosophical term is employed without any meaning or idea (as is but too frequent), we need but enquire, from what impression is that supposed

idea derived? And if it be impossible to assign any, this will serve to confirm our suspicion. By bringing ideas into so clear a light we may reasonably hope to remove all dispute, which may arise, concerning their nature and reality' (*ib.*).

To this test Hume subjects such principal philosophical ideas as those of space, time, cause, necessary connexion, substance, mind, to find in each case that there is no single distinct impression as the source of the idea. Such ideas must be referred to the grouping of impressions or ideas, or to the passage from one impression to another, or from one idea to another. For instance, the idea of substance is not derived from any distinct impression, but

'is nothing but a collection of simple ideas, that are united by the imagination, and have a particular name assigned them, by which we are able to recall, either to ourselves or others, that collection' (*A Treatise of Human Nature*, bk. I. pt. I. sec. VI.).

The idea of necessary connexion is not derived from any necessary connexion discoverable among our impressions, but from the *feeling* attending 'the customary transition of the imagination from one object to its usual attendant.' And the idea of cause and effect is to be understood, not in terms of any discoverable power by which one thing works a change in some other thing, but in terms of the persistent habit of human nature to expect similar facts to be followed by similar experience.

Thus Hume attempted to abolish the leading ideas of the philosophy which preceded him, by pushing to the extreme the doctrine that, so far as knowledge is concerned, we deal only with perceptions and their relations. Since we *perceive* no power, no necessary connexion, no substance in which qualities inhere, and no mind which itself perceives, but only perceptions, impressions, and the ideas derived from them, we must interpret mind, power, substance, and necessary connexion solely in terms of impressions and ideas. When so interpreted, they lose the force and significance usually assigned to them. They cease to be principles applicable to things, and become rather principles for the grouping and associating of ideas. Thus Hume gave a great impetus to associationist psychology, to the view that knowledge is concerned only with original mental elements and their associations.

The result thus reached by Hume he presents to the reader as a recommendation for scepticism. He points out that we naturally tend to repose faith in our senses and to believe that we perceive external objects, whereas philosophy convinces us that we perceive only perceptions which we *suppose* refer to objects or represent them. Of this supposition we can have no proof, for our perceptions, being perceptions and nothing more, never give any indication of external objects. Confined thus to our perceptions, reason can never pass beyond them, and we are forced to doubt the rational soundness of any conclusions which attempt to carry us beyond (see *Human Nature*, bk. I. pt. IV., particularly sections I., II., VI., and VII.).

Hume's reasoning here is so manifestly based upon the assumption that perceptions are not objects—one of Locke's fundamental assumptions, which he has himself declared to be really unintelligible—that it is difficult to follow him seriously. He appears to be playing with the issue to which he has reduced the philosophy of his predecessor. But in another connexion he gives a decidedly serious and important turn to his 'scepticism,' namely, in his doctrine of belief. 'We may well ask,' he states, 'What causes induces us to believe in the existence of body?', but 'tis in vain to ask, Whether there be body or not?' (*ib.* bk. I. pt. IV. sec. II.). This statement may be generalized to indicate how with Hume the problem of belief is more important than the problem of knowledge. To his mind philosophers had busied themselves

too much with the question whether the things in which we naturally believe, such as an external world, power, God, providence, exist—a question which cannot be answered, because, in order to answer it, we should have to pass beyond the limitations which experience puts upon the problem of existence. There is no way of proving that that which we have not experienced exists. It is, therefore, idle to try. But, since we believe in spite of this fact, the grounds of our belief may be investigated. In every case, Hume reduces belief to some principle of human nature, to some habit or propensity of mind, just as he reduces the belief in necessary connexion to the feeling attending the inevitable expectation of similar consequences from similar events. He defines belief generally as 'a lively idea related to or associated with a present impression.' His comment on this definition is not only a clarification of it, but a good illustration of his philosophical position generally.

'When we infer the existence of an object from that of others, some object must always be present either to the memory or senses, in order to be the foundation of our reasoning; since the mind cannot run up with its inferences in *infinitum*. Reason can never satisfy us that the existence of any one object does ever imply that of another; so that when we pass from the impression of one to the idea or belief of another, we are not determin'd by reason, but by custom or a principle of association. But belief is somewhat more than a simple idea. 'Tis a particular manner of forming an idea: And as the same idea can only be vary'd by a variation of its degrees of force and vivacity; it follows upon the whole, that belief is a lively idea produc'd by a relation to a present impression, according to the foregoing definition' (ib. bk. I, pt. iii. sec. vii.).

Then there is a kind of inevitableness about belief; it is the necessary result of putting the mind in certain circumstances. That is why scepticism, although it triumphs over reason and every attempt to establish by reason the objects of belief, is relatively impotent in the face of belief itself. 'Nature'—and here Hume means human nature—'will always maintain her rights, and prevail in the end over any abstract reasoning whatsoever.'

To ground belief on principles of human nature rather than on proved conclusions of reason, however, was for Hume not the end of philosophy. It suggested to him a science of human nature which should set forth in detail the ways in which men act and in which they come to believe in any matter of fact. Such things are with him the proper objects of philosophical inquiry. Only the method applicable to them should be carefully noted. The sub-title to his *Treatise of Human Nature* indicated what he conceived that method to be: 'an attempt to introduce the experimental method of reasoning into moral subjects.' That is, problems concerning man's beliefs and conduct are to be handled by observing how men behave under given conditions, and what actuates and moves them. Above all, the effects of *probable* conclusions based on observed uniformities, sequences, and expectations are to be emphasized. For probability rather than certain conclusions is the great guide in human life. This method has already been illustrated in the foregoing exposition. A further and significant illustration of it is found in Hume's theory of morals.

'Those who affirm,' he says, 'that virtue is nothing but a conformity to reason; that there are eternal fitnesses and unfitnesses of things, which are the same to every rational being that considers them; that the immutable measures of right and wrong impose an obligation, not only on human creatures, but also on the Deity himself: All these systems concur in the opinion, that morality, like truth, is discern'd merely by ideas, and by their juxta-position and comparison. In order, therefore, to judge of these systems, we need only consider, whether it be possible, from reason alone, to distinguish betwixt moral good and evil, or whether there must concur some other principles to enable us to make that distinction' (ib. bk. iii. pt. I. sec. I.).

His own opinion is that, tested by experience, it is not reason alone that enables us to make the distinction. 'Morals excite passions, and produce or prevent actions. Reason of itself is utterly im-

potent in this particular. The rules of morality, therefore, are not the conclusions of our reason. They are conclusions from feeling and sentiment. 'Morality is more properly felt than judg'd of.' Again:

'Virtue is distinguished by the pleasure, and vice by the pain, that any action, sentiment, or character gives us by the mere view and contemplation. This decision is very commodious; because it reduces us to this simple question, *Why any action or sentiment upon the general view or survey gives a certain satisfaction or uneasiness*, in order to shew the origin of its moral rectitude or depravity, without looking for any incomprehensible relations and qualities, which never did exist in nature, nor even in our imagination, by any clear and distinct conception. I flatter myself I have executed a great part of my present design by a statement of the question, which appears to me so free from ambiguity and obscurity' (ib. bk. iii. pt. I. sec. II.).

Thus we are brought to look for the springs of moral action, not in reason, but in a natural quality or disposition of human nature—the disposition to approve or disapprove actions as they affect us with a favourable or unfavourable view of the person acting, as they lead us to sympathize with him and his motives. Hume's theory of morals is thus neither hedonistic nor egoistic primarily. It is not essentially utilitarian, although considerations of utility are important for him. It is rather an attempt to show that morals are pre-rational, finding their origin in the emotions rather than in calculation. His theory is introduced by an elaborate and interesting study of the emotions themselves.

Hume's method of dealing with religion is the same as his method of dealing with morals. His 'Natural History of Religion' opens with these words: 'As every enquiry, which regards religion, is of the utmost importance, there are two questions in particular, which challenge our attention, to wit, that concerning its foundation in reason, and that concerning its origin in human nature.' Here, again, is the sharp contrast between reason and human nature. Hume, indeed, admits that there is rational ground for the 'primary principles of genuine theism,' such as an intelligent author of the whole frame of Nature, but insists that what the majority of men believe about God is not founded on reason. The latter has a natural history which he attempts, with very insufficient data, to trace. Religion, according to him, began as polytheism, and arose 'not from a contemplation of the works of nature, but from a concern with regard to the events of life, and from the incessant hopes and fears which actuate the human mind.' These hopes and fears led men to believe in many corresponding deities. The passage from polytheism to theism was brought about, not so much by any train of philosophical reasoning, as by a tendency to idealize the conception of Deity. There thus results a 'kind of flux and reflux in the human mind,' and 'men have a natural tendency to rise from idolatry to theism, and to sink again from theism into idolatry.' If religion had its origin in reason, such a flux and reflux would be impossible. Throughout this discussion of the natural history of religion, Hume lays little stress on the validity of religious belief. It is with him a characteristic belief of human nature, like belief in causation or in an external world.

The problem of validity is, however, discussed in his *Dialogues concerning Natural Religion*. A supernaturalist, a deist, and a sceptic are the protagonists in the discussion. The argument proceeds with much acuteness. The principal point in dispute is not the existence of God, but how far we can, by reasoning from the character of the world, the events of history, and the good and evil fortunes of men, reach sound conclusions about God's nature and attributes. Are we entitled to infer any greater goodness and perfections in the author of the world than we find exhibited in the

world? Can we infer a providential guidance of the course of events, in face of the fact that a special care for one man's good is bound up with another man's evil? The outcome is inconclusive, befitting, doubtless, the literary demands of the dialogue rather than illustrating Hume's own convictions. He does not hesitate, however, to betray his own preference for the sceptic's position. The subject passes the power of human reason to decide. Arguments balance one another. His closing statement is perhaps the expression of his own attitude:

'If the whole of Natural Theology, as some people seem to maintain, resolves itself into one simple, though somewhat ambiguous, at least undefined proposition, *That the cause or causes of order in the universe probably bear some remote analogy to human intelligence*: If this proposition be not capable of extension, variation, or more particular explication: If it affords no inference that affects human life, or can be the source of any action or forbearance: And if the analogy, imperfect as it is, can be carried no farther than to the human intelligence; and cannot be transferred, with any appearance of probability, to the qualities of the mind: If this really be the case, what can the most inquisitive, contemplative, and religious man do more than give a plain, philosophical assent to the proposition, as often as it occurs; and believe that the arguments, on which it is established, exceed the objections, which lie against it? Some astonishment indeed will naturally arise from the greatness of the object: Some melancholy from its obscurity: Some contempt of human reason, that it can give no solution more satisfactory with regard to so extraordinary and magnificent a question. But believe me, Cleanthes, the most natural sentiment, which a well-disposed mind will feel on this occasion, is a longing desire and expectation, that heaven would be pleased to dissipate, at least alleviate this profound ignorance, by affording some particular revelation to mankind, and making discoveries of the nature, attributes, and operations of the divine object of our faith. A person, seasoned with a just sense of the imperfections of natural reason, will fly to revealed truth with the greatest avidity: While the haughty Dogmatist, persuaded that he can erect a complete system of Theology by the mere help of philosophy, disdains any farther aid, and rejects this adventitious instructor. To be a philosophical Sceptic is, in a man of letters, the first and most essential step towards being a sound, believing Christian; a proposition which I would willingly recommend to the attention of Pamphilus: And I hope Cleanthes will forgive me for interposing so far in the education and instruction of his pupil.'

It should be noted, in conclusion, that Hume wrote many suggestive essays on social and political topics, which, however, have little historical importance. His *History of England* was a partisan document, based on an inadequate knowledge of the facts. It is significant, however, for its emphasis upon the social and literary interests of the nation as of equal importance with its political affairs.

LITERATURE.—The best modern ed. of Hume's works is that by T. H. Green and T. H. Grose, in 4 vols., London, 1874-75. L. A. Selby-Bigge has issued an ed. of the *Enquiries* (Oxford, 1894), and the *Treatise* (2nd ed., do. 1890), with an excellent topical index and critical apparatus. For his life, the principal writings are: J. H. Burton, *Life and Correspondence of David Hume*, Edinburgh, 1846; C. B. Hill, *Letters of Hume to William Strahan*, Oxford, 1888; and C. J. W. Francke, *David Hume*, Haarlem, 1897. Among the many philosophical studies of his work, T. H. Huxley's 'Hume,' in the *English Men of Letters* series (London, 1879), and W. Knight's 'Hume,' in *Philosophical Classics* (Edinburgh, 1886), deserve special mention. The Green-Grose ed. contains an elaborate critical introduction.

FREDERICK J. E. WOODBRIDGE.

HUMILITY.—The Greek word *ταπεινός* is one of those which, like *ἀρετή*, have been rescued and ennobled by Christian ethics (see Trench, *Synonyms of the NT*, Cambridge, 1854, § xlii.; T. K. Abbott, in *ICC* [Edin. 1897] on Eph 4³; cf. art. 'Humility,' in *HDB*).

Humility is an essential Christian grace, and distinguishes the religion of Christ from that of paganism. For Christians to walk 'worthy' of their vocation is to walk 'in lowliness and meekness' (Eph 4²).

'Paganism was not humble, because to paganism the true God was but a name. The whole life and thought of the pagan world was therefore very naturally based on pride. Its literature, its governments, its religious institutions, its social organisation and hierarchy, its doctrines about human life and human duty—all alike were based on the principle of a boundless self-assertion' (Liddon, *BL*, p. 500).

In the later Stoicism, self-reliance reaches its climax

in 'the deification of human virtue, the total absence of all sense of sin, the proud stubborn will that deemed humiliation the worst of stains' (Lecky, *Hist. of Europ. Morals*, London, 1869, i. 223; cf. Seneca, *Ep.* lxxvii. 8, where humility appears as a consciousness of weakness, disqualifying a man for the higher spiritual rank). It is true that even in Aristotle's conception of the *μεγαλψυχος* may possibly be discerned some elements of good: truthfulness of character and speech, magnanimity in overlooking offences, self-respect, and indifference to death (*Eth. Nic.* iv. 3, § 24 ff.). But it remains true on the whole that the highest and most inclusive type of heathen virtue is essentially an exalted form of self-esteem, implying contempt of others. The *μεγαλψυχος* is *ὁ μέγας ἀνὴρ ἀνὴρ ἀξίως ἀν.* In the classical conception of virtue there is, in fact, 'an element of worldly wisdom which does not exclude self-righteousness.' To a heathen the only check upon pride was the prudential consideration that the gods were envious of undue prosperity and hostile to insolence (*ὕβρις*) and self-exaltation. This is, of course, a commonplace of the Greek tragedians. A Greek might have assented to the maxim laid down by St. Paul in Ro 12³ (*φροσύνε ἐν τῷ σωφροσύνῃ*), but he laboured under a real confusion of mind, a real ignorance, as to the actual condition and true possibilities of human nature. In the gospel, humility is the natural fruit of the deepened insight which resulted from Christ's revelation of God, and of the personal example exhibited in the incarnate life. 'The sceptre of God's majesty,' says an early writer (Clem. *ad Cor.* i. xvi.), 'our Lord Jesus Christ came not in the pomp of arrogance or pride, though He might have done so, but in lowliness of mind (*ταπεινοφροσύνη*).' Here we have the keynote of the change which Christianity produced in man's estimate of himself. It may be added that 'magnanimity' ranks as a genuine Christian virtue; it is not, however, identical with humility, though quite compatible with it. Aquinas regards it as a species of fortitude (*Sum.* ii. 2. qu. cxxix.).

1. In the NT, humility seems to be considered under two main aspects.

(1) *As a personal virtue.*—From this point of view humility is that fundamental quality which places man in the only right relation to God. 'Humility,' says Aquinas, 'strictly speaking, implies the reverence whereby man subjects himself to God' (*Sum.* ii. 2. qu. clxi. art. 3 resp.). Humility is the victory of truth in character; that just self-estimate which, while not depreciating personal gifts or excellences, always refers them to God as their true and only source. This just self-estimate includes both the sense of creaturely limitations and the consciousness of personal weakness and sinfulness. 'Humilitas facit quod homo seipsum parvipendat, secundum considerationem proprii defectus' (*Sum.* ii. 2. qu. cxxix. art. 3 ad 4).

Humility is thus the initial grace of the Christian life. Its fundamental place in character is taught by Christ in the first Beatitude (Mt 5³); and also in the injunction of Mt 18³, Mk 10¹⁵, Lk 18¹⁷. It implies 'the acknowledgment of God' and of what man really is in His sight, and thus includes: (a) the spirit of *creaturely dependence and service*. Our Lord's great humility was manifested in His assumption of the 'form of a servant,' as contrasted with the glory and sovereignty of His original and essential state as Son of God (Ph 2⁷; see Corn. & Lap. *ad loc.*, and cf. Joh. Damasc. *de Orth. Fid.* iii. 21). Further, in virtue of the union of His human nature with Deity, He who is one

¹ Aristotle says (iv. B. 16): *δοκεῖν ἡ μεγαλψυχία οὐκ ἀνέμειναι τὴν εὐνοίαν τῶν ἀνθρώπων*.

with the Author and Giver of all spiritual blessings became Himself a receiver, inferior to the Father 'as touching his manhood' and dependent on Him for all that was needed to sustain His manhood, to equip it for its redemptive work, and to advance its condition (see Hooker, *Eccles. Pol.*, bk. v. ch. 54; Aquin. *Sum.* iii. qu. viii.). The unique characteristic of the Christian faith is the mystery of this self-humiliation; the fact that the pattern of humility is nothing lower or less than the incarnate life of the Son of God. Humility, then, in its primary sense is the spirit of perfect dependence on God.

'By humility I understand such a spirit or gracious property in the soul of man or any intellectual creature as that hereby he does sensibly and affectionately attribute all that he has or can do to God, the Author and Giver of every good and perfect gift' (H. More, 'Of the Divine Life,' ch. xii., *Theol. Works*, London, 1708, p. 37).

(b) *Holy fear or the sense of sin.*—'The poor in spirit,' says Augustine, 'are the humble and those who fear God. Nor can beatitude have any other beginning' (*Serm. Dom. in monte*, i. 3). Pride or self-assertion is the root of sin; the beginning of wisdom is the fear which springs from the sense of personal unworthiness. Thus Bernard calls self-knowledge and the humility which it produces 'mater salutis' (*in Cant.* xxxvii. 1). Humility is the essence of a true conversion; it is the indispensable secret of progress; it is the pledge of security, since even the grace already bestowed on the soul may be lost by pride.

This has never been more forcibly expressed than in a famous passage of Augustine (*Ep.* 118 'ad Diosc.', 22). He bids Dioscorus submit himself wholly and without reserve to the yoke of Christ, and tread no other road to the attainment of truth than that which was trodden by Him who, as God, saw the infirmity of our steps. 'And that road is first humility, secondly humility, thirdly humility. . . . And as often as I was asked about the precepts of Christian religion, I should choose to answer nothing else than "Humility," though perhaps necessity would compel me to say other things.'

(2) *As a social virtue.*—On the other hand, humility is commended in the NT as a social virtue, as, for instance, in Ph 2¹⁻¹¹. Humility is a form of moderation (cf. *Sum.* ii. 2. qu. clxi. art. 4). The point enforced by Christ's example in Ph 2 is that He did not insist upon rights which He might in strict justice have claimed. St. Paul implies that the desire for superiority, vainglory, and the spirit of partisanship are fatal to Christian unity and concord. The humility which honours all men and defers to them in *quantum in eis aliquid inspicit de donis Dei* tends to promote the well-being of the community (Ro 12³, Eph 4²⁻³, Ph 2³). It excludes the envy which springs from comparing self with others (2 Co 10¹²); it encourages the spirit of contentment and mutual serviceableness. The humble man will constantly recognize that any gift which gives him superiority over his fellows is in a measure due to the good influence of others—parents, friends, teachers, even enemies who have dealt candidly with his defects; and, further, 'so far from wishing to keep his virtues to himself he will wish that they were common as the air of heaven, that "all the Lord's people were prophets." Thus humility is a social virtue and may be regarded as an aspect of benevolence' (Rashdall, *The Theory of Good and Evil*, i. 206). Hence in the interests of peace, whether in the family or in the Church, the NT frequently insists on the duty of mutual subjection (e.g. Eph 5¹, 1 P 5⁵). Further, as one great secret of effective social service is patient study of the conditions of each problem that needs solution, the teachable or humble temper is essential—the spirit which is willing to learn and observe before taking action. Bernard's observation is here in point, that the Church needs reservoirs rather than pipes ('Canales hodie in Ecclesia multos habemus, conchas vero perpercas'). 'Men,' he complains, 'are nowa-

days so full of charity that they wish to pour out before they are full; they are more ready to speak than to hear, and eager to teach what they have not learned' (*in Cant.* xviii. 3). The scientific spirit needed in dealing with modern social problems is a spirit of humility, willing to put itself to school with facts, and mindful of Bacon's maxim, *artem invenienti cum inventis adolescere posse*.¹

2. The acts or offices of humility must necessarily vary with the particular states and conditions of men. The Benedictine rule, with its 'twelve grades' of humility, is briefly discussed by Aquinas (*Sum.* ii. 2. qu. clxi. art. 6; see also the last book of Cassian's *Inst.*, 'de Superbia'). In ordinary life the grace of humility takes such forms as are described by Jeremy Taylor (*Holy Living*, ch. ii. § 4). It is specially tested in a man's life with his equals.

'The hardest trial of humility must be not towards a person to whom you are superior, and who acknowledges that superiority, but towards a person with whom you are on equal footing of competition. . . . The relations to equals are thus the more real trial of humility than the relations to inferiors' (Mozley, *Univ. Sermon*, London, 1876, ix. 'Our Duty to Equals,' p. 220).

3. It may be noticed, in conclusion, that some clear principles connected with our subject emerge in our Lord's teaching, and find an echo in common human experience.—(1) *Docility or receptiveness*—the temper of the child is a necessary condition of spiritual as of mental growth (see PASSIVITY).—(2) *The spirit of dependence* is the condition of spiritual fruitfulness (Jn 15⁵). The Christian ideal is not self-reliance, but unlimited confidence in the goodwill and co-operating grace of God at every stage of moral and spiritual progress. The Christian echoes St. Paul's confession: *ἐνικουπλάσθην τυχὼν τῆς ἀπο τοῦ θεοῦ ἀρχῆς τῆς ἡμέρας ταύτης ἕσθηκα* (Ac 26²). The sense of personal insufficiency is never diminished in the true Christian. In proportion to his growth in grace he realizes more perfectly his 'universal need' of God—his complete dependence on Christ, his all-sufficiency in Christ (Ph 4¹²; cf. 2 Co 12⁹). We may contrast the boast of the Stoic: 'Sapiens cum Diis ex pari vivit, Deorum socius, non supplex' (Seneca, quoted by J. Smith, *Select Discourses*, London, 1660, p. 390). Again: 'Dicam quomodo intelligas sanum; si se ipse contentus est, si confidit sibi' (Sen. *Ep.* 72).—(3) *Humility is the way of exaltation* (Lk 14¹¹ 18³⁴). This is a saying of very wide scope. The supreme illustration of its meaning is seen in the Passion and Resurrection of Christ Himself. The condition of all real excellence is a just estimate by man of his own capacity, and of the greatness of the object at which he aims. The condition of acquiring the capacity to rule is service (Mt 20²⁶). The hope of progress lies in that self-dissatisfaction and habit of aspiration which is the negation of pride (Ph 3⁷⁻¹⁴). Christianity, in fact, as Pascal points out (*Pensées*, pt. ii. art. 4), combines what had hitherto seemed contrary: greatness of character and humility.—(4) The principle implied in Lk 16¹⁰ and in 1 Co 4³⁻⁵—the principle that *what a man is in God's sight, that and nothing else he is*. Humility implies a constant sense of the possible reversal of all human judgment. Hence humility is closely allied to Christian simplicity or single-mindedness, which aims simply at pleasing God (Ro 8⁵, 1 Co 7², 1 Th 4¹), which strives after a goodness such as He can accept (2 Co 5⁹), and which recognizes everywhere the presence of an unseen Lord who searches the heart. So Augustine describes the ideal righteous man as being one who 'Deum ubique praesentem ita cognoscat sicut sancti postea

¹ Cf. Huxley's maxim: 'Science seems to me to teach in the highest and strongest manner the great truth which is embodied in the Christian conception of entire surrender to the will of God. Sit down before facts as a little child, follow humbly wherever nature leads, or you shall learn nothing' ('Letter to G. Kingsley,' *Life and Letters*, ed. L. Huxley, London, 1900, i. 219).

cognituri sunt' (*de Spir. et Litt.* 86; cf. Cassian, *Inst.* xii. 32).

HUMOUR.—The quality of humour shares in the mystery which attaches to all forms of human emotion. In its genuine manifestations it is as spontaneous as laughter, and as inexplicable. It mocks all attempts at definition. We can 'see' it, and possess it, and enjoy it, but cannot say with definiteness what it is.

The word itself has had a changeful history. Starting with the significance of moisture or fluid, it was employed in pre-scientific medicine to describe what were regarded as the four principal humours or fluids of the human body, viz. blood, choler, phlegm, and melancholy. It then came to denote a passing disposition, a transient mood or temper, because these were supposed to originate from the condition of the humours. When the mood was permanent or characteristic, it indicated what we call an eccentricity. To Dr. Johnson a humorist was 'a man with odd conceits,' and to Goldsmith 'an eccentric fellow.' In modern usage, humour is generally restricted to the sense of the ludicrous, or that power in man which enables him to see and enjoy what is amusing. (There are some grounds for suspecting that some of the dumb animals are not entirely destitute of it.)

The common opinion among modern psychologists is that the perception of the incongruous and the inconsistent is the cause or source of humour. It is invariably associated with alertness and breadth of mind, a keen sense of proportion, and faculties of quick observation and comparison. It involves a certain detachment from or superiority to the disturbing experiences of life. It appreciates the whimsicalities and contradictions of life, recognizes the existence of what is unexpected and absurd, and extracts joy out of what might be a cause of sadness. It acts as a check to one-sided views of life, and champions the ideas of 'common sense' against the visionary aims of the idealist. It is complex in its character and action. It is 'essentially the gift of rising above the interest with which we [and others] may be engaged and reducing it to its limited importance, or even to its proper insignificance, in the great whole of things in which it is a part' (E. Caird, *CR* lxx. [1896] 818). Again, it sometimes exaggerates one special feature, or characteristic (as in caricature), so that it appears absurd, because out of relation to the whole to which it belongs; or it creates amusement by bringing into a temporary union ideas and things which do not belong to the same category. Bergson finds the source of the incongruity in the rigidity, automatism, or distraction to which we are liable, and which hinders us from adapting ourselves quickly to different situations, or from moulding our actions in swift accordance with the varying demands of changeable life. The contrasts between the ideal and the real, between the apparent dignity of man and the situations in which he sometimes finds himself, between the high aims which he sets before him and the poor measure of his attainment, the linking together of things and ideas which are essentially different—these are the perennial founts of humour. The sharper the contrast, and the more sudden the perception of it, the more intense is the emotion which is produced. Humour then relieves itself in an explosion of laughter. The element of sur-

prise is an almost necessary adjunct of humour. Not infrequently the contrast involves a moral incongruity. It is this fact that places humour as a weapon in the hands of the reformer.

Humour and wit are closely allied. In general they find their subjects in the same sphere, but they use them differently. Humour is kindly, and in its genuine forms includes the quality of sympathy; wit is sharper and more apt to wound. Wit is a flash, humour is a genial glow; wit is intensive, humour is relaxing. Qualities of feeling predominate in humour, in wit qualities of intellect. The boundaries of the two are somewhat indeterminate. The pleasure which humour evokes is more genial than that to which wit gives rise.

Humour assumes many forms: verbal humour, the humour of the situation, the burlesque, the practical joke, satiric humour, sardonic humour, and so on.

The sense of humour is universally desired, and is highly valued. No one will readily acknowledge that he does not have it. Without it man is scarcely human. It is a means of self-criticism, and saves from the folly of self-importance and the sin of self-righteousness. Personal vanity or pride cannot survive the possession of this self-corrector. It is a protection against excess; it fosters humility, and yet lessens the bitterness of failure and blundering. It softens the angularities of individual character and social life, and introduces a welcome charity into social judgments. It carries with it a tolerance which makes it a foundation of good fellowship. It is essentially a social quality, and postulates an absorbing interest in life. The cynic may live alone; the humorist delights in company. The cynic may be a pessimist, but pessimism is impossible to the humorist. In spite of his tendency to poke fun at the ideal, belittle the 'strenuous life,' and laugh at failure, he yet believes in the ideal. Humour tends to keep the heart young. As a criticism of social life and character it is invincible and invaluable. Humour is the inveterate foe of convention, and loves to make fun of Mrs. Grundy and all who follow in her train. It keeps social life from falling into ruts or from staying there when it does so. Many abuses which resist the combined assaults of reason, argument, and denunciation yield to the genial onslaught of humour, and fly before its shouts of laughter. Humour is an almost necessary quality in the reformer. Luther owed much of his success to his possession of it. It was also a prominent characteristic of Lincoln. The fanatic is destitute of it, and this may account for the fact that he generally fails. Humour of itself does not reform; it is only a force that weakens the strength of what is to be changed, and prepares the way for the reform.

But, apart from its practical influences on conduct and society, it adds a joy to life without which life would be dull and poor. It is a relaxation and a delight to step aside for a moment from the sober, grey, and solemn world, where reason and order rule, into a realm where the whimsical, the incongruous, and the absurd hold sway, and summon us to laughter or play. These also are part and parcel of the life of the world. Some of the world's greatest benefactors have been its humorists. They brighten with a touch of fun the horizon of life, which is often dark and dismal. They help us to see and to make life a gladsome thing. Even Dante named his great work the *Divine Comedy*, because he believed in a happy ending to the story of the world's life. In the closing paragraph of Plato's *Symposium*, Aristodemus reports that, when only half-awake, he heard Socrates say that the genius of tragedy was the same as the genius of comedy,

and that a true artist in the one was also a true artist in the other.

But humour, like many of the powers and qualities of man, is capable of evil as well as of good. It has a tendency to coarseness and even obscenity. Many of the humorous stories of the world cannot be repeated in decent society. Humour is often irreverent, and hurtful to the finer aspects of the emotional and spiritual life. The dreams which men cherish of higher and better things wither away under its mocking touch. They may be called 'quixotic,' but 'by these things men live, and wholly therein is the life of (the) spirit' (Is 38th). It may weaken the pursuit of a high ideal, because it sees the apparent futility of effort towards it. It may lead to the neglect of the more serious and noble side of life, and in its degradation treat the most solemn facts and experiences as subjects for laughter. Those who possess the sense of humour in a high degree are always in danger of being carried away by it. Their tendency to exaggeration makes us think that the humorist is not always to be taken seriously. We cannot accept the characterizations of Aristophanes as true representations of the men and women of Athens in his day, nor can we regard Rabelais as a trustworthy exponent of human nature. Although humour is a basis of good-fellowship, when unrestrained it tends to destroy friendship. It may develop heartlessness and ally itself with cruelty. No one likes to be laughed at, but the humorist not infrequently enjoys the misery which his 'fun' creates. Over-indulgence in humour leads to levity, flippancy, and shallowness. It is a quality which needs to be rigorously restrained. Humour for humour's sake is depressing; it adds a burden to life. The buffoon and the clown are out of place as permanent features of this work-a-day world.

It is a curious fact that humour differs widely at different periods of the individual life and among different people. The humour of the schoolboy is an annoyance to him when he is grown up. One of the gulfs which separate the races of the world is their differing conceptions of the humorous. A series of books dealing with the humour of different nations of Europe has been published by the Walter Scott Company, London—French, German, Italian, 1892; American, Dutch, 1893; Irish, Spanish, 1894; Russian, 1895. Outside of the particular nations to which the books refer, they are found to be dull.

JOHN REID.

HUNGARIANS.—There is not much of a distinctive kind that can be said about the religion of the ancient Hungarians. They worshipped the usual objects of Nature. Their religion, like that of many other nomadic peoples, was a very low polytheism. Their gods were personifications of natural phenomena or of natural forces. The personification did not reach a high grade of evolu-

tion, and the gods did not differ much from the phenomena, and possessed very little that could be called spiritual. There was a little more of a spiritual character attributed to their highest god, whom they called Isten (or Ishten), the conception of whom overshadowed that of the polytheistic 'little' gods. There were many 'little' gods; and the heathen Hungarians believed that the gods of the rain, the winds, life, death, winter, summer, the trees, the water, the day and the night, had a better and greater influence on human life and all its events than the highest god; and therefore they offered burnt-offerings to the 'little' gods, and thought that they were the counsellors of the highest god. They sacrificed especially white horses.

As to other religious tenets of the Hungarians, we know very little indeed. They had no elaborate system of theology, and the triumphant Christianity of the 11th cent. passed severe laws for the abolition of their rites, their hymns, and even their places of worship. But we know that they had a belief in a life beyond the grave. At the burial of their warriors they took care that their horses and dogs should be interred with them. They also thought that the enemy slain in a battle by a Hungarian was bound to serve the Hungarian hero after his death. They held firmly that the highest god loved the brave, and the greatest virtue with which he could endow a man was bravery.

The priests of the Hungarians were called *tákos* (or *taktosh*), 'wise man.' They performed the sacrifices, said the simple prayers, sang of the great deeds of heroes. They resembled the Welsh bards somewhat; but they had less religious strength than the bards, and accordingly Christianity not only vanquished but almost extirpated the old heathen religion of the Hungarians.

Among the modern Hungarians, fairies (*tündér*, 'apparitions') are, in older tradition, subject to a goddess named Furuzsina, and live in a far-away land of matchless beauty, though they still have mansions in this world (especially mountain castles) till vexed by mankind. They often entice away mortals whom they love. Fate-telling fairies (usually three, but also seven or nine in number) are also prominent figures in Hungarian folk-belief, dwelling near a spring, well, or brook. These fates are usually considered beneficent. Other fairies dwell in lakes and rivers, and there are, besides, mermen (*víci emberék*) and mermaids, who often form love-unions with human beings. Many springs are regarded as holy, and drought follows if stones are thrown into them, while folk-customs often retain traces of the wide-spread belief in the magic properties of water. Giants and dwarfs figure in popular belief; the former are, in general, kindly, and in their wonderfully beautiful palaces they live lives of model bliss and propriety. Unlike giants generally, the Hungarian giants are wise, and are particularly distinguished by the fact that they keep their strength in a vat in the seventh cellar of their palaces, taking with them only what they may require. The chief function of dwarfs is to guard treasure; but they take their third owner (they can be sold by one man to another) to hell. Obvious traces of an early fire-cult have survived, especially about the time of the summer solstice. The winds are the children of the 'wind-mother' (*Szélanya*) or the subjects of the 'wind-king' (*Szélkirály*); and apoplexy is often called 'wind-stroke' (*szélütés*). Generally speaking, however, the belief in disease-demons is rather attenuated among the modern Hungarians. In regard to Hungarian ideas concerning fate, it is noteworthy that the old term for casting lots is *nyílásmi*, 'to shoot an arrow.'

Before the fates have decided the future of a child, witches may decree it an evil destiny, though this may sometimes be ameliorated. The life of each man is predestined, but, if at midnight one throws gold coins away at a cross-road, he who picks them up surrenders to the other as many years as he takes coins. Traces of foundation sacrifice still persist, the heads of horses or dogs, or the bones of a raven or black cock, being buried in the foundation of the building.

The dog and the wolf were sacred animals to the ancient Hungarians, who made oath by them. After death shepherds and horse-keepers who have suffered wrong during life, as well as those who have been brought to harm by perjury of others, are transformed into wolves, horses, and dogs respectively; and in these forms they obtain requital for the injustice done them.

Folk-charms are numerous, and whatsoever has appertained to, or come in contact with, the dead has magic potency, which may be used either for beneficent or for maleficent purposes; while the hair, blood, etc. of another gives him or her who secretly obtains it power over its original owner. There is a firm belief in witches, changelings, etc., part of which may be borrowed from neighbouring peoples, but much of which may equally well be an inheritance from the pagan period.

HUNTING AND FISHING.—In the history of culture the hunter as a representative of a stage of development in human progress stands between the collector who depends entirely upon the provision of Nature for the roots, fruits, eggs, insects, etc., which he gathers while making no effort to ensure his food supply in the future, and the herdsman whose means of livelihood are his flocks or herds of domesticated animals. By a hunting community must be understood one in which the principal source of food supply is the flesh of wild animals killed or taken in the chase. In an early stage of social development, such a community will continue to employ the methods of the collector for vegetable food. The Tasmanians did not practise agriculture, nor did the aborigines of Australia, except in the west, where the cultivation of purslane is recorded and the heads of the yams were re-inserted in the ground after the plants had been dug up.¹ Some races, however, while still in the hunting stage, have cultivated the ground, even though by such primitive methods as those of the Bushmen. The Indians of North America, excepting the Pueblo Indians, at the time of their discovery were hunters, but practised agriculture to a certain extent, the cultivation of the ground being left to the women. Further, although hunting and fishing may no longer constitute the characteristic industry of a community, and may come to be regarded as a sport, as in dynastic Egypt and other countries of high civilization such as Persia and India, the methods of the primitive hunter survive, and in many cases are the principal or only means of providing a supply of animal food. Throughout the greater part of Africa the peoples, according to the character of their environment, are either agriculturists or herdsmen; but, as they do not, as a rule, eat their cattle,

they are compelled to rely upon the chase for fresh meat. It is not uncommon in such cases for the hunters to be a class apart, as, for instance, on the Congo, where men are chosen to lead hunting expeditions on account of their special skill, or in Uganda, where there are professionals, the sons of hunters, trained to the chase from an early age, who do nothing else.

In a hunting community, the conditions of life are not such as to favour either a high standard of, or progress in, culture. Climatic conditions, as a rule, are such as either to absorb the whole time and energy of the people in the provision of the bare necessities of existence, as in Australia, the Tundra region of Asia, and in the extreme north and south of America, or so little effort is required to secure a livelihood, as in the tropics, that it affords no stimulus to advancement. An almost equally effective check on progress is the migratory character of the hunting community, necessitated either by the seasonal movement of the game or by its scarcity. As a consequence, habitations are usually of a flimsy and temporary character, except where the rigour of the climate demands protection against cold and storm; the number of individuals forming the group is comparatively small, because a wide extent of country is required for the support of each member; and social organization is loose, because the solitary hunter has not yet learnt to appreciate the advantage of co-operation and subordination. Authority, in so far as it exists at all, rests with the old men or tends to centre in the skilled hunter.

The natives of Australia, when on their hunting expeditions, erected shelters of interwoven boughs, and, although it is not correct to say of all the tribes that they erected no permanent habitations, some of them, especially in the south and west, lived in huts which were little more than windbreaks. The Bushmen wandered about in small groups; they had no chiefs, and their habitations were screens made from the boughs of trees. Among the Andaman Islanders the sites of the encampments were determined largely by their fitness for the pursuit of game and fishing;² of their three types of habitations, the temporary shelter, consisting of a lean-to roof of palm-leaves affixed to two posts, was probably at one time the only form in use; the authority of their chiefs was very restricted; and the group numbered from fifty to eighty individuals. The Negrillos of Central Africa, the rock Veddas, the wilder Semang of the Malay Peninsula, and the nomadic Aetas (Philippines) may be mentioned as further examples of the primitive culture and social organization of the small hunting group. In North America the tribes were all hunters or fishers, with the exception of the tribes of the south-west, but exhibited considerable variety in culture and social organization. Many practised agriculture, especially in latitudes where the maize ripens. The Shoshones had a very loose social organization and an almost entire absence of ceremonial. The Yuma and Seri of California were both at a very low stage in culture; the latter ate their food for the most part raw, had no domestic animals except dogs, and did not practise agriculture. On the plains the buffalo was the chief staple of food and material of industry. Here the social organization was of a more stable and closely woven character, and the chieftainship was acquired by merit; this was no doubt to some extent due to the fact that the methods pursued in hunting the buffalo required concerted action and subordination. The Algonquins and Iroquois of the northern woodlands practised agriculture, and had evolved a highly organized machinery of government. In South America the Arawak of Guiana, the Botocudo and Bororo of Brazil, the Tehuelche, and the Fuegians—to mention instances only—are nomads with a loose tribal organization and a low type of culture, and are, for the most part, ignorant of agriculture. The Eskimos afford a typical example of a nomadic hunting community which draws its means of existence almost entirely from the animal world, and varies its location, methods, and objects of pursuit in accordance with the changes of season. In Africa, however, where hunting and fishing are universal, even the tribes which may be described as hunters have to a large extent abandoned nomadic habits through the additional means of livelihood afforded by the cultivation of the ground by their women. To the nomad herdsmen and the agriculturists of East Africa, hunting is merely an additional means of subsistence, followed, as by the peasant population of Uganda, partly as a sport, partly through the desire for meat as a supplement to the ordinary diet.

Although the culture of the hunter is, speaking generally, of a rude type, the implements and weapons which he has devised to meet his needs

¹ E. H. Man, *Aboriginal Inhabitants of the Andaman Islands*, London, 1882, p. 122.

² A. C. Gregory, *JAI* xvi. [1895] 151.

indicate a remarkable capacity to adapt himself to his environment, and, within the limits of the available material, to provide himself with the means most suitable for the attainment of his end.

The use of the bow and arrow is almost universal, the blunt arrow being employed in many localities for killing birds. This weapon, however, is not found in Australia or in most parts of the Pacific, except occasionally as a toy. Knives occur in a variety of forms as well as spears. It is, however, in the weapons of a more restricted distribution, devised to meet special circumstances, that the ingenuity and adaptability of the primitive hunter have been most strikingly displayed; as, for instance, in the case of the harpoon, of which the essential feature is that the head should come apart from, but continue to be attached to, the shaft when it strikes the quarry, to mark its position in water, or hamper its escape on land. The blowpipe, used with light poisoned darts, which is found in South Eastern Asia—the Malay Peninsula and adjacent islands—and in the forest regions of South America, and was at one time used in parts of the southern United States, is another example of a weapon admirably adapted to meet special conditions, and especially fitted for use in killing small birds and monkeys in a dense forest country.

It is not merely in devising weapons that primitive man shows this peculiarly acute quality of mind. The methods and devices used in hunting, trapping, and fishing show a capacity for close observation of the habits and psychology of wild animals which, with ready ability, has been turned to full advantage.

Hunting, when considered from the point of view of methods and apparatus, resolves itself into a question of the means by which man seeks to overcome the strength, fleetness of foot, capacity for flight, cunning, timidity, or aptitude for concealment of the animal world. In its simplest form the acquisition of animal food does not differ materially from the earliest method by which a primitive community procures its supplies of vegetable food: in each case, the process is one of simple collection.

In Australia and the Andaman Islands, mussels and shell-fish are gathered at low tide by hand. The "kitchen middens" of the Neolithic age in Denmark, the shell-mounds of Patagonia, of the Western coasts of both South and North America—to mention instances only—are relics of a population which at some time existed wholly or for the greater part by this means. The collection of insects, grubs, or birds' eggs, especially sea birds' eggs, involved as a rule no special measures. Sometimes the birds themselves were taken from the nest by hand, as the natives of Gippsland took the cockatoo. In California, in Tasmania, and in Australia on Lake Alexandrina, shell-fish were obtained by women by diving. The Eskimos of Alaska have been known to catch a seal simply with the hands as it tried to escape across the ice. The Australian women catch flounders, mud fish, and the like under the soles of the feet while wading. The beginning of the use of appliances in fishing may be seen in the branch of a tree employed by tribes of the north-west coast of America to dip up fish spawn from the water, and in the gunny bag held in the water by the Australian women, when the river is in flood, to catch small fry as they swim down stream. In these cases, no pursuit of the prey is involved, and this is also the case when, either by accident or as the result of observation, the prey is found in its lair. In California, the Indians used to cut down trees, sometimes as many as nine or ten, one after the other, in the hope of finding a squirrel in its nest. In Australia, the bark of the tree was examined for marks of the opossum's claws; when its nest was found, the animal was dragged out and killed.

Failing the discovery of the lair, the hunter stationed himself at some spot which, to his knowledge, was frequented by the animal, either a water-hole or a track leading to the water-hole, or some spot at which it came to feed. In the Torres Straits, the native, having observed the invariable route by which pigeons return from their feeding-grounds day by day, stations himself in a tree near their line of flight, and with a long slender stick attached to his wrist knocks the birds down as they pass. In Hinchinbrook Island, trees were built under the trees in which the birds roosted, while on the Tully river cockatoos were knocked off their roosting-places at night with a long cane.¹ In the winter the Eskimo takes advantage of the habits of the seal and waits by the holes at which it comes out to breathe, or, later in the year, appears as it basks in the

sun. The Ekoi build platforms on the trees visited by the bush beasts, from which they kill the animals as they eat the fruit on the ground below.² It was, however, in running down animals that the savage hunter displayed the greatest endurance. The Australian hunter captured the kangaroo by pursuit only, following it until it was exhausted. The Tasmanians ran down the emu, and the natives of Hawaii the goat.³ The Wallaki Indians of California hunted the deer on foot, men posted at intervals along its trail taking up the following in relays.

The pursuit of wild animals with the object of securing the prey by tiring it out demanded exceptional speed and endurance, while the result must, not infrequently, have been disappointing. Primitive man has, therefore, preferred, as a rule, to rely upon other means of approaching sufficiently near to his prey to enable him to disable and kill it. Both tracking and stalking require highly trained powers of observation combined with great skill to avoid attracting the attention of the quarry through its senses of smell, sight, or hearing. Record has frequently been made of the ability with which primitive peoples move noiselessly through jungle and forest without disturbing a twig.⁴

Most hunting races, however, do not rely entirely upon their own skill in tracking; they have utilized the natural instincts, speed and scenting powers, of the dog.

The Australians employ the dingo in hunting the opossum, emu, and kangaroo. In hunting the musk ox, the Eskimo dogs outstripped their masters and held the animals at bay until the latter came up. In the Malay Peninsula only the wild tribes use the dog. The Benua-Jakun, while floating down a stream in his canoe, sends his dog through the woods along the bank to hunt the mouse-deer. In Southern Nigeria the Ekoi also train their dogs to hunt by themselves. Both the Boloki (Congo) and the Ekoi perform certain rites over the dogs before they are free of the bush, to make them courageous and of keen scent.⁵ The hunting leopard of India and Persia and the hawk in Europe and in Tartary, as recorded by Marco Polo, are other instances in which the natural instincts of animals have been utilized by man in hunting. In fishing, the employment of the remora, or sucker-fish, by the natives of the Antilles and the Australians to hunt the turtle or dugong is a curious analogue.

In approaching the quarry, advantage is taken of shelter, both natural and artificial. The Australian, when hunting duck, swims beneath the surface of the water, while breathing through a reed. On the Nile, the ancient Egyptians hunted duck in much the same manner, covering their heads with a calabash; while in China it used to be the custom to catch swans by placing a basket containing bait on the head of the swimmer. Convenient trees, shrubs, or tufts of grass were used to cover the approach of the hunter; sometimes branches, small bushes, or bunches of grass were carried in the hand. The Bushman crept up behind a grass screen to the herds of antelopes, ostriches, or other game; the Australian used a screen of bushes, or in some districts a collar-like head-dress, when stalking the emu.

The appearance of the animal to be caught is frequently imitated.

The Bushman hunted the quagga, which grazes with the ostrich, by covering himself with the skin of one of these birds, imitating their action in feeding by means of a stick thrust up through the neck. Among the Dogrib Indians, two hunters covered themselves with the skin of a reindeer, the first holding in his hands bushes against which he rubbed the head of the animal in imitation of its action in feeding. In North America, in driving the buffalo one of the hunters, dressed up in a buffalo skin, enticed the herd to the edge of the precipice towards which it was desired to drive them.⁶

Various forms of decoy were employed.

A method frequently used in Australia was to fasten a wounded bird to a tree. It then attracted others by its cries.

Sometimes the cry of the bird was imitated by the hunter. The Botocondo attracted the crocodile to the bank by rubbing its eggs one against the other. Another form of decoy was an imitation of the action of the prey of the bird or animal. The Australians attracted pelicans by throwing shells into the water, imitating the splashes made by small fish.

The use of snares, usually set in a path frequented by game or at the approach to a water-hole, is wide-spread. The initial stage in the use of bait, snare, and trap is seen in a method adopted in New South Wales to catch birds of prey by attracting them with a piece of fish held in the hand of a man who pretends to be asleep, and in the practice of catching cormorants by posts set in the water upon which the birds alight and are noosed by the hunter who swims out to them.¹ A somewhat similar method is employed by the Eskimos in catching gulls: a hunter stationed inside a snow hut with a transparent slab of ice in the roof catches the birds by the feet as they alight on the top. The noose appears in its most highly developed form in America as the lasso of the American Indian; another appliance similar in its action of entangling but with the addition of the action of stunning is the bolas, a weapon found among the Eskimos and in South America, which consists of a number of ropes fastened together at one end and each having a weight at the other end. The noose anticipates the use of the snare, whether it is used in the hand, as in the capture of the crocodile in Northern Australia or in taking the turkey bustard in Queensland, or attached to fixed posts—a method followed, also in Australia, in catching duck—or fastened to a pole held in the hand, as the Californian Indians caught birds and the Panamint Indians the lizard, after its attention had been attracted by a grasshopper at the end of a line on a rod. The use of bird-lime, though hardly falling within the category of a trap (a term which usually connotes some hidden mechanism), represents a simple form of self-capture. On the Tully river in Australia, the natives catch cockatoos by placing bird-lime on the roosting branches. The Semang, the Berembun, and the Jakun use bird-lime; the Besisi fix rattans smeared with bird-lime on notches cut in trees for the purpose, while the Sakai catch large numbers of gregarious birds, such as the padi bird, by limed strips of rattan spread on the ground. An analogous device employed by the Semang consisted of strips of bamboo smeared with poison and spread in the paths.²

In the Malay Peninsula and in Borneo, advantage is taken of the argus pheasant's habit of rooting up grass to clear its dancing ground, by fixing sharp-edged strips of bamboo in the ground, which cut the throat of the bird when it tries to pull them up.³

In Australia, advantage was taken of the wallaby's habit of running with its head down, to stretch nets across its path. It was also caught in pits designed to break its legs. The pit with sloping sides is frequently employed, especially in taking big game, a common practice, as in the case of the pits of the Boloki on the Congo, being to put prongs or spikes of wood at the bottom to injure or kill the animal.⁴ The pits are concealed by rushes, boughs of trees, grass, or leaves, or sometimes a board, which the weight of the animal breaks down or tilts. In Central Africa, in the case of buck, fences, sometimes miles in extent, were built to guide the animal to the pit.⁵

A 'foot-trap' used by elephant hunters in Uganda was a deep hole slightly greater in circumference than the elephant's leg, at the bottom of which was a sharpened stake in which a deep notch had been cut. This spike was broken off by the animal's

struggles to free its leg, and rendered it lame. A form of trap or snare used in Tibet, Uganda, and other parts of Africa, was a ring made of creeper or other material in which were set sharp thorns, spikes, or pieces of wood or bone pointing inwards. This was fastened to a stake and then placed in or above a small hole.⁶ Another common form of trap is that in which a catch is released by an animal passing along a path. The guillotine trap, of frequent occurrence in Africa, is a heavy log with a sharp spear-head, sometimes poisoned, set in one end, suspended from a tree. This was commonly used for big game, e.g. in the Bulemisi district of Uganda, for elephants,⁷ and by the Anjanga for leopards and lions.⁸ Closely allied to this form is the spring trap, the spring usually being a sapling bent down over or near the path and fastened with a twig, which, on release, tightens a noose around some part, usually the leg, of the animal. Among the Anjanga, the release was a gate-like arrangement designed to catch a buck by the leg or a small animal by the neck.

In another form of release trap, the spring may set in action a bow and arrow, as among the Gilyaks, who use a crossbow or a spear, and in the Malay Peninsula by the Sakai and Semang. The Mantra placed a poisoned spike at the end of the sapling which formed the spring. An effective combination, consisting of a fence with spear-traps set in openings at regular intervals, is used by the Johor Benua and Berembun tribes.⁹ Snares and traps have at all times been much used in North America. Among the Dénés, the beaver is caught by a net let down into its run under the ice. The traps in which the tribes caught martens, lynxes, foxes, and even bears, are mostly variants of the figure-of-four release, in which, on the animal taking the bait, a cross-bar or other appliance falls and causes death.¹⁰ The net may be used simply as a snare or fence, being stretched across the path which an animal is expected to take, or it may be manipulated by hand. The Euahlayi tribes of Queensland in catching pigeons employ a net, one side of which is pegged to the ground, the other fastened to a rod, throwing it over the birds as they settle on their water holes.¹¹ In ancient Egypt the clap net was used in catching duck.

In some of the cases mentioned above, pits and other forms of traps are used in conjunction with a fence intended to make the capture of the animal more certain by guiding it to the trap. Fences of nets or stakes are frequently used with this object in view, but, instead of success being dependent upon the chance wanderings of the animal into the enclosure, it is made to depend upon the efforts of the hunters themselves, who entice or drive single animals or herds into the snares or between the fences. The operation of driving is one of the most frequent methods of organized hunting employed among primitive peoples, when once the advantages of co-operation have been appreciated. The numbers employed may vary from two, three, or four, the number required for duck-driving in Australia, to the 60,000 mentioned as engaged in the great hunting expeditions of the Incas, when 30,000 head of game would be taken.¹²

In Western Australia, at the moulting time of the black swan the natives lay in ambush, and, when the birds were sufficiently far from the water, they cut them off. A more elaborate method was used in driving duck. A net was stretched across the river or stream, the ends being fixed to posts. Some of the party went up stream and drove the birds down. When the ducks approached the net, they were frightened and caused to rise, while one man whistled like a duck hawk and threw a piece of bark in the air in such a way as to imitate the flight of that bird. The flock dipped, and many were caught in the net.

Fire was not infrequently used to assist the hunter either by driving or by confusing the game. The Seneca hunted deer by night in canoes in the bows of which lights were fixed. At Puget Sound, elk-deer and water-fowl were hunted by torch-light, while the Plains Indians drove the buffalo to the corral by fire. Fire was used in Australia and Tasmania for driving the kangaroo.¹³

The Eskimos and other peoples of the northern parts of North America used sometimes in hunting deer to draw a cordon across a peninsula and drive the animals into the water, where they were easily dispatched by hunters in canoes. Permanent stone

fences for driving the deer were erected near the track usually followed by them in the annual autumn migration from their northern feeding-ground.

The Belangor Sakal make frequent use of game-fences, which they build of sticks placed in rows with palm leaves across. These are sometimes as much as 500 yards in length.¹ In Uganda, hunts on a large scale were sometimes organized among the peasantry. Nets stretching over a considerable extent were set up, towards which game was driven with the aid of dogs and then killed by men stationed at the nets.² The Ekoi of South Nigeria, in driving game, use nets which, when joined together, extend for half a mile. These are stretched across the land between the rivers which join to form an angle.³ In Africa the drive was frequently made without net or fence: the hunters surrounded the piece of scrub or bush in which the game lay, and advanced upon it with shouts at a given signal. This was the method followed by the Central African tribes, the leader, carrying the 'medicines' for luck, being in the middle of the line,⁴ and in Uganda in the lion hunts organized by order of the king.

In North America the drive was the most favoured method of hunting the bison. Herds of bison were driven over crags and precipices, but the method more commonly employed was to erect a huge corral, such as was and is still used in Burma in hunting elephants. The buffalo corral was circular. A whole tribe would take part in these drives, and, as soon as the herd had been driven into and shut in the enclosure, women and children climbed on the palisading and speared the animals as they galloped round in their endeavours to escape. After the introduction of the horse, the Indians, among whom the Comanches excelled as horsemen, not infrequently abandoned the corral. Dividing their band into two divisions, they galloped round the herd upon which they closed at a given signal, or else pursued it as it tried to get away.

In ancient Egypt the king frequently took part in hunting wild cattle. The herd was surrounded by troops and people of the neighbouring villages and driven into enclosures. Amenhotep III. records with pride his achievements in this form of sport, and mentions that, on one occasion, he himself slew seventy-six cattle in one expedition.⁵

In fishing, so far as circumstances allow, the same methods are applied *mutatis mutandis* as in hunting. The collection of shell and other fish and the simple operations of catching fish with the feet or hands have already been described. The use of bait, or bow and arrow, spear and harpoon, the devices of attracting fish by the reflexion of fire, by splashing, capture by the net, trap, and the drive—all present analogies to the means employed in hunting animals on land.

One of the most primitive appliances used in fishing, probably representing the earliest dip-net, is the bough of a tree, covered with leaves, which is used to dip up fish spawn on the North Pacific Coast. Most primitive races use some form of dip-net, either to take small fry or to catch fish driven into shallows by other means. At Nutka Sound, sardines were driven into shallows and scooped up with troughs and wicker baskets. A special form of hand-net was used by the Anjanga on Lake Nyasa, which had two handles working scissors-fashion. The ordinary form of hand-net occurs in Australia and in the Malay Peninsula. A very simple form consisted of a basket of bamboo strips used by the Kedah Semang to catch small fish in pools.⁶ At Cook's Inlet, the Kenai used the dip-net to scoop up salmon from stages built in the river. Some doubt was expressed as to its occurrence in America before the advent of the white man, but Cushing dug up a dip-net at San Marco, Florida, while there is little doubt that in Washington it antedated European influence.⁷

The net, in its various forms, is the means upon which primitive man most commonly relies to supply himself with food from sea and river.

The Andaman Islanders at one time used nets eighty feet in length and fifteen feet in depth, with stone sinkers and stick-floats, to each of which was attached a cane leaf. The fish were driven to the net by splashing the water, and speared. In Australia, on the Diamantina, the natives use nets some twenty feet long fastened to two poles. Twenty or thirty of these nets

are used together, each being worked by two men, who swim out into the river. As a rule the net in Australia had no floats or sinkers, although the use of them is recorded on the Darling.¹ The Indians at the mouth of the Fraser River used reef-nets with stone sinkers and cedar-wood floats to catch salmon. On the flats they used the seine net, dragging it over the shoals between two canoes.² In pre-conquest days in South America the net was used both on Lake Titicaca and among the coast tribes. The immigrant strangers, who, according to tradition, landed on the coast of Peru, used nets for fishing.³

The fish trap is distributed almost as widely as the net.

A primitive form of trap in use among the Australians is a hollow log which is put down in a stream for some hours. Baskets and cages are also used.⁴ On Lake Kiyo on the upper reaches of the Nile, among the Baketi, who make their living entirely by fishing, exchanging the fish they do not eat for grain, the men use the fish trap only, while the women use the rod and line.⁵

On the upper reaches of the Fraser and Thompson rivers the Dénés and Carrier Indians use fish traps, among the former bottle-shaped baskets in connexion with a weir; if it is not possible to build a weir across the stream, a pen or corral is built, into which the fish are driven by splashing the water. Basket traps are fixed at one side of the weir, into which the fish swim in trying to escape. An ingenious form of trap is a pot-hanger basket, a screen-like erection at the top of a fall; as the fish in ascending the river leaps the fall, it strikes the screen and falls into the curved pocket at the bottom.⁶

Catching fish by means of a weir, whether in a trap or otherwise, is of frequent occurrence. In Australia, dams and weirs were built across streams, in which nets were fixed, or upon which platforms were built. The platforms were covered with boughs in which the fish became entangled. One of the most famous weirs is that at Brewarrina on the Darling, sixty-five miles above Bourke. It is eighty to a hundred yards wide, and extends for over a hundred yards along the course of the river. It is built of stone, is three to four feet high, and consists of a labyrinth of circles and passages in which the fish become entangled and are caught by hand. Stake or bush fences were also built. Movable bush fences were sometimes extended across a water-hole, to which the women drove the fish with bunches of grass and leafy boughs.⁷

Poison is often used either to stupefy the fish, making it possible to take them by hand, or to drive them from their places of refuge.⁸ It was employed by the Australians; and in North America it was used throughout the Southern States. The Californian Indian used soap root after cutting off the water. The use of some kind of vegetable poison is recorded among the Pima, the Tarahumara, the Payas of Honduras, the Mognexes of Columbia, the Peruvians, and the tribes of Brazil and the Amazon.⁹ The Gan on the Upper Nile use poison after the rains when the rivers are full.¹⁰

Many peoples took advantage of the fact that fish are attracted by the reflexion of fire, to fish by night, as did the Californian Indians.¹¹ In Australia (Victoria) a torch is fixed in the bow of the canoe. While it is paddled up stream, a man sitting with his back to the light spears the fish as they swim past him.¹²

The rod, though recorded among a number of peoples, is not very frequently employed. It is in use among the Kedah Semang. Among the Benna-Jakun and the Besisi (who, like the Anjanga, attract the fish by striking the water with the top of the rod), angling is left to the women and children; sometimes its use is confined to women, as among the Nilotic tribes¹³ and on the Murray in Australia.¹⁴

The hook used in Africa is usually a piece of bent wire. The Australians used many different materials. A thorn probably represents the earliest form of hook, and is still used with a line in the Malay Peninsula, but the Australian native used vine tendrils, eagle-hawk talons, tortoise-shell carefully moulded by hand, etc. The material requiring most care was shell; the beautifully made hooks of this material were the result of a long process of patient grinding, piercing, and polishing.¹⁵

When the game has been taken or killed, the disposal of the carcass is, as a rule, dependent upon a generally recognized custom; usually it becomes the property of the man who first wounded the animal, but the distribution of the various parts

of the body is not always in his control, and frequently must also be in accordance with custom.

For example, in Australia among the Kurnai, a catch of eels was distributed among a man's relatives, a large eel each being given to his mother and brother, and a small eel to his brother's children and to his married daughter. The Ngarago man, in cutting up a bear, was allowed to keep the left ribs for himself, but the remainder was distributed among his parents and relatives, certain joints being allotted to each, and the head being given to the bachelors' camp. Other animals were treated in the same way.¹ The same principle is followed among the Ekoi, except that one leg belongs to the townsfolk—no doubt a survival of a communal division.² In Uganda, certain joints were allotted to the men striking the first and second blows, the owner of the land on which the animal was killed, and of the dog which pulled it down. The bones of an animal were given to the god of the chase, while the head was eaten on the field, as it could not be taken into a garden or house because the ghost of the animal was believed to be attached to it.³

Rights of ownership of the land or hunting rights over the land are important in the hunting community and clearly recognized. In New Guinea, at Waga-Waga and Tube-Tube, the reefs near a hamlet are regarded as its special property; when the old men of the hamlet have placed a tabu on them, no member of another community will use them for fishing. If there should be no sign on the reefs, any one may fish from them, but the hamlet shares in any fish taken.⁴ Among the various Naga tribes of Manipur and among the jungle tribes of the Malay Peninsula, the sites of fishing weirs are held to be the property of the village near which they are situated. In Manipur, if an animal is killed on ground regarded as the property of another tribe, it is usual to send a portion of the kill to that community.⁵ On the Congo, the Boloki usually send the head of the animal to the headman of the town on whose ground they kill.⁶

Among many hunting peoples certain animals or certain parts of animals are not eaten, either by custom, for which various reasons are assigned, or by an express tabu. The most familiar instance is the very general prohibition against eating the flesh of the totem animal. Some peoples do not as a rule eat the flesh of wild animals, e.g., the agricultural Akikuyu of West Africa, although under the influence of the Akamba they are beginning to do so; fish they still avoid as making them unclean.⁷

Among the Nandi, most of the clans have some prohibition laid upon them in connexion with animals. The Kipolis clan may not make traps, and, although its members may hunt, they may not wear the skins of wild animals except the hyrax. The Kepumwi clan, which lives by the chase, may not eat the duiker or the rhinoceros; other clans may not eat game at all, and so forth throughout.⁸ Although fish is the chief staple of diet of some of the Déné tribes, others despise it as food; while among the southern tribes, e.g. the Navahos, even contact with fish is regarded with horror.⁹ The Ekoi will not eat the flesh of a certain white spotted antelope, except after an elaborate ceremony to make the flesh fit for consumption; a woman is bound to give her husband part of the catch, but certain fish he must not eat or he will be killed in the bush; nor must a woman eat an animal caught in her husband's new trap.¹⁰ The Eskimos will eat the flesh of the musk ox only in the last resort.¹¹ In Australia, a complicated body of rules limited the parts and species which might be eaten by boys, young men, girls, married women, and so on. Among the Wotjoballuk, for instance, boys might not eat the kangaroo, while men under forty might not taste the flesh of the emu or bustard. The penalties for transgression varied from grey hairs to death while uttering the cry of the animal eaten, the spirit of which had entered the body of the transgressor.¹²

The belief that an animal possessed a ghost or spirit was also responsible for the Baganda custom of drawing the nerve from the tusk of the elephant, in which it was believed the ghost resided. This was buried and the place of burial marked with stones; because, if any hunter stepped over the place, the ghost would cause him to be killed by an elephant in the next hunt.¹³

Reluctance to kill a certain species is not always explained as due to religious feeling or to a tabu. It may be the result of a transference to animals of modes of thought proper to man. This may be

illustrated by the primitive attitude of mind towards such of them as might be able, if animated by human motive, to avenge the death of a member of the group. Hence the reluctance shown by the Dayaks and Malagasy, for instance, to kill the crocodile except in a blood-feud and with special observances.¹

In Sumatra the Menangkabauers follow the same custom in relation to the tiger. Animism and sympathetic magic play a large part in the practices followed before and during the hunt. Some, however, may be due to a chance collocation of circumstances, as the Déné's preference for an old net or other appliance with which he has previously been successful;² or they may form part of a general complex of religious beliefs without any special meaning in relation to hunting or fishing, as in the case of the various abstentions, such as that from sexual intercourse or the avoidance of menstruating women as unclean, practised by these and many other peoples before a hunting expedition or while making their traps.

Where the food supply is precarious or may be easily affected by chance agencies, as it is in both hunting and fishing, it is not surprising to find a primitive people relying upon magic both to increase and to ensure the provision for their needs. The Arunta and other tribes of Central Australia, for instance, perform an elaborate series of magical ceremonies with imitative dances, and make drawings of animals, to increase the food supply.³ A case has been recorded from the Congo of drawings of fish made on the ground by the river, possibly intended to secure a plentiful supply of fish,⁴ while it has been conjectured that the drawings and paintings in the caves of France and Spain were the result of an attempt to secure power by magical means over animals used for food.

A more obvious method is followed by the Nutka wizard. If the fish do not arrive in due time, he makes an image of a swimming fish and places it in the water in the direction from which the fish are expected to come, and utters a prayer for the arrival.⁵ The Cambodian, when unsuccessful in netting, strips and, simulating the action of an animal, runs into and rolls himself up in his net, saying, 'Hallo, I am afraid I am caught.' When an Aleut struck a whale with a charmed spear, he did not throw again, but returned home and lived apart in seclusion for three days, snorting in imitation of a dying whale, in order to prevent it from leaving the coast.⁶ Seligmann⁷ gives significant and instructive accounts of ceremonies preceding hunting expeditions in New Guinea and among the Veddas. The object of the ceremonies is not only to increase the supply of game, but to ensure its capture by anticipatory imitation.

Precautions are frequently taken to secure the efficacy of weapons and hunting methods both by charms and by 'medicine' of various kinds.

The sea-otter hunter of Alaska attached great value to the wooden hat which was held to attract the game. The Déné hang 'medicine' on their nets.⁸ Among the Baganda, when game was being driven into nets, charms were hung at regular intervals to prevent it from breaking through. The elephant-hunter, after sharpening his spear, deposited it overnight in the temple of the god of the chase.⁹ The Boloki, before an elephant hunt, used to summon the medicine-man, who spent two or three days making medicine to catch the spirits who divert the game from the traps; every one who was to take part in the hunt chewed red pepper and the fruit of a certain plant. If any one refused or did not spit the mixture out in the proper way, the hunt was abandoned. Several of the Ekoi *jufu* are specially connected with hunting. Before an expedition each member sacrifices to his *jufu*; and, if a leopard has been killed recently, its skin is rubbed with *jufu* leaves, while a prayer is offered to its spirit that it may go on the left hand to drive the game to the hunter and help him to kill a leopard should one be met.¹⁰ In New Guinea a great variety of hunting and

aching charms are in use. The Koita, for instance, in hunting the pig, wear a tarsal bone of that animal on the arm to compel other pigs to come to them; in hunting the wallaby they blacken part of the face with the burnt bark of an odoriferous tree; they rub stones taken from the stomachs of alligators, pigs, etc., on the teeth of their dogs, and, before hunting, give them the bark of certain odoriferous trees boiled with sago. The last-named charm is especially efficacious if pieces of mullet are added, because these fish jump 'quick and strong.'¹ Charms of quartz crystals, highly polished pebbles, etc., after being heated with a fire-stick, are applied by the Koita to a corner of a fishing net to make it smoke before it is taken to the beach, while in the case of a dugong or turtle net the claw of a raptorial bird is placed under the net for a few minutes, or the fumes of gum resin on hot embers are made to rise through the net.²

On the other hand, there are certain actions that must be avoided, as they may affect the supply of game in the future, or may defeat the hunter's efforts in a particular instance. The animal which is slain must be treated with respect, and it may be even necessary to offer it apologies. Those of the Nandi who are prohibited from killing rhinoceros are not so strict as they once were in regarding the prohibition, but, when they kill the animal, they apologize.³

Among the Laos, the hunter must not wash for fear the wounds he gives may not be mortal.⁴ In Alaska, during the whaling season, the women must remain in comparative idleness, as it is not good for them to sew while the men are in boats. Any repairs to garments which are absolutely necessary must be done out of sight of the shore. The conduct of those who stay at home is believed seriously to affect the success of the hunter. The Bushmen attributed bad shooting to the children playing on the men's beds.⁵ In East Africa, elephant hunters believe that the husband of a woman unfaithful during his absence will be killed.⁶ In Toaripi, or Motumotu, New Guinea, during a hunting expedition the fire must not be allowed to go out, and the inmates of the men's club-house must abstain from certain foods and from taking anything that belongs to others.⁷ The Blackfoot Indian would not eat rosebuds when trapping the eagle; for, when it alighted near the trap, the rosebuds in his stomach would make it itch, and it would scratch itself instead of taking the bait. Nor in putting up the trap would he use an awl, as the claws might then scratch him.⁸ Any failure to treat the animal slain with proper respect, it was believed, would offend its relatives and lead to a scarcity of game. Among the Thompson Indians, precautions were taken to butcher the deer carefully and cleanly; the blood and offal were buried. If this were not done, the other deer would not present themselves to be killed. Deer meat was never taken through the common doorway of the lodge, because it was open to women who were ceremonially unclean. If the father of a pubescent girl went out to hunt, it was believed that the deer would evade him.⁹

Among many tribes, especially in North America, precautions are taken that the bones of the animals they kill may not be defiled through being eaten by dogs, or in some other way. Sometimes they are burned, sometimes thrown into a river, sometimes preserved in or before the house. Neglect of these precautions would make it impossible to catch other animals of the same species. Both in North Western Canada and in North Eastern Asia the bear is treated with peculiar respect, as is not unnatural in view of its value and strength. Indeed, in the latter region, the ceremonial which attends the bear sacrifice suggests that it is looked upon as an object of worship, if not as a deity. When hunting the bear, the Dénés begged the animal to come to be shot; it was petitioned not to be angry and not to fight. Sometimes the bear was thanked for allowing itself to be killed. When the flesh of the head had been eaten, the skull was placed on a high pole as a mark of respect, and, if this was omitted, it was believed, the other bears would not allow themselves to be killed. This custom of placing the skull on a pole, usually situated at one end of the hunter's house, is found throughout the two regions mentioned above. Among the Ainu, bear hunting was the chief occupation. It supplied the staple of their food

and the material for their clothes, and was the central object in their ritual (see AINUS).

Apart from the question of whether in these and other cases the animal is worshipped and regarded as a god, it is clear that the ceremonial slaughter, in which the custom of shooting the victim with arrows is peculiarly suggestive, falls into line with the seasonal ritual which is, as a rule, intimately connected with food supply. Primitive races do not recognize a close season in hunting, but climatic, social, or religious conditions, or conditions connected with the natural history of the animal, sometimes enforce a period of rest from the pursuit of a particular species. In Central Africa the growth of vegetation, in the Arctic and sub-Arctic regions the rigour of the winter and the migration of species, make a change in methods and objects of pursuit imperative. Among the Nagas, a *genna*, or tabu, forbids all hunting during the agricultural season. Where such causes as these are operative, the primitive mode of thought requires the hunting season to be inaugurated by a special ceremony to obviate the risk which attaches to a spiritually dangerous operation, as well as secure by a due observance of ritual that the future supply of food will not be endangered by an oversight or mistake.

HUNTINGDON'S (COUNTESS OF) CONNEXION.—The Countess of Huntingdon's Connexion is a loose confederation of about 45 urban congregations, akin by origin to the Calvinistic Methodists, making some use of the Anglican liturgy and the Thirty-Nine Articles, worshipping in buildings held by trustees with nominally absolute powers, assisted now by a conference of representatives. The founder, the Countess of Huntingdon, Selina Shirley (1707-91), daughter of the second Earl Ferrers, was attracted in 1730 into the first Methodist Society by George Whitefield. John Newton declared that at this time he was not sure that there was in the whole kingdom a single parish minister publicly known as a gospel preacher. She, therefore, approved Whitefield's plan of lay preaching, and her seat of Donnington Park became a centre of itinerancy over the Midlands. The death of her husband (1746) left her in the prime of life free and rich. On the return of Whitefield from Georgia she relieved him of his money difficulties and appointed him her chaplain. In this capacity he conducted frequent meetings in her drawing-room, and introduced Methodist influence to society circles, while his Moorfields congregation invited her to lead the movement. She now faced two revival problems—how to secure evangelical preachers, and how to ensure that given places might have continuity of evangelical preaching. The universities could by no means be relied upon for the former; the system of patronage endangered the latter; while the system of lectureships, previously devised to ensure it, had been declared illegal.

The latter problem was the easier, and she solved it not by buying up livings, but by developing her rights as a peeress. The Calvinistic evangelicals in the Church of England rallied round her, and she appointed many clergy to be her chaplains; as pluralities were common, several of them continued to hold livings while often travelling in her service. On the theory that she might have a private chapel exempt from episcopal jurisdiction attached to each of her residences, she acquired property in fashionable resorts like Cheltenham, Brighton, Bath, and Tunbridge Wells, and erected chapels. These were frequented by people who declined to countenance the Methodist field preaching, but who found no help in the official churches

and chapels of ease; many were of the leisured classes. So successful was the experiment that other towns were similarly treated, from York to Lewes, from Norwich to Swansea; and the Countess moved her chaplains about as she deemed best. Her influence was at its height in 1768, when, after a vain remonstrance with Archbishop Cornwallis on the bad example of his wife, she brought on him a severe rebuke from the king. This naturally did not increase the friendliness of the bishops, and in her desire for evangelical clergy she adopted a still more independent attitude, resembling that of the Old Dissent.

Howell Harris, the Calvinistic Methodist, had acquired large premises at Trevecca, whither a number of Welsh evangelists had migrated. On this place she fixed for a Seminary, and on her 61st birthday (24th Aug. 1768) Whitefield opened it, for training at her expense young preachers who should be free to work within or without the Established Church. She appointed as President John Fletcher, who often came across from Madeley to take his duties seriously. A resident master was sought, whose prime qualifications were to be faith and power from above, devotedness to God's cause, and Christian experience. Greek, Latin, Divinity, and the Sciences were to be taught. From 1768 onwards the Seminary not only sent forth earnest recruits for work in Britain, Ireland, and America, but was the Keswick of its day, whither huge crowds resorted every August.

In 1770 the Wesleyan Conference passed resolutions which led to a falling asunder of the Arminian and Calvinistic wings of the revival army. The Countess decided to establish a great London centre for the Calvinists, and bought fine premises in Spa Fields, which had been first a pleasure resort, and then a proprietary chapel. Retaining, as usual, a small part as her technical residence, she evidently destined the main building to be her cathedral. A neighbouring clergyman, therefore, successfully tested the legality of her proceedings by actions in the consistory court of the Bishop of London (1779). This crisis considerably altered the character of the movement. Some of her sixty chaplains severed all official relations with her; others broke with the Establishment, and took licences under the Toleration Act. She guarded these by registering her buildings for Dissenting worship. This, however, was hardly more than a technicality, for the liturgy was used almost unchanged, and the Thirty-Nine Articles were taken as the basis of a new Confession. The gaps caused by the defection of some chaplains were partly filled by students from Trevecca. As the bishops grew more reluctant to ordain these, the final breach occurred in 1783, when two of her clergy openly ordained six students in Spa Fields. This emboldened Wesley to follow suit next year.

The Countess proposed to consolidate the movement by forming an Association of ministers and laymen, somewhat on the lines of the Old Dissent, but was persuaded to bequeath all her chapels absolutely to four trustees. The Seminary was at once transferred to Cheshunt, and became the centre of gravity. The foreign missionary movement inaugurated by Carey was taken up enthusiastically, the London Missionary Society being formed at Spa Fields (1795), and the college supplying numerous volunteers.

The itinerant system inherited from the Countess has given place to comparative fixity of tenure, and the Congregationalists have shown themselves ready to disregard all differences and to welcome into fellowship; but the disintegration was checked in 1899 by Chancery. The college is now at Cambridge, while the trusts encourage continuous service within the Connexion.

HUPA.—The Hupa Indians in N.W. California, linguistically classified with the Pacific Coast division of the Athapascan stock, represent in matters of religious belief and practice a culture area which includes W. Oregon and N.W. California. As regards particular ceremonies even, Indians of other linguistic stocks, the Karok and Yurok on the lower Klamath river, join with the Hupa in their celebrations, and seem to feel that these ceremonies are common possessions.

1. Rites and ceremonies.—Three ceremonies of importance used to be held annually for the benefit of the entire community.

(1) One of these, called *Haitciddiye*, 'Winter Dance,' is held late in spring, at the close of the rainy season. Its purpose is to drive away and prevent epidemics, and to preserve the good health of the people. The first half consists of ten nights devoted to singing and dancing round a fire in the sacred house. This house differs from the other primitive dwellings only in the traditions connected with it, and in the restriction that persons of illegitimate birth are excluded from it. The dancing is done by several individuals, who circle about the fire, with their hands on the shoulders of the persons in front of them. A dance, which is a test of endurance, about a very hot fire, takes place at the conclusion of the last five nights of this part of the ceremony. No clothing is worn, and, because of the limited size of the room, the dancers are exposed to the fierce flames. The songs sung during the dancing are looked upon as the chief means of frightening away disease. The concluding portion of the ceremony occupies ten days, and is similar to the autumn dance described below, except that it is held in another place.

(2) The second ceremony takes place in August or September, and is usually called *Honsiltciddiye*, 'Summer Dance.' It is held out of doors, at certain places near the river, and lasts ten days. The costumes and sacred objects used in the dance are transported in canoes. The faces of the dancers are painted in horizontal lines with black obtained from the charcoal of the fire. A robe of deer-skin is worn either about the waist or from the left shoulder. A band of fur is bound round the head, and a net falls over the hair and neck. Eagle feathers or feathered darts are inserted at the back of the head. Two men, who are to carry the sacred obsidians, have closely knitted head-dresses, which hang nearly to the waist, and a row of sea-lion teeth about the forehead, instead of the band of fur. When the twelve or fourteen dancers are in line, it is noticeable that they are arranged symmetrically, from the middle, where the chief singer stands, to the wings, where boys are usually found. Not only are they graded as to stature, but the decoration and arrangement of the costumes of those equally distant from the centre are similar. Each dancer in the line holds a pole, on which a dressed and decorated deer-skin is draped. These skins all show peculiar natural markings, the most valued ones being those of albino deer, which have been killed in past generations and the skins faithfully preserved as the property of the community. The singing is led by one who has received the songs in a supernatural experience, and is accompanied by the men in the line, both by the voice and by moving the body and the horizontally held deer-skins backwards and forwards, and stamping with the left foot. Men from different localities compete in this singing and dancing, in alternate series of movements. During the first of each

series two men, each carrying a large, beautifully flaked black or red obsidian, move towards each other in front of the line of dancers, who elevate their poles with the deer-skins to let them pass. Afterwards these men take their places in the line, and join in the dancing.

- There are two interesting variations in the celebration. One of these takes place on the river, which, because of its swiftness, is difficult of navigation for the 'dug-out' canoes. Two or more of these canoes are filled with standing dancers, who by concerted movements impart considerable motion to the canoes, which are made to move down stream abreast. They approach and recede from the shore ten times before the final landing is made. The song sung is an old traditional one, instead of a new and specially revealed one. On the last afternoon of the ceremony many dancers form a long line on a hill somewhat back from the river and stand facing the south-west, from which direction the immortal first inhabitants of the world are supposed, ceasing their own dancing, to watch that of mortals.

One or two priests prepare the ground at each of the places where dancing occurs, by removing vegetation and objects which would annoy the dancers, and by scattering a sacred powdered root where they are to stand. They then build a small fire a short distance in front of the line, into which they throw the sacred root and tobacco, as they pray for the welfare of the people. During the intervals of the dancing, the priests, or other old men, address the spectators on ethical and religious subjects.

Nothing in the myths or folklore or in the present consciousness of the Hupa seems to give this ceremony a particular purpose. In a general way it is supposed to bring health and prosperity. The positions and movements of the dancers in relation to the deer-skins are strongly suggestive of sympathetic magic, to promote the annual mating of the deer.

(3) In two or three weeks after the completion of this ceremony a third one is begun. It is called *Tunkt'idilye*, 'Autumn Dance,' and is held at the village of Takimmitlding. A high fence is erected, in front of which the dancers are to stand. They wear on their foreheads broad bands of buckskin, covered with the scarlet crests of woodpeckers, relieved with white fur above and below. Many strings of shells are worn about the neck. An object of twined fibre is held in the hand while dancing. This resembles in shape the box of elk-horn used in this region to contain the *dentalium* currency. The men stand in line, with a man of exceptional physique in the middle, and a singer on each side of him. The basketry objects held in the right hand are swung forwards and upwards, and then brought down with a stamping of the left foot. One of the singers leads with a song, and the dancers accompany him, with vocables loudly uttered. When each of the singers has sung, the deer-skin robes are dropped from the waist to the ground, the baskets are placed on them, the dancers join hands and jump, raising both feet from the ground. Occasional rests are taken, the dancers squatting on their heels. As in the ceremony described above, groups of men from the two geographical divisions of the tribe compete in the alternate performances. The celebration lasts ten days, the last afternoon being the most important and the most largely attended. Its object is said to be to maintain the health of the people. A myth indicates that the first intention of the originator of the ceremony was that it should renew the youth of the aged who were to participate in its benefits. Being unjustly attacked, he took the dance, regalia, participants, and all to another world. The present human celebration of it is a less potent copy.

None of these dances or general ceremonies can be held until a valuable present has been made to the next relative of all persons who have died since the last similar settlement.

In the autumn, when the acorns have fallen in considerable quantities, a feast is held. Fresh acorns are ground, leached with tepid water, and made into mush by women designated for the office. When the people have gathered about noon, the priest leaves the sacred house and goes to the feast-ground. No one is allowed to look at him as he passes, for he impersonates the god of vegetation. He builds a fire ceremonially, and places stones in it, which are to be used by the women to cook the mush by dropping them hot into the baskets in which it is contained. First the priest and then the other men go to the river for a bath. The women wash their hands and faces only. The mush is served to the people in baskets, as they sit on stones, which remain from year to year in a circle about the fireplace. Fish, cured and fresh, are served in addition to the acorn mush. When the people have eaten, the priest places in the fire all the food that remains, and prays that the new crop may not be stolen by the birds and rodents, and that even in small quantities it may nourish and sustain the people. The stones used in cooking are deposited with those of previous years, and are never used again, or touched, except by the priest who keeps them in an orderly pile.

There are priests in whose families it is the traditional duty to catch the first lamprey eels and first salmon of the season, and perform a ceremony that shall ensure an annual run of these in large numbers and of excellent quality. A long formula is repeated by the priest, the object of which is to prevent certain evil supernatural beings at the mouths of the rivers from stopping the migrations, and to guard against the offending of the fish by the breaking of tabus. The eels and salmon caught are eaten by people who gather for the purpose, but the number so caught is usually insufficient for a considerable feast.

There are several ceremonies of a public character, the benefits of which are for particular individuals. The breaking of one of the many tabus connected with deer results in the enslavement of the offender's soul by the beings who are believed to own and care for the deer. When this has happened, the unfortunate man loses his health, and, upon ascertaining the cause, calls in a priest learned in this particular. A night is spent in song and prayer, in which several laymen participate, the object being the recovery of the soul. Because of certain offences on the part of the parents, or as the result of several deaths in the family, the souls of children, while they are still living, are supposed to have gone to the world of the dead. They are recalled by prayer, songs, and dancing, which continue during the first half of the first night, and during the whole of the third night. The ceremony is in charge of a priest or priestess, who spends the preceding days with a young girl in the forest, securing the necessary herbs and pitchwood used in the ceremony.

A ten days' ceremony is held for the benefit of each girl at the first appearance of menstruation. During this time she is under the guardianship of an old female relative, who makes sure that she keeps the tabus in regard to food and water, which are allowed her but once a day in combination as acorn gruel, and prevents her contact with people. The girl bathes in a ceremonial way at prescribed places each morning, and afterwards brings wood for the house-fire. Especial care must be exercised in regard to the language and conduct of the girl during this time. Not only will whatever she says happen, but whatever she does will become a fixed habit during her future life. The nights are spent in song. Several times during the night the men come into the house, where the girl is com-

pletely covered with a blanket, and sing over her, shaking rattling wands as an accompaniment. After the men withdraw, the women, who remain, sing songs of their own. This ceremony and the keeping of the tabus are supposed to procure long life and a desirable disposition for the girl.

A shaman, or medicine-man, first undergoes training during several months under the care of an older shaman. He is required to restrict his supply of water and food, and engage much in bathing and in smoking of tobacco. The nights, especially towards the close of his training, are spent in dancing about a fire in a large sudatory. Men and women join in the songs, and keep time with their feet as they sit about the sides of the room. The candidate must show his ability to control certain imagined semi-material objects, called 'pains,' injecting them and removing them from himself and others at will.

Besides these shamans with supernatural power, the singers at the greater ceremonies with supernatural gifts, and the priests charged by inheritance with the celebration of the dances and feasts, nearly every adult knows several formulæ for some particular object, such as hunting, fishing, gambling, love-making, and the cure of ailments. These formulæ are generally repeated over some fragrant herb, which is applied to the body, internally or externally, or to the weapons and implements concerned. The formulæ recite the discovery of the remedy or power by a supernatural person, its first application, and the wonderful results which followed. A prayer is addressed to this being, and an offering of tobacco made by blowing it in a powdered form from the hand. One may secure from another the benefit of one of these formulæ by the payment of a reasonable fee. Care is taken, in reciting them in the presence of others, to chant them in such a manner that they are not understood. Many formulæ have songs used in connexion with them, particularly those relating to hunting, fighting, gambling, and love-making. Hunting parties usually spend the night preceding a hunt in continued song and prayer.

The elderly men and the religiously inclined younger ones follow the daily habit of bringing sweat-house wood during the afternoon, taking a plunge into the river after the sweat bath, and spending some time in prayer, sitting naked after the bath. When a particular boon is desired, the men go to some high, wooded point, trim the branches from near the top of a large Douglas spruce, and stand naked in the acrid smoke of the green brush throughout the night. Bathing in certain pools, believed to be dangerous because they are the haunts of water-monsters, is productive of good luck. Whenever occasion suggests, extempore prayers are resorted to, accompanied by burning the sacred root.

2. Religious beliefs.—The Hupa believe that they sprang spontaneously into being from the ground, in the same locality in which they have lived since they have been known by white men. They claim to have been preceded by a race of similar origin—immortals, who, by their correct behaviour, fixed for the mortals destined to follow them the traditional conduct for all situations in life. Their chief, *Yimantuwingyai*, gave shape to the world according to his whims, provided some of the ceremonies, and rid the world of the monsters that preyed upon men. His wives, to whom he had been unfaithful, brought death into the world, and frightened the immortals from it. The latter fled to worlds beyond the Pacific Ocean and above the sky, where they still practise the perfect ways and celebrate the dances. *Yimantuwingyai* presides over one community of them, and his son over another. They observe the condition of the

earth and its inhabitants during the celebrations of the dances by immortals. *Yimantuwingyai's* conduct was often not above reproach; and the evils in the world, including death, are the results of his uncontrolled passion. He is seldom addressed in prayer.

A god of vegetation, *Yinukatsisdai*, 'he lives south,' was the originator of vegetable food, and still controls its supply by making annual provision according to the care or abuse of the previous crops by the people. He is generally invisible, is small of stature, and always carries a sack of seed.

The deer on the several ridges or mountains are under the care of local gods, called *Tans*. They keep the deer in the interior of their special hills, and let out only those destined as the reward of the hunter who keeps the tabus and sings the required songs. They have the owls for servants. The Hupa seldom mention them, but fear them greatly and direct many of their prayers to them.

The two thunders, at the north and the south, control the weather, sending that which is unreasonable when they are offended by the presence in sacred localities of those who have been bereaved, and are therefore in a measure unclean. They are appeased by a ceremony conducted near a rock in which the thunders are interested. The particular sort of weather desired is indicated by sprinkling the rock with water, or by carrying coals of fire round it.

There are numerous spirits believed to occupy the interior of mountains, deep pools in the streams, and certain places by the trails. These are not unkind to mortals, with whom they have become acquainted through worship, but are hostile to strangers and the uninitiated young members of the tribe.

The lower world, the abode of the dead, is under the control of a person seldom named. All except shamans and singers at the dances go to this common home regardless of their conduct in life. They appear there in the exact condition in which they have been buried. For this reason the Hupa hold that burials should be conducted with great care. The personal property of the dead is either buried with him or destroyed, apparently to prevent his return for it. Great care is exercised to avoid the reappearance of the ghost, especially in dreams. A five days' ceremony is necessary to free the grave-digger and the family of the deceased from uncleanness.

The heavenly bodies are considered to be persons. The sun is feared as one who consents to all natural deaths, but seems not to be worshipped. The morning star aids the warrior who knows and sings his songs. The white first dawn is worshipped as a maiden, who wishes to behold the faces of her worshippers as many days as possible, and therefore prolongs their lives. Early rising is practised in her honour. Prayers in general are said to be addressed to *Ninisan*, which usually means the earth, but seems capable of a wider meaning, including the universe as known to the Hupa. The conception, which seems to be vague, is decidedly animistic, but seldom personal. The deities mentioned above are perhaps only localizations, specializations of the one pervading soul of the world.

3. Ethics.—Social behaviour is very fully prescribed by tradition. The disregard of the rules of conduct is followed by material and temporal misfortune, but is not directly displeasing to the supernatural personalities and is not punished after death. The divine ones are offended rather by uncleanness, resulting from anything sexual or connected with death. Generosity is followed by blessing of the food supply. Unsanctioned sexual alliances are avoided, as likely to result in off-

spring lacking by nature in moral character, and so little esteemed in the eyes of his fellows that his death cannot be avenged. Injuring other persons by word or deed is avoided from fear of retaliation. The avenging of wrongs or insults to oneself or one's relatives is a sacred duty which may be discharged with honour at night from the brush as well as in open fight. In accordance with the same principles and by the same methods, the group, whether the single village against a neighbouring one, or the allied villages against those of another river-valley and of another speech, defend their land and rights, and avenge injury and insults. The final settlement of difficulties, internal and external, is by the payment of money.

LITERATURE.—S. Powers, 'The Indian Tribes of California,' vol. iii., *Contributions to North American Ethnology*, Washington, 1877; P. E. Goddard, 'Life and Culture of the Huron' and 'Huron Texts,' nos. 1 and 2 of *University of California Publications of Amer. Archaeology and Ethnology*, 1903, vol. i.

P. E. GODDARD.

HURON.—The Huron were a confederation whose principal members were four Iroquoian tribes—Attignawantan ('Bear People'), Arendahronon ('Rock People'), Attigneenongnahac ('Cord People'), and Tohontaenrat ('White-eared or Deer People')—that, from about 1589 to 1650, occupied a district known as Huronia, lying in the peninsula formed by Nottawasaga and Matchedash Bays, the River Severn, and Lake Simcoe, in what is now known as Simcoe Co., Ontario (see the maps of the region in the Huron period, in Parkman, *Jesuits in N. Amer.*, by A. F. Hunter, in *Jesuit Relations*, x. [ed. Thwaites], and by A. F. Jones, *ib.* xxxiv.). The earliest members of the confederation were the Attignawantan and Attigneenongnahac, who ceremonially termed each other 'brother' and 'sister,' and who had received the Arendahronon and Tohontaenrat about fifty and thirty years respectively previous to 1639 (Lalemant, in Le Jeune, *Jes. Rel.* xvi. 227, 229). Among the minor members of the confederacy were the Iroquoian Wenrothronon and the Algonquian Totontaratonhronon, who joined the Huron in 1639 and 1644 respectively.

The term by which this confederacy is known is not Indian, but French, *Huron* being a pejorative of O. Fr. *hure*, 'rough, bristling hair,' and having been applied to the peasants of the Jacques in 1388. According to Lalemant (*op. cit.* 227-231), the term was applied to these Indians by a Frenchman about 1600, because of their style of head-dress. Their native name was Wendat (probably meaning 'islanders' or 'peninsula-dwellers'), which appears in a number of variants, and which has been corrupted into their modern designation Wyandot.

The Huron were, as Lalemant said (in Le Jeune, *Jes. Rel.* xvii. 195), 'only an assemblage of various families and petty nations, which are associated together for the purpose of maintaining themselves against their common enemies'; and hence their religious system was composite, a case in point being the borrowing of the Algonquian rite of marriage to the fishing-net (see below, p. 884^b).

The governmental system of the Huron has been studied exhaustively by J. W. Powell (*I RBEIV* [1881], 59-69), who shows that it was based on a gentile organization 'of consanguineal kindred in the female line,' and that each gens bore the name of some animal, the ancient of this animal being the tutelary deity of the gens concerned. The gentes in the Wyandot period have been Big Turtle, Little Turtle, Mud Turtle, Wolf, Bear, Beaver, Deer, Porcupine, Striped Turtle, Highland Turtle, Snake, Hawk. Of these, the Mud Turtle, Beaver, Striped Turtle, Highland Turtle, and Hawk are now extinct. The Wolf exercise the functions of umpire, mediator, and executive between the two divisions—the first including the Bear, Deer, Hawk, and Snake, and the second comprising all the rest (W. E. Connelley, *Archæol. Report Ontario*, 1899, pp. 100 f., 105 f.; according to him, the Wyandot represent chiefly the Tionon-

tati, or Tobacco Nation [on which see Mooney, *HAI* ii. 755 f.; for a different enumeration of Wyandot gentes, see Powell, *loc. cit.*]). Each gens possessed a tract of land, which it could change only with the permission of the tribe; and at intervals of two years the women councillors re-partitioned the land. The property, consisting of the wigwam and household articles, was inherited by the eldest daughter or by the nearest female kin; and the personal belongings of the husband, such as clothing, hunting and fishing implements, and a small canoe—large canoes were gentile property—by his brother or by his sister's son. Each phratry had the right to certain religious ceremonies and to the preparation of certain medicines; each gens to the worship of its tutelary deity; and each individual to the possession and use of his particular amulet or charm.

The general picture of the Huron, as given by the early Recollets and Jesuits, is attractive. We are introduced to a people, grave, patient, courteous, and hospitable, modest in demeanour, brave, and, on the whole, industrious. Their faults were those of primitive peoples generally. They were cruel to the enemy, they would beg or steal from the alien, pre-nuptial chastity was lightly esteemed, and their religious rites contained much that was abhorrent to the zealously religious. Their criminal code has been summarized by Powell (*I RBEIV* [1881], 66-68). A girl guilty of fornication was punished by her mother or female guardian; but, if the case was flagrant or neglected, it might be taken up by the council women of the gens. An adulteress had her hair cropped for the first offence, and her left ear cut off for the second. Theft was punished by twofold restitution, and treason was a capital crime. Murder and maiming were compounded (cf. the elaborate accounts given by Ragueneau, in Lalemant, *Jes. Rel.* xxxiii. 235-249, and by Brébeuf, in Le Jeune, *ib.* x. 215-223). A secret sorcerer might be killed by any one (Brébeuf, 223; Ragueneau, 219, and in Lalemant, *Jes. Rel.* xxx. 21). If, however, a sorcerer was placed on trial and found guilty, he might appeal to ordeal by fire. Outlawry was of two degrees: if the outlaw continued to commit crimes, he might be killed without fear of clan vengeance; or it might be the duty of whosoever met with him to kill him (Powell, 67 f.). Suicide was not infrequent; and mere children, if harshly treated by their parents, were apt to hang or poison themselves (Le Mercier, *Jes. Rel.* xiv. 37; Chaumonot, *ib.* xviii. 27-29; Le Jeune, *ib.* xviii. 165-167, xix. 171-173).

A trait of the Huron and other Iroquois, as well as of the Algonquin and other eastern tribes, which has always shocked the general reader was their savage cruelty toward prisoners taken in war. No tortures were too terrible to be applied; and the bare recital of them as recorded in the *Jesuit Relations* and similar documents is, it must be confessed, somewhat unpleasant reading. It would appear that to some degree there was a delight in torture for its own sake—a sentiment which appears often in children of the higher races, and of which traces are found among even the most cultured adults. In many instances, further, the idea of personal revenge for the loss of a relative must have played a part. Yet there was also another side, in which, apparently, must be sought the real explanation of this trait. In a case recorded by Charlevoix, *Hist. of New France*, tr. J. G. Shea, New York, 1866-72, ii. 105-110 (repeated by Le Jeune, *Jes. Rel.* xiii. 37-79), a Seneca captive was conducted to a Huron village to take the place of the captured nephew of a chief, if the latter so desired. The prisoner was given a bride, was clothed in a new beaver robe, and, feasted in every cabin,

was treated with all kindness. The chief received him with affection, and the captive Huron's sister gave him food as if he were her own brother. With regret, however, the old chief informed the prisoner that his wounds were so severe that he must die, and the captive was accordingly tortured to death. Generally speaking—although exceptions frequently occurred—a captive was treated as well as possible until he reached the village where his fate was to be decided. There he might be adopted in the stead of a kinsman captured or slain; and such adoption was, in reality, based on a belief that the person so adopted was actually the person whom he represented. If tortured, he was expected to show defiance to his tormentors, and to bear every pain with the utmost stoicism. In the midst of his tortures, caressing words were addressed to him, and he would be honoured with delicate touches of firebrands or red-hot hatchets. To the horrified observers of all this, such caresses seemed, with good reason, the irony of demons incarnate; but it may be suggested that these were both intended and received as genuine. The substitute for a hero must die like a hero; if he was a poltroon, he dishonoured both himself and the dead. In him were curiously blended, to the Indian mind, both the enemy and the friend. He must suffer all night until the dawn (Lalemant, in Le Jeune, *Jes. Rel.* xvii. 75; cf. lxi. 65), doubtless in honour of the war-god, who seems to have been another form of the sun-god. After his death, if he had borne himself bravely, portions of his body were eaten (see art. CANNIBALISM, ii. § 6); and in some cases a Huron would make an incision in his own neck, and permit the blood of his tortured enemy to flow into it; for,

'since they have mingled his blood with their own, they can never be surprised by the enemy, and have always knowledge of their approach, however secret it may be' (Brébeuf, in Le Jeune, *Jes. Rel.* x. 227-229). It should be noted that, whereas in feasts on bear, dog, deer, or fish, the head was the most important part, in cannibalistic feasts the head was given to the lowest individual present (ib. 229).

The trophy usually carried off from a slain enemy during war was the head, and the cabin of the war-chief was called 'the house of cut-off heads' (Le Mercier, in Le Jeune, *Jes. Rel.* xiii. 59). If, however, their burden of heads proved too heavy, 'they were content with taking the scalp with its hair, which they call *onontsira* . . . to make trophies of them, and to put them, in time of war, on the palisades or walls of their town, fastened to the end of a long pole' (Sagard, *Voyage*, 208, *Hist.* 4421; cf. 445).

The Huron possessed a form of fellowship, by which 'two young men agree to be perpetual friends to each other, or more than brothers. Each reveals to the other the secrets of his life, and counsels with him on matters of importance, and defends him from wrong and violence, and at his death is chief mourner' (Powell, 68).

The sexual morality of the Huron appears to have been rather low. Pre-nuptial chastity was rare, and the young men frequently kept mistresses. Even after marriage, husband and wife are described as permitted to seek other temporary partners, without manifestation of jealousy by their lawful spouses (Sagard, *Voyage*, 160, 165, *Hist.* 3151, 420); and Sagard even declares that the favours of girls were sold for a small price by themselves and by their fathers—and of wives by their husbands—and that panders were not unknown (*Voyage*, 177). In a proposal of marriage, the man asked the girl of her parents. If she then accepted his presents, he was privileged to pass two or three nights by her side before consummating the marriage; but, if she had little liking for him at the end of that time, the matter was closed. If she felt affection for her lover, the formal marriage took place by the simple announcement of their wedlock in the presence of relatives and friends, and a wedding feast followed (*Voyage*, 161-163, *Hist.* 3161.). Marriage within the gens

was forbidden, though it must be contracted within the tribe; so that, if a person outside the tribe was chosen as a mate, he or she must first be adopted into some other gens than that of the prospective bride or groom. Polygamy was permitted; but the brides—unless sisters, who must be married within each other's lifetime, or else the second would be reckoned the husband's niece, so that she could not be married by her brother-in-law without reproach (Le Jeune, *Jes. Rel.* xvi. 207)—must be from different gentes. The husband retained the rights of his gens, but lived with the gens of his wife. Polyandry was unknown (Powell, 63). The descendants of brothers and sisters were regarded as 'brothers' and 'sisters,' and could never intermarry 'if they follow the good customs of their nation'; nor was a widower or widow expected to re-marry within three years (Le Jeune, 203-205). The principle of matriarchy is also obvious in case of death, for,

'In the event of the death of the mother, the children belong to her sister or to her nearest female kin, the matter being settled by the council women of the gens. As the children belong to the mother, on the death of the father the mother and children are cared for by her nearest male relative until subsequent marriage' (Powell, 64).

Divorce was extremely facile (Lalemant, in Vimont, *Jes. Rel.* xxviii. 51-53; Sagard, *Hist.* 298 f.); but, if there were children, only a grave cause could dissolve the marriage. In this case the children went with the father; but children were not the heirs of their father, whose property went to the children of their sisters (Sagard, *Voyage*, 164-166, 173).

The cult of the Huron, as has already been noted, was largely composite in character. Thus it is stated by Lalemant (in Le Jeune, *Jes. Rel.* xvii. 197-199) that the Huron rite of marrying two girls of tender age to the fishing-net had been borrowed from the Algonquins, because, 'some years ago,' the *oki* of the net had declared himself angry at the loss of his wife, and hence had prevented the Huron from catching fish until he had a spouse; whereupon, to make him the more contented, they gave him two (cf. Brébeuf, in Le Jeune, *Jes. Rel.* x. 167, where it is added that fish fear the dead).

As among so many other peoples, beliefs were relatively fluid among the Huron, whereas customs and rites were firmly established. This is brought out by Le Jeune (*Jes. Rel.* xvi. 199):

'The belief and superstitions of the savages are not very deeply rooted in their minds; for, as all these idle fancies are only founded upon lies, they fall of themselves, and suddenly disappear, or are dissipated by the rays of the truths, entirely conformable to reason, that are proposed to them. . . . As for what relates to their customs, that is a longer story. It is easier to banish errors of the understanding than to remove the bad habits of the will.'

The traditional history of the Huron was kept alive by being recited at assemblies for the election of chiefs (Ragneneau, in Lalemant, *Jes. Rel.* xxix. 61), and they believed that they came originally from a mountain side between Quebec and the sea, or at all events from the northern shores of the lower St. Lawrence (Wilson, *Trans. Roy. Soc. Can.* ii. pt. i. p. 59).

Their cosmogony is elaborately described by Brébeuf (in Le Jeune, *Jes. Rel.* x. 127-139).

The Hurons are declared to have recognized a first principle of all things, and to have worshipped the sky and the sun. On this Ragneneau (in Lalemant, *Jes. Rel.* xxxiii. 325) says:

'There remained in their hearts a secret idea of the Divinity and of a first Principle, the author of all things, whom they invoked without knowing him. In the forests and during the chase, on the waters, and when in danger of shipwreck, they name him *Aiwetouy Soutandien*, and call him to their aid. In war, and in the midst of their battles, they give him the name of *Onondawet*,¹ and believe that he alone awards the

¹ This deity, who is probably identical with the sun (cf. preceding col.), had the form of a dwarf. If he appeared to a warrior and caressed him, he would be victorious; but, if he

victory. Very frequently, they address themselves to the sky, paying it homage; and they call upon the sun to be witness of their courage, of their misery, or of their innocence. But, above all, in the treaties of peace and alliance with foreign nations they invoke, as witnesses of their sincerity, the sun and the sky, which see into the depths of their hearts, and will wreak vengeance on the treachery of those who betray their trust, and do not keep their word.

We are also informed by the same authority (*ib.* 217) that a principle of evil was acknowledged.

'The Hurons believe that there is a kind of monstrous serpent which they call *Angont*, which brings with it disease, death, and almost every misfortune in the world. They say that that monster lives in subterranean places, in caverns, under a rock, in the woods, or in the mountains, but generally in the lakes and rivers. They say that the sorcerers use the flesh of that frightful serpent to cause the deaths of those upon whom they cast their spells.'

If a man died by drowning or freezing, the sky was angry, and must be propitiated by cutting up the corpse and throwing the entrails and choicest portions into a fire as an offering to the offended deity (Brébeuf, in Le Jeune, *Jes. Rel.* x. 163). The wide-spread belief in the thunder-bird (cf. *ERE* i. 529) was found among the Huron (Sagard, *Voyage*, 251, *Hist.* 500; Brébeuf, 45); during eclipses they shot arrows at the sky to deliver the moon from danger, and uttered imprecations on their enemies (Brébeuf, 59); and they held that at night the sun went through a hole in the earth, emerging from the other end of his hiding-place at dawn (Sagard, *Voyage*, 251, *Hist.* 494, 537). They maintained that not only men and animals, but also inanimate things, had souls, to which prayer must be offered (Sagard, *Voyage*, 258, *Hist.* 493, 642), and that spirits ruled over rivers, journeys, treaties, wars, feasts, and maladies; even a rock of human shape, on the road to Quebec, was believed to have been originally a man, and sacrifice was offered to it, just as tobacco was cast into the dangerous Sault de la Chaudière after the Huron had safely passed it (Sagard, *Voyage*, 231 f., *Hist.* 495 f., 822; Brébeuf, 165-167). To secure good fishing, tobacco was often burned in honour of the water-spirit; but, if any portion of fish or game fell into the fire, no more would be caught, especially as the nets would tell the fish if such a thing occurred, or even if a child was harshly reproved; but, on the other hand, a good catch might be secured by the services of a fishing preacher (*prédicateur de poisson*) in each cabin, who told the fish of the Indians' devotion to them, and urged them to help the Huron, who honoured them and did not burn their bones (Sagard, *Voyage*, 255-258, *Hist.* 639-642, 494). Human sacrifice was unknown among the Huron (Sagard, *Hist.* 499). Prayer was constantly employed, a specimen being thus recorded by Lalemant (in Vimont, *Jes. Rel.* xxxiii. 55):

'Each one should go every day to his field, throw some tobacco on the fire, and burn it in honour of the demon whom he worshipped, calling aloud this form of prayer: "Listen, O sky! Taste my tobacco; have pity on us!"'

The general attitude of the Huron towards the unusual and their faith in charms are summarized by Bressani (*Jes. Rel.* xxxix. 25-27; cf. Ragueneau, in Lalemant, *Jes. Rel.* xxxiii. 211-213):

'They had a superstitious regard for everything which savored a little of the uncommon. If, for instance, in their hunt they had difficulty in killing a bear or a stag, and on opening it they found in its head or in the entrails a bone, or a stone, or a serpent, etc., they said that such object was an *oki*, that is, an enchantment which gave strength and vigor to the animal, so that it could not be killed: . . . If they found in a tree, or beneath the soil, some stone of an uncommon shape, like a plate, or spoon, or any vessel, they esteemed this encounter fortunate; because certain demons (they said), which live in the woods, forget these things, which make any person who finds them again successful in fishing, hunting, trade, and gaming. These objects they called *askianat*, and believed that they often changed form, transforming themselves, for instance, into a serpent, or a raven's beak, or an eagle's claw, etc.—changes which none had seen, but which all believed.'

The system of fraternities was developed among smote him on the forehead, he would be killed (Brébeuf, in Le Jeune, *Jes. Rel.* x. 183).

the Huron. The members of one of these, in endeavouring to expel the disease demon *Aoutaerohi*, carried hot stones and firebrands in their mouths, rubbed the sick with the glowing embers, and growled like bears in their ears (Le Mercier, in Le Jeune, *Jes. Rel.* xiv. 59-65). In general, Lalemant (*ib.* xvii. 187) says:

'For several of these superstitions there are organized fraternities, to which, and especially to the masters of which, one must address himself. All those who have once been the object and occasion of the dance or the feast belong to the fraternity, to which, after their death, one of their children succeeds; some have, besides, a secret or a charm which has been declared to them in a dream, with the song to be used before going, for example, to the fire feast, after which they can handle the fire without hurting themselves' (cf. also Ragueneau, in Lalemant, *Jes. Rel.* xxx. 28).

The 'medicine-man' flourished among the Huron, and some of them were not sincere, although the baser members of the profession were doubtless those unofficial sorcerers who, as noted above (p. 883^b), might be killed as outlaws. On this subject Brébeuf (in Le Jeune, *Jes. Rel.* viii. 123) writes:

'They say that the sorcerers ruin them; for if any one has succeeded in an enterprise, if his trading or hunting is successful, immediately these wicked men bewitch him, or some member of his family, so that they have to spend it all in doctors and medicines. Hence, to cure those and other diseases, there are a large number of doctors whom they call *Arendiouane*. . . . Some only judge of the evil, and that in divers ways, namely, by pyromancy, by hydromancy, necromancy, by feasts, dances, and songs; the others endeavor to cure the disease by blowing, by potions, and by other ridiculous tricks. . . . But neither class do anything without generous presents and good pay.

There are here some soothsayers, whom they call also *Arendiouane*, and who undertake to cause the rain to fall or to cease, and to predict future events' (cf. also Brébeuf, in Le Jeune, *Jes. Rel.* x. 197-199; Ragueneau, in Lalemant, *ib.* xxxiii. 193-195, 221; Sagard, *Hist.* 534).

The Huron maintained the doctrine of the multiple soul. According to Le Jeune (*Jes. Rel.* xvi. 191), the belief in souls profoundly affected the Huron theories of dreams, *ondonoc* ('wishes of the soul'), disease, and medicine. Failure to dream was one of the signs that the soul had departed (Le Jeune, *Jes. Rel.* xvi. 193). The whole theory is set forth by Ragueneau (in Lalemant, *ib.* xxxiii. 189-191); on the importance of dreams, see also Brébeuf, in Le Jeune, *ib.* x. 169-173; du Peron, *ib.* xv. 177-179; on the *ondonoc*, du Peron, 179-181; Lalemant, in Le Jeune, *ib.* xvii. 147-149, 153-159, 165-187; Chastelain, in Le Jeune, *ib.* xix. 193.

Parents dreamed on behalf of their sick children (Brébeuf, 173). On one occasion a man dreamed that he was burned by the Iroquois. To avert this fate, he was somewhat severely burned as a fictitious captive by his compatriots at the regular burning place, after which he offered a dog to be killed, roasted, and eaten (Lalemant, in Vimont, *Jes. Rel.* xxiii. 171-173; cf. also Bressani, *ib.* xxxix. 19). Sometimes the dream led to obscene rites (Sagard, *Hist.* 308 f.). After a propitiatory dream a feast was often given, for, according to Ragueneau (in Lalemant, *ib.* xxxiii. 195),

'they say that these gifts are given to compel the soul to keep its word, because they believe that it is pleased at seeing this expression of satisfaction for the propitiatory dream, and that, consequently, it will set to work sooner to accomplish it. And, if they failed to do so, they think that that might be sufficient to prevent such a result, as if the indignant soul withdrew its words' (on feasts among the Huron, see especially Brébeuf, in Le Jeune, *ib.* x. 175-185).

The Huron theory of medicine was based on the belief that 'all remedies always infallibly have their effect; if, then, the patient did not recover with a natural remedy, the malady was supernatural, and there was need of a supernatural and superstitious remedy' (Bressani, *Jes. Rel.* xxxix. 25). According to Ragueneau (in Le Jeune, *ib.* xxxiii. 199),

'the Hurons recognize three kinds of diseases. Some are natural, and they cure these with natural remedies. Others, they believe, are caused by the soul of the sick person, which

desires something; these they cure by obtaining for the soul what it desires. Finally, the others are diseases caused by a spell that some sorcerer has cast upon the sick person; these diseases are cured by withdrawing from the patient's body the spell that causes his sickness. This spell may be a knot of hair; a piece of a man's nail, or of an animal's claw; a piece of leather, or of bone; a leaf of a tree, some grains of sand, or other similar things.

Most sicknesses arose from unsatisfied soul-desires or from witchcraft (Ragueneau, 201-209, with the general procedure in such cases). The Huron sought baptism at first 'almost entirely as an aid to health' (Brébeuf, 13). A curious custom is recorded by Sagard (*Hist.* 313), who states that sometimes, either in consequence of a dream or at the bidding of the *loki* (medicine-man), the girls chose young men with whom they passed the night. In some instances stench was used to drive away demons of disease (Le Jeune, *Jes. Rel.* xix. 71). If all else failed, and there were many sick in the village, recourse was had to the *lonewoyroya* or *omonharota* ('turning the brain upside down'), when the villagers turned everything topsyturvy, shouted, and ran about all night, seeking to expel the demons. They then thought of the first object that came into their minds and went from cabin to cabin demanding something, and receiving gifts until they obtained that of which they thought. All other presents were returned after a feast, ordinarily lasting three days; but, if they failed to secure the object desired, the persons thus disappointed thought that their death was near (Sagard, *Voyage*, 279-282, *Hist.* 674 f.; cf. Brébeuf, 176-177). This feast was also celebrated every winter in honour of all the deities together (Lalemant, in Vimont, *Jes. Rel.* xxiii. 53). Frequently the games of *crosse* and 'dish' (a dish containing six plum-stones, white on one side and black on the other, being dashed on the ground so as to cause the stones to jump out, the object being to throw all of one colour) were played as a cure for sickness (Brébeuf, 185-189).

Of ceremonial dances we have scant information, but we are told that children were not allowed to imitate them (Lalemant, in Le Jeune, *Jes. Rel.* xvii. 163).

The Huron believed in re-incarnation. This is in evidence in a case in which a sorcerer claimed to have been a demon living under the ground who, wishing to become a man, had entered the womb of a woman who, knowing she had not conceived in the normal way, caused herself to give birth prematurely (Le Mercier, in Le Jeune, *Jes. Rel.* xiii. 105-107). This belief seems also to have been extended to animals, for a Huron who lost a favourite dog during a bear-hunt lamented that a small bear had not been brought him to get the dog's name and take its place (*ib.* xiv. 35). In their views regarding the future life the Huron 'make no mention either of punishment or reward. And so they do not make any distinction between the good and the bad, the virtuous and the vicious; and they honor equally the interment of both' (Brébeuf, in Le Jeune, *Jes. Rel.* vii. 121).

The Milky Way was called by the Huron 'the way of souls,' and the souls of dogs were also immortal, a group of stars near the Milky Way being known as 'the path of dogs' (Sagard, *Voyage*, 233, *Dict.* 21). It was possible, under certain circumstances, for the souls of the dead to be brought to the world of the living, and Huron folklore had at least one specimen of the Orpheus and Eurydice cycle (Brébeuf, in Le Jeune, *Jes. Rel.* x. 149-153).

LITERATURE.—This art. has intentionally been restricted to the purely pagan period of the Huron. For their history in the later epoch, see J. N. B. Hewitt, 'Huron,' in *HAI* (=30 *Bull. BE*, 1907-10) i. 584-591; for the history of Christian missions, A. E. Jones, 'Huron Indians,' in *Cath. Envy.* vii. [1910] 566-568; a general sketch is given by A. Featherman, *Donaco Meroniamontis* (=Social Hist. of the Races of Mankind, m. 1.), London, 1899, pp. 51-65; the most important sources are G. Sagard-Théodat, *Grand Voyage du pays des Hurons*, Paris,

1632, new ed., do. 1865, and *Hist. du Canada*, do. 1686, new ed., do. 1896 (in this art. citations from both works of Sagard are according to the first editions); *Jesuit Relations and Allied Documents*, ed. R. G. Thwaites, 73 vols., Cleveland, 1896-1901 (especially vols. viii., x., xvi., xxxiii., xxxix.). See also P. D. Clarke, *Origin and Traditional Hist. of the Wyandots*, Toronto, 1870; F. Martin, *Hurons et Iroquois*, Paris, 1877; F. Parkman, *Jesuits in N. Amer. in the Seventeenth Cent.*, Boston, 1867, especially pp. xxiv-xxli (Parkman endeavours painfully to be just, but is handicapped by utter inability to share either the Indian or the Catholic point of view, or even the mental attitude of the period which he discusses); J. LOUIS H. GRAY.

HUSSITES.—The Hussites were the followers of John Hus, who, after the death of their leader, sought by force of arms to secure toleration for themselves in Bohemia. Thereafter, in the 15th and 16th centuries, they were divided into two sections, the one, as the Utraquists or Calixtines, forming a party within the Roman Catholic Church; the other, as the Bohemian Brethren, becoming an independent religious community.

1. **John Hus.**—Jan Hus, the reformer of Bohemia, was born in the second half of the 14th cent. in the Bohemian village of Hussinecz. The year and day of his birth are unknown. As family names were not then in common use among the rural population of Bohemia, he styled himself, from the name of his native place, John of Hussinecz, subsequently (from 1396) abbreviating the name to John Hus. The poverty of his parents compelled him to earn his livelihood as a chorister and sacristan. About 1385, having resolved to devote himself to a clerical career, he began his studies at Prague. In 1393 he graduated B.A.; in 1394, B.D.; and in 1396 M.A. In academical circles, moreover, he won a position of high respect and influence; in 1401 he became dean of the philosophical faculty, and in 1402-03 was rector of the University. From the time of his ordination to the priesthood in 1400 he also acted as preacher in the Bethlehem Church of Prague.

As a result of the marriage of Anne, the sister of Wenceslaus, King of Bohemia, with Richard II. of England (1382), an active intercourse sprang up between the two countries, and one result of this was that the works of Wyclif (*q.v.*) became known in Bohemia. Even as a student, Hus had become acquainted with Wyclif's philosophical writings, and had assimilated his doctrine of realism. Wyclif's theological writings, however, first reached Prague in 1401-02; they made a profound impression upon Hus, and incited him to work actively for the reforms demanded by the English writer. By his moral diatribes against the vices of the clergy, Hus incurred the hostility of Archbishop Sbinko, though, on the other hand, he still retained the favour of King Wenceslaus, and the more so as in the University the Bohemian 'nation,' through Hus's influence, maintained the neutrality enjoined by the king in the Papal schism (between Pope Gregory XII. and Pope Alexander V.), while the other nations, as also the Archbishop, remained faithful to Gregory XII. Hus, availing himself of the king's favour, induced him to alter the conditions of voting in the University in favour of the Bohemian nation, with the result that the latter

secured three votes, and the other nations, combined, only one. This caused a large number of German teachers and students to withdraw from Prague and found a new University at Leipzig (1409). In this matter Hus acted not so much from racial antipathy to the Germans as from resentment against their fierce opposition to the Wyclifite doctrines which he advocated and regarded as truth. Thereafter Pope Alexander V., to whom Archbishop Šbinko had now made his submission, issued, at the instance of Hus's enemies, a bull against Wyclif, enjoining that his writings should be burnt (1410). Hus protested, and, in spite of the Archbishop's prohibition, actually defended Wyclif in public discussions. The consequence was that Hus was excommunicated, and Prague laid under a Papal interdict—measures which failed, however, to achieve their object.

Then Pope John XXIII.'s bull of indulgence for a crusade against Ladislaus of Naples, the champion of Gregory XII. (1411), led to a division among Hus's own followers. Hus assailed the bull in trenchant sermons and disputations, while the theological faculty of the University, including many of his former adherents, defended it. The breach became wider and wider, and led to popular riots in Prague, so that at length the king, who was still on Hus's side, found it necessary to induce him, for the sake of peace, to leave Prague (1411). Hus did so; but the desired result did not ensue, for his continued activity in Southern Bohemia, where he devoted himself partly to composing polemical tractates in the castle of a patron, and partly to preaching to the people of the district, soon put him at the head of the popular movement.

In order to effect an adjustment between the contending parties, the Emperor Sigismund, as heir to the Bohemian throne, resolved to bring the matters at issue before the General Council summoned to meet at Constance on the 1st of November 1414. Hus was quite prepared to attend the Council, but only as one who should be permitted in free discussion to try to win the fathers to the side of the Wyclifite teaching, and not as an accused person requiring to vindicate his actions. After prolonged negotiations with Sigismund the latter promised to use his Imperial authority to obtain for Hus this free and secure position in the Council. It was with bearing this sense that Hus and the entire Bohemian people regarded the Emperor's safe-conduct, which in its actual terms, however, was no more than a passport. Sigismund himself certainly intended it as a real safe-conduct; for, when by a base betrayal Hus was apprehended in Constance on the 28th November, the Emperor was so enraged that he threatened to leave the Council. Nevertheless, he at length allowed the Council to institute a prosecution for heresy against Hus, and was able to secure only a single mitigation in the latter's favour, viz. that—contrary to Canon Law—the accused heretic should be permitted to defend himself in open court. In all other respects the case took the usual course. As the prosecution did not undertake to confute the alleged errors which Hus had taken from Wyclif's writings, and as Hus therefore unconditionally refused to recant, he was condemned to death by burning. He died at the stake on the 6th of July 1415, steadfast under long-protracted agony, and in true greatness of soul praying to the last.

Hus was a follower of Wyclif, and made no higher claim. His ideas of Church reform are all derived from Wyclif, whose writings he often reproduces verbally in his own tractates. His position is a distinct one only in so far as his proposals were less drastic than those of the English reformer; and he still adhered to many doctrines and practices of the Church which the latter rejected, as,

e.g., the Seven Sacraments, Transubstantiation, Masses for the Dead, Intercession of the Saints, Purgatory, the Merit of Works, and others. From Wyclif he received, above all, the principle that Holy Scripture is the supreme standard in matters of faith, and that the authority of the Church must be subordinate thereto. For Hus, Christ was the Head of the Church, and the Church was not the hierarchy, but the community of the elect. These principles he proclaimed to the people with glowing eloquence, and so prepared them to put forward resolute demands for the abolition of various ecclesiastical abuses long felt to be tyrannical.

LITERATURE.—The sources for the life of Hus are collected in *Documenta Magistri Joannis Hus*, ed. F. Palacky, Prague, 1893. His writings—(a) Latin: *Joannis Hus et Hieronymi Pragensis historia et monumenta*, Nuremberg, 1558, and Frankfurt, 1715 (unsatisfactory, containing much that was not written by Hus); (b) Czech: K. J. Erben, *M. Jana Husi svrhané spisy*, Ceské, 3 vols., Prague, 1895–98. A new ed. of the Lat. and Czech works, by W. Flajshans, is in course of publication (Prague, 1903 ff.). Books dealing with the subject: G. V. Lechler, *Joh. Hus*, Halle, 1890; K. Müller, 'König Sigismund's Geleit für Hus' (*Hist. Vierteljahrschrift*, 1898); J. Loserth, *Wyclif and Hus*, Eng. tr., London, 1884; F. H. H. V. Lützow, *The Life and Times of Master John Hus*, do. 1900.

2. The Hussites.—The treacherous arrest of Hus, his condemnation as a heretic, and his execution were felt by the Bohemians as an indignity to their nation, and, when Sigismund began a savage persecution of Hus's followers in Bohemia, the people rose in revolt (1419). It is worthy of note that from the first the device under which the Hussites fought and conquered was the chalice, though Hus himself had never demanded that the laity should partake of the cup in the Lord's Supper, but had at most acquiesced when his friends in Prague made that demand during his imprisonment in Constance. In point of fact, as the earlier Waldenses frequently joined hands with the Hussites, inspiring them with fresh vitality, the claims of a large section of Hus's followers went far beyond what he himself had asked for. This is true especially of the more extreme party, the Taborites—so called from Tabor, the name of the town which they founded in the district of Southern Bohemia where Hus had preached to the people during his absence from Prague. The Taborites were the people's party among the Hussites—the most uncompromising Wyclifites, whose position was at first defined in part by certain eschatological beliefs. Their leader was the brilliant general, Jan Trocenov of Zizka.

The more moderate party were designated Calixtines or Utraquists, their chief demand being that the laity should have the cup (*calix*)—'communio sub utraque specie.' They were sometimes called 'Praguers,' from the fact that they were drawn mainly from the academical and civilian circles of Prague. Their leader and counsellor was Jan Rokycana, a Magister of Prague University, who was made a bishop by his party in 1435, though his appointment never received Papal ratification. The Utraquists put forward their distinctive claims in the Four Articles of Prague, as follows: (1) unrestricted preaching of God's word; (2) communion in both kinds; (3) the apostolic poverty and moral purity of the clergy; and (4) Church discipline. In spite of the numerous differences between the two sections, they always combined in making war upon their common enemy. Having repulsed several German crusading armies (1420–27), they took the aggressive, and, by ravaging the districts adjacent to Bohemia, sought to compel the German princes to abandon their Pro-Roman policy of oppressing and exterminating the Hussites. They were so far successful in these tactics that the Council of Basel entered into negotiations with them, and at length, in the Compactata of Basel (1433), granted them the four conditions just noted. But by taking

this step the Council managed at the same time to bring about an irreconcilable antagonism between the two Hussite parties, as the Taborites absolutely refused to be satisfied with such trifling concessions. War now broke out between the two sections, and the united forces of the Calixtines and the Catholics gained a decisive victory over the Taborites at Lipan on 30th May 1434. It soon became apparent, however, that Rome was bent upon revoking the concessions it had made. It did not adhere to the Compactata; in fact, Pope Pius II. formally cancelled them in 1462. Still, they remained actually in force, for the Bohemian Diet had made them the law of the land, and the Bohemian throne was pledged to maintain them. But in 1567 the Diet itself repealed them, as Utraquism was by that time in a state of utter dissolution. From the time of Luther's entrance upon the scene they had in ever-increasing numbers allied themselves with the reforming movement directed by him. The Taborites as a party were never of any consequence after the defeat of 1434; a section of what still remained of them attached itself to the Bohemian Brethren.

(Prague, 1898); J. Loserth, *Beiträge zur Gesch. d. hussit. Bewegung*, i.-v. (Vienna, 1877 ff.); F. Palacky, *Gesch. Böhmens*, iii.-v. (Prague, 1845-67).

3. The Bohemian and Moravian Brethren.—The Hussite wars, with their meagre results, left behind in Bohemia a general dissolution of ecclesiastical order and a spirit of pessimism. In all parts of the country there arose small communities, attaching themselves to individual priests, and the more bigoted circles of these communities often sought to effect reforms in strange ways, while their members, like the older Taborites, spoke of one another as brothers and sisters. But Rokycana, the leader of the Utraquists, and the Archbishop chosen by themselves, was dissatisfied with what had been won, and in his sermons vigorously denounced the moral and religious defects of the Roman Church, as well as of his own party, and made a powerful impression upon a little circle of religiously disposed persons whose leader and head was Brother Gregory. When, however, this circle called upon Rokycana to translate his strictures into action, he declined to do so. Then, after appealing also to Peter of Cheltschö—a thoroughgoing partisan of Wyclif, and the leader of one of the small communities above mentioned—for practical support of their designs, but again in vain, they withdrew, about 1457, to the east of Bohemia, to the solitudes of Kunwald, and there formed, not another monastic order, but a community like the Waldenses (*q.v.*) or the Friends of God (*q.v.*). Their practice was to send out itinerant preachers in pairs, they had a communal organization and communal law, they divided their members into beginners, proficients, and the perfect, as in the *Theologia Germanica* (ed. Pfeiffer, tr. S. Winkworth, 2nd ed., London, 1854, ch. 14). In 1467 this community, which meanwhile had gained accessions in several other districts of Bohemia and Moravia, dissociated itself completely from the Utraquist Church by adopting the policy of selecting and ordaining its priests from its own ranks, subsequently procuring for them a second ordination at the hands of a Waldensian bishop named Stephen, resident in Austria. They assumed the name *jednota bratrská* (Czech 'society of brethren'), afterwards Latinized as *Unitas Fratrum*; their opponents, however, called them Waldenses, or, more frequently, Pikhards (Bekhards). As they had now broken off relations with the Church, they proceeded to withdraw from the world. Military service, the taking of oaths, the

delivering of penal judgments, and, accordingly, all participation in the administration of State or Church, were forbidden to their members. They likewise loathed science, the sole function of which, they said, was to justify every error by Scripture. But their supreme concern was practical Christianity—purity of conduct, the permeation of social life in their communities by a disinterested and self-denying love to one's neighbour, the fulfilling of the law of Christ according to Gal 6¹; hence, too, they sometimes called themselves 'Fratres legis Christi.' In the succeeding decades their estrangement from worldly interests became gradually less rigorous—a development which was not effected without some internal conflicts, and resulted in the severance of the 'Little Sect' (also called Amosites, after their leader, Amos of Wodnian).

Hitherto the Brethren had found their standard of doctrine in the writings of Brother Gregory (*Seven Letters to Rokycana*, 1468-70, *Tractate on the Holy Church*, 1470, *Treatise on the Narrow Way of Christ*, 1470, *Of Two Kinds of Work—that founded on the Sand and on the Rock*, probably 1471, and others); but from about the year 1490 the spiritual leadership of the sect was assumed by Brother Lucas, a B.A. of Prague University, who, with a reverent regard for traditional usage, finally settled its constitution, its order of worship, its social organization, and its doctrine. His numerous works include, besides theological treatises, the first hymn-book of the Brethren, the first catechism for the various grades of the community, full official instructions for their priests, an order of ritual, etc. It was this effective organization that enabled the community to survive the numerous persecutions directed against them, and even to emerge therefrom with renewed strength. Their adversaries had been successful in having a decree adopted in the national statute-book, and thus made a law of the land, to the effect that the *Unitas Fratrum*, with its congregations and assemblies, should not be tolerated in Bohemia (1508). This law nominally remained in force for a century (till 1609), but the nobles had sufficient power to be able for the most part to protect the communities on their own estates.

Very soon after the rise of Luther, the Utraquist Church in Bohemia entered into negotiations with him, and upon both sides there was a desire for closer union. This fact induced the Brethren also to send ambassadors to Luther; but it was only after the death of Lucas (1528) that the relations between them and the German reformer became really intimate, and that their leading men, such as Johann Horn and Johann Augusta, sought to meet him half-way by adopting his doctrines in their Confession. (Their 'Statement of Faith,' with a preface by Luther, appeared in 1533.)

In consequence of the defeat suffered by the Bohemian nobles in their revolt against Ferdinand I. in 1547, the latter became powerful enough to set in operation once more the old laws against the Brethren. The large majority of the Brethren were thus forced to withdraw from Bohemia, and sought refuge in Poland. They were, however, permitted to remain in Moravia, where, indeed, they had their chief settlements, as also the administrative centre of their Church. The need of a legally secure position, such as the German Protestants had attained in 1555 by the 'Religious Peace' of Augsburg, led the Brethren—under the guidance of Blahoslav—and also the Utraquists, who in ever larger numbers had become Lutherans, to engage in prolonged ecclesiastical negotiations with Maximilian II. In the course of these negotiations, in 1575, the evangelical States adopted the *Confessio Bohemica*, in the framing of which the representa-

tives of the Brethren had taken part. But it was not till 1609, when the Emperor Rudolf II. issued an Imperial charter granting religious liberty to the adherents of that Confession, that the Brethren in Bohemia united with the evangelicals, stipulating, however, that their own constitution and order of worship should remain as before. In Moravia and Poland, on the other hand, they retained their existing Confession. Further simplification of this necessarily transitional state of affairs was prevented by the unfortunate issue of the Bohemian revolt in 1618, as, in consequence of the defeat of the evangelicals in the battle at the White Mountain, not only the Unity, but the entire evangelical Church in Bohemia and Moravia, was destroyed. Numbers of the defeated party fled to Hungary, Poland, and the neighbouring districts of Saxony; others remained where they were, became Catholics in external things, and, in hope of better days, tried to support one another secretly in the evangelical faith. But, as the Catholic reaction developed more and more vigorously in Moravia, many of their descendants migrated to Saxony about the beginning of the 18th cent., and there founded the settlement of Herrnhut. The Unity of the Brethren, which they reconstituted in alliance with Count Zinzendorf (see MORAVIANS), was joined by numerous exiles from Bohemia. The remnants of the Unity in Poland—their principal community was at Lissa, from which as a centre their bishop, John Amos Comenius (Comenius), developed his varied activities—also yielded to the ever-expanding power of Catholicism.

HUTCHINSONIANS.—1. Followers of John Hutchinson (1674-1737), in his reconciliation of science with the OT. Thomas Burnet had published geologic theories, relating them to Genesis; Woodward had followed with a *Natural History of the Earth*, identifying fossils as remains of living plants and animals, insisting on the earth's strata having been deposited from water, at the Noachian Deluge; and Samuel Clarke then had translated a treatise on Physics by a Cartesian, to pave the way for the study of Newton's *Principia*. Hutchinson was one of many correspondents with Woodward, and in his capacity as land-steward had great opportunities of augmenting Woodward's collection of fossils, ultimately bequeathed to Cambridge. Hutchinson hoped that Woodward intended to publish a book elucidating Genesis; and, when disappointed, he decided to do so himself, and so began the study of Hebrew. He followed Simon in discarding everything but the consonants, and wrote on the perfection of the Hebrew text when freed from Jewish forgeries. His first publication was an attack on the scientists named, entitled *Moses' Principia* (1724); a second part turned on Clarke and his doctrine of the Trinity, expounding a rival theory of the three natural agents—air or fire, light, spirit. He had now adopted Bampfield's view, that all useful sciences and profitable arts were implicit in the Bible, and he deduced the true doctrine of gravity from the cherubim, the true doctrine of the natural agents and the Trinity from Jachin and Boaz. Other topics dealt with were human physiology, the nature of body and soul, instinct. When, however, Hutchinson found Tindal arguing from the same premises that Christianity is as old as the Creation, he changed front and stigmatized Natural Religion as the religion of Satan, claiming that the use of reason was recovered only by the data of Christianity.

His teachings attracted attention in educated circles; Lord Advocate Forbes adopted his principles at once. Parkhurst followed him in emphasizing the consonantal Hebrew text, as his *Lexicon* attests. George Horne for the same reason opposed Kennicott's scheme of collating Hebrew MSS. He also believed that Hutchinson had excelled Newton in his understanding of the physical causes moving the world, and he aided William Jones of Nayland in a reply to Clayton's Essay on Spirit. Jones twice elaborated a theory of the Trinity, and to the end of the century developed his physical teachings. No later adherent made any mark.

LITERATURE.—*Works*, complete ed. R. Spearman and J. Bata, 12 vols., London, 1878; *Abstract of these*, do. 1753; *Supplement*, with *Life*, ed. Spearman, do. 1765.

2. The name 'Hutchinsonians' is sometimes applied to the followers of Anne Hutchinson (1590-1643), in her pleas for experimental religion and freedom of conscience. Reaching Boston in 1634, she found the civil suffrage limited to church members, with an oligarchy of ministers and elders in power; most of the settlers were Puritans, so intolerant that they shipped back a few who desired to use the Prayer-Book. She herself, though an admirer of John Cotton, was not at first admitted to membership in his church, which also silenced all women members; she therefore began teaching in meetings of her own. These were soon attended by men, the most prominent being young Henry Vane, son of a Privy Councillor. The Company forbade the organization of new churches without the consent of the magistrates and of the elders in existing churches; the democrats replied by putting forward Mrs. Hutchinson's brother-in-law to be assistant to Cotton, and electing Vane governor (1636). She then attacked the oligarchy as being under a covenant of works, whereas she and Cotton and most of the Boston church were under a covenant of grace, enjoying the peculiar indwelling of the Spirit. This led to all the elders in the colony assembling and condemning 82 opinions which they attributed to her or derived from her teaching; these they afterwards published in England to justify themselves, labelling them Antinomian, Familist, and Libertine. Cotton recanted, and at the next elections (1637) Vane was defeated, and returned to wage a better fight in England for toleration. His voluminous and obscure religious works are indebted to Boehme as much as to Mrs. Hutchinson. Other sympathizers migrated to the Connecticut River, and discarded all religious tests for civil membership. She and other adherents were banished; they settled in what they re-named the Isle of Rhodes (now Rhode Island), where her follower William Coddington and her husband were the earliest rulers, and the island was soon famed as the home of religious liberty.

W. T. WHITLEY.

HYKSOS.—'Hyksos' is the title given to a race of invaders, apparently of Semitic origin, who conquered Egypt during the time of confusion and weak rule which followed the close of the XIIIth and ended with the rise of the XVIIIth dynasty. The chief authority for the facts of the Hyksos conquest and domination is a fragment of the history of Manetho quoted by Josephus (*c. Apion*, i. 14). Its statements may be summarized as follows:

In the reign of a king named Timaio the gods were angry with Egypt, and there came up from the East a race of ignoble men who conquered the country without a battle. They treated the native population with great cruelty, burned the cities, and demolished the temples. Thereafter they made one Salatis their king, and he established a great fortified camp at a place called Avaris (Hê-nârt) on an arm of the Nile near Bubastis. Here he kept a garrison of 240,000 men. The Hyksos dominion

tion lasted for 511 years. Six kings are named—Salatis, 19 years; Boon, 44; Apakhnas, 88+; Apophis, 61; Iannas, 50+; Assia, 49+.¹ Eventually the kings of the Thebaid made insurrection against the oppressors, and under a king named Misragmoutosis drove them into Avaris, and blockaded them there. Finally an arrangement was reached whereby the Hyksos were allowed to depart from Egypt into Syria, where they built the fortress called Jerusalem. They were called *Hyksos*, or 'Shepherd Kings,' because *Hyk* in the sacred language of Egypt signifies a 'king,' and *sos* in the vulgar dialect a 'shepherd.' Some say that they were Arabians.

This is history of a somewhat curious type, and it is difficult to say how much reliance is to be placed on it. However, it is certain from native records that there was such an invasion and domination. An inscription of Queen Hatshepsut, dating from only two generations after the expulsion of the invaders, says:

'I have restored that which was ruins,
I have raised up that which was unfinished,
Since the Asiatics were in the midst of Avaris of the North-land,

And the barbarians were in the midst of them,
Overthrowing that which had been made,
While they ruled in ignorance of Râ.'

The inscription of Aahmes, son of Abana, a naval officer of El-Kab under Aahmes I., mentions the prolonged siege of Avaris. Further, a folk-tale, preserved in the First Sallier Papyrus, records how one of the Hyksos kings, Apepa, desired to impose the worship of Sutekh, his god, upon king Seqenen-Râ of Thebes. He therefore sent a message to him complaining that his sleep at Tanis was broken by the plunging of the hippopotami in the sacred lake at Thebes, and requesting that the offending animals should be exterminated. If Seqenen-Râ could make no answer to this amazing request, he was to give up his own god and worship Sutekh. If, on the other hand, he did what Apepa desired, the latter would worship Amen-Râ. This narrative, which shows Apepa most barefacedly manufacturing a *casus belli*, is obviously a romance fabricated to account for the outbreak of war between the Hyksos and the princes of the Thebaid. The fact, however, of Hyksos dominance is manifest in the whole tone of the story.

As to the duration of the period of oppression there is no certainty. Manetho's six named kings account for 260 years, and he states that these were the first kings, leaving others unnamed to fill up the 511 years. Petrie accepts the estimate of Manetho, allowing a century for the period of invasion and gradual conquest—260 years of more or less stable rule under the named kings, and the remaining century and a half for the struggle ending in the expulsion of the invaders. Breasted, on the other hand, who, following Meyer, allows only 208 years for the dynasties from the XIIIth to the XVIIIth, maintains that 100 years is ample for the whole Hyksos period. This seems a hard saying in face of the precise and not at all impossible figures given by Manetho. For these names Syncellus (p. 104) and Africanus (*apud* Syncellus, p. 61) present the following variants: Silités or Silitis; Baion or Bnôn; Pakhnas; Apophis or Aphobis; Sethôs; Kértôs; and Asêth. Africanus omits the last two names given by Josephus, and inserts after Apakhnas the kings Staan and Arkhlês, with reigns of 50 and 49 years respectively. For the same last two names Syncellus substitutes Sethôs (50 years), Kértôs (29 years), and Asêth (20 years). Budge (*Hist.* iii. 146, n. 1) plausibly suggests that the Silitês of Josephus represents Heb. שִׁלְטָן, 'governor.'

for the reigns of his six kings. Material relics of the Hyksos kings are scanty, as was to be expected. Two Apepas can be identified, the first of whom has left an inscription relating to the dedication of pillars and doors at the temple of Bubastis, while the Rhind Mathematical Papyrus claims to have been written in the thirty-third year of his reign.

The second Apepa has left an altar, now at Cairo, dedicated as follows: 'He made it as his monument for his father Sutekh, Lord of Avaris, when Sutekh set all lands under the king's feet.' One or other of these Apepas may be the 'Apophis' of the Manethonian fragment. More important are the relics of Khyan, who may, perhaps, be identified with the 'Iannas' of the fragment. Traces of his rule have been found in both Upper and Lower Egypt, while a granite lion bearing his cartouche was found at Bagdad, and an alabastron with his name was discovered by Evans at Knossos. One of the titles used by Khyan upon his scarabs and cylinders is *anq ralebu*, 'embracer of the lands.' These facts have inspired Breasted's imagination to the reconstruction of a vanished Hyksos empire, embracing all the territory from the Euphrates to the first cataract of the Nile, and governed during part of its history by a ruler of the Jacob tribes of Israel in the person of that Pharaoh whose scarabs give his name as Jacob-hier or Jacob-el. The foundation seems rather slight for such a superstructure.

As to the name of the invaders, the first syllable is obviously the Egyptian *Heg*, 'ruler,' the second may conceivably be *Shasu*, which was the generic Egyptian title for the pastoral races of the Eastern deserts. Khyan names himself *Heg Seta*, 'chief of the deserts,' and perhaps the derivation may lie here. But, on the whole, Manetho's derivation seems to be not far astray. There is no portrait evidence existing as to their race-type, the sphinxes and other statues exhibiting a peculiar type of face which were formerly assigned to them being now considered to be older; but there is no reason to doubt the tradition that they were of Arabian, or at least of Semitic, origin. Their existing relics suggest that, while the beginning of their rule may have been marked by harshness and oppression, the tradition of their unbounded cruelty and destructiveness is exaggerated. As in so many other cases, the land conquered its conquerors, and the Apepas and Khyans became in all essentials Egyptian Pharaohs. Their influence upon the native Egyptian race was probably beneficial, and its results may be traced in the wider outlook and renewed vigour of the nation under the XVIIIth dynasty. In all probability the introduction of the horse and chariot as instruments of warfare was due to them, and may have been the chief cause of their easy conquest of the land.
